as though she were living under one single roof. She believes in these truths as unanimously as though she had only one soul and a single heart, and she preaches them and expounds them and hands them down as concordantly as though she had only one mouth. While the languages current in the World are diverse, the force of the [Church's] tradition is one and the same everywhere. There is no variety in the faith or in the tradition of the churches that have established themselves in the Germanies or in the Spains or among the Celts or in the East or in Egypt or in North-West Africa, or, again, of the churches that have established themselves at the World's centre. Just as God's creature the Sun is one and the same throughout the World, so likewise the Gospel of the Truth shows its light everywhere.'—Irenaeus: *Contra Haereses*, Book II, chap. 10, § 2 (Migne, J.-P.: *Patrologia Graeca*, vol. vii, cols. 552-3). Cf. Book V, chap. 20, § 1 (col. 1177).

¹ For the Roman Government's persecution of the Christian Church see also IV, C (i), vol. iv, p. 8, and V, C (i) (c) 2, in the present volume, pp. 76 and 80, above, and V, C (i) (d) 6 (a), pp. 456-7, and V, C (ii) (a), vol. vi, pp. 201-2, below.

² Compare the Hitlerian legend that, in the General War of 1914-18, Germany was defeated, not by the Allied and Associated Powers on the battle-field, but by Liberal, Marxian, and Jewish traitors at the rear. The question whether the break-up of the Roman Empire and the dissolution of the Hellenic Society can properly be described, in Gibbon's phrase, as 'the triumph of Barbarism and Religion', has been discussed in IV, C (ii) (b) 1, vol. iv, pp. 58-63, above.

³ In this respect the recurrent bouts of systematic persecution to which the Christian Church in the Roman Empire was subjected between A.D. 235 and A.D. 311 will remind a reader of this Study of the systematic persecution of the Jews in a National-Socialist German Reich. In this post-war Germany the Jews were made the scapegoats for the sufferings and humiliations which had befallen the German people in and after their military defeat in the General War of A.D. 1914-18; and the reason why the Jews were singled out for victimization—on account of a German military defeat with which in truth they had had nothing to do—was because the Germans were unwilling to confess that they had mainly themselves to blame for their own misfortunes, and at the same time were unable (at least in the earlier years of the Nazi régime) to wreak their vengeance upon their Gentile ex-enemies at whose hands they had met with their overthrow in A.D. 1918.

numerical strength. Thanks to the prowess of these heroes who, at the critical moment, stepped forward from the Christian ranks in order to bear their witness at the cost of life itself, the Church emerged victorious from her contest with the melancholy sternness of a Decius and with the boorish brutality of a Daia; and that small but noble army of Eurytus-minded Christian men and women¹ have received no more than their due meed of fame in being remembered by History as 'the martyrs' *par excellence*, in antithesis to 'the traitors' (*traditores*).²

This survey of the recurrent conflict between the two contrary impulses towards truancy and towards martyrdom during the long-drawn-out disintegration of the Hellenic Society may close with a glimpse of two contrasted figures which appear for an instant on a tottering Hellenic stage in the last wild scene of all. On the eve of the dissolution of Hellenism in the break-up of the Roman Empire we see a noble Christian embodiment of the pagan political martyr in the Emperor Majorian (*imperabat* A.D. 457-61), who courted the death that overtook him³ when he refused to play the puppet's part for which he had been designed by the barbarian king-maker Ricimer, and insisted, instead, upon fulfilling the now desperate duty of his Imperial office by attempting to inflict upon barbarian war-bands that were by this time firmly seated in the Roman saddle the chastisement that had been meted out to less formidable predecessors of the fifth-century Franks and Vandals by a Marius or a Claudius Gothicus. As a foil to Majorian's martyrdom we may set the truancy of a renegade Greek man-of-business who in A.D. 448, nine years before Majorian's elevation to the purple, had crossed the path of the Greek historian and Roman diplomatist Priscus of Panium when Priscus was representing the Constantinopolitan Government on a mission to Attila, the Khāqān of the Black Huns, at the Nomad war-lord's camp on the Hungarian Alföld.⁴ The essence of the truant's state of mind is revealed in the ambassador's account of his conversation with this nomadized *ci-devant* citizen of the Roman Empire and member of the Hellenic Society.⁵ According to the narrator of the story the renegade's first confident exposition of the signal advantages

¹ For the story of Eurytus the Spartiate see V. C (i) (d) 1, p. 378, above.

² These original recipients of the opprobrious title 'traitor' (*traditor*) were Christians who delivered up the holy scriptures or the sacred vessels of the Church at the demand of the pagan Imperial authorities.

³ Officially Majorian died of dysentery five days after Ricimer had compelled him to abdicate as a punishment for having reigned too much in earnest. Actually there can be little doubt that his death was brought about by foul play on Ricimer's part.

⁴ See the fragment of Priscus's *History of His Own Times in Historici Graeci Minores*, edited by Dindorf, L.: vol. i (Leipzig 1870, Teubner), pp. 305-9.

⁵ Priscus's renegade is cited again—this time as an example of 'proletarianization'—in V. C (i) (d) 6 (α), pp. 473-4, below.

of 'going native' over staying Hellene broke down lamentably under Priscus's counter-attack on behalf of Hellenic culture and Roman law.

'My interlocutor', the historian records, 'was reduced to tears, and he confessed that the laws were excellent and that the Roman Constitution was admirable, if only the rulers had not so hopelessly lost the spirit of their predecessors that they were ruining Society.'

This Hellenic renegade might well weep when he was confronted by a loyal Hellene and Roman who commanded the ability to state the loyalist's case; for the renegade had not merely repudiated the spiritual and political allegiance to which he had been brought up: he had actually thrown himself into the service of hard-bitten barbarians who were the mortal enemies of both Hellenism and the Empire. This Hellenic act of truancy at the moment of the Hellenic Society's final dissolution has an analogue in the Manchurian marches of the Far Eastern World in the seventeenth century of the Christian Era on the eve of the conquest of Intramural China by the Extramural Manchu barbarians:

'The Chinese in Southern Manchuria . . . while characteristically Chinese in culture and social organization . . . had taken on [before the date of the Manchu conquest of Intramural China] a strong "frontier" colour. . . . Thus they were, for their part, willing to accept the authority, and identify themselves with the drive, of the rising and aggressive Manchu group, which promised them a share of the power and wealth to be garnered in China—the rich land, the land of civilization and luxury; a land whose promise altogether overshadowed any promise of growth and expansion toward the barbarian wilderness. . . . During the rise of the Manchu Power any Chinese who shaved his forehead and grew a queue (thus making it difficult for him to desert at short notice to an anti-Manchu political faction) could be recruited into a Chinese "banner"¹ [of the Manchu Army].'²

In the Syriac World in its 'Time of Troubles', when it was being battered by an Assyrian flail, we see the Prophets of Israel and Judah offering themselves as martyrs in protest against the truancy of a paganizing faction who were seeking an escape from intolerable miseries in a deliberate repudiation of the Chosen People's priceless peculiar heritage, with the base intention of purchasing some relief from pressure at the cost of re-merging the potter's

¹ See V. C (i) (c) 3, p. 315, footnote 3, above, and V. C (i) (d) 6 (α), p. 447, below.—A.J.T.

² Lattimore, O.: *Manchuria Cradle of Conflict* (New York 1932, Macmillan), pp. 45 and 61. These passages bring out the distinction between 'playing truant' and 'going native'; for these Manchurian Chinese recruits to Manchu barbarian war-bands committed the same heinous crime of truancy as Priscus's renegade without also being guilty, as he was, of the additional crime of 'proletarianization'. For a Chinese example of the converse process of 'going native' without at the same time playing truant see V. C (i) (d) 6 (α), p. 474, footnote 2, below.

half-shaped vessel into the still shapeless common clay of the unregenerate Gentiles.

In our own modern World of the West can we discern any traces of the two antithetical ways of social behaviour which we have now observed in the disintegration of three different civilizations? Assuredly we can put our finger on a portentous modern Western act of truancy in 'la trahison des clercs';¹ and the roots of this treason spring from a depth to which the gifted Frenchman who has coined the phrase might perhaps hesitate to trace them—though he has virtually confessed how deep-rooted the mischief is by choosing the medieval ecclesiastical name to denote and indict our modern Western 'intellectuals'. Their treason did not begin with the pair of treasonable acts—a cynical loss of faith in the recently established principles, and a nerveless surrender of the recently won gains, of Liberalism—that have been perpetrated by our 'intellectuals' within living memory. The truancy that has given this latest exhibition of itself was set on foot, centuries earlier, when the 'clerks' repudiated their clerical origin—and in the same act cut our Western culture off from the possibility of drawing nourishment any longer from the sap of the Tree of Spiritual Life—by trying to shift the rising edifice of our Western Christian Civilization from a religious to a secular basis.² This was the original act of *hybris* which is being required in our day by an *âtê* that has been accumulating for centuries at compound interest.³

If we cast our eyes some four hundred years back and then focus them upon the patch of Western Christendom which is known as England, we shall there see in Thomas Wolsey—the precociously modern-minded clerk who pleaded guilty, in the bitter hour of his political disgrace, of having served his God less well than he had served his King—a truant whose truancy was shown up in all its blackness, less than five years after his ignominious end,⁴ by the martyrdom of his contemporaries Saint John Fisher and Saint Thomas More. The modern Western clerkly proto-truant Wolsey has never lacked successors. It remains to be seen whether the blood of the modern Western protomartyrs will be proved, by fresh testimony in our day, to have been the seed of the Church⁵—as was the blood of their forerunners in the Hellenic World in the generations of Decius and Galerius.

¹ See the book with this title by Benda, Julien (Paris 1927, Grasset).

² On this matter see further Part VII, below.

³ For *hybris* and *âtê* see IV. C (iii) (c), *passim*, in vol. iv, above.

⁴ After his downfall in the autumn of 1529 Wolsey lingered on rather more than a year before dying a natural death on the 4th November, 1530; Saint John Fisher and Saint Thomas More were put to death by King Henry VIII on the 22nd June and on the 6th July, 1535, respectively.

⁵ See the phrase from Tertullian's *Apologeticus* that is quoted in V. C (ii) (a), vol. vi, p. 202, footnote 3, below.

4. *The Sense of Drift*

The sense of drift, which is the passive way of feeling the loss of the *élan* of growth, is one of the most painful of the tribulations that afflict the souls of men and women who are called upon to live their lives in an age of social disintegration; and this pain is perhaps a punishment for a commission of the sin of idolatry through a worship of the creature instead of the Creator;¹ for in this sin we have found one of the causes of those breakdowns from which the disintegrations of civilizations follow. In terms of the Christian Theology:

"The consequence of the Fall, as a declension of the Soul from allegiance to the Creator to concern with the creature, was, in a word, idolatry. To the early converts this idolatry appeared primarily as the worship of images and of the innumerable gods who were themselves creatures fallen from grace, if not mere phantoms of human conceit; but the most stubborn foe of the Christian, as it had been of the Platonic, Faith was that homage to the idols of the Reason which wears the mask of Philosophy. Call it Stoicism or call it Epicureanism, call it Science or Deism or Realism or mere indifference or what you will, the most insidious and obstinate enemy of Religion was, and is, the subservience of the mind content to see in the World only a huge fatalistic mechanism or a heterogeneous product of Chance or, as the modern Darwinians would have it, a monstrous combination of both. Whatever form the error may take, it is a denial of the Logos as the creative wisdom and purpose of God, a magnification of the creature, a refined, but not the less devastating, species of idolatry."²

Chance and Necessity³ are the alternative shapes in which this idol is saluted by its votaries;⁴ and, though at first sight the two notions may appear to contradict one another to the point of being mutually exclusive, they prove, when probed, to be merely different facets of one identical illusion.

The notion of Chance is expressed in the literature of the Egyptian 'Time of Troubles' through the simile of the giddy spinning of a potter's wheel,⁵ and in the literature of the Hellenic 'Time of Troubles' through the simile of a ship that has been abandoned,

¹ For this definition of idolatry, which is the sense in which the term is used in this Study, see Part I. A, vol. i, p. 9, footnote 3, and IV. C (iii) (c) 2 (α), in vol. iv, pp. 261-2, above.

² More, P. E.: *Christ the Word = The Greek Tradition from the Death of Socrates to the Council of Chalcedon: 399 B.C.-A.D. 451*, vol. iv (Princeton 1927, University Press) p. 305.

³ For a discussion and rejection of the view that Necessity is the cause of the breakdowns of civilizations see IV. C (i), vol. iv pp. 7-39, above.

⁴ 'Mihi haec et talia audienti in incerto iudicium est fatone res mortalium et necessitate immutabili an forte volvantur.'—Tacitus: *Annals*, Book VI, chap. 22, *init.* The rest of the chapter is devoted to an exposition of the alternative hypotheses.

⁵ See the passage from *The Admonitions of a Prophet* which is quoted in IV. C (iii) (c) 2 (β), vol. iv, pp. 410-11, above.

without a steersman, to the mercy of the winds and waves.¹ In a disintegrating Hellenic Society the sense of drift—'imus, imus praecipites'²—sought expression and relief in a worship of Chance which came near to becoming the prevailing religion of the Hellenic World as the Hellenic 'Time of Troubles' worked up towards its climax;³ and the deeply ingrained anthropomorphic habit of the Hellenic imagination conferred upon this new goddess, who was being raised to power by the defeat of a human attempt at self-determination, a 'local habitation and a name'.⁴ Timoleon dedicated to Fortune ('*Ἐρῶ Δαίμονι*') a house which had been given him by the Syracusans in acknowledgement of their gratitude to the liberator of their city; and in this house he built a chapel in which he offered sacrifices to 'Our Lady Automatism' (*Ἀυτοματία*).⁵ In later generations the same goddess won worship farther afield as *Τύχη Ἀντιοχείων* or Fortuna Praenestina *sive* Antias.⁶

O diva gratum quae regis Antium,
praesens vel imo tollere de gradu
mortale corpus vel superbos
vertere funeribus triumphos:

te pauper ambit sollicita prece
ruris colonus; te, dominam aequoris,
quicumque Bithyna lacessit
Carpathium pelagus carina.

te Dacus asper, te profugi Scythae
urbesque gentesque et Latium ferox
regumque matres barbarorum et
purpurei metuunt tyranni,

¹ See the passage from Plato's *Politicus* which is quoted in IV. C (i), vol. iv, pp. 26-7, above. This simile, which Plato applied to the Universe, was transferred by Seneca to the field of human psychology: 'Pauci sunt qui consilio se suaque disponant; ceteri, eorum more quae fluminibus innant, non eunt sed feruntur.'—Seneca, L. Annaeus: *Epistulae Morales ad Lucilium*, Book III, ep. ii [xxiii], chap. 8.

² Persius Flaccus, A.: *Satires*, No. III, ll. 41-2.

³ 'In the outlook of the general public, [as well as in that of the philosophers,] the [personal] rule of the Gods retires farther and farther into the background, and its place in the determination of human destinies is taken by Tychê or by Automatism—that is to say, by Luck and by Chance.'—Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii, 2nd edition (Stuttgart 1921, Metzler), p. 84.

⁴ *A Midsummer Night's Dream*, Act V, Scene 1. See I. C (iii) (e), Annex, vol. i, p. 443, above. This Hellenic personification of Chance was an expression of the same incorrigible anthropomorphic-mindedness as the impertinence of the unknown Greek sculptor in Gandhâra who carved the first statue of the Buddha in human form (see V. C (i) (c) 2, p. 135, footnote 3, above). ⁵ Plutarch: *Life of Timoleon*, chap. 36.

⁶ Even Constantinople was furnished by its Christian founder with a temple dedicated to the Roman Tychê (Parker, H. M. D.: *A History of the Roman World from A.D. 138 to 337* (London 1935, Methuen), p. 301). The worship of this goddess on this spot survived both the definitive triumph of Christianity at the close of the fourth century of the Christian Era (see IV. C (iii) (b) 12, vol. iv, pp. 226-7, above) and the breakdown of the *Pax Romana* in the Greek heart of the Hellenic World in the latter part of the sixth century (see IV. C (iii) (c) 2 (β), vol. iv, pp. 326-8, above). For this survival of the worship of the Roman Tychê of Constantinople into the Byzantine Age see Cumont, Fr.: 'L'Éternité des Empereurs Romains' in *Revue d'Histoire et de Littérature Religieuses*, vol. i (Paris 1896, Macon et Protat), p. 452.

THE PROCESS OF DISINTEGRATION

iniurioso ne pede prouas
stantem columnam, neu populus frequens
ad arma cessantes, ad arma,
concitet, imperiumque frangat.¹

Has this frank and concrete Hellenic worship of Tychê any analogue in the histories of other civilizations? We shall find a more subtle version of it prevalent in the Sinic World on the morrow of the foundation of the Sinic universal state, and a less straightforward version in our Western World at the present day.

When we look into our hearts, we find the Hellenic goddess now enthroned there—notwithstanding our boast of being hard-headed scientists who deal in facts and not in fictions²—as potently as she was in the hearts of the Hellenes themselves in their decadence. The following profession of faith in the omnipotence of Tychê may be quoted from the preface of a notable book from the pen of one of the most highly distinguished among our living Western historians:

‘One intellectual excitement has . . . been denied me. Men wiser and more learned than I have discerned in History a plot, a rhythm, a pre-determined pattern. These harmonies are concealed from me. I can see only one emergency following upon another as wave follows upon wave; only one great fact with respect to which, since it is unique, there can be no generalizations; only one safe rule for the historian: that he should recognise in the development of human destinies the play of the contingent and the unforeseen.’³

This brilliantly phrased passage cannot be dismissed as a scholar’s conceit; for the writer is a Liberal who is formulating a creed which Liberalism has translated from theory into action, and his irony is a sword with a rapier-point which flickers out into the world beyond the walls of the intellectual fencer’s study. This modern Western belief in the omnipotence of Chance gave birth in the nineteenth century of the Christian Era, when things still seemed to be going well with Western Man, to the policy of *laissez faire*: a philosophy of practical life which was founded on a faith in the miraculous enlightenment of self-interest. In the light of a transitorily gratifying experience our nineteenth-century grandfathers claimed to ‘know that all things work together for good for them that love’⁴ the goddess Tychê. And even in the twentieth century, when the goddess had begun to show her teeth, she was still the oracle of British foreign policy. The view that was prevalent

¹ Horace: *Carmina*, Book I, Ode xxxv, ll. 1-16.

² For the vanity of this boast on the lips of our modern *Homo Occidentalis* see I. C (iii) (e), Annex, vol. i, pp. 442-5, above.

³ Fisher, H. A. L.: *A History of Europe* (London 1935, Eyre & Spottiswoode, 3 vols.), vol. i, p. vii.

⁴ Romans viii. 28.

among the people, as well as in the Cabinet, of the United Kingdom during the fateful period of Western history which opened in the autumn of A.D. 1931 was accurately expressed in the following sentence from the files of a great English Liberal newspaper:

'A few years of peace are always a few years gained, and a war that is due in a few years' time may never come off at all.'¹

The doctrine of *laissez faire* which had brought the Western World to the pass in which it found itself in the autumn of 1938 cannot be claimed as an original Western contribution to the common stock of human wisdom. It was current coin in the Sinic World some two thousand years before it captivated modern Western minds; and, while the Sinic Society's pretensions to have anticipated us in our recently acquired technical command over Physical Nature are perhaps not to be taken *au pied de la lettre*,² there is no doubt that the spiritual 'defeatism' which has accompanied our own material triumphs of the last hundred and fifty years can also be detected in Sinic souls in the second century B.C. This Sinic worship of Chance differs, however, from ours in deriving from a less sordid origin. The eighteenth-century French bourgeois came to believe in *laissez faire laisser passer* because he had noticed and envied and analysed the prosperity of his English 'opposite number', and had come to the conclusion that the bourgeoisie might prosper in France as well as in England if only King Louis could be induced or compelled to follow the example of King George in allowing the bourgeois to manufacture what he chose, without restrictions, and to send his goods to any market, free from tolls. In fact, the catchword of our modern Western philosophy of drift has the prosaic original meaning of 'No state interference with business'. On the other hand the line of least resistance along which a weary Sinic World allowed itself to drift during the earlier decades of the second century B.C.³ was

¹ This quotation is taken from a leading article published in *The Manchester Guardian* of the 13th July, 1936.

² See, for example, the anecdote in III. C (i) (c), vol. iii, pp. 188-90, above.

³ It will be seen that in Sinic history the psychological self-surrender of a disintegrating society to the drift of the Universe was contemporaneous with the closure of the international anarchy of 'the Contending States' (see V. C (ii) (b), vol. vi, pp. 291-5, below) by the establishment of a universal state in the political arena. The captivation of Sinic souls by the dark power of Chance was of older date than this. It can be traced back into the second, at least, of the two bouts of the Sinic 'Time of Troubles'. In this earlier age, however, the Sinic response to the challenge of Chance had taken an active and not a passive form. The princes of 'the Contending States' did not resign themselves to the mercy of the winds and waves: they sought rather to take advantage of the movements of these elemental forces—tempestuous and menacing though these might be—for the furtherance of their own designs. According to Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), p. 428, the ideas that were in the ascendant in that age are summed up in two words which are almost impossible to translate: 'chou [anglice *shu*], recettes, méthodes, artifices, et *che* [*she*], conditions, situations, circonstances, forces, influences. Notre mot "chance" est, peut-être, celui qui rend le

conceived of, not as a pack-horse's beaten track from a humming mill to a lucrative market, but as a way which was the truth and the life:¹ the *tao* which 'meant "the way the Universe works"—and ultimately something very like God, in the more abstract and philosophical sense of that term'.²

The Sinic form of the worship of Chance was in fact a subtly decadent perversion of an original and authentic Taoist philosophy which—illuminated by knowledge born of suffering³—had apprehended the truth of 'etherialization',⁴ had resolved to live by it, and had acted on its resolve by taking one of the highest and most arduous flights ever essayed by the Sinic spirit.

In the theistic language of the Syriac religious genius⁵ the Taoist intuition of an absolute energy which is indistinguishable from an absolute tranquillity⁶ has been expressed in the poetic image of God's self-revelation to Elijah through the still small voice which made itself heard when the wind and the earthquake and the fire had come and gone;⁷ and this Hebrew poetry has been transposed into Christian theology in a single sentence of Saint Augustine which is as terse as it is sublime: *Novit quiescens agere et agens quiescere*.⁸ In the language of the Sinic philosophy the same truth is presented in such passages as the following from the *Tao Te King*:⁹

Great Tao is like a boat that drifts;

It can go this way; it can go that.

The ten thousand creatures owe their existence to it, and it does not disown them;

Yet, having produced them, it does not take possession of them.

Tao, though it covers the ten thousand things like a garment,

Makes no claim to be master over them,

And asks for nothing from them.

Therefore it may be called the Lowly.

moins mal le mot "che". Les situations et conditions diverses de temps et de lieu recèlent des occasions dont il faut se mettre en état de capter l'influence et la force pour risquer le sort avec le maximum de chances.¹

³ *Πάθει μάθος*—Aeschylus: *Agamemnon*, l. 177, quoted in I. C (iii) (b), vol. i, p. 169, footnote 1; II. C (ii) (b) 1, vol. i, p. 298; IV. C (iii) (b) 11, vol. iv, p. 218; IV. C (iii) (c) 3 (β), vol. iv, p. 584, footnote 1; and V. C (i) (c) 2, in the present volume, p. 78, above, and V. C (ii) (a), vol. vi, p. 275, below.

⁴ For the principle of 'etherialization' see III. C (i) (c), vol. iii, pp. 174-92, above.

⁵ For the differentiation between a sense of unity which apprehends the unifying principle in a ubiquitous and irresistible law and a sense of unity which apprehends the same principle in a unique and omnipotent deity, see V. C (i) (d) 7, vol. vi, pp. 15-18, below.

⁶ For this Taoist conception of Wu Wei see III. C (i) (c), vol. iii, p. 187, above.

⁷ I Kings xix. 11-12.

⁸ Aurelius Augustinus: *De Civitate Dei*, Book XII, chap. 18. Cf. the *Tao Te King*, chap. 81: 'Heaven's way is to sharpen without cutting.'

⁹ The English translation here given is Mr. Arthur Waley's, in op. cit. The selection of the passages is inevitably rather arbitrary, since the paradox of the *Tao* is the subject of the whole treatise—or, rather, poem—and almost every chapter is a variation on the anonymous author's inexhaustible theme.

The ten thousand creatures obey it,
Though they know not that they have a master;
Therefore it is called the Great.¹

This 'Way of the Universe' can only be apprehended by human souls through an act of cognition which is at the same time an act of will; and the Taoist sage attains his knowledge of 'the Way' by walking in it himself:

So, too, the sage, just because he never at any time makes a show of greatness, in fact achieves greatness.

Without leaving his door
He knows everything under Heaven.
Without looking out of his window
He knows all the ways of Heaven.
For the further one travels
The less one knows.
Therefore the sage arrives without going,
Sees all without looking,
Does nothing yet achieves everything.²

If only the lesson of the sage's life were taken to heart by the rulers of This World!

Tao never does;
Yet through it all things are done.
If the barons and kings would but possess themselves of it,
The ten thousand creatures would at once be transformed.
And if, having been transformed, they should desire to act,
We must restrain them by the blankness of the Unnamed.
The blankness of the Unnamed
Brings dispassion;
To be dispassionate is to be still.
And so, of itself, the whole Empire will be at rest.³

The philosophy that is hinted at in these passages is as noble as it is profound; and yet, for a human being who sets himself to

¹ *Tao Te King*, chap. 34, Waley's translation (cf. chap. 40).

² *Ibid.*, chaps. 34 and 47, Waley's translation (cf. chaps. 45, 48, 81).

³ *Ibid.*, chap. 37, Waley's translation. Compare a passage from chap. 67 of the *Tao Te King* which is translated as follows by Forke, A.: *Die Gedankenwelt des Chinesischen Kulturkreises* (Munich and Berlin 1927, Oldenbourg), p. 195:

'Whoso seeks to rule the state through knowledge is a scourge to the state; whoso rules it not through knowledge, a blessing.'

This Sinic dictum has a remarkably exact Arabic parallel in the following passage of Ibn Khaldūn's *Muqaddamāt* (Book I, chap. 24):

'Benevolent government is rarely associated with a ruler whose mind is over-alert and intelligence over-developed. Benevolence is most commonly found in rulers who are easy-going or who behave as if they were. The worst defect in the alert-minded ruler is that he lays burdens upon his subjects which are greater than they can bear; and he does this because his mental vision outranges theirs and because his insight penetrates to the ends of things at the beginnings—with disastrous consequences for them. . . . The ideal is the Golden Mean . . . and for this reason a man who is over-intellectual has Satanic attributes attributed to him.'

walk in the way of the *Tao*, the path is not without pitfalls; for the superhuman effortlessness of the divine activity may be confounded in human eyes with the human vice of sloth. A warning against this error is uttered by Saint Augustine in the chapter above quoted: *Non in eius vacatione cogitetur ignavia, desidia, inertia, sicut nec in eius opere labor, conatus, industria*. Nevertheless, when the flesh is weak, the Taoist sage's posture may sink into being little more than a pose that saves a sluggard's face. And Taoism was in fact perverted to this base use by the desperation of a Sinic Society which had found itself cheated, through the swift collapse of Ts'in She Hwang-ti's universal state,¹ of the repose for which it was panting after the hard labour of a 'Time of Troubles'.

'The First Empire lasted only fifteen years (221-206 B.C.). After seven years of terrific wars the country was again united under the Han Empire; but civil wars did not end till 195 B.C. The long years of revolution and war had devastated the country, and the new empire found everything in ruins. . . . What was needed was not positive and meddlesome reforms, but peace and order to allow the people to live and recuperate. So the early statesmen of Han practised the policy of peace and *laissez faire*, and scholars and thinkers tended to exalt the philosophy of Taoism, which taught non-action and non-interference with Nature.'²

The modern Chinese scholar, Dr. Hu Shih, who is the writer of these lines, goes on to quote³ a description of this misapplied Taoism of the early second century B.C. from the brush of a contemporary observer, Sse-ma T'an:⁴

'The Taoists say "Do nothing"; but they also say "Nothing is undone". It sounds subtle, but is in reality easy to work out. Its method lies in postulating nothingness or non-being as the basis of all things, and in following natural evolution as the principle of activity. They recognise no ready-made situation nor constant form; they are therefore able to understand the reality of things. They do not wish to anticipate things too prematurely, nor do they wish to lag behind the times; therefore they are masters of all things.'

'This attitude,' Dr. Hu Shih remarks,⁵ 'suited the temper of the age admirably well; and for nearly three-quarters of a century the people enjoyed peace and thrived in prosperity'—until the Emperor Wuti (*imperabat* 140-87 B.C.) abandoned this travesty of Taoism in order to establish, as the official philosophy of the Sinic uni-

³ *Ibid.*, p. 23.

⁴ Dr. Hu Shih mentions that this philosopher Sse-ma T'an was the father of the historian Sse-ma Ts'ien.

⁵ Hu Shih, *op. cit.*, p. 22; cf. Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin 1930, de Gruyter), pp. 286-8.

versal state, a form of Confucianism which was perhaps almost as remote from the teaching of Confucius himself as the contemporary Taoism was from the teaching of the *Tao Te King*.¹

This misapplied Taoism of the second century B.C. might be described equally well as a *modus vivendi* with Chance or as a surrender to Fate;² for the goddess of *laissez faire* has another face, under which she is worshipped, not as Chance, but as Fate or Necessity.³

The two notions of Necessity and Chance are correlative by reason of their very antithesis; for this antithesis does not lie between two alternative and incompatible conceptions of the nature of things, but merely between the human being who feels that he is adrift and the mighty waters that seem to him to be tossing him about as callously as though he were an inanimate piece of flotsam. In a self-regarding mood the castaway views the force that is defeating him in a negative light, as a sheer chaotic disorder, and it is in this mood that he gives the name of Chance to his irresistible adversary and mistress. But the notion of disorder, as Bergson has pointed out,⁴ is essentially relative, like the notion of order itself.⁵ Neither order nor disorder can be conceived except

¹ For the contamination of both Confucianism and Taoism with popular superstition in the Han Age see V. C (i) (d) 6 (δ), pp. 555-7, below. For the official adoption of Confucianism by the Emperor Wuti see V. C (i) (d) 6 (δ), Annex, pp. 654 and 707-8, below.

² That Fate works mechanically had been a tenet of the Taoist philosopher Lieh-tse (*vivebat circa 440-370 B.C.*); that Heaven is a blind mechanical force had been a tenet of Hsün-tse (*vivebat circa 310-230 B.C.*) (see Forke, A.: *Die Gedankenwelt des Chinesischen Kulturkreises* (Munich and Berlin 1927, Oldenbourg), pp. 67 and 55).

³ For the 'rationalization' of this surrender to Fate in the Babylonian philosophy of Astrology see V. C (i) (c) 1, pp. 56-7, above.

⁴ See Bergson, Henri: *L'Évolution Créatrice*, 24th édition (Paris 1921, Alcan), pp. 239-58.

⁵ The following extracts from the passage just cited may be quoted as examples of the great French philosopher's masterly lucidity in the exposition of his thought:

'If, at a venture, I select a volume in my library, I may replace it on the shelves, after taking a glance at it, with the remark "This isn't verse". But is this really what I perceived when I was turning the pages? Clearly not. I did not see, and I never shall see, an absence of verse. What I did see was prose. But, as it is poetry that I am wanting, I express what I find in terms of what I am looking for; and instead of saying "Here is some prose" I say "This isn't verse". Inversely, if it takes my fancy to read some prose and I stumble on a volume of verse, I shall exclaim "This isn't prose"; and in using these words I shall be translating the data of my perception, which shows me verse, into the language of my expectation and my interest, which are set upon the idea of prose and therefore will not hear of anything else. . . .

'Now let us suppose that there are two species of order and that these two orders are two contrary species embraced in a single genus. Let us further suppose that the idea of disorder arises in our minds every time when we look for one of the two species of order and find the other. The idea of disorder would then have a definite meaning in practical life: it would objectify, for expression in words, the disappointment of a mind which finds itself in the presence of an order that is different from the one which it wants—in the presence of an order for which, at the moment, it has no use, and which in this sense is non-existent for it. . . .

'An order is contingent, and appears so to us, in relation to the inverse order, in the way in which verse is contingent in relation to prose and prose in relation to verse. Just as all speech which is not prose is verse and is necessarily conceived of as verse, and just as all speech which is not verse is prose and is necessarily conceived of as prose, so every manner of being which is not one of the two orders is the other and is necessarily conceived of as the other. But it is possible for us to place a fog of affective states between

in contrast to its opposite. Every time that we make the observation that, in such and such a case, we are confronted with a disorder, our judgement is subjective. What we mean is that we are here being disappointed of some particular form of order which it has been our pleasure, here and now, to impose, in thought or in act, upon the face of the Universe. And the intractable state of the facts upon which we are taking a verbal revenge by giving it the bad name of disorder may—and indeed must—at the same time be an exemplification of the principle of order when the situation is viewed from one or other of the infinitely numerous possible alternative standpoints to that single arbitrary one which happens to be ours at the moment. For instance, the dizzy motion of the Egyptiac potter's wheel, which stands for the acme of disorder in the eyes of an Egyptiac poet¹ whose imagination animates the clay that is helplessly spinning on this wheel's whirling surface, is at the same time an example, on the mathematical plane of existence, of an orderly cyclic motion, while on the teleological plane it is an obedient instrument for impressing upon the clay the spiritual order that is represented by the potter's will.

Said one among them: 'Surely not in vain
My substance from the common earth was ta'en
And to this figure moulded, to be broke
Or trampled back to shapeless earth again?'²

In a similar way the disorderly motion of a rudderless ship, which stands in Plato's eyes for the chaos of a Universe abandoned by God,³

ourselves and our representation of what we are conceiving of, and between ourselves and our perception of the idea that is really present to our minds. . . .

'If we analyse the idea of chance, which is a near relation to the idea of disorder, we shall find the same elements. When the purely mechanical operation of the causes which bring the roulette to a halt on a particular number makes me win and so behaves as a good genius would have behaved if he had been looking after my interests, and when the purely mechanical force of the wind snatches a tile from the roof and flings it down on my head—thus acting as an evil genius would have acted if he had been plotting against my life—in both cases I find a mechanism in a place where I would have looked for—and ought, it would seem, to have encountered—an intention; and that is what I am expressing when I speak of "chance". And in describing an anarchic world, where the phenomena follow one another at the pleasure of their caprice, I shall say, again, that this is the reign of chance, and I shall mean by this that I find myself confronted by acts of will, or rather by "decrees", when what I was looking for was mechanism. . . . The idea of chance simply objectifies the state of mind of someone whose expectation has been directed towards one of two species of order and who then encounters the other.

'Chance and disorder are, then, necessarily conceived of as relative.'

A glimmer of Bergson's clear vision of the meaning of the ideas of 'Chance' and 'Disorder' has been caught by Oswald Spengler in *Der Untergang des Abendlandes*, vol. i (Munich 1920, Beck), pp. 210-11:

'Strange as this may sound, Chance in the everyday sense of the term has an intimate affinity with the principle of Causality. The link between them is the inorganic element and the absence of anything in the nature of "direction".'

For the idea of 'direction' see Part III. B, vol. iii, pp. 124-7, and IV. C (i), vol. iv, pp. 34-8, above.

¹ See IV. C (iii) (c) 2 (β), vol. iv, pp. 410-11, and the present chapter and volume, p. 412, above.

² Edward Fitzgerald's translation of the *Rubā'īyāt* of 'Umar Khayyām, Quatrain lxxxiv.

³ See IV. C (i), vol. iv, p. 26, and the present chapter and volume, pp. 412-13, above.

can be recognized, by a mind endowed with the necessary knowledge of dynamics and physics, as a perfect illustration of the orderly behaviour of waves and currents in the media of wind and water.¹ When the Human Soul adrift thus apprehends that the force which is baffling it is not simply a negation of the Soul's own will or caprice but is a thing in itself—albeit something that the Soul is failing to grasp or control—then the countenance of the unknown invincible goddess changes from a subjective aspect under which she is known as Chance to an objective aspect under which she is known as Necessity—but this without any corresponding change in the essence of this inhuman power's nature.

In approaching a divinity of so cold and implacable a mien as Necessity wears when she is recognized for what she is, her votaries are tempted to make some pretence of retaining a shadow of freedom which might save them, if it were genuine, from being driven to confess that they are utterly at the goddess's mercy.

At the dwarfed and daunted political heart of the Hellenic World in the second century B.C.,

'Philopoemen admitted that unquestionably a time would come sooner or later when the Greeks would find themselves constrained to obey, without option, any orders which the Romans might choose to give. "But we have still", he said, "some latitude in regard to dates. Do we want to bring this consummation to pass as quickly as possible, or on the contrary to put off the evil day to the latest possible date? Surely the latter?" And so, as he explained it, the difference between his policy and Aristaenetus's policy was this: Aristaenetus was eager to accelerate the march of Destiny (*τὸ χρεῖον*) and to do everything in his power to co-operate with it, while his own (Philopoemen's) policy was to resist and show fight to the limit of his strength.'²

The Achaean politician who was Philopoemen's opponent was acting, whether consciously or not, in the exact spirit of the famous prayer which the Stoic philosopher Cleanthes (*vivebat circa 300-220 B.C.*) had addressed to Necessity under the synonyms of Fate and Zeus:

ἄγον δέ μ', ὦ Ζεῦ, καὶ σὺν', ἡ Πεπρωμένη,
ὅποι ποθ' ὑμῖν εἰμὶ διατεταγμένος,
ὡς ἔψομαί γ' ἄοκνος· ἦν δέ γε μὴ θέλω,
κακὸς γένόμενος, οὐδὲν ἥττον ἔψομαι.³

¹ It may be added that, in the *Politicus*, the simile of the ship adrift is only one of two elements that make up, between them, the picture which Plato is painting in the colours of myth. The state in which the Universe drifts at the mercy of Chance alternates, in an endlessly recurrent cycle, with a contrary state in which it is steered by the hand of God according to Plan.

² Polybius, Book XXIV, chap. 13 (ed. Büttner-Wobst, vol. iv, Berlin and Leipzig 1904, Teubner), *ad annum* 181-180 B.C.

³ Cleanthes in von Arnim's *Stoicorum Veterum Fragmenta*, vol. i (Berlin and Leipzig 1905, Teubner), p. 118. The lines have been quoted, apropos of the decline and fall of the Osmanlis, in Part III. A, vol. iii, p. 47, footnote 1, above.

This sense of uncontrollable drift on the sweep of Necessity's tide was felt, in the Hellenic World of the second century B.C., in the sheltered garden of scientific research as well as on the blasted heath of international politics.

'The most remarkable feature in [the] history [of Hellenistic science] was its failure to lead on from its first successes to a continuous growth like that which the modern pioneers of science inaugurated. This general falling off from an earlier promise can hardly be attributed to ignorance of scientific method. The best specimens of Hellenistic research reveal precisely that blend of observation and reasoning which usually yields the most solid results in scientific discovery. A more valid if partial explanation is that Hellenistic science lacked instruments of precision, such as the telescope and microscope, and this at a stage when observation by the unaided eye could not carry them much further. This deficiency would help to explain the eventual stagnation of astronomy, botany and medicine. But the chief reason is, no doubt, to be found in that general loss of the spirit of hope and adventure which befell the Greek nation in the second century [B.C.]¹ It is significant that in the second century the Greek World became addicted to the practices of Astrology² and Magic. In pursuing these delusive short cuts to success, it proved that it had lost the faculty of patient research which distinguished the earlier Hellenistic pioneers.'³

The story of the progressive surrender of the Hellenic spirit to a sense of drift expressed in an ever more servile worship of Necessity has been recapitulated in the following terms by a modern Western historian of Hellenic thought:

'To ascribe knowledge and certainty to Physical Science and to deny Man's inner freedom by imprisoning the spirit in a huge mechanism of fixed and calculable Natural Law is to invert the whole order of the

¹ On this dictum a caveat is entered by Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), pp. 34-9. 'There is small sign of "decadence" down to about the middle of the 2nd century B.C.' In the Middle East the Greek of the last century B.C. 'did not essentially differ from the Greek of the third'. And as late as the first century of the Christian Era, as far afield as Babylonia, the city-state of Seleucia-on-Tigris still preserved intact both its Greek race and its Hellenic culture and ethos according to the testimony of two Roman men-of-letters of that age ('Neque in barbarum corrupta, sed conditoris Seleuci retinens' (Tacitus: *Annals*, Book VI, chap. 42); 'Libera hodie ac sui iuris Macedonumque moris' (Pliny: *Natural History*, Book VI, chap. 122)).—A.J.T.

² See V. C. (i) (c) 1, p. 57, with footnote 3, above. For the Fatalism which was instilled by Astrology into Hellenic souls, and for the attempts to find a religious way of escape from the astral Wheel of Existence along the alternative avenues offered by the worship of Isis, the rite of 'the Mithras Liturgy', Judaism, and Christianity, see Wendland, P.: *Die Hellenistisch-Römische Kultur* (Tübingen 1912, Mohr), pp. 156-7, 172, with footnote 1, and 399-400; and Dey, J.: *Παλιγγεσσία* (Münster i. W. 1937, Aschendorff), pp. 95-6 and 109. 'Whatever way men took it [Astrology], behind it loomed the gigantic and terrible figure of the Babylonian Fate, immutable and inexorable, neither loving nor hating, which ruled the Universe and before which gods and men were alike puppets playing their pre-determined parts, a figure which outraged the Greek sense of freedom till the history of Hellenistic religion might almost be summed up as a series of attempts to find a way of escape' (Tarn, op. cit., p. 60).—A.J.T.

³ Cary, M.: *A History of the Greek World from 323 to 146 B.C.* (London 1932, Methuen), pp. 352-3.

Platonic philosophy. The result of such an inversion is shown strikingly in the different connotations of the word "Necessity" in Plato and Marcus Aurelius. To the former, Necessity meant the resistance of the meaningless and incomprehensible flux of things, whether in Nature or [in] the Human Soul, to the government of order and happiness; it was the exact contrary of the spirit, which is shrined in liberty. To the Imperial Stoic, Necessity was the binding force of the whole World, leaving to the spirit this poor relic of freedom alone, that it might form its own opinion as to the moral character of the universal flux of which it was itself also a part, and so might persist in praising that as good which it felt to be evil.¹

A classical exposition of this latter-day 'totalitarian' Determinism of the Hellenic spirit has been placed on record by an Antiochene adept in Astrology who is believed to have been the Emperor Marcus's contemporary:²

'Life is a plaything and a wandering in the wilderness and a passing show. . . . This is the work of Fate (*Εἰμαρμένης*) and Chance (*Τύχης*), who ever so softly escort us human beings in order to make the lives of some of us happy and the lives of others unhappy with out rhyme or reason. So life travels its wandering and brutal course, and, as it goes, it brings some things to such increase and glory and prosperity and prominence that many fall in love with these prizes, while other things are wounded by Life and corroded and blighted and landed in oblivion and in peril and in odium. . . . For Fate has enacted, to operate in the life of each one of us, an unalterable series of irrevocably accomplished facts. . . . In these circumstances those who are either innocently or wilfully ignorant of the art of prognostication are harried and fleeced by the goddesses Hope and Chance. . . . On the other hand, those who have studied the art and have attained to the truth which it reveals are able to call their souls their own in a freedom that has no taint of slavishness about it. These freemen condemn Chance, do not cling to Hope, do not fear Death, and live unperturbed (*ἀταράχως*), because they have given their souls an anticipatory training in fortitude. They no longer either rejoice at good fortune or are cast down by bad fortune, but are satisfied with what comes to them. They are not in love with the impossible, and so they bear with self-control (*ἐγκρατῶς*) the enactments [of Fate], and, weaning themselves from all pleasure and servility, they enlist as Fate's soldiers. It is impossible for a man by prayers or sacrifices to overcome the destiny that has been laid down for him from the beginning and to establish a different one for himself according to his desires. What has been given will come to be, even without our prayers; and what has not been fated will not come to pass, even if we pray for it. So, just as the actors on the stage change their make-up to fit the book of the words and play, with a professional propriety, sometimes kings, sometimes

¹ More, P. E.: *Platonism*, second edition (Princeton 1926, University Press), pp. 238-9.

² This is the most probable date of Vettius Valens according to W. Kroll in his *editio princeps* of Vettius's *Anthologiae* (Berlin 1908, Weidmann), p. vi.

brigands, and sometimes yokels or cockneys or gods, in the same way we too ought to play the parts with which we are invested by Fate, and to conform to them without morally capitulating (*οὐ συγγνωσκόντες*) to the chances and changes of Life. If any man rebels, "he will have disgraced himself without modifying his destiny by one jot".¹

The Antonine astrologer's cherished freedom seems to be limited to the single privilege of voting in the affirmative when Queen Fate takes a vote of confidence in her dictatorial régime; and there is equally little substance in the show of freedom that is left to the human will in the classic form that has been given to the Islamic theory of Predestination by the masterful theologian Abu'l-Hasan al-Ash'arī (*vivebat circa* A.D. 873-935). Al-Ash'arī attempts to resolve the apparent contradiction between God's Predestination and Man's Free Will by propounding the doctrine of *Iktisāb*, according to which the human will accepts for itself the destiny which God has already assigned to it. On this showing, 'Man is still an automaton, although part of his machinery is that he believes himself free'.²

¹ Vettius Valens: *Anthologiae*, edited by Kroll, W. (Berlin 1908, Weidmann), p. 246 (Book VI, chap. 1); p. 240 (Book VI, Introduction); pp. 219 and 220-1 (Book V, chap. 9). The quotation at the end of the last of these passages—*κακὸς γινόμενος αὐτὸ τοῦτο μέλειται*—is a garbled version of the Stoic philosopher Cleanthes' verse *κακὸς γινόμενος οὐδὲν ἥττον ἐβόμαι* which has been quoted in this Study in Part III. A, vol. iii, p. 47, footnote 1, and in the present chapter and volume, p. 421, above.

One of the strangest passages in a strange work is an outburst of resentment at the exhaustion of an atmosphere of freedom of thought without which even Vettius's pseudo-science of Astrology could not live:

'In writing what I have written above I have been filled with pride for my own part in the heavenly science (*θεωρία*) in which I have been clad by the Deity—though nowadays this science is dishonoured and spurned, in spite of its venerable antiquity and its sovereign control over everything in life. Without it, nothing either is or can be, and yet sometimes even to have a name for being an adept in it brings one into odium—in sad contrast to the position of our predecessors, who used to boast of possessing the gift and to congratulate themselves upon it. This fills me with resentment and with envy of those ancient kings and despots who were enthusiasts for the science. Why did I not have the good fortune to live in those spacious days and to breathe the fresh air of their spiritual freedom for research? . . . At the present day the effective investigation of facts is obscured and blighted by Fear. The intellect, driven into negation and no longer fortified by ratiocination, has lost its stability. It has become consequently volatile to a degree at which it threatens to reassume its primeval unconsciousness (*ἀήθη*).'—Vettius Valens, *op. cit.*, ed. *cit.*, pp. 241 and 242 (Book VI, Introduction).

Evidently it had never crossed our author's mind that his own beloved pseudo-science of Astrology itself was both a symptom and a cause of the death, which he is here lamenting, of the Hellenic intellect.

² *The Encyclopædia of Islam*, vol. ii (London 1927, Luzac), s.v. Kadar. Al-Ash'arī's doctrine clearly approaches much nearer towards Predestination than towards Free Will, yet it was intended to establish a middle position between two extreme views which had previously been at war with each other on the arena of Islamic Theology. One of these two earlier opposing views was a thorough-going Fatalism; for, while the Qur'an contradicts itself on the issue of Predestination *versus* Free Will, its author had gradually inclined towards Fatalism, and—no doubt largely in consequence of this tendency in the Prophet Muhammad's own mental evolution—the earliest conscious Muslim attitude towards the problem had been uncompromisingly fatalist. A revolt against this position had, however, broken out—apparently under Christian influences—before A.D. 700; and from that time until the generation of al-Ash'arī the Primitive Muslim Fatalism had been vigorously attacked by the Qadariyah movement, whose supporters maintained that Man has *Qadar* (i.e. command) over his own actions.

After this preliminary observation of the hesitant fatalist's tendency to capitulate in the end to the full rigour of the creed which he has espoused, we may briefly pass in review the graven images of diverse substance in which the same goddess Necessity is worshipped by her whole-hearted devotees. There is, no doubt, an unspeculative form of Fatalism which is content to record Necessity's mighty works without making any inquiry into her nature. This attitude is exemplified in a formula—'Evil had to befall so-and-so, and therefore such-and-such things happened'—which repeats itself, like a refrain, in the history of Herodotus.¹ But more commonly Necessity is envisaged, in less abstract terms, as a force that operates in some particular medium—physical or economic or psychic or theistic.

The dogma of the omnipotence of Necessity on the physical plane of existence seems to have been introduced into Hellenic thought by Democritus—a philosopher whose long life-span (*vivebat circa* 460–360 B.C.) gave him time to grow to mature manhood before becoming a witness of the breakdown of the Hellenic Civilization, and thereafter to watch the process of social disintegration for at least another three score years and ten. 'By Necessity', Democritus pronounced, 'are foreordained all things that were and are and are to come'; and in this proposition 'a full and unhesitating Determinism' was indeed 'asserted as a base-principle of the Universe,' in contrast to the half-hearted Determinism of Democritus's predecessor Leucippus.² Yet Democritus appears to have ignored the problems involved in an extension of the empire of Determinism from the physical to the moral sphere;³ and Epicurus, who was content in general to follow Democritus's lead in sketching out his own perhaps rather perfunctory chart of the Physical Universe, took the drastic step of introducing an infinitesimal dose of rebellious caprice—the famous *παρέγκλιαις* or *clinamen*—into the physical department of Necessity's realm, because Epicurus—believing, as he did, that the Soul had a physical basis—was at the same time unwilling to admit the absolute sovereignty of Necessity in the sphere of morals.

'It were better', Epicurus declared, 'to follow the myths about the Gods than to become a slave to the "Destiny" of the natural philosophers

¹ See, for example, Herodotus: Book I, chap. 8; Book IV, chap. 79; Book V, chap. 33; Book V, chap. 92, 8; Book VI, chap. 64; Book VI, chap. 135; Book VII, chap. 11; Book VII, chaps. 17–18; Book VIII, chap. 53; Book IX, chap. 109. Translations of these ten passages will be found in Toynbee, A. J.: *Greek Historical Thought* (London 1924, Dent), pp. 160–1.

² Bailey, C.: *The Greek Atomists and Epicurus* (Oxford 1928, Clarendon Press), pp. 120–2.

³ *Ibid.*, pp. 186–8. It is curious to find this devotee of Physical Necessity castigating, in the field of human action, the weakness of the character that bows down and worships Chance.

(τῇ τῶν φυσικῶν εἰμαρμένη δουλεύειν); for the former suggests a hope of placating the Gods by worship, whereas the latter involves a necessity which knows no placation.¹

The dogmatic belief in an unmitigated Physical Determinism which was thus proposed by Democritus and declined by Epicurus in the course of the development of Hellenic thought was the foundation of the astral philosophy of the dominant minority in a disintegrating Babylonian World, as we have already had occasion to observe;² and we have also observed that the astrologers did not shrink from carrying to their logical conclusion the scientific principles of the uniformity of Nature and the mutual sympathy of all her creatures by extending the empire of Determinism from the motions of the heavenly bodies to the lives and fortunes of human beings. According to the thesis of at least one distinguished modern Western authority³ Nabonidus's Babylonia contributed more than Democritus's Abdera to inspire Zeno of Citium with the 'totalitarian' Fatalism that distinguishes his philosophy from that of his Athenian contemporary Epicurus. If we now turn from Hellas and Babylon to our own Western World, we shall observe that our modern Western physical scientists have adopted the creed of Physical Determinism with the wholeheartedness of a Democritus, while, in the sphere of the humanities, our moral philosophers have been more ready to follow suit to the physicists, as Zeno did, than to protest in company with Epicurus.

However that may be, the modern Western World seems to have broken virgin soil in extending the empire of Necessity into the economic field—which is, indeed, a sphere of social life that has been overlooked or ignored by almost all the minds that have directed the thoughts of other societies. The classic exposition of Economic Determinism is, of course, that philosophy—or religion⁴—whose founder is Karl Marx; but in the Western or Westernized World of to-day the number of the souls who testify by their acts to a conscious or unconscious conviction that Economic Necessity is Queen of All is vastly greater than the number of professing Marxians, and would be found in fact to include a phalanx of arch-capitalists who would repudiate with horror and indignation any suggestion that they were fundamentally at one, in the faith by which they lived, with the execrable prophet of Communism.

¹ Epicurus, *Letters*, No. 3, § 134. This translation of the passage, together with the original Greek, will be found in Bailey, *op. cit.*, on p. 318.

² In V. C (i) (c) 1, pp. 56-7, above.

³ See Bidez, J.: *La Cité du Monde et la Cité du Soleil chez les Stoïciens* (Paris 1932, Les Belles Lettres), *passim*, and especially p. 52.

⁴ For the transformation of the original Marxian philosophy into a new-fangled proletarian religion see V. C (i) (c) 2, pp. 176-7, above.

The sovereignty of Necessity in the psychical sphere has also been proclaimed by one faction, at least, in our fledgling school of modern Western psychologists, who have been tempted to deny the existence of the Soul—in the sense of a personality or self-determining spiritual whole—in the excitement of an apparent initial success in an endeavour to analyse the Soul's processes of psychic behaviour. And, young though the science of Psycho-analysis is, the worship of Necessity in the medium of soul-stuff can already claim as its convert the most sensationally successful politician of the age.

'I go my way with the assurance of a somnambulist, the way which Providence has sent me.'

These words are quoted from a speech which was delivered by Adolf Hitler at Munich on the 14th March, 1936; and they sent a cold shudder through the frames of millions of European men and women beyond the frontiers of the Third Reich (and perhaps inside them too) whose nerves had not yet had time to recover from the preceding shock of the German military reoccupation of the Rhineland seven days before.

There is another version of the creed of Psychical Determinism which breaks the bounds of the narrow Time-span of a single human life on Earth and carries the chain of spiritual cause and effect both backwards and forwards in Time without a break—backwards to the first appearance of Man on this terrestrial stage, and forwards to his final exit from it. This more formidable application of the dogma of Determinism to spiritual affairs was already a burning question many centuries before either National Socialism or Psycho-analysis were first heard of; and this older and deeper doctrine is found in two variants which, to all appearance, have arisen quite independently of one another. One variant is the Christian conception of 'Original Sin'; the other is the Indic conception of *Karma*, which has entered into both the philosophy of Buddhism and the religion of Hinduism.

These two renderings of one doctrine agree with one another in the essential point of making the chain of spiritual cause and effect—and the corresponding debit-and-credit account in the Book of Judgement—run on continuously from one earthly life to another. In both the Christian and the Indic view the character and conduct of a human being whom we behold alive on Earth to-day are held to have been causally conditioned by the nature of certain actions that have been performed in other lives¹—or in one other life²—lived in the past, while the life that is now being

¹ The Indic variant.

² The Christian variant.

lived is believed not only to have had a spiritual heritage entailed upon it, but also to be destined to bequeath a spiritual heritage to lives that are to be lived in the future.¹ To this extent the Christian and the Indic conception coincide, but beyond this point they diverge from one another.

The Christian doctrine of 'Original Sin' affirms that a particular personal sin of the progenitor of the Human Race has entailed upon all his offspring an untoward spiritual heritage which they would all have been spared if Adam had not fallen from grace; that every descendant of Adam, *ex officio stirpis*, is foredoomed to inherit this Adamic blemish; that he does in fact find himself saddled with it automatically; and that this hereditary spiritual infection is transmitted by physical descent without the moral plague being stayed by the psychic insulation of soul from soul (although this psychic insulation or 'individuality' of each and every soul is both absolute and all-important, according to the Christian belief). It will be seen that this Christian affirmation of the fact, and conception of the nature, of spiritual heredity in Mankind² anticipates the doctrine of a school of modern Western biologists who hold that the physical heritage of living creatures is handed down from one generation to another, across the ever-recurring gulf which divides the successive individual representatives of a species, without any modification of the original specific type through the subsequent transmission of characteristics that may have been personally acquired by individual descendants of the first member of the series. In the spiritual, as in the physical, version of the doctrine of 'Original Sin' the power of transmitting

¹ This conception of 'Original Sin' or *Karma* is accepted by Christianity and by Buddhism alike; and in this measure both Christianity and Buddhism explicitly recognize the sovereignty of the goddess Necessity; but of course it would be a travesty of the truth to classify either of these two faiths as a form of Necessity-worship or Fatalism; for, while they both of them take as their premiss the proposition that Man, in his unredeemed state, is in bondage *de facto* to 'Original Sin' or to *Karma*, the purpose of both faiths is to find for Man some method of release from Necessity's yoke, and their claim to Man's attention and allegiance rests on their conviction that they are able to offer him a method of release that is capable of being effective. 'The difference for Greeks between the teaching of Babylon and the teaching of Buddha' is underlined by Tarn in *op. cit.*, p. 60. This difference—which likewise distinguishes the teaching of Babylon from the teaching of Christ—is momentous, not merely for Hellenes, but for all men in all cultural climes and in all ages.

² The topic of 'Original Sin' has, of course, become one of the main arenas of theological controversy between contending Christian sects; yet the differences between their conflicting views on this subject—wide though these differences may be and bitterly though the points of conflict may be contested between them—seem to presuppose a certain common foundation of belief which is identical in all the contending schools of Christian Theology. The propositions which appear to be accepted by all Christian theologians universally and without contention are (i) that Adam, through a personal sin, has transmitted to all his physical descendants a spiritual heritage which is (a) untoward, (b) automatically inherited; (ii) that this faculty of physically transmitting an acquired spiritual characteristic (which in Adam's case happens to have been a state of lapse from grace) is a property, peculiar to the progenitor of the Human Race, which has never been possessed, and never will be possessed, by any of Adam's descendants, either for good or for evil.

an acquired characteristic from one individual to another is ascribed to Adam but is denied to every one of Adam's descendants.

The apparently arbitrary inner contradictions which are thus latent in the Christian conception of 'Original Sin' are not likewise implicit in the Indic conception of *Karma*. According to this Indic doctrine the spiritual characteristics that an individual acquires through his own acts are all transmitted from first to last, and for good or for evil, without exception; and the bearer of this cumulative spiritual heritage is not a genealogical tree representing a procession of successive separate personalities, but is a spiritual continuum (either a single permanently subsisting self or else a selfless continuum of psychological states)¹ which appears and reappears in the World of Sense through a series of reincarnations in a succession of phenomenal existences whose semblance of separateness from one another and of respective individuality is merely an hallucination in the minds of spectators.² These are the presuppositions of the Indic conception of *Karma*: a Sanskrit word which literally means just 'Action', but which has been restricted, in the technical terminology of philosophy and religion, to bear the special meaning of moral action, flowing from deliberate acts of will, which produces an abiding effect upon the character of the agent and which thus mounts up cumulatively, in an ever-open debit-and-credit account, from one re-incarnation to another.³

Finally we have to take notice of the theistic form of Determinism—a form which is perhaps the most bizarre and perverse of all, since in this Theistic Determinism an idol is worshipped in the likeness of the True God. The addicts to this covert idolatry still theoretically ascribe to the object of their worship all the attributes of a divine personality, while at the same time they insist upon the single attribute of transcendence with an emphasis so disproportionate that their God becomes transformed into a being as unapproachable, unknowable, unaccountable, implacable, and impersonal as *Saeva Necessitas* herself.

The 'higher religions' that have emanated from the internal

¹ The analysis of the human personality into a (not indissoluble) continuum of psychological states is a cardinal point of Buddhist doctrine which can be traced back, almost with certainty, to Siddhārtha Gautama himself; and this psychological scheme involves, at any rate implicitly, a denial of the existence of any such thing as a permanently abiding self (see Thomas, E. J.: *The History of Buddhist Thought* (London 1933, Kegan Paul), chap. 8).

² The spectators who suffer from this hallucination include not only outsiders but also the subject himself in his incarnation of the moment, if and when he is not in a state of enlightenment. It is only through attaining to enlightenment that the subject of *Karma* can make his memory leap the gulf between his present incarnation and his former lives, and thus become aware of the whole of the spiritual continuum of which his momentary embodiment is a temporary vehicle.

³ For the effect of a belief in the operation of this law upon the Indic conception of the nature of the Universe see V. C (i) (d) 7, vol. vi, pp. 19-20, below.

proletariat of the Syriac Society are the spiritual fields in which this idolatrous perversion of a transcendental Theism seems most apt to break out. The two classic examples of it are the notion of *Qismet*—a popular version, current in the modern Islamic World, of al-Ash'ari's classical doctrine of *Iktisab*¹—and the doctrine of Predestination as this has been formulated by Calvin on the alleged authority of Saint Augustine and has been presented in this guise by the modern Western Protestant revolutionary as a return to the original and fundamental teaching of the Christian Church.

Qismet is an Arabic word which means literally just 'distribution', but which has acquired the special meaning of the lot assigned to a human being for his life in This World.

'It is this meaning of the Turkish that is best known. In Turkish, however, *Qismet* is not so much an expression of theological doctrines concerning Predestination as of a practical Fatalism which accepts with resignation the blows and vicissitudes of Fate. The same sentiment is often expressed among Persian and Turkish poets by the words *falak* and *çarkh* to express the irrational and inevitable influence exercised by the spheres.'²

The following description of the practical working of this notion of *Qismet* in ordinary life comes from the pen of an acute English observer who was resident in Turkey over a long span of years in the latter part of the seventeenth century of the Christian Era: that is to say, in an age when the Iranic culture of the 'Osmanlis was already in full decadence without having yet begun to be contaminated by the intrusion of the alien culture of the modern West.

'The doctrine of the Turks in this point [of the nature of Predestination] seems to run exactly according to the assertion of the severest Calvinists. . . .

'They are of opinion that every man's destiny is wrote in his forehead, which they call *Narsip* [*Nasīb*] or *Tactir* [*Taqdīr*], which is the Book wrote in Heaven of every man's fortune, and is by no contrary endeavours, counsels or wisdom to be avoided; which tenent is so firmly radicated in the minds of the vulgar that it causes the souldiery brutishly to throw away their lives in the most desperate attempts, and to esteem no more of their bodies then as dirt or rubbish to fill up the trenches of the enemy. And, to speak the truth, this received assertion hath turned the Turks as much to account as any other of their best and subtilest maximes.

'According to this doctrine, none ought to avoid or fear the infection of the Plague—Mahomet's precepts being not to abandon the city-house where infection rages, because God hath numbered their dayes and predestinated their fate—and upon this belief they as familiarly attend the beds and frequent the company of pestilential persons as we

¹ See p. 424, above.

² *The Encyclopaedia of Islam*, vol. ii (London 1927, Luzac), s.v. *Kismet*.

do those that are affected with the gout, stone or ague. And, though they evidently see that Christians—who fly into better airs, and from infected habitations—survive the fury of the years of pestilence when whole cities of them perish and are depopulated with the disease, yet so far is this opinion rooted amongst them that they scruple not to strip the contagious shirt from the dead body and to put it on their own. Nor can they remove their abode from the chambers of the sick—it being the custom in the families of great men to lodge many servants on different palets in the same room, where the diseased and healthful lie promiscuously together; from whence it hath happened often that three parts of a Pashaw's family, which perhaps hath consisted of two hundred men, most youthful and lusty, hath perished in the heat of July and August's pestilence. And in the same manner many whole families every summer have perished, and not one survivor left to claim the inheritance of the house—for want of which, the Grand Signior hath become the proprietor.

'Though the Mahometan Law obliges them not to abandon the city nor their houses, nor avoid the conversation of men infected with the pestilence where their business or calling employs them, yet they are counselled not to frequent a contagious habitation where they have no lawful affair to invite them. But yet I have observed, in the time of an extraordinary plague, that the Turks have not confided so much to the precept of their Prophet as to have courage enough to withstand the dread and terrour of that slaughter the sickness hath made, but have under other excuses fled to retired and private villages—especially the *Cadees* [*Qādīs*] and men of the Law, who, being commonly of more refined wits and judgments than the generality, both by reason and experience have found that a wholesome air is a preserver of life, and that they have lived to return again to their own house in health and strength, when perhaps their next neighbours have through their brutish ignorance been laid in their graves.'¹

In this picture of the prevailing Turkish *êthos* in the decadence of the Iranic Civilization the sense of drift is the feature that dominates the psychological landscape.

¹ Rycaut, Sir Paul: *The Present State of the Ottoman Empire* (London 1668, Starkey & Brome), pp. 115–16. This seventeenth-century English observer's picture of the Turkish state of mind in his own day may be supplemented by the following testimony to the hold of Fatalism over eighteenth-century Turkish souls which is given by two twentieth-century Western scholars:

'As for the prevalence of Fatalism, no European observer of the Ottoman Empire in the eighteenth century fails to dwell on it; for it produced striking results: whole quarters of Istanbul were perpetually being burnt down; every few years the population would be decimated by plague. Yet nothing would make the Muslims build their houses of anything but wood or take the slightest precautions, for themselves or their families, against infection. They were, it is true, quite inconsistent: for instance, they would call in a physician to treat a patient and would do their best to extinguish these conflagrations: what constituted flying in the face of Fate was settled rather by convention than otherwise. The one unpardonable blasphemy was to complain of misfortune; for this was to imply either that an event might occur otherwise than by the will of God, or else that the will of God was unjust. The correct response was an immovable calm and a reference to *Qismet* or *Taqdir*' (Gibb, H. A. R., and Bowen, H.: *Islamic Society and the West*, vol. i (Oxford 1939, University Press), chap. 13).

5. *The Sense of Sin*

While the sense of drift is a passive feeling¹—even when it finds expression in the seemingly dynamic activities of a militant predestinarianism²—it has an active counterpart and antithesis in the sense of sin which is an alternative reaction to an identical consciousness of moral defeat.

In essence and in spirit the sense of sin and the sense of drift present the sharpest contrast to one another; for, while the sense of drift has the effect of an opiate in instilling into the soul an insidious acquiescence in an evil that is assumed to reside in external circumstances beyond the victim's control, the sense of sin has the effect of a stimulus because it tells the sinner that the evil is not external after all, but is within him³ and is therefore subject to his will—if only he wills to carry out God's purpose and so to render himself accessible to God's grace. There is here the whole difference between the Slough of Despond and the Faith that moves mountains; yet at the same time we can see that there may be a margin of common ground between the mountains and the slough in practical life—an intermediate zone of feeling and conduct across which a soul in travail with the spiritual pangs of an age of social disintegration may make an arduous passage from the passive to the active mood.

The existence of this no-man's-land in which the two moods overlap is implicitly assumed in the Indic conception of *Karma*;⁴ for, although on the one hand *Karma*, like 'Original Sin', is conceived of as a spiritual heritage with which the Soul or the continuum of psychological states is saddled without the option of repudiating it, the accumulation of *Karma*, as it stands at a given moment, is also the net result of a number of acts which—good and evil acts alike—have all been deliberate acts of will; and at any moment it is possible, through other such acts of will, either to increase the weight of the inherited burden or to diminish it. Thus, while *Karma* can be regarded in one aspect as a burden forcibly imposed by the inexorable working of the law of causation, there is an alternative light in which it can be viewed as a burden that is deliberately increased or diminished, assumed or thrown off, by acts which are all within the scope of the agent's own volition.⁵

¹ See V. C (i) (d) 1, p. 380, and V. C (i) (d) 4, pp. 412–31, above.

² See V. C (i) (d) 4, Annex, pp. 615–18, below.

³ See IV. C (iii) (a), vol. iv, pp. 120–2, above.

⁴ See V. C (i) (d) 4, pp. 427–9, above.

⁵ These two at first sight irreconcilable aspects of *Karma* can perhaps be brought into harmony by the consideration that, while the chain of acts that generates *Karma* is a chain of cause and effect, the acts themselves are all of them deliberate acts of volition.

When viewed under this aspect, *Karma* presents itself as the work of the soul (or bundle of psychoses) that is its subject, and no longer as the work of a Destiny that is external to the subject and unamenable to his (or its) control; and under this aspect *Karma* resolves itself into Sin instead of Fate. It turns out, that is, to be an evil of which the subject is himself the author, but which, by the same token, he has the power to diminish and perhaps even in the end to extinguish.

The same passage to a conquerable Sin from an unconquerable Fate can be made along a Christian road; for the Christian soul is offered a possibility of purifying itself from the taint of 'Original Sin', which is its heritage from Adam, by seeking and finding God's grace; and this divine grace does not operate as a sheerly transcendent spiritual force that scours off from the Soul an impurity which is likewise external to it. Grace comes as a divine response to a human effort; and, in order to merit this aid, the effort has to be directed towards overcoming—not, of course, the infectious primal sin which was committed by Adam and which must therefore *ex hypothesi* be impervious to the human action of any human being except Adam himself—but the personal sin of the particular soul that is now striving to win release. This personal sin may be traceable, *sub specie theologiae*, to an innate predisposition towards concupiscence which is Adam's untoward legacy to every one of his descendants; but a predisposition is not tantamount to a predetermination nor a temptation to a fall. And a sinner cannot find excuse for his sin by pleading that, in committing it, he has been yielding to a congenital frailty. For Adam's offspring, as for their progenitor, the responsibility for the sinner's own personal sin rests on the sinner himself. But, on that hypothesis, this personal sin is an evil which the Soul is capable of resisting and overcoming with the help of God's grace.

An awakening to the sense of sin can be detected in the development of the Egyptiac conception of the Life after Death in the course of the Egyptiac 'Time of Troubles';¹ but the classical case is the spiritual experience of the Prophets of Israel and Judah in the Syriac 'Time of Troubles'. When these prophets were

¹ In the time of 'the Old Kingdom' the attainment of bliss in the After Life was held to depend upon the fulfilment, in This World, of ritual requirements involving a material outlay. By the time of the establishment of 'the Middle Empire' the attainment of bliss in the After Life had come to be held to depend upon the living, in This World, of a righteous life. The aspirant to happiness after death no longer expected to be able to extort the prize from the Gods by the exercise of magic: he expected to stand a trial in which the Gods would be the judges, the Soul's moral conduct on Earth would be the subject of the divine scrutiny, and the alternatives of happiness and torment would be respectively the reward and the punishment that awaited the Dead alternatively according to whether the verdict were favourable or adverse (see I. C (ii), vol. i, p. 143, above, and also Meyer, E.: *Geschichte des Altertums*, vol. i, part (2), third edition (Stuttgart and Berlin 1913, Cotta), p. 242).

discovering their truths and delivering their message, the society out of whose bosom they had arisen, and to whose members they were addressing themselves, was lying in helpless agony in the grip of the Assyrian tiger, with the monster's claws lacerating the prostrate victim's flesh and its teeth splintering his bones like matchwood.¹ For souls whose body social was in this fearful plight, it was a heroic spiritual feat to reject the obvious and specious explanation of their misery as the work of an irresistible external force of a material kind, and to divine that, in spite of all outward appearances, it was their own sin that was the true cause of their tribulations² and that it therefore lay in their own hands to win their true release.

This saving truth which had been discovered by the Syriac Society in the ordeal of its own breakdown and disintegration was inherited from the Prophets of Israel, and was then propagated in a Christian guise, by the Syriac wing of the internal proletariat of the Hellenic World. Without this instruction from an alien source in a principle which had already been apprehended by Syriac souls with an altogether un-Hellenic outlook, the Hellenic Society might never—even in its own 'Time of Troubles'—have succeeded in learning a lesson which was so much at variance with the dominant mood in the Hellenic *êthos*. At the same time the Hellenes might have found it still more difficult than they did find it to take this Syriac spiritual discovery to heart if they had not, of their own motion, been moving in the same direction themselves.

This native awakening to a sense of sin can be traced in the spiritual history of Hellenism many centuries before a Hellenic trickle mingled with a Syriac stream in the river of Christianity.³

If we have been right in our interpretation of the origin, nature, and intention of Orphism,⁴ there is evidence that, even before the Hellenic Civilization broke down, at least a few Hellenic souls had become so painfully conscious of a spiritual void in their native cultural heritage that they had resorted to the *tour de force* of artificially inventing the 'higher religion' with which the apparent Minoan Civilization had failed to endow them. It is at any rate certain that, in the very first generation after the breakdown of 431 B.C., the apparatus of Orphism was being used—and abused—for the purpose of providing satisfaction for souls that were already convicted of sin and were groping, however blindly, for release from it. For this we have the testimony of a passage of Plato which might almost have flowed from the pen of Luther.

¹ See V. C (i) (c) 2, pp. 117-19, above.

² Reasons for pronouncing a verdict of suicide, and not one of murder, upon the death of the Syriac Society have been suggested in IV. C (ii) (b) 1, vol. iv, pp. 67-8, above.

³ See V. C (ii) (a), Annex II, vol. vi, p. 537, below.

⁴ See V. C (i) (c) 2, pp. 84-7, above.

'There are the quacks and diviners who peddle their wares to the rich and make them believe that these cheapjacks possess powers, procured from the Gods by sacrifices and incantations, for healing with diversions and festivities any sin that has been committed either by oneself or by one's forebears. Conversely—supposing that one wants to plague an enemy—they pretend to the command of corresponding powers for inflicting injury (upon the just and the unjust indifferently) by charms and spells at a modest price. This they claim to do by inducing the Gods to minister to their purposes; and as their authorities for all this rigmarole they cite the poets . . . and produce a host of books purporting to have been written by Musaeus and Orpheus, whom they palm off as the offspring of the Moon and the Muses. They follow these books in their hocus-pocus; and they persuade even Governments, as well as private people, that a release and purification from sin can be obtained by means of sacrifices and agreeable child's-play! They further maintain that these "rites" (as they call them in this connexion) are as efficacious for the dead as they are for the living. "Rites" liberate us from the torments of the world beyond the grave, while a dreadful fate awaits us if we neglect here and now to make sacrifices.'¹

This first glimpse that is given to us of a native sense of sin in the souls of the Hellenic dominant minority in its 'Time of Troubles' looks as unpromising as it is repulsive. Yet two and three and four centuries later, in the tender consciences of an Agis and a Cleomenes and a Tiberius and a Gaius Gracchus² and in the tardy yet sincere repentance of Augustus,³ we see a native Hellenic sense of sin which has been purified, out of all recognition, in the fires of suffering; and there is almost a Christian note in the voice of the Hellenic dominant minority in the Augustan Age as this makes itself heard in the poetry of Virgil:

Ergo inter sese paribus concurrere telis
 Romanas acies iterum videre Philippi;
 nec fuit indignum superis bis sanguine nostro
 Emathiam et latos Haemi pinguescere campos. . . .
 Di Patrii, Indigetes, et Romule Vestaque mater,
 quae Tuscum Tiberim et Romana Palatia servas,
 hunc saltem everso iuvenem succurrere saeclo
 ne prohibete. satis iam pridem sanguine nostro
 Laomedontae luimus periuria Troiae. . . .
 quippe ubi fas versum atque nefas; tot bella per orbem;
 tam multae scelerum facies; non ullus aratro
 dignus honos: squalent abductis arva colonis
 et curvae rigidum falces conflantur in ensem.

¹ Plato: *Respublica*, 364B-365A.

² For these four archaistic-minded social reformers see the references in V. C (i) (d) 1, p. 388, footnote 1, above.

³ See V. C (i) (c) 2, p. 78, above, and V. C (i) (d) 6 (δ), Annex, p. 648, and V. C (ii) (a), vol. vi, p. 187, below.

hinc movet Euphrates, illinc Germania bellum;
 vicinae ruptis inter se legibus urbes
 arma ferunt; saevit toto Mars impius orbe;
 ut cum carceribus sese effudere quadrigae,
 addunt in spatio, et frustra retinacula tendens
 fertur equis auriga neque audit currus habenas.¹

This is a prayer for delivery from a torturing sense of drift which is conveyed in the last three lines by one of the most vivid strokes of Virgil's art. The prayer takes the form of a confession of sin; and, though the sin from which the poet implores Heaven for release is nominally an 'original sin' inherited from Laomedon—a minor character in the Greek Epic Cycle of Troy who by Virgil's time had come to be adopted as a legendary Trojan progenitor for an authentic Roman dominant minority—the tremendous *ergo* which is the first word of the first line and the key word of the whole passage tells the reader that the sin which the Romans were expiating in Virgil's day was really the sin which they themselves had been committing during the two-centuries-long rake's progress upon which they had entered when they plunged into the Hannibalic War²—a sin that, in its fearful climax, had driven the Sun himself to veil his countenance,

cum caput obscura nitidum ferrugine texit,
 impiaque aeternam timuerunt saecula noctem.³

Within a century of the year in which Virgil's poem was written, the spirit that breathes through these passages had become predominant in a stratum of the Hellenic Society which had hardly yet come within range of the radiation of Christianity.

'From whatever quarter, a new spiritual vision had opened, strange to the Ancient World. It is not merely that the conception of God has become more pure and lofty: the whole attitude of the higher minds to the eternal had altered. A great spiritual revolution had concurred with a great political revolution. The vision of the Divine World which satisfied men in the Age of Pericles or in the Punic Wars, when Religion, Politics, and Morality were linked in unbroken harmony⁴—when, if spiritual vision was bounded, spiritual needs were less clamorous, and the moral life less troubled and self-conscious—could no longer appease

¹ Virgil: *Georg.* I, ll. 489-92, 498-502, 505-14. Some of these lines have been quoted already in IV. C (iii) (c) 3 (β), vol. iv, p. 509, above.

² See IV. C (iii) (c) 3 (β), vol. iv, pp. 505-8, above.

³ Virgil: *Georg.* I, ll. 467-8. The crime which, according to Virgil, had been signalized by this portent of diurnal darkness was, of course, the assassination of Caesar and not the crucifixion of Christ. This traditional association of an eclipse of the Sun with the death of a hero who is being cut off in his prime by a heinous piece of foul play can be traced back to the legend of Hēraklēs (see V. C (ii) (a), Annex II, vol. vi, p. 473, below).

⁴ For the diffraction, during the process of social disintegration, of the rays of social radiation which are blended into a single clear beam during the process of social growth, see I. B (iii), vol. i, pp. 26-33, and V. C (i) (c) 3, in the present volume, pp. 199-203 above.—A.J.T.

the yearnings of the higher minds. Both Morality and Religion had become less formal and external, more penetrating and exigent. Prayer was no longer a formal litany for worldly blessings or sinful indulgence, but a colloquy with God in a moment of spiritual exaltation. The true sacrifice was no longer "the blood of bulls" but a quiet spirit. Along with a sense of frailty and bewilderment men felt the need of purification and spiritual support. The old mysteries and the new cults from the East had fostered a longing for sacramental peace and assurance of an Other Life, in which the crooked should be made straight and the perverted be restored.¹

This picture of the spiritual state of the Hellenic dominant minority about a hundred years later than the generation of Augustus has been painted by a modern Western scholar with authentic colours that have been preserved in the literature of the age; and it is a different picture indeed from the sketch drawn by Plato some five hundred years earlier. In retrospect it is plain that the generations of Seneca and Plutarch and Epictetus and Marcus were unwittingly preparing their hearts for an approaching enlightenment from a proletarian source out of which these sophisticated Hellenic 'intellectuals' would never have augured the coming of any good thing.²

The Hellenic and Syriac societies are assuredly not the only civilizations in which there has been an awakening to the sense of sin through the shock of seeing an ancient social structure collapse in ruin. We may tentatively interpret the penitential self-mortifications of the Mayas³ in their age of social decadence as an outward visible sign of an inward spiritual state; and we may draw the same inference in the same tentative fashion from certain relics of the Sumeric religion: the Penitential Psalms and the worship of Tammuz and Ishtar.⁴ In the Sumeric and in the Mayan field the historian is working almost entirely in the dark, with only a rare glimmer of uncertain light to guide him. It is strange to find ourselves equally at a loss to answer the question whether a native sense of sin can be detected in the present state

¹ Dill, S.: *Roman Society from Nero to Marcus Aurelius* (London 1905, Macmillan), pp. 420-1. Compare the passages quoted in V. C (i) (d) 6 (8), pp. 550-1, below.

² John i. 46. On this point see further V. C (i) (d) 6 (8), pp. 550-68, below.

³ See V. C (i) (d) 2, p. 403, above. This vein in the religion of the Mayas in the time of the Mayan universal state duly reappears in the Mayan religious heritage of the Mexic Society (for this heritage see I. C (i) (b), vol. i, p. 127, and V. C (i) (c) 4, in the present volume, p. 357, above). Dirges on the themes of mutability and death are a prominent feature in the literature of the interloping barbarian Aztec empire-builders who embraced the religion of the Mexic World (see V. C (i) (c) 4, p. 357, above) and came within an ace of anticipating the Spaniards in establishing a Central American universal state (see Spinden, H. J.: *Ancient Civilizations of Mexico and Central America* (New York 1922, American Museum of Natural History, Handbook No. 3), pp. 212-13).

⁴ For the difficulty of replacing these relics of the Sumeric religion in their historical setting so long as we are handicapped by our present dearth of historical evidence see, I. C (i) (b), vol. i, p. 115, footnote 1, and V. C (i) (c) 2, in the present volume, pp. 148-9, above.

of mind of the society in which we ourselves actually live and move and have our being.

The sense of sin is, no doubt, a feeling with which our modern Western homunculus is quite familiar. A familiarity with it is, indeed, almost forced upon him; for the sense of sin is a cardinal feature of the 'higher religion' which we have inherited from the dead civilization to which ours is affiliated. In this case, however, familiarity seems latterly to have been breeding—not so much contempt as the more violent reactions of aversion and hostility. And the contrast between this temper of the modern Western World and the contrary temper of the Hellenic World in the sixth century B.C. shows up the vein of perversity in human nature. Though our historical evidence for the early age of Hellenic history is too scanty to be conclusive, it indicates, as we have seen,¹ that the Hellenic Society, starting life with the jejune and unsatisfying religious heritage of a barbarian pantheon, became conscious of its spiritual poverty and exerted itself to fill the void by inventing, in Orphism, a 'higher religion' of the kind that some other, perhaps more fortunate, civilizations have inherited from their predecessors; and the character of the Orphic ritual and doctrine makes it clear that the sense of sin was the pent-up religious feeling for which the Hellenes of the sixth century B.C. were eager, above all, to find a normal outlet. In contrast to the Hellenic Society our Western Society is one of those more generously endowed civilizations that have grown up under the aegis of a 'higher religion' and within the chrysalis of a universal church; and it is perhaps just because Western Man has always been able to take his Christian birth-right for granted that he has persistently depreciated and finally repudiated it.

The history of this graceless *Homo Occidentalis* who has turned against the Christianity that found him a barbarian and has promoted him to the lordship of creation is a tale of *ἔβρις* which has been told in the parable of Jeshurun.

'He found him in a desert land and in the waste howling wilderness; He led him about, He instructed him, He kept him as the apple of His eye. . . .

'He made him ride on the high places of the Earth that he might eat the increase of the fields, and He made him to suck honey out of the rock and oil out of the flinty rock. . . .

'But Jeshurun waxed fat and kicked . . . then he forsook God which made him, and lightly esteemed the rock of his salvation.'²

Of all the gifts of Christianity against which our modern Western Jeshurun has been kicking in these latter days, the sense of sin

¹ In V. C (i) (c) 2, pp. 84-7, above.

² Deut. xxxii. 10, 13, and 15.

is perhaps the one which has moved him to the direst fury of rebellion. You have only to mention the sense of sin in order to be sure of making the modern-minded Westerner 'see red'. The degree to which he flatters himself that he has succeeded in plucking this sense out and casting it from him is for him almost the measure of his success in his struggle to emancipate himself from the bondage of that Christian tradition in which he has been bred. And the cult of Hellenism, which has been so potent, and in many ways so fruitful, an ingredient in our secular Western culture during the last four centuries, has been partly fostered and kept alive by a conventional conception of Hellenism as a way of life which gloriously combines with all our own modern Western virtues and attainments an innate and effortless freedom from that hateful sense of sin which Western Man is now industriously purging out of his *ci-devant* Christian spiritual heritage.¹

Will modern Western Man repent of, and recoil from, his *ὑβρις* before it finds its nemesis in *ἄρνη*? If this is the riddle of the destiny of our Western Civilization, the answer cannot yet be forecast in a generation which has been born into the critical act of the tragic drama. But we may anxiously scan the landscape of our contemporary spiritual life for any symptoms that may give us ground for hope that we are regaining the use of a spiritual faculty which we have been doing our worst to sear and sterilize. Dare we allow ourselves to see at any rate a favourable omen in the emphasis that is laid upon a conviction of sin in the 'revivalist' version of Protestantism which has been rife on the English-speaking fringe of the Western World during the last two hundred years and which—winning its first foothold in a nascent industrial proletariat, and spreading thence to a rising lower-middle class—has lately been carried into the citadel of a paganized dominant minority by the shock-tactics of the so-called 'Oxford Groups'?

6. *The Sense of Promiscuity*

(α) *Pammixia and Proletarianization.*

The Receptivity of Empire-Builders.

A sense of promiscuity is the passive substitute for that sense of style which develops *pari passu* with the growth of a civilization.² This state of mind takes practical effect in an act of self-surrender to the melting-pot; and in the process of social disintegration an identical mood manifests itself in equivalent action in every province of social life:³ in Religion and Literature and Language and

¹ For the element of truth in this picture of Hellenism as an historic example of the blessedness of being spiritually 'once-born' see II. D (vii), vol. ii, pp. 355-7, above.

² See III. C (iii), vol. iii, pp. 377-90, above.

³ See V. C (i) (d) 1, p. 381, above.

Art, as well as in a wider and vaguer field that may be labelled 'Manners and Customs'. In attempting an empirical survey of the manifestations of this sense of promiscuity in the declines and falls of those civilizations that have broken down up to date within the brief span of some five or six thousand years during which this species of societies has been in existence so far, it will be convenient to sift out the phenomena for separate consideration under these different heads. It will also be convenient to begin operations in the field of 'Manners', since this is the field which has the widest range, while the spiritual crop that it bears is not to be despised if there is any truth in the adage that 'Manners makyth Man'.

In looking out for the earliest and strongest evidence for the emergence of a sense of promiscuity in the body social of a disintegrating society we shall perhaps be inclined to turn our eyes with the greatest expectancy towards the Internal Proletariat. In bringing the representatives of the Internal Proletariat on to our stage in an earlier chapter¹ we have observed that their common and characteristic affliction is the torture of being torn up by the roots; and this terrible experience of social 'deracination' might be expected, above all other experiences, to produce a sense of promiscuity in souls that had been compelled to undergo it. This *a priori* expectation is not, however, borne out by the historical facts; for, more often than not, the ordeal to which an internal proletariat is subjected seems to strike that optimum degree of severity at which the challenge acts as a stimulating spur and not as a crushing sledge-hammer;² and we see the uprooted and expatriated and enslaved men and women of whom an internal proletariat is composed not only keeping a firm hold upon any shreds of their torn and trampled native social heritage that they have been able to carry with them into exile or captivity, but actually going on to impart these fragmentary remnants of their ancestral culture to a dominant minority who, *a priori*, might have been expected—so far from receiving any cultural impress from that quarter—to impose their own 'culture-pattern' upon the mob of waifs and strays whom they have caught in their net and forced under their yoke.

¹ See V. C (i) (c) 2, *passim*, above.

² For the notion of Challenge-and-Response see Part II. D, vol. ii, *passim*, above. 'The Golden Mean' in the working of Challenge-and-Response is discussed in II. D (vii). The application of these principles to the life of the Internal Proletariat has been touched upon, in this context, in II. D (vi), which deals with the stimulus of penalizations. The ordeal of 'deracination', which is thus apt to evoke a victorious response from members of the Internal Proletariat, is on the contrary apt to have a demoralizing effect upon members of the External Proletariat when these are uprooted and transplanted in consequence, not of exile or enslavement, but of a *Völkerwanderung* in which their war-bands break through a *limes* and migrate from a no-man's-land into an Eldorado as military conquerors (see V. C (i) (c) 3, p. 201, footnote 1, above, and Part VIII, below).

It is still more surprising to see—as, again, we do see—the Dominant Minority showing itself similarly receptive to the cultural influence of the External Proletariat, considering that these truculent war-bands are insulated from the Dominant Minority by a military frontier and that their barbarian social heritage might have been expected to be lacking in both the charm and the prestige that manifestly still cling even to the tatters of those mellow civilizations to which the Internal Proletariat is heir in the persons of some, at least, of its involuntary recruits.

Nevertheless we do find, as a matter of fact, that, of the three factions into which a disintegrating society is apt to split, it is the Dominant Minority that succumbs to the sense of promiscuity the most readily, and this in its military intercourse with the External Proletariat beyond the *limes* as well as in its economic intercourse with the Internal Proletariat in the *ergastulum*. The ultimate result of these two parallel processes of 'proletarianization' to which the Dominant Minority yields itself is a disappearance of that schism in the body social which is the index and the penalty of a social breakdown. The Dominant Minority atones, in the end, for its sins by closing a breach that has been its own handiwork; and it closes it by merging itself in the Proletariat in so far as it does not forestall the completion of this process of 'proletarianization' by an act of suicide.

Before we attempt to follow the course of 'proletarianization' along its two parallel lines, it may be illuminating to glance at the evidence for the receptivity of empire-builders, since this pre-disposition may partly explain the sequel.

The universal states of which these empire-builders are the architects are, for the most part, the products of military conquest, and we may therefore look for our finest examples of receptivity in the sphere of military technique. We may begin by citing testimony to the military receptivity of the Romans which has been given by a Greek witness who was himself a member of the Hellenic dominant minority of the age in which he was writing.

'At the present day', Polybius records, 'the equipment of the Roman cavalryman is practically identical with that of his Greek companion-in-arms. Originally, however, it was otherwise. . . . [Here follows a detailed technical description of the Roman cavalryman's original equipment.] . . . When experience proved their own equipment unsatisfactory, the Romans speedily replaced it by the Greek, which possesses the following advantages. . . . [Technical specifications follow.] . . . The Romans were not slow to make these advantages their own when once they had apprehended them—the fact being that the Romans are without rivals among the nations of the World in their adaptability

and their enthusiasm for progress (ἀγαθοὶ γάρ, εἰ καὶ τινες ἕτεροι, μεταλαβεῖν ἔθη καὶ ζηλώσαι τὸ βέλτιον καὶ 'Ρωμαῖοι).¹

A similar receptivity in the sphere of military technique was shown by the Theban founders of 'the New Empire' of Egypt in borrowing the horse-and-chariot, as a weapon of war, from their defeated *ci-devant* Nomad antagonists the Hyksos; by the marchmen of the Sinic World over against the Eurasian Steppe in following their Nomad neighbours in the substitution of cavalry for chariotry as a more effective way of employing the horse in warfare;² by the Parnian³ and Saka Eurasian Nomad supplanters of Greek empire-builders in Parthia and in India in respectively employing against their Greek antagonists the two Greek weapons of catapults for besieging cities⁴ and naval flotillas for commanding navigable rivers;⁵ by the 'Osmanlis in borrowing the Western invention of fire-arms;⁶ by the Mughals in adopting this same Western innovation at second hand from the 'Osmanlis;⁶ and by the military Powers of the modern Western World in borrowing, in their turn, from their 'Osmanli debtors the immensely potent weapon of a disciplined professional infantry armed with muskets and uniformly dressed and drilled.⁷

The vein of receptivity in the empire-builders which is revealed in this readiness to exchange old lamps for new on points of military technique is not, however, by any means confined to the soldier's business in which these empire-builders have made their fortunes. They show themselves almost equally receptive to 'gadgets' and to habits that have little or nothing to do with the art of war. For example, the Parnian Nomad founders and

¹ Polybius, Book VI, chap. 25, §§ 3-11. A translation of the passage, including the technicalities that have been omitted here, will be found in Toynbee, A. J.: *Greek Civilisation and Character* (London 1924, Dent), pp. 92-3. This receptivity in the sphere of military technique was still being displayed by the Romans in an age, some three hundred years later than Polybius's day, when conservatism had become the note of Roman life in almost every other line of activity.

² The tactics of the Romans in the second century A.D. represent the evolution of a system of warfare based on the experience of centuries of fighting. If the cohort formation and the military camp were essentially Roman products, the phalanx was the contribution of Macedon, and the *gladius* and *lancea* the discoveries of Spain and Gaul. In this effective combination of inventions and inheritances Rome worked out her military organization and strategy, and the secret of her success lay in her willingness to learn from her enemies, and to assimilate the gifts which they had to offer' (Parker, H. M. D.: *The Roman Legions* (Oxford 1928, Clarendon Press)).

³ See III. C (i) (b), vol. iii, p. 167, footnote 1, and IV. C (iii) (c) 2 (γ), vol. iv, p. 439, footnote 4, above. The Sinic war-lord to whom this innovation is attributed was, it is true, a prince of Chao and not a prince of Ts'in, which was the border principality that gave birth to the Sinic universal state.

⁴ See II. D (vii), Annex V, vol. ii, p. 435, footnote 1, above.

⁵ Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), p. 21, footnote 1.

⁶ Tarn, op. cit., pp. 91, 320, 322, 329, 349.

⁷ For Bābur's acknowledgements of his indebtedness to the 'Ghazis of Rum' for the *chefs d'œuvre* of his military technique see I. C (i) (b), Annex I, in vol. i, p. 352, above.

⁸ For this military debt of the modern Western World to the 'Osmanlis see Part III A, vol. iii, p. 38, footnote 2, and IV. C (iii) (c) 2 (γ), vol. iv, p. 450, above.

masters of the Parthian 'successor-state' of the Seleucid Greek 'successor-state' of the Achaemenian Empire appear to have borrowed a number of administrative devices both from their Seleucid Greek predecessors and from their Euthydemid Greek neighbours.¹ Again, the Saka Nomad founders and masters of 'successor-states' of a Bactrian Greek empire on Indian ground borrowed administrative devices from their Greek predecessors and a religion, a language, and perhaps also a literature from their Indian subjects.² This wider range of receptivity is also strikingly illustrated by the following description, from a Greek observer's pen, of the Persian builders of the Achaemenian Empire—a description which is noteworthy for the abruptness of the contrast between the Persians' receptivity in practice and their exclusiveness in theory:

'Next to themselves, the Persians rate highest the peoples that live nearest to them, next highest the next nearest—and so on in a graduated scale in which appreciation varies in inverse ratio to distance, with the remotest nations at the bottom of the honours list. For they consider their own selves to be by far the finest specimens of Mankind in all points, and they grade the rest on the scale aforementioned, which condemns the remotest nations to rank as the worst. . . . There is no nation like the Persians for adopting foreign manners and customs (*ξενικά δὲ νόμια Πέρσαι προσίενται ἀνδρῶν μάλιστα*). For instance, the civilian dress of the Medes seemed to them handsomer than their own, so [in peace time] they wear that, while on active service they wear Egyptian breast-plates. They are also addicted to all kinds of outlandish self-indulgences which they have picked up—among others, unnatural vice, which they have learnt from the Hellenes.'³

A better taste in promiscuity appears to have been shown by the Inca empire-builders of the Andean universal state.

'Ce n'est pas un des moindres mérites des Inka que de s'être mis toujours à l'école des vaincus. Ils ont beaucoup emprunté au point de

¹ According to Tarn, in *op. cit.*, the 'Parthians' borrowed from their Euthydemid Greek neighbours in Bactria the constitutional expedient of appointing sub-kings (p. 90) and the administrative device of raising *ci-devant* Seleucid eparchies to the status of satrapies (p. 240), while from the Seleucidae they borrowed the devices of an official era (p. 65), a division of the empire into a senior western and a junior eastern kingdom (pp. 203-4), and the appointment of a queen regent (p. 317).

² According to Tarn, in *op. cit.*, the Sakas borrowed from their Bactrian Greek predecessors their administrative organization (pp. 241-3), their mints (p. 323), and their calendar (p. 359). Their subsequent borrowings from their Indian subjects were more momentous. They became converts to Hinduism and patrons of the archaistic revival of the classical Sanskrit language (see V. C (i) (d) 8 (γ), vol. vi, pp. 75-7, below). Their patronage may also have played a part in the precipitation of the Indic Epic in its present form (see V. C (i) (c) 3, Annex II, in the present volume, p. 606, footnote 3, below).

³ Herodotus, Book I, chaps. 134-5. This receptivity of the Persian builders of the Achaemenian Empire is compared with that of the Arab builders of the Caliphate by Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 38.

vue matériel au Royaume de Quito; ils ont peut-être aussi emprunté au point de vue spirituel au Royaume des C[h]imu.¹

A precocity in promiscuity is ascribed to the Athenians by one of themselves who has left us a vivid thumb-nail sketch of the cosmopolitan manners that his countrymen acquired as the makers and masters of a premature and abortive Hellenic universal state² which subsisted, from first to last, for barely three-quarters of a century; and, while 'the Old Oligarch's' testimony against a democratic Athens in which he and his kind were at a discount has in general to be received with caution, what he writes in the following passage is corroborated by all the other evidence that has come down to us.

'If we may be excused for mentioning trivialities, we may add to our catalogue of the consequences of the Athenians' command of the sea first and foremost the eclectic fashion of high living which they have elaborated out of what they have picked up here, there and everywhere in their intercourse with foreigners. Their command of the sea has enabled them to assemble on one table tit-bits from Sicily, Italy, Cyprus, Egypt, Lydia, the Pontus, the Peloponnese or anywhere that you will.'³

These exotic ingredients in the diet of Cleonian Athens cannot fail to conjure up, in the mind of any modern Western reader who has tasted 'the Old Oligarch's' Attic salt, a considerably longer catalogue of trivialities that have become woven by now into the very texture of the everyday life of our modern Western World, and which yet are, all of them, 'souvenirs' of the empire-building activities of a *Homo Occidentalis* who during the past four centuries has been ranging over the face of the planet 'as a roaring lion . . . seeking whom he may devour'.⁴ Our tobacco-smoking commemorates our extermination of the red-skinned aborigines of North America to make room for the re-peopling of 'the New World' (as it has been for us) by a population of European origin and Western culture.⁵ Our coffee-drinking and tea-drinking and polo-playing and pyjama-wearing and taking of Turkish baths commemorate the enthronement of the Frankish man-of-business in the seat of the Ottoman Qaysar-i-Rûm and of the Mughal Qaysar-i-Hind. And our jazzing, which is the most recent addition to this repertory of a Western bourgeois household's common round and daily task, commemorates the enslavement of the African

⁵ 1 Peter v. 8.

Negro and his transportation across the Atlantic to labour on American soil in plantations which had taken the place of the hunting grounds of the vanished Red Indian.¹

After this prefatory recital of some of the more notorious evidence for the receptivity of the Dominant Minority in a disintegrating society, we may now proceed to our survey, first of the vulgarization of the Dominant Minority through its pacific intercourse with an Internal Proletariat which lies physically at its mercy, and then of its barbarization through its warlike intercourse with an External Proletariat which eludes its yoke.

The Vulgarization of the Dominant Minority.

While the intercourse of the Dominant Minority with the Internal Proletariat is pacific in the sense that the proletarians of this class have already become physically subject to the Dominant Minority *ex hypothesi*, nevertheless it often happens that the first social contact between subjects and rulers—and even between slaves and masters, where the gulf is of that width—takes the form of an introduction of proletarian recruits into the empire-builders' permanent garrisons or standing armies which have been originally established as instruments of domination and have therefore, at the outset, been recruited, with a jealous exclusiveness, from members of the Dominant Minority only.

The classic example of this dilution of military labour is the recruitment of the Slave-Household of the Ottoman Pādishāh from renegades, prisoners-of-war, and child-conscripts supplied by the Pādishāh's own Orthodox Christian *ra'iyeh*;² for this dilution of the Ottoman standing army and administrative service set in at an early stage of the 'Osmanlis' history as empire-builders; it was the principal cause of their marvellous military and political triumphs; and it was carried to such extremes that in the heyday of the Ottoman Empire the Imperial slave's career was the sole avenue to power, and yet at the same time every free-born Muslim subject of the Pādishāh was debarred from following this career by the stigma of a birth which in almost every other society would have given him a paramount or exclusive title to bear rule. In a rather cruder form this apparent contradiction-in-terms—a proletarian dominant minority—re-appears in the Mamlūk régime in Egypt,³ and we have found traces of it in the substructure of the

¹ See IV. C (iii) (b) 2, vol. iv, pp. 137-41, above. For the less trivial influence which the uprooted African Negro recruit to the overseas section of the proletariat of the modern Western World may be destined to have upon our religion, see II. D (vi), vol. ii, pp. 218-20, and V. C (i) (c) 2, in the present volume, pp. 191-3, above.

² An account of the recruitment, training, organization, and employment of the Ottoman *qullar* has been given, in a different context, in Part III. A, vol. iii, pp. 22-44, above.

³ See Part III. A, vol. iii, pp. 30-1, above.

Mughal Rāj in Hindustan and in the superstructure of the régime under which Hindustan was ruled by the Mughals' forerunners in the fourteenth century of the Christian Era.¹

This *tour de force* of attaching disabilities instead of privileges to noble birth is the peculiarity of empires built *in partibus agri-colarum* by *ci-devant* Nomads whose line of least resistance, in seeking to adapt themselves to their new circumstances, lies in applying to an internal proletariat of human stock the technique that their own ancestors have worked out, on their native steppes, for the domestication of animals.² But at the same time this is only an extreme example of a tendency which is more widely prevalent; for the same process of dilution can be seen at work likewise in the standing armies of dominant minorities of non-Nomadic antecedents.

The history of the standing army of the Roman Empire, for example, is the story of a progressive dilution which began almost on the morrow of the Roman army's transformation from an *ad hoc* and amateur conscript force to a permanent and professional volunteer force by the act of Augustus. From the beginning the Augustan Imperial army included units of *auxilia*, recruited from subjects or semi-subjects of the Empire who were not Roman citizens,³ besides the legions which still at first continued to be composed of citizens exclusively; the *auxilia* perhaps at no time accounted for less than half the total strength of the regular establishment;⁴ and the differentiation between the 'auxiliary' and the 'legionary' branch of the service steadily diminished in significance as the privilege of Roman citizenship came to be extended to an ever widening circle, until the old distinction vanished altogether when Caracalla (*imperabat* A.D. 211-17) completed the process of enfranchisement by conferring Roman citizenship *ex officio* upon every free adult male inhabitant of the Empire who was either a citizen or a subject of any one of the hundreds of local city-

¹ See Part III. A, vol. iii, p. 31, footnote 1, above.

² This point has been made in Part III. A, vol. iii, p. 28, above.

³ These *auxilia* were, indeed, already a well-established arm of the Roman Army by the date of the Augustan reorganization; for they were the successors of, and substitutes for, an older non-citizen force in the shape of the cohorts furnished by the Italian communities that had formerly been *socii* and not citizens of the Roman state. When these Italian *socii* of Rome had at last extorted, by the *ultima ratio* of armed insurrection, an enfranchisement that had long been overdue, the Roman Government had found itself constrained to look elsewhere for non-citizen troops to brigade with the legions. 'By the enfranchising laws of 90-89 B.C. the recruiting area for legionary troops was extended to all Italy south of the Po. The *socii* disappeared, and the Roman Army was now composed of legions of citizen-soldiers and *auxilia* or detachments of foreign troops serving either as volunteers or as mercenaries' (Parker, H. M. D.: *The Roman Legions* (Oxford 1928, Clarendon Press), p. 46).

⁴ See *The Cambridge Ancient History*, vol. x, pp. 228-9, for the numerical ratio between *auxilia* and legions in the Roman Army as reorganized by Augustus. For the recruitment, character, and history of the *auxilia* see Cheesman, G. L.: *The Auxilia of the Roman Imperial Army* (Oxford 1914, Clarendon Press).

states that were the cells of the Imperial body politic.¹ Thereafter (until the radical reorganization of the Imperial army by Diocletian and Constantine) the legions, which had long since struck local roots in their respective cantonments in the provinces, were each recruited almost entirely from the surrounding population within their local radius, and the only surviving units in which the troops were Roman soldiers without being Roman citizens were now those raised (it is true, in growing numbers) from barbarian sources of man-power outside the Imperial frontiers.²

The history of the Roman standing army in a Roman Empire which was the Hellenic Society's universal state is reproduced in the history of the standing army in the Far Eastern universal state as this was reconstructed in the seventeenth century of the Christian Era by Manchu empire-builders;³ and the same tendencies are illustrated by the history of the Arab standing army in the dominions of the Umayyad and the 'Abbasid Caliphate. In its inclusion of Chinese as well as Manchu 'banners'⁴ the Manchu military establishment is an exact counterpart of the Roman with its units of *auxilia* brigaded with the legions.⁵ And the Manchu-Chinese comradeship-in-arms which grew up in the South Manchurian march of the Far Eastern World has a parallel in the Arab-Iranian comradeship-in-arms which grew up in the Syriac World's border-province (as it was in that age) of Khurāsān.⁶ We may also take note of the far-going dilution of the Mongol standing army, within less than a hundred years of the beginning of Chingis Khan's military career, which is illustrated by the episode of the annihilation of the Alan unit in a force which was being employed by Chingis' grandson Qubilay for the conquest of

¹ For this view of the scope of the Caracallan enfranchisement see Jones, A. H. M.: 'Another Interpretation of the *Constitutio Antoniniana*' in *The Journal of Roman Studies*, vol. xxvi, part 2 (1936).

² Unlike the *auxilia* of the first and second centuries of the Christian Era, these fourth-century and fifth-century *foederati* served in their own native equipment and formations and even under their own native commanders; and this difference was inimical to assimilation.

³ See IV. C (ii) (b) 2, vol. iv, p. 87, and V. C (i) (c) 1, in the present volume, pp. 53-4, above.

⁴ For the Manchu Imperial military organization see V. C (i) (c) 3, p. 315, footnote 3, and V. C (i) (d) 3, p. 410, above.

⁵ The analogy goes still farther; for, if the Chinese 'banners' of the Manchu establishment are strictly comparable with the units of *auxilia* which were recruited from the non-citizen subjects of the Roman Empire, the Mongol 'banners' correspond, with the same exactness, to those units of *foederati* that were recruited from the transfrontier barbarians.

⁶ Khurāsān was the border-province of the Syriac World over against the Eurasian Nomads during the period of little less than nine hundred years (from the latter part of the second century B.C. to the earlier part of the eighth century of the Christian Era) during which the Oxus-Jaxartes Basin was under Nomad occupation. For this episode of Syriac frontier-history and for the historical connexion between the fraternization of Arabs and Iranians in Khurāsān and the replacement of the Umayyad by the 'Abbasid dynasty in the Caliphate see II. D (v), vol. ii, p. 141, above.

Southern China.¹ The dilution of the standing army of the Achaemenian Empire must have been at least as thorough and at least as rapid, if we may draw any general inference from a glimpse of the organization and *personnel* of a single unit—the garrison of Elephantinê, on the Nubian frontier of Egypt—which has been given to us by our modern Western archaeologists through their discovery of some local records written on papyrus² in the Aramaic *lingua franca* to which the Achaemenidae had given an official currency in all their western provinces.³ A modern Western scholar need not, however, look so far afield as the Nile Valley in the fifth century B.C. in order to observe, in the life, how a military machine may serve as an instrument of vulgarization. He can watch the process at work under his eyes in his own world in his own day. For, though the Western Society has not yet entered into a universal state, the parochial states into which it is still articulated have been driven, by the twofold driving-force of Democracy and Industrialism, into following, one after another, the sinister lead given by France when she raised her *levée en masse* in A.D. 1793.⁴ Since that date we have witnessed, in a Western World that has in the meantime been expanding to a literally world-wide range, a transformation of the eighteenth-century professional standing armies—numerically insignificant forces which were segregated from the civilian population and were stamped, by a Draconian discipline, with the Dominant Minority's mark—into national short-service armies through which the entire able-bodied male population is passed, generation by generation, and in which the conscripts drawn from the Dominant Minority are outnumbered to an extent at which they are, not merely diluted, but swamped by the masses of the Internal Proletariat.

If we now try to estimate the importance of the part which has been played by comradeship-in-arms in the breaking down of the barrier between the Dominant Minority and the Internal Proletariat, we shall find, as we might expect *a priori*, that this factor has been of the greatest account in those cases in which the Dominant Minority has been represented by empire-builders who have been not merely frontiersmen but also men from the wrong side of the frontier—empire-builders, that is, of barbarian origin.⁵ For

¹ See V. C (i) (c) 4, p. 350, above.

² See Meyer, E.: *Der Papyrusfund von Elephantine*, 2nd edition (Leipzig 1912, Hinrichs); Hoonacker, A. van: *Une Communauté Judéo-Araméenne à Eléphantine, en Égypte, aux v^es et v^es siècles av. J.-C.* (London 1915, Milford).

³ For this currency of Aramaic as a *lingua franca* in the Achaemenian Empire see V. C (i) (d) 6 (y), pp. 487-91 and 499-501, below.

⁴ For this impact of Democracy and Industrialism upon War in the modern Western World see IV. C (iii) (b) 3, vol. iv, pp. 141-55, above.

⁵ For the several alternative provenances of empire-builders of universal states see V. C (i) (c) 1, pp. 52-6, above.

the barbarian conqueror is likely to be still more receptive than the marchman to amenities of life which he finds in use among the epigoni of peoples whom he has reduced by his own prowess to the status of a subject population.

Such, at any rate, was the sequel to the comradeship-in-arms between the Manchus and their Chinese neighbours in the debatable territory in South Manchuria outside the Great Wall, but inside the Willow Palisade:

'The Manchus were, from the beginning, without either the strong tribal consciousness or the strong historical traditions of the Mongols.¹ . . . This very immaturity facilitated their extraordinarily rapid and thorough assumption of Chinese characteristics. Indeed, nothing could be more evident . . . than that the Manchus, from a very early period, not only looked on China as a country to conquer, but on Chinese civilization as something to aspire to. . . . The Manchus . . . had taken on a thoroughly Chinese colour. Their two emperors who ruled from Mukden before the entry into China were emperors in the Chinese manner. . . . It cannot be doubted that the *racial* character of certain laws of privilege passed by the Manchus has been greatly overemphasized. There was a residuum of racial feeling in some of these laws; but all of them, in operation, had an almost purely social function; and in any case their nominal racial character is vitiated by the fact that, from the beginning, Chinese 'bannermen' were counted as Manchus. The 'banners' themselves were purely a military, never a racial, formation. . . . There was no restriction on marriage between Manchus and Chinese 'bannermen', and . . . at an early period Manchus began to marry non-'banner' Chinese girls, although not giving their own daughters in marriage to non-'banner' Chinese men.'²

The same tendency to abandon a *de jure* segregation in favour of a *de facto* symbiosis can be traced, as we have already noted, in the history of another body of barbarian empire-builders: the Primitive Muslim Arab conquerors of South-Western Asia, who were unintentionally and unconsciously restoring a Syriac universal state which had first taken shape in the prematurely shattered empire of the Achaemenidae.³

In Syria, under the régime of the Caliph Mu'āwīyah (*in Syria*

¹ The Mongols in the Far Eastern World, like the Hyksos in the Egyptian World, paid the penalty of eviction for their unreadiness to soak themselves through and through in the culture of the sophisticated people whom they had conquered. The happier fortune which was common to the Mongols' Manchu successors and the Hyksos' Libyan successors is an indication that, for a barbarian empire-builder, a cultural self-surrender is an indispensable act of atonement and that, if he cannot bring himself to this, he can never hope to win forgiveness for his political presumptuousness. (On this point see V. C (i) (c) 4, pp. 348-53, above.)—A.J.T.

² Lattimore, O.: *Manchuria, Cradle of Conflict* (New York 1932, Macmillan), pp. 44-7.

³ For this view of the Primitive Muslim Arab empire-builders' work see I. C (i) (b), vol. i, pp. 75-7, above. For the comparison drawn by Eduard Meyer between the receptivity of the Arab builders of the Caliphate and that of the Persian builders of the Achaemenian Empire see the present chapter, p. 443, footnote 3, above.

procurabat circa A.D. 640-61; *per Orbem Terrarum imperabat* A.D. 661-80),

'The distinction between masters and subjects appears not to have been so sharp as it was, to begin with, in 'Irāq. In Syria the Muslims did not live segregated in cantonments specially laid out for them: they lived at close quarters with the natives of the country in the old cities—Damascus, Emesa, Qinnasrīn, etc.—and sometimes they actually went shares with the natives in the use of a place of public worship, which then became half church and half mosque.'¹

In Khurāsān, under the last of Mu'āwīyah's Umayyad successors, on the eve of the transference of the Caliphate in A.D. 750 from the Umayyads to the 'Abbasids,

'Arabs and Iranians were not separated from each other by any segregation of domiciles. In the Arab garrison towns—Naysābūr (Bivārd, Sarakhs, Nasā), Marv, Marvrūd and Herāt—the indigenous population lived on, though the citadels were naturally occupied by the conquerors. Moreover the Arabs did not keep together in compact settlements at just a few points, and did not confine themselves to the towns which they had selected as sites for military colonies. They had properties, with serfs, in the country-side, and they spent part of their time there as well—especially in the oasis of Marv, where the town constituted the centre for a host of villages in a unitary system of irrigation. They kept Iranian retainers and married Iranian women; and this influence was bound to make itself strongly felt already in the second generation. . . . The Arabs acclimatized themselves; they felt themselves at one with the natives of the country as inhabitants of the province which was their common home. They, too, were now Khurāsānīs; and they wore trousers like the Iranians, drank wine, and celebrated the festivals of Nawrūz and Mihrigān. The Arab notable adopted the style of the Marzbāns. The daily round and common task brought in their train the need for an understanding with the Iranians; and even in Kūfah and Basrah Persian was at least as much in use as Arabic as the language of business.'²

When we turn to the histories of dominant minorities which have arisen—as dominant minorities normally do arise—from within and not from beyond the disintegrating society's pale, we shall not be able to leave the military factor out of account; for the proletarianization of the Manchu barbarian empire-builders of a Far Eastern, and of the Arab barbarian empire-builders of a Syriac, universal state through a comradeship-in-arms with recruits from the Internal Proletariat is a social phenomenon which is reproduced, as we have already seen, in the histories of the

¹ Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), p. 84.

² *Ibid.*, p. 307.

Roman army in the Imperial Age and of the conscript armies of the national states of the modern Western World.¹ At the same time we shall find that, in a disintegrating society in which the Dominant Minority is indigenous, a comradeship-in-arms is apt to be replaced by a partnership-in-business as the form of intercourse that is the most effectively instrumental in breaking down the social barrier and achieving the passage from segregation to symbiosis.

This comes out clearly in an account—by a contemporary observer whom we have quoted already—of a change in the social relations between masters and slaves at Athens that resulted from the Athenians' premature and abortive attempt to establish a Hellenic universal state in the fifth century B.C.

'Slaves . . . and permanently domiciled aliens enjoy an extreme degree of licence at Athens, where it is illegal to assault them and where the slave will not make way for you [in the street]. The reason why this is the local custom shall be explained. If it were legal for the slave—or the alien or the freedman—to be struck by the free citizen, your Athenian citizen himself would always have been getting hit through being mistaken for a slave. The free proletariat at Athens are no better dressed than the slaves and aliens, and no more respectable in appearance. If any reader is surprised at the further fact that at Athens they allow the slaves to live in luxury and in some instances to keep up an imposing establishment, it would not be difficult to demonstrate the good sense of their policy in this point as well. The fact is that, in any country that maintains a naval establishment, it is essential for slaves to bring in money by their services, in order that I [the master] may receive at least the royalties on the profits of my slave's labour;² and this involves [eventual] manumission.³ In a country, however, in which wealthy slaves exist, it is no longer desirable that my slave should be afraid of you—as he is, for example, in Lacedaemon. If your slave is afraid of me, that fact will keep him under a perpetual threat of having to stand and deliver his own money [to me as blackmail]. This is the reason why we have put our slaves on a social equality (*ισονομίαν*) with our freemen; and we have placed our permanently domiciled aliens on the same footing *vis-à-vis* our citizens because our country needs these aliens' services on account of the multiplicity of our industries, as well

¹ See pp. 446-7 and 448, above.

² The logical connexion between sea-power and making slavery pay is not here explicitly stated by the writer because, in his time and place, it was so notorious that he could count upon his readers' taking it for granted. The connexion is, of course, that, in a Hellenic city-state that maintained a navy, this expensive public luxury had to be paid for by the well-to-do slave-owning class in a burden of taxation which was so heavy as to make it impossible for slave-owners to keep their slaves employed on such occupations as domestic service, in which the capital sunk in the purchase-price of the slave would be, from the financial point of view, an unproductive investment.—A.J.T.

³ In the Hellenic World it was a psychological and economic commonplace that the only way of inducing a slave to work 'on his own' in a competitive trade with the zest of a freeman was by allowing him to put by a proportion of his earnings in order to save up for his eventual purchase of his own freedom.—A.J.T.

as on account of the navy. These are our reasons—and they are good ones—for giving social equality to the aliens as well.¹

When we find that the *Gleichschaltung* of citizens with aliens and of freemen with slaves in the Hellenic Society had been carried as far as this at Athens in the first generation after the breakdown of 431 B.C., it is not surprising to find further that four hundred years later, when the Hellenic 'Time of Troubles' had burnt itself out and when the Hellenic universal state, which the Athenians had tried and failed to establish, had come into being at last in the shape of the Roman Empire, the elements in the proletarian underworld which were the fittest to survive in the vicious social environment of a disillusioned and demoralized age had not only maintained the favourable social position which they had reached at Athens before the end of the Atheno-Peloponnesian War, but had gone on steadily climbing from one rung of the social ladder to the next till they had attained to dizzy heights of wealth and influence.² In the latter days of the Roman Republic the management of the Roman aristocrats' households, with their huge *personnel* and their elaborate organization, had already become a perquisite of the ablest of the freedmen of the nominal master; and, when Caesar's household, outgrowing and overtopping all its rivals, actually went into partnership with the Senate and People in the management of a Roman commonwealth which had become responsible for the government of the entire Hellenic World, then Caesar's freedmen became the cabinet ministers of a Hellenic universal state. Nor was theirs a hidden hand, like the authority that is exercised with such a discreet self-effacement by the permanent civil servants in the parochial states of our latter-day Western World. So far from that, the three principal portfolios held by freedmen in the Imperial Cabinet—the ministries *ab epistulis*, *a libellis*, and *a rationibus*—came to be part of the recognized insignia of the Imperial office—so much so, that, *imperante Nerone*, in A.D. 64, a member of the Roman aristocracy

¹ Auctor Atheniensis Anonymus: *Institutions of Athens* (edited by Kalinka, E.: Berlin and Leipzig 1913, Teubner), chap. 1, §§ 10–12, quoted in IV. C (iii) (b) 4, vol. iv, p. 156, footnote 3, above.

² Such careers as these were not, of course, typical of the contemporary experience of the whole class to which these self-made men belonged; for one of the effects of the four-centuries-long ordeal which the Hellenic 'Time of Troubles' imposed upon the Hellenic internal proletariat was to produce an extreme differentiation of fortunes between different elements in the proletarian mass. While some proletarians, who had the ability and the desire to adapt themselves to the spirit of the age, were able to rise to dizzy, though precarious, pinnacles of worldly success, the majority were ground down to a degree of misery that evoked from them a powerful spiritual reaction—either the violent reaction of Satanism or the gentle reaction which eventually found its expression in Johanan ben Zakkai's Judaism and in Christianity. (For this process of differentiation in the Hellenic internal proletariat see II. D (vi), vol. ii, pp. 213–16, as well as V. C (i) (c) 2, in the present volume, pp. 72–8, and V. C (i) (d) 1, *passim*, above, and V. C (i) (c) 2, Annex III, pp. 588–90, and V. C (ii) (a), Annex II, vol. vi, pp. 376–8 and 504–8, below.)

was hounded to death on a charge of treasonable designs against the reigning emperor because, in a fit of childish ostentation, he had rashly taken in vain the titles of the three secretaryships of state by conferring them on three freedmen of his own who, in the management of his private estate, were charged with the corresponding duties.¹

It will be seen that the Imperial freedmen in the early years of the Roman Empire enjoyed a plenitude of power which was comparable to that of those members of the Ottoman Sultan's Slave-Household who attained to the equally powerful—and equally precarious—office of Grand Vizier.² And we shall be reminded again of the rise of the Hellenic internal proletariat to the top of the social tree in the household of Caesar if we turn to the history of the Arab Caliphate and watch clients and patrons slowly but surely changing places with one another in the vast households which the Primitive Arab Muslim conquerors of the first few generations gathered round themselves by throwing the mantle of their protection over men of parts who were members of the non-Muslim subject communities.

In all cases of symbiosis between the Dominant Minority and the Internal Proletariat in which the relation attains to a certain degree of intimacy, both parties are affected by it, and the effect on each of them is to set them in motion on a course which leads towards an assimilation to the other class. On the superficial plane of 'manners' the Internal Proletariat moves towards enfranchisement, and the Dominant Minority towards vulgarization. The two movements are complementary, and both are taking place all the time; but, while it is the enfranchisement of the Proletariat that is the more conspicuous of the two in the first chapter of the story, in the last chapter it is the vulgarization of the Dominant Minority that forces itself upon our attention.

The classic example is the vulgarization, in 'the Silver Age', of the Roman governing class: a sordid tragedy which has been inimitably recorded—or caricatured—in a Latin literature which still preserved its old genius, or at least its old vigour, in the satirical vein long after it had lost its last breath of inspiration in every other *genre*.

This Roman rake's progress can be followed in a series of Hogarthian pictures in each of which the central figure is not merely an aristocrat but an emperor.

'Caligula . . . gave an immense impetus to the rage for singing,

¹ The victim's name was D. Iunius Torquatus Silanus. He was accused *inter liberos habere quos ab epistulis et libellis et rationibus appellet—nomina summae curae et meditamenta*. He anticipated a death-sentence by committing suicide (Tacitus: *Annals*, Book XV, chap. 35).

² For instances see Part III. A. p. 40, footnote 1, above.

dancing, and acting, for chariot-driving and fighting in the arena, not unknown before, which Juvenal and Tacitus brand as the most flagrant sign of degenerate morals. There was indeed a great conflict of sentiment under the early Empire as to some of these arts. Julius Caesar had encouraged or permitted Roman senators and knights to fight in the gladiatorial combats, and a Laberius to act in his own play. But a decree of the Senate, not long afterwards, had placed a ban on these exhibitions by men of noble rank. Tiberius, who was, beyond anything, a haughty aristocrat, at a later date intervened to save the dignity of the order. But the rage of the rabble for these spectacles had undoubtedly caught many in the ranks of the upper class. And Caligula and Nero found, only too easily, youths of birth and breeding, but ruined fortune, who were ready to exhibit themselves for a welcome *douceur*, or to gain the favour of the prince, or even to bring down the applause of the crowded benches of the amphitheatre or the circus. . . .

'Amid all this elaborate luxury and splendour of indulgence there was a strange return to the naturalism of vice and mere blackguardism. A Messalina or a Nero or a Petronius developed a curious taste for the low life that reeks and festers in the taverns and in the stews. Bohemianism for a time became the fashion. . . . The distinguished dinner party, with the Emperor at their head, sallied forth to see how the people were living in the slums. . . . In the fierce faction fights of the theatre, where stones and benches were flying, the Emperor had once the distinction of breaking a praetor's head.'¹

While Nero was content to emulate the proletarian music hall *artiste* ('Qualis artifex pereo!' ²), Commodus, a century later, could not satisfy his craving for proletarianization by any milder feat of exhibitionism than a public appearance in the gladiatorial arena.

'The influence of a polite age and the labour of an attentive education had never been able to infuse into his rude and brutish mind the least tincture of learning; and he was the first of the Roman emperors totally devoid of taste for the pleasures of the understanding. Nero himself excelled, or affected to excel, in the elegant arts of music and poetry. . . . But Commodus, from his earliest infancy, discovered an aversion to whatever was rational or liberal, and a fond attachment to the amusements of the populace—the sports of the circus and amphitheatre, the combats of gladiators, and the hunting of wild beasts. . . . The servile crowd, whose fortune depended on their master's vices, applauded these ignoble pursuits . . . [and], elated with these praises, which gradually extinguished the innate sense of shame, Commodus resolved to exhibit, before the eyes of the Roman people, those exercises which till then he had decently confined within the walls of his palace and to the presence of a few favourites. On the appointed day the various motives of flattery, fear and curiosity attracted to the amphitheatre an innumerable multitude of spectators; and some degree of applause was de-

¹ Dill, S.: *Roman Society from Nero to Marcus Aurelius* (London 1905, Macmillan), pp. 73-6.

² Suetonius: *Nero*, chap. 49.

servedly bestowed on the uncommon skill of the Imperial performer. Whether he aimed at the head or heart of the animal, the wound was alike certain and mortal. . . . But the meanest of the populace were affected with shame and indignation when they beheld their sovereign enter the lists as a gladiator and glory in a profession which the laws and manners of the Romans had branded with the justest note of infamy. . . . He now disdained the appellation of Hercules. The name of Paulus, a celebrated *secutor*, was the only one which delighted his ear. It was inscribed on his colossal statues, and repeated in the redoubled acclamations of the mournful and applauding Senate.¹

The last stage in the process of vulgarization is displayed in the portrait of an emperor of the next generation.

'The demeanour of Caracalla was haughty and full of pride; but with the troops he forgot even the proper dignity of his rank, encouraged their insolent familiarity, and, neglecting the essential duties of a general, affected to imitate the dress² and manners of a common soldier.'³

Caracalla's way of 'going proletarian' was neither so sensational nor so pathological as Commodus's way or Nero's, but, just on that account, it is perhaps of greater significance as a sociological symptom. A Hellenic dominant minority which had reached the last stage in the repudiation of its social heritage was fitly represented by the figure of an emperor who took refuge in the proletarian freedom of the barrack-room from a freedom of the Academy and the Stoa which he found intolerable just because he knew that it was his birth-right. Indeed, by this date, on the eve of the next relapse of the Hellenic Society into its downward course after the respite of the Augustan rally,⁴ the relative volumes and momenta and speeds of the two mutually contrary streams of influence that flowed respectively from the Dominant Minority and from the Internal Proletariat had changed, in the proletarian stream's favour, to a degree at which the latter-day observer may find himself wondering whether, after all, he has not been

¹ Gibbon, E.: *The History of the Decline and Fall of the Roman Empire*, chap. iv.

² 'Dressing the part' is one of the ways in which the social turncoat advertises his intention to declass himself; and the proneness of the Roman governing class, in its decadence, to this crude form of exhibitionism is commemorated in the nicknames 'Caracalla' and 'Caligula', under which two *apaches* who were raised by Fortune to the Roman Imperial Throne have succeeded in making themselves remembered by Posterity. The sovereign who wears his own livery may of course be moved by motives of petty policy as well as by a taste for low life; for this is one of the easiest and cheapest ways at his command for currying favour with his lackeys. Suleymân the Magnificent sought to propitiate the Janissaries, who were already beginning to get out of hand before the end of his reign, by enrolling himself in one of their units and drawing a private's pay. Is this trick of Ottoman statecraft the origin of the custom, which is now *de rigueur* for the heads of our Western states, of wearing their own uniforms and holding honorary rank in their own service? (See Part III. A, vol. iii, p. 38, footnote 2, § 3, above.) —A.J.T.

³ Gibbon, *op. cit.*, chap. vi.
⁴ For this relapse see IV. C (i), vol. iv, p. 8, and V. C (i) (c) 3, in the present volume, p. 219, above, and V. C (i) (d) 6, Annex, p. 649, V. C (ii) (a), vol. vi, p. 207, and V. C (ii) (b), vol. vi, p. 284, below.

watching the movement of a single current which now, at a certain moment, has simply reversed its direction. Though this is an illusion, it is true that in the earlier stages of disintegration our attention is more apt to be caught by the downward percolation of emotions and ideas from the Dominant Minority to the Internal Proletariat,¹ while in the later stages we become more and more clearly aware that the Dominant Minority is taking its colour from the Internal Proletariat instead of continuing to exercise that function of leadership which is the Dominant Minority's sole *raison d'être* (and that a doubtful one!).

This increasing moral subservience of a sinking Dominant Minority to a rising Internal Proletariat is illustrated in the history of the Hellenic dominant minority's orientation towards Christianity;² for, in each successive phase, the dominant minority can be convicted of having adopted towards Christianity, tardily and reluctantly, the attitude, whatever it might be, that had shown itself to be prevalent among the internal proletariat of the day. In an age in which a majority of the internal proletariat was still both non-Christian and anti-Christian, the Roman authorities bowed to popular feeling in the last resort by stooping from time to time to a half-hearted official persecution of the unpopular faith. On the other hand, when the Christian Church eventually succeeded—whether in spite of persecution or because of it—in overcoming the proletarian opposition and establishing its own ascendancy over the internal proletariat's life, the dominant minority signified its unenthusiastic acceptance of the proletariat's revised verdict by a wry-faced announcement of its own conversion to a religion which had now decisively proved its title by its sensational victory in the proletarian arena. Nor is this the whole of the story; for, in so far as the dominant minority played its successive proletarian parts of persecutor and convert with a certain scepticism and cold-bloodedness, it was still betraying, under its proletarian shirt, the sophisticated temper of a Gallio. We shall not have taken the full measure of the dominant minority's repudiation of its own traditional *êthos* until we have watched it exchanging this traditional Gallionic indifference for a savagery which, in Gallio's day, would have branded any one who exhibited it as the classmate of a Theudas and Judas of Galilee and a John of Gischala.

'In accordance with the law that governs the religious development of the Imperial Age throughout, the religious zeal which inspired the

¹ This percolation from above downwards is discussed, *à propos* of a concrete case, in V. C (ii) (a), Annex II, in vol. vi, below. See, in particular, the passage quoted on pp. 456-7 from Seck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii, 2nd edition (Stuttgart 1921, Metzler), pp. 203-4.

² On this see also V. C (i) (c) 2, pp. 76 and 80, and V. C (i) (d) 3, pp. 408-9, above, and V. C (ii) (a), vol. vi, pp. 201-2, below.

populace to its deeds [of violence] mounted slowly from below upwards. As the new faith gradually penetrated the ruling strata of Society, the hatred with which Christianity was regarded by its adversaries made its way among the rulers *pari passu*. We see here two currents beating against one another which are both of the same nature.¹

In concrete terms, we see the pagan levity of a Gallienus giving place to the pagan grimness of a Galerius; the lukewarm Christianity of a Philip changing into the fervent Christianity of a Constantine; and the Hadrianic tolerance, which Constantine never sacrificed to the fervour of his own less philosophic age, being thrown to the winds by the pagan fanaticism of a Julian and by the Christian fanaticism of a Theodosius with an equal recklessness.²

If we now turn our eyes from the Hellenic to the Far Eastern World, we shall see the first chapter in our story of the proletarianization of the Roman governing class in the act of reproducing itself in the history of the Manchus at the present moment. And here we are in a position to observe the process at first hand by doing sociological field-work of the kind that is exemplified in the following record from the pen of a living Western scholar, who shows us the struggle for enfranchisement giving way to the drift towards proletarianization within the compass of the single generation that separates a Manchuized Chinese father from his own proletarianized son:

'It was . . . possible, in Manchuria, for a Chinese from China Proper to become, in his own lifetime, an out-and-out "Manchu". An instance of this phenomenon came within my own experience when I formed an acquaintance with a Chinese military officer and his old father. The father, born in Honan, had gone to Manchuria as a young man, had travelled over the most remote parts of the three provinces, and had finally settled at Tsitsihar. One day I said to the young man: "Why is it that you, who were born in Tsitsihar, speak just like the generality of Manchurian Chinese, while your father, who was born in Honan, has not only the speech, but exactly the manner and even gestures, of the old-fashioned Manchus of Manchuria" [which differ somewhat from those of Peking Manchus]? He laughed, and said: "When my father was a young man, it was difficult for a *min-jen* [non-'banner' Chinese, 'a civilian', 'one of the people'] to get on in the world up in the northern regions. The Manchus dominated everything, and they harassed the *min* Chinese. In Tsitsihar, where he settled down, they had a custom of 'chasing out the *min*' twice a year. All the Chinese who had filtered in were liable to be driven out, and often beaten and robbed. Of course many of them came back; but the only way to

¹ Seeck, *op. cit.*, vol. cit., 2nd edition, p. 301.

² For the eventual victory of fanaticism over tolerance in the Hellenic World in the course of the fourth century of the Christian Era see IV. C (iii) (b) 12, vol. iv, pp. 226-7, above.

become secure was to 'follow' [as the phrase went] the Manchus and become so like them as to be undetectable. So my father, when he had learnt their ways, 'entered the banners' and married a Manchu [which, of course, was against the strict law] and has always remained like them. But when I was growing up it was no longer any use to be a 'bannerman', and therefore I became like all the other young men of my generation." This is a story which illustrates the processes of the present as well as of the past; for the young Manchus of Manchuria are becoming rapidly indistinguishable from Manchuria-born Chinese.¹

In this record of the social history of a Chinese father and son we see the stream of vulgarization in the life of a Manchu dominant minority encountering and overwhelming the stream of snobbery in the life of a Chinese internal proletariat. While in the father's generation the proletarian who meant to rise was still compelled to resort to a servile mimicry of his masters, in the son's generation the children of a *ci-devant* proletariat and a *ci-devant* dominant minority were already meeting and mingling on the common level of a proletarian vulgarity.

An Englishman who was moved at this time to do some work of his own in this field of sociological research on living subjects had no need to put himself to the expense of booking a berth on the Trans-Siberian express; for the social changes that were witnessed by our twentieth-century American observer on the banks of the Nonni River could be seen and studied quite as well on the banks of the Thames by his stay-at-home English contemporaries. The proletarianization of a dominant minority could be watched in the London metropolitan area in the year 1938 by any one who entered the doors of either a cinema or a club; for in the cinema he would see people of all classes taking an equal pleasure in films that had been artfully designed to cater for the taste of the proletarian majority of the audience, while in the club he would find that the black ball did not exclude the yellow press. Indeed, if our latter-day British Juvenal was a family man, he could stay indoors and still find his copy. He had merely to open his ears (which was perhaps easier than to close them) to the jazz-music which his children were conjuring out of the wireless set. And then, when, at the end of the holidays, he saw his boys off to school, let him not forget to ask them to point out to him 'the bloods' among their schoolfellows assembling on the platform of the London railway terminus. As, at this passing show, our quizzical paterfamilias discreetly took smart young Commodus's measure, he would notice the rakish proletarian angle at which 'the public schoolboy's' trilby hat was cocked, and would observe

¹ Lattimore, O.: *Manchuria Cradle of Conflict* (New York 1932, Macmillan), pp. 62-3.

that the *apache* scarf, with its convincing air of negligence, had really been carefully arranged so as not to reveal the obligatory white collar. Here was proof ocular and positive that in twentieth-century London, as in second-century Rome, the proletarian style was *à la mode*. And, since a straw really does show which way the wind is blowing, the satirist's trivialities may be grist for the more ponderous mill of the historian.

The Barbarization of the Dominant Minority.

When we pass from the vulgarization of the Dominant Minority through their pacific intercourse with the Internal Proletariat to examine the parallel process of their barbarization—a social change which arises out of their warlike intercourse with the External Proletariat beyond the pale—we find that the plot of both plays is the same in its general structure. In this case, as in that, either party exercises an assimilative influence on the other; and in both cases alike it is the influence of the Dominant Minority upon its proletarian servitor or antagonist that claims our attention in the first act. This time once again, however, there is a second act in which the two actors exchange their roles; and the curtain does not fall until the Dominant Minority has been barbarized in this encounter as decisively and irretrievably as we have already seen it vulgarized in the companion play.

In our present play the *mise-en-scène* is an artificial military frontier—the *limes* of a universal state—across which the Dominant Minority and the External Proletariat are seen confronting each other, when the curtain rises, in a posture which, on both sides alike, is one of aloofness and hostility. As the play proceeds, the aloofness turns into an intimacy which does not, however, bring peace; and, as the warfare goes on, Time tells progressively in the barbarian's favour, until at last he succeeds in breaking through the *limes* and overrunning the vast domain—a whole world in itself—of the universal state which the Dominant Minority's garrison has hitherto successfully protected. The causes and consequences of this denouement of the play on its military side are discussed in a later part of this Study;¹ and in the present place we shall concern ourselves exclusively with the social side: that is to say, with the social assimilation of the two adversaries to one another—an assimilation which is partly the effect, but also partly the cause, of their growing intimacy, and which ends in their fusion into a social amalgam in which the dominant element is the barbarian one.

In the first act the barbarian appears in the successive roles of

¹ See Part VIII, *passim*, below.

hostage and mercenary, and in both these roles he comes on to the Dominant Minority's ground in a figurative as well as in a literal sense; for, in both, he comes over as a more or less docile apprentice. In the second act he still crosses the line, but now only in a sense which is literal with a vengeance; for he now comes neither by command nor by invitation but unbidden and unwanted as a raider who eventually settles down to stay as a colonist or a conqueror. Thus, between the first act and the second, the military ascendancy passes out of the Dominant Minority's hands into the barbarian's; and, although the change is not always easily perceptible while it is in the act of taking place—since the barbarian conqueror may be a time-expired mercenary, and his seizure of the land may be legalized *ex post facto*, by a Dominant Minority eager to save its face, as a payment in kind for military services rendered—all the same, in the end, the reversal of fortune is sensational; for, while at the opening of the play the barbarian is well content if he can hold his own and prevent the frontier of Civilization from being pushed still farther forward at his expense, the close of the play sees the *ci-devant* Dominant Minority resigning itself to the permanent establishment of a barbarian invader on the wrong side of the old front line as the new lord and master, *de facto*, of a ravished world. This sensational transfer of the kingdom, the power, and the glory from the Dominant Minority's to the barbarian's banners has a profound effect upon the Dominant Minority's outlook; and, long before the military and political process is complete, the revolutionary inversion of prestige is proclaimed by the discomfited party itself in deeds that are more eloquent than words. It is now the Dominant Minority that comes on to the barbarian's ground—not, indeed, in the literal sense, for the time has now long since gone by when the garrison of the *limes* could show its mettle by making punitive expeditions into no-man's-land. In the literal sense the Dominant Minority is now yielding ground to the barbarian in an unbroken retreat that is threatening to turn into a rout. But, just for the reason that the barbarian is now manifestly gaining the upper hand, the Dominant Minority seeks to retrieve its rapidly deteriorating military and political position by taking one leaf after another out of the barbarian's book; and imitation is assuredly the sincerest form of flattery.

Having now sketched out the plot of the play, we may pause to survey the scene more closely as it displays itself in the several acts. We may watch the barbarian make his first appearance on the stage as the Dominant Minority's apprentice; see the Dominant Minority begin to 'go native'; catch a glimpse of the two

adversaries at a fleeting moment at which, in their rival masquerades in one another's borrowed plumage, they assume the grotesque generic resemblance of the griffin to the chimaera; and finally watch the *ci-devant* Dominant Minority lose the last traces of its original form by sinking to meet the triumphant barbarian at a common level of barbarism that is quite unmitigated.

Our list of barbarian war-lords who have made their *début* as hostages in the hands of a 'civilized Power' includes some famous names. Theodoric served his apprenticeship as a hostage at the Roman Court of Constantinople,¹ and Scanderbeg² his at the Ottoman Court of Adrianople, where he received the education of an *ich-oghlan*.³ We may perhaps hesitate to number among the barbarians the hostage-son of Amyntas who learnt at Thebes from Epaminondas and Pelopidas the arts of war and peace which he afterwards practised to such brilliant effect when he had mounted his father's throne as King Philip II of Macedon. But we may mention a living example of the type in the person of Muhammad 'Abd-al-Karīm al-Khattābī: a chief of the tribe of the Banu Wuryāghal in the Moroccan Rif who annihilated a Spanish expeditionary force at Anwāl in 1921 and in 1925 performed the greater feat of momentarily shaking the French power in Morocco to its foundations. For 'Abd-al-Karīm's apprenticeship was served in an eleven-months-long sojourn in a Spanish prison at Melilla.⁴

The treatment that the Rifī war-lord received at his Frankish gaolers' hands turned him immediately and inevitably into their implacable enemy; but 'Abd-al-Karīm's experience was the exception and not the rule; for common sense usually moves a dominant minority which is anxious to hold its barbarian frontier with the minimum of trouble and expense to bind its barbarian hostages in chains that are so pleasantly gilded that the captive will be tempted to hug them. Through such tactful handling the young barbarian who comes as a hostage may be induced to stay on as a mercenary; and Theodoric and Scanderbeg both completed their apprenticeship in this fashion by serving for a time, on a more or less voluntary footing, in the army of the empire which they afterwards made it their life-work to combat.⁵

¹ For Theodoric see further pp. 472-3, below.

² For Scanderbeg see Pisko, J.: *Skanderbeg* (Vienna 1894, Frick).

³ For the system of education which was the making of the Ottoman Pādīshāh's Slave-Household in 'the Golden Age' of Ottoman history see Part III. A, vol. iii, pp. 28-44, above.

⁴ See Toynbee, A. J.: *Survey of International Affairs, 1925*, vol. i (London 1927, Milford), p. xii.

⁵ If it is so manifestly politic for the Dominant Minority to slur over the distinction between mercenary and hostage, it is not surprising that the historian should sometimes find himself at a loss to know whether this or that barbarian warrior ought to be assigned to this or that category. For example, was it as a hostage in Roman hands or as a mercenary in the Roman service that the Cheruscan war-lord Hermann-Arminius

The list of barbarians who have 'come' and 'seen' as mercenaries, before imposing themselves as conquerors, is a long one. The Teutonic and Arab barbarian conquerors of Roman provinces in the fifth and in the seventh century of the Christian Era were respectively the descendants of many generations of Teutons and Arabs who had done their military service in the Roman forces;¹ and the careers of a Theodoric and a Mu'āwiyah are foreshadowed by those of a Maximinus Thrax and a Philippus Arabs—a pair of third-century barbarians who rose in the Roman service from the ranks to the purple. Again, the Turkish body-guard of the 'Abbasid Caliphs in the ninth century of the Christian Era prepared the way for the Turkish buccaneers who carved the Caliphate up into its eleventh-century 'successor-states'. And the present Kingdom of Yugoslavia, which is a barbarian 'successor-state' of the Ottoman Empire on the one hand and of the Danubian Hapsburg Monarchy on the other, perhaps ultimately owes its existence to past generations of Serbs who served an Ottoman military apprenticeship as hirelings of the Pādishāh,² and later on as *qullar* in the Slave-Household, and a Western military ap-

earned his title to be described by a contemporary Roman man-of-letters as *adsiidus militiae nostrae prioris comes, iure etiam civitatis Romanae decus equestris consecutus gradus* (Velleius Paterculus, C.: *Historia Romana*, Book II, chap. 118)? It is perhaps significant that Hermann is remembered by Posterity under the Latinized form of his native barbarian name, and 'Scanderbeg [i.e. Iskender Bey] under his Ottoman *nom de guerre* and not under his Christian name George Castrioti. Again, the hero and champion (*el Campeador*) of the Western Christian barbarians beyond the pale of the Andalusian Umayyad Caliphate has been made famous—and this by his own people—under his Arabic title of the Cid and not under his Christian name of Rodrigo Diez de Bivar. We may also notice that a Latin name was borne by one, and a Greek name by another, of the seven kinglets of the Teutonic barbarian Alemanni whose war-bands were caught on the wrong side of the Rhine and roughly handled by the Caesar Julian in A.D. 357; and the Latin historian—who was himself 'miles quondam et Graecus'—has considerably gratified our curiosity by telling us how the Alemannian prince who bore the Greek name had come to be called by it:

'Latus vero dextrum Serapio agebat: etiam tum adultae lanuginis iuvenis, efficacia praecurrens aetatem, Mederichi fratris Chnodomarii filius, hominis quoad vixerat perfidissimī, ideo sic appellatus quod pater eius diu obsidatus pignore tentus in Galliis, doctusque Graeca quaedam arcana, hunc filium suum, Agenarichum genitali vocabulo dictitatum, ad Serapionis transtulit nomen' (Ammianus Marcellinus: *Res Gestae a Principatu Caesaris Nerae*, Book XVI, chap. 12, § 25).

These tell-tale names bear witness that, while the barbarian who has once been domesticated may break loose again and turn all the more savage for having at one time worn chains, the most truculent defiance in after-life can still never quite efface the marks that have been made upon him by an education to which he has been subjected at the impressionable age of youth or early manhood. Even when he is ranging at large again in no-man's-land as the notorious captain of a barbarian war-band, his transmogrified name commemorates his earlier experience of domestication as surely as the 'little bald spot' which 'Mowgli's' finger was able to feel under the fur of Bagheera's throat betrayed the fact that the panther who was now enjoying the freedom of the Jungle had at one time languished in a cage (Kipling, Rudyard: *The Jungle Book*, 'Mowgli's Brothers').

¹ For the mercenary service, in the Roman forces, of the Teutonic-speaking barbarians on the European Continent and in Scandinavia, and also of the Celtic-speaking barbarians in the British Isles, see Chadwick, H. M.: *The Heroic Age* (Cambridge 1912, University Press), pp. 445-7.

² This is the true history of Marko Kraljević, who has been transfigured into a hero by the genius of Serbian minstrelsy (see V. C (i) (c) 3, Annex III, p. 609, below).

prenticeship as *granichari* in the border regiments¹ with which the Hapsburg Government garrisoned the frontiers of the territories that it wrested out of the 'Osmanlis' grasp at the turn of the seventeenth and eighteenth centuries.² As for the Libyan interlopers who eventually usurped the derelict heritage of 'the New Empire' of Egypt, they reversed the usual order of proceedings; for, after a series of premature attempts (which all ended disastrously for the presumptuous barbarian aggressors) to exchange the mercenary's role for the conqueror's at the turn of the thirteenth and twelfth centuries B.C., the Libyans put their pride in their pocket and reverted to their mercenary calling; and they were rewarded for their humility by being permitted to win after all, through a process of peaceful penetration, the prize that had been brusquely denied to them when they had tried to snatch it by main force.³ Finally, if we may venture to treat the Greeks as the barbarians that they appeared to be in Egyptiac and Syriac eyes, we may find the precursors of Alexander's world-conquering army in those 'Brazen Men' of Carian and Ionian provenance who had risen so obligingly from the sea to take mercenary service with the first Psammetichus and with the Pharaohs who followed after him during the next three centuries;⁴ or, more pertinently still, in those fourth-century mercenaries drawn from almost every city-state of a distracted Hellas who fought with the same professional loyalty and political insouciance at Cunaxa for Cyrus the Younger against his Achaemenid brother Artaxerxes and at Gaugamela for the last Darius against Alexander himself.

Our list might be longer still if the historical records of the last agonies of civilizations were not so fragmentary as they are apt to be. But we may at least conjecture that the sea-roving barbarians who hovered round the fringes of the Minoan thalassocracy and sacked Cnossos itself *circa* 1400 B.C. had served their apprenticeship as the hirelings of Minos before they aspired to supplant him; for the contemporary Egyptiac records tell us that 'the Peoples of the Sea' competed with the Libyans in the lucrative business of soldiering for 'the New Empire' of Egypt, and went into partnership

¹ In addition to these regiments of Yugoslav regulars whose task was to guard the frontiers that marched with the Ottoman Empire, the Hapsburg Government, under the stress of its struggle with Frederick the Great, also enlisted Yugoslav irregulars who made themselves a scourge under the name of Pandours. These Pandours are presumably homonyms of the Pindaris who so obstinately resisted the establishment of the *Pax Britannica* in Central India.

³ See IV. C (iii) (c) 2 (β), vol. iv, p. 422; V. C (i) (c) 3, in the present volume, pp. 269-70, and V. C (i) (c) 4, pp. 352-3, above.

⁴ The most distinguished name on the roll of Greek mercenaries in the Egyptiac service is that of King Agesilaus of Sparta (*regnabat* 400-361 B.C.).

with the Libyans in the confederated barbarians' unsuccessful attempt to deal with Egypt as they had dealt with Crete. Can we likewise infer from the semi-legendary figure of Ogier the Dane, who makes his appearance among Charlemagne's paladins in the French Epic, that the Vikings who were already raiding the coasts of the Carolingian Empire before Charlemagne was in his grave were preceded by Scandinavian mercenaries in the Austrasian service?¹ And did the Han dynasty enlist the Eurasian Nomads from beyond the Great Wall—whose descendants were ultimately to reign on Sinic soil as the Han's eventual successors—for patrolling the frontiers of the Sinic universal state?

'The policy for the Middle Kingdom is to employ the barbarians for knocking the barbarians on the head' is a maxim which is to be found in an essay from the brush of Kia Yi, a Sinic political philosopher of the second century B.C.;² but in practice we hear less of Nomad soldiers in the Sinic Imperial service than of Nomad settlers planted, on the Imperial Government's initiative, on Intramural territory; and these settlers evidently correspond not so much to the units of barbarian *foederati* in the Roman Imperial army as to the barbarian agricultural colonists known as *laeti*³ who were recruited from time-expired mercenaries or from prisoners-of-war or even from raiders whom the Government was too lazy to drive out, and who were planted for the purpose of recultivating and repeopling the provinces which these settlers' own kinsmen, or perhaps even the settlers themselves, had previously devastated and depopulated.⁴ It was perhaps in this more peaceful fashion, rather than with weapon in hand, that the Northern Barbarians gained their footing on Sinic soil; and this surmise would appear to be borne out by the notorious fact that the Sinic universal state was not supplanted immediately by 'successor-states' of barbarian origin even in the northern marches. 'The Three Kingdoms',

¹ This conjecture is favoured by the fact—which is known for certain—that the Vikings who embarked on the waters of the Baltic and not on those of the North Sea, and who made their fortunes at the expense of the Khazar Empire in the Russian forests (see V. C (i) (c) 3, pp. 286–8, above), instead of making them at the expense of the Carolingian Empire in North-Western Europe, gained entrance as mercenaries before they rose to be masters. 'In the commercial centres, into which the warlike foreign elements were particularly active in pushing their way, their status changed without difficulty. From trading partners or salaried wardens of the trade-routes they easily turned into rulers.'—Kliutschewskij, W. [= Kluchewski, V.]: *Geschichte Russlands*, vol. i (Berlin 1925, Obelisk Verlag), pp. 133–7.

² The general tenor of this essay is reproduced by Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin 1930, de Gruyter), pp. 332–3.

³ For a list of instances of the settlement of barbarian colonists on the land, in districts inside the Roman Imperial frontiers, by the Roman authorities from the reign of Augustus (*imperator* 31 B.C.–A.D. 14) to the reign of Valens (*imperator* A.D. 364–78) inclusive, see Dill, S.: *Roman Society in the Last Century of the Western Empire*, 2nd edition (London 1905, Macmillan), pp. 292–5. See also Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. i, 4th edition (Stuttgart 1921, Metzler), Book II, chap. 6.

⁴ The comparison is drawn by Franke in op. cit., vol. ii (Berlin 1936, de Gruyter), pp. 30–6.

which were the direct heirs of the Posterior Han, were all indigenous; and, between them, they covered the whole domain of the universal state which they replaced. It was not till about a hundred years after the break-up of the Han Power (which occurred *de facto* in the last quarter of the second century of the Christian Era, though officially the dynasty lingered on till A.D. 221) that the descendants of the Nomad settlers in the northern marches openly took the sceptre into their own hands.¹

We can also espy several instances in which the barbarian mercenary has missed his 'manifest destiny'. For example, the East Roman Empire might have fallen a prey to the Varangian Guard if it had not been ravished by the Normans and the Saljūqs, carved up by the French and the Venetians, and finally swallowed whole by the 'Osmanlis. And the Ottoman Empire, in its turn, would assuredly have been partitioned among the Bosniak and Albanian mercenaries who were fast asserting their mastery over the provincial pashas and even over the Sublime Porte itself at the turn of the eighteenth and nineteenth centuries of the Christian Era if the Frankish man-of-business had not come treading on the heels of the Albanian man-at-arms to give the last chapter of Ottoman history an unexpected turn by flooding the Levant with Western political ideas as well as with Manchester goods.² The Oscan mercenaries, again, who found a market for their services in the Greek city-states of Campania and Magna Graecia and Sicily made a practice of ejecting or exterminating their Greek employers whenever they gained the opportunity, and there is little doubt that they would have carried on this game—in which the Greeks themselves never ceased to play into their hands—until there would not have been one single Greek community left on the western side of the Straits of Otranto, if the Romans had not taken the Oscan homelands in the rear at the critical moment.³ Finally, we may venture to prophesy that, if these Roman tammers of the Oscans had succumbed in their turn to Hannibal, the profits of that great Punic soldier's success would not have long remained in the pockets of the petty-minded Carthaginian oligarchy whom he was attempting (as it turned out, vainly) to save in spite of themselves. For some three hundred years before Hannibal's time Carthage had been fighting her battles with the arms of barbarian mercenaries whom she recruited from all the hinterlands of the Western Mediterranean; and, after she had escaped destruction at Roman hands in the First Punic War, she had courted it

¹ See IV. C (ii) (b) 1, vol. iv, p. 65; V. C (i) (c) 3, in the present volume, pp. 272-3, and V. C (i) (c) 4, p. 356, above, and the present chapter, pp. 477-8, below.

² See IV. C (ii) (b) 2, vol. iv, pp. 76-8, above.

³ For this Roman intervention see V. C (i) (c) 3, pp. 213-4, above.

at the hands of her own hirelings, whom she exasperated into mutiny by her close-fistedness in the settlement of their pecuniary claims upon her. The four years of this war at her own gates with the mercenaries (240-237 B.C.) were perhaps as terrible for Carthage as the twenty-four years of the antecedent war with Rome, which had been fought entirely on or over the sea (except for the African expedition of Regulus, which had ended disastrously for the Roman invader). If, in the second trial of strength between Carthage and Rome, the genius of Hannibal had availed to give Carthage the immediate victory, the ultimate victors would assuredly have been Hannibal's native troops: his Libyan and Spanish infantry and his Numidian horse.

This Carthaginian case may remind us of a living instance in which we cannot yet read the riddle of Destiny. At the time of writing the military strength of the French Republic resided—not indeed to a Carthaginian degree, but nevertheless in a formidable measure—in White African man-power drawn from the Carthaginian recruiting-grounds in the Maghrib and Black African man-power drawn from trans-Saharan sources which Carthage never tapped (though her maritime explorers may have rounded Cape Verde). Was it France's destiny, under the increasing strain of an effort to maintain her weakening position in Europe, to serve as the military vehicle through which the valley of the Rhine was to fall under the dominion of barbarians from the Senegal? To an Englishman in his armchair this suggestion might appear to be nothing more serious than a rhetorical question that had been drafted in a German National-Socialist Ministry of Propaganda. On the other hand, to any native of the Rhineland who had not been living abroad between the autumn of 1918 and the 30th June, 1930, the picture of a Europe cowed by African bayonets would suggest, not a piece of fantastic *Zukunftsmusik*, but a grim reality with which he was already acquainted through his personal experience.

In the same sober spirit an Indian of the same generation might speculate on the future role, in India's destinies, of those barbarians—entrenched in a warlike independence in their fastnesses beyond the limits of the Government of India's administration or control—from among whom no less than one-seventh of the Indian Regular Army was recruited in A.D. 1930.¹ Were the Gurkha mercenaries and the Pathan raiders of that day marked out to be remembered in history as the fathers or grandfathers of barbarian conquerors who were to carve out on the plains of Hindustan the 'successor-states' of the British Rāj?²

¹ For these figures see II. D (v), vol. ii, p. 128, footnote 1, above.

² For the British Indian Government's local practice and experience in employing

Whether Englishmen and Afridis or Frenchmen and Kabyles were likely, in course of time, to exchange their respective roles was a question which still lay on the knees of the Gods at the time when this volume was published. In cases such as these, in which we find ourselves in the middle of the story, we can only say that such a denouement appears not impossible in the light of the clear evidence that the like has actually occurred in other cases in which the whole of the drama has already been played out. One such case, in which we are acquainted in some detail with the second act of the play as well as with the first, is the story of the relations between the Hellenic Society in its universal state and the European barbarians beyond the northern *limes* of the Roman Empire. On this historic stage we can watch from beginning to end the parallel processes by which the Dominant Minority sinks into barbarism while the barbarians are making their fortune at the Dominant Minority's expense.

In this performance the play opens in a liberal atmosphere of free contract and enlightened self-interest.

'The Empire was not an object of hatred to the barbarians. Indeed, they were often eager to be taken into its service; and many of their chiefs, like Alaric or Ataulphus, had no higher ambition than to be appointed to high military command. On the other hand there was a corresponding readiness on the Roman side to employ barbarian forces in war. From the earliest days of the Empire these auxiliaries appear on the army lists. Germans are found in the bodyguard of Augustus. They fought under Vitellius in the foremost ranks at the battle of Cremona. Vespasian had special confidence in the loyalty of the Sueves, and had two of their chiefs in his service. Marcus Aurelius formed some corps of Germans for his war with their countrymen on the Danube. In the third century the tendency becomes even more marked. Valerian, in a despatch to Aurelian, describes an army which included troops from Ituraea, Arabia and Mesopotamia, and officers bearing such unmistakable German names as Hariomundus, Hildomundus and Haldagates. Claudius II, after the great defeat which he inflicted on the Goths, enrolled a large number of them under his standards. Probus recruited the frontier garrisons with 16,000 from the wreck of the great host which had devastated Gaul. The army of Constantine, in the battle of the Milvian Bridge, was chiefly composed of Germans and Celts and Britons. Of similar composition was the army with which Theodosius defeated Eugenius on the Frigidus.'¹

The scholar from whose work this passage is quoted goes on in the same context² to trace the individual careers of a number of

a Waziri militia to guard the North-West Frontier of India in the Waziristan sector see de Watteville, H.: *Waziristan, 1919-1920* (London 1925, Constable), especially pp. 8-9 and 13-14.

² *Ibid.*, pp. 295-6.

barbarian military officers who made their mark in the Roman service in the fourth and fifth centuries of the Christian Era: the *laetus* Magnentius; the Franks Arbogastes and Merobaudes and Richomer and Bauto; the Goths Munderich and Gainas and Fravitta; and the Vandal Stilicho. The 'Scythian' Modares, likewise, is proclaimed a barbarian by his name, while his generic epithet tells us that he was a child of the Eurasian Steppe; and 'how many more may have disguised their nationality under Roman names no one can tell'.¹ It appears, however, that, about the middle of the fourth century, the Germans in the Roman service started a new practice of retaining their native names;² and this change of etiquette, which seems to have been abrupt, points to a sudden access of self-consciousness and self-assurance in the souls of a barbarian *personnel* which had previously been content to 'go Roman' without any reservations in favour of its own 'native' past.

It is all the more significant that this new insistence on the barbarians' side upon a cultural individuality of their own, which they were now asking their Roman employers to accept as something distinctive and inalienable, did not evoke on the Romans' part any counter-demonstration of an anti-barbarian exclusiveness. So far from that, the barbarians in the Roman service began, at this very time, to obtain admission into an inner sanctum of Roman public life which had never been thrown open to them in earlier centuries when their own attitude had been less aggressively self-assertive.

'German chiefs [now] not only obtained the great military commands; they also rose to the consulship, the highest civil honour which the Emperor had to bestow. Dagelaephus and Merobaudes were colleagues of Gratian in this great office. In the reign of Theodosius, Merobaudes, Richomer and Bauto were consuls in successive years, and at least five more German names appear in the reigns of the last emperors of the West. When an office which the Emperor himself was proud to hold was given so freely to men of barbarian origin, it is plain that the old exclusiveness had disappeared and that the Germans had stolen their way into the very citadel of the Empire long before its distant outworks were stormed.'³

This social triumph of the fifth-century barbarian *novi homines* attained its culmination when the Emperor Theodosius's son and successor Arcadius (*imperabat* A.D. 395-408) deigned to take in marriage the barbarian Bauto's daughter Eudoxia—without scrup-

³ Dill, S.: *Roman Society in the Last Century of the Western Empire*, 2nd edition London 1905, Macmillan), pp. 296-7.

ling to raise the child of a Frankish soldier-of-fortune to the rank of Augusta, the highest honour open to a woman in the Imperial society of the age.

While the barbarians were thus setting their feet upon the top-most rungs of the Roman social ladder, the Romans themselves were beginning to move in just the opposite direction; for, in the generation before that in which the Teutonic mercenary Bauto achieved the double feat of winning the consular *laticlavium* for himself and the Imperial purple for his daughter, the Roman Emperor Gratian (*imperabat* A.D. 375-83) had succumbed to a new-fangled form of inverted snobbery, a mania, not for vulgarity, but for barbarism.

'The most skilful masters of every science and of every art had laboured to form the mind and body of the young prince. . . . But the influence of this elaborate instruction did not penetrate beyond the surface; and, . . . as soon as time and accident had removed those faithful counsellors from the throne, the emperor of the West insensibly descended to the level of his natural genius; abandoned the reins of government to the ambitious hands which were stretched forwards to grasp them; and amused his leisure with the most frivolous gratifications. . . . Among the various arts which had exercised the youth of Gratian, he had applied himself with singular inclination and success to manage the horse, to draw the bow, and to dart the javelin; and these qualifications, which might be useful to a soldier, were prostituted to the viler purposes of hunting. Large parks were enclosed for the Imperial pleasures, and plentifully stocked with every species of wild beasts; and Gratian neglected the duties, and even the dignity, of his rank to consume whole days in the vain display of his dexterity and boldness in the chase. The pride and wish of the Roman emperor to excel in an art in which he might be surpassed by the meanest of his slaves reminded the numerous spectators of the examples of Nero and Commodus; but the chaste and temperate Gratian was a stranger to their monstrous vices; and his hands were stained only with the blood of animals.

'The behaviour of Gratian, which degraded his character in the eyes of Mankind, could not have disturbed the security of his reign if the Army had not been provoked to resent their peculiar injuries. As long as the young emperor was guided by the instructions of his masters, he professed himself the friend and pupil of the soldiers; many of his hours were spent in the familiar conversation of the camp;¹ and the health, the comforts, the rewards, the honours of his faithful troops appeared to be the object of his attentive concern. But, after Gratian

¹ It will be noticed that the respectable Gratian begins his rake's progress at the point which had been the ruffianly Caracalla's limit (see p. 455, above). The inverse contrasts between the two careers and the two characters give the measure of the distance along the road towards proletarianization that had been travelled by the Hellenic dominant minority in the Roman Empire between the first quarter of the third century and the last quarter of the fourth.—A.J.T.

more freely indulged his prevailing taste for hunting and shooting, he naturally connected himself with the most dexterous ministers of his favourite amusement. A body of the Alani was received into the military and domestic service of the palace; and the admirable skill which they were accustomed to display in the unbounded plains of Scythia was exercised, on a more narrow theatre, in the parks and enclosures of Gaul. Gratian admired the talents and customs of these favourite guards, to whom alone he entrusted the defence of his person; and, as if he meant to insult the public opinion, he frequently showed himself to the soldiers and people with the dress and arms, the long bow, the sounding quiver, and the fur garments of a Scythian warrior. The unworthy spectacle of a Roman prince who had renounced the dress and manners of his country filled the minds of the legions with grief and indignation.¹ Even the Germans, so strong and formidable in the armies of the Empire, affected to disdain the strange and horrid appearance of the savages of the North, who, in the space of a few years, had wandered from the banks of the Volga to those of the Seine.²

This craze for barbarian dress and manners eventually cost Gratian his life; but the poor young prince's grisly end did not choke off the rising generation of his class from following the fashion which Gratian had inaugurated.

'There are signs that even in smaller things, such as toilet and dress, Germans, at the beginning of the fifth century, were setting the fashion. Three edicts of Honorius, between 397 and 416, forbid the wearing of trousers,³ long hair and fur coats of the barbarian style within the precincts of the city. The tone of the law of 416 leaves no doubt that the

¹ Yet poor Gratian was only doing what was done with impunity in the eighteenth century by the enlightened monarchs of a modern Western World when they dressed up their troopers (and on occasions their own selves) in the outlandish 'Scythian' kit of a Hungarian 'hussar' or a Polish 'uhlan' (*Turcick* 'oghlan', i.e. one of 'the boys' in the American sense).—A.J.T.

² Gibbon, E.: *The History of the Decline and Fall of the Roman Empire*, chap. xxvii.

³ The hesitating steps by which the Hellenic dominant minority gradually took to trousers are significant marks of the successive stages in its descent down the slippery slope of barbarization, because trousers were the common badge of the barbarians beyond two frontiers: on the one hand, of the Germans and Dacians beyond Rhine and Danube, and, on the other hand, of the Parthians beyond Euphrates. (The trousers of Iran and those of Northern Europe were, of course, alike derived from the Eurasian Steppe, whence they had been introduced by Nomad invaders: the common descent of the Parthians and the Dacians from the same Eurasian Nomad horde has been mentioned already in II. D (vii), Annex V, vol. ii, p. 435, footnote 1, above.) On this account, trousers were originally regarded as the very insignia of barbarism by the polite society of the Roman Empire, which was at bay on two frontiers against a threat of invasion by war-bands clad in these 'inexpressibles'. When Virgil has to refer to trousers, he resorts to the decent periphrasis 'barbara tegmina crurum' (*Aeneid*, Book XI, l. 777); and in the revolutionary year A.D. 69 the commander of the force that marched on Rome from the Rhine in order to secure the Imperial throne for Vitellius did perceptible damage to his cause by imprudently continuing to wear, on the Italian side of the Alps, a garment to which he had become addicted in the harsher climate of a Rhenish garrison-town. 'Caecina, velut relicta post Alpīs saevitia ac licentia, modesto agmine per Italiam incescit. ornatum ipsius municipia et coloniae in superbiā trahēbant, quod versicolori sagulo, bracas [breeches] indutus, togatos adloqueretur' (Tacitus: *Historiae*, Book II, chap. 20). As late as A.D. 274 it was the trousers on the legs of the captive Gallic pretender Tetricus that caught the eye of the crowd which watched the Emperor Aurelian's triumphal procession (see V. C (i) (c) 3, p. 219, above) traversing

rage for German fashions was wide-spread and that the previous edicts had been disregarded.'¹

The fifth century was the age in which the Romans who were 'going barbarian' and the barbarians who were 'going Roman' met one another, in their respective courses, mid-way, and lingered for a moment abreast—until the Romans drifted on again along their downward road towards barbarization and now carried the half-Romanized barbarians backwards with them. This brief phase of social parity in an unstable compromise between Barbarism and Civilization may be illustrated by bringing together the portraits of two men both of whom may claim to rank among the outstanding figures of that world in that penultimate phase of its history. Aetius, who was the older man of the two, was officially a Roman, while Theodoric the Ostrogoth, who was a child of the succeeding generation, was officially a barbarian. Both alike, however, were born frontiersmen; and the birth-place of both was the same sector of the *limes*. It was that Lower Danubian sector where the pressure was always particularly high because at this point the north-eastern corner of the Roman Empire touched the head of the Great Western Bay of the Eurasian Steppe (a funnel up which the flood of Nomadism was apt to surge with the speed and force of the tide in an estuary).² While their identity of birth-place thus constituted an initial bond between these two distinguished sons of Moesia Secunda, their respective upbringing happened in either case to be such as to bring them still nearer together by counteracting their diversity of social heritage; for, while Aetius

the streets of Rome. 'The use of braccæ, breeches or trowsers was still considered in Italy as a Gallic and Barbarian fashion', is Gibbon's observation (*The History of the Decline and Fall of the Roman Empire*, chap. xi, footnote 86). 'The Romans, however,' Gibbon adds, 'had made great advances towards it.' And Gibbon himself was destined soon to see the polite society of his own world do likewise. There is extant a letter dated the 21st June—7th July, 1778, which was written to the Countess of Carlisle by her husband the Fifth Earl when that nobleman was on a diplomatic mission in America (as one of the Royal Commissioners who had been appointed on the 12th April, 1778, in the forlorn hope of persuading the now indomitable insurgent colonists to accept, at the thirteenth hour, some accommodation which would avert a complete severance of the revolted colonies' political connexion with the British Crown); and in this letter the following passage occurs:

'The gnats in this part of the River [Delaware] are as large as sparrows; I have armed myself against them by wearing trousers, which is the constant dress of this country.' (Historical Manuscripts Commission: Fifteenth Report, Appendix, Part VI: The Manuscripts of the Earl of Carlisle, preserved at Castle Howard (London 1897, Eyre & Spottiswoode), p. 345.)

It was only a few years after this, again, that the French disciples of the American revolutionaries earned the nickname of *sans-culottes* for appearing in public, not in nothing but their shirts, but shockingly clad in liberal trousers instead of conservative knee-breeches. A superstitious antiquary might be tempted to infer that the act of going into trousers was an infallible outward visible sign of the demoralization of a *ci-devant* dominant minority.—A.J.T.

² See Part III. A, Annex II, vol. iii, pp. 401 and 426-8, above;

was brought up as a hostage among the Goths and Huns, Theodoric was brought up as a hostage at the Roman Imperial Court of Constantinople. The two sketches that here follow both come from the deft pen of the same modern Western scholar:

'Aetius . . . était Romain. Il était né . . . à Durostorum (aujourd'hui Silistrie).¹ Son père . . . avait fait une carrière brillante. . . . C'est évidemment parce qu'il appartenait à une famille militaire distinguée qu'Aetius, jeune garçon, fut donné comme otage à Alaric. Le chef des Visigoths distingua l'enfant romain, l'instruisit dans le métier des armes. Puis Aetius passa, toujours comme otage, chez les Huns, sur lesquels régnait le roi Rougila. . . . Il connut à sa cour le neveu du Khan, Attila, et se lia avec lui. Ainsi les deux fameux adversaires de la célèbre bataille du Campus Mauriacus, où devaient s'affronter d'un côté la Romania et les fédérés germaniques, de l'autre la Barbarie tatar avec ses sujets germaniques, alains, etc., se sont connus dès leur prime jeunesse.²

'Ce séjour chez les Huns eut des conséquences importantes. Aetius conserva des intelligences chez ce peuple. C'est chez lui qu'il aimait à puiser les mercenaires dont il composera les armées dites "romaines" pendant une quinzaine d'années. En 424, alors qu'il favorisait l'usurpation de Johannès contre Valentinien III, Aetius avait été chercher une armée hunnique. En 432, lorsqu'il dut prendre la fuite, vaincu sous Rimini par son rival Boniface, Aetius se réfugia chez les Huns et revint, l'année suivante, avec une armée que lui fournit le roi Rougila. Par la terreur, il se fait alors octroyer le titre de généralissime (*magister utriusque militiae*) et la dignité de "patrice": c'est-à-dire, de père adoptif de l'empereur. Le romain Aetius n'agit pas autrement que le visigoth Alaric ou, plus tard en Orient, l'alain Aspar, l'ostrogoth Théodoric. Il est plus barbare d'éducation et de tempérament que le vandale Stilichon.

'Aetius nous est connu surtout par les panégyriques de Mérobaude et un fragment de la chronique de Renatus Profuturus Frigeridus. Ces deux écrivains latins du v^e siècle sont, comme l'indiquent leurs noms, d'origine germanique: signe des temps.

'Il faut reconnaître que, si l'Empire a pu tenir trente ans encore en Occident, de 424 à 454, c'est [dû] à la connaissance approfondie que le patrice Aetius avait des hommes et des choses du monde barbare, tant tatar que germanique, non moins que du monde romain.³

It is instructive to examine this portrait of Aetius in the same synoptic view as the following portrait of Theodoric from the hand of the same artist:

'Nul barbare ne fut plus comblé de faveur que Théodoric. L'empereur Zénon le nomma patrice, l'adopta même comme fils d'armes

¹ Durostorum was one of the fortresses that guarded the Roman military frontier along the south bank of the Lower Danube.—A.J.T.

² It is for this reason that another modern Western scholar (quoted in I. C. (i) (a), vol. i, p. 60, footnote 1, above) describes the conflict between Aetius and Attila as presenting 'the image of a civil war'.—A.J.T.

³ Lot, F.: *Les Invasions Germaniques* (Paris 1935, Payot), pp. 89-90.

(476). Plus tard il sera fait *magister militum*, désigné pour le consulat. Théodoric n'était pas étranger au monde gréco-latin. Donné comme otage par son père en 465, il avait passé à Constantinople dix années, de 8 à 18 ans, les années décisives de l'homme, celles de sa formation. S'il avait été seul, il aurait fait sa fortune au service de l'Empire d'Orient, comme tant d'autres chefs barbares, comme son rival et homonyme Théodoric le Louche. Mais Théodoric appartenait à la race illustre des "Amals". Le peuple ostrogothique, qui le reconnaissait pour son chef, avait mis en lui toute sa confiance. Ce sont les revendications incessantes de ses compatriotes qui expliquent son attitude ambiguë vis-à-vis de l'Empire, tantôt déferente et soumise, tantôt subitement agressive. En 488 enfin, Zénon trouva l'occasion de se débarrasser de ce sujet indocile. Il lui concéda le pays d' "Hespérie" (L'Italie), à charge de s'en rendre maître aux dépens d'Odoacre.¹

If, having examined and compared this pair of fifth-century portraits, we were now to break off our survey and shut our eyes, we might flatter ourselves that we had already witnessed the closing scene in the play, and that the spectacle on which the curtain was falling was a stable amalgam of Roman and barbarian manners on a level which must be at any rate as high as Theodoric's, though it might also be as low as Aetius's. There is, however, still another scene to come; and this further scene—which is really and truly the final one—has met our eyes already in our portrait-gallery of truants.² We have there taken notice of a picture of a *ci-devant* Roman citizen which was drawn from the life in A.D. 448 by a Greek man-of-letters who paid a visit in that year to Attila's camp in the Hungarian Alföld on a diplomatic mission from the Roman Imperial Court at Constantinople. This contemporary of Aetius who is portrayed for us by Priscus had the same taste as Aetius himself—and Aetius's forerunner Gratian—for a barbarian way of life; but the canny Greek (for such he was by birth, like the historian who has immortalized him) had managed to indulge in Gratian's craze without incurring Gratian's fate; for Fortune had enabled him to carry his barbarization to a length from which even Gratian would probably have recoiled. The story is best told in the words of Priscus the Roman envoy and Greek historian.

'While I was waiting' [Priscus tells us, for an audience with Attila's minister Onegesius,] 'and was pacing up and down in front of the enclosure surrounding the establishment, I was approached by an individual whom I presumed, from his Nomad dress, to be a native, but who addressed me in Greek with the words "Good morning" (*χαίρε*)!—a greeting which intrigued me, for here was good Greek issuing from the lips of a Nomad. The Nomads, being the sweepings of the

¹ Lot, F., op. cit., p. 135.

² See V. C (i) (d) 3, pp. 409-10, above.

Earth, supplement their diverse vernaculars by some study of either Hunnish or Gothic or Latin (in so far as they have intercourse with the Romans),¹ while none of them readily speak Greek except the prisoners carried off from Thrace or from the Adriatic sea-board. These unfortunates, however, were recognizable at sight. Their tattered clothing and unkempt heads marked them out as people who had come down in the world, whereas my friend had all the appearance of a prosperous Nomad, with his clothes so smart and his hair so neatly bobbed.

'After returning his greeting, I inquired who he was and where he had lived before he had crossed into No-Man's-Land and adopted the Nomadic Life. He retorted by asking the motive of my eagerness to learn these details. I told him that the cause of my curiosity was his knowledge of Greek. Thereupon he laughed and told me that he was a Greek (*Γραικός*) by race who had come on business to the Moesian town of Viminacium on the Danube. He had stayed there a long time, married a local heiress, and enjoyed a spell of prosperity; but he had been stripped of all this when the town fell into the hands of the barbarians—on which occasion his former wealth had caused him to be reserved for Onegesius himself in the division of the spoils. The well-to-do captives, he mentioned, were the special perquisite (after Attila had taken his choice) of the *élite* in the Nomadic World, because they fetched the highest price when disposed of. However, he continued, he had distinguished himself in the subsequent actions against the Romans and against the [*Khazar*] horde; had made over his winnings on active service to his native master, according to the Nomad etiquette; and had thus obtained his freedom. He had married a native wife; he was the father of children;² he was an honoured guest at Onegesius's table; and he considered his present life preferable to his past.'³

¹ Latin was at this time the language of all the Danubian provinces of the Roman Empire from the Black Forest to the Black Sea, while Greek was hardly spoken any longer anywhere to the north of the Balkan Range (see IV. C (iii) (c) 2 (β), vol. iv, p. 326, footnote 2, above).—A.J.T.

² In due course Priscus's renegade might have become the progenitor of a new Nomad tribe or horde, if the dominion of the Huns on Roman ground had not collapsed at Attila's death but had lasted on for nine or ten generations, like the dominion of the Manchus in the Far East. In the territory of the Jasakto Khan 'Banner' of Mongols, in the southern division of the Hsingan Province of 'Manchukuo', there was in 1935 an enclave which was at that date still occupied by a tiny autonomous community of prosperous Nomadic stock-breeders who were known as the Manchu-Mongols. The story of this little horde is told as follows by a modern Western scholar who has obtained his knowledge at first hand (Lattimore, O.: *The Mongols of Manchuria* (London 1935, Allen & Unwin), pp. 228-32):

'In the reign of Ch'ien Lung (*imperabat* A.D. 1736-96) a Manchu Imperial princess was given in marriage to the ruling prince this of [the Jasakto Khan] "banner". In her following were seven "slaves" who were later given Mongol wives. On the death of the princess the then prince established them in their present territory. At the same time he gave them a kind of charter, exempting them from taxes and service, except for the expenses of the annual sacrifices at the tomb of the princess. . . . They have increased to over a hundred families, numbering about a thousand people. . . . The fact that this group is called "Manchu-Mongol" is, in my opinion, misleading. The original seven men were undoubtedly Chinese, and were called Manchu simply because they came as the servants of a Manchu princess. There is a tradition that they were artisans—a carpenter, a mason, and so on—and artisans coming from Peking in the eighteenth century were not likely to be Manchus. The Peking Manchus of that time,

For footnote ³ see opposite page, at bottom.

This *ci-devant* Greek renegade who was encountered by the historian Priscus in Attila's *ordu* in A.D. 448 was a portent of things to come; for he stands at the head of a line of truants from an expiring Hellenic dominant minority who managed to make themselves at home in a barbarian environment and who took to this adoptive barbarism so whole-heartedly that they began to lend a hand in fighting the battles of Hun or Teuton war-lords whose ancestors had been employed by their own ancestors as mercenaries. In a different context¹ we have already noted how at Vouillé in A.D. 507, when the Visigoths and the Franks were fighting out by the ordeal of battle the question which of two barbarian war-bands was to become the permanent possessor of the derelict Roman Imperial heritage in Gaul, there fought and died at the side of the Visigoth war-lord Alaric a grandson of the Latin man-of-letters Sidonius Apollinaris. The grandfather had been a mild and cultivated Gallo-Roman country-gentleman who could have comfortably worn the shoes of Jane Austen's Mr. Woodhouse, but who would have rubbed his eyes at the spectacle of his little grandson breaking Sarmatian lances instead of turning Latin verses as a gentleman should. Yet young Sidonius was acting no differently from other Gallo-Romans of his generation. At Vouillé there were Gallo-Roman forces engaged on the Frankish as well as on the Gothic side; it was the man-power of the Gallo-Roman population of the Seine Basin, whose allegiance Clovis had previously captured from their native leader Syagrius, that furnished the Frankish adventurer with the means of overthrowing all the rival barbarian war-lords within his reach;² the survivors among young Sidonius's Arvernian contemporaries who lived to fight another day had in their turn to exchange an Amalung for a Merowing *heretoga*; and in the sixth century it was the habit of the Frankish kings of Gaul to fight their wars, both civil and foreign, with an unwieldy *levée en masse* in which their Latin and Teutonic subjects were

being at the height of their prestige, were a leisured class who did not have to work as artisans. Furthermore the surnames Wang and Li, given for three of the families, were not Chinese names that were commonly taken by Manchus during the period when they were at pains to distinguish themselves socially from the Chinese. This group offers, therefore, a well established and clearly dated example of Chinese "turning Mongol". The numbers are not important; the amount of Chinese blood in a hundred families descended from seven men of the eighteenth century must be very small indeed. It is the process that is important. It undoubtedly was common in the past; for something of the same sort can still be seen in regions where the Chinese penetrate among the Mongols in small numbers.'

This testimony of Lattimore's from the opposite extremity of Eurasia affords an interesting corroboration of Priscus's story.—A.J.T.

conscripted promiscuously.¹ There is no evidence that in this age the descendants of the Roman provincials showed any less alacrity² in following a *Führer* on the war-path than was shown by the contemporary descendants of barbarians to whom, for centuries past, the war-game had been the breath of life.

'Ces populations gallo-romaines désarmées par la méfiance de l'Empire romain reprirent le goût de la guerre avec une rapidité incroyable. On les voit, dès le vi^e siècle, se battre avec rage contre elles-mêmes pour soutenir les querelles insensées d'un Chilpéric, d'un Sigebert, d'un Gontran. L'armement, l'instruction militaire, la tactique furent copiés sur ceux des Francs. Même en temps de paix, le Gallo-Romain prit l'habitude de porter l'épée au côté et de se vêtir d'habillements serrés au corps, à la façon des Barbares. À sa mort, il voulut être enseveli avec ses armes, comme le guerrier franc. De là, l'aspect tout barbare des nécropoles de ce temps. Les prétendus "cimetières francs" sont en réalité, pour la plupart, des cimetières gallo-romains.'³

In the rare intervals when there was no dynastic bickering among their Frankish war-lords to give these sixth-century Gallo-Romans an excuse for indulging in their new-found barbarian sport the Gallo-Roman cities—reviving the pugnacious tradition of international relations between the city-states of the Hellenic World before the establishment of the Roman Peace—now indulged, in flat defiance of the peace of a barbarian 'successor-state', in private wars against one another.⁴ And the local history of the progress of this cult of Barbarism among the epigoni of a Roman governing class can also be traced, and this perhaps most clearly of all, in a change of fashion in names. We have noticed above⁵ that, about half-way through the fourth century, the barbarians in the Roman Imperial service had dropped the practice—handed down by previous generations of barbarian hostages and mercenaries—of Latinizing their barbarian names or even giving them up in order to take good Latin names in place of them. The following century saw, in Gaul, the earliest examples of an inverse move, on the part of true-born Romans, to assume German names instead of imposing them;⁶ in the last third of the sixth century this late-fifth-century fashion abruptly gained the upper hand; and before the end of the eighth century it had become universal.⁶

¹ For instances see Dill, S.: *Roman Society in Gaul in the Merovingian Age* (London 1926, Macmillan), pp. 119-20 and 274.

² Lot, F.: *Les Invasions Germaniques* (Paris 1935, Payot), p. 210.

³ Dill, S., op. cit., p. 265.

⁴ On p. 468.

⁵ The process of fusion must have been expedited by the legalization, in A.D. 497, of marriages between Romans and Franks in the Frankish dominions (see Taylor, op. cit., vol. i, p. 120). The Franks do not seem to have thought of treating their Roman fellow subjects as members of a separate and inferior race (Taylor, op. cit., vol. i, p. 123).

⁶ These socially significant changes of nomenclature are recorded by Lot in op. cit., pp. 229-34. In the Visigothic 'successor-state' of the Roman Empire in the Iberian

By Charlemagne's time every inhabitant of Gaul was sporting a German name, regardless of whether his or her ancestry was actually Frankish or provincial.

This trivial point of manners tells us how unsubstantial was the ghost of the Roman Empire that was officially evoked in Western Christendom in Charlemagne's reign and person;¹ and this Gallic testimony is confirmed by the history of a parallel cult of barbarism in the decline and fall of the Sinic World; for this Sinic story has a singularly different ending from that of our tale of Gaul.

If we make a chronological equation between the break-up of the Roman Empire in the West at the turn of the fourth and fifth centuries and the break-up of the Sinic Empire of the Han at the turn of the second and third centuries of the Christian Era, and if we concentrate our attention, in both cases, upon those ex-Imperial territories that were carved up into barbarian 'successor-states', then the century in the post-Sinic interregnum in Northern China that will correspond to the eighth century of the Christian Era in the post-Hellenic interregnum in Western Europe will be the sixth century or thereabouts. When we examine, however, what was happening by that time in those northern marches of the defunct Empire of the Han which had been carved up, at the close of the third century, into barbarian 'successor-states' under the dominion of *ci-devant* Eurasian Nomads,² we behold a revolution of manners which is the exact inverse of the revolution which was consummated in the eighth century in Gaul.

The respective Sien Pi and Hiongnu and To Pa founders of the three earliest barbarian 'successor-states' of the Sinic universal state had already taken care to drape the nakedness of their barbarism under a veil of decency by archaistically bestowing upon their new political creations the polite Sinic names of 'Pe Yen' and 'Pe Han' and 'Wei';³ and some two hundred years later, after the To Pa principality of 'Wei' had annexed both of its two neighbours and rivals,⁴ the cue of 'de-barbarization' was taken up and followed out to its logical consequences by one of the princes of 'Wei', Hiao-wên ti (*regnabat* A.D. 490⁵-499).⁶ In A.D. 494 this Sinomane

Peninsula the fusion between Romans and Goths seems to have been completed by the middle of the seventh century of the Christian Era (Taylor, *op. cit.*, vol. i, p. 118).

¹ The hollowness of 'the Holy Roman Empire' has already struck us by contrast with the solidity of the rival structure which was erected in the same century in Orthodox Christendom. For this contrast between 'the Holy Roman Empire' of Charlemagne and the East Roman Empire of Leo Syrus see IV. C (iii) (c) 2 (β), vol. iv, pp. 322-3, above.

² See IV. C (ii) (b) 1, vol. iv, p. 65; V. C (i) (c) 3, in the present volume, pp. 272-3; V. C (i) (c) 4, p. 356; and the present chapter, p. 465, above.

³ See V. C (i) (c) 3, p. 273, above.

⁴ See V. C (i) (c) 4, p. 356, footnote 6, above.

⁵ This was the date of Hiao-wên ti's effective accession. He had been on the throne as a minor, under a regency, since his father's abdication in A.D. 471.

⁶ For Hiao-wên ti's reign and policy see Franke, O.: *Geschichte des Chinesischen Reiches*, vol. ii (Berlin 1936, de Gruyter), pp. 208-15.

prince of To Pa barbarian origin transferred the seat of his government from his forefathers' camping-ground at P'ing-ch'êng, in the barbarized marches, to the derelict site of the ancient Imperial capital of Loyang; in the same year he prohibited the wearing of barbarian dress by any of his subjects; in 495 he banned the use of the barbarian vernaculars at Court and compelled the barbarian-descended families in the population to exchange their barbarian names for Sinic substitutes; and finally, in 496, he changed the name of his own dynasty from the tell-tale barbarism of 'To Pa' to the respectable Sinism of 'Yuan'. If the Sinic tradition could cast so strong a spell as this over the native prince of a barbarian 'successor-state' some three hundred years after the break-up of the Sinic universal state, it is not surprising to find the universal state itself being resuscitated, after the passage of another hundred years, by the Sui and the T'ang¹ with an effectiveness that is likewise characteristic of the corresponding work of an Anatolian Leo Syrus, but which is conspicuously lacking in the work of an Austrasian Charlemagne.²

Before closing our inquiry into the barbarization of dominant minorities, we may pause to ask ourselves whether any of the symptoms of this social phenomenon are discernible in our own world of the modern West. On first thoughts we shall perhaps be inclined to think that our question has received a conclusive answer in the recent conquest of one of the strongest of the surviving fastnesses of Barbarism by one of the weakest of the Western Great Powers of our day. Even if there be a dominant minority in our twentieth-century Western World which may find itself constrained to plead guilty to a charge of vulgarization, can this other danger of barbarization be taken very seriously in a world where the last of the transfrontier barbarians are being subjugated or exterminated under our eyes? The spectacle of Ethiopia may impel us to dismiss our question with a curt answer in the negative; yet, before we finally condemn it as inane, we may do well to look farther afield and remind ourselves of the rather disconcerting fact that, in the present heart of our Western Society's 'New World' of North America, there is to-day a large and widespread population of European blood and Western Christian social heritage which has been unmistakably and profoundly barbarized by being marooned in the Appalachian backwoods after serving a preliminary term of exile on 'the Celtic Fringe'.³

¹ See V. C (i) (c) 4, p. 356, footnote 6, above, for the historical development, through a number of intervening stages, of the *imperium redivivum* of the Sui and the T'ang out of the Han Empire's To Pa barbarian 'successor-state' in Shansi.

² This likeness of the Sinic *imperium redivivum* of the Sui and the T'ang to the East Roman Empire, in a common contrast to 'the Holy Roman Empire', is examined further in Part X, below.

³ See II. D (vii), vol. ii, pp. 311-12, above.

The barbarizing effect of the American frontier has been described with equal eloquence and insight by an American historian who is a master of the subject.

'In the settlement of America we have to observe how European life entered the continent and how America modified and developed that life and reacted on Europe. Our early history is the study of European germs developing in an American environment. . . . The frontier is the line of most rapid and effective Americanization. The wilderness masters the colonist. It finds him a European in dress, industries, tools, modes of travel and thought. It takes him from the railroad car and puts him in the birch canoe. It strips off the garments of civilization and arrays him in the hunting shirt and the moccasin. It puts him in the log cabin of the Cherokee and Iroquois and runs an Indian palisade around him. Before long he has gone to planting Indian corn and plowing with a sharp stick; he shouts the war-cry and takes the scalp in orthodox Indian fashion. In short, at the frontier the environment is at first too strong for the man. He must accept the conditions which it furnishes, or perish; and so he fits himself into the Indian clearings and follows the Indian trails. Little by little he transforms the wilderness; but the outcome is not the old Europe. . . . The fact is that here is a new product that is American.'¹

The thesis is that, although the Indian frontier of the United States has ceased to exist as a physical fact with a precise geographical locus, it has succeeded nevertheless in immortalizing itself by setting a permanent spiritual impress upon the national life of a new nation of European origin which, as the frontier travelled westward across the Continent,² was steadily growing in stature on American ground. If this thesis is correct, then we are bound to declare that, in North America at any rate, a social pull of prodigious force has been exerted upon one section of the dominant minority of our modern Western World by one section of the external proletariat. For, on this showing, the influence of the now physically obsolete Indian frontier is visible not only in the 'living museum' of barbarized frontiersmen who have been left stranded in an Appalachian fastness by the westward-rolling tide of American 'nation-building': the frontier has also carved for itself a vaster monument in a more lasting medium by introducing a vein which is certainly distinctive, and possibly predominant, into the new-made American national character. When we remind ourselves of the initial disparity—and this in spiritual culture as well as in corporate physical strength—between the incomers from Europe who have built this new nation up and the American aborigines whom they have swept out of their path, and when

¹ Turner, F. J.: *The Frontier in American History* (New York 1921, Holt), pp. 3-4. Part of this passage has been quoted already in II. D (vii), vol. ii, p. 312, footnote 1, above.

² See V. C (i) (c) 3, pp. 207 and 328-32, above.

we further recall that the Indian frontier of the European colonies in North America was in physical existence for barely two centuries and a half, reckoning from the landing of the first settlers on the Atlantic coast down to the time when their descendants reached and occupied their natural frontier on the Pacific sea-board of the North American Continent, we shall be more astonished than ever at the strength of the influence exerted by a barbarism which was continually 'on the run' upon an invading civilization which hardly paused in its march across the American Continent and which was animated by the 'driving-power', and backed by the weight, of the whole body social of Western Christendom in its European homeland. In the light of this American portent it would be rash to assume that the spiritual malady of barbarization is a peril which our modern Western dominant minority can afford to disregard. On our American precedent an Ethiopian barbarism that has been crushed by methods more barbarous than its own may perhaps be expected to revenge itself by transferring its habitation from Abyssinian to Italian souls and perpetuating itself, no longer innocuously in a primitive Africa, but lethally in a decadent Europe.

(β) *Vulgarity and Barbarism in Art.*

If we pass next from the general field of 'Manners and Customs' to the special field of Art, we shall find the sense of promiscuity betraying itself, here again, in the two alternative forms of vulgarity and barbarism with which we have now made ourselves familiar. In one or other of these forms the Art of a disintegrating civilization is apt to pay for an abnormally wide and rapid geographical diffusion by forfeiting that distinctiveness of style which is the sign manual of well-being in Art perhaps even more conspicuously than it is in any of the other activities of a civilization that is still in its growth.

Two classic examples of vulgarity in Art are the fashions in which a disintegrating Minoan and a disintegrating Syriac Society successively radiated their aesthetic influence round the shores of the Mediterranean. The interregnum (*circa* 1425-1125 B.C.) which followed the overthrow of the Minoan 'thalassocracy' is marked—in the 'artifacts', disinterred by our modern Western archaeologists, which are our sole evidence for the course of Minoan history—by the vulgar fashion, labelled 'Late Minoan III', which outranges in its diffusion all the earlier and finer Minoan styles;¹ and similarly

¹ For its range see Glotz, G.: *La Civilisation Égéenne* (Paris 1923, Renaissance du Livre), pp. 64 and 248-50. In this age when it was *in articulo mortis*, the Minoan culture spread from the Aegean to Macedonia in one direction and to Cyprus in another, and Syrian princesses took to dressing *à la crétoise*.

the 'Time of Troubles' (*circa* 925-525 B.C.) which followed the breakdown of the Syriac Civilization is marked by the equally vulgar and equally widespread mechanical combination of *motifs* drawn promiscuously from Egyptian and from Babylonian sources which was diffused from Tyrian and Sidonian workshops into the sister Hellenic World in the Aegean, as well as into the barbarian hinterlands of Carthage and of Gades.

In the history of Hellenic art a corresponding vulgarity found expression in the excessively rich decoration which came into vogue with the Corinthian order of architecture—an extravagance which is the very antithesis of the distinctive note of the Hellenic genius; and, when we look for outstanding examples of this fashion, which reached its climax in the Imperial Age of Hellenic history (*circa* 25 B.C.-A.D. 375), we shall not find them at the geographical heart of the Hellenic World. As illustrations of this florid display of aesthetic decadence, the surviving columns of the Olympieum at Athens are not so characteristic as the remains of the temple of a non-Hellenic divinity at Ba'labak, or as the sarcophagi that were manufactured by Hellenic 'monumental masons' to harbour the mortal remains of Philhellene barbarian war-lords on the far eastern rim of the Iranian Plateau.¹

If we turn from the archaeological to the literary record of the disintegration of the Hellenic Civilization, we find that the 'high-brows' of the first few generations after the breakdown of 431 B.C. bewailed the vulgarization of Hellenic music and the deplorable effect upon the Hellenic *êthos* of a change for the worse in an art to which Hellenic souls were particularly sensitive. And we have already noticed in another context² the vulgarization of the Attic drama at the hands of Διονύσου Τεχνῖται ('United Artists, Ltd.') who tore it up from its roots in the theatre of Dionysus at Athens in order to hawk it up and down the world from Parthia to Spain.

In the modern Western World we may observe that it is the floridly decadent and not the severely classical style of Hellenic architecture that has inspired our Western Hellenizing fashions of Baroque and Rococo. And in the so-called 'chocolate-box style' of our Victorian and Edwardian 'commercial art'³ we can discern an analogue of 'Late Minoan III' that bids fair to conquer, not merely the Mediterranean Basin, but the whole face of the planet in the service of a peculiarly Western commercial technique of visually advertising the tradesman's wares.

¹ See III. C (i) (a), vol. iii, p. 131; III. C (iii) (a), vol. iii, p. 247, footnote 2; V. C (i) (c) 2, in the present volume, pp. 134-5; and V. C (i) (c) 3, p. 196, above.

² In IV. C (iii) (b) 14, vol. iv, p. 243, above.

³ For the corresponding modern Western monstrosity of 'commercial architecture' see the passage quoted from Frobenius in V. C (i) (c) 3, p. 201, footnote 1, above.

The fatuousness of 'the chocolate-box style' is so desolating that it has provoked even a generation as aesthetically obtuse as ours¹ into attempting desperate remedies. Our archaistic flight from vulgarity into a pre-'Pre-Raphaelite' Byzantinism is discussed in a later chapter;² but in this place we have to take note of the contemporary and alternative flight from vulgarity into Barbarism. Self-respecting Western sculptors of the present day who have not found a congenial asylum in Byzantium have turned their eyes towards Benin; and it is not only in the glyptic branch of art that a Western World whose own sources of creativeness have apparently run dry has been seeking fresh aesthetic inspiration from the barbarians of West Africa. West African music and dancing, as well as West African sculpture, have been imported into the heart of the Western World on the lips and in the limbs of African conscript-immigrants; Congolese slaves have carried them into America, and Senegalese mercenaries into Europe; and the effect upon the *êthos* of our Western dominant minority has been so swiftly and so deeply demoralizing that, if Plato could have witnessed it, he would assuredly have lifted up his hands and given thanks to Apollo for Timotheus.

This triumph of a Negro art in the northern states of America and in the western countries of Europe represents a much more signal victory for Barbarism than the progressive barbarization of the Hellenic image and superscription on the staters of King Philip's mintage in the course of the long and slow journey of this Hellenic coin-type from the banks of the Strymon to the banks of the Thames in Ultima Thule.³

To a layman's eye the flight to Benin and the flight to Byzantium seem equally unlikely to lead the latter-day Western artist to the recovery of his lost soul.

Hoc se quisque modo fugitat, quem scilicet, ut fit,
effugere haud potis est.⁴

And yet, even if he cannot save himself, it is still not impossible that he may be a means of salvation for others. 'A mediocre teacher, giving mechanical instruction in a science that has been created by men of genius, may awake in some one of his pupils the vocation which he has never felt in himself';⁵ and, if the 'commercial art' of a disintegrating Hellenic World performed the astonishing feat of evoking the supremely creative art of Mahayanian

Buddhism through its encounter with the religious experience of another disintegrating world on Indic ground,¹ we cannot venture to pronounce *a priori* that the modern Western 'chocolate-box style' is incapable of working similar miracles as it is flaunted round the globe on the advertiser's hoardings and sky-signs.

(γ) *Lingue Franche*.

In the field of Language the sense of promiscuity in a disintegrating society reveals itself in the change from a local distinctiveness to a general confusion of tongues.

Though the institution of Language exists for the purpose of serving as a means of communication between one human being and another, the social effect of Language in the history of Mankind up to date, as far as we have knowledge of it, has actually been on the whole to divide the Human Race and not to unite it; for hitherto this institution (which in itself is one of the clearest of the criteria that distinguish men from brutes) has been current in so great a number of such extremely diverse forms that even the languages which have won the widest currency and enjoyed the longest vogue have never yet become common to more than a fraction of Mankind. Even within the narrower subjective world of the individual human being's experience in his brief personal span of Time and Space it has hitherto been rare for him to find himself speaking a language that has been common to all other human beings who have come within his ken either by intercourse or by report. An element which has seldom been absent from Man's mental picture of the world in which he lives is a consciousness of the existence of 'foreigners' whose principal hall-mark is their unintelligible speech; and thus it has come about that an institution which is common to all Mankind and which distinguishes Man from all other embodiments of Life on this planet has hitherto served in practice to distinguish and divide one human community from another as well as to identify and unite with one another the respective members of each one of these innumerable separate linguistic communities into which the Human Family has hitherto been parcelled out. This is the penalty which Mankind has had to pay for the narrowness of the limits of mutual intelligibility. For in fact, so far as our modern Western knowledge goes, there has never really yet been a time when 'the whole Earth was of one language and of one speech'.² A mutual intelligibility that knows no exceptions and no limits is a potential achievement of the power of speech which may be its ultimate purpose and its

¹ See III. C (i) (a), vol. iii, p. 131; III. C (ii) (a), vol. iii, p. 247, footnote 2; V. C (i) (c) 2, in the present volume, pp. 134-5; and V. C (i) (c) 3, p. 196, above.

² Gen. xi. 1.

eventual goal; but, if so, we can only say that the purpose has never yet been attained and that the goal still lies hidden in the Future. Hitherto, any widespread uniformity—even within limits far short of a world-wide range—has been exceptional, while an extreme variety of tongues has been the rule. We find this rule of linguistic diversity prevailing, not only in primitive societies like those which still survive in the Sudan,¹ but also in civilizations in their growth stage. The Hellenic World, for example, included non-Greek-speaking Carians and Lycians, as well as Greek-speaking peoples, within the ambit of its city-state culture since the earliest date to which our records of Hellenic history go back;² and among the Greek-speaking majority there was a diversity of dialect and script between one district and another, and even between one city-state and another within the same district, which was jealously preserved as the distinctive shibboleth and hall-mark of a diversity of local character and was only ironed out into complete uniformity by the last tribulations of the Hellenic 'Time of Troubles'.³ Again, in our modern Western World in our own day—whether we are living already in a 'Time of Troubles' or still in an age of growth⁴—a local diversity of language within an oecumenical uniformity of culture is an even more conspicuous feature than it was in the Hellenic World in the early and the middle chapters of Hellenic history.

It is in disintegrating civilizations at an advanced stage of their decline that we are apt to see languages—following the fortunes of the communities that speak them as their mother-tongues—waging internecine wars with one another and conquering, when victorious, wide dominions at their discomfited rivals' expense; and, if there is any grain of historical fact in the legend⁵ of a confusion of tongues in the land of Shinar at the foot of an unfinished zigurat in a recently built city of Babel, the story perhaps takes us to Babylon in an age in which the Sumeric universal state was breaking up, and the Sumeric Civilization dissolving, after the death of Hammurabi (*imperabat circa* 1947–1905 B.C.).⁶ Babylon had been the capital of the Sumeric universal state in those latter days when 'the Empire of Sumer and Akkad' was being kept alive

¹ See Part III. A, Annex I, vol. iii, p. 393, above.

² On the other hand it was not until after the breakdown of the Hellenic Civilization that the Greek-speaking barbarians north and north-west of the Thermopylae–Naupactus line were brought into the Hellenic fold (see III. C (ii) (b), Annex IV, vol. iii, p. 478, above).

³ See Buck, C. D.: *Introduction to the Study of the Greek Dialects* (Boston 1910, Ginn), pp. 154–5 and 157.

⁴ This not yet soluble problem of historical diagnosis has been noticed in I. B (iv), vol. i, pp. 36–7, above, and is considered further in V. C (ii) (b), vol. vi, pp. 313–14, below.

⁵ Gen. xi. 1–9.
⁶ See I. C (i) (b), vol. i, pp. 106 and 110, and IV. C (ii) (b) 1, vol. iv, pp. 63–4, above, and V. C (ii) (b), vol. vi, pp. 297–8, below.

by a Babylonian dynasty of Amorite princes of whom Hammurabi himself was the most eminent representative;¹ and it might well be remembered in a 'folk-memory'² that 'the Lord did there confound the language of all the Earth, and from thence did the Lord scatter them abroad upon the face of all the Earth'; for in this catastrophic last chapter of Sumeric history the Sumerian language became a dead language after having played an historic role as the original linguistic vehicle of the Sumerian culture, while even the Akkadian language, which had attained to an upstart parity with Sumerian in the course of the Sumeric decline and fall, had now to contend with a host of external proletarian vernaculars—Hyksos and Hittite and Kassite—which had been brought into the derelict domain of the Sumeric universal state by barbarian war-bands that were ranging over it and settling down upon it during the post-Sumeric *Völkerwanderung*.³

We may thus perhaps venture to interpret this famous legend as the persistent echo of a bitter lament for the passing of a language which had formerly been current for a season, not indeed over the whole Earth, but at least over the whole domain of a single disintegrating civilization; and we may then go on to surmise that a uniform medium of linguistic communication which was looked back to with such poignant regret after it had passed out of currency may have been looked forward to with a proportionately keen longing in an earlier age when the very idea of an oecumenical language was still only a hope or a dream. This conjecture is fully in accord with the picture of the characteristic social circumstances of a 'Time of Troubles' which has already unfolded itself in this Study in other contexts. In a 'Time of Troubles', when a society is violently plucked up by the roots, those traditional articulations of the social structure which have grown up gradually and naturally through the ages are suddenly confounded. The once distinct and separate local communities now collide and intermingle with one another; the Orontes flows into the Tiber;⁴ and the agony which these tribulations are bound in any case to inflict on the human beings who are called upon to endure them is aggravated by the special pains of loneliness and helplessness so long as the victims of the social convulsion, when they are thrown together in their strange new relations of hostility or comradeship, continue

¹ See I. C (i) (b), vol. i, pp. 103 and 106, above, and V. C (ii) (b), vol. vi, pp. 297-8, below.

³ For this *Völkerwanderung* see I. C (i) (b), vol. i, pp. 104-11, and V. C (i) (c) 3, in the present volume, pp. 263-6, above.

⁴ The famous passage of Juvenal has been quoted already in V. C (i) (c) 2, p. 67, above.

to be divided by the barriers of linguistic diversity that are a legacy of their former state. The legend of the confusion of tongues is true to life in fastening upon this state of mutual unintelligibility as being a sovereign impediment to concerted social action in face of a new and unprecedented social crisis; and this association of linguistic diversity with social paralysis can be illustrated by examples that stand out conspicuously in the full light of history.

In our Western World in our own generation this was one of the fatal weaknesses of that Danubian Hapsburg Monarchy which perished in the General War of 1914-18; and even in the inhumanly efficient Slave-Household of the Ottoman Pādīshāh in its age of maturity, in A.D. 1651, we see the curse of Babel descending upon the *Ich-oghians* within the precincts of the Seraglio and reducing them to impotence at the critical moment of a palace revolution. In their excitement the boys forgot their artificially acquired 'Osmanli idiom; and the astonished ears of the spectators were smitten by the sound of 'a tumult . . . with different voices and languages—for some cried in Georgian, others Albanian, Bosnian, Mingrelian, Turkish and Italian'.¹ In this historical instance of 'speaking with tongues' the multitude were not miraculously hearing from the lips of others, but were automatically rearticulating on their own lips, their 'own tongue wherein' they had been 'born',² while they were momentarily forgetting the new common language in which they had been sedulously instructed for the very purpose of enabling them to act effectively by acting in concert. We may allow ourselves to surmise that the memory of this paralysing experience inspired this batch of *Ich-oghians* in after-life to master their 'Osmanli language of official intercourse with as thorough a command as they possessed over their now disconcerting mother-tongues. But all the circumstances of this trivial incident of Ottoman history are inverted in the momentous episode in which a 'speaking with tongues' is reported for the first time in the Acts of the Apostles.³ In that scene depicted in the saga of the infancy of the Christian Church the tongues which are spoken are foreign to the lips of the speakers; these speakers are unlettered Galileans, who have hitherto never spoken, and seldom heard, any other language than their native Aramaic; their sudden outbreak into other tongues is represented as being a miraculous gift from God, which they exercise 'as the Spirit' gives 'them utterance'; and this gift is the first in which their new inspiration is manifested; for, according to the tale, the miracle of the Apostles

² Acts ii. 8.

³ Acts ii. 1-13.

speaking 'with other tongues' breaks out immediately after the descent of the Holy Ghost upon them.

While this tale may be diversely interpreted as history or as legend, there will be no dispute about the point in it which here concerns us. It is clear that, in the view of the writer of the Acts, the gift of tongues was the first enhancement of their natural faculties that was needed by Apostles who had been charged with the tremendous task of converting Mankind to a newly revealed 'higher religion'. Indeed, the world-wide range of their mission and the enhancement of their natural faculties through an in-pouring of the spirit of God are two things which the writer expressly brings into direct relation with one another in an earlier passage:

'Ye shall receive power after that the Holy Ghost is come upon you; and ye shall be witnesses unto me both in Jerusalem and in all Judaea and in Samaria and unto the uttermost part of the Earth.'¹

Since the Acts of the Apostles is a mirror of the minds of the Christian missionaries of the first generation, these passages are evidence that the boon of an oecumenical medium of communication was as ardently desired by the pioneer propagators of a new-born Christianity as the loss of an historic *lingua franca* must have been keenly regretted by those survivors of the shipwreck of the Sumeric Society to whose grievous experience we may tentatively trace back the legend of the confusion of tongues in the Book of Genesis. In the view of the authorities behind the author of the Acts the pentecostal gift of tongues is in fact a miraculous substitute for a natural facility—the currency of a *lingua franca*—for lack of which the early Christian missionaries might otherwise have found themselves almost prohibitively handicapped.

If this is a true reading of the passage, the eagerness and gratitude of these early Christian missionaries for the gift of speech in a multitude of local vernacular languages may still, however, at first sight seem surprising when we consider that the Apostles' world in the first century of the Christian Era was far less ill supplied with *lingue franche* than our world is to-day. The mother-tongue of the Galileans of that age was an Aramaic which would carry any Palestinian speaker of it northwards as far as the Amanus and eastwards as far as the Zagros and westwards as far as the Nile, while the Greek in which the Acts themselves are written would carry the writer in Saint Paul's company overseas through 'the Isles of the Gentiles'² as far as Rome—and on beyond Rome to the Rhône and the Pyrenees and the Atlas, if the swords of Paul's

¹ Acts i. 8.

² Gen. x. 5.

Roman gaolers would drop their points to give further passage to the intrepid Greek-speaking preacher of an Aramaic-speaking Christ. Any child of that age who commanded both these two oecumenical languages had it in his power to address himself—through the written word, at any rate—to a public which extended, east and west, from the countrymen of the learned Magi to the subjects of the cultivated King Juba—as is testified by a celebrated contemporary of the anonymous author of the Acts. The Jewish historian Josephus¹ tells us in the preface to one of his works² how he first wrote the book in Aramaic for the information of half his world and then, for the instruction of the other half, published a translation of it in Greek.

In Josephus's opinion the previously published works on the Romano-Jewish War of A.D. 66–70 which had been written in Greek by non-Jewish authors were without exception highly unsatisfactory.

'Such works consist of alternate invective and encomium, without a vestige of historical accuracy; and this has induced me to offer to the public of the Roman Empire, in a Greek translation, a work of my own, originally composed in my native language [i.e. in Aramaic] and published in the non-Hellenic Orient (*ἃ τοῖς ἀνω βαρβάροις τῇ πατρίῳ συντάξας ἀνέπεμψα πρότερον*). . . I felt it a paradox that the truth concerning events of such importance should be allowed to remain in doubt, and that the Parthians, the Babylonians, the most remote peoples of Arabia, my own compatriots beyond the Euphrates and the inhabitants of Adiabene should be accurately informed, through my labours, of the origin, vicissitudes and issue of the war, while the Greeks and all Romans who did not serve in the campaign should have nothing better at their disposal than flattering or fictitious accounts which conceal the truth.'

It will be seen that the world for which Josephus was writing was uncommonly well equipped in the matter of *lingue franche* if a command of no more than two languages would suffice to enable an author to bring his book within reach of all potential readers of it. Perhaps the reason for this trivial yet striking exception to the general disharmony and frustration which were the outstanding features of the social life of Josephus's time and place was that Josephus's world was composed of the overlapping domains of no less than three civilizations—the Babylonian, the Syriac, and the Hellenic—which had successively broken down and had so given play for the spread of *lingue franche* in the course of their own disintegration. In the world-wide Great Society of the present age it would be difficult for any writer to reach so large a propor-

¹ For Josephus's career as an example of Withdrawal-and-Return see III. C (ii) (b), vol. iii, pp. 294–6, above.

² Josephus: *The Romano-Jewish War*: Preface = Book I, chaps. 1–16.

tion of his potential public as Josephus was able to reach without having to do more than simply write his book in his own mother-tongue and then translate it into a single other language. In our world neither a Russian book with a French translation nor an Arabic book with an English translation would command so wide a range of readers as was accessible to a book written in Aramaic and translated into Greek by a Palestinian Jew in the first century of the Christian Era.

We may next observe that the peoples mentioned in the catalogue¹ of those in whose local mother-tongues the Apostles miraculously began to speak on the Day of Pentecost are almost all of them included either in the Aramaic-reading or in the Greek-reading portion of Josephus's public. The Parthians and Arabians are mentioned by name in the Acts as well as in Josephus's catalogue of Aramaic-readers; Josephus's Aramaic-reading Babylonians and Adiabeniens are next-door-neighbours of the 'Medes and Elamites and the dwellers in Mesopotamia' whom the writer of the Acts has included in his list; and we may presume that the Aramaic language was also current among these three peoples likewise. Why was it, then, that the Apostles' own native Galilaean Aramaic did not serve them, without any special gift of tongues, for speaking to such of their audience as belonged at any rate to those five out of the fifteen nationalities mentioned, as well as to the Aramaic-speaking dwellers in Judaea? And, as for the other nine—the dwellers in 'Cappadocia, in Pontus and Asia, Phrygia and Pamphylia, in Egypt and in the parts of Libya about Cyrene, and strangers of Rome (Jews and proselytes)', together with the 'Cretes'—could not the Apostles have anticipated Josephus by reaching them, one and all, in a single non-Aramaic language, namely Greek? Was not the gift of a dozen other tongues, in addition to their native Aramaic, a superfluous prodigality? Would it not have sufficed for these hereditarily Aramaic-speaking preachers of the Word to be miraculously endowed with an additional power of speech in Greek, and in Greek only?

This apparent inconsequence may find its explanation in the fact that the people whom the Apostles were addressing were drawn from the same range of countries as Josephus's public without being drawn from the same class. Whereas Josephus was undoubtedly writing for an intellectual *élite*, it seems likely that the 'Jews, devout men, out of every nation under heaven', who, dwelling in Jerusalem, there suddenly (as the story goes) heard issuing from the Apostles' lips the local vernaculars of their respective countries of origin, will for the most part have been

¹ Acts ii. 9-11.

people of a humbler and less highly sophisticated sort.¹ And one of the points of difference between these two different social strata was probably just this, that the people on the lowlier level were masters of their mother-tongue only, while those of the superior rank were masters of one or more *lingue franche* in addition to their mother-tongue, unless they happened (as was the happy fortune of an Aramaic-speaking Galilaean or Judaeon or a Greek-speaking Pamphylian or 'Crete') to have inherited as their mother-tongue one of the languages of wider currency.² One reason why Josephus was able to reach his far-flung public through the medium of no more than two languages was because this public belonged exclusively to a cultured, and therefore bilingual or trilingual, minority. If, instead of setting out to write a 'serious work' for 'high-brows', Josephus had been called, like the Apostles, to preach salvation to the unlettered multitude, neither his own native Aramaic nor his laboriously acquired Greek would have carried him anything like so far. His Aramaic preaching would have been understood of the people from Judaea and Mesopotamia and Babylonia and Adiabene, while his Greek preaching might have been partially intelligible to those from Crete and Cyrene and Pamphylia, as well as to some of those from Asia and from Rome; but, when he came to the pilgrims from the back parts of Arabia and Iran and Anatolia, he would soon have found himself praying for the miraculous gift of tongues as his only hope of being able to enter into communication with these outlandish potential converts whose exotic native vernaculars were the only media through which the Word could be conveyed to them.

This contrast between the respective linguistic problems with which the Apostles and Josephus had to cope brings out more clearly what the difference is between the linguistic situation in a disintegrating society and the situation in other social circumstances. In a disintegrating society, as in other places and times, the masses are masters of their mother-tongue only, and of no other language besides; but at the same time the process of social disintegration is accompanied by two linguistic processes which are specially characteristic of it: in the first place, the original

¹ Such, at any rate, is to-day the general character of the corresponding element in the Jewish community at Jerusalem—in contrast, for example, to the Zionists.

² To pursue our analysis of the respective social ingredients in the Palestinian Jewry of the first and of the twentieth century of the Christian Era, we should perhaps likewise find to-day that, among the 'devout men' belonging to the *Agudath Israel*, only a minority would be masters of a second language in addition to their mother-tongue (whether they were East-European Yiddish-speaking Jews or Central-Asian Tajik-speaking Jews or Yamani Arabic-speaking Jews). On the other hand we should find that all the Zionists possessed at least a smattering of Neo-Hebrew, and that many of them were also masters of one of the world-languages of the day—e.g. English or French—even when they were Jews who had been born and brought up in some European country in which neither English nor French was the local vernacular.

mother-tongue of some communities or countries is ousted by an intrusive language (as, in the case in point, Hebrew had been ousted by Aramaic in Judaea and Assyro-Babylonian by Aramaic in Babylonia and in Adiabene);¹ and in the second place certain of these aggressive languages also become *lingue franche* on the lips of an intellectual *élite* over a far wider geographical range than the regions in which they have succeeded in supplanting the original mother-tongue of the masses (as, in the case in point, Aramaic had gained currency as a *lingua franca* in Parthia and Media and Elam and Arabia without having at the same time supplanted the local Iranian and Arabic vernaculars).²

In the social circumstances in which the need for such a *lingua franca*, or supplementary language of more than local currency, has begun to make itself felt, there are several alternative means through which the growing demand may be supplied in different degrees of efficacy.

The simplest media of mental communication across the boundaries of parochial language-areas are not languages nor even scripts, but are mere systems of numerical notation. The classic example is the famous Incaic system of *quipus*—sets of cords which were variously coloured and knotted to convey a wide range of meanings with the aid of an elaborate scheme of mnemonics—and these unwritten records which spoke the same wordless language to men of different tongues were one of the essential instruments in the administration of an Incaic Empire which grew to the stature of an Andean universal state. A cruder form of the same material device, in the shape of ‘tallies’, was employed in one of the most efficiently administered kingdoms in the Transalpine part of medieval Western Christendom; and a more elegant form is in daily use in our own world to-day in the shape of the Arabic numerals—which have now won their way to an almost ubiquitous currency, though the numbers for which they stand are known in different languages by a vast variety of names conveyed in a considerable variety of scripts.

When we pass from numerals to ‘characters’,³ we see the Latin

¹ See I. C (i) (b), vol. i, p. 79; IV. C (iii) (c) 3 (α), vol. iv, p. 484; and V. C (i) (c) 2, in the present volume, pp. 117–19, above, and the present chapter, p. 499, footnote 5, below.

² See V. C (i) (c) 2, p. 123, footnote 2, above, and the present chapter, pp. 499, below.

³ On the border-line between numerical notations and scripts that convey, not numerals, but the sounds of articulate human speech, we may conjecturally place the still undeciphered scripts (representing several distinct systems) which have been recovered from the debris of the Minoan World by the enterprise of our modern Western archaeologists (see V. C (i) (c) 2, p. 84, above). In the present context we may take note of the fact that, in the history of the Minoan system of writing or notation, as far as it is as yet possible for us to reconstruct it, an original variety seems to have given way to a subsequent uniformity at about the time of the foundation of a Minoan

Alphabet steadily winning its way towards as wide a currency as that of the Arabic numerals, thanks to the convenient fact that the same letters can be employed in different languages with an almost endless variety of phonetic values—while the only rival of the Latin Alphabet which is stubbornly refusing to be driven off the field is the ideographical Sinic script, in which every 'character' stands for a more or less precise and constant meaning, though there may be no recognizable affinity between the respective sounds in which, in different dialects, the same 'character', with the same meaning, is translated out of brushwork into the living speech that can be uttered by human mouths and heard by human ears.¹ If the Arabic numerals are an example of an international notation and the Latin Alphabet an example of an international script, the Sinic ideograms show how a script that has already gained an international currency may go half-way along the further road of evolution into an international language as well; for this ideographical script has achieved the feat of giving a more than parochial currency to mental meanings as well as to visual 'characters'. Yet, regarded strictly as an international language, the Sinic system of ideograms is evidently imperfect, since its success in standardizing the painted sign and the associated meaning has not been crowned by a standardization of the sounds in which this meaning is conveyed in living speech; and, for the social purposes of a *lingua franca*, aural intelligibility is even more important than visual. In order to be complete, a *lingua franca* must be equipped with uniform 'phonemes' or articulate sounds which convey constant meanings to the ear, as well as with the uniform 'characters' by which constant meanings are conveyed to the eye.

Such a *lingua franca*, complete in all its parts, may be deliberately invented—as, for instance, Esperanto has been invented in our own world and age. Indeed, it might have been expected *a priori* that this would turn out to be the usual origin of *lingue franche*; for, in a language which *ex hypothesi* has to be learnt by an effort of will in a utilitarian spirit, instead of being acquired unconsciously as a mother-tongue, it is manifest that the two supreme desiderata will be simplicity and regularity, and these

universal state—if that event is to be equated with the beginning of the period which the archaeologists have labelled 'Middle Minoan III' (for this equation see I. C (i) (a), vol. i, pp. 92-3; IV. C (ii) (b) 1, vol. iv, p. 64; and V. C (i) (c) 3, in the present volume, p. 236, above; and V. C (ii) (b), vol. vi, p. 312, below). In 'Middle Minoan II', which presumably coincided in date with the final paroxysm of a Minoan 'Time of Troubles', two separate hieroglyphic scripts, known as 'A' and 'B', simultaneously made their appearance. At the beginning of 'Middle Minoan III' a new linear script, composed eclectically out of all the earlier systems, suddenly came on the scene and superseded the two hieroglyphic scripts completely (Glotz, G.: *La Civilisation Égéenne* (Paris 1923, Renaissance du Livre), p. 429).

¹ See III. C (i) (c), vol. iii, p. 175, above.

two qualities are imparted to works of art more easily than they are found in unkempt Nature. As a matter of experience, however, it is notorious that there is no known instance of a synthetic *lingua franca* becoming a really effective instrument of social intercourse; for the utmost intellectual ingenuity that may have been expended on an artificial language by a cunning verbal artificer will not compensate for the absence of the emotional associations that accompany, and invigorate, any natural language—even one which has had half its roots cut away in the process of being converted from a mother-tongue into a linguistic second string for use when wanted over a wider range of intercommunication. An empirical survey will show us that every *lingua franca* that has played a historic role up to date has been a natural language which has first appeared on the scene as the mother-tongue of some local community and has subsequently extended its currency from an original range that may have been very narrow.¹

In examining the causes and the consequences of such transformations of local mother-tongues into oecumenical *lingue franche* we shall find, on the one hand, that a language which wins this kind of victory over its rivals usually owes its success to the social advantage of having served, in an age of social disintegration, as the tool of some community which has been potent in war or else in commerce. On the other hand, we shall find that languages, just like the human beings who speak them, are unable to win victories without paying a price. And the price which a language pays for gaining the currency of a *lingua franca* is the sacrifice of its native subtleties and niceties; for it is only on lips that have learnt it in infancy that any language is ever spoken with that effortless perfection which is the dower of Nature and the despair of Art. In fact, a language—even a natural language—cannot gain an artificial currency without a risk of becoming vulgarized. A flagrant example of this process in the modern Western World is the vulgarization of the Low Dutch mother-tongue of the Netherlanders into Afrikaans on the lips of ex-French-speaking Huguenot refugees in South African territories that were once dominions of the Dutch Republic. These strangers have clumsily broken the sharp edges, and crudely confounded the lights and shades, of an alien language which they have adopted without enthusiasm in the house of exile as one of the incidental hardships of a cruel destiny. The aesthetic and intellectual impoverishment which forces itself

¹ There is a suggestive parallel between the failure of artificial languages like Esperanto to win their way into current use as *lingue franche* and the failure of abstract philosophical or scientific conceptions of deity to win their way into current acceptance as representations of the One True God (see V. C (i) (d) 7, vol. vi, pp. 18–28, below). There is a corresponding parallel between the triumph of the natural languages and the triumph of Yahweh (see V. C (i) (d) 7, vol. vi, pp. 38–49, below).

painfully upon the attention of any unprejudiced outsider who sets himself to compare Afrikaans with its European parent is a change for the worse which is characteristic of the evolution of all the *lingue franche*; and we may observe at this point that so grievous a loss of a cherished spiritual heritage is unlikely to be accepted with indifference—and, *a fortiori*, with complacency—in any highly sensitive social milieu. *Lingue franche* are rare in primitive societies and also rare in civilizations while these are still in growth. *Lingue franche* only flourish on a spiritual soil that has been coarsened by that loss of sensitiveness and that appetite for promiscuity which are symptoms of the process of social disintegration.

This vulgarization of a *lingua franca* in the course of its spread, and its indebtedness for its vulgar success to the adventitious aid of war or commerce or both, are characteristic features, to judge by the frequency of their recurrence in the careers of *lingue franche* that have made their mark on History. This judgement can be verified by a survey of the historical evidence.

In the history of the disintegration of the Hellenic Society we see two languages one after the other—first Attic Greek and subsequently Latin—starting as the respective mother-tongues of the two tiny districts of Attica and Latium and then spreading out from these small beginnings until, on the eve of the Christian Era, we find Attic being employed in the chancery of a Greek principality on the east bank of the Jhelum and Latin in the camps of Roman legions on the west bank of the Rhine. In the career of Attic Greek the first step in the expansion which eventually went to these vast lengths can be observed in the time of the Athenian ‘thalassocracy’ in the fifth century B.C., when the city-state of Athens made herself the naval mistress of the Aegean and took advantage of her political ascendancy in order to divert to the Peiraeus the trade of Aegina and Miletus. Thereafter the fortunes of Attic Greek were made, once for all, when this foreign dialect was adopted as the official language of the Macedonian Court by King Philip the son of Amyntas (*regnabat* 359–336 B.C.).¹ As for Latin, its fortunes followed the flag of the Latin-speaking city-state of Rome which succeeded in the fullness of time in establishing that Hellenic universal state which the abortive Athenian ‘thalassocracy’ had prematurely and hazily foreshadowed.² Even, however, when we have taken due account of these adventitious advantages, we shall be lost in admiration at the stupendous triumph of a pair of

¹ Attic belonged to the Ionic branch of the Greek linguistic family, whereas the native Macedonian Greek dialect appears to have been a variety of Aeolic (see Hoffmann, O.: *Die Makedonen* (Göttingen 1906, Vandenhoeck & Ruprecht), especially pp. 111–15).

² See IV. C (iii) (b) 10, vol. iv, p. 208, above.

local dialects which won their way, each in its turn, to an ocumenical currency—and then, if we exchange the economist's and the publicist's spectacles for those of the philologist and the man-of-letters, we shall be struck no less forcibly by the spiritual impoverishment which the material victory brought with it.

In the history of Attic Greek the ravages of vulgarization were already conspicuous before the Athenian 'thalassocracy' had come to grief. The contemporary Athenian observer whom we have quoted more than once already in other contexts tells us that his countrymen

'have their ears constantly bombarded by all the languages of the World, and have responded by picking up one expression from one language and another from another—with the result that, while the Hellenes in general tend to cultivate a particularism in their speech, as well as in the rest of their manners and customs, the Athenians have made themselves conspicuous by talking a jargon compounded of ingredients for which the whole World—barbarian as well as Hellenic—has been laid under contribution'.¹

In this picture, which was drawn before the close of the fifth century B.C., we can perceive already at work the tendencies which were eventually to transform the exquisite parochial Attic mother-tongue of Aeschylus and Sophocles into the vulgar Attic *κοινή* of the Septuagint and Polybius and the New Testament.² A similar price for a comparable extension of its currency in the Time-dimension as well as in the Space-dimension has been paid by Latin in its vulgarization from the classical language of the Augustan Age to the 'Dog Latin' that was handed down through the slums and the *ergastula* of the western provinces of the Roman Empire to an affiliated Western Christian Society which continued to use this inelegant yet accommodating *lingua franca* for all serious forms of international intercourse until a modern *Homo Occidentalis* who had made up his mind to emancipate himself at all costs at last abandoned 'Dog Latin' for French no longer ago than the seventeenth century.³

¹ Auctor Atheniensis Anonymus: *Institutions of Athens* (edited by Kalinka, E.: Berlin and Leipzig 1913, Teubner), chap. 2, § 8.

² A concise professional account of the evolution of the Attic *κοινή* will be found in Buck, op. cit., pp. 156–9. A curious stage in the process by which a vulgarized Attic gradually supplanted all the non-Attic dialects of Ancient Greek is represented by the Doric and the North-West Greek *kowal*: intermediate forms in which these non-Attic dialects were fused together, and at the same time vulgarized in an Attic direction, as a first step towards that complete Atticization which was their eventual fate. It may also be noted that the history of the Attic Greek language has been reproduced, *mutatis mutandis*, in that of the Attic Greek Alphabet. This Alphabet has succeeded in making itself the vehicle for a number of languages—Coptic and Armenian and Georgian, as well as Bulgarian and Ukrainian and Russian and Serbo-Croat, in addition to Modern Greek—but it has made its foreign conquests at the price of being distorted—in some cases, almost out of recognition.

³ In the realm of learning we may date the change at the generation of the Hano-

In the long-drawn-out disintegration of the Egyptiac Civilization we see the New Egyptian language breaking through the long-since-dead crust of Classical Egyptian in the fourteenth century B.C. in order to establish itself for a short season as the *lingua franca* of a tottering 'New Empire', and for a much longer season as the literary language of an Egyptiac World which had been shorn of all its foreign annexes. The beginning of the end of 'the New Empire' of Egypt was contemporaneous with the beginning of the use of the New Egyptian language as a medium of official and literary intercourse. Both movements date from the reign of the Emperor Ikhnaton (*imperabat circa 1370-1352 B.C.*);¹ and within less than two hundred years of Ikhnaton's accession the loss of the senile empire's non-Egyptiac provinces was complete; yet this short currency as a *lingua franca* with an ever-dwindling geographical range set a stamp upon the New Egyptian language which was never effaced. In the later age when New Egyptian, in its turn, had become a dead language like the Classical Egyptian which it had supplanted, 'particular attention' had to be paid by those who studied it to 'the many foreign words and barbarous names in which' it 'abounded'.²

In the disintegration of the Sumeric Civilization the victory went to the Akkadian language, which in all probability³ had made its first appearance above the Sumeric horizon as the barbarian mother-tongue of a swarm of Semitic-speaking squatters who had verian philosopher Leibnitz (*vivebat A.D. 1646-1716*), who wrote in Latin and in French indifferently (perhaps in both senses of the word). In the realm of public affairs we may remind ourselves that the English poet Milton (*vivebat A.D. 1608-74*) was employed by Cromwell as his Latin Secretary. In the old-fashioned eastern fringes of Western Christendom 'Dog Latin' remained in use as a *lingua franca* for some two hundred years longer—and this not only on paper but *viva voce*. The Hungarian parliament, for example, transacted its business in Latin down to A.D. 1840 (and in A.D. 1938 it could be seen, in retrospect, that the abandonment of the use of this neutral language was one of the detonators of an internecine struggle of intermingled nationalities which had burst out in 1848 and had thenceforward never ceased until it had broken the Crown of St. Stephen into fragments in 1918). In Poland, too, 'Dog Latin' lingered on; and the writer of this Study can remember once meeting a countryman of his own who—travelling as a young man in the Polish provinces of the Russian Empire during the insurrection of A.D. 1863-4—had successfully turned his knowledge of Latin to account for communicating with the insurgent Polish gentry. If the Polish gentry had still gone on speaking Latin in the generation of Marshal Pilsudski, Europe might have been spared the post-war feud between Poland and Lithuania!

¹ 'In the great revolution at the end of the Eighteenth Dynasty, which we associate with the name of Amenophis IV [Amehotep IV = Ikhnaton], . . . men began to write poetry in the actual language of the day, and in it is composed the beautiful hymn to the Sun, the manifesto of the reformed religion. But, whereas the other innovations of the heretical régime disappeared after the collapse, this particular one survived—doubtless because the conditions hitherto existing had become impossible. Under the Nineteenth and Twentieth Dynasties there burst forth into flower a vigorous literature written in the new language.'—Erman, A.: *The Literature of the Ancient Egyptians*, English translation (London 1927, Methuen), p. xxvi. Cf. Meyer, E.: *Geschichte des Altertums*, vol. ii, part (1), second edition (Stuttgart and Berlin 1928, Cotta), p. 508.

² Erman, op. cit., p. 187.

³ In attempting to reconstruct the early chapter of Sumeric history to which we must assign the first settlement of the Akkadians in the Land of Shinar, we are thrown back upon inference in the absence of positive historical evidence.

been attracted out of the Arabian Steppe into the fringes of a rising and growing Sumeric World in an early chapter of Sumeric history. The fortune of the Akkadian language was made by the fact of its being the mother-tongue of all but the first of the four outstanding militarists of the Sumeric 'Time of Troubles';¹ and, when a Sumerian-speaking saviour of the disintegrating society arose at last in the person of Ur-Engur of Ur, who brought the Sumeric 'Time of Troubles' to an end through the establishment of a universal state,² the Akkadian language was placed on an official parity with the Sumerian, and this elevation of its status was proclaimed in the very title of 'the Empire of Sumer and Akkad'. The position thus accorded to the Akkadian language *de jure* almost certainly, however, did less than justice to the currency which had already been gained by Akkadian *de facto*; for, while in the following age, when the Sumeric universal state was being laboriously held together by an Amorite dynasty from Babylon, Sumerian gave way to Akkadian, even in Sumer itself, as the language of everyday intercourse, and only lived on in the precarious life-in-death of ceremonial usage and learned reminiscence, the Akkadian language still went from strength to strength. In the heyday of the Sumeric universal state, when Elam was one of the provinces of 'the Empire of the Four Quarters', Akkadian temporarily supplanted Elamite, not indeed as the spoken vernacular language of the country, but as the notarial language for private business transactions as well as the language of state.³ And, after Elam had regained its independence and the Empire of Sumer and Akkad had broken up and the Sumeric Society itself had gone into dissolution, the Akkadian language not only held its own among the ruins, but actually rose to the zenith of its career as a *lingua franca*; for during the post-Sumeric interregnum, when the derelict provinces of the Sumeric universal state were parcelled out into barbarian 'successor-states'—Hittite and Hyksos and Kassite and Mitannian—which were all alike under the dominion of non-Semitic-speaking intruders, the ancient Semitic language of Akkad continued to serve as the common language of diplomatic and commercial intercourse for the whole of South-Western Asia for at least six centuries after the death of Hammurabi; and it was in this age that this Akkadian tongue won what was perhaps the

¹ The Sumerian militarist was Lugalzaggisi; his Akkadian successors were Sargon of Agade, Sharrukin, and Naramsin (see I. C (i) (b), vol. i, p. 109, above, and V. C (ii) (a), vol. vi, p. 184, and V. C (ii) (b), vol. vi, p. 296, below).

² See I. C (i) (b), vol. i, p. 106, above; and V. C (i) (d) 6 (δ), Annex, in the present volume, pp. 650-1; V. C (ii) (a), vol. vi, p. 190; and V. C (ii) (b), vol. vi, pp. 296-7, below.

³ See I. C (i) (b), vol. i, p. 117, footnote 4, above. At the same time the Sumerian form of the cuneiform script, which had been adapted to convey the Akkadian language likewise, temporarily ousted in Elam the Elamite variant of cuneiform which had been struck out for the purpose of conveying the Elamite language in an earlier age.

greatest triumph in its history. For, when 'the New Empire' of Egypt established its footing on the wreck of the Hyksos power and eventually extended its rule over the former possessions of the Hyksos Empire in Syria, an Egyptiac Society which had always been inclined towards exclusiveness, and which had recently been exacerbated to an unprecedented pitch of xenophobia by its experience of the Hyksos domination,¹ condescended to borrow from the barbarian upstarts whom it had just overthrown one of the most conspicuous elements in their detested veneer of Sumeric culture. The Government of the reconstituted Egyptiac universal state deigned to correspond even with its own client princes in Syria, as well as with the independent Powers beyond Euphrates and Amanus, in the prevailing South-West Asian *lingua franca*; and, while this use of Akkadian was no doubt virtually forced upon Pharaoh's chancery by the practical necessity of entering into diplomatic relations with the denizens of the strange new world into which 'the New Empire' had allowed itself to be carried by the impetus of a *revanche*, nevertheless the trove of diplomatic documents in the cuneiform script and the Akkadian language which has turned up in Ikhnaton's archives at Tell-el-Amarna is an astonishing testimony to the Akkadian language's power of penetration as a medium of international intercourse.

In the disintegration of the Indic Civilization we may see so many rival competitors for the role of *lingua franca* in the several vernaculars (prākritis) that were respectively employed by Aśoka in his inscriptions in different provinces of the Indic universal state; and yet another competitor is to be seen in the closely related Pāli dialect of the voluminous Hinayanian Buddhist scriptures. Pāli was the linguistic medium in which an Indic culture which was all the time expanding as it disintegrated made its conquest of Ceylon; and on the opposite fringe of the Indic World, in the Tarim Basin, we find the sense of promiscuity acquiescing in the evolution of local *lingue franche* that were blends of the mother-tongue of the native population with intrusive elements of Indic speech. The language that has been labelled 'Nordarisch' by the modern Western archaeologists who have unearthed it has an Iranian base, but it contains an infusion of prākrit, and the resulting amalgam is conveyed in the Brāhmī Indic script.² Another local hybrid language, which was current as a medium of administration in the third century of the Christian Era, has a prākrit base but a large foreign element in its vocabulary, and this

¹ For the psychological effect of the Hyksos domination upon the Egyptiac *ethos* see I. C (ii), vol. i, p. 144, and V. C (i) (c) 4, in the present volume, pp. 351-2, above.

² See Eliot, Sir Ch.: *Hinduism and Buddhism* (London 1921, Arnold 3 vols.), vol. iii, p. 790,

inversely compounded amalgam is likewise conveyed in an Indic script, which in this case is the Kharosthī.¹

In the disintegration of the Babylonian and Syriac civilizations the ruins of the two simultaneously collapsing societies became ever more indistinguishably intermingled, the thicker they came to be strewn over their common *Trümmerfeld*; and across the broken surface of this promiscuous debris the Aramaic language spread itself with the luxuriance of a weed which flourishes where no crop can grow and which stretches its creeping tendrils, with an indiscriminating alacrity, over every shattered column or splintered pinnacle that can offer them a hold. The expansion of this Aramaic *lingua franca* of the declining Babylonian and Syriac worlds was fostered first by the Assyrian and later by the Achaemenian political power; but the impulsion which it thus received from the operation of political forces was not, in either case, a deliberate act like King Philip's when he chose Attic for his Macedonian Kingdom's language of state, or like the Emperor Aōka's when he made his selection of prākritis for employment in his inscriptions. The Assyrians propagated the Aramaic language and Alphabet involuntarily as an incidental consequence of their ruthless conquests and deportations;² and the Achaemenidae made a determined attempt to give, through their official patronage, an oecumenical currency to three languages—none of which was Aramaic or was even conveyed in the Aramaic script³—before they bowed to a *fait accompli* and accepted Aramaic, with its own Alphabet to convey it, as the regional language of official business for all the western provinces of their empire—including Egypt and Anatolia, where Aramaic had never established itself as the vernacular language of ordinary life.⁴ This was the origin of the Aramaic *lingua franca* in which, in the first century of the Christian Era, Josephus wrote his *magnum opus* before translating it into the Attic κοινή.⁵

¹ See Burrow, T.: *The Language of the Kharosthī Documents from Chinese Turkestan* (Cambridge 1937, University Press).

² See I. C. (i) (b), vol. i, p. 79; IV. C. (iii) (c) 3 (α), vol. iv, p. 484; and V. C. (i) (c) 2, in the present volume, pp. 117-19, above.

³ The three favoured languages were Elamite, Medo-Persian, and Assyro-Babylonian (the last phase of Akkadian); and these three were selected, perhaps rather academically, as the languages current at the time in the three Imperial capitals: Susa, Ecbatana, and Babylon. All three were conveyed in variants of the cuneiform script, and the drastically simplified cuneiform syllabary which was used for the Medo-Persian language would appear to have been specially invented for the purpose (see V. C. (i) (c) 2, p. 123, footnote 2, above).

⁴ See V. C. (i) (c) 2, p. 123, footnote 2, above.

⁵ See pp. 488-91, above. The area within which the Aramaic language supplanted the previous local vernaculars was, of course, narrower than the range over which it established itself merely as a *lingua franca*; yet even as a vernacular it conquered the whole of 'the fertile crescent' that skirts the northern fringes of the Arabian Steppe. Radiating from its homelands in Eastern Syria and in Western Mesopotamia, Aramaic supplanted the previous local Semitic vernaculars first in the Judæo-Samaritan military colony at

The currency of the Aramaic language, however, seems short-lived and narrow-verged by comparison with that of the Aramaic Alphabet.¹ The standard Aramaic Alphabet that had been current under the Achaemenian régime broke up—upon the break-up of the Achaemenids' Seleucid 'successor-state' in the second century B.C.—into a number of variants,² several of which have had the privilege of becoming in their turn the vehicles for great governments or great literatures or great religions. The list of offshoots of the Aramaic Alphabet within the former Achaemenian frontiers includes 'Square Hebrew', Nabataean (a humble script which has left its mark on human history as the parent of the Arabic), Palmyrene, Syriac (which has gradually differentiated itself into separate Nestorian and Jacobite styles), and Pehlevi (the parent of Avestan)—besides the obscurer variants that have been worked out in the bosom of the Mandaean and the Manichaeen churches for the conveyance of their scriptures.³ In the extreme eastern march of the Achaemenian Empire the Aramaic Alphabet gave birth to the Kharosthī script which was used by the Emperor Açoka to convey his prakrit texts in two out of the fourteen inscriptions of his that are known to us;⁴ and in the extreme north-eastern march, again, at a later date, it gave birth to yet another variant—the so-called 'Sogdian'⁵—which gradually made its way eastwards from the banks of the Jaxartes to the banks of the Amur within less than two thousand years after the destruction of the Achaemenian Empire by Alexander the Great.⁶

It will be seen that the spread of the Aramaic script and language

Elephantinê on the southern frontier of Upper Egypt, then in Palestine (where Hebrew was already falling into disuse in the third quarter of the fifth century B.C.: see Nehemiah xiii. 24, and the present Study, V. C (i) (d) 8 (v), vol. vi, p. 70, footnote 3, below), next in Assyria and Babylonia, and last of all in Phoenicia (Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 137; idem: *Der Papyrusfund von Elephantine*, 2nd ed. (Leipzig 1912, Hinrichs), pp. 17-19; Hoonacker, A. van: *Une Communauté judéo-Araméenne à Éléphantine, en Égypte, aux vi^e et v^e siècles av. J.-C.* (London 1915, Milford), pp. 31-2).

¹ See Jensen, H.: *Geschichte der Schrift* (Hanover 1925, Lafaire), pp. 122-33.

² Ibid., p. 122.

³ Mani's innovation consisted in abandoning the clumsy Pehlevi Alphabet, with its use of Aramaic words as ideograms (see I. C (i) (b), vol. i, p. 80, with footnote 3, above, and the present chapter and volume, p. 501, footnote 4, below) and with its rudimentary vowel pointing, and in adopting, in its place, an adaptation of the Syriac Alphabet for writing in the Middle Persian language as well as in the Syriac language (Christensen, A., *L'Iran sous les Sassanides* (Copenhagen 1936, Levin & Munksgaard), pp. 185-6 and 194).

⁴ A prakrit written in Kharosthī was also current as an official language in the Tarim Basin in the third century of the Christian Era (see Burrow, T.: *The Language of the Kharosthī Documents from Chinese Turkestan* (Cambridge 1937, University Press)).

⁵ The Sogdian Alphabet was derived, not from the Pehlevi Alphabet that was officially current in the Parthian and in the Sasanian Empire, but from the Manichaeen version of the Syriac Alphabet (Christensen, op. cit., loc. cit.).

⁶ See III. C (i) (a), vol. iii, pp. 130-1, and V. C (i) (c) 3, in the present volume, p. 196, above. Alexander completed the subjugation of the Achaemenian provinces in the Oxus-Jaxartes Basin in 328 B.C.; and in A.D. 1599 the Manchu Alphabet was borrowed from the Modern Mongol which had been derived from the fourteenth-century Galik which had been based on the Uigur which had arisen out of the Sogdian

both within and far beyond the bounds of the Syriac World was not interrupted by the unceremonious intrusion of Hellenism; and when, after the passage of nearly a thousand years, the work of Alexander's Macedonians was at last undone by the Primitive Muslim Arabs, and the Syriac universal state which had found its first embodiment in the Achaemenian Empire was re-embodied in the Umayyad and 'Abbasid Caliphates,¹ the career of the Aramaic language was emulated by the sister Semite Arabic language, and the career of the Aramaic Alphabet by the derivative Alphabet in which the Arabic language was conveyed.

While Aramaic owed less of its fortune than was owed by Attic Greek to political influences, Arabic has been indebted to the Arab Caliphate as deeply as Latin to the Roman Empire. Unofficially the conquerors' language radiated from their military cantonnements and tribal settlements in the conquered territories.² Officially Arabic was substituted for Greek (not for Coptic) in the ex-Roman provinces, and for Pehlevi in the ex-Sasanian provinces, in the reign of the Caliph 'Abd-al-Malik (*imperabat* A.D. 685-705).³ And, though the Arabic Alphabet has not succeeded in pushing its way eastwards so far into the heart of Asia as the Aramaic Alphabet, it has at least made a deeper impression as far as it has gone; for, in adopting the Arabic Alphabet in place of the Aramaic to convey their non-Semitic mother-tongues, the Persians and the Turks have allowed the new script to bring in its train an invading host of alien Arabic words into their native vocabularies.⁴

variant of the Aramaic Alphabet (see Jensen, *op. cit.*, pp. 213-16). It is possible that the Sogdian Alphabet may also be the ancestor of the script used in the Turkish inscriptions of the eighth century of the Christian Era in the basins of the Orkhon and Yenisei rivers; but the origin of this script, like that of the Baltic Runes, is uncertain, and it is possible that it, too, may be derived, not from the Aramaic Alphabet, but from the Greek (Jensen, *op. cit.*, pp. 208-10).

¹ See I. C (i) (b), vol. i, pp. 76-7, above.

² The spread of Arabic through this channel was powerfully promoted by the Arab conquerors' practice of recruiting 'clients' from among the members of the subject communities (see V. C (i) (d) 6 (a), pp. 449-50, above).

³ Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), pp. 136-7. In Egypt the official replacement of Coptic by Arabic is known to have taken place in the Islamic year A.H. 87, in the reign of the Caliph Walid (*imperabat* A.D. 705-715). For the introduction of Arabic at Damascus and at Kūfah, see Balādhuri, abu'l-Abbās Ahmad b. Jābir al-: *Kitāb Futūh al-Buldān*, English translation by P. K. Hitti, vol. i (New York 1916, Columbia University Press), pp. 301 and 465-6.

⁴ In thus adopting an Arabic vocabulary as well as an Arabic script, New Persian has gone a step farther than Pehlevi ever went in laying itself open to a Semitic influence. This difference is not apparent to the eye; for in a Pehlevi text, just as in a New Persian text, Semitic words (in this case Aramaic) will be found interspersed among Iranian words written in the same Semitic script. Whereas, however, the Arabic words in New Persian are pronounced as they are spelt (like the French and Latin and Greek words in Modern English), it is believed that the Aramaic words in Pehlevi were employed as ideograms and were pronounced, not according to their spelling, but as though they were their Iranian equivalents (see I. C (i) (b), vol. i, p. 80, with footnote 3, above). If this is the fact, then in Pehlevi (unlike New Persian) the Semitic element was confined entirely to the script, and did not extend to the vocabulary, even where an Iranian word was represented by an ideogram which would make a Semitic word if it were pronounced phonetically; and in the spoken, as opposed to the written, form of the Pehlevi language there will then have been hardly a trace of Semitic influence. On the other hand, in the spoken as well as in the written form of both New Persian and Turkish, the Arabic inlay in the vocabulary is conspicuous. It is true that, in both

If we turn next to the abortive cosmos of city-states with its main focus in Northern Italy which arose within the ambit of Western Christendom during the so-called 'medieval' period of Western history,¹ we shall see the Tuscan dialect of Italian eclipsing its rivals, as Attic eclipsed the rival dialects of Ancient Greek, and at the same time being propagated round all the shores of the Mediterranean by Venetian and Genoese seamen and traders and empire-builders, as well as by Pisans and Florentines who spoke Tuscan as their mother-tongue; and this Pan-Mediterranean currency of the Italian language in its Tuscan shape outlived the prosperity, and even the independence, of the medieval Italian city-states. In the sixteenth century of the Christian Era Italian was the service language of an Ottoman Navy that was then fast driving its Venetian and Genoese opponents out of Levantine waters; and in the nineteenth century, again, the same Italian was the service language of a Hapsburg Navy whose Imperial-Royal masters were successful from 1814 to 1859 in reducing Italy herself to the mere 'geographical expression' that Metternich had pronounced her to be. In fact, the 'Osmanlis and the Hapsburgs each in turn found themselves constrained to employ an Italian medium of communication as an indispensable element in the construction of a war-machine which they were creating for the purpose of holding the Italian people in check; and thus the Italian language succeeded twice over in forcing itself down the throats of strangers who were so far from speaking it by nature that they were actually the mortal enemies of the people who had inherited it as their mother-tongue. This Tuscan Italian, however, was no more able than the Attic Greek had been to make such extraordinary foreign conquests with impunity; and we are confronted with an Italian analogue of the Greek *κοινή* in the historical *Lingua Franca*, which may be accurately described, in the very words which our anonymous Athenian author has used of his own fast-changing Attic tongue, as 'a jargon compounded of ingredients . . . for which the whole World has been laid under contribution'.² This *Lingua Franca* of the Levant, with its Italian base almost buried under the load of its miscellaneous foreign accretions, is such an admirable example of the genus which it represents that its historic name has come to bear a generic meaning.

Latterly, however, this historic *Lingua Franca* has been replaced languages, there has eventually been a reaction against this process of Arabicization. In New Persian the weeding out of Arabicisms was begun a thousand years ago by Firdawsi; and in our own day President Mustafâ Kemâl Atatürk set himself to liberate the Ottoman Turkish language from its Arabic vocabulary as well as from its Arabic script.

¹ For this city-state cosmos within the medieval Western World see III. C (ii) (b), vol. iii, pp. 341-50, above.

² See the passage quoted on p. 495, above.

by a substitute, even in its congenial Levantine haunts; and this successor that has supplanted it is not a purified Italian but a vulgarized French.

In the history of the decline and fall of the medieval Western city-state cosmos, French came treading on the heels of Italian as, in the decline and fall of Hellenism, Latin followed Attic Greek, or as Arabic followed Aramaic in the longer-drawn-out disintegration of the Syriac Civilization. The fortune of the French language has been made by the fact that during the 'Time of Troubles' of the broken-down cosmos of Italian and German and Flemish city-states—a phase in the history of this sub-society's disintegration which set in towards the close of the fourteenth century of the Christian Era and which lasted until the close of the eighteenth¹—France carried off the victory in the contest among the Great Powers round the periphery of this still expanding world for the mastery over its now decaying centre.² From the age of Louis XIV (*regnabat* A.D. 1643–1715) onwards, France forged ahead of the ungainly Hapsburg Power which had been her principal competitor; French culture began to exert an attraction which kept pace with the progress of French arms;³ and, when Napoleon at length achieved his Bourbon forerunner's ambition of piecing together a mosaic with a French design out of all the broken fragments of medieval city-states which strewn the face of Europe at the French nation's doors from the Italian shores of the Gulf of Genoa and the Adriatic to the German shores of the North Sea and the Baltic, the Napoleonic Empire proved itself to be a cultural force as well as a military system.

It was, indeed, its cultural mission that was the Napoleonic Empire's undoing; for the ideas of which it was the 'carrier' (in the clinical sense of the word) were the expression of a modern Western culture which had sprung to maturity among the ruins of the medieval city-state cosmos and had transmuted the legacy of a medieval Italian culture into a new spiritual force. In the

¹ The various local catastrophes in the last quarter of the fourteenth century which may be taken as signs of the breakdown of the medieval Western cosmos of city-states have been touched upon in III. C (ii) (b), vol. iii, pp. 347–50, above.

² For this contest, and for the light which it throws upon the general principles of the working of the Balance of Power, see III. C (ii) (b), vol. iii, pp. 300–5, above, as well as V. C (i) (d) 6 (y), Annex I, in the present volume, pp. 624–33, below.

³ In Germany the triumph of a French culture conveyed in the French language was already assured before the birth of Germany's French military conqueror Napoleon as all but a Genoese subject in Corsica; for the French-writing movement which Leibniz had begun was carried to its climax by Frederick the Great. In the most critical period of the Seven Years' War Frederick spent the short daily ration of leisure and relaxation which he allowed himself on the literary exercise of writing French Alexandrine couplets! This was surely as great a triumph for the French language as was scored by Italian when it was adopted as the service language of the Ottoman and the Hapsburg Navy. (For Frederick's literary recreations, see *Frederick the Great: The Memoirs of his Reader Henri de Catt* (1758–1760), translated by Flint, F. S. (London 1916 Constable, 2 vols.).)

Revolutionary and Napoleonic Age that force was still in the flood tide of its youthful energy; and 'the Ideas of the French Revolution', imbued as they were with this dynamically restless spirit, were not calculated to act as a sedative which might reconcile the Italians and Flemings and Rhinelanders and Hanseatics to the yoke of the French empire-builders by whom these ideas were being introduced. So far from that, the revolutionary impact of Napoleonic France gave these stagnating peoples a stimulating shock which roused them from their torpor and inspired them to rise up and overthrow the French Empire as a first step towards taking their places as new-born nations in a modern Western World side by side with France herself.¹ Thus the Napoleonic Empire carried within itself the seeds of its own inevitable failure in the Epimethean role of serving as the universal state of a decadent world which, once, in its long-past noonday, had created the splendours of Florence and Venice and Bruges and Ghent and Nürnberg and Lübeck.²

The actual task which the Napoleonic Empire did involuntarily perform was to tow the stranded galleons of a derelict medieval armada back into the racing current of Western life, and at the same time to stimulate their listless crews into making their vessels sea-worthy for sailing on a broader ocean than the landlocked seas on which they had hazarded their lives in times past; and this actual French performance was a short and thankless business in the nature of the case. The French Empire has been—as it was bound to be—abortive; the genius of Napoleon I could not avail to sustain this political *tour de force* for even a full score of years after the first passage of the Rhine and the Alps by the armies of Revolutionary France; and all the king's horses and men could not reinstate Humpty Dumpty when once he had suffered the great fall of 1812-14. 'The Hundred Days' were a *fiasco* and the Second Empire ended in a *débâcle*. Since 1871 the French Empire has been dead and buried not only as a European reality but even as a French dream.³ Yet in the Great Society of to-day there is

¹ This repayment of the modern Western World's debt to the medieval Italian culture through the quickening of Italian life from a new Transalpine source of spiritual energy has been touched upon in IV. C (i), vol. iv, p. 19, and in IV. C (iii) (c) 2 (α), vol. iv, pp. 283-4, above. The Italian experience was not, of course, unique; for the German and Flemish epigoni of the medieval cosmos of city-states were inoculated from the same source and in the same generation with the same new fund of spiritual energy. Heine's *Reisebilder* give a vivid picture of the reanimation of the Rhenish city of Düsseldorf as the result of a dose of French conquest and Napoleonic rule. For a systematic account of the effect of this spiritual medicine upon the German province of the *ci-devant* city-state cosmos see Fisher, H. A. L.: *Studies in Napoleonic Statesmanship in Germany* (Oxford 1903, Clarendon Press).

² For this aspect of the Napoleonic Empire see V. C (i) (d) 6 (γ), Annex I, below.

³ For the transfer of the field of French imperial aspirations and activities from Europe to the Maghrib see Toynbee, A. J., and Boulter, V. M.: *Survey of International Affairs*, 1937, vol. i (London 1938, Milford), pp. 489-92.

one substantial legacy of the two-hundred-years-long role, with its brief Napoleonic culmination, which was sustained by France in the last phase of the decline and fall of the medieval city-state cosmos. The French language has succeeded in establishing itself as the *lingua franca* of that central portion of our Western World, and it has even extended its dominion to the far extremities of the former domains of the Spanish and Ottoman Empires, which, from the fifteenth century to the seventeenth, were two of the competitors of France for the hegemony over the colonies and the metropolitan territories of the Italian commonwealths. In Germany and Italy a 'totalitarian' nationalism has latterly been doing its best to efface the marks of French influence; but a knowledge of French will still carry the traveller through Belgium and Switzerland and the Iberian Peninsula and Latin America and Rumania and Greece and Syria and Turkey and Egypt;¹ and the Latin Alphabet, riding on the shoulders of the French language, has superseded a Slavonic Alphabet as the vehicle of Rumanian, and an Arabic Alphabet as the vehicle of Turkish.²

In its haste to reap the fruits of commercial and military and political labours that have all been so much labour lost, the French language—like the other languages that have followed the same questionable career—has stooped to the indignity of vulgarization. And any member of the cultivated nation that enjoys, as not the least valuable part of its birth-right, the privilege of speaking perfect French without ever having consciously to acquire this accomplishment, must feel a horrid tingling in his sensitive ears if ever he is compelled to hear his delicate mother-tongue being butchered to make an Argentinian intelligible to a Pole, or a Brazilian to a Greek—unless, perchance, he may be saved from this excruciation by a blissful unawareness of the fact that South

¹ The vogue of the French language in Egypt has triumphantly survived a British military occupation which lasted for 54 years before it was at length brought to an end as the result of the signature of an Anglo-Egyptian treaty of friendship and alliance on the 26th August, 1936. French never ceased to be the official medium of communication between the representatives of the Egyptian Government and their British advisers; and, when the British High Commissioner in Egypt, Lord Allenby, on the 23rd November, 1924, read to the Egyptian Prime Minister, Zaghlûl Pasha, in *English*, two communications conveying an ultimatum which had been provoked by the assassination of the Sirdar, Sir Lee Stack, the unusual choice of language was doubtless intended to be taken as a mark of displeasure or even discourtesy. Even then, the British High Commissioner deposited written copies of his communications in *French* in order to make sure that their purport should be understood by their Egyptian recipient (see Toynbee, A. J.: *Survey of International Affairs*, 1925, vol. i (London 1927, Milford), p. 216).

² For the substitution of the Latin for the Arabic Alphabet in Turkey in A.D. 1928 on the initiative of President Mustafâ Kemâl Atatürk see Toynbee, A. J., and Boulter, V. M., *Survey*, 1928 (London 1929, Milford), III A. (viii). It is perhaps even more significant that the Latin, and not the Russian, Alphabet was adopted—and this with the approval, and even encouragement, of the ruling authorities in the U.S.S.R.—as the new vehicle for conveying the twenty-seven Turkish dialects that were spoken in various parts of the territory of the U.S.S.R. at this time (see op. cit., pp. 223-7).

America and Eastern Europe are boasting themselves to be talking Racine's tongue when they are holding intercourse with each other in their voluble *lingua franca*.¹

If this French *lingua franca* is a monument, in the modern Western World, of the decline and fall of a medieval sub-society within the Western body social, we may see in the English *lingua franca*—which, since the War of 1914–18, has been raised to even an official parity with French as an alternative medium of diplomatic international intercourse—a product of that gigantic process of *pammixia* (whatever it may portend) which has expanded—and, in the process, diluted—our modern Western World into a 'Great Society' of literally world-wide range. In this world-wide arena the English language has now gained the ascendancy over French, as well as over Dutch and Spanish and Portuguese; and its definitive victory,² in a struggle which lasted for some two hundred years, was won in the Seven Years' War.³

¹ We may assume with some confidence that no Frenchman—not even so rare an anglomane as Monsieur Clemenceau himself—would have recognized his own mother-tongue in the 'French' to which Mr. Lloyd George is reported to have laid claim when he deftly eluded the effort of a malicious interlocutor who had sought to put him out of countenance by asking him in public how on earth, without knowing French, he had managed to get on at the Peace Conference of Paris. 'But I do understand French', Mr. Lloyd George is reported to have answered very placidly; and, having thus tripped his adversary up, he finished his sentence by adding demurely—'when it is spoken by Lord Grey.' This story is corroborated, if it is not inspired, by Lord Grey's own testimony, apropos of a conference in Paris in 1916 between the French Cabinet and a deputation from the British Cabinet consisting of Mr. Lloyd George, Lord Grey, and Lord Oxford.

'Such part as was taken by us was left to, or, it would be more correct to say, thrust upon myself. Asquith would not, Lloyd George could not, and I *had* to speak French. . . . When the council was over, and we three British Ministers were safely outside, Lloyd George said to me: "You know, your French was the only French that I could understand." If this suggests to a mocking spirit a doubt whether the French Ministers understood it, I can reply that on other occasions when I have had to speak French, I have had proof that it was intelligible even to French ears' (Grey of Falloden, Viscount: *Twenty-Five Years* (London 1925, Hodder & Stoughton, 2 vols.), vol. ii, p. 245).

² This victory of the English language has mainly taken the form, not of supplanting the discomfited competitor languages in regions where they had already established themselves as vernaculars or even merely as *lingue franche*, but of encircling them and circumscribing their possibilities of further expansion. For example, Dutch has been supplanted by English as the vernacular of the European colonists of the Hudson Valley, but it is still the *lingua franca* of Indonesia; and a Dutch public servant once recounted to the present writer—half proudly and half whimsically—how a party of Javanese 'regents' who had been making the grand tour exclaimed, when they reached Holland in due course, what a relief it was at last to find themselves once more in a place where every one spoke the world-language! As for the French colonists in the St. Lawrence Valley, they have stubbornly retained their French mother-tongue for their vernacular, while succumbing to a passable familiarity with an English that has now become the *lingua franca* of all North America. The Spanish and Portuguese languages have been still more successful in maintaining their currency in the vast domains which they had staked out for themselves before the English language entered the lists against them. The Philippine Archipelago is perhaps the only place where Spanish has given way to English; and in the Philippines Spanish (thanks to the liberal policy of the Spanish Crown in this matter) was never forced upon the natives in substitution for their own mother-tongues; so that in the Philippines it has merely been a question of a change of *lingua franca* (see Wyndham, H.: *Native Education* (London 1933, Milford), pp. 103–4).

³ The view that the Seven Years' War marked a turning-point in the struggle between the French and English languages is supported by the testimony of the life and letters

This triumph of the English language was a corollary of the triumph of Great Britain herself in a military and political and commercial struggle for the mastery of a new world overseas which was being annexed to the domain of a once parochially West European civilization through the competitive growth and expansion of the rival nations into which a medieval Western *Populus Christianus* had latterly broken up in the Western Society's West European homeland; and therefore it is not surprising to find the English language established to-day as the principal vernacular of the North American continent and as the dominant *lingua franca* of the Indian sub-continent, since these two regions were the scenes of Great Britain's eighteenth-century victory over France in these two European Powers' twofold competition in Asiatic empire-building and in American colonization. The prowess of the English language, as distinct from that of the English people and its daughter nations overseas, is perhaps more impressively attested by the present currency of English as a *lingua franca* in the Far East; for here the direct material impact of the English-speaking peoples did not begin to make itself felt until some two hundred years later than the date when it was first felt in India and North America; and, during the hundred and fifty years or so during which the Far East has been subject to the present second bout of Western social pressure,¹ this Western impact has largely taken the peaceful forms of missionary and commercial enterprise, while, by comparison at any rate with the older history of Western penetration into the Indies and the Americas, the corresponding expansion of the Western Powers in the Far East has been accompanied by few aggressive wars, still fewer permanent conquests, and scarcely any colonization. Thus in the Far East the adven-

of Edward Gibbon (*vivebat* A.D. 1737-1794). Gibbon's first work, an *Essai sur l'Étude de la Littérature*, was written in French in 1759, and published in the same language in 1761, while the Seven Years' War was in progress and its issue still in doubt. Thereafter Gibbon continued to use French as his medium in his study *Sur la Monarchie des Médés*, which appears to have been still unfinished at the opening of the year 1763 (see Low, D. M.: *Edward Gibbon, 1737-1794* (London 1937, Chatto & Windus), p. 206), as well as in his abortive *Introduction à l'Histoire Générale de la République des Suisses*, which was finished in 1768. On the other hand, *The History of the Decline and Fall of the Roman Empire*, which was conceived on the 15th October, 1764, on the morrow of the peace settlement of 1763, was composed in English between October 1772 and the 27th June, 1787 (see IV. C (iii) (b) 3, vol. iv, p. 148, footnote 3, above). For the considerations which determined Gibbon's choice of English in preference to French as the vehicle for his *magnum opus* see further V. C (i) (d) 6 (y), Annex II, below.

¹ In this second bout, which began towards the close of the eighteenth century of the Christian Era, the principal agents of Western penetration have been Protestant missionaries and British, French, and American sailors and men-of-business. In the first bout, which began towards the middle of the sixteenth century and came to an end soon after the beginning of the eighteenth, the missionaries were Catholic and the sailors and traders were Spanish and Portuguese. The policy and fortunes of the Catholic missionaries in China, from Ricci's generation to de Tournon's inclusive, are touched upon in V. C (i) (c) 4, pp. 365-7, above; and in V. C (i) (d) 6 (δ), p. 539, and in V. C (i) (d) 7, vol. vi, pp. 23-4, below.

titious aid that the English language has received has been distinctly less forceful than elsewhere; and therefore, so far as the language has succeeded in making its way here also, this success can more confidently be ascribed to the language's own intrinsic powers. Accordingly the present currency of English in the Far East may be taken as the measure of its achievements and its prospects in the World at large; and we may venture to rate these high when we find English being employed as a *lingua franca* in Far Eastern cities which have never been under the rule of either the British Empire or the United States, and on the lips of speakers who have been speaking English in the act of carrying on a propaganda campaign against 'British interests'.

English was, in fact, the medium of communication between the people of Southern and Central China and Mr. Michael Borodin, the political adviser who was lent in the summer of 1923 to the Kuomintang Government at Canton by the Soviet Government at Moscow¹ for the purpose of instructing the Kuomintang in the art of launching an anti-foreign mass-movement which was to be pointedly anti-capitalist and still more pointedly anti-British. Mr. Borodin knew no Chinese; and his strenuous political activities during the four years for which his mission in China lasted left him no leisure for mastering a difficult foreign language with the facility that would have been required for making popular appeals to mass-meetings. At the same time the Kuomintang were unable to find on the southern sea-board of China, or even in the Yangtse Valley, Chinese linguists who were sufficiently well acquainted with Russian to be able to serve Mr. Borodin as interpreters from Russian into Chinese. On the other hand there was no difficulty in finding Southern Chinese with an adequate knowledge of English; and, since this was a *lingua franca* which Mr. Borodin, too, could understand and speak, the English language became a vital link in this Russian emissary's anti-British propaganda campaign in a Chinese mission-field. The Chinese invasion of the British Concession at Hankow on the 3rd-5th January, 1927, was the sequel to a series of inflammatory speeches which had been delivered in Hankow by Mr. Borodin in December;² and, in addressing the Chinese mobs whom he was inciting to attack the British, the Russian agitator had to employ the cumbrous method of speaking in English to a Chinese interpreter who then translated the orator's ardently anti-British words out of their original English dress into the local Chinese vernacular.

This English means of communication between a Chinese audi-

¹ See Toynbee, A. J.: *Survey of International Affairs*, 1925, vol. ii (London 1928, Milford), pp. 311 and 322, and *Survey*, 1926 (London 1928, Milford), pp. 283-4.

² *Ibid.*, pp. 347-51.

ence and a Russian orator on the banks of the Yangtse¹ is not, however, the most striking of the illustrations of the currency of English as a *lingua franca* in the Far East that have come to the notice of the present writer; for, on board an American ship *en voyage* from Shanghai to Kobe in 1929, he witnessed at first hand the employment of English by Chinese as a means of communication, not with foreigners, but with one another.

In this American ship's saloon I was given my place at a table where all the other seats were occupied by Americans or English people, while at the next table to ours the party was entirely Chinese. In a lull in the conversation at our own table we noticed that we were not alone in talking English; for at the Chinese table an English conversation was in full swing—and this in an English which was not less fluent than ours. Why, we speculated, were our Chinese neighbours speaking English among themselves? There was no suspicion that they might be 'showing off' their mastery of the world-language, for they were manifestly quite un-self-conscious; and, even if we had not been able to read this on their countenances at a glance, we could have been sure *a priori* that it would never have occurred to Chinese men and women of good breeding (such as these were) to take any pride in performing the tricks of foreign trades. Their use of English in talking among themselves must therefore serve some strictly practical purpose; and, as we fell into exchanging surmises as to what the point of it might be, I contributed the guess that our Chinese party might be made up of passengers from different provinces, including some of those on the southern and south-eastern seaboard where each province speaks its own local dialect and not the elsewhere current 'mandarin',² so that English might be the only language in which they were all of them sufficiently well versed to be mutually intelligible to one another. By this time our English and American curiosity had become so eager that we ventured to interrupt the neighbouring conversation in order to learn the answer to our riddle—whereupon our Chinese fellow passengers told us, with much good humour, that my explanation was the right one.

The admirable English that was being talked by Chinese passengers on board an American ship in A.D. 1929 is not, however, the only form in which the language may be heard nowadays on lips to which it has not come as a birthright. Indeed, we have not

¹ This was not the last occasion on which the English language was to serve as a means of Russo-Chinese communication. The Russo-Chinese Pact of Friendship and Non-Aggression which was concluded on the 21st August, 1937, was drawn up in an English text (Art. 4).

² For this latter-day Chinese *lingua franca* see pp. 512-14, below.

far to seek in order to discover that 'ingredients . . . for which the whole World has been laid under contribution' now also infest the English that is spoken as a mother-tongue in North America and in the South Seas and even in England itself—for the Germanisms¹ in North American English are decidedly less exotic than the Indianisms² of a metropolitan Kiplingese. If 'the Old Oligarch' whose lot was cast in Periclean Athens had been able to turn his attention to this latter-day metropolitan English of ours, he would assuredly have castigated it in terms even more sardonic than those which he was provoked into using in order to express what he felt about the vulgarization, in his own day, of his own metropolitan Attic Greek. We can picture the extremity of disgust to which this Periclean Athenian aristocrat would have been moved if he could have lived to hear a post-Alexandrine Attic *κοινή* being spoken by Susan priests or Gerrhaean sailors or Bactrian villagers. Yet, so far as we know, the Attic *κοινή*—even in its remotest outposts and even in its most degenerate days—never fell into the plight to which English has been reduced as the *lingua franca* of Chinese coolies.

In this 'Pijin English' we have the spectacle of a colloquial Chinese masquerading in an English costume. The tendency—already strong in the native English remnant of our modern English vocabulary—to reduce every word to a monosyllable has been carried, in 'Pijin English', to a Chinese degree. In 'Pijin English' monosyllables are the rule; and, having taken the Chinese cue in this *reductio ad absurdum* of the admirable principle of linguistic simplicity, 'Pijin English' has followed suit to colloquial Chinese in adopting a Chinese cure for a Chinese malady. Colloquial Chinese has worked out an ingenious device for parrying the ambiguity which is apt to beset a monosyllabic language owing to the diversity of meanings which each monosyllable has to bear. It has sought to make its meaning clear by expressing every idea in a pair of monosyllables which happen to be more or less synonymous, and it has thus begun to revert from monosyllabism to dissyllabism in its word-structure. In 'Pijin English' we can observe a reflection of this latest tendency in the indigenous language which has here been moulding the English *lingua franca* of the Far East into accord with the Chinese genius. For instance,

¹ e.g. 'nix' (*nichts*) meaning 'of no account' and 'dumb' (*dumm*) in the sense of lacking, not in the faculty of speech, but in mother wit (to be dumb in this American sense is quite compatible with being voluble).

² e.g. 'pyjamas' (meaning in Persian 'leg-wear') and 'gymkhana' (meaning in Hindustani 'a ball house'). Both these two compound words are packed with linguistic history; for, while three out of the four components are Persian, the English language has acquired them, not from Persian direct, but through the two intermediate stages of Hindustani and Urdu (for these two *lingue francae* of a disintegrating Hindu Society see further pp. 517-18, below).

in monotonously employing the couplet 'look-see' to describe every visual act, 'Pijin English' has sacrificed the proper English discrimination between the passive connotation of 'see' and the active connotation of 'look', for the sake of ensuring that the one nondescript 'hyphenated' word shall at least convey unmistakably the general category of meaning that is common to both its constituents.

The English that has undergone this conversion into a cheap *chinoiserie* may prove puzzling to ears which have been accustomed to hear nothing but English from their infancy; and this un-Englishness of 'Pijin English' is illustrated by a story to which the present writer, as a child, was never tired of listening as it was told by an old great-uncle of his¹ who had served in the English merchant marine and had risen to the command of an East-Indiaman. The incident related in this story purports to be an historical event dating from one of those middle decades of the nineteenth century of the Christian Era when the narrator was navigating his ship in Chinese waters and when the trade which made such a distant voyage worth while for European merchantmen was being forced upon China at the cannon's mouth by European men-of-war. The story tells that, in a lull between the successive naval wars of aggression in which the Western Powers were at that time forcing open the Far Eastern hermit empire's hitherto almost hermetically sealed doors, one Power which had recently been at war with China made an offer to the Chinese Government, through the diplomatic channel, for building a hospital at the foreign Government's own expense at a point on Chinese territory which these unexpectedly benevolent foreigners took the trouble to designate. The offer was made in proper form and in courteous language; but the site which the foreign Government had selected for its benefaction was one of such conspicuous strategic importance that the Imperial Government's suspicions were aroused. To invert the terms of Clausewitz's epigram,² the policy of the European Power that was making the offer was shrewdly suspected by the mandarins of being 'a continuation of war by other means'. However, they had now been taught by painful experience to take every possible precaution against giving these bellicose 'South Sea Barbarians' any shadow of excuse for resorting to arms on the ground that they had been insulted by the Imperial Government's behaviour; so, with an uneasy mind, the mandarins accepted the offer in phrases still more courteous than those in which it had been laid before them. Their uneasiness did

¹ Captain Henry Toynbee (*vivebat* A.D. 1819-1909).

² Quoted in III. C (ii) (b), vol. iii, p. 298, footnote 2, above.

not diminish as the work progressed; for the building which now swiftly began to rise on the crown of an island commanding the estuary of one of China's finest navigable rivers seemed singularly inappropriate for the philanthropic service to which it was officially dedicated. The windows—mere slits—were as narrow as the walls—veritable ramparts—were massive. And when the roof was on and the donors began to land the medical stores with which the new hospital was to be equipped for performing its works of mercy, the cases were reported by the coolies, hired to carry them up from the beach, to weigh as heavy as lead. At this stage the Imperial Government, feeling that the time for action had arrived, passed the word to a trustworthy gang of its public-spirited coolie-subjects to drop one of the cases, *en route*, with a clumsiness sufficient to break it. The accident was duly contrived; and, sure enough, the bursting medicine-chest disgorged, not Epsom salts or cupping-glasses, but stands of muskets with powder and shot to match. At this shattering exposure one of the coolies who had staged it exclaimed to his European taskmasters, with a consummately innocent air of surprise: 'Hi-yah! Me no savey sick man yam gun.' It would perhaps have been difficult to go farther in denaturing the English medium of an *impromptu* diplomatic retort of which the ironic Chinese point could hardly have been presented more sharply in the most carefully conned note from the officials of the Imperial Ya-men.

After this glance at the vicissitudes with which the English language has met in its career as the *lingua franca* of a Westernized World, we may pass on to consider the fortunes of other living *lingue franche* which have been overtaken by English—and overridden by it, in different degrees—in the course of their own less ambitious careers of expansion over the narrower domains of non-Western societies that have latterly been enmeshed in a world-enveloping Western net.

In the main body of the Far Eastern World, for example, the political unity which has been maintained, off and on, ever since the close of the sixth century of the Christian Era¹ has had its linguistic counterpart in the spread of the so-called 'mandarin' dialect. This Imperial *lingua franca* has now become current through the greater part of the vast area that is occupied at the present day by a Chinese-speaking population; and the mutual intelligibility which it has established as it has spread is such that

¹ This political unity has worn the appearance of a ghost of the universal state of the Sinic Civilization to which the Far Eastern Civilization is affiliated. This aspect of the empire of the Sui and T'ang and Sung and Yuan and Ming and Ch'ing as a resuscitation of the empire of the Ts'in and Han is touched upon in V. C (i) (c) 4, p. 356, footnote 6, and in V. C (i) (d) 6 (α), pp. 477-8, above, and is discussed in Part X below.

to-day an inhabitant of the south-western province of Yunnan, on the far side of the Upper Yangtse, can travel all the way to the extreme north-eastern province of Kirin, which is washed by the Amur, without finding himself, at any stage of his journey, unable to understand the local speech or to make his own speech understood by the local inhabitants. On the other hand there is a chain of five provinces along the southern and south-eastern seaboard—including the province of Kiangsu, which bestrides the estuary of the Yangtse and contains both Nanking and Shanghai—where the local dialects are not only different from 'mandarin' but are so far removed from it, and at the same time so highly differentiated from one another,¹ that in this region the areas of mutual intelligibility rarely exceed the limits of a single province, in sharp contrast to the vastness of the area (some twenty provinces, all told, including those in Inner Mongolia and Manchuria) over which the 'mandarin' dialect uniformly prevails.²

We have already overheard the members of a party of Chinese travellers which included a contingent from some of the non-'mandarin'-speaking provinces communicating with one another in English in the saloon of an American steamer;³ and it is conceivable that the Pan-Chinese oral and auditory *lingua franca*⁴ which is one of China's present crying needs will in fact be provided in the form of an utterly alien Indo-European language, imported from the far side of the Old World, which, in linking the several vernacular language-areas of China with one another, will at the same time be linking up the whole of China with all the rest of the World in virtue of having become the oecumenical language

¹ In spite of this diversity from one another, all the southern and south-eastern Chinese dialects apparently display one common difference from 'mandarin' in the shape of a certain old-fashionedness. These outlying dialects are in some respects living specimens of Chinese speech in a 'pre-mandarin' stage (see III. C (i) (a), vol. iii, p. 138, above).

² During the seven years ending in the autumn of 1938 a number of the Chinese provinces here mentioned had been at least temporarily overlaid by new administrative structures that were the products and at the same time the instruments of Japanese aggression against the main body of the Far Eastern Society. Yet, notwithstanding the immense destruction of life which was inflicted on these ravished Chinese provinces by the Japanese aggressors, it was beyond the power of Japanese militarism to curtail the domain of either the Chinese population or the 'mandarin' *lingua franca* in continental Eastern Asia—as was shown by the fact that 'mandarin' was adopted, as a matter of course, as the official language of every one of the 'puppet states', beginning with 'Manchukuo', which were successively established by the Japanese interlopers on the territory of the Chinese Republic.

³ See p. 509, above.

⁴ China has, of course, from time immemorial been in possession of a *lingua franca* that can be painted with the brush and read with the eye, in the shape of the classical characters, which convey constant and uniform meanings in spite of the extreme variety of their pronunciation in different times and places (see p. 492, above). This ideological *lingua franca* is common to-day not only to all parts of China but to Korea and Japan and Tongking and Annam besides. It appears to have taken shape during the second bout of the Sinitic 'Time of Troubles' (circa 403–221 B.C.: see V. C (ii) (b), vol. vi, p. 294, footnote 3, below), and to have been standardized by the Emperor Ts'in She Hwang-ti, who was the first founder of the Sinitic universal state (see Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), p. 457).

of 'All that is Under Heaven' in the literal as well as in the Sinic sense of that term. It is also possible, however, that, while English will indeed become (as would seem, indeed, to be its manifest destiny) the medium of both visual and vocal communication between China and the outer world, it will not, after all, snatch away from the 'mandarin' dialect of Chinese the different function of serving as a universal means of internal communication by mouth and ear within the boundaries of the immense region in which the vernacular languages are all of them dialects of Chinese. For within the last few years the leading spirits in the non-'mandarin'-speaking provinces have been setting themselves to make 'mandarin' as familiar there as it is in the rest of China.¹

At Shanghai in 1929 the writer of this Study was told by the Chinese scholar and philosopher Dr. Hu Shih—who has dedicated his life to the foundation of a popular literature in a simplified form of 'mandarin'—that he had recently hesitated to accept an invitation to go on a lecture tour in the South because the experiment had not proved a success when he had tried it on a former occasion not so very long before. On this previous tour Dr. Hu Shih had not found adequate audiences in the South that could follow him in 'mandarin', while he himself was, of course, unable to address the intelligentsia of each southern province in its own parochial patois. He put these difficulties which he had then encountered to the Southerners who were now inviting him to visit them for the second time; and he received in reply an emphatic assurance that—thanks to the progress which had been made in the South in the intervening years in spreading a familiarity with 'mandarin' there—he need no longer fear any repetition of his previous aggravating experience.

In the Iranic World, before it began to succumb to the process of Westernization, the New Persian language, which had been fashioned into literary form in mighty works of art during the post-Syriac and pre-Iranic interregnum (*circa* A.D. 975–1275),² at the same time gained a currency as a *lingua franca*; and at its widest, about the turn of the sixteenth and seventeenth centuries of the Christian Era, its range in this role extended, without a break, across the face of South-Eastern Europe and South-Western Asia from the Ottoman pashalyq of Buda, which had been erected out of the wreckage of the Western Christian Kingdom of Hungary after the Ottoman victory at Mohacz in A.D. 1526, to

¹ This new linguistic policy in the provinces of the southern and south-eastern seaboard of China is a sign that, in linguistic and educational matters, the old provincial particularism has now given way to a nationalism on a Pan-Chinese scale; and a change which has thus already taken place on the cultural plane may be expected to follow on the political plane sooner or later.

² See I. C (i) (b), Annex I, vol. i, p. 363, footnote 3, above, and Part VI, below.

the Muslim 'successor-states' which had been carved, after the victory of the Deccanese Muslim princes at Talikota in A.D. 1565, out of the carcase of the slaughtered Hindu Empire of Vijayanagar.¹ For this vast cultural empire the New Persian language was indebted to the arms of Turkish-speaking empire-builders—reared in the Iranic tradition and therefore captivated by the spell of the New Persian literature—whose military and political destiny it had been to provide one universal state for Orthodox Christendom² in the shape of the Ottoman Empire³ and another for the Hindu World in the shape of the Timurid Mughal Rāj.⁴ These two universal states of Iranic construction on Orthodox Christian and on Hindu ground were duly annexed, in accordance with their builders' own cultural affinities, to the original domain of the New Persian language in the homelands of the Iranic Civilization on the Iranian Plateau and in the Basin of the Oxus and the Jaxartes; and in the heyday of the Mughal, Safawī, and Ottoman régimes New Persian was being patronized as the language of *litterae humaniores* by the ruling element over the whole of this huge realm, while it was also being employed as the official language of administration in those two-thirds of its realm that lay within the Safawī and the Mughal frontiers.

The new Persian language and literature were staples in the intellectual education of the *Ich-oghlan*s who were the *corps d'élite* among the neophytes in the Ottoman Pādishāh's Slave-Household,⁵ and the influence of this Persian mental background naturally persisted among the adult lights and leaders in the Ottoman court and camp. The redoubtable Ottoman militarist Sultan Selim the Grim amused his leisure by writing Persian verse⁶ with better success than ever attended the Hohenzollern militarist King Frederick the Great's poetic efforts in French;⁷ and the lavish patronage of the Muslim courts in India has piled up, through a long series of command performances, a corpus of poetry in the Persian tongue which is as preponderant in mass as it is inferior in merit to the classical Persian poetry that has sprung spontaneously from a less heavily manured Iranian soil that is this fine flower's native

¹ This Empire of Vijayanagar had been founded in A.D. 1336 as a last asylum in which a remnant of the Hindu Society might continue to lead its own life in a state of independence after the Turkish and Iranian Muslim invaders of the Hindu World had conquered the greater part of the Deccan (in sequence to their previous conquest of Hindustan) at the turn of the thirteenth and fourteenth centuries of the Christian Era.

² Not, of course, including the domain of the Russian offshoot of the Orthodox Christian Society, which was shaking off the Turkish domination of the Golden Horde at the very time when the main body of Orthodox Christendom was succumbing to the Turkish domination of the 'Osmanlis.

³ See Part III. A, vol. iii, pp. 26-7, and IV. C (ii) (b) 1, vol. iv, p. 68, above, and V. C (ii) (b), vol. vi, pp. 298-300, below.

⁴ See IV. C (ii) (b) 2, vol. iv, p. 97 above.

⁵ See Part III. A, vol. iii, p. 39, footnote 4, above.

⁷ See p. 503, footnote 3, above.

earth. As for the career of the Persian language on Indian ground as an official vehicle of administration, it was not till A.D. 1829 that Persian began to be discarded for this purpose, in favour of English, in the territories which the British East India Company had taken over from the Mughal Rāj and its 'successor-states'.¹

It is not surprising to find that the New Persian language has had to pay for this ephemeral vogue as a *lingua franca*² by submitting in its day to as radical a vulgarization as has since been the lot of that European language to which Persian has eventually been forced to give way in Hindustan. To begin with, Turkish and not Persian was the mother-tongue of the war-lords and war-bands who were the empire-builders of the Safawī and the Mughal as well as the Ottoman Empire; and all three dominant minorities—including the two which went the length of employing Persian for their public administration as well as for their private literary recreation—retained the use of their native Turkish for the humdrum domestic business of everyday life. In these linguistic circumstances all three of them sought to reconcile nature with culture by doctoring their raw Turkish mother-tongues with a potent infusion of Persian elements.³ The Turkī, Azerbaijānī, and Ottoman Turkish languages, as we know them to-day—or knew them yesterday before a generation of purists or pedants arose to reverse the process—are virtually composite languages with a Persian superstructure that counts for more than the Turkish basis.⁴

¹ In 1829 Lord William Bentinck substituted English for Persian as the linguistic medium of the Sirkar's diplomatic correspondence with Indian princes. On the 7th March, 1835, Lord William Bentinck announced his decision to make English, and not Persian or any other Oriental language, the medium of higher education in British India. Finally, in 1837, Persian was deposed, in British India, from its previous function of serving as the instrument of public business, and was replaced by the local vernaculars in the conduct of both judicial and fiscal proceedings.

² At the present day the one country where Persian is the official language without at the same time being the people's mother-tongue is Afghanistan; for, although the vernaculars of a majority of the tribes within the Afghan frontiers likewise belong to the Iranian family of languages, they all differ very widely from the classical Farsi. There are also, of course, certain districts, not only in Afghanistan but in Persia, in which the local vernaculars are not Iranian at all, but Turkish. A Turkish dialect is spoken in the provinces of Afghanistan between the Hindu Kush and the Oxus, and again in the Persian province of Azerbaijan; and in Fars itself there are tribes of Turkish origin which still continue to speak their ancestral mother-tongue in this citadel of the New Persian language and literature.

³ In Ottoman Turkish the handful of borrowed Persian particles has been a more precious acquisition than the host of borrowed Persian nouns (see III. C (i) (c), vol. iii, p. 178, above).

⁴ It is mainly through this Persian channel—and not, for the most part, direct—that the Turkish languages of the Iranic culture-circle have imbibed their infusion of Arabic. It was likewise the Persian version of the Arabic Alphabet, and not the Arabic original, that these Turkish languages employed for their script until they discarded it, in favour of the Latin Alphabet, only the other day. The iconoclasts who have now substituted the Latin for the Perso-Arabic Alphabet as the vehicle of this westerly group of Turkish languages point out that, after all, the Perso-Arabic Alphabet is not the first in which a Turkish language has ever been reduced to literary form. Long before the Turkish-speaking peoples of the Iranic culture-circle had been carried into their present domiciles, and been there exposed to New Persian cultural influences, as a result of their *Völkerwanderung*, circa A.D. 975-1275, into the derelict domain of the

These Turco-Persian linguistic alloys do not, however, represent the final degree of the New Persian language's debasement; for in the Indian dominions of the Mughal Empire and in the European dominions of the Ottoman Empire the Persian *lingua franca* of the Timurid and 'Osmanlı empire-builders came into contact, not only with these dominant minorities' Turkish mother-tongues, but also eventually with the indigenous languages of the Hindu and Orthodox Christian worlds when the cultures of the subject populations began to captivate their Iranicized Turkish conquerors.

'The character of Akbar, so far as it depended upon heredity, was . . . based on three distinct non-Indian strains of blood existing in his proximate ancestors: namely, the Turk or Turkī, the Mongol or Mogul, and the Persian or Iranian strains. The manners and customs of his court exhibited features which were derived from all the three sources: Turkī, Mongol, and Iranian. During the early years of his reign Indian influences counted for little—the officers and courtiers surrounding him being divided into two parties: the Turks (Mongol or Chaghatāy and Uzbek) on the one side and the Persians on the other. But after Akbar had attained maturity the pressure exercised by his Indian environment rapidly increased, so that in sentiment he became less and less of a foreigner until, in the later years of his life, he had become more than half an Hindu. His personal conduct was then guided by Hindu *dharma* or rules of duty, modified considerably by the precepts of Iranian Zoroastrianism. The Turkī and Mongol elements in his nature were kept so much in the background that he was reputed by Hindus to be a reincarnation of a Brahman sage.'¹

This Indianization of Akbar's soul found its linguistic reflexion in the formation of a new alloy of the Persian language with a vein of base metal that was Indian instead of being Turkish.

'Both Turkī and Persian were spoken at his court, but the former tongue in the course of time dropped out of use, while the latter became the recognized official and literary language. The highly Persianized form of [Western] Hindī known by the name of Urdū, or the camp language,² which developed gradually as a convenient instrument

'Abbasid Caliphate, the Uighur Turkish language had been reduced to writing in an Alphabet of Aramaic origin, and the Altaian Turkish language in the Alphabet of the inscriptions in the basins of the rivers Orkhon and Yenisei—a script which, whatever its origin may be, is certainly not derived from the Arabic Alphabet (see p. 500, footnote 6, above). It may be added that the starkly consonantal Arabic Alphabet is peculiarly ill equipped for conveying any member of a family of languages which has a genius—as the Turkish family has—for both the differentiation and the harmonization of vowel sounds.

¹ Smith, V. A.: *Akbar the Great Mogul*, 2nd ed. (Oxford 1919, Clarendon Press), pp. 10-11. The religious aspect of Akbar's eclecticism is examined in V. C (i) (d) 6 (δ), Annex, pp. 699-704, below.

² 'Urdū' = 'ordū' = 'horde'. In Turkey at the present day this Mongol word 'ordū' is used with the technical meaning of 'army-corps'. In the Mughal Empire 'Urdū-i-Mu'allā' was the name of the Imperial military bazaar outside the palace at Delhi (*The Imperial Gazetteer of India*, new edition, vol. i (Oxford 1907, Clarendon Press), p. 365).—A.J.T.

of communication between natives and foreigners,¹ was often almost identical in vocabulary with Persian as spoken in India, while retaining the grammatical structure of an Indian tongue.²

The Persian influence on Western Hindī has been so strong that the Hindustānī language has accommodated itself—even in its less impure form, in which the influx of the Persian vocabulary has been kept within more modest limits—to employing the Perso-Arabic Alphabet as an alternative vehicle to the indigenous Brāhmī script—though the latter still serves to convey the greatest of all Hindī works of poetic art: the Eastern Hindī *Rām-Charit Mānas* of Akbar's Hindu contemporary and subject, Tulsī Dās.³

This penetration of a Hindī element into the everyday speech of Akbar's court and camp has a rudimentary analogue in the prevalence, in the same age, of Jugoslav as the domestic language of the Ottoman Pādishāh's Slave-Household; and, if the master institution of the Ottoman Empire had not, after the death of Suleymān the Magnificent, been reduced to a premature decadence by a breach of the fundamental rule that the recruits must be infidel-born,⁴ a Perso-Jugoslav alloy might be playing in the Near East to-day a role corresponding to that of the Perso-Hindī alloy which is still current under the name of Urdu as a *lingua franca* in India. This possibility was blighted by the socially disastrous

¹ The basis of Urdu is Hindustānī: i.e. 'that dialect of Western Hindī whose home is the Upper Gangetic Doāb, in the country round Meerut. The city of Delhi lies close to the southern border of this tract. Here the dialect was in general use, and from here it was carried everywhere in India by the lieutenants of the Mughal Empire' (*The Imperial Gazetteer of India*, new edition, vol. i, p. 365).—A.J.T.

² Smith, *op. cit.*, p. 11. 'When this infusion of borrowed words is carried to an extreme . . . the language is intelligible only to educated Musulmāns and to those Hindus who have been educated on Musulmān lines. . . . The extreme Persianization of Urdū is due to Hindu rather than to Musulmān influence. Although Urdū literature is Musulmān in origin, the Persian element was first introduced in excess by the pliant Hindu kāyasths and khattis employed in the Mughal administration and acquainted with Persian, rather than by Persians and Persianized Mughals, who for many centuries used only their own language for literary purposes. . . . During the first centuries of its existence Urdū literature was entirely poetical. Prose Urdū owes its origin to the English occupation of India and to the need of text books for the College of Fort William. The Hindi form of Hindustānī was invented at the same time by the teachers at that college. It was intended to be a Hindustānī for the use of Hindus, and was derived from Urdū by ejecting all words of Arabic and Persian birth, and substituting in their place words borrowed or derived from the indigenous Sanskrit. Owing to the popularity of the first book written in it, and to its supplying the need for a *lingua franca* which could be used by the strictest Hindus without their religious prejudices being offended, it became widely adopted and is now the recognized vehicle for writing prose by those inhabitants of Upper India who do not employ Urdū. . . . Urdū, as becomes its origin, is usually written in a modified form of the Persian character, while Hindī is generally written, like Sanskrit, in the Deva-nāgarī character' (*The Imperial Gazetteer of India*, new edition, vol. i, pp. 365-6). For this archaistic form of Hindī see further the present Study, V. C (i) (d) 8 (y), vol. vi, p. 77, footnote 2, below.

³ Tulsī Dās *vivebat circa* A.D. 1530-1623; Akbar *vivebat* A.D. 1542-1605. Though Akbar delighted in giving his patronage to eminent Hindus, the genius—and, indeed, even the existence—of Tulsī Dās seems never to have been brought to the Emperor's notice (Smith, *op. cit.*, pp. 417-18).

⁴ For the value of this rule and the fatal consequences of its violation see Part III. A, vol. iii, pp. 34-5 and 44-7, above.

political success of the Pādishāh's free Muslim subjects in taking the Pādishāh's Slave-Household by storm; for most of the free Muslim recruits who forced their way into the Household in and after the later decades of the sixteenth century of the Christian Era were drawn from the Turkish-speaking Muslim population of the metropolitan provinces of the Empire in the Anatolian and Balkan peninsulas. This usurpation of the Ottoman seat of power by a ring of predominantly Turkish-speaking Muslim freemen in the place of a ring of predominantly Yugoslav-speaking Christian slaves has been reflected in the respective fortunes of the rival languages. The Yugoslav language has missed its destiny of becoming, under a Persian veneer, a *lingua franca* for the whole of the Near East, and has been reduced to the modest role of serving as the parochial vernacular of a single one among the Ottoman Empire's numerous 'successor-states'. On the other hand the Turkish language of the original 'Osmanlı empire-builders has escaped the fate—which has overtaken the sister Turkī tongue of the Timurid empire-builders in India—of ceasing to be spoken by the empire-builders' own descendants in the conquered territories. There is, indeed, a striking contrast between the extinction of Turkī in India and the survival of Turkish in Anatolia, where the Ottoman Turkish language has not been content merely to hold its own against the Greek and Armenian which it found in occupation, but has steadily won converts at their expense until in the end it has driven both these predecessors right off this Anatolian field.¹

The most remarkable trophy of the Turkish language's victory here has been its capture of ex-Greek-speaking and ex-Armenian-speaking minorities² who have 'turned Turk', not as an incidental consequence of becoming converts to the Islamic faith of their Turkish conquerors, but in spite of an unbroken loyalty to the Orthodox and to the Gregorian Monophysite Christianity which are their respective religious heritages from a pre-Turkish-speaking past. This now Turkish-speaking remnant of the ancient Christian communities of Anatolia has so utterly lost the command of its pre-Turkish speech that it has come to use a Turkish version of the Orthodox and Gregorian Christian liturgies and to inscribe Turkish texts (in Greek or Armenian letters) upon the tombstones that commemorate its dead. A passing stranger who happened, before the mass-evictions of A.D. 1915–22, to find himself in some Christian village among the secluded mountain fastnesses

¹ See IV. C (ii) (b) 1, vol. iv, p. 75, and IV. C (iii) (c) 2 (β), vol. iv, p. 398, above, with the authorities cited on p. 398, footnote 3.

² For the commercial prowess of the ex-Greek-speaking Orthodox Christian Qāra-mānliš see II. D (vi), vol. ii, p. 223, above.

on the watershed between the Halys and the rivers of Cilicia could not have told by the ear that these villagers were of a different religion from their Muslim neighbours. He must use his eyes to observe that the local house of worship was not a mosque but a church; and he must then look still closer—at the tombstones in the graveyard and at the books behind the screen—in order to determine whether the Christianity of these Turcophone Christians was of the Greek-lettered Orthodox or of the Armenian-lettered Gregorian kind.

It is true that this conversion to the Turkish language without a conversion to Islam has not carried with it that sense of political affinity which in the Near East has invariably accompanied a change of faith—even when this has not been followed by a corresponding change of speech. This truth has been recognized on both sides; and the recognition has been acted upon in an interchange of populations—partly by way of forcible eviction, but also partly by way of a more or less voluntary migration—through which the formerly intermingled *millets* of the old Ottoman Empire have sorted themselves out, in the course of about a hundred years ending in 'the nineteen-twenties', into a number of separate and severally homogeneous *blocs* on the pattern of the distribution of nationalities in Western Europe.¹ If we examine the demographic map of the Near East as it stands to-day, when this agonizing process of geographical segregation is practically complete, we shall find that the Turkish-speaking Orthodox Christians who learnt their Turkish, without giving up their Christianity, in their native Anatolia have now been transplanted to Greece, because they are felt, and feel themselves, to be Greeks in virtue of their religion—while conversely the Greek-speaking and Bulgar-speaking and Yugoslav-speaking Muslims who respectively became converts to Islam, without any change of speech, in their native Crete and Rhodope and Bosnia, have now been transplanted to Turkey because, on the same religious criterion, they are felt, and feel themselves, to be Turks.

On this showing, it might perhaps be imagined that the difference in religion between, for example, a Turkish-speaking Gregorian Christian Armenian and a Turkish-speaking Muslim Ottoman Turk would count for everything, and their identity of language for nothing at all, in determining their attitude towards each other. Did not the religious antagonism between these two Turkish-speaking communities harden the Turkish-speaking Muslims' hearts to the point of attempting to exterminate the Turkish-

¹ See IV. C (ii) (b) 2, vol. iv, pp. 76-8, and IV. C (iii) (b) 5, vol. iv, pp. 185-90, above, and Part IX, below.

speaking Christians in A.D. 1915-16, without any scruple about acting in this inhuman way towards victims who shared their butchers' mother-tongue?¹ And could the moral gulf between the perpetrators and the survivors of those hideous deportations and massacres ever be bridged? The writer of this Study (whose melancholy task it once was to edit a collection of documents relating to this grim episode in Near Eastern history)² was convinced—until he was presented one day with decisive evidence to the contrary—that the gulf was quite unbridgeable; and, even if it had been foretold to him that a happier relation between at least one Turk and one Armenian would soon be re-established nevertheless, he still would not have guessed that the community of Turkish speech between the Armenian Christian and his Turkish Muslim enemy would be the social substance out of which this miraculous moral bridge would be built. Yet so it was in the experience of a Turkish friend of the writer's, from whose lips he heard the story.

The narrator was Yūsuf Kemāl Bey, an eminent Turkish lawyer who had rallied to Mustafā Kemāl Pasha in his Cave of Adullam at Angora and had distinguished himself as an amateur diplomatist in the service of what seemed a hopeless cause when the Ottoman Turkish people was fighting for its life in the Anatolian war-after-the-war of 1919-22. After the conclusion of peace with honour at Lausanne, Yūsuf Kemāl Bey was appointed Turkish Ambassador at the Court of St. James's; and, as the Turkish Embassy in London had by then been closed for some ten years—ever since the suspension of diplomatic relations between Turkey and the United Kingdom upon the outbreak of war between them in 1914—the new Ambassador found that his official residence was not immediately habitable as it stood when he arrived to reopen it. During the uncomfortable days which had to be passed while the necessary redecorations were being carried out, the Ambassador, with his family and his suite, took his dinner night by night in a neighbouring restaurant; and, in their temporarily forlorn and homeless state, the Turkish diplomatic party were cheered and touched by the markedly cordial solicitude on their behalf which was invariably shown by one, in particular, of the

¹ As a matter of fact, such scruples were both felt and shown by the Turkish-speaking Muslim neighbours of the Turkish-speaking Armenian deportees from Cilicia; and in this district, at any rate, it seems improbable that the traditional relations of good-neighbourliness between the two Turkish-speaking communities would ever have been disturbed if they had been left to themselves. The deportations were engineered and carried out on the initiative of the Committee of Union and Progress: a recently founded Turkish Muslim organization, with its head-quarters far away at Salonica, which was inspired by a fanatical determination to apply throughout the Ottoman Empire the exotic and inappropriate Nationalism of the modern Western World.

² See the British parliamentary paper on *The Treatment of the Armenians in the Ottoman Empire, 1915-16* = Cd. 8325 (1916) = Misc. No. 31 (1916).

waiters who here served them at table. On their last visit to the restaurant before the Embassy kitchen was in working order once again, the Ambassador singled this waiter out for a parting expression of his thanks; and then at last the waiter's tongue was loosed. 'O Your Excellency,' he burst out in Turkish, 'you really need not thank me at all, for it is I myself, entirely, that have been the gainer through the stroke of good luck that put me in the way of waiting on you and yours. You see, I am an Armenian from' such and such a place (it was an out-of-the-way spot in Anatolia); 'and now, for years on end, I have had to spend my life earning my living here in London, with the whole breadth of Europe between me and home and without ever hearing a word of my native tongue. And so, Your Excellency, when you and your party came in here for the first time the other night and started to talk Turkish, I felt almost as though I were at home again, and my heart leapt up. Night by night, since then, I have just feasted my ears. Simply by talking to each other, you and your friends were doing me a world of good without ever suspecting it. So you see, Your Excellency, it is really I that am in debt to you!' Here was at least one native of the Near East who was more deeply moved by the sound of his mother-tongue than by the bitter memories of a communal vendetta! As the Ambassador told the story, his countenance beamed with his pleasure at this unlooked-for welcome in London from an Armenian Turkish-speaking mouth; and the Turkish narrator's English listener took the tale as a happy augury for the opening of a new chapter of Near Eastern history.

If we pass now from the Iranic World, with its Indian and Near Eastern annexes, to the sister Arabic World, and then cast our eyes over the borderland between the domain of this Arabic Civilization and its Tropical African hinterland, we can trace the progress of the Arabic language as it has pushed its way westward from the west coast of the Indian Ocean towards the Lakes, and southward from the south coast of the Sahara into the Sudan, in the train of successive bands of Arab or semi-Arabicized stock-breeders and slave-raiders and traders. And the linguistic side of this movement can still be studied to-day in the life; for, while the physical impact of Arab intruders upon the domain of the native Negro peoples in this African 'living museum'¹ of Primitive Humanity has been brought to a standstill by European intervention within the last fifty or sixty years, the linguistic impact of the Arabic language upon the native vernaculars has actually received fresh impetus from an 'opening-up of Africa' which has latterly been taken out of Arab hands and been carried to completion as a

¹ See II. C (ii) (b) 2, vol. i, p. 313, above.

European enterprise. Under the European flags that signify the imposition of a Western régime the Arabic language is proceeding with its advance into the heart of Tropical Africa with better facilities than it ever commanded before the present railways and motor-roads and postal and telegraph and telephone services were placed at its disposal by the energy and ability of European pioneers; and these material services do not exhaust the tale of benefits which have been conferred upon the Arabic language and culture in Tropical Africa by European colonial Powers. Perhaps the greatest benefit of all has been the official encouragement that they have given—for the sake of supplying an administrative need of their own—to the mixed languages that have arisen on the different cultural coasts on which the flowing tide of an Arabic *lingua franca* has been seeping in through native African mangrove swamps. It is French imperialism on the Upper Niger and British imperialism on the Lower Niger and British and German imperialism side by side in the East African hinterland of Zanzibar that have respectively made the fortunes of Fulani and Hausa and 'Swahili'; and all these three languages are linguistic alloys—with an African base and an Arabic infusion—that have been reduced to writing in the Arabic Alphabet. Sawāhili, the East African 'language of the coasts', is an Arabo-Bantu counterpart of the Perso-Hindī alloy which is the Indian 'language of the camp' or Urdū; and the body that has been given to 'Swahili' by an East African dialect of Bantu has been given to Fulani and Hausa by two of the local non-Arabic vernaculars of the semi-nomadic peoples on the Saharo-Sudanese borderland between the Desert and the Sown.¹

When we pass from the Old World to the Americas, we find the Inca empire-builders of the Andean universal state displaying in their linguistic policy, as in everything else, a characteristic authoritarianism which has not yet been emulated by European administrators in Africa. Having come to the conclusion that their subjects could not function as fully efficient human instruments of a 'totalitarian' régime unless they were equipped with some common *lingua franca*, the Incas selected the Quichua language for this purpose and then not merely encouraged but actually compelled all the inhabitants of their empire to make themselves familiar with it.² This linguistic regimentation of the Andean

¹ For Fulani and Hausa see the references given in Part III. A, Annex I, vol. iii, p. 393, above.

² Joyce, T. A.: *South American Archaeology* (London 1912, Lee Warner), p. 213; Markham, Sir Clements: *The Incas of Peru* (London 1910, Smith Elder), p. 137. The Incas evidently looked upon Quichua as a vulgar tongue; for they had another esoteric classical language of their own, which they kept to themselves. The ordinance prescribing a compulsory universal proficiency in Quichua is ascribed to the Emperor Pachacutec (*imperabat circa A.D. 1400-48*) by Baudin, L.: *L'Empire Socialiste des Inka* (Paris 1928, Institut d'Ethnologie), pp. 116-17.

peoples at their Inca masters' hands has had lasting consequences, notwithstanding the premature and violent interruption of the Incas' work by the Spanish *conquistadores* who hurled them from the seat of power and enthroned themselves in their stead.¹ For the missionaries of the Catholic Christian Church espied a new world ripe for spiritual conquest in the wreckage of an Incaic earthly paradise which had been ravished and devastated by the material weapons of Pizarro and his ruffianly companions;² and they perceived that a *lingua franca* which was already a 'going concern' throughout the vast domain of the shattered Andean universal state might be as useful an instrument for the propagation of the Christian Faith as it had been for the operation of the Incaic system of government. Accordingly the dissemination of the Quichua language, which the Inca administrators had begun, was carried further by the Catholic Christian hierarchy which partitioned the Incaic heritage with the Spanish Crown; and it is perhaps mainly thanks to this ecclesiastical policy that, on the Andean Plateau to-day, Quichua is still spoken by a numerous population.³ No doubt this consecutive Incaic enforcement and Catholic furtherance of a knowledge of Quichua in the Andean World for three or four centuries on end did much to prepare the ground for the subsequent spread of Spanish over the same area.

This Spanish, unlike the Quichuan, *lingua franca* of a post-Incaic Andean Society serves not merely as a medium of internal intercourse but also as a means of communication with other regions of that Westernized World of literally world-wide extent into which the Andean Society's formerly secluded domain has been incorporated as one of the consequences of the Spanish conquest. Within that 'Great Society' of the present age a common command of Spanish links the Andean World with Spain itself and with those South American territories—now occupied by the republics of Chile and Argentina and Uruguay—in which a sparse and backward aboriginal population has been

¹ This interruption of the Incas' work by the Spaniards has a parallel in the interruption of the work of the Achaemenidae by the Macedonians.

² When the Spanish Crown at length succeeded in Peru in asserting its authority over the demonic licentiousness and destructiveness of the *conquistadores* and their diadochi, the viceroys sought to make the best of a bad business by deliberately restoring as much as possible of the Incaic régime; but the damage had been done and the restoration was a caricature (Baudin, *op. cit.*, p. 241). The Catholic Church showed at any rate a greater ability than the Spanish Crown, if not a greater goodwill, to save something from the wreck.

³ The policy was carried out in the grand style. To begin with, the Catholic missionaries gave the Quichua language the benefit of the art of writing, which they had brought with them to the Andes from the Old World, by reducing Quichua to literary form in the Latin Alphabet. In A.D. 1576 a chair of Quichua was founded at the University of Lima, where it was maintained until 1770; and in 1680 a knowledge of Quichua was made in Peru an obligatory qualification for any candidate for ordination to the Catholic Christian priesthood (*ibid.*, p. 117).

evicted and replaced by a Spanish-speaking population of European origin. At the same time this common Spanish *lingua franca* is a bond between the Andean World and the domain of a neighbouring society in Central America with which the Andeans appear to have had little direct intercourse before the fates of these two indigenous civilizations of the New World were brought into a tragic conjunction by the common calamity of a Spanish conquest which overwhelmed both of them alike in the early decades of the sixteenth century of the Christian Era. In Central America, south-west of the Rio Grande, the Spanish language to-day enjoys as wide a currency as anywhere south of the Isthmus of Panamá—and this in spite of the fact that in Central America no indigenous *lingua franca* has prepared the ground for Spanish as Quichua has prepared it in the Andes. The Spanish conquest which followed the establishment of an Andean universal state by the Incas anticipated the establishment of a Central American universal state by the Aztecs;¹ and, owing to this historical accident, the Western culture—of which the Spanish language has been the vehicle in the Central American as well as in the Andean portion of the vast tract that has now become Latin America—has been compelled in Central America to make its way for itself, instead of finding, as it has found in the Andes, the valleys filled and the rough ways made smooth² by the antecedent cultural labours of indigenous empire-builders.

It may seem strange that any *lingua franca* which has originally been imposed as a result of a military conquest should ever afterwards be able to shake itself free from this odious historical association in the minds of the conquered peoples who have had it forced down their throats. Yet Spanish and Quichua are by no means unique in having been started on their careers in this fashion; this has been the history of more than half the *lingue franche* in our catalogue; and a final example may be cited to illustrate how hard it is for bitter memories to hold their own against convenient habits.

At the Peace Conference of Paris the writer's wife was acting as assistant to the special correspondent of *The Manchester Guardian*; and in the course of her work it fell to her lot one day to accompany her principal when he was waiting on the Georgian delegation in their hotel in order to obtain an interview from them. The leading Georgian delegates who were then in Paris were men whose names had become widely known in a previous chapter of history as those of prominent Menshevik Social-

¹ See I. C (i) (b), vol. i, p. 124; IV. C (ii) (b) 2, vol. iv, pp. 105-6; and V. C (i) (c) 4, in the present volume, p. 357, above.

² Luke iii. 5.

Democratic deputies in the Imperial Russian Duma at Petrograd; but in Paris in 1919 they were presenting themselves in another role—not as members of one of the great political parties of the *ci-devant* Russian Empire, but as representatives of a non-Russian nationality which was now 'rightly struggling to be free' from a forcibly imposed Russian yoke. In accordance with their professed political metamorphosis the delegates opened the conversation—which was conducted through an interpreter belonging to their staff—by dwelling upon the distinctiveness of the Georgian from the Russian culture; and they sought to drive their point home by reminding their visitors that the Georgian language was not even remotely akin to Russian—as English, for example, was—but actually belonged to an utterly different language-group which had no affinity whatever with the Indo-European family. This picturesque insistence upon the outlandishness of the speakers' mother-tongue caught the assistant-correspondent's fancy; and, whenever the Georgian delegates were priming their interpreter with the representations that he was to pass on to her principal and herself in French, she took advantage of these pauses in her own work of taking notes in order to gratify her curiosity by listening to the cadences of a language whose chief title to consideration seemed to lie in being *sans pareil*.

As the interview proceeded in this fashion—with the touch of tedium that is inevitable in a conversation that has to be interpreted—the listener's mind gradually began to wander; and presently she found herself stumbling on the thought that apparently one has only to open one's ears for a certain length of time to a wholly unknown language in order to begin to catch some glimmerings of an understanding of it. The absurdity of this idea recalled the dreamer, with a start, to wakeful consciousness. How fatuous the mind can be when one allows it to go wool-gathering! And then, as she went on listening with her attention now at full stretch, it was suddenly borne in upon her that perhaps, after all, she had not been so silly as she had supposed; for surely the language which the delegates were talking with the interpreter was Russian—a language of which she did, as it happened, possess a certain knowledge. With her curiosity now sharply whetted, she took the first opportunity to put in a word to the interpreter on her own account. 'I wonder', she said, 'if you would allow me to ask you what language you and the delegates were talking together just now?' And at this the interpreter, looking slightly embarrassed, held a whispered conversation with his chiefs. 'The delegates desire me to tell you,' he finally answered her, 'that, as a matter of fact, they were talking Russian just then; but they were

only talking it for a moment, and you must not attach any importance to that. They have, of course, been talking Georgian all the rest of the time.'

Good manners forbade any cross-examination; but the interpreter's explanation of an unfortunate *lapsus linguae* was hardly convincing; and a different tale was told with greater eloquence by the disconcerted countenances of the delegates themselves. The questioner drew the conclusion (which, no doubt, was correct) that even a Georgian patriot's mind fell into thinking in Russian, the moment it was off its guard, if the subject of its thoughts was political. The Great Russian *lingua franca* of the Muscovite Empire was, after all, the vehicle which had first conveyed to Transcaucasia the exotic political ideas of a Western World that was sundered from Georgia by the redoubtable breadth of all the Russias; and, if your Georgian was being constrained to think in terms of 'natural rights' and 'constitutions' and 'plebiscites' and 'minorities', it stood to reason that it would be exceedingly difficult for him to utter or even frame such thoughts in any other medium than the parliamentary language of a Russian Duma in which he had served his apprenticeship and made his name as a politician. On the conscious plane of his mental life this Georgian politician *à la Russe* might have made up his mind to repudiate his Russian political past and to throw himself into the novel part of a Georgian nationalist; on the subconscious plane, however, he was evidently apt, at unguarded moments, to relapse in a trice into his indelibly Russian political self. It will be seen that the Georgian politician's Russian *lingua franca* was something more than a convenient social tool which could be employed or laid aside at its master's good pleasure; it was a vehicle of thought without which a Georgian could not live the life of a political animal any more than a fish could swim on dry land or a bird fly in a vacuum. In fact, a Georgian political programme of secession from the Russian body politic was in 1919 a political contradiction in terms.

(δ) *Syncretism in Religion.*

In the field of Religion, as in the fields of Language and Art and Manners, syncretism is an outward manifestation of that inward sense of promiscuity which arises from the schism in the Soul in an age of social disintegration.

The phenomenon of religious syncretism may be taken, with some assurance, as a symptom of disintegration in the social milieu in which the phenomenon presents itself, because the apparent examples of religious syncretism in the histories of civilizations

in their growth-stage turn out, on inspection, to be illusory. For instance, when we see the parochial mythologies of innumerable city-states being co-ordinated and harmonized into a single Pan-Hellenic system by the labours of Hesiod and the 'catalogue poets' and the 'logographers' in the early stages of the growth of the Hellenic Civilization, we are watching a mere juggling with names which is not accompanied by any corresponding fusion of different rites or blending of diverse religious emotions. Similarly, when we see Latin *numina* being identified with Olympian divinities—a Jupiter with a Zeus or a Juno with a Hera—what we are watching, in effect, is the mere replacement of a primitive Latin animism by the anthropomorphic pantheon of the Hellenic World in the course of the peaceable conversion of a primitive Latin society to Hellenism.¹ These equations between Latin and Greek names of gods do not bear witness to any dilution of Greek with Latin religious ceremonies or ideas; there has been no give-and-take; for the giving has been all on the Greek and the taking all on the Latin side when Zeus has been installed on the Capitol under the name of Jupiter, no less than when Polydeuces has been installed as 'Pollux', and his brother Castor under his own undistorted Greek name, on a site in the Forum Romanum within a stone's-throw of Zeus-Jupiter's Capitoline seat. It makes no difference whether a Castor and an Apollo are translated from Greece to Latium under their exact original names; or whether, in the process of translation, a Polydeuces is distorted into a 'Pollux' and a Heracles into a 'Hercules' and a Persephone into a 'Proserpine'; or whether a Hestia and a Zeus are transposed into their philological equivalents Vesta and Jovis; or whether a Hephaestus is dubbed 'Vulcanus' and a Demeter 'Ceres' in spite of the absence of any kinship here between the Latin name and the Greek. This arbitrary variety of usage in the matter of nomenclature covers a uniform cultural process which is not a case of syncretism at all, but consists in the introduction of a Greek divinity, *de toutes pièces*, into a Latin vacuum.²

¹ For this conversion of the Latins to Hellenism during the growth stage of the Hellenic Civilization see IV. C (i), vol. iv, pp. 19-20; V. C (i) (c) 1, in the present volume, p. 55, footnote 4; and V. C (i) (c) 3, p. 212, above.

² 'Les Latins attribuaient à Neptune les aventures de Ποσειδών.'—*Œuvres de Turgot* (Paris 1844, Guillaumin, 2 vols.), vol. ii, p. 621 ('Géographie Politique'). There is an almost exact parallel to this process in the history of the Japanese offshoot of the Far Eastern Society, where, after the introduction of the Mahāyāna into Japan, the indigenous Japanese *numina* (*Japonicé 'kami'*) were systematically identified with famous Mahayanian Bodhisattvas (Holtom, D. C.: *The National Faith of Japan: A Study in Modern Shintō* (London 1938, Kegan Paul, Trench, Trubner), pp. 35-8; Kato, Genchi: *A Study of Shinto, the Religion of the Japanese Nation* (Tokyo 1926, Meiji Japan Society), pp. 134-6). In this system of 'Ryobu' or 'Dual' Shinto the Bodhisattvas were given the place of honour, as archetypes or ideas (in the Platonic sense) of which the Shinto *kami* were reflexions in the phenomenal world. This relation was reversed by Urabe Kanetome (*vivebat* A.D. 1435-1511) in a counter-system entitled 'Yui-itsu' or

There is a different class of identifications between names of gods in which these verbal equations do occur in an age of social disintegration and also do bear witness to the prevalence of a sense of promiscuity, but which nevertheless will be found on examination to be no genuine religious phenomena, but merely politics under a religious mask. Such are the identifications that are made between the names of different local gods in an age when a disintegrating society is being forcibly unified on the political plane as the mechanical consequence of a series of internecine wars between parochial states into which the society has articulated itself previously in its growth-stage.¹

For example, when, in the concluding chapters of Sumeric history, Enlil the Lord (Bel) of Nippur was merged into Marduk of Babylon, and when Marduk-Bel of Babylon in his turn went incognito for a time under the name of Kharbe,² the *panmixia* commemorated in this deliberate confounding of distinctions between the names of different gods was of a political and not of a religious order. The political significance of this juggling with divine names is indeed prodigious. When the god who was the lord of Nippur was given his lordly title—Bel—in the Akkadian language, we can infer that this Semitic dialect must by that time have been supplanting Sumerian in a city-state which had hitherto been the hub of the Sumeric universe. When Marduk of Babylon was identified with the Bel of Nippur, this was a record of the rehabilitation of a Sumeric universal state through the prowess of a Babylonian dynasty. And, when we find Bel-Marduk of Babylon going under the Kassite name of Kharbe, we can tell that the Sumeric universal state which had been momentarily rehabilitated by Hammurabi has now been superseded, even in its metropolitan territory, by a barbarian 'successor-state' under the rule of Kassite war-lords. Again, in the affiliated Babylonian Society, when we find the same pantheon enthroned in both Babylonia and Assyria, name for name, except that in Assyria the pre-eminent position of the Babylonian Marduk-Bel is occupied by a god called Asshur,³ the true inference is not that there was any substantial difference between Assyrian and Babylonian religious practices and beliefs, but merely that, in the political life of the Babylonian Society, the Assyrians had developed a

'Only One' Shinto, in which the *kami* are promoted to the rank of archetypes and the Bodhisattvas degraded to that of shadows (Holtom, op. cit., pp. 38-41; Kato, op. cit., pp. 136-7).

¹ This internecine warfare which ends in an amalgamation of the local gods begins as a competition between them in which they experience the same changes of fortune as the local communities by which they are respectively worshipped. The vicissitudes in the fortunes of some of the local gods of the Sumeric city-states during the Sumeric 'Time of Troubles' are noticed by Sir Leonard Woolley: *Abraham* (London 1936, Faber), pp. 224-5.

² See I. C (i) (b), vol. i, p. 116, above.

³ See loc. cit.

strongly pronounced national consciousness which they expressed in religious terms by calling the high god of the Assyro-Babylonian Pantheon by the name of their own eponymous Assyrian national divinity in preference to using the name of Marduk-Bel with its distinctively Babylonian political associations.

In a similar way in the Egyptiac World, when the obscure local god Amon of Thebes—who seems originally to have been a double of the neighbouring local god Min of Coptos—was identified with Re the Sun-God, who was not only a Pan-Egyptiac divinity but was actually the high god of the Egyptiac Pantheon,¹ this was a mere reflexion, in religious terms, of the political facts that the Egyptiac universal state had not only been founded in the first instance by one Theban prince but had afterwards been reconstituted by another empire-builder from the same southern march of the Egyptiac World after the interlude of a Hyksos barbarian domination.² The god Amon's fortune was made by the prowess of the human rulers who happened to have inherited him as their parochial object of worship; and it is significant that Amen-emhat ('Amon was in the Beginning') was the name of the first Theban Emperor of the Twelfth Dynasty, whose reign inaugurated the 'Indian Summer' of the Egyptiac universal state.³ Thereafter, when, after the Hyksos interlude, Amon had returned to power in the train of another Imperial dynasty—the Eighteenth—from the god's native canton of Thebes, the Emperor Thothmes III organized an ecclesiastical counterpart of the restored Egyptiac universal state in the shape of a Pan-Egyptiac hierarchical corporation under the presidency of the Chief Priest of Amon-Re's Theban sanctuary.⁴

¹ In the Egyptiac World the Sun-God had been raised to this eminence in the course of the 'Time of Troubles' between the breakdown of 'the Old Kingdom' and the establishment of 'the Middle Empire' by Theban hands. This epoch saw 'the completion of a far-reaching progressive transformation of the Egyptiac religion. The ideas, evolved at Heliopolis, regarding the unity of the divine power which reveals itself in the creative energy of the Sun—ideas which had first found their liturgical expression in the Sun-worship of the Fifth Dynasty—now obtained general currency. [The doctrine was that] in truth there is only one single godhead, namely the Sun who is sprung from Nunu, the primeval waste of waters, and this whether the god who dwells in the Sun is called Atum, Re, Khepre "the Creator", or what you will. . . . This is the Solar Monotheism of the Egyptiac Theology. All other gods that are worshipped locally here and there in the Egyptiac World sink to being either mere names for "the One" or, alternatively, to being his assistants and servitors. This doctrine, which had been worked out at Heliopolis, . . . was now propagated all over the Egyptiac World as a piece of esoteric wisdom belonging to the priesthood, and the higher orders, the "Knowing", were initiated into it.'—Meyer, E.: *Geschichte des Altertums*, vol. i, part (2), third edition (Stuttgart and Berlin 1913, Cotta), pp. 243-4.

² See I. C (ii), vol. i, p. 144; II. D (v), vol. ii, pp. 112-13; V. C (i) (c) 3, in the present volume, p. 268, and V. C (i) (c) 4, p. 352, above.

³ See V. C (ii) (a), vol. vi, p. 192, below. For the foregoing foundation of the Egyptiac universal state by Amenemhat I's predecessor Mentuhotep IV see I. C (ii), vol. i, p. 137; II. D (v), vol. ii, p. 117, footnote 1; IV. C (ii) (b) 2, vol. iv, p. 85; and V. C (i) (c) 3, in the present volume, p. 267, above; and V. C (ii) (a), vol. vi, p. 190, below.

⁴ See I. C (ii), vol. i, p. 145, footnote 5, and IV. C (iii) (c) 2 (β), vol. iv, pp. 413 and 421, above, and V. C (i) (d) 6, Annex, in the present volume, pp. 653-4 and 695, below.

Through the glory reflected upon him by this political advancement of both his local human prince and his personal human servitor, Amon rose to a pinnacle of greatness to which the Theban god would scarcely have dreamed of aspiring in the days of his obscurity during the growth-phase of Egyptiac history; but, for this immense aggrandisement, Amon had to pay the price of ceasing to be himself. 'His old local characteristics, whatever they may have been,¹ have been supplanted by those of the Sun-God, and the ancient local Amon has been completely solarized. In this way it has been possible to raise him to the supreme place in the Pantheon.'² 'As Amon-Re, he receives a new, and less indecent, shape.'³ 'On the whole, Amon-Re is actually nothing more than the old powerful Sun-God Re,⁴ Harakhti, Atum, Khepre and whatever else he was called. Like him he sails over the celestial ocean, and like him wars with the cloud-dragon Apophis; and all that Re possesses in the way of sanctuaries, ships, names and crowns becomes his property.'⁵

'The Ennead was joined in thy limbs, . . . every god was united with thy body. Thou didst emerge first that thou mightest begin the commencement, O Amon, whose name is hidden from the Gods, great aged one, older than these, Tenen who did shape himself as Ptah. . . .

'Of mysterious form and gleaming shape, the wondrous god with many forms. All gods make their boast in him in order to magnify themselves with his beauty, for he is so divine.

'Re himself is united with his body, and he is the great one who is in Heliopolis.'⁶

This Egyptiac conception of a single universal godhead manifesting itself under a host of local names was not only extended from Re of Heliopolis to Amon-Re of Thebes. In an age when the Egyptiac Civilization itself was on the eve of extinction we find an Egyptiac Isis who by this time had conquered a spiritual empire for herself in an alien Hellenic World laying claim to the same Protean universality in her epiphany to the hero of Apuleius's pornographico-devotional romance.

¹ Amon seems originally to have been, like Min, a local ithyphallic fertility god—an aspect of godhead which is at the very farthest remove from the ethereal and oecumenical figure of the Sun-God with whom Amon now came to be identified.—A.J.T.

³ Erman, A.: *Die Religion der Ägypter* (Berlin 1934, de Gruyter), p. 104.

⁴ Long before the course of Egyptiac political events had led to the identification of Amon with Re, Re himself had been 'politicized' by becoming 'a kind of celestial reflection of the earthly sovereign' (Breasted, J. H.: *Development of Religion and Thought in Ancient Egypt* (London 1912, Hodder & Stoughton), p. 17, cited already in I. C (ii), vol. i, p. 141, above).—A.J.T.

⁵ Erman, A.: *The Literature of the Ancient Egyptians*, English translation (London 1927, Methuen), p. 283.

⁶ Chapters 90 and 200 of *The Thousand Songs* in honour of Thebes and Amon-Re (quoted in Erman, *Literature*, English translation, pp. 298-9).

'En adsum tuis commota, Luci, precibus, rerum naturae parens, elementorum omnium domina, saeculorum progenies initialis, summa numinum, regina manium, prima caelium, deorum dearumque facies uniformis, quae caeli luminosa culmina, maris salubria flamina, inferum deplorata silentia nutibus meis dispenso: cuius numen unicum multiformi specie, ritu vario, nomine multiugo totus veneratur orbis. inde primigenii Phryges Pessinuntiam deum matrem, hinc autochthones Attici Cecropeiam Minervam, illinc fluctuantes Cyprii Paphiam Venerem, Cretes sagittiferi Dictynnam Dianam, Siculi trilingues Stygiam Proserpinam, Eleusinii vetustam deam Cererem, Iunonem alii, Bellonam alii, Hecatom isti, Rhamnusia illi, et qui nascentis dei Solis inchoantibus inlustrantur radiis Aethiopes Arique priscaeque doctrina pollentes Aegyptii caerimoniis me propriis percolentes appellant vero nomine reginam Isidem.¹

The same deliberate policy of establishing identifications between divinities that were originally local and unrelated comes into evidence in the Andean World in the time of the universal state that was constructed by the Incas;² and the Inca Pachacutec (*imperabat circa* A.D. 1400-48), in whose reign this political unification of the Andean World was substantially completed,³ performed a feat of ecclesiastical organization which was exactly analogous to the Egyptian performance of the Pharaoh Thothmes III. Pachacutec convened a congress of priests from all parts of his dominions at Corichanca—the great temple in Cuzco which was the seat of the Incas' own ancestral Sun-worship—and arranged that all the gods of the Incaic Empire should be marshalled into a pantheon with the Corichancan Sun-God in the role which was assigned by Thothmes III to his own Theban Amon-Re.⁴ Like Thothmes again, Pachacutec provided his heavenly pantheon with an earthly hierarchy in which the Chief Priest of the temple of the Sun at Corichanca occupied the position of the Chief Priest of Amon-Re at Thebes; and in the Andean, as in the Egyptian, World the central shrine of the high god of the pantheon was reproduced in a host of local Sun-temples at the seats of provincial administration, while the whole ecclesiastical establishment was endowed with the produce of lands which were set aside for this purpose in all parts of the empire.⁵

¹ Apuleius: *Metamorphoses*, Book XI, chap. 5.

² See Joyce, T. A.: *South American Archaeology* (London 1912, Lee Warner), p. 152.

³ See II. D (iv), vol. ii, p. 103, footnote 2, above.

⁴ Pachacutec carried out his policy in a way that was more literal and more drastic than anything that Thothmes ventured to do; for in the Andean case the idols of the local divinities were physically removed from their local shrines in order to be assembled at Corichanca (see Baudin, L.: *L'Empire Socialiste des Inka* (Paris 1928, Institut d'Ethnologie), p. 62).

⁵ See Means, P. A.: *Ancient Civilisations of the Andes* (New York and London 1931, Scribner), pp. 427-8; Joyce, op. cit., pp. 156-9; Baudin, op. cit., p. 62; Markham, Sir C.: *The Incas of Peru* (London 1910, Smith Elder), pp. 105-6; and the present Study, V, C (i) d) 6 (8), Annex, in the present volume, pp. 653 and 694, below.

In this Protean capacity for metamorphosis, which is common to Enlil-Bel-Marduk-Kharbe-Asshur and to Min-Amon-Re-Ptah and to the gods who were regimented by the Incas into their Andean Pantheon, we are witnessing not so much a religious phenomenon as politics working through an ecclesiastical medium; and in our own Western World a classical example of this process of political syncretism in an ecclesiastical mould is to be seen in the ecclesiastical history of the English and Scottish Crowns during the last two and a half centuries. Since the time of the Anglo-Scottish political and ecclesiastical settlement which was inaugurated by the accession of King William III to the two thrones, and which was completed by the constitutional union of the two kingdoms themselves in A.D. 1707, the common sovereign with whom the churches that are respectively established in England and in Scotland have each, in virtue of their establishment, continued to be in official relations¹ (though this on quite different terms in the two cases) has so far always been deemed, and has deemed himself, to be a member of both churches.² At the same time, in the same settlement, the churches themselves not only freely went their respective ways and, in doing so, parted company once for all in rite and constitution, if not in doctrine: their respective freedom was also reciprocally guaranteed in a political Act of Union which was formally passed in the common sovereign's name—though in fact, of course, it was a transaction between the two parliaments, or indeed between the two nations, since the monarchy had become constitutionally limited after the deposition of King James II.³ In this Western case we are witnessing, not indeed a theological union of different godheads, but a personal union of different forms of worship of one and the same god through

The ecclesiastical empire of the Sun-temple at Cuzco was divided into nine or ten 'dioceses' with a 'bishop' in charge of each of them under the Cuzcan 'Pope's' supervision (see Cunow, H.: *Geschichte und Kultur des Inkareiches* (Amsterdam 1937, Elsevier), pp. 198–201). In the contemporary Mexic World a process of religious amalgamation seems likewise to have accompanied the process of political unification which, in this world, was heading towards the establishment of a Mexic universal state by force of Aztec arms when the work of the Aztec empire-builders was cut short, on the verge of its completion, by the advent of the Spaniards (see Thompson, J. E.: *The Civilisation of the Mayas* (Chicago 1927, Field Museum of Natural History), p. 36).

¹ The situation in which an English and a Scottish established church are severally in official relations with a single sovereign has, of course, existed since 1603, when the two crowns were first united on the head of King James I/VI.

² King William III's predecessor King James II, as a Roman Catholic, had been a member neither of the English nor of the Scottish Established Church. It may be noted that both King William III himself and Kings George I and II were actually members, not merely of two churches, but of three, since King William was also a member of the Calvinist Church of the United Netherlands, while the first two Georges were also members of the Lutheran Church of Hanover. The Calvinist Church of the Netherlands had the same doctrine as that of Scotland, but the Lutheran Church of Hanover had a doctrine and an ecclesiastical constitution which differed from both the Anglican and the Scottish.

³ For the happy political consequences of this ecclesiastical *Ausgleich* between the English and Scottish constituent state of the United Kingdom see V. C (i) (d) 6 (8), Annex, pp. 711–12, below.

the common participation of a single crowned head in the membership of different churches.

The foregoing survey has brought out the fact that the parochial gods who come to be identified with one another in a disintegrating society, as a consequence and an acknowledgement of the unification of the parochial states, are apt to have a certain antecedent affinity with one another in virtue of their being in most cases the ancestral gods of different sections of one and the same dominant minority. For this reason the amalgamation of godheads that is demanded, at this stage of a society's history, by *raison d'état* does not, as a rule, go seriously against the grain of religious habit and sentiment. In order to find examples of a religious syncretism that cuts deeper than *raison d'état* and touches the quick of religious practice and belief, we must turn our attention from the religion which the Dominant Minority inherits from a happier past to the philosophy which it strikes out for itself in response to the challenges of a 'Time of Troubles'; and we must watch rival schools of philosophy colliding and blending not only with one another but also with the new 'higher religions' that are imported into the life of a disintegrating society by the alien recruits to the Internal Proletariat. Since these 'higher religions', too, collide with one another besides colliding with the philosophies, it will be convenient first to glance at the relations between 'higher religions' *inter se* and philosophies *inter se* in their originally separate social spheres, before we go on to consider the more dynamic spiritual results that follow when the philosophies on the one side come into relation with the 'higher religions' on the other.

In the disintegration of the Hellenic Society the generation of Poseidonius (*vivebat circa* 135-51 B.C.) seems to mark the beginning of an epoch in which the several schools, which had hitherto delighted in lively, acrimonious, and interminable controversies, now tended with one accord (with the solitary exception of the Ishmaelitic Epicureans) to notice and emphasize the points that united them rather than those that divided them,¹ until a time came, in the first and second centuries of the Roman Empire, when every non-Epicurean philosopher in the Hellenic World of the age subscribed to much the same eclectic set of tenets, whether he chose to call himself a Stoic or a Peripatetic or an Academic. A similar tendency towards promiscuity in philosophy displays itself in the history of the disintegration of the Sinic Society at a

¹ This new tendency towards consensus was facilitated by a likewise new tendency towards dogmatism (see Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii. (Stuttgart and Berlin 1923, Cotta), pp. 329 and 536) which set in simultaneously; and this dogmatism tended to take a more and more religious and emotional, and a less and less scientific and intellectual, colour (see pp. 550-68, below).

corresponding stage. In the second century B.C., which was the first century of the Empire of the Han, eclecticism was equally the note of the Taoism¹ which was at first in favour at the Imperial Court and of the Confucianism which eventually supplanted it.

'Taoism is a term invented about this time to designate that great eclecticism which was taking place during the second century B.C. and which attempted to embrace all the essential doctrines of the various schools of thought that had flourished during the preceding age of philosophical speculation. . . . "Its method" [says Sse-ma Tan]² "consists of observing the seasonal regularities of the natural forces as taught by the astrologers, and in selecting the best elements in the teachings of the Confucianists and Mo-ists and incorporating into itself the essentials of the schools of the Logicians and the Jurists".'³

This so-called 'Taoism', which was the prevalent philosophy of the Sinic dominant minority during the first two generations of the Han régime, was officially superseded in the reign of the Emperor Han Wuti (*imperabat* 140-87 B.C.) by a 'Confucianism' which 'was not at all what Confucius taught or Mencius philosophized about, but was something so different from the original teachings of the school that we must call it "the Han Confucianism" in order to distinguish it from the moral and social teachings of Confucius and Mencius on the one hand and the Neo-Confucianist philosophy of the Sung Dynasty on the other'.⁴

This syncretism between rival philosophies which we observe in the disintegration of the Sinic Society as well as in that of the Hellenic has its parallel in the relations between rival 'higher religions' nurtured in the bosom of the Internal Proletariat.

For example, in the Syriac World from the generation of Solomon onwards we find a strong tendency towards a *rapprochement* between the Israelitish worship of Yahweh and the worships of the local Baalim of other Syriac communities which were Israel's neighbours;⁵ and the date is significant, because we have seen reason⁶ to believe that the death of Solomon heralded the break-

¹ For this travesty of Taoism see V. C (i) (d) 4, pp. 418-19, above.

² For this Sinic philosopher of the second century B.C. see loc. cit.—A.J.T.

³ Hu Shih: 'The Establishment of Confucianism as a State Religion during the Han Dynasty' in *The Journal of the North China Branch of the Royal Asiatic Society*, vol. ix, 1929, pp. 22-3. For the distinctive tenets of the diverse Sinic schools of philosophy which had grown up during the foregoing 'Time of Troubles', see Waley, A.: *The Way and its Power* (London 1934, Allen & Unwin), Introduction.

⁴ Hu Shih, op. cit., p. 28.

⁵ We may assume that the *rapprochement* which followed the collision between the worship of the god of Israel and the worships of the gods of Moab and Ammon and Phoenicia and Philistia was a matter of give-and-take, even though our records tell us only of the religious influences to which the worship of Yahweh was exposed, while they are silent about any influences that the worship of Yahweh may have imparted to other local cults. The *argumentum ex silentio* would be more than usually hazardous in this case, considering that the evidence at our disposal comes exclusively from the Israelitish side. (On this point, see II. D (ii), vol. ii, p. 50, above.)

⁶ In IV. C (ii) (b) 1, vol. iv, p. 68, above.

down of the Syriac Civilization and the beginning of a Syriac 'Time of Troubles'. No doubt the remarkable and momentous feature in the religious history of Israel during that age is the exceptional success of the Prophets in combatting the sense of promiscuity and diverting the stream of Israelitish religious development out of the facile channel of syncretism into a new and arduous channel which was peculiar to Israel itself. Yet, when we look at the credit instead of the debit side of the Syriac account of reciprocal religious influences, we shall recall that the Syriac 'Time of Troubles' may have seen the worship of Yahweh make an impact upon the religious consciousness of the peoples of Western Iran in whose midst a 'Diasporà' of Israelitish deportees had been planted by the Assyrian militarists;¹ and it is at any rate certain that there was a powerful counter-impact of the Iranian upon the Jewish religious consciousness in the time of the Achaemenian Empire, which was the Syriac universal state, and in the succeeding age when the Seleucid successors of the Achaemenidae were reigning over the defunct empire's former provinces in Asia. By the second century B.C. the mutual interpenetration of Judaism and Zoroastrianism had gone to such lengths that our modern Western scholars find the utmost difficulty in determining and disentangling the respective contributions that these two sources of Syriac religious experience have severally made to the stream which was fed by their united waters.²

Similarly, in the development of the 'higher religions' of the internal proletariat of the Indic World we see a fusion—which goes much deeper than a mere equation of names—between the worship of Krishna and the worship of Vishnu.³

At this point we may also take note of a type of religious syncretism which is peculiar to the abnormal situation that arises when a disintegrating civilization is provided with its universal state by alien empire-builders, owing to a failure on the part of the indigenous dominant minority to perform even this service for its society.⁴ In this situation there is sometimes, as we have

¹ See I. C (i) (b), vol. i, p. 81, with footnote 1, and V. C (i) (c) 2, in the present volume, p. 121, above.

² There is a wide discrepancy between the estimates of the influence of Zoroastrianism upon Judaism that have been made by different modern Western scholars. For a conservative estimate see Meyer, E.: *Ursprung und Anfänge des Christentums* (Stuttgart and Berlin 1921-3, Cotta, 3 vols.), vol. ii. For a less cautious estimate see von Gall, A.: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter). All scholars, however, seem to be agreed that in this age Zoroastrianism and Judaism did influence one another in some degree. (On this point see V. C (i) (c) 2, p. 121, above, and V. C (i) (d) 7, vol. vi, pp. 43-4; V. C (i) (d) 9 (γ), vol. vi, p. 126, footnote 5, and p. 129, footnote 2; and V. C (i) (d) 11, vol. vi, p. 163, footnote 1, below.)

³ For the failure of Hinduism to transcend the residual separateness of Vishnu-Krishna from Shiva see V. C (i) (d) 7, vol. vi, pp. 47-9, below.

⁴ These universal states of alien origin have been discussed in V. C (i) (c) 1, pp. 53-4; V. C (i) (c) 2, pp. 105-17; and V. C (i) (c) 4, pp. 347-51, above.

observed in another context,¹ a fusion between the hereditary religion of the alien empire-builders who have earned the status of a dominant minority in the society which they have provided with a universal state, and the hereditary religion of the indigenous dominant minority which has forfeited its birth-right and has in consequence been degraded to the ranks of the internal proletariat. For example, on the morrow of the endowment of the main body of Orthodox Christendom with an alien universal state in the shape of the Ottoman Empire a syncretism between the Islam of the 'Osmanlis and the Christianity of their subjects was propagated by Sheykh Bedr-ed-Dīn of Simāv.² On the eve of the establishment of an alien universal state in the Hindu World by the Timurid Mughals a syncretism between the Islam of the pre-Mughal Iranic empire-builders in Hindustan and the Hinduism of the indigenous populations, whom these alien intruders were conquering, was conceived in the soul of Kabīr and realized in the Sikh Church Militant.³ And, when the short-lived alien universal state that had been built for the Hindu Society by Timurid hands was reconstructed, after its premature collapse, by a second fatigue-party of alien empire-builders who were recruited, this time, from the West, a syncretism between Hinduism and the Protestant Christianity of the Timurids' English successors was compounded by Ram Mohan Roy.⁴ Finally, in the main body of the Far Eastern World, on the eve of its incorporation into a Great Society with an oecumenical range and a Western framework, the T'ai-p'ing movement was generated by a blend between the indigenous Far Eastern religious and philosophical tradition and the Protestant Christianity of English intruders who were the apostles of Westernization in the Far East as well as in India.⁵

Such breaches in the barriers between religion and religion or philosophy and philosophy in times of disintegration will

¹ In V. C (i) (c) 2, pp. 106-7 and 111, above.

² See IV. C (ii) (b) 1, vol. iv, p. 68, and V. C (i) (c) 2, in the present volume, p. 111, above.

³ See IV. C (iii) (b) 13, vol. iv, p. 231, and V. C (i) (c) 2, in the present volume, p. 106, above, for the Hindu-Islamic syncretism which was precipitated in the fifteenth century of the Christian Era by the genius of Kabir. At the present day there are believed to be about one million non-Sikh Kabir-panthis in India, some of whom regard themselves as Hindus and others as Muslims (Eliot, Sir C.: *Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. ii, p. 266). But the most important of the spiritual heirs of Kabir are not these followers of Kabir himself but those of his younger contemporary Nanak (*vivebat* A.D. 1469-1538), who founded the Fraternity of the Sikhs—largely under the inspiration of Kabir's ideas. The metamorphosis of a fraternity which was originally a purely religious association into a militant political community—a sinister transformation which was carried out, by stages, between the last quarter of the sixteenth and the last quarter of the seventeenth century of the Christian Era—is discussed in V. C (i) (d) 6 (8), Annex, pp. 665-8, below.

⁴ See IV. C (iii) (b) 13, vol. iv, p. 231, and V. C (i) (c) 2, in the present volume, p. 106, above.

⁵ See V. C (i) (c) 2, in the present volume, p. 107, above.

evidently open the way for *rapprochements* between philosophies and religions; and in these philosophico-religious syncretisms, in which the sense of promiscuity achieves its spiritual *chefs d'œuvre*, we shall find again that the attraction is mutual and that the move is made from both sides. Just as, astride the military frontiers of a universal state, we have watched the soldiers in the imperial garrisons and the warriors in the barbarian war-bands gradually approximating towards one another in their ways of life until at length the two social types cease to be distinguishable,¹ so, in the interior of a universal state, we can watch a corresponding movement of convergence between the adherents of the philosophic schools and the devotees of the popular religions. And the parallel runs true; for in this case, as in that, we find that, while the representatives of the Proletariat do come a certain distance to meet the representatives of the Dominant Minority, the latter go so much farther along their own path of proletarianization that the eventual fusion takes place almost entirely on proletarian ground. In studying the *rapprochement* from both sides it will therefore be convenient to survey the shorter spiritual journey of the proletarian party first before attempting to follow the longer spiritual journey of the Dominant Minority.

When 'higher religions' that have been nurtured in the bosom of the Internal Proletariat find themselves face to face with the Dominant Minority, their advance along the path of adaptation may sometimes stop short at the preliminary step of commending themselves to the Dominant Minority's notice by assuming the outward fashions of the Dominant Minority's style of art. Thus, in a disintegrating Hellenic World, the Mahāyāna and the worships of Mithras and Cybele and Isis all sought to promote the success of their respective missionary enterprises on Hellenic ground by recasting the visual representations of their divinities into forms that might be expected to prove agreeable to Hellenic eyes. Up to this point these eventually unsuccessful rivals of Christianity for the conquest of Hellenic souls were taking the same course as Christianity itself; but none of them made any appreciable move towards taking the further step of Hellenizing itself inwardly as well as outwardly. It was Christianity, alone among them all, that went the length of expressing its creed in the language of Hellenic philosophy.²

In the history of Christianity the intellectual Hellenization of a religion whose creative essence was of Syriac origin was foreshadowed in the employment of the Attic, instead of the Aramaic,

¹ See V. C (i) (d) 6 (α), pp. 459-80, above.

² On this point see V. C (i) (c) 4, p. 366, above.

κοινή¹ as the linguistic vehicle for the New Testament; for the very vocabulary of this vulgarized yet sophisticated form of Greek carried with it a host of unsuspected philosophic implications.

'In the Synoptic Gospels Jesus is regarded as the Son of God, and this belief is carried on and deepened in the body of the Fourth Gospel. But also in the prologue to the Fourth Gospel the idea is thrown out that the Saviour of the World is the Creative Logos of God. Implicitly, then, though the statement is not made explicitly, the Son of God and the Logos of God are one and the same: the Son as the Logos is identified with the creative wisdom and purpose of deity, the Logos as the Son is hypostatized into a person beside the person of the Father. At one bound the philosophy of the Logos has become a religion'²—

or, to describe the same spiritual mutation in the inverse terms, the religion of the Dying God Incarnate has found a new expression for itself in the hitherto abstract and frigid philosophy of the Logos.

Nor has this first occasion been the only one on which the missionaries of the Christian Faith have translated their good tidings into the language of the philosophers. The legitimate intellectual arts by which the scholarly Alexandrian Fathers Clement and Origen commended Christianity to a Stoic-minded Hellenic dominant minority were reapplied some fourteen hundred years later when Matteo Ricci and his fellow members of the Society of Jesus addressed themselves—with an ability and a discernment which barely failed to win the triumph that they deserved—to the comparable task of converting the souls of a Confucian-minded dominant minority of Far Eastern literati.³

This device of preaching Religion in the language of Philosophy—an intellectual manœuvre to which Christianity has already resorted twice, with an overwhelming success at the first essay which was all but repeated at the second—was one of the heirlooms which Christianity had inherited from Judaism. It was Philo the Jewish philosopher of Alexandria (*vivebat circa* 30 B.C.—A.D. 45) who sowed the seed from which Philo's Christian fellow citizens and fellow philosophers Clement and Origen were to reap so rich a harvest within two centuries of Philo's day; and it was perhaps from the same quarter that the author of the Fourth Gospel gained his vision of the Divine Logos with which he identifies his Incarnate God.⁴ No doubt this Alexandrian Jewish forerunner of Alexandrian

² More, P. E.: *Christ the Word = The Greek Tradition from the Death of Socrates to the Council of Chalcedon*: 399 B.C.—A.D. 451, vol. iv (Princeton 1927, University Press), p. 298.

³ See V. C (i) (c) 4, pp. 366-7, above.

⁴ On the other hand, in the opinion of Eduard Meyer (*Ursprung und Anfänge des Christentums* (Stuttgart and Berlin 1921-3, Cotta, 3 vols.), vol. ii, p. 318, the Johannine

Christian Fathers was led into the path of Hellenic philosophy through the gate of the Greek language, like the Christian philosophers themselves; for it was assuredly no accident that Philo lived and philosophized in a city in which the Attic *κοινή* had become the vernacular language of a local Jewish community that had so utterly lost command of Hebrew, and even of Aramaic, that it had been driven by dire necessity to desecrate its Holy Scriptures by translating them into the impious language of the Isles of the Gentiles. Yet in the history of Judaism itself this Jewish father of a Christian philosophy is an isolated figure. He was not the spiritual progenitor of either the Zealot John of Gischala or the Rabbi Johanan ben Zakkai;¹ and his ingenious effort to derive the Platonic philosophy from the Mosaic Law remained, for Judaism, a barren aetiological conceit which was 'Alexandrian' in the depreciatory meaning of the epithet.

When we pass from Christianity to Mithraism, which was the Syrian 'higher religion's' Iranian counterpart and rival² in a competition for the spiritual conquest of the Hellenic World, we shall observe that, on its voyage westwards from its Iranian homeland, Mithra's barque took on board a heavy cargo of the Babylonian astral philosophy³ from the now half-submerged continent of the *ci-devant* Babylonian World. Indeed,

'the Chaldaean conception of the Powers of Destiny that manifest themselves in the planets and the stars—the belief that everything has its proper "hour", which is fixed and calculable—becomes a common mental possession of all peoples.'⁴

In similar fashion the Indic 'higher religion' of Hinduism barefacedly despoiled a senile Buddhist philosophy of its intellectual panoply⁵ in order to acquire for itself the last and most potent of the weapons that it needed in order to drive its philosophical rival right out of their common homeland in the Indic World. And it is the opinion of at least one eminent modern Western Egyptologist that the proletarian worship of Osiris only won its

'Logos' was not derived, either through Philo or through any other channel, from the Hellenic philosophical tradition, but was a translation of the Aramaic 'Memra': the Word of God which, in the Judaism of this age, had come to be endowed with something that might almost be called a personality of its own which was felt to be distinct from the personality of its utterer Yahweh. Eduard Meyer also points out, in the same context (op. cit., vol. ii, p. 317), that the Johannine concept of the Logos has an exact analogue in the Islamic concept of the Uncreated Qur'an.

¹ See V. C (i) (c) 2, pp. 75–6, above.

² Both the Syrian religion of Christianity and the Iranian religion of Mithraism were, of course, 'Syriac' in the cultural sense in which that term is used in this Study.

³ For this implacably determinist philosophy see V. C (i) (c) 1, pp. 56–7, above.

⁴ Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 172. See also the present Study, V. C (i) (c) 1, in the present volume, p. 57, above.

⁵ See V. C (i) (c) 1, p. 58, above.

way into the citadel of the Egyptiac dominant minority's hereditary pantheon by usurping from Re the ethical role—originally quite foreign to the Osirian Faith—of a divinity that reveals and vindicates Righteousness. According to Breasted, this role had already been assumed by Re before the fall of 'the Old Kingdom'—at a time, that is to say, when the Egyptiac Civilization had been still in its growth-stage—and had then been etherialized, always still in Re's person, through the wisdom born of the suffering of an Egyptiac 'Time of Troubles',¹ whereas Osiris was little better than a hypocrite who gained his entry into the exclusive upper circle of an Egyptiac celestial society under the false pretence of patronizing an ideal of goodness that had not originally been his.² And it was in the strength of this borrowed ideal that the proletarian worshippers of Osiris made their eventual conquest of the Egyptiac World in the time of a 'Middle Empire' which was the Egyptiac universal state. In fact,

'the Lord gave the people favour in the sight of the Egyptians, so that they lent unto them such things as they required. And they spoiled the Egyptians'³—

and this is not only the story of the religion of Osiris in its appropriation of an ethic that had been cultivated by an Egyptiac dominant minority in a 'Time of Troubles': it is likewise (as we have seen) the story of Hinduism in its dealings with Buddhism and of Mithraism in its dealings with Astrology and of Christianity in its dealings with Stoicism and Neoplatonism.

This 'spoiling of the Egyptians', however, may sometimes cost a 'higher religion' dear—as is illustrated by the Egyptiac case in point. In the Egyptiac case an aspiring Osirian Church, which sought to help itself on its way by commandeering an ethic that was the creation of a dominant minority, had to pay for these unceremoniously borrowed plumes by putting itself into the hands of the party that was being constrained to lend them. The master-stroke of the old Egyptiac priesthood was to place itself at the disposal—and, in so doing, also place itself at the head—of a rising proletarian religious movement which it had found itself unable to suppress or even hold at bay, and which might eventually have swept the old established hierarchy away if, at the critical moment, these priests of a pre-Osirian Egyptiac Pantheon had not deftly checkmated their opponents by ostensibly going over to their

¹ 'It is Re who is dominant in the thinking of [the] social philosophers of the Feudal Age. . . . The moral obligations emerging in the Solar theology . . . wrought the earliest social regeneration and won the earliest battle for social justice of which we know anything in history' (Breasted, *op. cit.*, p. 250).

² For this (no doubt, controversial) theory see Breasted, *op. cit.*, pp. 170-8.

³ Exodus xii. 36.

side.¹ By their astuteness in thus taking the Osirian religion under their wing the Egyptiac priesthood raised their order to a pinnacle of power which it had never attained in the days before Osiris had appeared, as a formidable newcomer, above the Egyptiac dominant minority's horizon.²

Astute as it was, this feat of the Egyptiac hierarchy is not unique. The capture of the Osirian religion by the priests of the old Egyptiac Pantheon has its parallels in the capture of the post-Buddhaic Hinduism by the Brahmins³ and in the capture of Zoroastrianism by the Magi.⁴ But there is another, and still more insidious, way in which a 'higher religion' that has made its epiphany out of the bosom of an internal proletariat is apt to fall into the hands of a dominant minority which this rising religion is successfully despoiling of its accumulated spiritual treasures; for the priesthood which gains control over a proletarian church and then abuses this control in order to govern that church in the Dominant Minority's spirit and interest—in impudent defiance of the church's own origin and mission—need not be an ancient priesthood belonging to the Dominant Minority by descent; it may actually be recruited from among the leading lights of the proletarian church itself.

In an early chapter of the political history of the Roman Republic the *stasis* between Plebeians and Patricians was notoriously brought to an end by a 'deal' in which the Patricians took the leaders of the Plebeians into partnership on the tacit understanding that, in consideration of their own admission into the sanctum of the politically and socially privileged class, the appointed champions of the unprivileged lower order would cynically betray their trust by leaving the Plebeian rank-and-file in the lurch.⁵ In a similar fashion on the religious plane, in the history of the internal proletariat of a disintegrating Hellenic World, the rank-and-file of Jewry had been betrayed and deserted, by the time of Christ, by their own former leaders the Scribes and Pharisees. These

¹ See I. C (ii), vol. i, pp. 143-4, and V. C (i) (c) 2, in the present volume, p. 152, above. In these other contexts we have observed that, in its achievement of this *tour de force*, the Egyptiac priesthood was assisted by the fanatical reaction in the Egyptiac body social against the Hyksos barbarian domination—a reaction of which the priesthood took advantage in order to draw the Osiris-worshippers in the internal proletariat into an 'union sacrée' with the Re-worshippers in the dominant minority.

² See I. C (ii), vol. i, p. 145, footnote 5; II. D (v), vol. ii, p. 116, footnote 1; IV. C (iii) (c) 2 (β), vol. iv, p. 421; and IV. C (iii) (c) 3 (β), vol. iv, pp. 515-17, above.

³ See IV. C (iii) (c) 2 (β), vol. iv, p. 421, footnote 3, and V. C (i) (c) 2, in the present volume, p. 137, above.

⁴ See V. C (i) (d) 6 (δ), Annex, p. 705, footnote 1, below.

⁵ The traitorous Plebeian leaders were assisted in 'putting over' this 'deal' at the expense of their own followers by the temporary relief from economic pressure which the rank-and-file of the Roman Plebs obtained through land-settlement on lands which came into the possession of the Roman Government as one of the fruits of the Roman conquest of Italy (see IV. C (iii) (b) 9, vol. iv, p. 205, above).

Jewish 'separatists' lived to deserve their self-imposed name in a sense which was the opposite of their meaning at the time when they originally assumed it. The original Pharisees were Jewish puritans who separated themselves from the Hellenizing Jews when these renegades were joining the camp of an alien dominant minority.¹ On the other hand the distinguishing mark of the Pharisees of the time of Christ was their separation of themselves from the rank-and-file of the loyal and devout members of the Jewish community to whom they still hypocritically professed to be setting a good example.

'The learned in the Scriptures, as well as the worldlings, belong to the upper strata of Society; and their attitude is one of condescension mingled with contempt as they look down upon the masses of the working population whom it is their intention to instruct and lead. In [the souls of] these masses, however, the religious life pulsates with a far fiercer intensity. With a fervent credulity they have taken the Law into their bosoms complete. It fills their whole life. . . . At every moment of their existence they feel themselves to be in direct communication with the Godhead, and they discern His operation anywhere and everywhere. The course of events in this chapter of Jewish religious history is the same as it is in all other similar cases—we will confine ourselves here to recalling the various phases of [Christian] monasticism, the Pietists and Methodists, Sufism, and, in the field of Buddhism, the transcendental doctrine of "the Great Vehicle" (the Mahāyāna). In Judaism, likewise, the refinement and etherialisation (*Fortbildung und Verinnerlichung*) of Religion proceeds, not from the learned, but from those strata of the common people that have taken Religion to heart. It is the silent folk of the land (*die Stillen im Lande*)² who live and labour (*leben und weben*) in these ideas. They call themselves "the Pious" *sans phrase*: *chasidim*, meaning literally "the Partakers in Grace", to whom God, in His grace, has granted the proper conduct, god-fearingness and piety. Already in the Psalms the word is used—side by side with the much more common *Saddiqim*, "the Righteous"—as a party name for those who feel themselves to be the true Church of God, the poor and oppressed who put their trust in God alone, in contrast to "the Wicked" (*Resha'im*), the selfseeking and ungodly worldlings who ostensibly are masters of the situation in This World but who all the time are living under threat of punishment in the Judgement which will bring all their pomp to a fearful end when God's long-suffering is exhausted."³

This is the historical background of the scathing denunciation of the Pharisees which echoes through the pages of the Gospels.

¹ See V. C (i) (c) 2, p. 73, with footnote 3, above, and V. C (i) (d) 9 (β), vol. vi, pp. 103-5, below.

² The same phrase is used by Jung in the passage quoted on p. 567, below.—A.J.T.

³ Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), pp. 41-2.

'The Scribes and the Pharisees sit in Moses' seat: all, therefore, whatsoever they bid you observe, that observe and do; but do not ye after their works; for they say and do not. For they bind heavy burdens and grievous to be borne, and lay them on men's shoulders; but they themselves will not move them with one of their fingers. . . . They . . . love the uppermost rooms at feasts and the chief seats in the synagogues and greetings in the markets, and to be called of men "Rabbi, Rabbi". But be not ye called "Rabbi"; for one is your master, even Christ; and all ye are brethren. . . . Neither be ye called "masters" . . . but he that is greatest among you shall be your servant. And whosoever shall exalt himself shall be abased; and he that shall humble himself shall be exalted.'¹

Here, through the eyes of the rank-and-file of the Jewish contingent in a Hellenic internal proletariat, we see the Pharisees as Jewish ecclesiastical counterparts of Jewry's Roman political masters; and in the exordium to the parable of the Pharisee and the Publican, in which the parable is described as being addressed 'unto certain which trusted in themselves that they were righteous, and despised others',² we are given a complementary definition of a Pharisee which would as aptly describe a Stoic philosopher. Nor was this assimilation of the *ci-devant* spiritual leaders of Jewry to both the two main types of their former Hellenic adversaries just a curiosity of history without practical consequences. In the tragedy of the Passion of Christ we see the Scribes and Pharisees not merely inclining in the privacy of their hearts to the spirit and behaviour of a dominant minority, but also actively ranging themselves at the side of the Roman authorities in the public light of the forum in order to compass the death of a prophet of their own race who had been putting them to shame by doing the very works of which these 'whited sepulchres'³ made no more than a hollow pretence.

'When he saw the multitudes, he was moved with compassion on them, because they fainted and were scattered abroad, as sheep having no shepherd.'⁴

This clear and reproachful apprehension of the treachery that the Pharisees had perpetrated in heartlessly deserting their flock was Jesus's unforgivable offence in the Pharisees' resentful eyes.

Are there other instances of this spiritual treason which the Pharisees exemplify? When we observe the Pharisaic tendencies of the Manichaean and Paulician *electi*,⁵ we may speculate whether

¹ Matt. xxiii. 2-12; with these verses and the rest of the chapter compare Mark xii. 38-40; Luke xi. 39-52; and Luke xx. 46-7.

² Luke xviii. 9.

³ Matt. xxiii. 27.

⁴ Matt. ix. 36, with a reminiscence of Zech. x. 2.

⁵ For the Paulician *electi* see IV. C (iii) (c) 2 (β), Annex III, vol. iv, p. 628, above; for the Manichaean *electi* see Burkitt, F. C.: *The Religion of the Manichees* (Cambridge 1925, University Press), p. 46.

these 'separatist' leaders of two later Syriac religious movements might not have relieved the Pharisees of the invidious distinction of serving as the classical examples of the type, supposing that Manichaeism had succeeded in conquering the Hellenic World in the fourth century of the Christian Era, or Paulicianism Western Christendom in the thirteenth.

If we pass now to our examination of the complementary movement in which the philosophies thought out by the Dominant Minority make their approach towards the religions discovered by the Internal Proletariat, we shall find that on this side the process begins earlier, besides going farther. It begins in the first generation after the breakdown; and it passes from curiosity through devoutness into superstition.

The earliness of the first infusion of a religious tinge into the Dominant Minority's philosophical speculations is attested, in the classical Hellenic case, in the *mise en scène* of Plato's *Republic*. The scene is laid in the Peiraeus—the oldest crucible of social *pammixia* in the Hellenic World—at some moment before the end of the Peloponnesian War;¹ the master of the house in which the dialogue is supposed to take place is a resident alien and not an Athenian either by origin or by naturalization; and the alleged narrator, Socrates, begins by telling us that he has walked down to the port from the city of Athens, where his own house is situate, 'in order to pay' his 'respects to the Thracian goddess Bendis, and at the same time out of curiosity to observe how they are going to keep the festival that is being celebrated in her honour at the Peiraeus for the first time on this occasion'. Socrates is delighted with the procession of the townspeople, but he is also delighted as much, or even more, with that of the Thracian strangers in whose train the Thracian goddess has come to Greece; and when, as he starts back for home, he is induced to turn aside and spend the rest of the day at Cephalus's house, he finds his host engaged in the concluding rites of a domestic act of worship. Thus, in the atmosphere of this *chef d'œuvre* of Hellenic philosophical literature, Religion is in the air; and the religious celebrations that catch the eye are alien and even exotic. Here, surely, is an introduction which prepares us for the sequel that is described by a modern Western scholar in the following words:

'The extraordinary thing . . . is that, despite the alien source of the new myth, the theology and philosophy of the Greek Fathers should have turned out in essential matters so thoroughly Platonic, or, more

¹ The date at which the dialogue is to be imagined as taking place is nowhere expressly indicated by the author, and the internal evidence, which our modern Western scholars have industriously searched for a clue, has been diversely interpreted. Boeckh places the imaginary date in the year 411 B.C., Adam in the year 410.

accurately expressed, could have been adopted from Plato with so few modifications. Such a coalescence may lead us to conjecture that the mythology which Plato sought to substitute for the old tales of the Gods was not so much antagonistic to the faith of Christianity as imperfectly Christian. . . . From hints here and there it could even be surmised that Plato himself was dimly aware of a theophany to come, of which his allegories were a prophecy. Socrates in the *Apology* had warned the Athenians of other witnesses to the Soul who should appear after him and avenge his death; and elsewhere he had admitted that, for all the reasoning and high imaginings of Philosophy, the full Truth could not be known until revealed to Man by the grace of God (*theia moira*).¹

The religious curiosity which brought Socrates from Athens to the Peiraeus to witness the festival of Thracian Bendis at some date that was previous to the close of the fifth century B.C. was still alive at Athens, not much less than five hundred years later, among 'certain philosophers of the Epicureans and of the Stoics' who 'took . . . and brought . . . unto the Areopagus' a 'babbler' from abroad, 'saying, "May we know what this new doctrine, whereof thou speakest, is?"'—because he seemed 'to be a setter forth of strange gods'.² In the first century of the Christian Era it remained as true as it had been in the fifth century B.C. that 'all the Athenians and strangers which were there spent their time in nothing else but either to tell or to hear some new thing'.³ And while, as we have noticed in another context,⁴ it was the tragedy of Athens that the promise of *The Republic* was not fulfilled in *The Acts*, still the Hellenic philosophy which had first come to flower on Attic soil did fulfil its destiny of transposing itself into religious terms, and into religious feelings and practices as well, in other provinces of the empire of Hellenism—a cultural empire which was continually expanding as the Hellenic Civilization itself continued to decline.⁵

Our historical record of this metamorphosis of Philosophy into Religion is ample enough in the Hellenic case to enable us here to follow the process clearly through its successive stages.

The cool intellectual curiosity which is the Platonic Socrates' attitude in *The Republic* towards the Thracian religion of Bendis is also the mood of the historical Socrates' contemporary Herodotus in his incidental disquisitions on the comparative study of Religion. The interest, here, is essentially scientific in character; and, to Herodotus's mind, it was evidently of hardly any genuinely

⁴ Acts xvii. 18-19.

⁵ For the correlation between physical expansion and social and spiritual disintegration see III. C (i) (a), vol. iii, pp. 139-54, and V. C (i) (c) 3, in the present volume, pp. 199-201, above.

religious consequence at all whether this or that Syriac or Egyptian or Babylonian divinity was, or was not, in truth identical with this or that member of the Hellenic Pantheon.¹ Such theological problems of identity or difference came to be matters of somewhat greater practical concern to members of the Hellenic dominant minority after the overthrow of the Achaemenian Empire by Alexander the Great, when the Hellenic or Hellenizing princes of the 'successor-states' had to make some ritual provision for the religious needs of mixed populations in which the non-Hellenic and Hellenic elements were coming to be ever more intricately intermingled.² At the same time the founders and propagators of the Stoic and Epicurean schools of philosophy were making it their concern to provide a ration of spiritual comfort for individual souls which found themselves forlornly astray in a spiritual wilderness, as a result of their sudden liberation from the social bondage—or expulsion from the earthly paradise—of the close-knit corporate life of the pre-Alexandrine Sovereign City-State. If, however, we take as our gauge of the prevalent tendency of Hellenic philosophy in this age the tone and temper of the school which had been the first in the field and which looked back to the prince of the philosophers as its founder, we shall observe that, in opposition to the Stoa, the Academy, during the first two centuries *post Alexandrum*, was pushing ever farther along the path of scepticism. A course that had been set by Arcesilaus was continued by Carneades (*vivebat circa* 213–129 B.C.), who made it his life-work to unpick the threads of a Stoic web that had been woven by Chrysippus (*vivebat* 280–207 B.C.). It was not till after Carneades' death that the litigiously contending schools were moved to look for points of contact and agreement instead of keeping their eyes open for subjects of dispute.³ But, when at last they did set them-

¹ See, for example, Herodotus's chronological proof, in Book II, chaps. 43–5, that the Egyptian divinity whom the Hellenes of his day called Hēraklēs might be the same as the Tyrian divinity to whom they applied the same name, but that it was impossible to regard either of these alien divinities as being identical with the native Hellenic Hēraklēs whose father was Amphytrion.

² See, for instance, the post-Alexandrine examples of the description of a divinity by a long string of titles, some of them Hellenic and some of them non-Hellenic, which are cited in Wendland, P.: *Die Hellenistisch-Römische Kultur in ihren Beziehungen zu Judentum und Christentum*, 2nd and 3rd editions (Tübingen 1912, Mohr), p. 131. The most interesting of the composite titles there quoted is that from the inscription of King Antiochus I of Commagene (*regnabat circa* 70–29 B.C.) on the Nimrud Dagh (for the identities of the four divinities named in this inscription see Christensen; A.: *L'Iran sous les Sassanides* (Copenhagen 1936, Levin & Munksgaard), p. 152). Alexander's political expedient of arranging literal marriages between Macedonian officers and Iranian ladies (see V. C (i) (d) 7, vol. vi, pp. 6–7, below) has its politico-religious reflexion in a symbolic marriage—celebrated in an Aramaic inscription of the second century B.C. which has been found at Arabsun in Cappadocia—between the *genius loci*, under the name of Bel, and the Zoroastrian Religion, under the name of Dēn Mazdayasn. This metaphorical marriage appears to signify the 'reception' (in the juristic sense) of Zoroastrianism in the *ci-devant* domain of the Hittite Civilization (see Christensen, op. cit., pp. 152–3).

³ See p. 534, above.

selves to walk in step with one another, they found their single track in a path leading away from an intellectual nihilism towards an emotional faith.¹

After Carneades' death the Academics and the Sceptics suffered an eclipse;² and the Syrian Greek Stoic philosopher Poseidonius of Apamea (*vivebat circa* 135-51 B.C.), who was the leading intellectual light of his age, avenged Chrysippus upon Carneades by opening the gates of the Stoa for the reception of popular religious beliefs and practices to an extent that might have startled, not only Chrysippus himself, but even Poseidonius's own immediate predecessor the Rhodian aristocrat Panaetius.³ Poseidonius lived to see the Academy itself capitulate to the *Zeitgeist* of which the Stoic philosopher was the spokesman. About 80 B.C., at a time when Athens was lying stunned on the morrow of the harrowing experiences which she had brought upon herself through her intervention in the conflict between Rome and Mithradates of Pontus,⁴ another Syrian philosopher, Antiochus of Ascalon, who was at that time president of an Academy that had obstinately remained a citadel of scepticism down to the reign of his immediate predecessor Philo of Larisa, declared that 'Philosophy must go into reverse'.⁵

¹ This emotional faith, like the intellectual nihilism against which it was a reaction, was a pathological exaggeration (see IV. C (iii) (c) 2 (y), Annex, in vol. iv, above) of one among the several constituents of the harmoniously balanced philosophy with which the founder of the Academy had been inspired by his own master Socrates. In the soul of Socrates three impulses—'an intellectual scepticism, a spiritual affirmation, and a tenacious belief in the identity of virtue and knowledge'—are distinguished by More, P. E.: *Platonism*, 2nd edition (Princeton 1926, University Press), p. 2. According to the same scholar (*Hellenistic Philosophies = The Greek Tradition from the Death of Socrates to the Council of Chalcedon: 399 B.C. to A.D. 451*, vol. ii (Princeton 1923, University Press), p. 375, the post-Socratic schools of Hellenic philosophy concocted the diverse fare which they offered, in competition with one another, to a hungry Hellenic public, out of crumbs which had all fallen from their common master's table. Epicureanism was a combination of Socrates' rationalism with his hedonism; Stoicism was a combination of his rationalism with his optimistic endurance (*καρτερία*); Neoplatonism was a combination of his rationalism with his spiritual affirmation; Pyrrhonism was a combination of his scepticism with his hedonism and his endurance. In making these diverse excerpts from the philosophy of Socrates all the schools alike were aiming at the same goal: namely, a reconciliation of liberty with security under the watchword of *αὐτάρκεια*.

² More, P. E.: *Hellenistic Philosophies = The Greek Tradition from the Death of Socrates to the Council of Chalcedon: 399 B.C. to A.D. 451*, vol. ii (Princeton 1923, University Press), p. 317. In the strength of the rally which the Hellenic Society succeeded in making when it passed out of its 'Time of Troubles' into its universal state in the generation of Augustus, an archaistic revival of the Hellenic philosophy of Scepticism was set on foot, at the beginning of the Christian Era, by Aenēsidesmus. The author of the chief extant Greek treatise on this Neo-Scepticism, Sextus Empiricus, lived in the last generation of the *Pax Augusta*, circa A.D. 150-230. In Sinic history there was a comparable revival of sceptical thought—in this case, likewise, with an archaistic savour—in a rally that was also reflected in the restoration of the Sinic universal state by the Posterior Han Dynasty after an interlude of anarchy. The moving spirit in this Sinic Neo-Scepticism was Wang Ch'ung (*vivebat circa* A.D. 27-100) (Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), p. 580).

⁴ See IV. C (iii) (c) 2 (α), vol. iv, p. 266, above.

⁵ Seeck, op. cit., loc. cit.

This conversion, which began to take effect in the sensitive souls of philosophers as early as the turn of the second and the last century B.C., took some time to communicate itself to the Hellenic dominant minority as a whole. At a date some three hundred years later than Antiochus of Ascalon's day, in the pale light of an Antonine 'Indian Summer', a vestige of the prosaic *raison d'état* of Antiochus of Commagene is still visible, through the rising mist of piety, in the syncretism that was cultivated, in his private religious life, by the Emperor Alexander Severus (*imperabat* A.D. 222-35).

'The philosophic devotion of that emperor was marked by a singular but injudicious regard for the Christian religion. In his domestic chapel he placed the statues of Abraham, of Orpheus, of Apollonius and of Christ, as an honour justly due to those respectable sages who had instructed Mankind in the various modes of addressing their homage to the supreme and universal deity.'¹

The state of mind here displayed in private life by one of the rulers of the Hellenic universal state on the eve of its first collapse can also be detected unmistakably in the following account of the public religious policy of the second founder² of the Sinic universal state, Liu Pang, the first emperor of the Han Dynasty:

'When the unification of the empire was completed, the city of Ch'ang Ngan was made the capital of the new empire, and all the tribal and local religions and cults were fully represented in the capital, where each sect had its own shrines, priesthoods, and ceremony. There were the Liang Priestesses, representing the sects of the western peoples of modern Szechuan; the Tsin Priestesses representing the tribal worship of modern Shensi;³ the Ts'in Priestesses representing the peoples of modern Shensi and further west; the Chin Priestesses, representing the races of the valleys of the Han and the Yangtse. . . . And, when the Emperor Wuti conquered the tribes of modern Kwangtung (III B.C.),⁴ the Yueh Priestesses were added to the numerous tribal and local priesthoods at the capital city and were allowed to worship their own gods and spirits and practise their peculiar method of divination by means of chicken-bones.'⁵

In fact, in the Sinic, as in the Hellenic, World the original attitude of cultivated minds in the Dominant Minority to the religious practices and beliefs of the Internal Proletariat was that depicted

¹ Gibbon, Edward: *The History of the Decline and Fall of the Roman Empire*, chap. xvi. Gibbon's account is based on the following passage of 'the Life of Alexander Severus' (chap. 29) in the so-called *Historia Augusta*: 'Usus vivendi eidem hic fuit: Primum [ut], si facultas esset—id est, si non cum uxore cubuisset—matutinis horis in larario suo, in quo et divos principes, sed optimos electos, et animas sanctiores, in quibus et Apollonium et (quantum scriptor suorum temporum dicit) Christum, Abraham et Orpheum et huiusmodi ceteros habebat et maiorum effigies, rem divinam faciebat.'

⁴ Hu Shih, op. cit., pp. 30-1.

⁵ Shansi?—A.J.T.

in a famous description, in the Acts of the Apostles, of how the Roman Governor of the province of Achaia behaved when the Jewish community at Corinth hailed Paul, the Apostle of Christ, before his judgement-seat,

'saying: "This fellow persuadeth men to worship God contrary to the Law". And, when Paul was now about to open his mouth, Gallio said unto the Jews: "If it were a matter of wrong or wicked lewdness, O ye Jews, reason would that I should bear with you; but, if it be a question of words and names and of your law, look ye to it; for I will be no judge of such matters". And he drave them from the judgment-seat. Then all the Greeks took Sosthenes, the chief ruler of the synagogue, and beat him before the judgment-seat. And Gallio cared for none of those things.'¹

Yet this Marcus Annaeus Gallio, who has so strangely acquired a reflected fame from a wandering Jew who happened to cross the Roman administrator's path when Gallio was Proconsul of Achaia, had a brother named Lucius Annaeus Seneca who is justly famous in his own right as a philosopher; and

'Seneca is the earliest and most powerful apostle of a great moral revival. . . . He adheres formally to the lines of the old Stoic system in his moments of calm logical consistency. But, when the enthusiasm of humanity, the passion to win souls to goodness and moral truth, is upon him, all the old philosophical differences fade; the new wine bursts the old bottles. The Platonic dualism, the eternal conflict of flesh and spirit, the Platonic vision of God, nay, a higher vision of the Creator, the pitiful and loving Guardian, the Giver of all good, the Power which draws us to Himself, who receives us at death, and in whom is our eternal beatitude—these ideas, so alien to the older Stoicism, transfigure its hardness, and its cold repellent moral idealism becomes a religion. . . .'²

'Hardly less striking is the warmth of devout feeling which suffuses the moral teaching of Epictetus and Marcus Aurelius. They have not, indeed, abandoned the old Stoic principle that Man's final good depends on the rectitude of the will. But the Stoic sage is no longer a solitary athlete, conquering by his proud unaided strength and in his victory rising almost superior to Zeus.³ Growing moral experience had taught humility and inspired the sense of dependence on a higher Power in sympathy with Man. No true Stoic, of course, could ever forget the divine element within each human soul which linked it with the Cosmic Soul, and through which Man might bring himself into harmony with the great polity of gods and men.⁴ But somehow the Divine Power immanent in the World, from a dim cold impalpable Law or Fate or

impersonal force, slowly rounds itself off into a Being, if not apart from Man, at any rate his superior, his Creator and Guardian, nay, in the end, his Father, from whom he comes, to whom he returns at death. . . .¹

'We are now on the threshold of another world from which many voices were coming to the age of Plutarch.² After Philosophy has done its utmost to mould the life of sixty or seventy years into a moral harmony, with its music in itself, the effort ends in a melancholy doubt. The precept of Seneca and Plutarch, that you should live under the tutelary eye of some patron sage of the past, revealed a need of exterior help for the virtuous will. The passion for continued existence was sobered by the sense of continued moral responsibility and the shadow of a judgement to come. Vistas of a supernatural world opened above the struggling human life on Earth and in far mysterious distances beyond. When Philosophy had done its utmost to heal the diseases of Humanity, it was confronted with another task: to give Man a true knowledge of God and assurance of His help in This World and the Next. . . .³

'Some may think this a decline from the lofty plane of the older school. The answer is that the earlier effort to find salvation through pure reason in obedience to the law of the Whole,⁴ although it may have been magnificent, was not a working religion for Man as he is constituted. The eternal involution of Spirit and Matter in the old Stoic creed, the cold impersonal unknowable Power which under whatever name—Law, Reason, Fate, Necessity—permeates the Universe, necessarily exclude the idea of design, of providence, of moral care for Humanity. The unknown Power which claims an absolute obedience has no aid or recognition for his worshipper. The monism of the old Stoics breaks down. The human spirit, in striving to realize its unity with the Universal Spirit, realizes with more and more intensity the perpetual opposition of Matter and Spirit, while it receives no aid in the conflict from the Power which ordains it; it "finds itself alone in an alien world". The true Stoic has no real object of worship.'⁵

In the spiritual experience of Hellenic souls the yearning after God which suffused this latter-day Stoicism with a warm religious glow had already found expression, six hundred years earlier—before the age of growth had ended in a breakdown—in the deliberately manufactured religion of Orphism;⁶ and within the

next two hundred years, at the hour of sunset, the glow was to flare out for one fleeting moment into the gorgeous colours of Neoplatonism.

In another context¹ we have already seen a corresponding metamorphosis overtaking the Indic philosophy of Buddhism and changing it into the 'higher religion' of the Mahāyāna.

'The Buddhas and Bodhisattvas are conceived as mighty beneficent beings rivalling the gods of the surrounding Hinduism. They may not have been conceived as gods in the sense of the ultimate reality of things; but popular thought was not concerned with such problems. It sought objects of worship, and it found them in the Buddhas and Bodhisattvas. . . . The element of devotion (*bhakti*)² was thus introduced into Buddhism. . . . In the popular mode of expression the *Tathāgata* does manifest himself. He does so "when men have become unbelieving, unwise, ignorant, careless, fond of sensual pleasures". In the same way the god Krishna in the *Bhagavadgītā*³ says: "Whenever there is a decay of righteousness and a rising of unrighteousness, then I emanate myself. In order to save the good and to destroy evil-doers, to establish righteousness I am born from age to age." The actual historical relations between Buddhism and Krishnaism or Vaishnavism are not known, but here we have popular Mahāyāna Buddhism conforming exactly to the beliefs of contemporary Hinduism. . . . The Buddha has become an eternal being and an object of worship not differing in powers or qualities from the gods of the rival religions.'⁴

It was in this hardly recognizable form of a 'higher religion' appealing to the Proletariat that the Mahāyāna made its subsequent conquest of the Sinic World,⁵ and at the same time stimulated the Sinic philosophy of Taoism to enter into competition with it after accomplishing a similar metamorphosis.⁶

In this phase of suffusion with religious feeling the philosophies of the Dominant Minority show themselves capable of rising, in their highest flights, within range of those heights of spiritual sublimity that are attained by the religions which spring from the bosom of the Internal Proletariat. There are passages in Seneca's philosophical works that are so arrestingly reminiscent of passages in the Epistles of Saint Paul that some of the less critical-minded Christian theologians of a later age have duplicated Philo's conceit of Plato's debt to Moses, and have allowed themselves to imagine that the Roman philosopher was in correspondence with the Christian missionary. Such conjectures are as superfluous as they are improbable; for, after all, there is nothing to surprise us in

⁶ See V. C (i) (c) 2, pp. 146-7, above.

these harmonies of tone between two pieces of spiritual music which were the fruits of the same social experience and the products of the same age—albeit in different souls. On this common ground between the Dominant Minority and the Internal Proletariat, at a certain moment, Seneca stands on a level with Paul, as, at another moment and on different ground which is common to the Dominant Minority and the External Proletariat, Aetius matches Theodoric;¹ and this is only what we should expect. On the other hand it is not only extremely surprising, but also deeply disconcerting, to find that the parallel which we have just drawn continues to run true in the sequel. We have seen² that the military guardian of the physical frontiers of a universal state does not succeed in making a stable combination of the barbarian's virtues with his own. When once he has let himself begin to 'go barbarian', he cannot check his course at some optimum point of his own choosing midway, but runs on willy-nilly till he reaches a full stop in a barbarism that is unmitigated. Worse still, he drags down again, with him, his barbarian 'opposite number' who had been making notable headway in the direction of civilization under the frontiersman's earlier influence. This melancholy history of the *limitaneus* whose duty lies in holding the physical frontiers of the Dominant Minority's domain against an outer darkness has a parallel, which is still more tragic, in the history of the philosopher whose mission is to hold frontiers that are spiritual against a darkness arising from within. The philosophies of the Dominant Minority blossom into Religion at one moment only to rankle into Superstition at the next.

'Up to this point [in Hellenic history] all progress in religious thought had proceeded from the highest circles of Society and of the life of the Spirit; the Oriental worships, on the other hand, pushed their way up from the dregs of the populace. In Rome the first initiates of Isis had been rouds and whores; the gospels of the Great Mother and of Mithras had found their apostles in slaves, pirates and common soldiers. "The extermination of the élite"³ made itself felt in the religious sphere too; and here its consequence was that the leadership in matters of Religion was no longer retained by those who had a claim to it in virtue of their greater maturity in culture, and that the lower classes and the spiritual paupers forced their superstition upon the higher social strata. It would be nearer the truth to say that these latter themselves sank lower and lower, and, in thus sinking, gradually reverted to the lower religious level of their underlings. Even Philosophy, which once upon a time had tolerated the popular religion, *de haut en bas*, solely as a crutch for cripples, now saturated itself with this popular

¹ See V. C (i) (d) 6 (α), pp. 471-3, above.

² In loc. cit.

³ This terrible phrase of Seeck's—'die Ausrottung der Besten'—has been quoted already in IV. C (ii) (b) 1, vol. iv, pp. 62-3, above.—A.J.T.

religion and soon found its mission in either defending or explaining the very thing which, once upon a time, Philosophy itself had undermined.¹

A tendency which thus displays itself throughout the whole field of the religious life of a Hellenic Society in disintegration can also be seen uniformly at work at different geographical points and at different social levels. It can be observed, for example, on Syrian ground under a Hellenic political régime, in the evolution of an Oriental religion which has surpassed all its sisters and rivals in historical interest and importance through its having given birth to Christianity.

'The double-edged ambiguity of the new development [in Judaism] declares itself at once in the fact that here, as in Zoroastrianism, it flings the doors wide open for the entry of Demonology, Superstition and Magic. It fills the World with spirits, whose nature and operation, as well as their names, it strives to apprehend more and more exactly; it sees everywhere the operation of supernatural powers, rejects the rational comprehension of the understanding, and puts in its place the mystical intuition of a spiritually unbalanced sensibility and phantasy, which then—and this is the most disastrous step of all—is paradoxically reduced to an absurd system by the application of the most hard-headed logic. Hereby the "Wisdom" of the learned is perverted into its own opposite, and the road is blocked against the acquisition of any genuinely scientific knowledge. This is the course of development through which all advanced religions (*fortgeschrittene Religionen*) have passed—the Egyptiac religion in ever increasing measure since the fiasco of Ikhnaton's monotheistic reformation, and not only the Egyptiac religion but likewise the Babylonian (under the tyranny of Astrology),² the Persian religion of the Magi, the Indian religions, and in Hellas the mystery religions (this development is already under way in Hesiod) and Orphism, and thereafter, since the beginning of the reaction against the Enlightenment, Neopythagoreanism and Philosophical Eclecticism. Everywhere we find an increase in the moral depth of Religion going hand in hand with a relapse into the most primitive forms of Religion, forms that have long since been completely transcended.'³

Thus, in Hellenic history, the philosophies of the Dominant Minority and the religions of the Internal Proletariat gradually approach one another until at length they contrive to meet on the common ground of Superstition.

In tracing the nemesis of the self-idolization of Athens we have already been witnesses of the portentous spectacle of latter-day Athenian professors of philosophy stooping to practise out of school the primitive arts of the rain-making magician;⁴ and, if we

now examine the activities of these Hellenic philosophers¹ Sinic counterparts at a corresponding stage in the disintegration of the Sinic Civilization we shall receive a second shock in seeing these Confucian sages of the last two centuries B.C. making precisely the same exhibition of themselves as the Attic Neoplatonists of the fifth century of the Christian Era.

'It was in . . . an atmosphere of occultism and superstition that Confucianism was elevated to be the orthodox system of teaching in the [Han] Empire. It was impossible for Confucianism and for the Confucian scholars to escape from the contagious influence of this tremendously powerful atmosphere of the popular superstitions. Indeed, a number of the great Confucianists never attempted to escape from it. Mencius once remarked that Confucius was a timely sage. Confucianism, too, was always a timely system of teaching; it always caught up the fashions of the age. Shu-sen Tung, who was the real founder of [the] Confucianism of the Han Empire, was described by his own disciples as a sage that knew what the time needed. The same may be said of a number of the leading Confucianists of the age. Tung Chung-shu, the greatest representative of Confucian thought of the [Han] Dynasty, was well known in history for his method of praying for rain—which consisted in closing all southern gates of the city and forbidding all use of fire while our Confucian philosopher stood on the northern gate spraying the passers-by with drops of water.¹ Another great scholar of the Confucian School, Liu Hsiang, was an alchemist believing in the possibility of converting base metals into gold through the magic intervention of spirits; and he was once sentenced to death on the charge that he had deceived the Emperor Hsuanti (*imperabat* 73-49 B.C.) with his alchemical forgeries.

'It is to be expected that the New Confucianism established under the patronage of a ruler of such multifarious and insatiable credulity and under the leadership of such equally credulous scholars—this New Confucianism should be a great synthetic religion into which were fused all the elements of popular superstition and state worship, rationalized somewhat in order to eliminate a few of the most untenable elements, and thinly covered up under the guise of Confucian and pre-Confucian classics in order to make them appear respectable and authoritative. In this sense the New Confucianism of the Han Empire was truly the national religion of China. It was a great conglomeration of popular beliefs and practices of the time through a thin and feeble process of rationalization. . . . One may easily see that the New Confucianism of the Han Empire was quite different from the agnostic humanism of Confucius or the democratic political philosophy of Mencius. . . .

'The whole religious and intellectual atmosphere, even in the highest quarters of nobility and royalty, was primitive and crudely supersti-

¹ Another activity of Tung Chung-shu's was the interpretation of the prodigies recorded in the annals of history as evidence for the sympathy between the workings of Physical Nature and the vicissitudes of human affairs (see Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), pp. 579-80).—A.J.T.

tious. It was but natural that the New Confucianism which was patronized and nurtured in this environment should take on much that was primitive and crudely superstitious. It frankly discarded the naturalistic philosophy of a previous age which had been accepted by such prominent Confucian thinkers as Hsün-tse. It frankly rejected the agnosticism of Confucius himself and openly took a theistic position similar to that of the school of Mo Ti, whom the earlier Confuci[an] philosophers had condemned. These New Confucianists of Han believed that they knew the will of God and were capable of interpreting [the] hidden meaning of all its manifestations in Heaven and on Earth. They believed in magic and practised alchemy. They borrowed their methodology from the astrologers and spent their lives in trying to interpret the significance of physical catastrophes and anomalies by means of historical and scriptural analogies. Yet, for all that, we must forgive them. These Confucian scholars were children of an environment which alone was responsible for their primitiveness and crudity.¹

These rank weeds of Superstition which sprang up and choked a senile Confucianism as well as a senile Neoplatonism have also been the death of the Mahāyāna;² and in the Westernized Great Society of the present day no open-eyed observer will fail to detect symptoms of similar things to come. Already our Natural Science can be seen sprouting into 'Christian Science' and our psychical research into 'Spiritualism' and our comparative study of religions into 'Theosophy'. And, if the Marxian version of Hegelianism succeeds in holding its ground—either in its present posture of an oecumenical faith or even in the more modest role of a distinctive way of life for the peoples of the Soviet Union—we may foresee that the 'red line' which has already run from Hegel through Marx to Lenin will be continued (like the Platonic 'Golden Chain' that once upon a time ran through the sceptics Arcesilaus and Carneades to the medicine-man Proclus) in successors who, in entire good faith, will interpret their Marxian dogma and develop their Marxian practice into shapes which the Fathers of the Communist Church would perhaps hardly be able to recognize as any legacy of theirs if they were one day to revisit the Earth for an inspection of the results of their labours.³

Such is the miserable end of the philosophies of the Dominant

¹ Hu Shih, op. cit., pp. 34-5, 39, and 40.

² The classic Mahayanian sutra that bears the title of *The Lotus of the True Doctrine* includes a chapter on spells as well as a statement of the abstruse metaphysical doctrine of the Void (see Thomas, op. cit., pp. 184 and 186). In the sequel it has been the matter of chapter 21 of *The Lotus*, and not that of chapter 15, that has pervaded the consciousness and attracted the interest of most of the latter-day adherents of a Mahayanian universal church. This sutra was taken as the holy scripture of one of those popular forms of the Mahāyāna that were put into currency among a Japanese internal proletariat after the breakdown of the Far Eastern Civilization in Japan and the onset of a Japanese 'Time of Troubles' (see V. C (i) (c) 2, p. 101, above).

³ For the inspiration and evolution of Communism see also V. C (i) (c) 2, pp. 177-87, above.

Minority, and this even when they have striven with all their might to win their way on to that kindlier proletarian spiritual soil that is the seed-bed of the 'higher religions'. It profits these philosophies nothing that they, too, have at last broken into flower when this tardy and reluctant flowering revenges itself upon them by degenerating almost at once into an unhealthy and enervating luxuriance. In the last act of the dissolution of a civilization the philosophies finally dry up and wither away, while the 'higher religions' keep alive and in consequence become the defunct philosophies' residuary legatees, with an undisputed claim upon the Future. In a dissolving Hellenic World Christianity survived and succeeded to Neoplatonism (which found no elixir of life in discarding the rationality of Stoicism). In a dissolving Indic World Hinduism similarly survived and succeeded to the Mahāyāna (which could not keep Buddhism alive on its native Indian ground by throwing to the winds the sobriety of the Hīnayāna).¹ And in a dissolving Sinic World a Mahāyāna which had succeeded in completing its metamorphosis from an esoteric philosophy into a popular religion in the course of a long and roundabout journey from the Ganges to the Yellow River through a Hellenic-Syriac corridor,² encountered at its Sinic goal a Taoism that knew how to emulate the Mahāyāna's peculiar *tour de force* of transmuting itself from a philosophy into a religion³ without requiring the Mahāyāna's special stimulus of being driven to wander in an alien wilderness beyond the pale of its native social environment. The result was that on Sinic ground these two new popular religions with philosophic antecedents which they had both of them succeeded in living down now triumphantly divided between them the heritage of a Confucianism that had failed, after all, to season itself by the sordid device of steeping its Master's sovereign common sense in a mud-bath of vulgar Superstition.

This empirical survey, brief though it be, will perhaps have sufficed to bring out the apparent truth that, when philosophies and religions meet, the religions must increase while the philosophies must decrease;⁴ and we cannot turn away from our study of the encounter between these respective spiritual discoveries of the Internal Proletariat and the Dominant Minority without pausing to look into the question why it is that this defeat of the philosophies is—as history testifies—a foregone conclusion.

What, then, are the weaknesses that doom Philosophy to dis-

¹ For this victory of Hinduism over Buddhism—even as travestied in the most extreme of the divers Hinduistic metamorphoses of the Indic philosophy—see V. C (i) (c) 2, pp. 136–9, above.

⁴ John iii. 30.

comfiture when it enters the lists as a rival to Religion? The fatal and fundamental weakness, from which all the rest derive, is a lack of spiritual vitality.

'The geometry of the Ancients¹ was able to provide particular problems with solutions which look like anticipatory applications of our [modern Western] general methods. But it was not able to extract these methods themselves, because it had not the *élan* that could make the jump from statics to dynamics. The Ancients had simply pushed to the extreme limit a simulation of dynamics in static terms. We receive an impression of the same kind when we compare the doctrine of the Stoics . . . with Christian morality. The Stoics proclaimed themselves citizens of the World, and they added that all men are brothers because they are all children of the same God. These were almost the same words [as those of the Christian Gospel]; but they did not find the same echo, because they were not spoken with the same accent. The Stoics set some magnificent examples. If they did not succeed in drawing Mankind after them, that was because Stoicism is essentially a philosophy. The philosopher who is taken with a doctrine of such loftiness, and who puts himself into it, does, no doubt, lend life to it by practising it—as Pygmalion's love breathed life into the marble that had already been carved into a statue. But it is a far cry from Pygmalion's love to the enthusiasm which propagates itself from soul to soul without limit, like a conflagration.'²

This lack of *élan* lames Philosophy in two ways. On the one hand it diminishes its attractiveness for the mass of Mankind, and on the other hand it discourages the minority to whom it does appeal from throwing themselves into the task of converting their fellows.

One manifest secondary weakness is the proneness of Philosophy to provide for the Intellect out of all proportion to its provision for the other faculties of the Soul.

'The warning voice had sounded out clear to the World and was heard through all the places where men disputed and reasoned; the four hundred volumes of Hasdrubal-Cleitomachus, the compact effective arguments of Aenésidémus, the penetrating irony of Lucian, all these things were there, palpable and audible, during the centuries when the determination of the people of the Graeco-Roman World slowly matured to put themselves under the authority of a new dogma. Men did not answer the Sceptical arguments: they simply went past them, turned their backs upon them. Why was this? Why was the logic of the Sceptics impotent to arrest this movement of the Human Spirit? I think that, as we look at the history more closely, we see why. . . . There was one respect in which the Sceptical Philosophy hopelessly broke down; it broke down just where all Agnosticism must break down, before the exigencies of Life—before the fact that Man is not

¹ i.e. the Hellenes.—A.J.T.

² Bergson, H.: *Les Deux Sources de la Morale et de la Religion* (Paris 1932, Alcan), p. 58.

only a spectator of Reality but a maker of it. If we were minds suspended in Space merely watching what went on, we might well, so far as I can see, take the advice of the Sceptic to hold back from all belief; we might simply wait and see what happened. But we have to act, to-day and to-morrow and all the days to come. It was, when all was said and done, because men wanted guidance for action that they turned, in spite of all [that] the Sceptics could urge, to dogmatic systems—to Stoicism, to Epicureanism, and later on to Neoplatonism and the Church. There was an imperious need which the dogmatic systems set out to supply, and which Scepticism could neither supply nor set aside.¹

Another secondary weakness of Philosophy as a rival to Religion is the proneness of Philosophy to address itself to an intellectual *élite* within the Dominant Minority and to deliver its message in the elaborate and sophisticated terms which will commend it to these cultivated minds, but which, by the same token, will hardly be understood of the people at large, outside this narrow circle.² Alexander's vision of the unity of Mankind³ effaced the ancient division between Hellenes and Barbarians without exorcizing the spirit of exclusiveness itself from the souls of the Hellenic dominant minority; and a spirit which had been quelled in one quarter promptly found vent in another direction.

¹ Bevan, E.: *Stoics and Sceptics* (Oxford 1913, Clarendon Press), pp. 140-2. In the light of this Hellenic example an analogous course of spiritual development in the modern Western World has been predicted by Spengler, O.: *Der Untergang des Abendlandes*, vol. i (Munich 1920, Beck), pp. 608-9:

'I declare it in advance: this current century, which has been the epoch of scientific-critical Alexandrianism, will not have passed without having seen [the Western Soul] outlive its will to win victories for Science. European Science is on the road towards a self-annihilation through a refinement of the intellect. First (in the 18th century) we tested the resources of Science, and then (in the 19th century) its power; at the end of the story, to-day, we are seeing through its historical role. From Scepticism there is a path that leads to "the Second [Bout of] Religiosity"—the religiosity of the dying mammoth-cities (*Weltstädte*), of that morbid inner life that comes, not before a culture, but after a culture, bringing a touch of warmth to wizened souls, as was done by the Oriental religions in latter-day Rome.'

While it remains to be seen whether Spengler's proleptic analogy between the respective spiritual histories of the Hellenic and the Western World is to be justified by the event, the rebound from scepticism into credulity which Mr. Bevan has observed in the course of Hellenic history has a Sinic parallel which is likewise already an accomplished fact. The occultism and the superstition to which the Confucian philosophy abandoned itself in the Imperial Age of the Han Dynasty (see pp. 555-6, above) followed hard upon the heels of the esotericism and the scepticism that had been the distinguishing marks of the Confucianism of the philosopher Hsün-tse (see Hackmann, H.: *Chinesische Philosophie* (Munich 1937, Reinhardt), p. 202; and Granet, M.: *La Pensée Chinoise* (Paris 1934, Rennaissance du Livre), p. 579).

² The spirit of intellectual exclusiveness which inspired the Hellenic philosophy from the outset is pithily expressed in the notice which is said to have been inscribed over the gate of the Academy: *Μηδεὶς ἀγawaμέρητος εἰσὶτω* (Tsetzes: *Chiliades*, Book VIII, l. 973). With this Platonic warning we may contrast the Christian boast: *ἐξέστι γὰρ τῷ καθ' ἡμᾶς πολιτευομένῳ καὶ ἀνευ γραμμάτων φιλοσοφεῖν . . . κοινὴ γὰρ ἀπάντων τῶν ἀνθρώπων τῶν γε ἐλομένων ἡ σωφροσύνη* (Clement of Alexandria: *Stromata*, Book IV, chap. 8, § 58, quoted by Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin 1923, Cotta), p. 539, footnote 1). These are the words of an Alexandrian Greek Father of the Church who had made it his life-work to express Christianity in terms of Hellenic philosophy.

³ See V. C (i) (d) 7, vol. vi, pp. 6-10, below.

'The distinction between Hellenes and Barbarians is translated into one between the cultivated and the uncultivated; and the cultivated alone—to the exclusion of the residual masses—are qualified for attaining to the correct apprehension of the truth, and this only if they have genuinely achieved, to perfection, the inward education of the spirit.'¹

This intellectual exclusiveness was not purged out of the Hellenic philosophy by its latter-day suffusion with Religion.

'The gospel of philosophy expounded by Seneca was rather an esoteric or aristocratic creed. With all his liberal sentiment, his cosmopolitanism, his clear conception of human equality and brotherhood, Seneca always remains the director of souls like his own, enervated by wealth, tortured with the ennui of jaded sensibility, haunted by the terror of the Caesars. Indeed, Stoicism was always rather a creed for the cultivated upper class than for the crowd. In its prime its apparatus of logical formulae, its elaborate physics and metaphysics, its essentially intellectual solution of the problems both of the Universe and [of] human life, necessarily disabled it from ever developing into a popular system. . . . In the first century [of the Christian Era] Stoicism came to be much more a religion than a philosophy or even a theology. Its main business, as conceived by men like Seneca, is to save souls from the universal shipwreck of character caused by the capricious excesses of luxury, the idolatry of the world and the flesh, which sprang from a riotous pride in the material advantages of imperial power, without a sobering sense of duty or a moral ideal. But, in the nature of things, this wreck of character was most glaringly seen among the men who were in close contact with the half insane masters of the World in the first century, and who possessed the resources to exhaust the possibilities of pleasure or the capacities of the senses to enjoy. It is to people of this class who still retained some lingering instincts of goodness—weary with indulgence, bewildered and tortured by the conflict of the lower nature with the weak but still disturbing protests of the higher—that Seneca addresses his counsels.'²

It will be seen that, in the Hellenic case, the approach of Philosophy towards Religion which began to declare itself openly in Seneca's day was not accompanied in the narrow circle of the elect by any serious practical attempt to bring the philosopher's esoteric creed within the mental range of a wider public which was likewise hungering for spiritual bread; and this ominous failure of the latter-day Hellenic philosopher's new faith in a supra-mundane Power to express itself in new works of charity towards the semi-convert's fellow human beings is perhaps, after all, not surprising; for by this time the tradition of intellectual, and even

¹ Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin, 1923, Cotta), p. 325.

² Dill, S.: *Roman Society from Nero to Marcus Aurelius* (London 1905, Macmillan), pp. 334-5.

social, exclusiveness had become deeply ingrained in the practice of all the Hellenic schools of philosophy, with the honourable exception of the Cynics.¹ In the pre-Senecan generation of Augustus the cultivated poet Horace could write without any prick of compunction or fear of bringing odium on himself:

Odi profanum vulgus et arceo;
favete linguis: carmina non prius
audita Musarum sacerdos
virginibus puerisque canto.²

And a contemporary man of science has expressed the same sentiment in even more brutal language.

'A rabble of women and promiscuous vulgarians cannot be induced to answer to the call of Philosophic Reason if you are wanting to lead them into piety and holiness and faith. In dealing with people of that sort, you cannot do without Superstition; and Superstition, in its turn, has to be fed with fairy-tales and hocus-pocus.'³

This inhuman prescription of the Hellenic Enlightenment for giving the Proletariat a stone in lieu of bread⁴ stands in diametrical opposition to the lord's injunction to the servant in a parable⁵ which was soon to be disseminated through the Hellenic World in the scriptures of the Christian Church:

'Go out into the highways and hedges and compel them to come in, that my house may be filled.'⁶

The contrast is presented in the following terms by a modern Western master of the subject:⁷

'The difference of individualities is recognized by Christianity too: "Many be called, but few chosen."⁸ Here, however, the differentiating

¹ For this exception see Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii, 2nd ed. (Stuttgart 1921, Metzler), pp. 68-9.

² Horace: *Carmina*, Book III, *carm.* i, ll. 1-4.

³ Strabo: *Geographica*, Book I, ch. 8, p. 19: οὐ γὰρ ὄχλον γε γυναϊκῶν καὶ παντὸς χυδαίου πλήθους ἐπαγαγεῖν λόγῳ δυνατόν φιλοσόφῳ καὶ προσκαλέσασθαι πρὸς εὐσέβειαν καὶ δαιοτήτα καὶ πίστιν, ἀλλὰ δεῖ καὶ δεισιδαιμονίας τοῦτο δ' οὐκ ἀνεν μυθοποιίας καὶ τερατείας. Compare the passage of Polybius quoted in V. C (i) (d) 6 (δ), Annex, pp. 646-7, below. This tendency towards intellectual exclusiveness on the part of the cultivated elite of the Hellenic World also comes to light in a philological observation made in the second century of the Christian Era by the Latin scholar Aulus Gellius, who points out (*Noctes Atticae*, Book XIII, chap. 16) that the Latin word 'humanitas' is used in the meaning, not of the Greek word *φιλανθρωπία*, but of the Greek word *παιδεία*: 'Qui verba Latina fecerunt . . . "humanitatem" non id esse voluerunt quod vulgus existimat quodque a graecis *φιλανθρωπία* dicitur . . . sed "humanitatem" appellaverunt id propemodum quod Graeci *παιδείαν* vocant, nos eruditionem institutionemque in bonas artes didicimus.' That is to say, a word which, in virtue of its origin and its literal meaning, ought to stand for something which unites a cultivated man with the mass of his fellow men, has come to stand for something which distinguishes and divides him from them.

⁴ Matt. vii. 9 = Luke xi. 11.

⁵ Luke xiv. 15-24; cf. Matt. xxii. 1-14. This parable has been cited already, as an illustration of the phenomenon of *περιπέτεια*, in IV. C (iii) (c) 1, vol. iv, p. 247, above.

⁶ Luke xiv. 23.

⁷ Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin 1923, Cotta), pp. 325-6.

⁸ Matt. xx. 16, and xxii. 14.

factor is not the intellect and not the individual's own ability, but is the divine grace; and for precisely this reason the preaching of the word is addressed in principle to the whole of Mankind, and in the first place to the middle and lower, and not to the upper, strata of Civilized Society—to those uncultivated and simple souls which are neither born nor bred to pass a logical judgement or to acquire a philosophical apprehension of the truth, but which follow the obscure drift of their sensibilities and are for that reason accessible to the *πνεῦμα*. To these circles Christianity offers something which neither the philosopher nor the Cynic preacher of "moral uplift" can offer to them, and that is a firm foundation for Life and Thought. This foundation is won through Faith: that is, through an acceptance, without reservation, of the revelation that is preached to them, however strange—and, to cultivated minds, nonsensical—its contents may appear to be. A further condition is their willing submission to the divine authority which is showing compassion on them. This is nothing less than a denial of everything that is of the essence of philosophical thought and of its spiritual freedom. The ideal of Philosophy is the sage who relies on himself; the ideal of Christianity is the believer who sinks himself in God.¹

The first penalty that an enlightened Hellenic dominant minority had to pay for its spiritual frigidity was the loss of its moral and material power.

'The leadership slips out of the hands of the cultivated class because they have lost the power to fulfil the tasks with which they are confronted. They have nothing more to offer to the world: intellectual life founders in the trifling business of rhetoric, government is abandoned to the professional civil servants, while, as for the sword, they have let it pass out of their hands and have shuffled off the duty of military service—which in their eyes is unworthy of a cultivated world which attends to its affairs in peace—on to the shoulders of the culturally lowest strata of the population and eventually on to those of mercenaries recruited from beyond the frontiers. The rise of the religious movement and the victory of Christianity is merely the reverse side of the unlimited extension of the military régime since the days of Severus and Caracalla, and after them the Illyrians, in the third century. The state moulded by Augustus had been based on the conception that the upper classes had a vocation to bear rule; as and when these upper classes fail, the decision falls into the hands of the gross, loutish masses; and

¹ 'Here we touch the really decisive point of difference. Philosophy is a movement that comes from above and that is the offspring of the Enlightenment, of the emancipation of the Spirit from the traditional ideas of Religion and of the social heritage (*des Herkommens*); and for this reason Philosophy is in principle unbelieving; it begins with doubt, and this doubt then leads, through scrutiny, either to a complete rational system of knowledge of the World and of Man, or else to scepticism. Christianity, on the other hand, like all the other phenomena of the same order, is a movement that comes from below and that is the offspring of Religion and of the ideas—to which the masses cling so obstinately—of mythical thought and of the supernatural powers, the good and the bad, with their magical properties and their arbitrary operations. For this reason these phenomena are in principle irrational and authoritarian.'

the ascendancy of the masses carries with it an ascendancy of the views and feelings by which these masses are governed (whether consciously or unconsciously) and of an intellectual and religious life that is shaped to fit the masses' needs.¹

At this point the *ci-devant* governing class began to hunger after the spiritual bread which they had so long and so contemptuously rejected; but their tardy repentance only served to bring down upon their heads the nemesis which the Gospel announces:

'I say unto you that none of those men which were bidden² shall taste of my supper.'³

The breath of Religion which momentarily animated the cold and clear-cut marble of the Hellenic intellect in the generations of Seneca and Epictetus rapidly staled, after the generation of Marcus, into a stuffy religiosity; and the heirs of the Hellenic philosophical tradition fell lamentably between two stools. They threw away their precious heritage of Reason without finding their way, through this supreme sacrifice, to the hearts of the masses; and in ceasing to be sages they dropped into crankiness instead of rising to sainthood.⁴

In the moribund Hellenic Society of the fourth century of the Christian Era,

'The motive that impelled Athanasius to idealize Antony was not unlike that which led Julian, the philosopher in the World, to turn from Socrates to Diogenes for his model of Philosophy out of the World. And Diogenes alone—or, let us say, the legendary Diogenes—could stand with the martyrs of the Church, as he stood with the terrible ascetics. . . .

'It might seem as if Socrates would have served such a purpose better than Diogenes, for he had in fact faced Death for his convictions and conquered its fears; but . . . the death of Socrates, as had been his life, was too calm and reasoned to satisfy the religious craving of that age. Julian might make a brave pretence of appealing to the verdict of intelligence, but at heart he was a child of his own generation, and for centuries the World had been receding farther and farther from the old hope of finding salvation in the clear conception of Truth and of what we know and do not know. The change shows itself in the eclectic merging of the various, even contradictory, sects of Philosophy, with a vein of Neopythagorean obscurantism predominating over all.⁵ It is

¹ Meyer, op. cit., vol. cit., p. 335.

² This refers, of course, not to the guests who were now to be brought in from the highways and hedges, but to other guests who had accepted invitations in advance and then, at the last moment, had sent messages praying the master of the house to have them excused.—A.J.T.

³ Luke xiv. 24.

⁴ Monsieur Henri Bergson has pointed out in *Les Deux Sources de la Morale et de la Religion* (Paris 1932, Alcan), p. 249, that the saint is not afflicted with the philosopher's morbid aversion from the work of evangelizing the masses.

⁵ For this merger see the present chapter, p. 534, above.—A.J.T.

notable in the waves of emotional superstition that were supplanting the humanized mythology of Olympus.¹ Most conspicuously it is seen in the victory of the Christian Faith, foretold by Saint Paul in the declaration that God hath "made foolish the wisdom of This World"² and verified in the exultant cry of Tertullian: [*Credibile est*] *quia ineptum est!* [*Certum est*] *quia impossibile!*³ Over and over again we find the Fathers, even those most favourably disposed to Plato and most ready to admit that God had not left himself without a witness among the Gentiles—again and again we find them reproaching Philosophy with its inability to convert the stubborn hearts of men and to save the masses. And the Fathers were right. In whatever terms we may choose to state the fact, it is true, as Ambrose said, that "it hath not pleased God to give his people salvation in dialectic".⁴ It is simply true that, in setting the emphasis so strongly upon knowledge and intelligence, and in leaving so little room for the will and the instinctive emotions, Classical Philosophy, even the Philosophy of Plato, had left the great heart of Mankind untouched.⁵

Indeed, in this tragi-comic last act, the epigoni of Plato and

¹ The Olympian Faith was dead before its rival heirs broke into the Hellenic arena to fight over the corpse (see I. C (i) (a), vol. i, p. 57, and II. D (vi), vol. ii, pp. 215-16, above). 'The decay of religious feeling reveals itself most plainly of all in the fact that the oracles, which once had attained to so great a power, almost all of them gradually became extinct during the last centuries before Christ, because nobody any longer felt it worth while to consult them' (Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii, 2nd ed. (Stuttgart 1921, Metzler), p. 84).—A.J.T.

² I. Cor. i. 20. See also the passages from the same chapter of the same epistle that are quoted in IV. C (iii) (c) 1, vol. iv, p. 249, above, and in V. C (i) (d) 11, vol. vi, p. 150, below.—A.J.T.

³ Tertullian: *De Carne Christi*, 5 (Migne, J.-P.: *Patrologia Latina*, vol. ii, col. 761). The maxim of Tertullian has been popularized, but scarcely travestied, in the words: *Credo quia absurdum*.—A.J.T.

⁴ Ambrose: *De Fide*, Book I, chap. 5, § 42: 'Non in dialectica complacuit Deo saluum facere populum suum.' The Milanese master's aphorism was to become his Hipponian disciple's commonplace. 'Sed forsitan dicet aliquis: "Etsi ipse humiliter natus est, in discipulorum nobilitate iactare se voluit"? Non elegit reges aut senatores aut philosophos aut oratores: immo vero elegit plebeios, pauperes, indoctos, piscatores. Petrus piscator, Cyprianus orator. Nisi fideliter praecederet piscator, non humiliter sequeretur orator.'—Augustine, *Sermo cxcvii*, fragm. 2. Cf. eundem, *Sermo xliiii*, chap. 5 (apropos of I. Cor. i. 26-8): Peter was a fisherman, not an orator, senator, or emperor; *Sermo lxxxvii*, chap. 10 (apropos of the same passage of Scripture): 'Dominus noluit prius eligere senatores, sed piscatores'; *Sermo cclxxxi* (apropos of Psalm cxii. 7-8): 'Nisi prius eligeretur vilis infirmorum, non sanaretur inflatio superbiorum'; *Enarratio in Psalmum xxxvi*, *Sermo ii*, chap. 14 (apropos of I. Cor. i. 27): 'Et non de oratore piscatorem, sed de piscatore lucratum est oratorem, de piscatore lucratum est senatorem, de piscatore lucratum est imperatorem'; *De Civitate Dei*, Book XXII, chap. 5: 'Ineruditos liberalibus disciplinis et omnino, quantum ad istorum doctrinas attinet, impolitos, non peritos grammatica, non armatos dialectica, non rhetorica inflatos, piscatores Christum cum retribus fidei ad mare huius saeculi paucissimos misit atque ita et ex omni genere tam multos pisces et tanto mirabiliores, quanto rariores, etiam ipsos philosophos cepit.' In this matter the two fourth-century Latin fathers Saint Ambrose and Saint Augustine are supported by the nineteenth-century French prophet of the modern Western heresy of Racialism. 'Ce n'est pas l'érudition qui sauve un peuple arrivé à la décrépitude' (de Gobineau, le Comte J. A.: *Essai sur l'Inégalité des Races Humaines* (Paris 1853-5, Firmin Didot, 4 vols.), vol. i, p. 278).—A.J.T.

⁵ More, P. E.: *Hellenistic Philosophies = The Greek Tradition from the Death of Socrates to the Council of Chalcedon: 399 B.C. to A.D. 451*, vol. ii (Princeton 1923, University Press), pp. 297-9. In the present Study this operation of the principle of *ἀνεπίσχετος* in the intellectual field is touched upon in IV. C (iii) (c) 1, vol. iv, p. 248-9, above, and in V. C (i) (d) 11, vol. vi, pp. 149-54, below.

Zeno confessed the inadequacy of their own great masters and ensamples by abandoning themselves to an imitation of the Internal Proletariat which was in very truth the sincerest flattery of this *profanum vulgus*. Nor was their imitation directed solely towards the inward *êthos* of the rising religions that had made their first epiphany in a proletarian environment: it was also extended, with an indiscriminating zeal, to the details and even the trivialities of these religions' external rites and organization.

'In Iamblichus—as contrasted with Plotinus and also still with Porphyry—the individual religious experience, with the whole of its inspiration, is eliminated. Its place is taken by a mystical church with sacraments, a scrupulous exactness in carrying out the forms of worship, a ritual that is closely akin to magic, and a clergy. To give all this its finishing touch Iamblichus introduces a fanaticism which in the Ancient World is something quite new. Porphyry, for example, is vehemently attacked—without regard to any merit that he may have acquired as an opponent of Christianity—because he does not seem to stand on entirely positive ground. This attitude in itself proclaims the advent of a new age. Julian's attempt to found a pagan state church has hitherto been written off as a completely isolated enterprise of the Ancient Civilization in its last phase; but this view, thus expressed, is not correct. In this field, likewise, the Roman emperor has merely executed the Syrian philosopher's design. To adapt a well-known phrase from Modern History, Julian is an Iamblichus on horseback.

'Julian's ideas about the elevation of the priesthood reproduce . . . exactly the standpoint of Iamblichus, whose zeal for the priests, for the details of the forms of worship, and for a systematic orthodox doctrine had prepared the ground for the construction of a pagan church. Julian's role is simply to develop this conception further. The project of establishing a church of this kind is thus one piece of that organic development in which the rising fervour of pagan piety expressed itself.'¹

The accident of Julian's birth and office made it possible for the emperor-archaist momentarily to shore up the shaky structure of this would-be Neoplatonic universal church by buttressing it with the massive masonry of a not yet fallen Hellenic universal state. Yet Julian's impetuous dedication of these vast political means to that bizarre religious purpose merely served to make it plain that

All the King's horses and all the King's men
Could not set up Humpty-Dumpty again.²

² For a more general examination of the relations between churches and governments see V. C (i) (d) 6 (δ), Annex, below.

Julian's state-supported pagan ecclesiastical establishment collapsed in a trice at the news of the death of its Imperial architect and patron; and thereafter nothing remained of Iamblichus's grandiose dream save a pathetically futile coterie of cranks.

'The sketches of the anti-Christian Eunapius give a picture, which is as remarkable as it is vivid, of the inner life of Hellenes—both men and women—in the fourth century. The picture reveals a society of passionately religious philosophers rapt in contemplation and ecstatically absorbed in the Divine. The spirit of the age breaks out in them, almost morbidly, when they are still in their tender years. This amazing state of things seems hardly capable of being keyed up to any higher pitch; and yet it is not till the fifth century that it attains the acme of its eccentricity. No doubt the contemporary Christian Church likewise displays similar features and produces a fair number of very queer saints; but among the Christians we never find, on quite this scale, any community of people who are completely extravagant, and almost entirely engrossed in unprofitable thoughts and actions; such as we find among these late pagan philosophers who drift like sleep-walkers through a Utopian world of their own.

'The special characteristic of these representatives of Paganism is a mutual resemblance which is so close that their common psychic condition absolutely hits the observer in the eye. . . . What is the goal at which these latter-day Hellenes are aiming? It is holiness, purity, the mortification of the flesh, a union with the World of the Gods. This holiness becomes a fixed programme which is followed out with complete singleness of mind. The means employed to this end are an asceticism, an observance of special fast days, and an anchorite's existence which is filled with a constant intentness upon heavenly things. . . .

'As a genuine regard for science diminishes . . . theurgy—and the magic that is directly bound up with it—gain proportionately in prestige. . . . As the lord of Physical Nature, the philosopher makes rain like a primitive warlock, and knows how to ban an earthquake. He drives out devils through the sheer force of his personality . . . though it is true that there is a painful consciousness that this holy lore is beginning to be lost—a consciousness which inspires enthusiasm for such isolated depositories of the ancient theurgy as still survive.

'So their life is lived in a world of miracles and legends—and also of inept and undesignedly ludicrous old-wives'-tales. . . . A mystical catalepsy and a religious transport strip away all that is natural in the life of body and soul. . . . And the disappearance of all simple and natural feeling finds compensation in an accentuation of supernatural powers. . . .

'Pythagoreanism has bequeathed a legacy to this age in the participation—which becomes more and more vigorous—of female adepts in the philosophers' spiritual life. Sosipatra is followed by Hypatia, Asclepigenea, Aedesia. The mystical eccentricity of the men commu-

nicates itself to the women as a matter of course; and then the women in their turn win the men's unstinted admiration if they prove themselves receptive pupils of the theurgi and perhaps go on to practise rain-making under the cloak of "Nephelomancy", like Anthusa of Cilicia.

'The studies of these sages are naturally confined, in essentials, to Religion—apart from the acquisition of the formal sophistic accomplishments. They plunge deep into the hieratic lore of the Egyptians and tread in the footsteps of innumerable predecessors in their interpretations of the animal-worship of the Holy People; and all other known religions are laid under contribution with equal enthusiasm. Proclus, for instance, as his biographer boasts of him, was acquainted with the whole corpus of Theology, Greek and Barbarian. He addressed his prayers to Marnas of Gaza, to Aesculapius Leontuchus of Ascalon, to Theandrites the god of the Arabs, and to Isis of Philae. He kept the religious festivals of all nations. In his eyes the philosopher was the whole World's hierophant.'¹

A fitting epitaph for Proclus—and not for this last of the Neoplatonists alone, but also for his Buddhist and Taoist and Confucian counterparts—is offered us in the following passage from the pen of an eminent living Western psychologist who is manifestly thinking, as he writes, of a world that is neither Julian's nor Skandagupta's² nor Hsuanti's,³ but is the writer's very own:

'Great innovations never come from above; they come invariably from below, just as trees never grow from the sky downward, but upward from the earth, however true it is that their seeds have fallen from above. The upheaval of our world and the upheaval in consciousness is one and the same. Everything becomes relative and therefore doubtful; and, while Man, hesitant and questioning, contemplates a world that is distracted with treaties of peace and pacts of friendship, Democracy and Dictatorship, Capitalism and Bolshevism, his spirit yearns for an answer that will allay the turmoil of doubt and uncertainty. And it is just people of the lower social levels who follow the unconscious forces of the Psyche; it is the much-derided, silent folk of the land⁴—those who are less infected with academic prejudices than

¹ Geffken, J.: *Der Ausgang des griechisch-römischen Heidentums* (Heidelberg 1920, Winter), pp. 190–200. This picture of the last phase of Hellenism is curiously reminiscent of a description of the last phase of the abortive Scandinavian Civilization in Iceland which has been quoted in II. D (vii), vol. ii, p. 358, above.

² In the generation of Skandagupta (*imperabat circa* A.D. 455–80), on the eve of the break-up of an Indic universal state that had been re-established by the Gupta Dynasty after the intrusion of Hellenism upon the Indic World (see I. C (i) (b), vol. i, pp. 85–6, above), Hinduism was gaining ground, under Imperial patronage, at the expense of a Buddhism that was at the same time rapidly ceasing to be distinguishable from the rising religion that was supplanting it (see Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), p. 303).

³ For the credulity of the Han Emperor Hsuanti (*imperabat* 73–49 B.C.) see the passage quoted on p. 555, above, from a paper by Dr. Hu Shih.

⁴ The same phrase is used by Meyer in the passage quoted on p. 543, above.—A.J.T.

great celebrities are wont to be. All these people, looked at from above, present mostly a dreary or laughable comedy; and yet they are as impressively simple as those Galilaeans who were once called blessed.¹

¹ Jung, C. G.: *Modern Man in Search of a Soul*, English translation (London 1933, Kegan Paul), pp. 243-4. Compare the quotation from Eduard Meyer in V. C (i) (d) 9 (β), vol. vi, pp. 114-15, below.

ROMAN POLICY TOWARDS PRIMITIVE PEOPLES

THE exception which proves the rule of habitual humanity in the record of the Romans' treatment of primitive peoples is their behaviour towards the Gallic natives of the lowlands between the Appennines and the Po, and the Ligurian natives of the North-West Appennine valleys, during the quarter of a century running from 197 to 173 B.C. This black chapter in the history of the Roman conquest of the European barbarians was distinguished by those acts of eviction, deportation, and extermination which we have cited above¹ as examples of the ruthlessness of the Hellenic dominant minority on the war-path. This Roman application of the policy of 'frightfulness' was, however, strictly local and temporary, and it can be accounted for as the exceptional result of a combination of special causes.²

In the first place the quarter of a century in question was the post-war period after the Hannibalic War, when the war-generation of the *Populus Romanus* was still distraught by the eighteen-years-long agony which it had just had to endure. In the second place the Romans bore a special grudge against these Gallic and Ligurian tribesmen because they had taken Hannibal's side as soon as he had appeared over the crest of the Alps, and had enlisted in his army. The tribesmen had thereby done their worst to bring about the defeat of Rome in her life-and-death struggle with an implacable adversary, and they had undoubtedly helped Hannibal materially to prolong the struggle and so to inflict that deadly wound upon the Roman body social in Italy which was his permanent legacy of revenge upon a Power that was the bane of Carthage. In the third place the Roman Government was desperately in need of lands for the resettlement of ex-servicemen who had been uprooted in formidable numbers from their homes in the Cisappennine war-zone, and who could not be replanted easily in the devastated areas. The lands which were now confiscated from Hannibal's Gallic and Ligurian confederates after the Cartha-

¹ In V. C (i) (c) 1, on pp. 37-8, above.

² The only precedent for the eviction of the Boii in 191 B.C. was the previous eviction of this tribe's kinsmen and neighbours, the Senones, in 283 B.C. This previous act of inhumanity, which was committed two generations before the outbreak of the Hannibalic War and not on the morrow of it, had no excuse. It can only be said that the Roman Government had at first made a moderate use of its victory over the Senones by founding on their territory the single *colonia Latina* of Sena Gallica as a frontier-fortress (Polybius, Book II, chap. 19). The subsequent alienation (in 232 B.C.) of all the rest of the lands of the Senones in allotments to Roman citizens was a demagogic measure which was carried through by Gaius Flaminius in the face of sharp criticism and strong opposition (Polybius, Book II, chap. 21).

ginian invader's defeat were turned to account, between 189 and 175 B.C., in order to add ten new constituent city-states¹ to the Roman Commonwealth;² and the residue that remained in the hands of the Roman State, after the ex-servicemen who were enrolled as citizens of these new communities had been provided with allotments on a generous scale, was divided up, in 173 B.C., into freehold homesteads for individual settlers.³ These were the circumstances in which the four acts of inhumanity above mentioned were committed by the Roman authorities; and in this connexion there are two further points to be noted. In the first place each of the acts in question had either some excuse or some mitigation; in the second place the policy which prevailed from 197 to 173 B.C. was deliberately and effectively changed for the better in 173-172 B.C. by the active intervention of the Senate, which in this age exercised the supreme authority in the Roman body politic.

As regards the first of these two points, the confiscation of the lands of the Boii was mitigated by the restriction of this harsh measure to one half (though this, no doubt, the better half) of the tribal territory.⁴ The deportation of the Apuani was mitigated by the facts that they were granted permission to take their movable property with them; that the move was financed at the cost of the Roman Treasury; that land-allotments were provided for the deportees in their new homes; and that a further Treasury grant was made to them for building and furnishing their new houses.⁵ Again, the eviction of the Gallic settlers from Venetia was partly mitigated by the restoration to them of their movable property and was partly excused by the fact that they had only just arrived—and this without asking permission—from beyond the Alps;⁶ while the extermination of the Ligurian 'Die-Hards' on Mounts Letus and Balista was provoked by the indefensible behaviour of the victims. (After having tendered their submission, they had revolted as soon as the Roman troops had been withdrawn; they

¹ The *coloniae Latinae* Placentia, Cremona, Bononia, Aquileia, and Luca; the *coloniae civium Romanorum* Parma, Mutina, and Luna; and the *oppida civium Romanorum* Florentia and Pistoria. Of these, Placentia and Cremona were not new foundations but restorations. They had been in process of foundation in 218 B.C., when Hannibal arrived on the scene; and the natives had seized the opportunity to wipe them out.

² For the system of 'dual citizenship' on which the Roman Commonwealth was constructed, and for the Roman practice of enlarging the material scale of the structure by founding new city-states on politically virgin soil. see IV. C (iii) (c) 2 (β), vol. iv, pp. 311-13, above.

³ Livy, Book XLII, chap. 4. The individual settlers appear to have been organized into *oppida civium Romanorum* (*vici, fora, conciliabula*). Among the townships which owed their origin to the *senatusconsultum* of 173 B.C. we may probably identify Caesena, Forum Livii, Faventia, Forum Corneli, Claterna, Tannetum, Fidentia, Florentia (a second foundation of the name, between Parma and Placentia), Forum Novum (between Parma and Luna), and Forum Druentinarum.

⁵ Livy, Book XL, chap. 38.

⁴ Livy, Book XXXVI, chap. 39.
⁶ Livy, Book XXXIX, chaps. 22, 45, and 54.

had then attacked, plundered, and momentarily occupied the newly founded Roman colony of Mutina (Modena); and, upon the approach of a punitive force, they had carried their prisoners off with them to their mountain fastnesses and had massacred them there.)¹

The second point—that is, the new turn given to Roman policy by the Senate in 173–172 B.C.—is an historical event of considerable interest and importance.²

In 173 B.C. Marcus Popillius Laenas, who was one of the two Consuls of the year, invaded, without provocation, the territory of a Ligurian tribe, the Statelli, who had never been at war with Rome; forced the tribesmen to give battle by making open preparations to attack their capital town; inflicted on them a sanguinary defeat; and then, when they surrendered unconditionally, proceeded to disarm the surviving fighting men, raze the town to the ground, and sell the whole population into slavery, besides selling up their property. When the Senate received the Consul's dispatches boasting of what he had done, they passed a strong resolution censuring him, directing him to make restitution, and recalling him from his province; and, when he showed himself contumacious and opened a second campaign against the Statelli after returning to the province as Proconsul in the following spring, the Senate brought him to heel. By refusing to transact any public business until this public scandal had been removed, they prevailed upon two Tribunes of the Plebs to propose a plebiscite—which was carried by a large majority—empowering the Senate to appoint a commissioner with authority to hold an inquiry and take disciplinary action. The Senate thereupon appointed one of the Praetors of the year; and the insubordinate Proconsul duly appeared before the Praetor's tribunal. Characteristically he was let off with this lesson and was spared—through a deliberate protraction of the judicial proceedings beyond the end of the official year—the humiliation of having sentence passed upon him (a humiliation which might have affected the prestige of the whole governing class). On the other hand effective measures were taken to make what restitution could be made to Popillius's Ligurian victims. The Senate passed a resolution instructing the magistrates of the year (172 B.C.) to liberate all enslaved Ligurians who had not borne arms against Rome since the end of the year 179 B.C.,³ and to settle them on lands beyond

¹ Livy, Book XLI, chaps. 14 and 18.

² The story will be found in Livy, Book XLII, chaps. 7–9 and 21–2.

³ Evidently this date was chosen in order to withhold the amnesty from the enslaved survivors of the Brinates, who had treacherously taken up arms again in 177 B.C., after having made their submission in 179 B.C. (see above).

the River Po. 'Through this resolution of the Senate many thousands of souls were restored to liberty and were transplanted to the farther side of the Po, where lands were duly allotted to them.'

This intervention of the Senate against the Consul Marcus Popillius Laenas achieved more than the redress of a single flagrant act of injustice: it gave a new turn to the policy of Rome towards primitive peoples. From that time onwards the Roman state did in truth act for the most part—at any rate in its dealings with peoples on the primitive level of culture—upon the maxim *parcere subiectis et debellare superbos*¹ which was formulated by Virgil retrospectively in words which gave an immortal expression to what had been the normal practice from 172 B.C. down to the poet's own day.

The fact that this great reform of policy was not only introduced but was also subsequently maintained is impressive when we consider that the problem of finding land for uprooted Roman citizens had by no means been solved by the land distributions at the Gauls' and Ligurians' expense between the years 197 and 173 B.C. The Hannibalic War did not merely produce a temporary economic and social disturbance which could be surmounted by emergency measures for tiding over a transitional period: the shock which it administered to the Roman body social and economic in Peninsular Italy was so profound² that it set in motion movements of a secular wave-length as well. There were two of these not only new but also persistent factors—namely the perpetual drafting off of Roman peasant proprietors to serve on long-drawn-out campaigns in distant war-zones overseas³ and an irreversible revolution in economic technique which was making it profitable to buy up small peasant properties and consolidate them into vineyards, olive-yards, and cattle-ranches⁴—that were now combining to uproot the Roman peasantry from their ancestral freeholds in Peninsular Italy as ruthlessly as they had been uprooted by Hannibal's *Landsknechts*; and consequently the pressure upon the authorities to find ever new supplies of free land continued without relief. With these facts in mind we may conjecture that Popillius's undoubtedly unprovoked and apparently wanton attack upon the Statelli in 173 B.C. was a purposeful and not an aimless atrocity: in fact, that the Consul was doing what he conceived to be his public duty by manufacturing a pretext for acquiring a new,

¹ Virgil: *Aeneid*, Book VI, l. 853.

² See IV. C (ii) (a), vol. iv, pp. 48-9, with the references on p. 49, footnote 2, above.

³ See V. C (i) (c) 2, pp. 62-3, above.

⁴ For the untoward social consequences of this economic advance see III. C (i) (b), vol. iii, pp. 168-71, and V. C (i) (c) 2, in the present volume, pp. 65-7, above.

and urgently needed, reserve of public land for colonization.¹ If this conjecture is right, and if we may assume that this aspect of the issue was in the minds of the Senate and the Tribunes of the Plebs and the Plebs itself, as well as in the mind of the Consul, then we must conclude that the *senatusconsulta* and *plebiscitum* of 173-172 B.C. were extremely creditable to the Roman Government and People. The Romans were now perhaps deliberately refusing to seek, in cold blood, a solution for their own internal economic and social problem at their external proletariat's expense.

What were the historical consequences of this affair? In one sense the Romans had their reward for their virtue; for a change of policy which placed before the barbarians' eyes a hope of security in return for submission, instead of the previous fear of eviction from their ancestral lands or outright extermination, was a change which made the threat of Roman conquest a tolerable prospect, and which thus paved the way for an extension of Roman rule, in the course of the next two centuries, over hundreds of recalcitrant but not desperate or irreconcilable barbarian tribes from the Appennines and the Po to the Rhine and Atlantic and Sahara.² In another sense, however, the Romans paid—and paid heavily—for their deliberate and persistent refusal to confiscate the lands of the primitive peoples who came under Roman rule by conquest; for, while the Roman People's native subjects in the provinces, like the wild animals in Italy, still had some hole or lair which they could call their own, the Roman citizens who were the provincials' masters and Italy's defenders were now sinking to the condition of proletarians without a stake in the country—houseless

¹ At the moment when the first draft of this sentence was being written in July 1935, Popillius's behaviour towards the Statelli was on the point of being emulated in Signor Mussolini's policy towards the Abyssinians. It may be noted, as one of the minor curiosities of history, that the Romagnol dictator of Italy in A.D. 1935 was a native of the territory from which the Boii were evicted in 191 B.C.

² This statesmanlike consideration was probably in the minds of the Senate in 172 B.C., since the allotment to Roman citizens, in 232 B.C., of the residue of the land that had been confiscated in 283 B.C. from the Senones had immediately provoked the surviving Gallic tribes in the Po Basin to rise in arms against Rome and to recruit reinforcements from the Gallic backwoodsmen beyond the Alps, under the impression 'that the Romans' war-aims were no longer mere political supremacy or even domination, but had come to be nothing short of the complete eviction and extermination of their victims' (Polybius, Book II, chap. 21). In 225 B.C. the Romans had had to meet, on their own ground south of the Appennines, a torrent of invasion in which the whole of Barbarian Europe seemed to be coming down upon Italy in spate. It was no doubt the vivid memory of this disconcerting sequel to Flaminius's ruthless act that led the Senate, in 183 B.C., to send envoys to the Transalpine barbarians in order to explain the Roman Government's reasons for sending the unauthorized Gallic settlers back to their own side of the mountains (Livy, Book XXXIX, chap. 55). In the Western Society of our own age the practice and spirit which were characteristic of the Roman Government's treatment of barbarians from 172 B.C. onwards have been recaptured by the French Republic's great proconsul, Marshal Lyautey, in his dealings with the primitive Berber highlanders in the Atlas (see V. C (i) (c) 3, p. 324, footnote 2, above). At the time of writing it looked as though, in the French Zone of Morocco, the genius of a single great man had succeeded in setting upon the policy of France that lasting stamp that was set upon the policy of Rome by the action of the Senate in 173-172 B.C.

and homeless wanderers over the face of the Earth whose share in the good things enjoyed by their fellow members of Society was limited, now, to the air that they breathed and the sunlight that shone impartially on the evil and on the good.¹

This increasing host of disinherited and unemployed Roman citizens had sooner or later to be provided for somehow; and, if the provision was not to be made unjustly, at the expense of primitive peoples who had thrown themselves on the mercy of their Roman conquerors, then justice must be done by adopting the only alternative and carving homesteads for the landless citizen proletariat out of the state domain in Italy itself which the Roman Government had acquired as a consequence of the Hannibalic War. By rejecting Marcus Popillius Laenas' cynical solution of the land-question in 172 B.C. the Senate had logically committed itself to an eventual acceptance of the naïve solution which was proposed by Tiberius Sempronius Gracchus forty years later. The Gracchan solution was naïve because, during the seventy years which had elapsed by then since Hannibal's evacuation of Italy, a formidable vested interest in the usufruct of this state domain had been acquired by the prosperous heirs of speculative planters and stockmen to whom this usufruct had originally been granted. Yet it was no policy at all to reject both, in succession, of the only two solutions that were feasible; and accordingly the rejection of the Gracchan alternative precipitated a revolution which continued for a century and was only brought to an end by the establishment of a Caesarean dictatorship.

¹ For a comparison between the *λόγιον* ascribed to Tiberius Gracchus in Plutarch's *Lives of the Gracchi*, chap. 9, and the *λόγιον* ascribed to Jesus in Matt. viii. 19-20, and Luke ix. 57-8, see IV. C (iii) (c) 3 (β), vol. iv, pp. 508 and 510, and V. C (i) (c) 2, vol. v, pp. 70-1, above, and V. C (ii) (α), Annex II, vol. vi, p. 381, with Table VIII, logion (α), on p. 414, below.

ANNEX I TO V. C (i) (c) 2

THE ROLE OF MANICHAISM IN THE ENCOUNTER BETWEEN THE SYRIAC INTERNAL PROLETARIAT AND HELLENISM

IN the chapter to which this Annex attaches, we have described in the Nestorian and Monophysite 'Diasporàs' the monuments of a second abortive attempt on the Syriac Society's part to cast Hellenism out by fighting it with its own intellectual weapons.¹ We may go on to ask ourselves whether Nestorianism and Monophysitism were the only two movements in which this attempt was made, or whether we can catch another echo of the same passage of Syriac history in the voice of Manichaeism: a Syriac religion, founded in the third century of the Christian Era, which has not survived even as a 'fossil'. This question, which we have touched upon already,² may occupy our attention once again for a moment in the present context.

Was it the mission of Manichaeism, too, to reclaim a Syriac spiritual treasure for the Syriac World by purging a Syro-Hellenic religious syncretism of its Hellenic alloy? We might be tempted to answer this question in the affirmative if we ventured to interpret the Manichaean Mythology³ as a 'higher critic' reads the Book of Daniel or as a psycho-analyst explains his patient's dreams.

For example, the invasion of the realm of Light by the ruler of Darkness might be taken to signify the invasion of the Syriac World by Hellenism. The Primal Man who is brought into being by the King of Light in order to fight the Darkness might typify the Achaemenid,⁴ and the Bright Elements which are his weapons might be Judaism and Zoroastrianism.⁵ The stunning of Primal Man and the swallowing of the Bright Elements by the Dark Powers might describe the conquest of the Achaemenian Empire by Alexander.⁶ The descent of Primal Man into the Abyss, where

¹ See V. C (i) (c) 2, p. 127, with footnote 3, and also I. C (i) (b), vol. i, pp. 83 and 91; I. C (iii) (b), vol. i, p. 155; II. D (v), vol. ii, p. 203; II. D (vi), vol. ii, p. 235; II. D (vii), vol. ii, pp. 286-7 and 374; and IV. C (iii) (c) 2 (b), vol. iv, pp. 325-6, above.

² In II. D (vii), vol. ii, p. 374, footnote 3, above.

³ The presentation of the Manichaean Mythology which is adopted in the present Annex is that which is given in Burkitt, F. C.: *The Religion of the Manichees* (Cambridge 1925, University Press). See also Christensen, A.: *L'Iran sous les Sassanides* (Copenhagen 1936, Levin & Munksgaard), pp. 178-84.

⁴ The establishment of a Syriac universal state in the shape of an Achaemenian Empire just forestalled the establishment of a Hellenic ascendancy over the Egyptian, Syriac, and Babylonian worlds in the sixth century B.C.

⁵ For the role of these two 'higher religions' of the Babylonian internal proletariat as alternative potential nuclei for a Syriac universal church see V. C (i) (c) 2, pp. 120-2, above. The number of the bright elements in the Manichaean Mythology was, however, not two but five (Christensen, op. cit., p. 179).

⁶ By conquering the Achaemenian Empire in the fourth century B.C. Alexander won

he cuts the roots of the Dark Elements and thereby ensures that these shall never increase, might represent the counter-captivation of the heart of the Hellenic World by a Syriac Underworld which brings its own 'folklore',¹ own religion,² and own *êthos* with it and, by propagating these *in partibus infidelium*, overcomes the Hellenic culture in its own citadel. In the defeat and capture of the Dark Archons we might see an image of the military disasters that were inflicted on the Seleucid brothers Demetrius Nicâtôr and Antiochus Sidêtês³ and on their Roman successor Crassus⁴ by the Parthians. In the two problems which Light now has to solve—the walling off of the realm of Darkness and the extraction, from the captive Archons, of the particles of Light which they have swallowed—we might recognize the political problems of containing the Roman Empire within the line of the Euphrates and dismembering the Hellenic 'successor-states' of the Achaemenian Empire east of the Euphrates in order to use the recaptured territories as a building-site for the Parthian, and later for the Sasanian, Empire. In the lust which is excited in the appetites of the captive Dark Powers by the Light which is successfully extracted, we might find an allegory of the passion which Hellenic souls came to conceive for certain elements of Syriac religion when these had been 'peptonized', to suit Hellenic palates, by having been passed through a Hellenic cultural medium.⁵ And the Sin which is thus incidentally produced by the process of salvaging the Light might be identified with the creation of such Syro-Hellenic religious syncretisms as Christianity and Mithraism (the latter being symbolized in the sin-dragon which falls into the sea and is slain). In the Adam who is generated by the Dark Powers as a receptacle to retain the rest of the stolen Light which the Light Powers are seeking to recapture, we might discern a portrait of the Hellenized Oriental; and when Jesus rouses Adam from his sleep and throws him into a mental agony by revealing to him the duality of his nature, we might fancy ourselves watching that Syriac reaction to Hellenism which we have detected in the Nestorian and Monophysite movements and which may perhaps be the motive of the Manichaean movement as well—a desperate reaction of the Hellenized Oriental against the dark Hellenic envelope in which his soul-spark of Syriac light has been imprisoned.

for Hellenism the Oriental dominions which it would have won for itself some two hundred years earlier if in the sixth century this prize had not been snatched, at the eleventh hour, out of the grasp of Ionian and Carian pirates, mercenaries, and merchants by the prowess of Cyrus, Cambyses, and Darius the Great.

² See II. D (vi), vol. ii, pp. 215-16, and V. C (i) (c) 2, in the present volume, pp. 81-2, above.

³ See I. C (i) (b), vol. i, p. 75, above.

⁴ See III. C (i) (b), vol. iii, p. 164, and IV. C (iii) (c) 2 (γ), vol. iv, p. 440, above.

⁵ See V. C (i) (d) 6 (δ), pp. 538-40, above.

Such interpretations of the Manichaean Mythology are perhaps not unprofitable exercises of the fancy; but we should be rash to take them so seriously as to conclude, on the strength of them, that Manichaeism is to be placed in the same category of Syriac religious phenomena as Monophysitism and Nestorianism.

If this tentative classification is to be confirmed, it must be shown that Manichaeism stands to Mithraism in the relation in which Nestorianism and Monophysitism both alike stand to Catholic Christianity: i.e., in the relation of a child to a parent against whom the child is in reaction. Manichaeism, however, is not the child of Mithraism; at the closest it is only its first cousin, and it may prove to be only its first cousin once removed. For the closest kinship that can be traced between Manichaeism and Mithraism is through a common Zoroastrian, or perhaps pre-Zoroastrian, element in their respective origins,¹ since Manichaeism derives from Zoroastrianism (in so far as that is its source), not through Mithraism, but direct. While Mithraism is Zoroastrianism—or, alternatively, is a pre-Zoroastrian Iranian paganism—in a Hellenic dress, Manichaeism is Zoroastrianism in a Christian dress.² Further, though it is true that the Christianity which Mani has incorporated into his system is the Christianity of Marcion and the Christianity of Bardesanes, and not Catholicism, it is also a fact that any form of Christianization involves some measure of Hellenization as well. The Hellenic elements in Manichaeism may be slight, but they are unmistakable.³ There can be no mistake, for instance, about the Greek origin of the term βῶλος; and we may conjecture that the source of the term was likewise the source of the bizarre doctrine which the term embodies.⁴ Again, the Manichaean account of the origin and nature of Adam is strongly reminiscent of the anthropological teaching of the abortive Hellenic 'higher religion' of Orphism.⁵ On this showing, the tendency of

¹ The bifurcation of the respective lineages of Manichaeism and Mithraism has to be dated back to the Pre-Zoroastrian Age of Iranian religious history if Mithraism is to be regarded, not as a derivative of Zoroastrianism (in the sense in which Manichaeism is a derivative of Zoroastrianism and Christianity of Judaism), but as a separate and independent development out of a pre-Zoroastrian Iranian paganism (according to the view put forward in Pettazzone, R.: *La Religione di Zarathustra* (Bologna 1920, Zanichelli), p. 167). On this question see further the always suggestive and often brilliant but sometimes fanciful work of Autran, C.: *Mithra, Zoroastre, et la Préhistoire Aryenne du Christianisme* (Paris 1935, Payot).

² See Christensen, op. cit., pp. 186–7. Mani seems to have proclaimed himself to be the Paraclete (Christensen, op. cit., p. 178).

³ See Burkitt, op. cit., pp. 65–6 and 93 seqq.

⁴ Compare the Greek name (Βῆμα) of the Manichaean festival commemorating Mani's martyrdom. At this festival the Prophet's unseen presence was signified in the erection of an empty tribune (*Graecè βῆμα*) (Christensen, op. cit., p. 193). Compare the empty tent that was erected by Eumenes, as a symbol of the unseen presence of Alexander the Great, in the camp of the Argyraspides (Plutarch: *Life of Eumenes*, chaps. 11–13).

⁵ This resemblance may, of course, be the consequence, not of any direct borrowing from 'Orpheus' on the part of Mani, but rather of a common Zoroastrian inspiration in

Manichaeism, so far from being in reaction against, or opposite to, that of its cousin Mithraism, would actually be in harmony with it, while, so far from being the same as the tendency of Nestorianism and Monophysitism, it would turn out to be the exact antithesis of that. While these two versions of Christianity can properly be described as attempts to purge the parent religion of its Hellenism, we should have to regard Manichaeism as being, like Mithraism, an attempt to blend an Iranian religion with a Hellenic alloy.¹

But what could have moved a Syriac prophet to adulterate with Hellenism a pure Syriac religion, such as Zoroastrianism had contrived to remain, in an age when the tide of Syriac feeling was already setting strongly in an anti-Hellenic direction?² Perhaps we may find an explanation in the brilliant conjecture of an Italian scholar,³ who points out that Mani preached his new religion in a generation which saw the foundation of the Sasanian state and the official adoption of Zoroastrianism as the new state's established church. In becoming the established church of an empire which was dedicated to the task of fighting Hellenism with political weapons,⁴ Zoroastrianism was patently repudiating its former mission of providing a universal church for the Syriac internal proletariat.⁵ Signor Pettazzone suggests that Mani was a religious genius who had the insight to understand, and the sensibility to regret, that Zoroastrianism was taking this disastrous turn;⁶ and he interprets Manichaeism as a deliberate attempt to meet this religious emergency by calling into existence a new religion which was to redress the overturned balance between Religion and Politics by assuming the spiritual role which Zoroastrianism had abandoned and by filling the void which this act of betrayal had left in the Syriac religious universe. Pettazzone's theory would explain why it was that Mani's activities were in the end⁷ so actively combated and so ruthlessly repressed by the Sasanian Govern-

both Orphism and Manichaeism (for Zoroastrian elements in Orphism see V. C (i) (c) 2, p. 85, above).

¹ See II. D (vii), vol. ii, p. 374, footnote 3, above.

² See I. C (i) (b), vol. i, pp. 75-6, above.

³ Pettazzone, R.: *La Religione di Zarathustra* (Bologna 1920, Zanichelli), p. 193.

⁴ See II. D (v), vol. ii, p. 203; II. D (vii), vol. ii, pp. 285-7 and 374; and V. C (i) (c) 3, in the present volume, p. 216, above, and V. C (i) (d) 6 (δ), Annex, pp. 659-61, below.

⁵ 'It was solely due to outward circumstances that both [Zoroastrianism and Buddhism] were given a national stamp, and that the teaching of Zarathustra actually became the national religion of Iran. Wherever the possibility was open, Zoroastrianism, just like Buddhism and (later) Christianity and Islam, carried on an energetic propaganda beyond the frontiers of the Iranian nationality' (Meyer, E.: *Geschichte des Altertums*, vol. i, part (1), 4th ed. (Stuttgart and Berlin 1921, Cotta), p. 155).

⁶ For the disastrousness of it see also II. D (vii), vol. ii, p. 375, above, and V. C (i) (d) 6 (δ), Annex, in the present volume, pp. 659-61, below.

⁷ Mani was put to death in A.D. 276 by Vahrām I (*imperabat* A.D. 273-6) after having been well treated by Shapur I (*imperabat* A.D. 241-72) (Christensen, op. cit., pp. 189-93).

ment. The Sasanian policy of welding State and Church together into a single 'totalitarian' body politic and ecclesiastic would have been condemned to frustration if this exploitation of Syriac religion for Sasanian political ends had resulted in a wholesale conversion of the votaries of the old 'higher religion', which had now allowed itself to be perverted into an instrument of secular policy, to a new 'higher religion' which promised to furnish hungry souls with the spiritual bread that Zoroastrianism could now no longer offer them.

If this explanation of Mani's Ministry and Passion is the right one, then our tentative comparison of Manichaeism with Nestorianism and Monophysitism falls to the ground. On this showing, the true parallel lies between Manichaeism and Primitive Christianity—Manichaeism standing to a Sasanian Zoroastrianism as Primitive Christianity stands to a Maccabaeen Judaism.¹ In this case, as in that, when the older religion went into politics and immured itself in the prison-house of a particular parochial state, the younger religion took up its predecessor's abandoned vocation of saving the souls of Mankind and preaching a gospel to the ends of the Earth.² More than that, it was the Hellenic World that was the principal mission-field of the Manichaean as well as the Christian—and the Mithraic—missionary. This fact is apt to be overlooked because Manichaeism spread from its original 'Irāqī centre of dispersion'³ in two directions—north-eastwards towards Central Asia as well as westwards towards the Mediterranean—and, while in the western field Manichaeism, like the worship of Mithras, rapidly succumbed to Catholic Christianity, in the Central Asian field it survived, like Nestorianism, in 'Diasporā' till the thirteenth century of the Christian Era.⁴ This now extinct Central Asian 'Diasporā' is the source of our fragmentary first-hand evidence in regard to Manichaean doctrine and practice.⁵ But we must be on our guard against the fallacy of gauging the relative importance of the two Manichaean mission-fields by the relative value of the raw materials which they have respectively yielded to our modern Western captains of historical industry.⁶ The true measure is given by the

¹ For the perversion of Judaism into a political instrument in the hands of the Maccabees see V. C (i) (d) 6 (δ), Annex, pp. 657–9, below.

² 'I am come from the land of Babylon to make a cry heard throughout the World.'—Mani, Fragment M 4 a, quoted in Christensen, *op. cit.*, p. 178.

³ Mani's home-country was Mesene, which was approximately coincident with the present province of Basrah (see IV. C (iii) (c) 2 (β), Annex III, vol. iv, p. 629, footnote 1, above). This 'Irāqī prophet seems, however, to have been of Iranian extraction. His father is said to have come to Mesene from Hamadan, and his mother is said to have been of Arsacid birth (Christensen, *op. cit.*, p. 177).

⁴ The greatest single triumph of Manichaeism in its Central Asian mission-field was the conversion of the Uighurs in A.D. 762 (see Part III. A, Annex II, vol. iii, pp. 415, 425, footnote 1, and 451, above).

⁵ See Christensen, *op. cit.*, p. 196.

⁶ This fallacy has been exposed already, in the classic example of Ptolemaic Egypt and Seleucid Asia, in Part I. A, vol. i, pp. 5–7, above.

distribution of the efforts and the orientation of the hopes of the Manichaean missionaries themselves; and on this criterion the rapidly defeated Manichaean mission in the Hellenic World takes precedence over the temporarily successful mission in Central Asia. If Manichaeism had succeeded in supplanting Catholic Christianity in the Mediterranean Basin, instead of merely succeeding in surviving for a time, side by side with Nestorianism, in Central Asia, then Mani would have to be numbered among the prophets who have given a decisive turn to the fortunes of Mankind. The western mission of Manichaeism was, as we have observed, abortive; yet the strength of its appeal to Hellenic souls, in competition with Christianity, is illustrated by the fact that in the fourth century of the Christian Era in North-West Africa it made a temporary convert of Augustine of Madaura.

MARXISM, SOCIALISM, AND CHRISTIANITY

THE advocates of Marxism will perhaps protest that in a rather summary account of the Marxian Philosophy or Faith¹ we have made a show of analysing this into a Hegelian and a Jewish and a Christian constituent element without having said a word about the most characteristic and most celebrated part of Marx's message to his fellow men. In the mind of 'the man in the street', the Marxian apologist will point out, Marxism means Socialism; and he will add that 'the man in the street' is substantially right in making this popular equation. Socialism, the Marxian will tell us, is the essence of the Marxian way of life; it is an original element in the Marxian system which cannot be traced to a Hegelian or a Christian or a Jewish or any other pre-Marxian source; and it is a supremely philanthropic ideal—so much so that, when we place it in its proper position at the heart of the Marxian dispensation, the whole of this dispensation will appear in an utterly different light from the lurid colour in which it is maliciously painted by its enemies. As soon as we view it thus in its true proportion and perspective, we shall perceive (we shall be told) that Marxism is eminently humane and constructive in its ulterior aims and in its ultimate effects, and that the destructive violence upon which its enemies have seized as a pretext for discrediting it is no more than an incidental and transitory means to an end which is purely beneficent. Our champion of Marxism will probably follow up this vigorous defence by passing over to the offensive. He will accuse the opponents of his Faith of giving a false pretext for their hostility because they are ashamed of confessing the true reasons. What they really hate and fear in Marxism (he will suggest) is not its revolutionary violence but the fact that its programme of Socialism is a threat to existing anti-social vested interests and an exposure of the inadequacy of pre-Marxian philosophies and religions. The sages and prophets who have left it to Karl Marx to proclaim what is Man's elementary social duty to his neighbour must have been either hypocrites or imbeciles.

In attempting to reply to a Marxian protest on such lines as these we shall readily admit the humaneness and the constructiveness of the ideal for which Socialism stands, as well as the importance of the part which this ideal plays in the Marxian 'ideology'; but we shall find ourselves unable to accept the Marxian contention

¹ This account will be found in V. C (i) (c) 2, pp. 177-87, above.

that Socialism is Marx's own original discovery. We shall have to point out, on our part, that there is a Christian Socialism which was practised as well as preached before the Marxian Socialism was ever heard of; and, when our turn comes for taking the offensive, we shall venture to make two assertions. We shall maintain that the Marxian Socialism is derived from the Christian tradition as unmistakably as is the Marxian concern to convert the World. We shall also maintain that the Marxian version of the Christian ideal of philanthropy is an excerpt which has omitted the one thing needful—and indeed indispensable—for making any form of Socialism work.

The social arrangements of the primitive Christian community are only referred to incidentally in the books of the New Testament, because the authors' minds are pre-occupied with other aspects of the life of the Founder and his companions; but these incidental allusions give us glimpses of a picture of a common way of life which is undoubtedly Socialism and indeed Communism in the economic sense¹ of a community of goods and services.

In the story of the Passion as told in the Gospel according to Saint John, Jesus and his companions are represented as having a common purse which is in Judas Iscariot's keeping.² And in the preface to the story of Ananias and Sapphira, as told in the Acts of the Apostles, the economic régime of the infant Church on the morrow of the Ascension is depicted as being that of a miniature and rudimentary yet authentic Communist commonwealth.

'The multitude of them that believed were of one heart and of one soul; neither said any of them that ought of the things which he possessed was his own; but they had all things common. And with great power gave the Apostles witness of the resurrection of the Lord Jesus; and great grace was upon them all. Neither was there any among them that lacked; for as many as were possessors of lands or houses sold them and brought the prices of the things that were sold and laid them down at the Apostles' feet; and distribution was made unto every man according as he had need.'³

The complete community of goods that is described in this passage did not, of course, become one of the permanent institu-

¹ For the political meaning of Communism as a revival of the Paris Commune of A.D. 1871 see V. C (i) (c) 2, p. 179, footnote 5, above. It was this sense of the word that Lenin had in mind when he re-named the Russian Social-Democratic Party 'the Russian Communist Party' in A.D. 1918. The Paris Commune of A.D. 1871 was itself called after the communes of medieval Western Christendom; and these were self-governing commonwealths in which the thing that was shared in common was not property but sovereignty. This medieval usage of the Latin word *commune* in the sense of a self-governing body politic is a perfectly correct piece of Latinity for which classical authority can be found in the works of Cicero and in the C.I.L.

² John xii. 6, and xiii. 29.

³ Acts iv. 32-5.

tions of the Christian Church (as, for that matter, it is not being insisted upon to-day in the Soviet Union either); nor can the testimony of the Acts be taken as conclusive evidence that the picture here presented was ever strictly true to the life of the Church even in the Apostolic Age¹ (any more than the first written constitution of the Union of Soviet Socialist Republics can be taken as conclusive evidence for the social condition of Russia even in the lifetime of Lenin). What the passage does attest is the social ideal of the early Christian milieu in which the Acts was conceived and written. And, even if this contemporary testimony were lacking, the Christian social ideal of the Apostolic Age could still be reconstructed by inference from the testimony of succeeding centuries, in which the Church was famous for a sensitiveness—that declared itself in material as well as in spiritual good works—to the emotional attitudes and moral responsibilities implied in being one's brother's keeper. This ingrained philanthropic vein in the post-Apostolic Christian tradition comes out in the legend of how St. Lawrence replied to the Roman Government's summons to

¹ As evidence for social facts (though not, of course, as evidence for social ideals) the passage just quoted from the Acts of the Apostles is suspect on account of certain coincidences of content, and even of words, which seem too numerous and too close to be dismissed as fortuitous, with other works of literature, both Syriac and Hellenic. For instance, the first sentence in Acts iv. 34 sounds like an echo of the first sentence in Deuteronomy xv. 4; and the whole passage here quoted corresponds in so many points, both of content and of language, with a description of the life of the primitive Pythagorean community at Croton in Iamblichus's *Life of Pythagoras*, §§ 167-9, that it is hardly possible to account for these correspondences on any hypothesis except that of there being some literary relationship between the two passages. (Their literary affinity positively leaps to the eye when they are set out in parallel columns, as they are in Schubert, H. von: *Der Kommunismus der Wiedertäufer in Münster und seine Quellen* (Heidelberg 1919, Winter), p. 36.) *A priori* there are two alternative possible relationships. Since Iamblichus lived and wrote no earlier than round about the turn of the third and fourth centuries of the Christian Era, it is chronologically possible that his picture of an early Pythagorean Communism may be a copy of the picture of an early Christian Communism in the Acts; or, alternatively, it is possible that the points of likeness in the two passages may have been inherited independently from some common literary ancestry. Of these two alternative possibilities the former may be ruled out; for, while it is true that by Iamblichus's time the Christian Scriptures were not only accessible but also notorious in pagan circles, it is at the same time almost inconceivable that the spiritual father of a Neoplatonic Antichurch (see V. C (i) (d) 6 (δ), p. 565, above) should have brought himself to borrow any of the properties of a Christian Church which he so passionately hated and despised. We are left with the possibility of a common literary ancestry; and von Schubert (op. cit., p. 37, footnote 1) traces both passages back to a passage of Plato, namely *Respublica*, Book V, 462 c. Presumably there are missing intermediate links in both chains of literary ascent. According to Bertermann, W.: *De Iamblichi Vitae Pythagorae Fontibus* (Königsberg 1913, [dissertation]), p. 74, as cited by von Schubert in op. cit., p. 36, Iamblichus's immediate source was the work of the Sicilian Greek historian Timaeus of Tauromenium (*vixit circa 352-256 B.C.*). As for the immediate inspiration of the author of the Acts, von Schubert conjectures (op. cit., p. 38) that he may have been emulating Josephus's description (in *The Romano-Jewish War*, Book II, chap. 8) of the social life of the contemporary Jewish ascetic confraternity of the Essenes, who practised Communism, were regarded, by Hellenic and Hellenized Jewish observers, as Jewish counterparts of the Pythagoreans, and may in truth have borrowed some of their beliefs and institutions from a Pythagorean source. The general question of correspondences between passages of the New Testament and passages of pagan Hellenic literature is discussed in V. C (i) (d) 11, Annex I, *passim*, in vol. vi, and in V. C (ii) (a), Annex II, *passim*, in vol. vi, below.

deliver up the Church's treasures by collecting a crowd of the poor and needy from the slums of Rome and presenting himself, at their head, to the public authorities. But we need not appeal to an unverifiable Christian legend when we can cite the unimpeachable testimony of Julian the Apostate. The virtual monopoly of social-welfare work by the Christian Church in the Hellenic World of the fourth century of the Christian Era is sorrowfully confessed by Julian in a pastoral letter¹ to one of the pagan prelates of his Neoplatonic Antichurch:²

'If Hellenism [i.e. Neoplatonism] is not yet making the progress which we have a right to expect, it is we, its devotees, who are to blame. . . . Are we refusing to face the fact that Atheism [i.e. Christianity]³ owes its success above all to its philanthropy towards strangers and to its provision for funerals and to its parade of a high puritanical morality? These are all, surely, virtues which we ourselves ought to put into practice *bona fide*. . . . You must establish in every city [in your see] an ample number of hospices, in order that strangers may have the benefit of a philanthropy which will be recognized as ours; and this service must not be confined to strangers of our own persuasion; it must be at the disposal of anybody whatsoever who is in need. I have already provided for the allocation to you of the necessary funds. . . . A fifth of this grant should be spent on the poor who are in the clientèle of the [pagan] clergy; the balance should be distributed to strangers and beggars. It is a disgrace to us that our own people should be notoriously going short of assistance from us when in the Jewish community there is not a single beggar, while the impious Galilaeans are supporting not only their own poor but ours as well. You should instruct the votaries of Hellenism to make voluntary contributions towards these charitable services, and the Hellenic [i.e. pagan] parishes [in your see] to dedicate their first fruits [for this purpose]. You must get our Hellenic community into the habit of doing good works of this kind by instructing them that this is one of our most ancient traditional activities—as is testified by Homer. . . . Do not let us allow hostile competitors to outdo us in our own strong points while we give way to a slackness and indifference which are not merely a disgrace to our religion but a downright betrayal of it.'

These passages from the correspondence of the Emperor Julian and from the Acts of the Apostles and from the Gospel according to Saint John will perhaps suffice to demonstrate our three propositions. In the first place they make it clear that Socialism—and

¹ Letter from the Emperor Julian to Arsaces, the Chief Priest of Galatia (= Letter No. 84 in Bidez, J.: *L'Empereur Julien: Œuvres Complètes*: Tome i, 2^e Partie: 'Lettres et Fragments' (Paris 1924, Les Belles Lettres)).

² For this abortive Neoplatonic Antichurch see II. D (vii), vol. ii, p. 378; V. C (i) (c) 2, in the present volume, p. 147; and V. C (i) (d) 6 (δ), pp. 565-7, above; and V. C (i) (d) 6 (δ), Annex, pp. 680-3, and V. C (ii) (a), vol. vi, pp. 222-3, below.

³ For this Hellenic name for Christianity see IV. C (iii) (c) 2 (β), vol. iv, p. 348, above, and V. C (i) (d) 7, vol. vi, p. 40, footnote 2, and V. C (ii) (a), Annex II, vol. vi, p. 536, below.—A.J.T.

this in the strict formal sense of a community of goods—is one of the principles of the primitive Christian *Weltanschauung*. In the second place they establish a very strong presumption that the Socialism, as well as the Oecumenicalism, of the Marxian scheme is derived from the Christian tradition.¹ In the third place they reveal the element in the Christian Socialism which the Marxian Socialism has left—or cut—out.

The passage in the Acts represents the philanthropy of the primitive Christian Society as flowing from a God-given grace which was the fruit of a belief in the divinity of Jesus. In other words, the charity which is here depicted as moving the primitive Christians to go—in their mutual concern for one another's welfare—to the extreme length of sharing all their worldly goods is not a mere love of Man for Man (which is the limited literal meaning of the word 'philanthropy'), but is a spiritual relation to which God is a party as well as His human creatures. In fact, this Christian Socialism is a practical application, on the economic surface of life, of the fundamental religious truth that the brotherhood of Man is a consequence of the fatherhood of God—a truth which is driven home with special force by a religion which teaches that God is not only the father and creator of Man, but also his saviour who has been incarnate in human shape and has suffered, and triumphed over, Death.² Christians believe—and a study of History assuredly proves them right—that (beyond the narrow circle of the tribe, in which a parochial 'honour among thieves' is maintained at the prohibitive moral price of an Ishmaelitish warfare against a world of foreign enemies) the brotherhood of Man is impossible for Man to achieve in any other way than by enrolling himself as a citizen of a *Civitas Dei* which transcends the human world and has God himself for its king.³ And any one who holds this belief will feel certain, *a priori*, that the Marxian excerpt from a Christian Socialism is an experiment which is doomed to failure because it has denied itself the aid of the spiritual power which

¹ And perhaps, through this Christian tradition, from a Hellenic tributary of the river of Christian faith and works (see p. 583, footnote 1, above). 'A tenuous thread of historical continuity on the plane of ideas (*eine feine ideengeschichtliche Linie*) runs from the man of action John of Leyden to the theorist Plato across an interval of 2,000 years. . . . In motives and in mental scope the Marxian Communism of the present day is something rather different from the Communism of the sixteenth century. Yet now, as then, the idea fills its devotees with an enthusiasm of a religious fervour, and now, as then, again the intolerable tension between the shining ideal and the commonplace realities of life sets in motion the same socio-psychological forces and produces the same chaotic mixture of the most exalted love with the most savage hatred in the heart of Man towards his fellow men—just as at the time of the outbreak at Münster' (Schubert, op. cit., pp. 56–7). For the vein of Communism in the Anabaptist movement see V. C (i) (c) 2, pp. 169–72, above.

² For the distinctiveness of this feature in Christianity see further V. C (ii) (a), vol. vi, pp. 275–8, below.

³ On this point see Bergson, H.: *Les Deux Sources de la Morale et de la Religion* (Paris 1932, Alcan), *passim*.

alone is capable of making Socialism a success. The Christian critic will have no quarrel with the Marxian Socialism for going as far as it does: he will criticize it for not going far enough. Its fatal flaw in his eyes will be a sin of omission and not a sin of commission.

Thus, from the Christian standpoint, the Marxian experiment in Socialism is a tragedy; but this cannot be the Christian observer's last word; for the responsibility for this tragedy is manifestly shared by the Christian Church itself.

How, in face of such evidence as we have cited, are we to explain the Marxian attitude towards Christianity? The Marxians not only maintain that there is no trace of Socialism in the Christian tradition and that their own prophet has been the first to awaken Man's social conscience: they actually declare that Christianity is one of the most formidable obstacles in the way of their own effort to apply Socialism in practice. 'Christianity', they say, 'is the opiate of the People'; and, in the Soviet Union at any rate, this supposed antithesis and incompatibility between Socialism and Christianity has been so sincerely believed in, and so strongly felt, that the votaries of Christianity or of any other theistic religion have been debarred, *ex officio religionis*, from admission to membership of the All-Union Communist Party. In fact, Communism has been definitely and militantly anti-Christian. And, when we ask how this has come to be when Socialism and philanthropy loom as large as they do in the Christian tradition, the answer is, of course, that the Christianity against which the Communists have declared war is neither the first-century Christianity of Jerusalem nor the fourth-century Christianity of the Roman Empire but the nineteenth-century and twentieth-century Christianity of the Western World and Russia. It is our modern Western and modern Russian practice of Christianity that has given this occasion for an enemy to blaspheme; and a practice that has aroused a hatred and contempt which are plainly as sincere as they are vehement must have fallen far indeed below the Christian practice of the first four centuries.

Thus the campaign against Christianity which is to-day an integral part of the propaganda of Marxian Socialism is a challenge to the living generation of Christians to examine their consciences and to throw themselves, once more, into an essential Christian activity which they have neglected, or even abandoned, in modern times; and we may aptly begin by addressing the Apostate's searching questions to ourselves:

'Are we refusing to face the fact that Atheism owes its success above all to its philanthropy? . . . These are virtues which we ourselves ought

to put into practice *bona fide*. . . . Do not let us allow hostile competitors to outdo us in our own strong points while we give way to a slackness and indifference which are not merely a disgrace to our religion but a downright betrayal of it.'

Fas est et ab hoste doceri;¹ and, if we do take to heart the self-reproachful words of a noble adversary, we latter-day Christians may still turn a Marxian attack upon Christianity to good account as, seven centuries ago, a Paulician attack was turned to account, in comparable circumstances, under the inspired leadership of Saint Francis and Saint Dominic.² In that event the verdict of History may turn out to be that a re-awakening of the Christian social conscience has been the one great positive practical achievement of Karl Marx; and, in bringing Marx's endeavours to this unexpected issue, the irony of History would not be so cruel as might at first appear; for, if we are right in our thesis that the Marxian Socialism is doomed, *a priori*, to be a Socialism *Manqué*, then we must believe that Marx's sole chance of realizing his ideal of a socialized world lies in awaking from its inopportune slumber, and speeding upon its abandoned path, that primitive Christian charity which does know the secret of making Socialism work as one of the terrestrial institutions of a supra-mundane *Civitas Dei*.

THE AMBIGUITY OF GENTLENESS

'GENTLENESS', in the sense in which we have used the word in the chapter to which this Annex attaches, might equally well be called 'Non-Violence'. This alternative description makes it clear that what we are thus labelling is something negative. If we go on to look below this superficial negative label we may expect to find that it covers more than one positive reality; and a first glance will bring to light at least four distinct positive meanings of our term, every one of which can be illustrated by conspicuous cases in point.

At its lowest the practice of Non-Violence may express nothing more noble or more constructive than a cynical disillusionment with the fruitlessness of a Violence which has been previously practised *ad nauseam* without having produced the intended results. A notorious example of a Non-Violence of this unedifying kind is the religious toleration which has been in vogue in the Western World from about the last quarter of the seventeenth century of the Christian Era down to our own day.¹ Alternatively, Non-Violence may express a conviction that Man's divinely allotted role in the economy of the Universe is to adopt a patiently passive attitude towards a mundane scene on which it is God's exclusive prerogative to execute His divine will through His own action—which would be hampered, and not assisted, if Man were to presume to intervene in what is wholly God's business. Such is, for example, the conviction that underlies the Non-Violence of the *Agudath Israel*.² This second philosophy of Non-Violence is as pious and as scrupulous as our first is unprincipled and cynical; but at the same time it resembles the Non-Violence of Disillusionment in being unconstructive. Non-Violence may, however, also be practised as a means to some constructive end; and such an end, again, may be either mundane or 'Otherworldly'. A classic example of the practice of Non-Violence for a mundane end is presented in Mahatma Gandhi's political tactics of Non-Violent Non-Co-operation.³ The aim of Mr. Gandhi and his followers is to obtain for the People of India the political boon of complete self-government; and the pursuit of this aim by these tactics is

² See V. C (i) (c) 2, p. 76, above, and V. C (i) (d) 9 (γ), vol. vi, p. 128, below.

³ The most authoritative account of the origin and aim of Mr. Gandhi's movement is to be found in a book by Mr. Gandhi himself: *Satyagraha in South Africa* (Madras 1928, Ganesan).

evidence of a high degree of intellectual and moral originality; for the aim in view has been valued at its present enormously high current price in a Western Vanity Fair; and our Western nationalists have seldom or never abstained from resorting to Violence—of heart, if not of hand¹—in their endeavours to gain possession of this coveted pearl. Mr. Gandhi's tactical recourse to Non-Violence is therefore a noteworthy new departure in the political technique of a Westernized 'Great Society'; but it is not, of course, so great a departure as a practice of Non-Violence for reasons which are not just tactical but are strategic. While Mr. Gandhi practises Non-Violence because he considers this to be the most efficacious means of pursuing an aim that is mundane, the Non-Violence of Jesus and Johanan ben Zakkai is a reflexion, on the mundane plane, of a transference of the field of action² from that mundane plane to another.

In the New Testament this profound shift of interest and change of objective is a *fait accompli*. Considering that the movement, of which the New Testament is a monument, came out of the bosom of the same Hellenic internal proletariat that threw up the Maccabees and the Zealots and Eunus and Salvius and Spartacus, it is not surprising to find in it, here and there, some trace of a violent vein (for examples of this see V. C (ii) (a), Annex II, vol. vi, pp. 378 and 388, below): what is remarkable is to observe how faint this trace is.

The denunciation of the rich in James v. 1-6, leads on to an exhortation to the poor to—not revolt, but—exercise patience. In general, wealth is represented, not as a material boon to be envied and, if possible, expropriated, but as a spiritual impediment to be deprecated (this is the moral of the simile of the Camel and the Needle's Eye;³ of the antecedent incident of the Young Man with Great Possessions;⁴ and of the pastoral exhortations in 1 Tim. vi. 6-11, and James i. 9-11). Conversely, the poverty which in the sight of a Tiberius Gracchus is damning evidence of the Internal Proletariat's intolerable social grievance is accepted in the New Testament as the distinctive badge of office of the servants of God.⁵

¹ In op. cit., chap. xiii, 'Meaning of Satyagraha', Mr. Gandhi draws a sharp distinction between his own instrument of 'soul force' and the English political expedient of 'passive resistance'. He regards 'passive resistance' as a form of militancy: 'the weapon of the weak', to which they resort as a *pis aller* when they do not command a majority of votes or a superiority in arms. On the other hand, Satyagraha and militancy are, in Mr. Gandhi's view, mutually exclusive in principle. As examples of non-Indian Satyagrahis, Mr. Gandhi cites Christ, the early Christian martyrs, and the Dukhobors. 'In Satyagraha there is not the remotest idea of injuring the opponent, Satyagraha postulates the conquest of the adversary by suffering in one's own person.'

² See III. C (i) (d), vol. iii, pp. 192-217, above.

³ Matt. xix. 23-4 = Mark x. 23-5 = Luke xviii. 24-5.

⁴ Matt. xix. 16-22 = Mark x. 17-22 = Luke xviii. 18-23.

⁵ Contrast Plutarch: *Lives of the Gracchi*, chap. 9, with Matt. viii. 19-20 = Luke ix. 57-8; Luke vi. 20; 1 Cor. iv. 9-14; James ii. 5.

It is in the Other World, not in This World, that Lazarus is comforted and Dives tormented.¹ And even for the rich the hope of gaining entry into the Kingdom of Heaven is not completely ruled out.² Finally we may observe that the non-revolutionary attitude of the New Testament towards the current social conflict between Rich and Poor is also its attitude towards the analogous conflicts between Masters and Slaves and between Rulers and Subjects. Examples of this attitude towards Slavery are Ephesians vi. 5-9; Colossians iii. 22-5; 1 Tim. vi. 1-5; Titus ii. 9-10; 1 Peter ii. 18-25; and, above all, the Epistle to Philemon. As for the political conflict, the characteristic attitude of the Primitive Christian Church towards the mundane political authority of the Roman State is expressed in Matt. xxii. 15-22 = Mark xii. 13-17 = Luke xx. 19-26. and in Romans, xiii. 1-7, and not in the Book of Revelation.

The ambiguity of our term 'Gentleness' will now be clear; and at later points in this Part³ we shall have occasion to distinguish sharply between different meanings of the term which are not merely distinct but are positively antithetical to one another. It would have been premature to introduce these distinctions in the chapter to which this Annex attaches, since the purpose of this chapter has been to bring the historic internal proletariats on to our stage as the necessary first step towards a study of their diverse faiths and works.

THE RHINE-DANUBE FRONTIER OF THE ROMAN EMPIRE

THE Rhine-Danube frontier of the Roman Empire is sometimes cited as a classical example of a frontier that is 'natural' or 'scientific'; and this belief, which has been inculcated by our modern Western classical scholars, in the intrinsic rightness or excellence of the long-since obliterated Continental European boundary of the Hellenic universal state has had a perceptible effect upon the political history of our own Western World, since it is one of the grounds of the modern French claim—or ambition—to have the Rhine for the frontier of France from the Alps to the North Sea (an aspiration which was first formulated in the seventeenth century; was translated into fact for a brief span when the Napoleonic Empire was at its height; and was revived, in the dreams of a few Frenchmen, during the Paris Peace Conference of 1918–20).

Whatever may be thought of a Rhine frontier for France, a Rhine-Danube frontier for the Roman Empire undoubtedly does look 'natural' on a small-scale map of Europe on which the two great rivers are apt to show up among the most prominent of the physical features that are picked out for display by the cartographer. Indeed, a river-line is not only conspicuous on the map but is also more precise in actuality than any other physical feature—except a sea-coast—which might serve as a 'natural' basis for a political boundary. Nevertheless a river is apt to be less effective, even as a strategic frontier, than a mountain-range or a desert;¹ and, while mountains and deserts tend to act as social insulators on the economic and the cultural as well as on the military and the political plane, rivers tend, like narrow seas, to bring together rather than to keep apart the populations that face one another across the water. This has certainly been the normal social effect of both the Rhine and the Danube upon the riparian populations ever since the Rhine-Danube frontier of the Roman Empire vanished with the Empire itself—as is witnessed by the present political map of Europe, on which those sections of the courses of the two rivers on which the waterways now serve as political boundaries are very much shorter in the aggregate than those other sections in which either river now runs through the heart of a country and serves as one of its principal internal arteries (the

¹ 'The frontiers of states are either large rivers or chains of mountains or deserts. Of all these obstacles to the march of an army the most difficult to overcome is the desert; mountains come next; and large rivers occupy the third place.'—*The Officer's Manual: Maxims of Napoleon*, translated from the French by Colonel Sir G. C. d'Aguilar (Dublin 1831, Milliken), Maxim 1, p. 5.

role of the Rhine in Holland and Prussia and Hessen, and of the Danube in Württemberg and Bavaria and Austria and Hungary). On the strength of this contemporary evidence we may hazard the conjecture that the Rhine and the Danube may have performed the same function of bringing together, instead of keeping apart, the populations on their opposite banks in that primitive Transalpine Europe which was artificially and forcibly partitioned into a Roman and a non-Roman half when the Roman frontier was drawn along the river-line.

In any case, even if it were to be conceded, for the sake of the argument, that a river-frontier is a 'natural' one in principle, it would still remain to be proved that the particular river-frontier to which the Roman Empire resigned itself in Europe was 'scientific'; and to prove this would be difficult indeed.

A 'scientific' military frontier presumably means one that has been chosen out of a number of alternative possible lines because it is the easiest of all of them to hold; and, *ceteris paribus*, the most defensible line is the shortest. A glance at the map will make it evident, however, that, of all the river-frontiers in the interior of Europe that could have been selected for an empire which was based on the Mediterranean Sea and which embraced the whole of the Mediterranean Basin, the Rhine-Danube frontier, so far from being the shortest, was in fact the longest.¹ An Elbe-Danube frontier would have been shorter, an Oder-Danube frontier shorter still, and a Vistula-Dniestr frontier the shortest (and on this count therefore the best) of all.² In and after the reign of Vespasian (*imperabat* A.D. 69-79) the Roman Government did manage to shorten the Rhine-Danube frontier slightly—and at the same time to embrace an additional patch of barbarian territory in the Roman pale—by cutting out the Swabian salient between the upper courses of the two rivers and running a line of artificial fortifications overland from the right bank of the Rhine below Coblenz to the left bank of the Danube above Ratisbon. But the saving of length through this substitution of an overland line for the river-line in the Swabian sector was more than offset by Trajan's prodigality in trespassing beyond the river-line in the Lower Danube sector and annexing to the Empire a Transdanubian bridge-head—the new province of Dacia—which included at least the whole of what are now Little Wallachia and Transylvania. Nor was any

¹ This point has been noticed, by anticipation, in II. D (v), vol. ii, p. 162, above.

² After the interregnum that followed the break-up of the Roman Empire, the frontier of the new society of Western Christendom was, of course, pushed forward from the Rhine to the Elbe, the Oder, the Vistula, and still farther afield to the Niemen, the Dvina, and finally the Narev in the course of the six centuries following the launching of Charlemagne's attack upon the Saxons in A.D. 772 (see II. D (v), vol. ii, pp. 167-9, above).

great net economy of length achieved when, after the paroxysm in the third century of the Christian Era, Aurelian reversed Trajan's policy and withdrew the frontier to the river-line again in this Lower Danube sector; for in the same emergency the Roman Government was compelled also to abandon the transfluvial land-frontier on the Swabian sector likewise, and the withdrawal to the river-line here meant lengthening the frontier instead of shortening it. While the abandonment of Transylvania to the Goths relieved the empire of its own former salient into Barbaria, the abandonment of Swabia to the Alemanni¹ let a new barbarian salient into Romania; and this new salient pointed menacingly towards the Empire's Italian heart.

Thus, through all its successive local fluctuations, the Rhine-Danube frontier was never anything but the longest 'natural', or mainly 'natural', frontier on the European Continent that the Roman authorities could have chosen. But to imply that they did deliberately choose this line is to beg the question of their skill and insight as frontier-makers when we know as a matter of fact that the Roman Government did not ever choose this line, but simply acquiesced in it as a *pis aller*. The fateful decision was made by Augustus in A.D. 9, after he had reluctantly come to the conclusion that the establishment of an Elbe-Danube frontier, at which he had previously been aiming, could only be achieved at the cost of a greater military and financial effort than he could venture to call for from a Hellenic World which was then in urgent need of rest and relaxation after the protracted and cumulative strain of its four-hundred-years-long 'Time of Troubles'. The attempt to reach the Elbe-Danube line, which Augustus thus confessed to be beyond his strength, was not repeated by any of his successors; but Trajan did, as we have seen, succeed in temporarily substituting the mountain-frontier of the Eastern Carpathians for the river-frontier of the Lower Danube when he annexed Transylvania; and Marcus Aurelius would perhaps have succeeded (if his life had not been cut short when he was on the verge of success) in pushing the frontier forward from the river-line to the mountain-line on the Middle Danube sector as well, where he made a determined effort to annex the territories of the Marcomanni and the Quadi in what was yesterday Czechoslovakia.

The truth is that the Roman authorities were always dissatisfied with the Rhine-Danube frontier and showed their dissatisfaction in the strenuous attempts which they made on almost every sector,

¹ Swabia derives its present name from the presumably predominant Suebian element in the *σύνμικτος ὄχλος* of which the Alemannian war-band was composed. (For the social and psychological effects of a *limes* upon the transfrontier barbarians see V. C (i) (d) 7, vol. vi, p. 4, footnote 4, as well as Part VIII, below.)

at one time or another, to push their way forward to a better line—Augustus aiming at a shorter river-line and the Flavians at an elimination of the salient between the Upper Rhine and the Upper Danube, while Trajan and Marcus Aurelius each sought, on a particular sector, to get rid of the river-line altogether and to secure a mountain-frontier instead. It was only in the last phase of the Empire's existence, during the lull between the second barbarian offensive and the third,¹ that the Roman frontier in Europe coincided exactly with the courses of the Rhine and the Danube throughout their length from the North Sea to the Black Sea; and in this period the frontier was held at a greater cost and at the same time with less efficiency than during the century and a half that had intervened between the establishment of the Swabian *limes* during the reign of Vespasian and the temporary collapse of the whole frontier in the fifth decade of the third century of the Christian Era.²

On this showing, we must decline to pay the Rhine-Danube frontier of the Roman Empire the compliment of allowing it to be called either 'natural' or 'scientific'. So far from being a monument of Roman strategical ability, it cannot even be regarded as the outcome of a deliberate choice on the Roman Government's part. Meandering, as it did, along the longest axis of Continental Europe, this unduly praised frontier really registered nothing but the undesigned and accidental locus of the geographical line along which two conflicting social forces had come into a transitory equilibrium. At this distance from the Mediterranean the barbarians of Continental Europe found themselves able to check the farther advance, at their expense, of a Hellenic dominant minority which conversely found itself now compelled to leave its European external proletariat half-unconquered because it had previously wasted the strength of the Hellenic Society in a series of internecine struggles that had begun with the Peloponnesian invasion of Attica in 431 B.C. and had ended in 31 B.C. with Augustus's victory at Actium over Antony and Cleopatra. In fact, the Rhine-Danube frontier of the Roman Empire, though it held, with certain temporary lapses, for nearly four hundred years from first to last, was almost as unnatural and unscientific as the line along which, for

¹ For these two offensives see V. C (i) (c) 3, pp. 219–22, above. The lull lasted about a hundred years, *circa* A.D. 275–375.

² In a critique of the policy of Constantine the Great the French philosopher-administrator Turgot has expressed the opinion 'que l'Empire [Romain] ne fut jamais assez grand [et] qu'il fallait joindre au projet de transporter la capitale de l'Empire [à Constantinople] celui de conquérir le Nord de l'Europe et de ne laisser à l'Empire aucun ennemi à craindre'. In order to conserve the Empire's military energies for this urgently necessary conquest of Northern Europe the Imperial Government, Turgot argues, ought to have refrained from aggression against Iran, (Turgot, A. R. J.: *Œuvres* (Paris 1844, Guillaumin, 2 vols.), vol. ii, pp. 620–1.)

less than four years, an open warfare settled down into a trench warfare on the Western Front after the Battle of the Marne in the General War of A.D. 1914-18. A definitive and therefore satisfactory 'natural' frontier for a civilization on the Continent of Europe was not to be found anywhere short of the limit of human habitation in the latitude of the Arctic Circle. This line—which was never reached by a Hellenic Society that addressed itself to the problem only after it had already gone into decline—was eventually reached by the two affiliated societies of Western and Orthodox Christendom in the fourteenth century of the Christian Era¹ as a result of efforts which had had to be maintained over a span of not less than six hundred years.

¹ See II. D (v), vol. ii, pp. 168-9, above.

THE VÖLKERWANDERUNG OF THE ARYAS AND THE
SANSKRIT EPIC

THE Sanskrit Epic, as it has come down to us, clearly cannot be regarded as the work of the Aryan invaders of the Indus Basin, or even as the work of these invaders' epigoni, in the sense in which the Scandinavian Saga and the Greek and English epics are respectively the work of the Norse settlers in Iceland and the Ionian settlers in Asia Minor and the English settlers in Britain.

On this question the dates are decisive. The incursion of the Aryas into the domain of the Indus Culture certainly took place before the end, and probably before the middle, of the second millennium B.C.—considering that the Hyksos, who were evidently an *apodasmos* of the same Eurasian Nomad horde, are known to have pushed their way as far afield as the Asiatic borders of Egypt before 1680 B.C. On the other hand the making of the Sanskrit Epic in its present form is estimated, on internal evidence, not to have been begun before 400–200 B.C. and not to have been completed before A.D. 200–400.¹ Thus in the Time-dimension there is a great gulf fixed between the composition of the Sanskrit Epic and the experience of the post-Sumeric Völkerwanderung, which must be presumed, on analogy, to have been the mental stimulus that inspired the Aryan invaders or their epigoni to make whatever their contribution may have been to the Sanskrit Epic as we have it.

The breadth of this gulf may be measured by the heterogeneity of the contents of the Epic in its final form; for while our scholars can make out at least a plausible case for unity of authorship in their *critiques* of certain famous works of 'heroic' poetry—for instance, the *Odyssey* or the *Chanson de Roland*—not even the boldest 'unitarian' would have the hardihood to call in question

¹ Sidhanta, N. K.: *The Heroic Age of India: A Comparative Study* (London 1929, Kegan Paul), pp. 48–9. Cf. Eliot, Sir Ch.: *Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. ii, p. 169. Some independent evidence from the Hellenic side has been brilliantly detected and presented by W. W. Tarn in *The Greeks in Bactria and India* (Cambridge 1938, University Press). The 'heroic' core of the *Mahābhārata* must have been known to the authority followed by the Alexandrian geographer Ptolemy (*vivebat Aevi Christiani saeculo secundo*) when he attributes to the Pandavas of the *Mahābhārata* a territory which had never been occupied by a people of that name at any time since the Indic World had first come within the Hellenic World's horizon (Tarn, op. cit., pp. 511–12). Ptolemy's authority may have been Trogus's Far Eastern Greek source, who seems to have been writing between 87 B.C. and 80 B.C. (Tarn, op. cit., pp. 59). Again, two passages of the *Mahābhārata* (in the form in which we now have it) which apparently belong, not to the original Aryan 'heroic' core but to the much later Hindu religious accretions, are echoed in an inscription on a column at Besnagar which was set up by a certain Heliodorus son of Dio who was in the service of the Far Eastern Seleucid Greek king Antialcidas (*regnabat circa 130–100 B.C.*) (Tarn, op. cit., pp. 313–14 and 380–1).

the compositeness of the authorship of the *Mahābhārata*. It would be fantastic to suggest that the *Bhagavadgītā*—which has been preserved as an episode in the *Bhārata*—is the work of a barbarian minstrel who has been nurtured in the bosom of a war-band and has found his *métier* in celebrating the prowess of his companions-in-arms. The *Bhagavadgītā* is not a piece of 'heroic' literature, but a sophisticated work of religious or philosophico-religious art. And this late and discordant religious element in the Sanskrit Epic does not only make its appearance in separate lays which, like the *Gītā*, can be isolated and detached and lifted bodily out of the main body of the epos. The whole fabric of the epos has been permeated by this religious leaven; and it is evident that, after having passed through the normal earlier stages in the development of a 'heroic' poetry, the literary legacy of the Aryan war-bands fell into the hands of the Brahmans¹ and was eventually incorporated into the scriptures of Hinduism:² the 'higher religion' which was discovered, after the breakdown of the Indic Civilization, by the Indic internal proletariat.³

This capture and exploitation of an ancient barbarian work of art by the apostles of a latter-day 'higher religion' or philosophy is not altogether without parallel. In the latter days of Hellenic history the Homeric Epic was taken up and taken over, in somewhat the same fashion, by the Fathers of the Neoplatonic Church; and Neoplatonism is an amalgam of the philosophy of the Hellenic dominant minority with the religion of the Hellenic internal proletariat which shows an unmistakable resemblance to Hinduism.⁴ The Neoplatonist Fathers, however, never went to the lengths to which the Hindu Fathers permitted themselves to go in taking liberties with their 'heroic' captive. The Neoplatonists contented themselves with re-interpreting 'Homer' allegorically; and, even if they ventured to tamper with the *textus receptus* here and there, they never dreamed of interpolating whole books of 'Orphic' or 'Sibylline' religious verse between the historic cantos of the *Iliad* and the *Odyssey*. The complete smothering of an original 'heroic' nucleus under a pile of later religious accretions is a process that is peculiar to the history of the Sanskrit Epic; and it is one of the most striking illustrations of that tendency towards a predominantly religious *habitus* which is, as we have seen,⁵ the special bent of the Indic Civilization.

At the same time we shall observe that the Hindu religious

¹ Sidhanta, op. cit., pp. 66-7.

² Ibid., p. 110.

³ See V. C (i) (c) 2, pp. 137-8, above.

⁴ For Neoplatonism see II. D (vii), vol. ii, p. 378; V. C (i) (c) 2, in the present volume, p. 147; V. C (i) (d) 6 (δ), pp. 565-7; and V. C (i) (c) 2, Annex II, p. 584, above; and V. C (i) (d) 6 (δ), Annex, pp. 680-3, and V. C (ii) (a), vol. vi, pp. 222-3, below.

⁵ In III. C (iii), vol. iii, pp. 384-5 and 387-8, above.

manipulators of the Aryan 'heroic' epos have not succeeded in turning it into an entirely religious work of art which is unitary in the sense of being all of one uniform Hindu êthos and texture; for they have not eliminated—or perhaps even sought to eliminate—the original 'heroic' element altogether. In the Sanskrit Epic as we have it, the residual 'heroic' element is still manifest and even conspicuous; and there are even glaring contradictions between the original Aryan and the interpolated Hindu ideas and ideals which the Hindu manipulators of the *Mahābhārata* have not been able to remove.

The êthos and institutions of a barbarian war-band are unmistakably reflected in the thirst for fame and in the Fatalism which the *Bhārata* attributes to its heroes;¹ in the 'atmosphere of savage heroism' which pervades the *Bhārata* (though it is absent from the *Rāmāyana*);² in the importance of the parts that are played by the institutions of kingship and the *comitatus*;³ in the purely personal basis of international relations;⁴ and in the representation of the heroes as being meat-eaters—in contrast to the practice of an Indic Society in which the principle of *Ahimsa* had come to prevail at least as early as the sixth century B.C.⁵ The gods of the Vedic Pantheon also behave in the *Bhārata* according to their kind. Indra has a mansion for warriors slain in battle which corresponds to Odin's Valhalla;⁶ and he comes down to Earth—like Ares and Apollo and Athena in the *Iliad*—to take part in the warfare between rival human war-bands on an equality with the human combatants. This reduction of Indra to the stature of a mortal man does not trouble the later Hindu editor, for whom Indra is only a literary reminiscence and not a living god; but the latter-day poet falls into serious embarrassment when he allows himself to be decoyed—by his respect for the externals of the Aryan 'heroic' tradition—into bringing on to the battlefield his own Hindu god Shiva, who is the genuine object of a fervently pious worship. How can the omnipotent Shiva be allowed to be worsted, or even challenged, by human arms? And, on the other hand, how can the 'heroic' tradition be maintained if the divine combatant, *ex officio deitatis*, is to carry all before him?⁷ In the purely Hindu didactic additions to the *Bhārata* this dilemma does not arise

¹ Sidhanta, op. cit., pp. 82-4.

² Ibid., pp. 177 and 172-4.

³ Ibid., p. 187. For this characteristic feature of 'heroic ages' see further V. C (i) (d) 7, vol. vi, p. 4, footnote 4, below.

⁴ Sidhanta, op. cit., p. 169. We may compare the similar contrast between the diet of the Homeric heroes, who feast on beef and have a horror of fish, and the diet of the latter-day urban communities of the Hellenic World, in which fish was the staple flesh-food, while beef and mutton were rarely eaten.

⁵ Ibid., pp. 210-12.

⁶ For this dilemma see *ibid.*, p. 94.

² Ibid., p. 89.

because the theme is here changed from barbarian warfare to sophisticated speculation; and in these interpolations the Vedic gods are quite eclipsed by Brāhmā, Shiva, and Vishnu.¹

The frequent *actes de présence* that are made in the Sanskrit Epic by Indra and other members of the Vedic Pantheon are sufficient proof that some part, at least, of the 'heroic' element in the *Mahābhārata* is a genuine legacy from the Völkerwanderung of the Aryas in the second millennium B.C.; and we have corroborative evidence to the same effect in strata of Indic literature which are unquestionably of an early date. For instance, Nāra-shamsī songs (κλέα ἀνδρῶν) are mentioned in the *Vedas*, and there are allusions to heroic minstrelsy in the *Shatapatha Brāhmaṇa*.² These facts would appear to establish, beyond doubt, both the existence of an original Aryan epos which was inspired by the Aryan Völkerwanderung, and also the survival of at least some reminiscence of this ancient epic tradition in the Sanskrit Epic as we have it. Yet there is something extraordinary about this apparent persistence of a 'heroic' literary tradition in an inchoate and fluid form over a period of at least five hundred years between the latest date that can be assigned to the historical events by which this poetry was inspired³ and the earliest date that can be assigned to the crystallization of the Sanskrit Epic in its present shape. This curious chapter of literary history would become more comprehensible if we had warrant for surmising that, about the time when the Sanskrit Epic did, at last, take its classic shape, the interest in the ancient 'heroic' literary tradition of the Aryas was revived in the Indic World of the day by a contemporary recurrence of the social experiences by which the Aryan 'heroic' tradition had originally been precipitated. Between 400-200 B.C. and A.D. 200-400—which are, as we have seen,⁴ the probable *termini post et ante quos* for the composition of the Sanskrit Epic—was there anything in the nature of a new Völkerwanderung and a new 'Heroic Age' in Indic history?

We may perhaps find our answer to this question if we approach it by way of an analogy that is to be found in the history of a comparable 'heroic' tradition which had its home in the Iranian province of the Syriac World.

The Iranian Epic, which has been given its classic and final

¹ Ibid., p. 200.

² Ibid., pp. 55-6.

³ A comparison of the internal evidence of the *Mahābhārata* with evidence afforded by other works of Sanskrit literature which unquestionably date from the early age of Indic history appears to show that the historical characters and events of which there are reminiscences in the *Bhārata* fall within the quarter of a millennium *circa* 1100-*circa* 850 B.C. (Chadwick, H. M. and N. K.: *The Growth of Literature*, vol. ii (Cambridge 1936, University Press), pp. 512-20).

⁴ On p. 596, above.

form by the genius of a single great poet,¹ has as long a history as the Sanskrit Epic; for, while Firdawsī lived from about A.D. 930 to A.D. 1020, and the Pehlevī prose work which is supposed to have been his source (through the medium of a New Persian translation) is not ascribed to an earlier date than the reign of the last Sasanian Pādishāh Yazdagird (*imperabat* A.D. 632–51), the mythology which is presented in the *Shāhnāmāh* proves to be identical, even in minor details, with the mythological scheme that is presupposed in the *Avesta*,² and some, at least, of these mythical characters and events appear to be creations of the Iranian imagination in the eighth and seventh centuries B.C., when the Iranian peoples were living as members of the external proletariat of a disintegrating Babylonian Society beyond the eastern frontiers of the Assyrian Empire. There are other elements, however, in the *Shāhnāmāh* which date from later ages than this, while they are still considerably older than the age which saw the composition of Yazdagird's *Khudhāynāmāh*. For example, a group of Arsacid Parthian royal names have found their way into the Iranian 'heroic' tradition in connexion with one particular episode;³ and even so recent an historical event as the death of the Sasanian Pādishāh Pīrūz at the hands of the Ephthalites in A.D. 484⁴ has passed over into the realm of legend⁵ and has there become of one substance with the mythical exploits of Jāmshīd and Firūdūn.

Another distinct chronological stratum of 'heroic' matter is perhaps to be found in the tales that are associated with the names of Zal and Rustam; for, while the figures of these two heroes and their adversaries loom large in the Iranian Epic in its final form,⁶

¹ In strict accuracy we ought perhaps to say 'the genius of two poets'; but—whether or not Daqīqī would have grown to Firdawsī's stature if Death had not cut his work short—the older poet's contribution to the *Shāhnāmāh* as we have it is completely dominated by the work of the successor who not only continued the poem but made it what it now is.

² Nöldeke, Th.: *Das Iranische Nationalepos*, 2nd ed. (Berlin and Leipzig 1920, de Gruyter), p. 1.

³ Ibid., pp. 7–8. Several of these historical names are associated with one another in the realm of historical fact as well as in the realm of poetic fiction. An historical King Gotarzes, who is the namesake of Firdawsī's Gōdharz, had to fight for his throne in A.D. 49–50 against an historical pretender, Meherdates (a Latin rendering of the Pehlevī version of the name Mithradates), who is the namesake of Firdawsī's Milādh. Meherdates was supported by the Kāren family, who likewise figure in this episode of the *Shāhnāmāh*.

⁴ For the repercussion of this event upon Indic history see V. C (i) (c) 3, p. 279, footnote 1, above.

⁵ Nöldeke, op. cit., p. 9.

⁶ The contents of the *Khudhāynāmāh* have to be reconstructed by inference, since neither the original Pehlevī text nor Ibn Muqaffā's Arabic translation (made in the middle of the eighth century of the Christian Era) is extant (Nöldeke, op. cit., p. 15). Our inference that the *Khudhāynāmāh* did include the Rustam cycle is drawn from the fact that as early as the first half of the seventh century of the Christian Era, before the Arab conquest, the name Rustam is borne by private persons in Western Iran and in Irāq (Nöldeke, op. cit., p. 11)—e.g., by the unfortunate commander of the Sasanian army which was routed by the Arabs in the Battle of Qādisiyyah, circa A.D. 637.

there is no trace of them in the *Avesta*.¹ An indication not only of the date but of the source of the Rustam cycle is perhaps to be found in its geographical locus. The legends in this cycle are all definitely associated with the two East Iranian provinces of Seistan and Zābulistān in the basin of the River Hilmand;² and the name Seistan, or Sakastene, commemorates the fact that the lower basin of the Hilmand, which had previously been known as Drangiana,³ was submerged in the second and third quarters of the second century B.C. by a flood of Saka Nomads from the Eurasian Steppe.⁴ These Saka invaders were part of the external proletariat of a disintegrating Syriac Society who had assembled in a no-man's-land beyond the Transoxanian frontier of the Achaemenian Empire⁵ and had then broken through the former Achaemenian front when the Yuechi Nomads, from the depths of the Steppe, had given an impetus to the Sakas from the rear, and when the forces of the Achaemenian Empire's Macedonian 'successor-state' in Asia had been divided and redivided against themselves by a gradual secession of a Greek principality in Bactria from the Seleucid Monarchy during the latter part of the third century B.C.⁶ and by a half-successful Seleucid attempt, in the fourth decade of

¹ Nöldeke, *op. cit.*, p. 9.

² *Ibid.*, p. 10. When the Arab conquerors pushed their way into Seistan, they found there a place called 'The Stall of Rustam's Horse [Raksh]' (Nöldeke, *op. cit.*, p. 11).

³ This older name of the province survived in the name of its capital city, which continued to be known as Zaranj down to the last days of Syriac history in the Age of the 'Abbasids.

⁴ See II. D (v), vol. ii, p. 141, footnote 2, and p. 144, and V. C (i) (c) 3, in the present volume, pp. 215-16, 239-40, 275-6, and 310, above. The vanguard of the Saka host which occupied Drangiana in the second century B.C. seems to have planted itself there as early as *circa* 155 B.C., when a body of Saka mercenaries in the service of the Parthian King Mithradates I appears to have made itself at home in this province, without asking its employer's leave, as its self-conferred reward for previous military services which had enabled the Parthian war-lord to conquer Drangiana, Arachosia, and Gedrosia from the Bactrian Greeks in 159 B.C. (see Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), pp. 222-3 and 500). The main body of the Sakas erupted out of the Eurasian Steppe into the Parthian Empire in 129 B.C. under pressure from the Yuechi, who had erupted into the Bactrian principality in 130 B.C. or shortly before (see V. C (i) (c) 3, p. 240, footnote 4, above). The momentarily overrun north-eastern provinces of the Parthian Empire, including Drangiana, were recovered for the Arsacid by his vassal the Suren between 124 and 115 B.C. (Tarn, *op. cit.*, pp. 224, 320, and 501), and in the process the bulk of the Saka invaders were driven still farther south-eastwards, out of Drangiana into Sind (see pp. 602-4, below); but a sufficient number of them remained in Drangiana permanently, under the Suren's Parthian rule, to impose upon the province their name (Sakastene) and, with it, perhaps, their social impress. The same Parthian reconquest of Seistan that drove some, though not all, of the Saka invaders south-eastwards into Sind seems to have driven one of the trespassing Nomad war-bands—namely the Pasiāni or Parsii—north-eastwards into the highland country, round the headwaters of the Hilmand and Kābul rivers, which subsequently came to be known as Zābulistān. In nationality these Parsian Nomads seem, to judge by their name, to have belonged not to the Saka-speaking but to the Persian-speaking branch of the Iranian family (Tarn, *op. cit.*, pp. 292-5 and 469-73).

⁵ For the history of this Eurasian frontier of the Syriac World see II. D (v), vol. ii, pp. 137-44; Part III. A, Annex II, vol. iii, pp. 444-5 and 448-9; and V. C (i) (c) 3, in the present volume, pp. 239-741, 244-6, and 247-8, above.

⁶ See Tarn, *op. cit.*, pp. 72-4.

the second century, to recover this lost dominion by force of arms.¹ It has been conjectured by some of our modern Western scholars that the Rustam cycle—which is so distinct, both in its local colour and in its fabulous atmosphere,² from the rest of the matter of the Iranian Epic—may be a literary reflexion of the social experience of the Sakas in their *Völkerwanderung* in the second century B.C.

This attractive conjecture has been rejected by the great scholar upon whose work we have just been drawing in this Annex.³ But, if, in defiance of Nöldeke's formidable authority, we may venture to entertain the hypothesis unless and until it is decisively refuted, we may find in it a clue to the solution of the Indic problem which has led us to take this Iranian question up.

While Seistan was permanently occupied by the Sakas—as is testified by the permanent change in the province's name—it was not the final resting-place of the whole Saka horde.⁴ The Sakas took the road to Seistan in and after 129 B.C. simply because this was their line of least resistance;⁵ but Seistan, as well as Herat and

¹ See Tarn, *op. cit.*, pp. 183–224.

² For this atmosphere see Nöldeke, *op. cit.*, p. 10.

³ See *ibid.*, p. 11. But the only reason which Nöldeke gives in support of his adverse judgement is the fact that the personages in the Rustam cycle all bear Iranian names; and this argument seems scarcely cogent, since it is almost certain that the Saka Nomad invaders of Drangiana, as well as the sedentary population which they found in occupation, were an Iranian-speaking people, while the allied war-band of Persian Nomad invaders, who were pushed, by the Parthian counter-attack of 124–115 B.C., out of Seistan up the Hilmand Valley into Zābulistān, probably spoke a language that was not merely Iranian but was actually a member of the Persian branch of that linguistic family (see p. 601, footnote 4, above).

⁴ See p. 601, footnote 4, above.

⁵ With their fellow Nomads the Yuechi at their heels the Sakas could not pitch their tents in the Upper Oxus-Jaxartes Basin (Sogdiana and Bactria), which the Yuechi had just taken for themselves. One war-band of the Saka Rawaka (Sacaraucae) which was pushed back to the north-eastern side of the Oxus in the Parthian counter-offensive of 124–115 B.C. 'perished' in consequence (Tarn, *op. cit.*, pp. 306–7). Again, they could not push, south of the Hindu Kush, up the valley of the Murghab and down the valley of the Kābul River into the Panjab, partly because of the difficulty of the *terrain* and partly because the Seleucid Greek principality which had been carved out of the Euthydemid Greek Empire of Bactria in the fourth decade of the second century B.C. (see p. 601, above) had not only survived the Yuechi conquest of its provinces in the Oxus-Jaxartes Basin but had remained strongly entrenched in a natural fastness between the Hindu Kush Range and the Jhelum River (Tarn, *op. cit.*, p. 312). When the Parthian counter-offensive of 124–115 B.C. subsequently drove the Parsii out of Seistan up the Hilmand Valley, they did succeed in pushing across the watershed into the head of the Kābul Valley (Cōphēnē) at some date before 87 B.C. (*ibid.*, pp. 295, 314, and 332); but (although it was the descendants of these Persian invaders of the Kābul Valley that eventually gave the Greek Power in India its *coup de grâce* both in the Kābul Valley and in the Eastern Panjab: see *ibid.*, pp. 349–50) the Greeks of the Paropamisadae and Gandhāra proved strong enough to check the Parsians' progress down the Kābul Valley for some 60 years; and before the end they even managed, with Kushan military and Han diplomatic assistance, to drive the Parsians back between *circa* 50 and *circa* 30 B.C. (*ibid.*, pp. 337–43). Thus in the eighth decade of the second century B.C. the Sakas could not push their way into either the Upper Oxus-Jaxartes Basin or the Kābul Valley; and at the same time they could not advance south-westward, into Western Iran and beyond it, owing to the indomitable defence of the Khurasanian escarpment of the Iranian Plateau by the Arsacid prince Mithradates the Great (see II. D (v), vol. ii, p. 141, footnote 2; Part III. A, Annex II, vol. iii, p. 449; and V. C (i) (c) 3, in the present volume, p. 239, above). The only 'get-

Merv, was reconquered by Parthian arms, between 124 and 115 B.C., under the leadership of the Arsacid's vassal the Suren;¹ and, although a Saka rear-guard settled down, nevertheless, under Parthian rule, on the banks of the Hilmand, the greater part of the horde then trekked on still farther south-eastward to find new homes in the Indic World. After making their way out of the Hilmand Basin into the Indus Basin over the Bolan Pass, these Sakas struck the River Indus itself in Northern Sind, took to the water,² and went on to conquer Patalênê (the Indus Delta) and Surāshtra (Kathiāwār and Gujerāt).³ By about 80 B.C. they had established themselves in these provinces so firmly that they were able to turn northwards and attack the Seleucid Greek principality which still survived between the Jhelum and the Hindu Kush. This time, again, the Sakas came by water; and it was a naval victory on the Indus over their Greek antagonists that opened for them the way to the conquest of Taxila before 77 B.C., of Gandhāra before 70 B.C., and of Kapisa, in the Paropamisadae, before 60 B.C.⁴ While he was thus conquering the greater part of the Seleucid Greek principality in India with one hand, the Saka war-lord Maues was at the same time extending his rule in Central India by conquering Ujjain about 62 B.C.⁵ and Mathurā about 60 B.C.⁶ The Euthydemid Greek principality in the Eastern Panjab, however, still held out between the Jhelum and the Ravi,⁷ and both Greek principalities reasserted themselves when, in 58 B.C., Maues was defeated by the Mālavas, lost Ujjain, and met his death.⁸ The Euthydemid Greeks won a naval victory over the Sakas on the Jhelum;⁹ the Seleucid Greeks reasserted themselves in the Paropamisadae;¹⁰ and this collapse of the Saka Power in India seemed to be confirmed when the Sakas' domain in the Panjab, as well as both the two Greek principalities on its flanks, was conquered by the Parsian principality about 30 B.C.,¹¹ and when this ephemeral Parsian Empire was conquered in its turn, together with the remnant of the Saka Empire in Sind and Kathiāwār and Gujerāt, by the Parthian Suren Gondophares in A.D. 19.¹² The Sakas, however, were strong both in numbers and in adaptability,¹³

away' that was left to the Sakas was to steal up the valley of the Heri Rud, between Mithradates' right wing and the Kābul Valley Greeks' left wing; and this route led them straight to Drangiana.

¹ See p. 601, footnote 4, above.

² These Saka Nomads who took to the water are the inverse of the Cossack watermen who took to the steppe (see II. D (v), vol. ii, p. 156, above).

and, though the *ci-devant* Saka Empire of Maues in the Indus Valley never came to life again, this defunct empire's two great outlying satrapies—one at Mathurā and the other in Surāshtra (i.e. Kathiāwār and Gujerāt)—both managed to survive, and the southern satrapy subsequently extended the Saka Rāj into Central India far deeper than Maues had ever penetrated in the last century B.C. These epigoni of the Saka conquerors of the Indus Valley reconquered Ujjain about A.D. 78¹ and made themselves masters of Mahārāshtra about the same time; and, although the Saka satrapy in Mahārāshtra was momentarily overthrown by the Andhra Power, from the Deccan, *circa* A.D. 126, the satrapy in Mālhwā recovered Mahārāshtra for the Saka Rāj between A.D. 126 and A.D. 150. From that time until its extinction at the hands of the Guptas *circa* A.D. 390,² this Saka satrapy bore rule, from its capital at Ujjain, 'not only over the peninsula of Surāshtra [Kathiāwār], but also over Mālhwā, Cutch, Sind, the Konkan and other districts—in short, over Western India'.³ It will be seen that the wave of the Saka Völkerwanderung was washing over from the north-eastern fringe of the Syriac World into the north-western fringe of the Indic World in the very age in which the Sanskrit Epic is believed, on quite independent grounds, to have been crystallizing into its present shape; and it is tempting to conjecture that the otherwise extraordinary phenomenon of a revival, in the Indic World in this age, of an interest in a 'heroic' tradition descending from the Aryan invaders of the Indus Valley in the second millennium B.C. may partly be accounted for by the arrival in force, in the course of the last two centuries B.C. and the first two centuries of the Christian Era, of a Saka swarm of barbarian invaders who had lately acquired the same literary tastes, as a result of the same social experience, as their Aryan predecessors who had trodden the road from Eurasia to India more than a thousand years earlier.

It is not necessary to suppose that any of the 'heroic' matter of the Sanskrit Epic, as we have it, is actually of Saka origin—whatever we may think of the theory of a Saka origin of the Rustam cycle in the Iranian Epic. In the Indic case, at any rate, we need not go farther than to suggest that the Saka barbarian invaders who pushed their way into the heart of Western India some time between the end of the second century B.C. and the beginning of the second century of the Christian Era were inspired by their own recent social experience with a taste for that 'heroic' poetry which

¹ Tarn, *op. cit.*, pp. 335 and 501.

² See I. C (i) (b), vol. i, p. 86, above.

³ Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), p. 291.

seems to be the normal form of literary self-expression for barbarians who have been through a *Völkerwanderung*.

When a demand for 'heroic' poetry arises among barbarian conquerors who have settled down to live off their conquests as a ruling caste, this demand can be satisfied in either one of two alternative ways. Either the barbarians can produce minstrels of their own to celebrate their own deeds in their own language; or else they can call upon the subject population to supply them with the spiritual commodity of 'heroic' poetry as well as with the material commodities which they are accustomed to take as tribute.¹ From what we know of the *êthos* of the Sakas, we should expect *a priori* that, if and when they did have an appetite for 'heroic' poetry, they would prefer to borrow what they wanted rather than to make it for themselves; for in other fields the Sakas undoubtedly displayed in a high degree the receptivity that seems to be characteristic of empire-builders.² In their administration, coinage, and calendar they took over the institutions of the Greeks whom they supplanted,³ and in the next chapter of their history they were captivated by the Indic religion of Hinduism and by the associated archaistic revival of the Sanskrit language.⁴ On the strength of these analogies we may perhaps venture to guess that, when the Sakas felt a need for 'heroic' poetry, they addressed themselves to their Indic subjects; and it is evident that, when this demand is made upon a subject population, its poets will be prone, like the householder in the parable,⁵ to bring forth out of their 'treasure things new and old'. They will search out and furbish up, for the delectation of their new barbarian masters, any 'heroic' matter which their own literary tradition may have preserved from a more or less remote barbarian past, but at the same time they will find ways and means of satisfying their own taste, and giving expression to their own interests, by embroidering this ancient stuff with incongruous modern trappings. If we imagine a Hindu poet whose heart—like that of 'every scribe which is instructed unto the Kingdom of Heaven'⁵—is set upon a new 'higher religion', being called upon by an importunate barbarian Saka war-lord to provide him with 'heroic' minstrelsy, is not the Sanskrit Epic, as we have it, exactly the kind of farrago which we should expect to see produced by the *tour de force* of an attempt to provide simul-

¹ We have already come across a case in point in studying the transformation of the Norse settlers in the Lower Seine Valley into the Normans. The *ci-devant* barbarians were so completely captivated by the culture of the society which they had compelled, at the sword's point, to receive them as its adopted sons that they abandoned their Norse mother-tongue for French and thereafter satisfied their taste for 'heroic' poetry by lending their ears to the French Epic (see II. D (v), vol. ii, p. 201, above).

⁴ See p. 606, footnote 3, below.

⁵ Matt. xiii. 52.

taneous satisfaction for two tastes that were so diverse and for two interests that were so far apart?

If we may be allowed to follow up our suggestion *jusqu'au bout*, we will even venture tentatively to designate a precise place and time in which the Sanskrit Epic may have taken its final shape. We will put our finger upon 'Ujjain, one of the most ancient cities of India, . . . famous as a seat of learning and civilization';¹ and we will focus our attention upon the age in which Ujjain was the capital of a Saka satrapy which bore rule over the greater part of Western India.² Is it too rash a guess to conjecture that the Sanskrit Epic took its final shape at the Saka Court in Ujjain some time between about A.D. 150 and A.D. 390?³

¹ Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), p. 291.

² See the passage quoted from op. cit. on p. 604, above.

³ This conjecture may be supported by philological as well as social and religious considerations; for the crystallization of the Sanskrit Epic between 400-200 B.C. and A.D. 200-400 occurred in close association, not only with the rise of the Hindu religion, but also with an archaistic revival of the Sanskrit language; and the use of Neo-Sanskrit for official purposes is believed, on the evidence of coins and inscriptions, to have been introduced from the North-West into the Deccan, at some date between A.D. 120 and A.D. 200, by the Saka satraps of Ujjain, who are our hypothetical barbarian patrons of the Sanskrit Epic. 'The later Saka satraps of Surāshtra seem to have inclined personally much more to the Brahmanical than to the Buddhist cult, and they certainly bestowed their patronage upon the Sanskrit of the Brahmins rather than upon the vernacular literature. . . . The restoration of the Brahmanical religion to popular favour, and the associated revival of the Sanskrit language, became noticeable in the second century and were fostered by the satraps of Gujerāt and Surāshtra during the third' (Smith, op. cit., pp. 302-3). The Neo-Sanskrit which was in use in Mahārāstra in the second century of the Christian Era under the Saka régime was still full of solecisms; but this very imperfection of the Saka satraps' Neo-Sanskrit style points the fact that they were the pioneers of the Sanskrit revival in a Pāli-speaking world. In the second century of the Christian Era Pāli continued to be used for inscriptions not only in the Andhra Empire, to the south-east of the Saka satrapy of Ujjain, but also in the Indus Valley (see Franke, R. O.: *Pāli und Sanskrit in ihrem Historischen und Geographischen Verhältnis auf Grund der Inschriften und Münzen* (Strassburg 1902, Trübner), pp. 78-82). If the Saka satraps patronized the revival of the Sanskrit language, they may well have extended their patronage to the ancient 'heroic' poetry which, among all the literary monuments of the favoured language, was the matter which the Sakas themselves would most readily appreciate. (For the archaistic resuscitation of the Sanskrit language as one of the symptoms of a decadence of the Indic Civilization see also V. C (i) (d) 8 (γ), vol. vi, pp. 75-7, below.)

HISTORICAL FACT AND 'HEROIC' TRADITION

IN a notable work of both literary and historical scholarship¹ Professor H. M. Chadwick has collated the references to historical events in the Teutonic Epic with the accounts of the same events that have come down to us in the works of Greek and Latin historians; and from this comparison he has brilliantly brought out the fact that, even where the alleged historical event in the epic story turns out to be authentic, there is apt to be no correspondence whatever between the importance that is ascribed to this event in the 'heroic' tradition and its actual importance as our historical records enable us to estimate this quite independently of the 'heroic' version.²

For example, the Burgundian war-lord Guthhere or Gunther, whose figure looms so large in the *Nibelungenlied*, proves to have played in fact a very minor part in the barbarian infiltration into Gaul in the fifth century of the Christian Era; and, as for the still more famous literary figure of Siegfried, he 'has been identified with a number of famous princes from Arminius to Sigebert', but 'it cannot be said that any one of these identifications is of a nature to carry conviction; in no case, indeed, have they gained wide acceptance'.³ Professor Chadwick suggests that

'It was scarcely through the greatness of their power, much less through the effects of their achievements on after generations, that the characters of "the Heroic Age" acquired celebrity; it was far more through the impression made upon their neighbours and contemporaries by their magnificence and generosity, by their personality, and perhaps above all by the adventures and vicissitudes of fortune which fell to their lot.'⁴

In other words, it is not the military or political effectiveness, but the literary 'availability',⁵ of a barbarian war-lord that makes his literary fortune; and from this it follows that the literary history of a hero of 'heroic' poetry begins to diverge from his authentic history from the moment—which may fall within the hero's own lifetime—when his actions and his character are taken up as

⁴ Ibid. Cf. Meyer, E.: *Geschichte des Altertums*, vol. i, part (1), 4th ed. (Stuttgart and Berlin 1921, Cotta), pp. 220-1.

⁵ In the sense in which this word is used of a candidate for the Presidency of the United States.

a literary theme by a poet. That moment sees the creation of a 'character' and a plot which have a separate existence from the personality and the transaction 'in real life' by which these creatures of imagination have been evoked in the poet's soul; and thenceforth these 'fictions' live and grow in accordance with aesthetic laws of their own which have little or no relation to the canons of historical veracity.¹

'It is possible for an occurrence to be recounted in a way that departs completely from the real course of events, and this immediately after it has taken place, and in the mouths of the spectators and participants themselves. And, the farther the story spreads and the longer it lives, the more radical becomes the transformation, until at last there remains scarcely a vestige of the original facts.'²

A classic example of such duality in the literature relating to an historical person is the notorious distinction between the perfectly authentic historical records about Alexander the Great and the essentially imaginative 'Alexander Romance'. In this instance the romance and the records not only both began to take shape simultaneously within the hero's lifetime, but also both originated in the same social milieu, which was none other than Alexander's own personal entourage.³

As Professor Chadwick points out,

'Two tendencies are constantly observable: (i) to connect stories or incidents which originally were quite distinct;⁴ (ii) within the

¹ This point has been touched upon by anticipation in V. C (i) (c) 3, p. 299, above.

² Meyer, E.: *Geschichte des Altertums*, vol. i, part (1), 4th ed., p. 221.

³ See V. C (i) (c) 3, p. 252, above, and V. C (ii) (a), Annex II, vol. vi, pp. 441-4, below. The Alexander Romance may formally be included in our catalogue of 'heroic' literature, since Alexander's conquest of the Achaemenian Empire was, in its Macedonian aspect, a barbarian Völkervanderung from the Thracian hinterland into the South-West Asian heart of the Syriac World. There is, however, another aspect of Alexander's work that is more prominent and at the same time more important. Besides being a barbarian war-lord, Alexander was a missionary of the Hellenic Civilization; and it was Hellenism, not Barbarism, whose domain was ultimately extended, as the result of Alexander's labours, at the expense of the Syriac Civilization and also of the Egyptian, Babylonian, and Indic civilizations, whose domains had likewise been embraced within the conquered Achaemenian Empire's frontiers. In fact, the immediate effect of Alexander's conquests was to produce a sudden vast increase in the numbers of the internal proletariat of a disintegrating Hellenic Society (see III. C (i) (a), vol. iii, pp. 140 and 149-51; III. C (i) (d), vol. iii, pp. 197-9; and V. C (i) (c) 2, in the present volume, pp. 64-5, above); and it was in the slums of this Oriental Underworld, and not in the camps of the Macedonian war-bands who were Alexander's comrades-in-arms, that the Alexander Romance took shape eventually (see V. C (ii) (a), Annex II, vol. vi, p. 444, below). This example illustrates the fact that the 'heroic' literature of the External Proletariat has its counterpart in a 'folk' literature of the Internal Proletariat. And the divergence of 'fiction' from fact, which in this Annex we are studying in a 'heroic' proletarian milieu, is characteristic of the 'folk' proletarian literature as well (as will appear from the cases examined in V. C (i) (d) 11, Annex I, vol. vi, and in V. C (ii) (a), Annex II, vol. vi, below).

⁴ Cf. Meyer, E.: *Geschichte des Altertums*, vol. i, part (1), 4th ed., p. 221. This tendency is strikingly illustrated by the growth of the legend of one of the heroes of the Classical School of Serb 'heroic' poetry, Marko Kraljević (see Chadwick, H. M. and N. K.: *The Growth of Literature*, vol. ii (Cambridge 1936, University Press), p. 388), and by the attraction, into the *Nibelungenlied*, of elements from different cycles

individual story to lose sight of all except the outstanding characters and incidents."

In fact, the finer the work of art that is the ultimate product of poetic genius and rhapsodic tradition, the farther the characters and the plot of the epos are likely to travel away from the historical persons and events by which they were originally inspired. The *chef d'œuvre* of creative perversion of the historical truth has perhaps been achieved in the 'heroic' poetry of the Serbian external proletariat of Orthodox Christendom, in which an historical hero, Vuk Branković, has been transfigured into a 'fictitious' traitor, and an historical traitor, Marko Kraljević, into a 'fictitious' hero.²

and of characters from distant ages (see Meyer, E.: *Geschichte des Altertums*, vol. ii, part (1), 2nd ed. (Stuttgart and Berlin 1928, Cotta), p. 296). In the Russian 'heroic' tradition the figure of the historical Cossack pioneer Yermak, who led the vanguard in the expansion of the Russian Orthodox Christendom across Siberia in the ninth decade of the sixteenth century of the Christian Era (see II. D (v), vol. ii, p. 157, and IV. C (iii) (c) 3 (α), vol. iv, p. 497, above), has similarly been attracted into the saga of Ilya of Murom in the Kiev Cycle of Russian 'heroic' poetry, which is an echo of historical events that had occurred four hundred years, at the latest, before Yermak's day (see Chadwick, op. cit., vol. ii, p. 50). One of the simplest and most easily intelligible illustrations of this tendency is the coalescence of two historical personages who happen to be one another's namesakes into a single character of 'heroic' saga. For example, the 'Prince Vladimir of Kiev' who is the equivalent of King Arthur in the Kiev Cycle of Russian 'heroic' poetry is a 'fictitious' compound of the two historical war-lords Vladimir I (*militabat* A.D. 980-1015) and Vladimir II (*militabat* A.D. 1113-25) (Chadwick, op. cit., vol. ii, pp. 24 and 34).—A.J.T.

² Subotić, D.: *Yugoslav Popular Ballads, Their Origin and Development* (Cambridge 1932, University Press), pp. 84-7. Compare Chadwick, op. cit., p. 318. For the stages in the evolution of the historical Vuk Branković into a 'fictitious' traitor see Chadwick, H. M. and N. K.: *The Growth of Literature*, vol. ii (Cambridge 1936, University Press), p. 382. For the converse process of the embellishment of the figure of Marko Kraljević see op. cit., pp. 385-8. The good fortune of Marko Kraljević may prove to have been shared by a still more famous hero of 'heroic' saga. A gloss on a passage in the work of the Britanno-Roman historian Nennius (*Historia Brittonum*, chap. 56) gives an odious picture of Arthur. The following note on this point has been most kindly communicated to the writer of this Study by Professor H. M. Chadwick:

"The text of most of the MSS. is as follows (I am quoting from F. Lot's edition): "Tunc Arthur pugnabat contra illos in illis diebus cum regibus Brittonum, sed ipse dux erat bellorum." C and L add the following sentences: "Et in omnibus victor extitit. Mab Uter Britannice, filius horribilis" Latine, quoniam a puericia sua crudelis fuit. Artur Latine translatus sonat 'ursum horribilem' vel 'malleum ferreum' quo confringuntur molae leonum." Lot says: "add. de plusieurs mains de C copiée par L." I don't know the MSS., but I am under the impression that the additional passage is a gloss—or rather a series of glosses—in C, and that it is incorporated into the text in L. (C is Corp. Chr. Coll. Camb. No. 139; L is Camb. Univ. Libr. Ff. I.27.) In the "Lives" of saints Arthur sometimes behaves in a tyrannical way to a saint. Then the saint performs a miracle, and Arthur becomes penitent and generous. But there is one passage in the Prologue to the Life of St. Cadoc which represents Arthur in a rather more unsympathetic light, and which may perhaps interest you, if you have not seen it. Gwynllw (Woollo), father of Cadoc, has eloped with Gwladys, daughter of Brychan, and is fleeing to his own country, hotly pursued by Brychan and his army. Arthur is playing dice with Cai and Bedwir on the top of a hill, as they pass. He is enraptured by the girl's beauty, and proposes to appropriate her for himself. But Cai and Bedwir say that this would be disgraceful, and that they ought to protect the distressed. So they come to the rescue of the lovers. Woollo and Gwladys eventually became saints, and Woollo's abode is now the cathedral of Newport. But I should doubt if the above incident is an early story. I have taken it from Rees' *Lives of the Cambro-British Saints*, p. 311 f. The Life of St. Cadoc is believed to date from circa A.D. 1075."

Are we here catching a glimpse of an historical Arthur whose authentic lineaments have been embellished out of all recognition in the 'heroic' tradition from which all our other pictures of Arthur are derived? For the historical Marko Kraljević see also V. C (i) (d) 6 (α), p. 462, footnote 2, above.

Besides taking these enormous liberties with the historical persons and events which it does choose to mention, 'heroic' poetry is apt to pass over in silence the persons and events which are actually of the most outstanding historical importance in the age with which the poems are concerned.

'It is . . . a curious fact that Clovis and his great achievements seem to be entirely unnoticed in poetry; [and] it appears . . . that, though most of the principal Teutonic nations are represented in our stories, the relative prominence assigned to them does not at all correspond to what we should expect. Most remarkable is the fact that in stories relating to the Continent nearly all the chief characters (Eormenric, Theodric, Guthhere, Attila, etc.) belong to nations which had passed out of existence before the end of the sixth century.'¹

For the historian it is a paradox that 'the Frankish nation, which ultimately became dominant, is but poorly represented'² in the Teutonic Epic; but this is by no means the greatest of the paradoxes with which the Teutonic Epic confronts him. The greatest of all is the at first sight astonishing fact that the Teutonic Epic almost entirely ignores the existence of the Roman Empire and *a fortiori* the history of the Hellenic Civilization of which the Roman Empire was the universal state.³ How is this silence to be explained, when the age with which these Teutonic 'heroic' poems are concerned is precisely the post-Hellenic interregnum which was occupied by the *Völkerwanderung* of the North European and other transfrontier barbarians into the territories of the Roman Empire?

'The period . . . coincides with what is generally known as the Age of National Migrations (*Völkerwanderungszeit*). It was during this period that many of the Teutonic nations broke through the frontiers of the Roman Empire and carved out for themselves extensive kingdoms within its territories. Among these were the realms of Guthhere and Theodric, and in part also that of Attila. There is no doubt that in all these cases the conquest of the Roman provinces brought with it a great accession of wealth and profoundly affected the life of the invaders.'⁴

More than that, it is this very experience of breaking through the Roman frontiers and becoming masters of a derelict empire, after having been wanderers in a wilderness, that appears to have evoked the Epic in the barbarians' imaginations; and the victorious

¹ Chadwick, *The Heroic Age*, pp. 31-2; compare p. 39.

² *Ibid.*, p. 39.

³ 'It is by no means especially the important, nor indeed even the most momentous, events of the age that are immortalized in the [Teutonic] Epic Tradition. So far from that, the tradition knows nothing of the conflicts with Rome, of the invasion of the Roman provinces, or even of the bare existence of the Roman Empire, or, again, of the battle on the Catalaunian Plains.'—Meyer, E.: *Geschichte des Altertums*, vol. ii, part (1), 2nd ed. (Stuttgart and Berlin 1928, Cotta), p. 295.

⁴ Chadwick, *The Heroic Age*, p. 28.

feat of arms, with this accompanying outburst of 'heroic' poetry, was the last act in a long drama of frontier warfare between the external proletariat and the dominant minority of the Hellenic Society. It was in response to the challenge of this frontier warfare that the barbarian war-lords and their war-bands and their poetry and their pantheon all arose.¹ What has moved the authors of the Teutonic Epic to leave unsung the Roman *causa causans* of their own barbarian art and barbarian world?

The first point to notice is that this remarkable silence is not unique. While we should never have suspected the existence of the Roman Empire and the Hellenic Society—of which we are so amply informed by contemporary Greek and Latin books, documents, and inscriptions—if the Teutonic Epic had been our only source of information, it is a fact that, until some of the public records of 'the New Empire' of Egypt were discovered and deciphered by our modern Western archaeologists, we actually never did guess from the 'heroic' tradition of Israel, as it has come down to us in the Pentateuch, that Palestine in the second millennium B.C. was under an Egyptian dominion which had been long established there over the domain of a foregoing abortive Syriac Civilization.² In the narrative in the Book of Joshua there is no hint that the Canaanites whom the Israelites were assailing were subjects of 'the New Empire' of Egypt, and that many of the cities of Canaan were held at this time by Egyptian garrisons.³ Thus the 'heroic' literature of Israel boycotts an Egyptian Empire as rigidly as the Roman Empire is boycotted by the Teutonic Epic. What is the explanation of this consistently strange behaviour of barbarian poets who ignore the empires which their heroes are engaged in destroying? If the barbarian war-lord's strongest desire is for fame, and if the barbarian minstrel's first business is to give this desire satisfaction,⁴

¹ The nature and genesis of this 'heroic' society is examined further in Part VIII, below.

² For this abortive Syriac Civilization—which has, of course, to be distinguished from the historic Syriac Civilization which afterwards came to birth in the same region—see II. D (vii), vol. ii, pp. 388–91, above.

³ On this silence of the Books of Joshua, Judges, and Samuel in regard to an Egyptian rule in Palestine which lasted on into the twelfth century B.C. see Chadwick, *The Growth of Literature*, vol. ii, pp. 634 and 686, and Meyer, E.: *Geschichte des Altertums*, vol. ii, part (1), 2nd ed., p. 487, footnote 1: 'The Israelitish tradition has lost all recollection of these events [the punitive expedition of the Pharaoh Merneptah against the Israelitish settlements in the hill country of Ephraim at some date before the close of the thirteenth century B.C.] as completely as, for example, the Teutonic Saga has lost all recollection of the [North European barbarians'] conflicts with the Romans.' The Pentateuch does, however, contain a hint (though a very inadequate one) of the part which was played in the genesis of the historic live-born Syriac Civilization by refugees from the Minoan World (see I. C (i) (b), vol. i, p. 102, footnote 2, above).

⁴ For the 'Heaven' in which the children of the Hellenic internal proletariat are bidden in the Gospel (Matt. vi. 20) to lay up treasure for themselves, the External Proletariat, in its 'Heroic Age', substitutes the glory that is conferred by canonization as a hero of poetry (Teggart, F. J.: *The Theory of History* (New Haven 1925, Yale University Press), pp. 13–14).

why suppress all mention of a feat of arms which is the greatest that any barbarian war-lord can achieve? Why leave unsung the conquest of long-coveted Gaul and of distant sea-girt Africa, and the sack of Rome herself, in order to make poetry out of rival war-lords' petty conflicts with one another *μήλων ἕνεκ' Οἰδιπόδαο*?¹

For the sophisticated historian it is hard to believe that the barbarian poets are not guilty of a conspiracy of silence to which they have been prompted by some inexplicable prejudice or else by sheer caprice. But it is the historian himself who has conjured up this insoluble problem by making the flagrantly unhistorical mistake of ascribing his own interests and outlook to authors who are poets and not historians and whose social milieu is a barbarian war-band and not a civilization.

"The supposition that it is an interest in History that keeps alive [the memory of] historical events [when these are the subject of "heroic" poetry] is merely an illusion in the mind of Posterity. In reality these tales survive thanks to just those elements in them that are unhistorical—elements which may be of a predominantly mythical or religious, or of an exclusively poetical, order. The true course of events is a matter of complete indifference [to the poet and his audience]."²

There is, in fact, no warrant for assuming that the authors of 'heroic' poetry are interested in historical truth at all, and *a fortiori* no likelihood that they compose their compositions for the purpose of giving Posterity an accurate and justly proportioned historical record of the age in which their heroes have been living. When once we rid our minds of these rather fantastic *a priori* postulates, we can perceive the patent fact that the silence of the Teutonic Epic in regard to Clovis and to Rome is neither capricious nor deliberate.

It is not capricious; for what the 'heroic' poet wants is a suitable theme for his art; and, from his point of view, both Rome and Clovis would be 'bad subjects'. Clovis is the shrewd calculating politician who has been born into the barbarian war-lord's harness and who successfully overthrows his rivals because he possesses qualities, 'making for success', that are rarely developed in men in his position; but these very qualities that have made Clovis a flaming political success, and therefore an outstanding historical figure, are obviously the marks of a rather prosaic and sordid character which is stony ground for a poet's imagination to cultivate.³ As a human subject for poetry, how can a mere 'maker of

¹ Hesiod: *Works and Days*, l. 163.

² Meyer, E.: *Geschichte des Altertums*, vol. i, part (1), 4th ed., p. 222.

³ This point has been touched upon, by anticipation, in V. C (i) (c) 3, pp. 296 and 297-9, above, in connexion with the history and the poetry of the Serb external proletariat of the main body of Orthodox Christendom. In this context we have

history' like Clovis compare in poetic interest with an ideal tragic hero like the historically unimportant Guthheres and Siegfrieds?¹ And, even in corporate political terms, how can a Frankish tortoise creeping steadily towards hegemony compare in poetic pathos with a Gothic hare bounding headlong to destruction?² As for the Romans, it may be true that they have been unintentionally the prime movers of the *Sturm und Drang* of the barbarian 'Heroic Age', besides now being the principal victims of it. But how can an unsophisticated poet make convincing characters for his tale out of a strange people? How can he attempt to portray, from within, a soul that, for him, is a sealed book? The contemporary citizen of the Roman Empire is spiritually quite beyond the ken of the barbarian minstrel and his barbarian audience in every one of this Roman stranger's diverse tastes and activities—whether he is watching a show in the amphitheatre or gossiping in the baths or discussing the nature of the Trinity or commenting on the *Timæus* or writing a history of his own times. And if the minstrel knows his business he will not attempt to handle subjects that are intractable to his imagination.³

On this showing, we can see that the Teutonic Epic's silence regarding the Romans and Clovis, and the Old Testament's silence regarding the Egyptian officials—and all but silence regarding the Minoan refugees—in the Promised Land, is so far from being capricious that it is not even deliberate. Assuredly the poet does not ever consciously take a decision to avoid mentioning such people; he passes them over quite unconsciously in his practice

observed that the Hajduk and Uskok cycles of Serb 'heroic' poetry, which have for their theme the earlier stages of an ultimately successful Serb breach of an Ottoman *limes*, are artistically inferior to the works of the Classical School of Serb 'heroic' poetry, which has for its theme the crushing defeat of the Serb war-bands by the founders of the *Pax Ottomanica* at the close of the Orthodox Christian 'Time of Troubles'. In the same context, again, we have seen that the nineteenth-century Serb counterparts of Clovis have proved to be as refractory as Clovis himself to conversion into subjects of 'heroic' poetry.

¹ In its disdain for mere material success the Barbarian Society of 'the Heroic Age' agrees with the Gospel in its negative precept 'Lay not up for yourselves treasures upon Earth' (Matt. vi. 19).

² This contrast between the respective careers of the Goths and the Franks has been noticed in V. C (i) (c) 3, p. 217, footnote 1, above.

³ The soundness of a rule of the barbarian poet's art which has perhaps never been consciously formulated, yet has certainly seldom been transgressed in practice, is demonstrated by the signal failure of the bards of a Russian school of 'heroic' poetry to find fruitful subjects for their art in the sophisticated social life of the Westernized Russian Orthodox Christendom of the Post-Petrine Age (see V. C (i) (c) 3, pp. 302-3, above). The exceptional aberration, in this Russian case, of the proletarian artist's usually sagacious sense of tact is perhaps to be explained by the fact that the Westernization of Russian life was set in train, without any dynastic or even personal break, by a Muscovite Tsar whose predecessors had provided themes for 'heroic' poetry that were quite after the poet's heart. If the Western Civilization had been imposed upon Russia, not by the native hands of a Peter Romanov, but by the alien hands of a Polish King Sigismund III or a Swedish King Charles XII, we may guess with some confidence that the contemporary Russian bards would then have passed over in silence the works and days of such alien performers of a Russian Peter's historic handiwork.

of an art in which he is following the guidance of his artistic intuition without reflecting upon or defining what he is doing and without ever formulating his practice in rules. It has not occurred to him to differentiate between fact and fiction.¹ He simply has an eye for a promising subject and a gift for presenting his theme in a telling way; and in innocently following these lights he has stumbled upon a method which Aristotle has ascribed to him—correctly enough, as regards what our ‘heroic’ poet actually does, but with a fantastic perversion of the truth in so far as the sophisticated philosopher takes it for granted that the barbarian artist is as coldly and consciously purposive when he is composing a poem as Aristotle himself is when he is constructing a syllogism.

‘Homer is the great master of the art of telling falsehoods right. . . . From him one learns to prefer what is impossible but plausible to what is possible but incredible.’²

For the barbarian artist and his audience Beowulf’s adventures in Grendel’s lair in the depths of the lake are more credible than the life which a Theodoric begins to lead when, as the guerdon for his victory in the Rabenschlacht, he exchanges the Gothic camp for the Roman palace in order to rule the Roman People in Italy as the Viceroy of the Emperor at Constantinople. The poet does not seek to follow his lost leader through the folds of the palace-curtains; and as an artist he is right—however culpable his lack of curiosity might have been in the historian that this poet has never set out to be.

On this showing, there is nothing either unusual or surprising in the silence with which the historic sack of Cnossos *circa* 1400 B.C. and the historic sea-fight off the coast of Egypt *circa* 1200/1190 B.C. are passed over in the *Iliad* and the *Odyssey*, or in the comparable silence of the Teutonic Epic in regard to the momentous battle of A.D. 451 on the Catalaunian Plains and to a sack of Rome in A.D. 410 which reduced Saint Jerome to tears and moved Saint Augustine to write *De Civitate Dei*.³

¹ On this point see I. C (iii) (e), Annex I, vol. i, p. 442, above, and V. C (ii) (a), Annex II, vol. vi, pp. 438–64, below.

² Aristotle: *Poetics*, 1460 A, quoted in I. C (iii) (e), Annex, vol. i, p. 450, footnote 1, above.

³ See V. C (i) (c) 3, pp. 223–5, above.

FATALISM AS A SPIRITUAL TONIC

IF we have been right in suggesting that a deterministic creed is an expression of that sense of drift which is one of the psychological symptoms of social disintegration, we have still a problem to solve before we can claim that our proposition has been demonstrated; for it is an undeniable fact that many people—both individuals and communities—who have been avowed determinists have actually been distinguished by an uncommon energy, activity, and purposefulness, as well as by an uncommon assurance.

'The central paradox of religious ethics—that only those are nerved with the courage to turn the World upside down who are convinced that already, in a higher sense, it is disposed for the best by a power of which they are the humble instruments—finds in [Calvinism] a special exemplification.'¹

Calvinism, however, is only one of several notorious examples of a fatalistic creed which is apparently in contradiction with the conduct of its votaries. The temper displayed by the Calvinists (Genevan, Huguenot,² Dutch, and Scottish) has likewise been displayed by other theistic predestinarians: for example, by the Jewish Zealots, by the Primitive Muslim Arabs, and by other Muslims of other ages and races (for instance, by the Janissaries who were observed by Rycaut³ and by the Mahdists who were overthrown by Kitchener).⁴ And in the nineteenth-century Western Liberal votaries of Progress and the twentieth-century Russian Communist Marxians we see two predestinarian sects of an atheistic turn of mind whose *éthos* is manifestly akin to that of their theistic fellow votaries of the idol of Necessity. The parallel between Communists and Calvinists has been drawn by the brilliant pen of the English historian whom we have quoted above.

'It is not wholly fanciful to say that, on a narrower stage but with not less formidable weapons, Calvin did for the *bourgeoisie* of the sixteenth century what Marx did for the proletariat of the nineteenth, or that the doctrine of Predestination satisfied the same hunger for an assurance that the forces of the Universe are on the side of the Elect as was to be assuaged in a different age by the theory of Historical Materialism. He

¹ Tawney, R. H.: *Religion and the Rise of Capitalism* (London 1926, John Murray), p. 109.

² For the prowess of the Huguenots there is an alternative explanation. It is possible that it may be due, not to their creed, but to their experience as a penalized minority (see II. D (vi), vol. ii, p. 250, above).

³ See the quotation from Rycaut in V. C (i) (d) 4, on p. 430, above.

⁴ See V. C (i) (c) 3, pp. 295-6, above, and V. C (ii) (a), vol. vi, p. 227, below.

set their virtues at their best in sharp antithesis with the vices of the established order at its worst, taught them to feel that they were a Chosen People, made them conscious of their great destiny in the Providential plan and resolute to realize it. . . . Their triumphs in the past, their strength in the present, their confidence in the future, their faith in themselves and their difference from their feebler neighbours—a difference as of an iron wedge in a lump of clay—made them, to use a modern phrase, class-conscious. Like the modern proletarian, who feels that, whatever his personal misery and his present disappointments, the Cause is rolled forward to victory by the irresistible force of an inevitable evolution, the Puritan *bourgeoisie* knew that against the Chosen People the gates of Hell could not prevail. The Lord prospered their doings.¹

The historical link between sixteenth-century Calvinism and twentieth-century Communism is nineteenth-century Liberalism.

'Determinism was much in vogue by this time; but why should Determinism be a depressing creed? The law which we cannot escape is the blessed Law of Progress—"that kind of improvement that can be measured by statistics". We had only to thank our stars for placing us in such an environment, and to carry out energetically the course of development which Nature has prescribed for us, and to resist which would be at once impious and futile. Thus the Superstition of Progress was firmly established. To become a popular religion, it is only necessary for a superstition to enslave a philosophy. The Superstition of Progress had the singular good fortune to enslave at least three philosophies—those of Hegel, of Comte, and of Darwin. The strange thing is that none of these philosophies is really favourable to the belief which it was supposed to support.'²

This at first sight contradictory combination of conduct and creed is evidently of too frequent an occurrence to be fortuitous. Are we to infer that a belief in Predestination is actually a spur to action? And, if this conclusion forces itself upon us, can a predestinarian creed still properly be regarded as an expression of the sense of drift?

These pertinent questions may perhaps be met with the following answer. The belief in Predestination does manifestly act on occasions as a spur to action³—a spur whose prick is exceedingly stimulating—but (if we may vary the simile in order to discover how far it can be pressed) a predestinarian creed may perhaps also be likened to a tonic which—like the drams drunk at half-time by

¹ Tawney, *op. cit.*, pp. 112 and 210.

² Inge, W. R.: *The Idea of Progress* (Oxford 1920, Clarendon Press), pp. 8-9.

³ The same stimulus has even been derived, by at least one famous man of action, from the usually enervating belief in the omnipotence of Chance. 'Imperatorem esse Fortunae est' was a favourite saying of Constantine the Great, but the moral that Constantine drew was 'agendum ut sint imperio digni quos regendi in necessitatem vis fatalis adduxerit'.—*Historia Augusta*, 'Antoninus Heliogabalus', chap. 34.

improvident players in the football-match described in *Tom Brown's Schooldays*¹—is transitory in its effect and is also apt to leave the drinker's last state worse than his first. Taking a hint from one of the passages quoted above from Professor Tawney, we may also surmise that Predestinarianism is a belief to which people do not readily take unless they are consciously in need of a pick-me-up. 'The hunger for an assurance that the forces of the Universe are on the side of the Elect' may have to be felt before Fatalism can become attractive; and such hunger is surely evidence that the person who feels it has been losing faith in his own power to control events, or, in other words, has been succumbing to the sense of drift.

On this showing, the adoption of a predestinarian creed may be interpreted as an attempt to fortify a weakening human will by making the bold assumption that this human will is coincident with the Will of God or with the Law of Nature or with the decrees of Necessity, and is therefore bound, *a priori*, to prevail. If such a belief is embraced by the convert with even a modicum of sincerity, it is easy to understand how it may give power to his elbow for a season. But by the same token it is evident that the stimulus is artificial; and we may also reflect that, if the predestinarian really believed in Predestination in his heart of hearts, he would turn quietist—which he does not—instead of turning rampant as he does.² The demoniac effort which the predestinarian is prone to make for the purpose of ratifying the decrees of Fate by his own exertions is an idle and indeed an impious activity if the predestinarian's professed convictions are to be taken seriously; and we may venture to draw the conclusion that his belief in the coincidence of his own will with the inevitable course of Destiny is hollow in the exact measure of the believer's display of 'dynamism'. It is at any rate indisputable that Predestinarianism does resemble dram-drinking in this, that the practice revenges itself

¹ 'The leaders are past oranges and apples, but some of them visit their coats and apply innocent-looking ginger-beer bottles to their mouths. It is no ginger-beer, though, I fear, and will do you no good. One short mad rush, and then a stitch in the side and no more honest play: that's what comes of those bottles.'—Hughes, T.: *Tom Brown's Schooldays*, chap. 3.

² It is worth recalling in this context that, in Jewry to-day, Quietism is the attitude of the *Agudath Israel* towards that hope of a return to the Promised Land which is cherished by Jews of all persuasions, while the Zionists are activists both on principle and in practice. The *Agudath Israel* are a strictly orthodox sect who believe implicitly that an ultimate restoration of Jewry is God's will, and that He is certain to accomplish this purpose of His in His own way and in His own time. On the other hand the Zionists partake of the secularist rationalism of the modern Western Goyyim from whom Zionism has taken the tone of its nationalism (see V. C (i) (c) 2, p. 76, above). In an earlier chapter of Jewish history the attitude of the Rabbi Johanan ben Zakkai presents a similar contrast to the behaviour of the Zealots (see loc. cit., pp. 75–6). For the positive difference between the negatively identical Quietism or Non-Violence of the *Agudath Israel* on the one hand and Rabbi Johanan ben Zakkai on the other see V. C (i) (c) 2, Annex III, pp. 588–9, above.

upon the addict as soon as things begin to go badly with him. For it becomes impossible for him to equate Destiny with his own will as soon as this will of his fails to impose itself triumphantly upon his environment; and, when this failure (which is inevitable sooner or later) eventually overtakes him, then he is driven to equate Destiny, no longer with a will of his own that is now being frustrated, but, on the contrary, with those intractable external circumstances to which this devastating frustration has to be ascribed. When this happens, the predestinarian's artificially stimulated confidence and energy give place abruptly to a proportionately exaggerated discouragement and lassitude. The 'dynamism' of yesterday has to be paid for with the 'defeatism' of the morrow.

ANNEX I TO V. C (i) (d) 6. (γ)

THE NAPOLEONIC EMPIRE AS A UNIVERSAL STATE

THE Napoleonic Empire is usually regarded as an episode in the history of France or—on a rather wider view—in the history of the Balance of Power between the Great Powers of the Western World in the modern chapter of Western history; and from this angle of vision the Napoleonic episode wears the appearance of a sensational interlude which is oddly out of relation with both its antecedents and its sequel. In these customary terms the best account of the Napoleonic Empire that we shall find ourselves able to give is that the titanic personal genius of Napoleon, harnessing to its own aims the no less titanic social driving-force which had been generated by the French Revolution, came within an ace of overthrowing a Balance of Power between the principal states of the Western World which had been steadily maintained over a period of some three hundred years before Napoleon entered the arena; but we shall have to add that Napoleon's career was a brief one¹ and that the eventual miscarriage of his all but successful attempt to make France mistress of the Western World by delivering 'knock-out blows' to all the other Great Powers was so decisive that, since the morrow of the Battle of Waterloo, the history of the Western World might appear to have resumed its pre-Napoleonic course as though the Napoleonic episode had been nothing but a pointless aberration.² Such an account of the Napoleonic episode is so manifestly unsatisfactory and unconvincing that any student of history will be impelled to question the validity of an outlook from which the object of study assumes so queer a shape.

Can we, then, espy anything radically wrong with that conventional way of looking at the Napoleonic Empire which we have just been essaying? Perhaps the mistake may lie in allowing ourselves to see this so-called 'French Empire' through French eyes;

¹ From the Italian campaign of A.D. 1797 to the Hundred Days in A.D. 1815 inclusive, Napoleon's career extended over no more than nineteen campaigning seasons, and the widest extension of the Napoleonic Empire, which did not outlast the year 1812, had not been attained until the close of the year 1809.

² The psychological effect of the Restoration of 1814-15 in one of the Rhenish districts of the non-French portion of the Napoleonic Empire has been vividly conveyed, from a deeply felt personal experience, by Heine in the last of the three pieces that constitute the *Reisebilder*. In 'Das Buch Le Grand' the German-Jewish man-of-letters shows us the *Ancien Régime* clicking back into place with an instantaneous precision which made the Napoleonic interlude seem, in retrospect, as though it must have been a mere political mirage.

'Wo man sonst Französisch sprach, ward jetzt Preussisch gesprochen; sogar ein kleines preussisches Höfchen hatte sich unterdessen dort angesiedelt; und die Leute trugen Hoftitel; die ehemalige Friseurin meiner Mutter war Hoffriseurin geworden, und es gab jetzt dort Hofschneider, Hofschuster, Hofwanzentvilgerinnen, Hofschneaps-läden; die ganze Stadt schien ein Hoflazareth für Hofgeistesranke.'

for though, at first sight, it may seem sheer common sense to take a French view of an empire that was built up by French arms round a French nucleus, we find in general that as a matter of fact an empire is apt to play a less important part in the lives of the empire-builders who have exerted themselves to erect it as a monument to their own egotism than it plays in the lives of their involuntary subjects who have been annexed by force of arms and who have been chafing under a yoke which they feel to be both cramping and humiliating.¹ If we are to apply this general law of empire-building to our Napoleonic case, we must begin by concentrating our attention upon the non-French portion of the Napoleonic Empire in order to observe how this composite body politic looks from a standpoint which is just the opposite of that which its historians have usually taken.

Our first step will be to remind ourselves of the territories which this non-French portion of the French Empire embraced at its greatest extension in the years 1810-11; and to define this area we must exclude France proper, up to her pre-imperial limits as these stood in 1792, besides excluding all countries which cannot be reckoned to have been effectively under the government or the control of the Emperor Napoleon, even at the summit of his power. On this criterion we must unquestionably exclude the Ottoman Empire and Great Britain and the Overseas World (none of which ever fell into Napoleon's hands save for an ephemeral occupation of the soil of Egypt and possession of the title-deeds to Louisiana); and we should scarcely be justified in including either Prussia or Austria or Russia—in spite of the fact that, at certain times between 1805 and 1813, all three of these East European Powers were dominated by Napoleon in different degrees. *A fortiori* we cannot include Spain and Portugal, which were partially occupied by Napoleon's armies without ever being completely subdued. We are left with two sets of territories which hang together *de facto* in spite of an arbitrary juridical distinction which was drawn by the French empire-builders on the principle of *divide et impera*. On the one hand we have the non-French

¹ This paradoxical 'law' of empire-building is tested empirically in Part VI, below. In the Hellenic case there is evidence to show that the conception of the Roman Empire as a Hellenic universal state was first conceived in the minds of the Romans' Greek subjects (see the passage quoted in V. C (i) (c) 4, pp. 343-4, above, from Aelius Aristides' *In Romam*) and that the lesson was only learnt at second hand and against the grain by the Romans themselves, who were slow to acquiesce in the idea that an empire built in the sweat of Roman brows was not, after all, an exclusively Roman affair (see Vogt, J.: *Orbis Romanus* (Tübingen 1929, Mohr), pp. 9-10). In Oswald Spengler's picturesque language, 'Imperialism is so necessary a result of every civilization that it takes a people by the scruff of the neck and hurls them into the role of rulers if they refuse to play. The Roman Empire was not a product of conquest. The *Orbis Terrarum* forced itself into this mould and compelled the Romans to give it their name' (Spengler, O.: *Der Untergang des Abendlandes*, vol. ii (Munich 1922, Beck), p. 529).

territories which were annexed to the French Empire outright: the new French departments which were constituted out of the Netherlands; out of the German districts on the left bank of the Middle Rhine and on the lower reaches of the Ems, Weser, and Elbe; out of the Italian districts in the Upper Basin of the Po and along the Mediterranean coast from Nice to Terracina (including the whole of the basins of the Arno, Ombrone, and Tiber); and out of the ex-Venetian and ex-Hapsburg territories on the eastern sea-board of the Adriatic and in its hinterland from the Bocche di Cattaro to the eastern bank of the Isonzo and to the headwaters of the Drave. On the other hand we have those dependencies of the French Empire which were formally not less independent than Prussia, Austria, Russia, or Spain, but were practically not less subject to French control than the neighbouring non-French territories which had been reduced officially to the status of integral parts of the French Imperial body politic; and this second group includes not only the Napoleonic Kingdom of Italy (which was an integral part of the French Empire in all but name), but also the Kingdom of Naples, the states members of the Confederation of the Rhine, the Duchy of Warsaw, and Switzerland, together with such small fry as the principalities of Lucca, Piombino, Benevento, Pontecorvo, and Neufchâtel, and the republics of San Marino and Danzig.

When these two groups of territories have been amalgamated in our mind's eye, we shall find that, if we leave out of account the two outlying dependencies of Warsaw and Naples, the residue almost exactly coincides in area with the domain of a medieval city-state cosmos which we have plotted out in another context.¹ And, if we now set ourselves to think of the Napoleonic Empire as a belated episode in the history of this medieval galaxy of Northern Italian and Western German and Flemish city-states, we shall find historical explanations for the extent and the date and the duration of Napoleon's conquests, and for the provenance of Napoleon himself, instead of having to resign ourselves to being baffled by a series of historical problems that are insoluble so long as we insist upon thinking of the Napoleonic Empire as a momentary aggrandizement of modern France in the course of her latter-day competition with the other Great Powers of the modern Western World.

In the first place we shall observe that the extent of the Napoleonic Empire, as we have defined it above, is just what we should expect if its social function was to provide the medieval Western city-state cosmos with a universal state (in the sense in which that

¹ In III. C (ii) (b), vol. iii, pp. 344-7, above.

term is used in this Study).¹ For, in embracing the whole of the cosmos for which it was performing this service, and at the same time including under the same political aegis a broad circuit of extraneous territories, the Napoleonic Empire, looked at in relation to that medieval Western cosmos; displays the same political structure as the Roman Empire looked at as the universal state of the Hellenic World. In this aspect the Roman Empire can be dissected into three distinct geographical parts: first, the Greek core of the Hellenic World which the Roman empire-builders had succeeded in uniting under their own rule; second, the Italian marches of the Hellenic World, which had nurtured these Roman empire-builders and had provided them with the necessary base of operations; and, third, a fringe of alien territories (Syriac and Egyptiac in their culture) which had been incorporated into the Hellenic World in the course of its disintegration and were consequently at the disposal of the Roman empire-builders as materials for adding an architecturally superfluous Oriental wing to their Hellenic political edifice. If we regard the Napoleonic Empire as the universal state of the medieval Western city-state cosmos, we shall find that it resolves itself into three corresponding component parts. In the first place it embraced the Tuscan and Lombard and Swabian and Rhenish and Flemish and Hanseatic core of the cosmos to which we are relating it; in the second place it embraced, in France, a march which played the same active part in the construction of the Napoleonic Empire as was played in the construction of the Roman Empire by Italy; and in the third place the Napoleonic Empire embraced, in the Duchy of Warsaw and in the Kingdom of Naples, certain originally alien territories which had been penetrated by the cultural influence of the medieval city-state cosmos during the modern centuries of its decline.

The Kingdom of Naples was a remnant of the colonial domain which the maritime Italian city-states, in partnership with Norman and other Transalpine adventurers, had acquired in the Mediterranean at the height of their medieval prosperity;² and in this connexion we may also observe that the Mediterranean island which was the birthplace of the Emperor Napoleon was one of the earliest acquisitions of the medieval Italian maritime Powers at the expense of the Syriac and Orthodox Christian worlds.³ When

¹ An explanation of the Napoleonic Empire in this sense has been foreshadowed in II. D (iv), vol. ii, p. 104, above.

² For the medieval Mediterranean empires of Venice and Genoa and Florence see III. C (ii) (b), vol. iii, p. 347, footnote 1, above. For the genesis of the Kingdom of the Two Sicilies as a Norman Western 'successor-state' of the Orthodox Christian East Roman Empire see IV. C (iii) (c) 2 (β), vol. iv, p. 353, footnote 2, and p. 406, footnote 3, above.

³ See V. C (i) (c) 3, p. 244, above. The Italian maritime Powers expelled the Arabs from Corsica in A.D. 1091 (Firenne, H.: *Les Villes du Moyen Âge* (Brussels 1927, Lamer-

we remind ourselves that the Buonaparti were not even native Corsicans but were colonists of Florentine origin,¹ we shall perceive that Napoleon's provenance—so far from being one of the curiosities of history, as it is bound to appear if we think of him primarily as a ruler of France²—is eminently appropriate to the emperor of a universal state that had been called into existence in order to serve the needs of a cosmos of city-states in which Florence was a focal point and in which even Corsica lay within hail of two such brilliant maritime stars in the galaxy as Genoa and Pisa. When we see this Florentino-Corsican military adventurer in the French service winning his spurs in a campaign resulting in the expulsion of the Austrian 'barbarians' from Italian soil, and then immediately following up this success by cajoling his French employers into entrusting him with the command of a French expeditionary force for the purpose of gaining possession of the lost medieval Italian overseas empire in the Levant, it seems hardly fanciful to suggest that, in these illuminating early chapters of his career, Napoleon was—albeit unconsciously—being drawn into the wake of his medieval Italian forebears.³

Again, if we observe the date at which the sudden emergence of

tin), p. 82). Before the close of the eleventh century the Pisans had ousted their Genoese fellow conquerors from both Corsica and Sardinia (Schaube, A.: *Handelsgeschichte der Romanischen Völker des Mittelmeergebiets bis zum Ende der Kreuzzüge* (Munich and Berlin 1906, Oldenbourg), p. 54). But during the next two hundred years the Genoese gradually regained ground in Corsica at the Pisans' expense. In 1138 Pope Innocent II divided the ecclesiastical jurisdiction over the island between the Pisan and Genoese sees. In 1195 the Genoese established themselves at Bonifacio. In 1347 they were requested by a Corsican national assembly to assume sovereignty over Corsica. And, after a century and a half (1298–1447) of struggle for possession between Genoa and Aragon, Corsica did eventually come under a Genoese rule which was exercised first indirectly through the Bank of St. George and then, from 1559 onwards, by the Genoese Government itself.

¹ See II. C (ii) (a) 1, vol. i, p. 242, footnote 3, above.

² The date of Napoleon's birth was just late enough to allow him to be born a French subject instead of a Genoese (see V. C (i) (d) 6 (γ), p. 503, footnote 3, above). He was born on the 15th August, 1769, and a Franco-Genoese treaty executing the sale of the sovereignty over Corsica by Genoa to France had been signed on the 15th May, 1768. *De facto* the Genoese Government's exercise of authority in Corsica had been ineffective since 1729; and French troops had landed on the island with Genoese acquiescence in 1764. The resistance of the islanders to their French conquerors had collapsed only two months before Napoleon's birth, when, on the 16th June, 1769, their leaders had sailed from Corsica for Leghorn as refugees on board a British ship.

³ Consciously, perhaps, Napoleon owed the inspiration of his Egyptian Expedition to the unearthing of a plan which had been submitted to the French King Louis XIV by the Hanoverian philosopher Leibniz and had been preserved ever since, unutilized, in the French Government's archives (see Ghorbal, S.: *The Beginnings of the Egyptian Question and the Rise of Mehemet Ali* (London 1928, Routledge), p. 3); and certainly in French minds Napoleon in Egypt has commonly presented himself in the guise of a successor of Saint Louis (for the *peripeteia* in the relative military efficiency of the French invaders of Egypt and the Egyptian Mamlüks between Saint Louis' day and Napoleon's see IV. C (iii) (c) 2 (γ), vol. iv, p. 450, above). In the modern history of France, however, Napoleon's Egyptian Expedition remains, nevertheless, as oddly detached an episode as the Napoleonic Empire itself, whereas, if we regard Buonaparte in the light of a would-be founder of an Italo-Flemish universal state, his attempt to follow in the Levantine wake of his medieval Venetian predecessors will become just as intelligible as Mark Antony's attempt to follow in the footsteps of Alexander the Great.

the Napoleonic Empire interrupted the regular course of modern Western history, we shall find that this is just the time when we should expect to witness the foundation of a universal state in the history of the medieval Western city-state cosmos; for we have seen reasons for suggesting that this medieval Western sub-civilization may have broken down in the last quarter of the fourteenth century of the Christian Era;¹ and, since the average duration of those 'Times of Troubles' which intervene between the breakdown of a civilization and the rally that is signalized by the foundation of its universal state² would appear, on the statistical evidence at our command, to run to about four hundred years,³ the end of the eighteenth century, which is the moment when the Napoleonic Empire arose, is the very time when we should be expecting the appearance of some empire of this kind and scale in those parts of Western Christendom into which the medieval city-state cosmos had ramified in its heyday.

Finally we shall find that, by relating the Napoleonic Empire, as we are now doing, to the medieval city-state cosmos, we can explain the brevity of its life and the completeness of its failure to make any notable mark upon the course of Western history beyond assuring the French language of a currency as a *lingua franca*.⁴

If we glance again at the map of the Napoleonic Empire at its apogee from the morrow of the Danubian campaign of 1809 until the eve of the retreat from Moscow in 1812, and concentrate our attention, this time, upon the setting of this empire in the map of the world of the day, we shall observe that its standing during this brief spell of three campaigning seasons—A.D. 1810-12—is almost exactly analogous to that of the Roman Empire during the spell of twenty-two years which began in 168 B.C. on the morrow of the Battle of Pydna and ended in 146 B.C. with the annexation of Africa and Macedonia and the annihilation of Carthage and Corinth.⁵ For the purposes of our comparative study of the standing of the French and Roman Empires in their respective worlds during these two spells of time, we may equate Austria with Macedon; Prussia with Carthage; Spain with the Empire of the Ptolemies; Russia with the Empire of the Seleucidae; Sweden with

¹ For the symptoms of breakdown in several portions of this cosmos in the course of that quarter of a century see III. C (ii) (b), vol. iii, pp. 347-50, above.

² For the rhythm of Rout-and-Rally-and-Relapse in the disintegration of a civilization see V. C (ii) (b), vol. vi, pp. 278-87, below.

³ The statistical evidence for this Time-span is examined in Part XI, below.

⁴ For this linguistic legacy of the Napoleonic Empire—a legacy which is the *point d'attache* of the present Annex to the main thread of this Study of History—see V. C (i) (d) 6 (γ), pp. 502-6, above.

⁵ This comparison has already been foreshadowed in II. D (iv), vol. ii, pp. 103-6. See also III. C (ii) (b), vol. iii, pp. 310-14 and 339-41, and IV. C (iii) (c) 2 (α), vol. iv, pp. 265-6 and 268-9, above, and V. C (ii) (b), vol. vi, pp. 290-1, below.

the Pergamene shadow of the abortive Empire of Lysimachus; the Confederation of the Rhine with Rhodes and Numidia and the rest of those small states of the Hellenic World which had found their advantage in siding with Rome against the other Great Powers who were Rome's defeated rivals and these small states' no longer formidable neighbours; the Napoleonic Kingdom of Italy with Continental European Greece to the south of Olympus; the Italian departments of the French Empire with the Roman province of Sicily; and the Rhenish and Netherlandish and Hanseatic departments of the French Empire with Magna Graecia. This elaboration of our analogy will not be labour lost if it serves to bring out the essential points of likeness between the two international situations that we have brought into a synoptic view.

In both tableaux we see the same political landscape with its cluster of venerable and cultivated but minute and broken-down *Kleinstaaten* in the centre and with its ring of large and lusty but upstart and brutal Great Powers round the edges; in both, in the act immediately preceding the respective moments (168 B.C. and A.D. 1810) at which we are raising the curtain on the play, the impotent centre has been serving as an arena in which the boisterous giants from the outskirts have been contending for the maintenance or overthrow of a Balance of Power among themselves; and in both, at the moment of observation, the Balance has in fact been overthrown through a notable triumph of one of the competing Great Powers over its rivals. The victor—Rome in the one case and France in the other—has already set up the conventional trophy of victory in the shape of an exclusive hegemony over the whole cluster of small states in the centre of the ring; and the other Great Powers—though they have not yet been wiped off the map—have been excluded from all influence over the central area, shorn of large slices of their own metropolitan territories, and weakened to a degree at which—if they were ever to venture again to try conclusions with the victor and were to take the obvious precaution of banding themselves into a coalition for the joint conduct of this formidable enterprise—they would scarcely find themselves able, even with united forces, to face their common adversary single-handed.

The political significance of this international map is unmistakable: the old division between the small states at the centre and the Great Powers round the fringes, and the old temperate and therefore recurrent contests¹ between the Great Powers themselves,

¹ For the note of temperateness which 'so advantageously distinguished' the contests between the Great Powers of the modern Western World over a span of three centuries ending in A.D. 1783, see III. C (ii) (b), vol. iii, p. 311; IV. C (iii) (b) 3, vol. iv, pp. 148-9; IV. C (iii) (b) 5, vol. iv, p. 189; and IV. C (iii) (c) 2 (α), vol. iv, p. 283, above.

are both now on the point of being brought to an end through the forcible unification of the whole of this hitherto fragmentary world by the arms of a single Great Power which is at last on the verge of expanding into a universal state. One more round of warfare, and the process can hardly fail to be completed! And in the Hellenic case this expectation was in fact duly realized; for the sixth decade of the second century B.C. saw the extinction of the remnants of Carthage and Macedon and the reduction of the remnants of the Seleucid and Ptolemaic Empires to an impotence at which they found themselves as completely at Rome's mercy as if they had been a Pergamum or a Rhodes. In the Western case, however, the play has a denouement which runs quite counter to the plot; for the inevitable next round of warfare, which was fought out in this case in the years 1812-15 of the Christian Era, did not leave the French Empire in sole and thenceforth unchallengeable possession of a completely prostrate world. On the contrary, it resulted in the utter overthrow of a Power which at the end of the preceding act had seemed to be on the verge of becoming a universal state; and this reversal of the fortunes of France was followed by a complete rehabilitation of those rival Powers which, at the end of the preceding act, had seemed to be on the verge of annihilation. Manifestly it is the Napoleonic and not the Scipionic denouement that demands an explanation. Let us see whether we can discover one.

If we return to our comparison between a Hellenic World of the third and second centuries B.C. over which Rome succeeded in establishing a domination that was exclusive and ubiquitous and lasting, and a Western World of the eighteenth and nineteenth centuries of the Christian Era in which Napoleon tried and failed to emulate this Roman achievement, we shall be able to put our finger upon one point of difference between the two situations which is vital. The Hellenic World of which Rome made herself mistress consisted of the three parts—and these three only—which we have analysed above: first a central cluster of venerable city-states which had been the original Hellas; second an outer ring of parvenu Great Powers of a supra-city-state calibre, including the Roman Commonwealth and its four unsuccessful rivals; and in the third place an appendage of alien territories which had fallen under Hellenic rule in the course of the Hellenic Society's disintegration. We have identified three corresponding components of the world in which Napoleon failed in the nineteenth century of the Christian Era to obtain the conclusive success which the Romans had obtained in their world in the second century B.C.; but we have now to observe that, although this geographical

survey of Napoleon's world does cover the whole of the area of the medieval Western city-state cosmos up to the farthest limits of its latest expansion, it is still far from accounting for the whole of the modern Western World of Napoleon's day—whereas the area over which the Romans extended their dominion in the second century B.C. does account for the whole of the Hellenic World of that time.

In another context we have noticed that the medieval Western city-state cosmos had never succeeded in swallowing up the whole of Western Christendom at any time—not even in the heyday of the city-states in the thirteenth and fourteenth centuries.¹ The pre-existent Western feudal dispensation survived both the rise and the fall of the medieval Western city-state régime—and this not only in the Transalpine parts of Western Europe, but also in a Cisalpine Piedmont at the very gates of Milan and Genoa.² Moreover this recalcitrant major portion of Western Christendom which had held aloof from the city-state experiment contrived to be the principal beneficiary from a social and cultural venture on which it had obstinately declined to stake its own future; for, when the city-state cosmos broke down at the turn of the fourteenth and fifteenth centuries, the hitherto impenitently feudal part of Western Christendom became the residuary legatee of Tuscany and Lombardy and Flanders, and successfully rejuvenated itself by grafting the delicate shoots of a Flemish and Italian culture on to hardier French and Spanish and English stems.³ This feudal second-hand version of a medieval city-state culture was propagated, in the course of the Modern Age of Western history, not only throughout the whole feudal residue of Western Christendom within its medieval limits, but on beyond into newly discovered worlds. It made its way overseas into the Indies and Americas and overland into the Russias. These were the dimensions of the Great Society into which Napoleon was born and in which he had to work; and the two new worlds that had been brought within the ambit of the Western World during the three centuries ending in Napoleon's generation were the factors that upset Napoleon's calculations, wore down his strength, and eventually redressed the balance of the old city-state cosmos, which Napoleon had triumphantly overthrown, by bringing the whole Napoleonic edifice to the ground in irreparable ruin.

The extent and resources of these new worlds with which Napoleon failed to reckon can be measured by recurring to our comparison between the Roman political system in the years

¹ See III. C (ii) (b), vol. iii, pp. 346–7, above.

² For the imperviousness of Piedmont to the influence of the North-Italian city-state culture see IV. C (iii) (c) 2 (α), vol. iv, pp. 285–6, above.

³ See III. C (ii) (b), vol. iii, pp. 351–63, above.

168-146 B.C. and the Napoleonic political system in A.D. 1810-12. When we have accounted for everything in the Napoleonic system to which the Roman can supply a counterpart, we shall recollect that we have not found any anti-Roman counterpart of Great Britain—a Power which in A.D. 1810-12 was still holding its own against Napoleon on equal terms—and also that, in taking notice of Napoleon's incursion into the Iberian Peninsula, we have so far overlooked the immunity from French invasion which was enjoyed, from beginning to end of the Napoleonic episode, by the immense Spanish and Portuguese empires overseas under the aegis of a British Navy which held the command of the sea and made use of it in order to insulate all the Transmarine appendages of Western Europe from their normal contact with a continent that had now fallen under Napoleon's military domination. In the third place we shall observe that our equation of Russia with the Seleucid Monarchy—valid though it may be on the points of social structure and cultural role—breaks down on the point of political and military strength, which is the crucial point for our present purpose.

While the reverses which Napoleon inflicted upon Russian armies on Austrian and Prussian ground in A.D. 1805 and A.D. 1807¹ may be comparable to the Roman victories over the Seleucid King Antiochus III at Thermopylae and Magnesia in the War of 192-188 B.C., there is no parallel at all, but on the contrary an extreme antithesis, between the crushing diplomatic humiliation that was inflicted upon Antiochus IV in 168 B.C. by the Roman envoy Popillius Laenas² and the Russian Tsar Alexander's decisive

¹ See II. D (iv), vol. ii, p. 106, above.

² Popillius presented himself, without any armed force at his back, at Antiochus's camp before the walls of Pelusium, at a moment when the Seleucid monarch had in his grasp the metropolitan territory of the Ptolemaic Empire which was the historic rival of the Seleucid House. In these circumstances Popillius handed Antiochus an ultimatum from the Roman Government in which the aggressor was called upon to surrender and renounce all his actual and prospective gains at the Ptolemaic Empire's expense. When Antiochus, after reading the text of the ultimatum, asked the bearer for time to consult his ministers on the momentous questions that it raised, Popillius drew a circle round the King with his stick and insisted upon having his answer before Antiochus stepped out of the ring. After a brief hesitation Antiochus gave Popillius to understand that he accepted the Roman Government's terms without reservation. Evidently the paramount consideration in Antiochus's mind, when he submitted to a public humiliation against which his fiery temperament must have vehemently rebelled, was the knowledge that, if he accepted the Roman challenge, he would assuredly bring upon himself and his empire a repetition of the disaster into which his father Antiochus III had blundered in the Romano-Seleucid War of 192-188 B.C. At the same time, according to one modern Western master of the subject (Tarn, W. W.: *The Greeks in Bactria and India* (Cambridge 1938, University Press), p. 192), Antiochus IV, when he turned the other cheek to the imperious Roman envoy in 168 B.C., was moved not only by prudence but also by ambition. According to this interpretation of Antiochus IV's policy and acts, the conquest of Egypt was for him a secondary aim which he was determined not to allow to divert his energies and resources from his primary aim of reincorporating into the Seleucid Empire the whole of the Far East of the post-Alexandrine Hellenic World, including the vast new dominions which the Bactrian Greek prince Demetrius the son of Euthydemus had recently acquired on Indian ground south-east of the Hindu Kush.

victory over Napoleon in the military campaign of A.D. 1812. For a Roman parallel to Napoleon's retreat from Moscow we must look, not to any Seleucid feat of arms, but to the annihilating defeat which Crassus suffered in 53 B.C. at the hands of the Parthians; and even Crassus's catastrophe at Carrhae, appalling though it was in itself, did not bring the Roman Empire to the ground, as the Napoleonic Empire was brought down by the retreat from Moscow. It is evident that—in contrast to the utter inability of the Seleucidae to stand up, even in Asia, to a Roman assault—the Russians on their own ground were more than a match for Napoleon.

This military and political strength that was displayed by Russia in response to Napoleon's challenge undoubtedly took Napoleon himself by surprise; and it does indeed demand some explanation, considering that Russia was a semi-barbarous offshoot of Orthodox Christendom which had not begun to seek initiation into the 'polite society' of the modern Western World until the reign of Peter the Great; for, between the year 1689, which was the date of Peter's effective accession to power, and the year 1812, in which Russia was called upon to undergo the tremendous ordeal of meeting an attack by a military genius who commanded all the resources of Western and Central Continental Europe, Peter's bold experiment of transposing Russian life from a Byzantine to a modern Western key had been given no longer than 123 years to work itself out. How, then, are we to explain the remarkable outcome of the campaign of 1812? The credit for the triumphant reaction of Russia to her searching Napoleonic test cannot all be assigned to the genius of Peter and to the perseverance of his Westernizing successors in the government of the Petrine Russian state; the surprising solidity which the Petrine structure now showed itself to possess must partly be attributed to the excellence of the sources from which Peter and his successors had derived the Western technique and institutions and ideas with which they had been industriously leavening their Byzantine heritage. These Muscovite apostles of Westernization had turned in the first instance to Holland, and thereafter to the Protestant parts of Germany; and from these quarters they had obtained a modern Western version of the medieval Western culture of Flanders and Northern Italy which possibly had more life in it than the Hellenism which the Seleucid Empire imported in the third and second centuries B.C. from an Athens who by then had passed the prime in which she had been 'the education of Hellas'¹ without

¹ For the decadence of Athens see IV. C (iii) (c) 2 (α), vol. iv, pp. 263-74, above. In the third and second centuries B.C., however, Athens was only one of the sources

having handed on her torch to any younger or more lively disciples.

While this invigoratingly Westernized Russia taxed Napoleon's military strength on the Continent to a point at which it gave way under the strain, the naval and economic discomfiture of the would-be maker of a Western universal state was the work of Great Britain; and here is a second opponent of Napoleon's ambitions who—more clearly still than Petrine Russia—is without a counterpart in the ranks of the adversaries with whom Rome had to settle accounts in the third and second centuries B.C.

England was not, as Russia was, a recent and outlandish recruit to the company of the Great Powers of the Western World. She had been reckoned among their number since the beginning of the modern chapter of Western political history and, in the cultural life of Western Christendom, she had never ceased to play a part which was as intimate as it was active. She had, however, adopted at the turn of the Medieval and the Modern Age,¹ and had persistently pursued ever since, a foreign policy in which she was singular among modern Western or Westernized Powers. For some three centuries, ending in Napoleon's day, all the other combatants in the modern Western gladiatorial arena had been contending on Flemish and Rhenish and Lombard battle-fields, with a zest which seemed to be proof against disillusionment, for the prize of hegemony over the derelict domain of the broken-down medieval city-state cosmos. Great Britain, alone among her peers, had shown herself unwilling to play for this stake. Indeed, the British had avoided being drawn into the Continental European arena at all except to the trifling extent to which they might find it expedient to take a hand in Continental 'side-shows' for

in the heart of Hellas from which the Seleucid Empire drew its draughts of Hellenic culture and its drafts of Greek settlers. In another context (IV. C (i), vol. iv, pp. 20-3, above) we have already observed that the Ionian Greek city-states along the western seaboard of Asia Minor, which had been under an eclipse at the noontide of Athens' brilliance in the fifth century B.C., re-emerged in full splendour *post Alexandrum*, when Athens was in full decline. In the judgement of Tarn (op. cit., p. 34, cited already in V. C (i) (d) 4, p. 422, footnote 1, above) apropos, not of Athens alone, but of Hellas as a whole, 'there is small sign of' decadence 'down to about the middle of the second century B.C.', and 'to talk much about Greek decadence prior at any rate to the Christian Era would . . . give a very false impression'. In the Transuephratean dominions of the Seleucid Monarchy the retransference of political power from Greek to Iranian hands, which was the political consequence of the collapse of the Seleucid régime in those regions, 'had the somewhat unexpected result of instilling fresh vigour into' the Greeks 'and leading to a stronger assertion of their Greekhood, if we may judge by what happened in the sphere of literature and learning'.

¹ The substitution of abstention for intervention in Continental European affairs as the rule of English foreign policy took place between A.D. 1429 and A.D. 1558. The history of England's foreign relations during that transitional period makes it evident that the abstentionist policy which the United Kingdom was afterwards to pursue with might and main, as one of its most precious privileges, had originally been adopted by England against the grain, under *force majeure* (see III. C (ii) (b), vol. iii, p. 366 above).

the sake of furthering the acquisitive enterprises overseas upon which all British energies and interests and ambitions were now being steadily concentrated. The underlying aim of British statesmanship in this age was to take advantage of the other Powers' infatuation with Continental enterprises which in British estimation were not worth their fabulous market price, in order to sweep into the British net as many as possible of the overseas annexes of the modern Western World, which could be won at less cost and retained with less effort because the statesmen who dictated the policy of Great Britain's Continental rivals were prone to estimate the present value of these outlying and undeveloped estates at a very much lower figure than that at which this value was assessed by the business acumen of 'a nation of shopkeepers' who were accustomed to dealing in 'futures'.

This eccentric British policy of eschewing Continental adventures and concentrating upon expansion overseas had become firmly established long before Napoleon's appearance on the scene; and, when the Corsican adventurer made his supreme and all but successful effort to win for his adopted country France—or perhaps, rather, for the Corsican himself from a convenient French base of operations—that elusive Continental hegemony which had been the dream of every Continental Great Power for the past three hundred years, his brilliant failure in playing this old-fashioned Continental game produced one definite and permanent result which was certainly the last thing that the Emperor of the French had either foreseen or desired when he embarked on his extraordinary career. In failing to achieve his own imperialistic ambitions, Napoleon incidentally gave his British arch-enemies an incomparable opportunity for achieving theirs.

The Napoleonic gambit came as a veritable godsend to a generation of British imperialists who, at the turn of the eighteenth and nineteenth centuries, had hardly yet begun to recover from their disheartening experience of seeing the first British attempt at building an overseas empire checkmated in the American Revolutionary War of 1775–83. British statesmanship accordingly exerted itself to extract the utmost possible advantage out of a situation in which Napoleon had become master of the Continent while Great Britain remained mistress of the seas. Beyond the coasts of his European *terra firma* the Emperor of the French was so impotent in the face of British sea-power that he could neither recover the lost French foothold in India¹ nor make any better

¹ The only effect of Napoleon's abortive attempts to re-establish relations of diplomatic and military co-operation between France and the rulers of some of the indigenous 'successor-states' of the Mughal Rāj in India was to move the British to sweep off the

use of the title-deeds to Louisiana, when he reacquired them from Spain,¹ than to sell them cheap to the United States, who was the only bidder in a position to take delivery.² And, when the Corsican war-lord eventually overran the metropolitan territories of the Spanish Crown in the Iberian Peninsula, the only permanent effect of this inconclusive and ephemeral Continental European exploit of Napoleonic arms was to open to British commerce the vast Spanish overseas empire in South and Central America—where the Spanish colonists eagerly seized upon the chance of throwing off the incubus of the mother-country's hitherto jealously guarded monopoly of the colonial trade. Again, Napoleon's domination and eventual annexation of Holland gave Great Britain an excuse—of which she fully availed herself—for taking possession of the Dutch colonies in Africa and the Indies. Indeed, by the time when Napoleon was riding for his Russian fall, Great Britain had succeeded in drawing to herself the markets and sources of supply of the whole of the Overseas World, and in planting her flag over a considerable part of it into the bargain; and there was a double relation of cause-and-effect between these lucrative British economic and political acquisitions overseas and Napoleon's fatal march on Moscow. For one thing, Napoleon found one of his pretexts for making war on Russia in the Tsar's revolt against the economic sacrifices that his unwilling collaboration in Napoleon's anti-British 'Continental System' had been exacting from him; but—more important, by far, than this—it was Great Britain's access, in defiance of the master of Continental Europe, to the economic resources of the entire Overseas World that had supplied her with the financial means of keeping up single-handed the struggle against Napoleon at the height of Napoleon's power; and it was the stimulus of this British example, and the expectation of obtaining British financial aid if they had courage to take the British political cue, that emboldened the poverty-stricken but populous Powers of Eastern Europe—with Russia in the van

Indian chess-board a number of the pawns that had been lying there at their mercy ever since they had got this Indian game into their own hands by eliminating the French player through their victory in the Seven Years' War. The struggle against Napoleon was carried on by the British Government with so great an economy of British land-forces on the European Continent that Great Britain found herself able to make extensive and decisive additions to her territorial holdings in India at a time when she was waging war against Napoleon with all her might at sea and in the economic field.

¹ King Louis' Government had ceded Louisiana to its ally Spain in the peace settlement of 1763. Napoleon extorted the title-deeds from the Spanish Government in 1800 and sold them to the United States Government in 1803 (see II. D (ii), vol. ii, p. 67, above):

² The United States was in a position to take delivery of Louisiana, even if Great Britain had objected to the transaction, because she was the only Power except the Spanish Empire that marched with Louisiana along a land-frontier, and because (unlike Spain) the United States was militarily stronger than Great Britain was on the North American Continent.

and with Prussia and Austria successively swinging back into line with her—to resume, in and after 1812, the struggle on land against a Corsican war-lord who in 1809 had to all appearance established once for all his own military ascendancy on the Continent.

It is manifest, then, that Napoleon's attempt to attain in his own world in the nineteenth century of the Christian Era that complete supremacy which the Romans did attain in their world in the second century B.C. was frustrated by the resistance of two adversaries of a kind and a calibre that the Scipios never had to reckon with. If we mentally eliminate both Great Britain with her overseas hinterland and Russia with her Asiatic hinterland from the list of the factors with which Napoleon still had to settle accounts after his fourth victory over Austria in 1809, and thus leave him (in our imagination) no adversaries to deal with from that time onwards save an already enfeebled Austria and Prussia and a long since decrepit Spain, we can hardly doubt that under these imaginary conditions Napoleon—even if we still condemned him to die as prematurely on an unoverturned throne as he actually died in captivity at Saint Helena—would have succeeded before his early death in 1821 in imposing his own dominion upon the whole of our imaginarily shrunken Western World as decisively as Rome did succeed in imposing hers upon the whole of the Hellenic World by the year 146 B.C. Even, however, if we agree that this conclusion would follow from our hypothesis, there is a further question which we shall have to ask ourselves. Assuming that, in a Western World that we have imaginarily restricted to the confines of Continental Europe west of the Niemen and north-west of the Ottoman frontiers, Napoleon had indeed been successful in establishing a complete universal state in the course of the years that he had at his disposal between 1809 and 1821, would this Napoleonic erection have been likely to be still standing at the present day? In normal circumstances our answer to this question would be confidently affirmative, considering that the normal expectation of life of a universal state is a span of about 400 years.¹ In the case in point, however, there is a particular consideration which suggests that, even if Napoleon had not been prevented from establishing his universal state by the operation of those British and Russian factors which we have now hypothetically eliminated, the Corsican empire-builder's work would have proved ephemeral because it would anyhow have carried in itself the seeds of its own destruction.

These dragon's teeth had been sown, long before Napoleon's

¹ The statistical evidence for this Time-span is examined in Part XI, below.

day, in the French field which was his indispensable base of military and political operations; for there was one vital point in which Napoleon's France departed from the standard type of empire-building communities that serve as instruments for the establishment of universal states.

In our inquiries into the character and the provenance of empire-building communities¹ we have found that, although it is exceptional for them to be wholly alien in culture from the society in whose service they are working, it is usual for them to be outlying communities which have been trained in the stern school of border warfare against barbarians and have there acquired a military prowess and a political common sense which they eventually turn to account in forcibly uniting under their own rule the hitherto warring members of the disintegrating body social to which they themselves belong. In this situation, which we may take to be the normal one, the service rendered to a distracted society by the community which provides it with its universal state is apt to be exclusively political and military; and, although the social boon of a universal peace imposed by main force is of inestimable value to a society that has arrived at the extremity of a 'Time of Troubles', the policeman's timely virtues do not exhaust all the surviving values of life, even in a society which has been spiritually as well as materially impoverished by a long course of self-laceration. The moral rally which is perhaps one of the necessary conditions for the successful establishment of a universal state could hardly be achieved if the bruised reed of the afflicted society's cultural heritage had been utterly broken; and the cultural, in contrast to the political and military, materials for the construction of a universal state are apt to be provided, not by the empire-building wardens of the marches, but by the militarily and politically decadent communities in the heart of a disintegrating world whom the empire-builders have forcibly united by subjecting them, willy-nilly, to their own high-handed domination. In fact, there is apt to be a certain exchange of social services between the empire-builders and their subjects on the lines of Horace's famous verses:

Graecia capta ferum victorem cepit et artes
Intulit agresti Latio;²

and it is this element of reciprocity that paves the way for a mutual understanding between two parties who have been brought into partnership originally by the sheer force of the dominant party's arms.

If we are right in believing that such an exchange of cultural

¹ See V. C (i) (c) 1, pp. 52-5, and V. C (i) (c) 4, p. 341, above.

² Horace: *Epistles*, Book II, ep. 1, ll. 156-7.

and politico-military services is a normal process in the life of a universal state, and that this kind of social commerce between the divers members of the body politic is no less necessary for the preservation of health than is the circulation of blood in the human body, then we cannot feel sure that the Napoleonic universal state, if it had ever been definitively established, would even then have been capable of keeping alive; for in the Napoleonic Empire there was no reciprocity at all between the French empire-builders and their Italian and Belgian and German subjects; the cultural ideas were a French contribution, as well as the administrative institutions and the military force;¹ and the political content of these

¹ This exceptionally one-sided economy of the Napoleonic Empire will appear the more remarkable when we remind ourselves that the conquered epigoni of the medieval Western city-state cosmos had cultural gifts to give, and that these gifts were of a kind that has usually been acceptable to the empire-builders of a universal state. The classical German literature, which was at its zenith at the time when the Napoleonic Empire was established, was penetrated through and through with both the sense of promiscuity and the sense of unity (see Bruford, W. H.: *Germany in the Eighteenth Century* (Cambridge 1935, University Press), pp. 304-8); and the great Franconian exponent of this school of thought and feeling once met the Corsican empire-builder face to face. Yet this encounter between Goethe and Napoleon was merely picturesque and not historic; for Goethe did not captivate Napoleon, whereas Napoleon, for his part, did captivate Heine. This might, no doubt, be discounted as an easy conquest, since Heine was a Rhenish man-of-letters who was also a Jew; and for the Jews of the Rhineland the French conquest spelt social emancipation. A more impressive triumph of French cultural ideas was their captivity of the Teutonic souls which were the authors of the *Befreiungskrieg* and the Italian souls which were the authors of the *Risorgimento*.

Why was it, then, that the French (to their own undoing) succeeded in imposing their ideas, as well as their *imperium*, upon the epigoni of the medieval city-state cosmos when the Germans, at any rate, had ideas of their own to contribute to the social outfit of a nascent universal state? Perhaps the explanation is that the *soi-disant* French 'Ideas of 1789' triumphed in the domain of the disintegrating city-state cosmos in virtue of their original provenance from the very quarters which they were now invading from abroad.

In other contexts (for example, in III. C (ii) (b), vol. iii, pp. 350-63 and 369-71; IV. C (i), vol. iv, p. 19; IV. C (iii) (c) 2 (α), vol. iv, pp. 283-4, above) we have already observed that the one-sided economy of the Napoleonic Empire was a piece of poetic justice; for, while there may have been a lack of reciprocity between the living generation of the French empire-builders and the living generation of their non-French subjects inasmuch as the cultural as well as the political and military contributions were now all coming from the French side, the Frenchmen of Napoleon's generation who were conferring these cultural benefits on their Italian contemporaries and subjects were thereby repaying a cultural debt which had been contracted by these Frenchmen's ancestors to Italians of an earlier age. The French culture with which Napoleon inoculated Italy was a Transalpine version of a North Italian culture which had radiated out into the Transalpine and Transmarine parts of Western Christendom at the time of transition from the Medieval to the Modern Age of Western history. In the Transalpine form in which this originally North Italian culture was reintroduced into Italy by the French empire-builders of the Napoleonic Age, the wine was almost as strange as it was stimulating to the epigoni of those medieval Northern Italians who had produced the first vintage of it. At the same time the ultimately North Italian origin of this modern Italianistic culture from the farther side of the Alps did not count for nothing—as can be seen by comparing the avidity with which this French gift was welcomed in Lombardy and Tuscany and the Romagna with the repugnance that it excited in the continental half of the Kingdom of the Two Sicilies—a piece of Italian territory which had been merely a colonial annex (see p. 622, above) to the Italian part of the medieval Western city-state cosmos. (For the recalcitrance against the Napoleonic régime in the Kingdom of Sicily beyond the Faro see Johnston, R. M.: *The Napoleonic Empire in Southern Italy* (London 1904, Macmillan, 2 vols.).)

Finally, we may observe that, in the precipitation and dissemination of 'the Ideas of 1789', Flanders as well as Northern Italy played its part. While the arch-disseminator

idées napoléoniennes was a leaven of disruption which was as swift as it was potent in its working.¹

This internal ferment perhaps did as much to break the Napoleonic Empire up as the external shock of Napoleon's military and economic collisions with Russia and Great Britain; and this was not all; for the fermentation of French ideas in Italian and Belgian and German minds did more than merely wreck the momentary political structure which had served as a carrier for these revolutionary mental germs. This spiritual upheaval also dispelled beyond recall² a three-hundred-years-old constellation of political forces in Europe which had made the momentary establishment of a Napoleonic Empire possible. It effectively put an end to a situation in which a central cluster of small weak states had been affording a battle-ground to be fought over and a prize to be competed for by the rival members of a surrounding circle of Great Powers. In fact, the universal state with which the medieval Western city-state cosmos was duly endowed, at the close of its 'Time of Troubles', by the Corsican empire-builder's demonic exertions, had a psychological effect upon its beneficiaries which was just the opposite of that which a universal state usually produces. Instead of serving—as the Roman and the Achaemenian and the Ottoman Empire did each serve—as a sovereign rest-cure, it acted as a dynamic stimulus which spiritually transfigured the North Italians and Swabians and Rhinelanders and Belgians of Napoleon's generation by turning the weary epigoni of an expiring civilization into eager participants in one that was still throbbing with life.³ In fact, the advent of the Napoleonic régime, at the

Napoleon Buonaparte himself was a Corsican of Florentine ancestry who found himself a citizen of revolutionary France owing to the acquisition of his native island by the French Crown in the reign of Louis XV (see p. 623, footnotes 1 and 2, above), the arch-precipitator Robespierre was a native of Arras who found himself a citizen of revolutionary France owing to the acquisition of his native city-state by the French Crown in the reign of Louis XIV.

¹ Read Heine's brilliant phantasy in 'Das Buch Le Grand':

'Parbleu! wie viel verdanke ich nicht dem französischen Tambour, der so lange bei uns in Quartier lag, und wie ein Teufel aussah, und doch von Herzen so engelgut war, und so ganz vorzüglich trommelte. . . . Monsieur Le Grand wusste nur wenig gebrochenes Deutsch, nur die Hauptausdrücke — Brot, Kuss, Ehre — doch konnte er sich auf der Trommel sehr gut verständlich machen; z. B. wenn ich nicht wusste, was das Wort "liberté" bedeute, so trommelte er den Marseiller Marsch — und ich verstand ihn. Wusste ich nicht die Bedeutung des Wortes "égalité", so trommelte er den Marsch "ça ira, ça ira . . . les aristocrates à la lanterne!" — und ich verstand ihn. Wusste ich nicht, was "bêtise" sei, so trommelte er den Dessauer Marsch, den wir Deutschen, wie auch Goethe berichtet, in der Champagne getrommelt — und ich verstand ihn. Er wollte mir mal das Wort "l'Allemagne" erklären, und er trommelte jene allzu einfache Urmelodie, die man oft an Markttagen bei tanzenden Hunden hört, nämlich Dum-Dum-Dum — ich ärgerte mich, aber ich verstand ihn doch.'

The first people to feel the effects of the German reaction to this French lesson were the French imperialists themselves.

² The deadliness of the blow which Napoleon dealt to the *ancien régime* as far as his own empire extended can be gauged from the completeness of the failure of the restoration that was attempted after Napoleon's overthrow.

³ The classic description of this extraordinary effect of the Napoleonic régime in

turn of the eighteenth and nineteenth centuries, in these derelict areas in the heart of Western Christendom, which had fallen out of the race of Western progress since the close of the Middle Ages, served to draw these stranded Western communities back into the ever-rolling stream of Western life—just as, in the course of the hundred years immediately preceding the Napoleonic Age, certain Orthodox Christian communities under Ottoman rule—the Moreot Greeks and the Morava-Valley Serbs—who had never previously moved in a modern Western orbit, were drawn into the current of modern Western Civilization for the first time¹ by the advent of a Venetian régime in the one case and of a Hapsburg régime in the other.

If we pursue on the political plane our comparison between these three examples of cultural stimulation, we shall observe a remarkable uniformity in the sequence of events. In all three cases the cultural stimulus was brought in by an alien, or virtually alien, political régime; in all three cases this régime had only a short life before it was overthrown—with a violence that it had provoked by the antecedent violence of its own original intrusion—in order to make way for a restoration of the *ancien régime*; in

recalling to life the dead-alive epigoni of the medieval Western city-state cosmos is to be found in Heine's account, in his *Reisebilder*, 'Das Buch Le Grand', of the Napoleonic transformation of Düsseldorf. A brilliant picture of the working of the same miracle over the whole field of the German departments and dependencies of the Napoleonic Empire will be found in Fisher, H. A. L.: *Studies in Napoleonic Statesmanship in Germany* (Oxford 1903, Clarendon Press)—a book which is the fruit of a study of the original documents by an historian of a later age. The recalcitrance of the *ci-devant* Byzantine population of the Kingdom of Sicily-extra-Pharum towards a stimulus to which the Northern Italians, as well as the Western Germans, reacted so eagerly, may be studied in Johnston, *op. cit.*

The vivifying effect of the Napoleonic régime in Lombardy and the Rhineland is notorious; but we must extend our survey to the Illyrian departments of the French Empire—a strip of ex-Venetian and ex-Hapsburg possessions at the remote south-eastern extremity of the Western World—in order to obtain the most impressive testimony of all to the genius of the Napoleonic system for working miracles within the span of a few years (1806 to 1812 in the case of Istria and Dalmatia; 1810 to 1812 in the case of Krain and Croatia). In these backward marches,

'Under the enlightened, if despotic, rule of Marshal Marmont, the long stagnation of the Middle Ages was replaced by feverish activity in every branch of life. Administration and justice were reorganized, the Code Napoléon superseding the effete medieval codes; schools, primary and secondary, commercial and agricultural, sprang up in every direction; the first Croat and Slovene newspapers appeared; the old guild system was reformed and commercial restrictions removed; peasant proprietary was introduced; reafforestation was begun; and the splendid roads were constructed which are still the admiration of every tourist. . . . A well known story relates how the Emperor Francis, during his visit to Dalmatia in 1818, plied his suite with questions as to the origin of the various public works which struck his eye, and met with the invariable answer: "The French, Your Majesty."—"Wirklich Schad" dass s' nit länger blieben sein" ("It's a real pity they didn't stop longer") exclaimed the astonished Emperor in his favourite Viennese dialect; and there the matter rested for eighty years' (Seton-Watson, R. W.: *The Southern Slav Question* (London 1911, Constable), p. 26).

¹ In an earlier age of Western and Orthodox Christian history the Morea had been subjected to the painful experience of being conquered and dominated by the Frankish adventurers who had gone on 'the Fourth Crusade'. From this Frankish yoke the Moreots had almost completed their own liberation by their own efforts before the arrival of the 'Osmanli empire-builders of an Orthodox Christian universal state.

all three cases, however, this restoration was almost as short-lived as the intrusive régime which it had superseded; and then in all three cases, when the ephemeral restoration had been dismantled in its turn, the subject communities, which had first been stimulated and had then been repressed, at length won their way to political freedom and at once made use of this freedom in order to organize themselves politically into national states of the pattern which had become common form in the Western World¹ by the time of the transition from the Modern Age to that 'post-modern' epoch in which we find ourselves living to-day.²

This remarkably uniform sequence of events brings out the at first sight paradoxical yet at the same time unquestionable fact that in all three cases the culture which was introduced by the intrusive empire was directly inimical in the first place to the survival of the empire itself and in the second place to the national interests of the empire-building community. The explanation of this apparent paradox is to be found in a piece of antecedent history that has already come to our notice.³ We have seen that the modern Western version of the medieval Western city-state culture was, in one of its aspects, an adaptation of this culture to the social conditions of the persistently feudal parts of Western Christendom, and that the necessary adjustment was made by transposing the standard unit of political articulation from the city-state to the kingdom-state scale. This pouring of the new wine of Italian efficiency into the old bottles of Transalpine feudal kingdoms had eventually generated a fresh political force with a new institutional expression.⁴ It had brought to birth that modern Western nationalism which can nowhere rest until it has expressed itself in the concrete form of a sovereign independent national state. The France which Napoleon used as the instru-

¹ See Part I. A, vol. i, p. 1, above.

² The historical analogy which we have followed out above can perhaps be presented more graphically in the form of a table:

<i>Derelict Area.</i>	<i>Intrusive Empire.</i>	<i>Period of Intrusion.</i>	<i>Period of Restoration of the Ancien Régime.</i>	<i>Period of Liberation and Organization into National States.</i>
Northern Italy, Belgium, Swabia, Rhineland, and Hanau	{ The Napoleonic Empire }	1797-1814	1815-1848	1848-1871
The Morea	{ The Venetian Empire }	1690-1715	1715-1821	1821-1829
Serbia	{ The Danubian Hapsburg Monarchy }	1718-1739	1739-1804	1804-1828

N.B. Belgium, in contrast to both Italy and Germany, succeeded in overthrowing the restoration régime as early as 1830 and in establishing her sovereign independence as a national state as early as 1831.

³ In III. C (ii) (b), vol. iii, pp. 350-63, above.

⁴ See IV. C (iii) (b) 8, vol. iv, p. 198, above.

ment for his empire-building work had already learnt to think of herself as *la Grande Nation*; and it was manifestly inevitable that the Italians and Belgians and Germans who had become the political pupils of the French, in the act of becoming their subjects, should revolt against a French Imperial régime which, for the sake of the aggrandizement of a nationally adult and emancipated France, was illogically and inequitably depriving these other nations in embryo of the 'natural right' to national self-determination which the French had insistently claimed and successfully secured for themselves. It was in this sense that the Napoleonic French Empire carried with it the seeds of its own destruction in the non-French portions of its domain. And we shall be stating the same historical truth in other terms if we say that the principal benefit which Napoleon conferred upon the epigoni of the medieval Italians and Flemings and Swabians and Rhinelanders and Hanseatics by dragooning them all into his universal state lay in the impulse which he thereby communicated to them—in diametrical opposition to his own life-work—to rise up at the first opportunity and insist upon dissecting the non-French territories of this short-lived French Empire into a number of new-fangled national 'successor-states'.

These Belgian and Italian and German 'successor-states' of the Napoleonic French Empire did not supersede their involuntary parent directly; for, as we have observed, the non-French national movements which the French Empire evoked were successfully exploited for a season by the surviving heirs of the *ancien régime*, who made a passing show of complacency towards the anti-French nationalism which had been kindled among their subjects by the experience of Napoleonic rule, until the explosion of the *Befreiungskrieg* had done its negative work in bringing the Napoleonic Empire to the ground—whereupon the legitimists abruptly changed their tactics and stretched out their hands to monopolize for themselves once again a sovereignty which they could never have wrested back from the grip of the Corsican usurper if the German and Italian converts to 'the Ideas of 1789' had not so naively laboured for the profit of their hypocritical allies. 'The kings crept out, the peoples stayed at home'; and it took the new-born nations thirty-three years—one third of a century—to win back the national rights which, in 1812-15, they had earned by pouring out their blood and had lost through being made the victims of a political swindle. Thus the non-French national states of a 'post-modern' Western World which ultimately owe their existence to a Napoleonic French stimulus have been founded on the ruins of the post-Napoleonic restoration and not on those of the Napoleonic

Empire itself; and so they cannot be regarded as the immediate authors of the Napoleonic Empire's overthrow. On the other hand their establishment has unquestionably had the effect of expunging once for all from the Western political horizon that prospect of a French hegemony over the Western World which was one of the constant concerns of Western statesmen not only during the brief episode of the Revolutionary and Napoleonic wars but throughout the two centuries ending in 1870; for the preponderance of *la Grande Nation* over rival Powers was due in large measure to the existence of a political no-man's-land on the farther side of France's northern and eastern frontiers; and, since the time when this long-persisting vacuum was turned into a plenum by the successive crystallizations of a Belgian and an Italian and a German national state, France has lost her two-hundred-years-long pre-eminence¹ and has fallen to a level set by the relative strength of French 'man-power' and French industrial power in a Western World which has now been politically rearticulated from one end to the other into an unbroken array of national states which all conform to a standard French pattern, though one of

¹ By the time, in October 1938, when these lines were being revised for the press, it had come to look as if the pre-eminence which France had lost in 1870 had passed, after all, to Germany, notwithstanding the sensational set-back which Germany had suffered through her eventual defeat in the General War of 1914-18. On the eve of the twentieth anniversary of the Armistice of the 11th November, 1918, it seemed that the outcome of that war, so far from blighting Germany's political prospects, might prove to have ensured the eventual predominance of Germany in Europe. In once for all establishing the principle of National Self-Determination as the moral basis for the articulation of Europe into parochial states, the peace settlement of 1919-20 (see IV. C (iii) (c) 2 (α), vol. iv, p. 299, footnote 1, above) had made it certain that, sooner or later, the 80 million Germans on the Continent would achieve their national unity in a single Reich which would have almost twice as large a population as the next largest European national state. At the same time the same peace settlement had also made it certain that, when this Pan-German Reich did arise, the intrinsic advantage over the other European Great Powers with which it would be endowed by its superiority in 'man-power' would be reinforced by the adventitious advantage of finding, on the farther side of its eastern and south-eastern frontiers, a political no-man's-land like that which France had found beyond her eastern and northern frontiers from the reign of Louis XIV to the reign of Napoleon III inclusive. When the political vacuum in Central Europe, from which France had profited for two hundred years, was filled at last in the nineteenth century by the crystallization of the Belgian, Italian, and German national states, it was already in process of being replaced by a new vacuum in Eastern Europe. The break-up of the medieval Central European city-state cosmos in the fourteenth and fifteenth centuries under the impact of the modernized kingdom-states of feudal Europe has had its historical counterpart in the nineteenth and twentieth centuries in the break-up of the modern East European dynastic states into national 'successor-states' generated by the principle of Self-Determination. This process, which began in the early decades of the nineteenth century with the secession of the nuclei of a Serb and a Greek national state from the Ottoman Empire, was completed in the peace settlement of 1919-20 by the partition of the Ottoman and the Hapsburg Empire and the mutilation of the Hohenzollern and the Romanov Empire. The result was the creation, between the eastern frontier of the Weimar Republic and the western frontier of the Soviet Union, of an East European no-man's-land precariously tenanted by a dozen *Kleinstaaten*, from Greece to Finland. In this situation it was perhaps inevitable that the truncated post-war Prussia-Germany should eventually be replaced by a Greater Germany including the German population which had been left stranded by the wreck of the Hapsburg Monarchy, and that this 'Third Reich' should then seek to dominate the non-German *Kleinstaaten* on its eastern and south-eastern flanks.

them has now crystallized, in the shape of a Greater Germany, on a physical scale which dwarfs 'the Third Reich's' French prototype.¹

Our analysis of the Napoleonic Empire has now perhaps been carried as far as is necessary for the purpose of this Study; and we can sum up our results in the conclusion that Napoleon did not merely fail to achieve his aim but actually produced, through his unsuccessful endeavours, a number of results which he never intended or foresaw and which in combination entailed the paradoxical consequence of making it for ever impossible for any French successor of this fallen titan to emulate his career with a happier fortune. On the one hand Napoleon failed to weld the derelict domain of the medieval city-state cosmos in Italy and Germany and Belgium on to the living body of France in the bonds of a French Empire which was to perform the service of a Western universal state. On the other hand Napoleon unintentionally made the fortune of Great Britain in seeking to ride rough-shod over the obstacle which she obstinately presented to the attainment of the Corsican megalomaniac's superlative ambitions; and he likewise unintentionally compromised the national prospects of France herself by rousing his non-French subjects from their long political slumber and launching them on a new course of political activity which ended in the establishment of a Belgian and an Italian and a German national state on the continental threshold of France within less than three-quarters of a century from the year in which Buonaparte had entered on his meteoric career by descending upon Italy at the head of a revolutionary French army.²

¹ If we are right in seeing, in the contemporary spectacle of a France now cowering under the menacing shadows of a 'totalitarian' Germany and Italy, the nemesis of the Napoleonic French domination over the Germans and Italians of a hundred years ago, we can put our finger upon corresponding reversals of fortune in the two other cases which we have brought into our comparison. In the same historical perspective the disruption of the Danubian Hapsburg Monarchy through the prise of a Serbian lever in the General War of 1914-18 is to be regarded as the nemesis of the Hapsburg domination over the Serbs in 1718-39; and even the Venetian domination over the Morea in 1690-1715 has subsequently taken its toll from a United Italy by raising an obstacle, in the shape of a liberated and nationally awakened and consolidated Greece, to modern Italian endeavours to re-establish the medieval Italian Empire in the Levant.

² It did, however, take the better part of these three-quarters of a century for the immense prestige of the Napoleonic Empire to evaporate.

France, which had given the impulse to personal freedom, was able to usher in greater freedom of trade through the Napoleonic treaty-system of 1860-70. England might be treated as an exception by other nations. France was always an inspiration; and, although Free Trade had been an accomplished fact in England in the 'forties, and though the European movement was based originally on English economic writers, yet it needed the French advertisement and Napoleon III to make it European. It is difficult for us to realize the glamour which this France, rejuvenated after the wars of 1815, was able to exercise on its contemporaries in the first three-quarters of the nineteenth century' (Knowles, L. C. A.: *Economic Development in the Nineteenth Century: France, Germany, Russia and the United States* (London 1932, Routledge), p. 21).

For the role of France in the modern chapter of Western history as interpreter and disseminator of Italian and English ideas see III. C (ii) (b), vol. iii, pp. 369-71, above. For the Free Trade Movement in the Western World in the middle of the nineteenth century see IV. C (iii) (b) 4, vol. iv, pp. 172-4, above.

Thus the note of the Napoleonic episode in our Western history is a striking discord between irony and consolation. The irony appears in the spectacle of the Corsican empire-builder's consummate self-frustration; the consolation makes itself heard in the sound of a revolutionary French trump that proved to possess the miraculous power of raising the dead to new life.¹ The beneficiary of this miracle was the rotting corpse of a medieval Western city-state cosmos which had committed suicide² four hundred years before the bustling epiphany of the little man who blew the magic blast. It is amazing that he should have blown it without ever having foreseen what the effect of his rousing music was bound to be.

¹ The *risorgimenti* of communities that have previously passed through a phase of social decadence are discussed in more general terms in IV. C (i), vol. iv, pp. 16-23, above.

² See III. C (ii) (b), vol. iii, pp. 348-50, above.

ANNEX II TO V. C (i) (d) 6 (γ)

EDWARD GIBBON'S CHOICE OF LINGUISTIC VEHICLE

IN the chapter to which this Annex attaches it has been suggested that, in the competition between the English language and the French for the prize of becoming the *lingua franca* of an oecumenical 'Great Society', English won its definitive victory in the course of the Seven Years' War, and that this view is supported by the testimony of the life and letters of Edward Gibbon, who wrote his *juvenilia* in French while the war was still in progress, and his *magnum opus* in English after the war had ended in the discomfiture of France and in the triumph of Great Britain.¹ In this connexion it may be apposite to quote certain passages from Gibbon's own works, and one passage from a letter addressed to Gibbon by Hume, which, when read together, throw some light on the considerations that led Gibbon to adopt French as his vehicle in the first instance and afterwards to abandon French in favour of English.

Gibbon's motives for having recourse to French in his earliest literary venture have been recalled in retrospect by the author himself:

'At Lausanne I composed the first chapters of my Essay² in French, the familiar language of my conversation and studies, in which it was easier for me to write than in my mother-tongue. After my return to England I continued the same practice, without any affectation, or design of repudiating (as Dr. Bentley would say) my vernacular idiom. . . . In modern times the language of France has been diffused by the merit of her writers, the social manners of the natives, the influence of the Monarchy, and the exile of the Protestants: several foreigners have seized the opportunity of speaking to Europe in this common dialect, and Germany may plead the authority of Leibniz and Frederic, of the first of her philosophers and the greatest of her kings. The just pride and laudable prejudice of England has restrained the communication of idioms; and, of all the nations on this side of the Alps, my countrymen are the least practised and least perfect in the exercise of the French tongue. . . . The vanity of being the first English author in the French language might perhaps be excused; but, in sober truth, I wrote, as I thought, in the most familiar idiom.'³

Gibbon's persistence in the use of French in his unfinished and unpublished history of the rise of the Swiss Confederation drew

¹ See V. C (i) (d) 6 (γ), p. 506, with footnote 3, above.

² *Essai sur l'Étude de la Littérature*, written in 1759 and published in 1761.—A.J.T.

³ Gibbon, Edward: *The Autobiographies of Edward Gibbon* (London 1896, Murray), pp. 175, 176, and 300.

a friendly criticism from an already famous English man-of-letters who was Gibbon's older contemporary. In a letter addressed to Gibbon on the 24th October, 1767,¹ David Hume took the younger writer to task in the following terms:

'Why do you compose in French, and carry faggots into the wood, as Horace says with regard to Romans who wrote in Greek? I grant that you have a like motive to those Romans, and adopt a language much more generally diffused than your native tongue: but have you not remarked the fate of those two ancient languages in following ages? The Latin, though then less celebrated, and confined to more narrow limits, has in some measure outlived the Greek, and is now more generally understood by men-of-letters. Let the French, therefore, triumph in the present diffusion of their tongue. Our solid and increasing establishments in America, where we need less dread the inundation of Barbarians, promise a superior stability and duration to the English language.'

The impression made upon Gibbon's mind by the last of Hume's points in the letter quoted above is attested by the manifest reminiscence in the following passage in *The History of the Decline and Fall of the Roman Empire*—a passage which appears to have been written at least five years, and possibly as long as thirteen years,² after Hume's letter had reached Gibbon's hands:

'If a savage conqueror should issue from the deserts of Tartary, he must repeatedly vanquish the robust peasants of Russia, the numerous armies of Germany, the gallant nobles of France, and the intrepid free-men of Britain; who, perhaps, might confederate for their common defence. Should the victorious Barbarians carry slavery and desolation as far as the Atlantic Ocean, ten thousand vessels would transport beyond their pursuit the remains of Civilized Society; and Europe would revive and flourish in the American World, which is already filled with her colonies and institutions. America now contains about six millions of European blood and descent; and their numbers, at least in the North, are continually increasing. Whatever may be the changes of their political situation, they must preserve the manners of Europe; and we may reflect with some pleasure that the English language will probably be diffused over an immense and populous continent.'³

By the time when these words were published, Gibbon had already staked his hopes of lasting fame upon the fulfilment of

¹ The full text of this letter will be found in op. cit., p. 277.

² For the date of the writing of the 'General Observations on the Fall of the Roman Empire in the West', in which this passage occurs, see IV. C (iii) (b) 3, vol. iv, p. 148, footnote 3, above, in correction of III. C (ii) (b), vol. iii, p. 311, footnote 1.

³ Gibbon, Edward: *The History of the Decline and Fall of the Roman Empire*, chap. xxxvii: 'General Observations on the Fall of the Roman Empire in the West'. The last of the sentences here quoted is a footnote and not part of the main text, and it is possible that this footnote was added as late as the year 1781, even if the 'Observations' themselves were drafted before the 10th May, 1774 (for this *terminus ante quem* see IV. C (iii) (b) 3, vol. iv, p. 148, footnote 3, above).

Hume's forecast by producing three volumes of *The Decline and Fall* in English; and his eventual choice of language was dramatically justified when an odd volume of *The Decline and Fall*—finding its way into a tract in the heart of North America which had been transformed, since Gibbon's day, from virgin wilderness into the infant State of Illinois—fell into the hands of a certain young backwoodsman, unversed in any tongue but his native English, who was eagerly educating himself with the aid of the few books that he had managed to acquire.¹ It would be a pretty exercise for the fancy to compose, in Gibbon's name and style, some reflections on the American statesman's intellectual debt to the English historian,² could the latter have lived to learn of it. We should be on surer ground in guessing that, if Lincoln's as well as Gibbon's life could have been prolonged into the fourth decade of the twentieth century, these two masters of the English language would have been decidedly of one mind—in spite of their vast diversity in genius—in their judgement on the culture of which their mother-tongue had latterly become the vehicle in the Middle Western core of that 'immense and populous continent' over which the English language has now duly been diffused in an ironically barren fulfilment of Hume's far-sighted prophecy.³ In placing themselves beyond the reach of another barbarian eruption from the Eurasian Steppe the European settlers in North America appear to have escaped from an imaginary danger of being barbarized from outside at the price of undergoing, at any rate for a season, a genuine barbarization of another kind which is far more difficult to withstand because it does not break in from abroad but wells up from the secret places of the heart.

This latest (though assuredly not last) chapter in the cultural history of the Middle West bears out a thesis which has been put forward in this Study already in earlier passages.⁴

¹ See Ludwig, Emil: *Lincoln*: English translation (London and New York 1930, Putnam), p. 36.

² This volume of *The Decline and Fall* came into Lincoln's hands at New Salem at a critical moment in his career, in the interval between his momentous voyage down river to New Orleans and back and his first entry into politics. The future statesman was not more than twenty-three years old at the time; his mind at that age must have been at least as impressionable as it showed itself to be in its maturity; and it seems reasonable to assume that the impression made by any particular book would be in inverse ratio to the number of the books that the young man had had an opportunity of reading up to date.

³ For the deterioration of culture in the Middle West of the United States since the close of the nineteenth century see Lynd, R. S. and H. M.: *Middletown: A Study in American Culture* (London 1929, Constable).

⁴ See IV. C (iii) (a), vol. iv, pp. 119-33, and V. C (i) (c) 3, in the present volume, pp. 334-7, above.

ANNEX TO V. C (i) (d) 6 (8)

CUJUS REGIO, EJUS RELIGIO?

IN the chapter to which this Annex refers we have found reason for believing that, when the philosophies thought out by the Dominant Minority and the religions discovered by the Internal Proletariat encounter one another in a competition for the conversion of souls, the outcome of the contest between them is apt to bear out the dictum of a modern Western psychologist that 'great innovations never come from above; they come invariably from below'.¹ On this spiritual plane it is, indeed, the Internal Proletariat, and not the Dominant Minority, that proves to be the victor as a rule, on the showing of an empirical survey of a number of cases in point. But we are still left with the question whether the Dominant Minority has it in its power to make up for its spiritual weakness by bringing its physical strength into play and forcing a philosophy or a religion upon its subjects, from above downwards, by means of a political pressure which might be none the less effective for being illegitimate.

If we now examine the historical evidence on this head, we shall find that in general the Dominant Minority's efforts to impose a philosophy or a religion upon the Internal Proletariat by political means are apt to be as unsuccessful—at any rate in the long run—as its analogous efforts to hold the External Proletariat at bay by military force along an artificial stationary frontier.²

This finding contradicts outright one of the sociological theories of the Enlightenment during the Hellenic 'Time of Troubles'; for, according to this theory, the deliberate imposition of religious practices and beliefs from above downwards, so far from being impossible or even unusual, has actually been the normal origin of religious institutions in societies in process of civilization. This theory has been applied to the religious life of Rome in the following celebrated passage in the work of the historian Polybius (*vivebat circa 206–128 B.C.*):

'The point in which the Roman constitution excels others most conspicuously is to be found, in my opinion, in its handling of Religion. In my opinion the Romans have managed to forge the main bond of their social order out of something which the rest of the world execrates: I mean, out of Superstition. In dramatizing their Superstition theatrically and introducing it into private as well as into public life, the

¹ C. G. Jung, quoted in V. C (i) (d) 6 (8), on pp. 567–8, above.

² For the usual outcome of such relations between the Dominant Minority and the Barbarians see Part VIII, below.

Romans have gone to the most extreme lengths conceivable; and to many observers this will appear extraordinary. In my opinion, however, the Romans have done it with an eye to the masses.¹ If it were possible to have an electorate that was composed exclusively of sages, this chicanery might perhaps be unnecessary; but, as a matter of fact, the masses are always unstable and always full of lawless passions, irrational temper and violent rage; and so there is nothing for it but to control them by "the fear of the unknown" and play-acting of that sort. I fancy that this was the reason why our forefathers introduced among the masses those theological beliefs and those notions about Hell that have now become traditional; and I also fancy that, in doing this, our ancestors were not working at random but knew just what they were about. It might be more pertinent to charge our contemporaries with lack of sense and lapse from responsibility for trying to eradicate Religion, as we actually see them doing.²

This late Hellenic utilitarian theory of the origins of Religion in societies in process of civilization is about as remote from the truth as the modern Western social-contract theory of the origins of states. If we now proceed to examine the evidence, we shall find that, while political power is perhaps not completely impotent to produce effects upon spiritual life, its ability to act in this field is dependent on the presence of certain special combinations of circumstances; and we shall also find that, even then, its range of action is very narrowly circumscribed. In fact, in the history of the occasional endeavours of political potentates to make their wills prevail in the religious sphere by bringing into play the political means at their command, successes are exceptional and failures are the rule.

To take the exceptions first, we may observe that political potentates do sometimes succeed in establishing a cult when this cult is an expression, not of any genuine religious feeling, but merely of some political sentiment that is masquerading in a religious disguise; and in such a case the feat is perhaps not even very difficult to achieve if the political sentiment which the ruler selects for embodiment in a pseudo-religious ritual is one that is already strongly flowing as a spontaneous popular current—such as, for example, the thirst for political unity in a society that has drunk to the dregs the bitter cup of a 'Time of Troubles'. In these particular circumstances a ruler who has already won a hold over his subjects' hearts as their human saviour³ may sometimes even

¹ In this sentence and what follows, Polybius credits the dominant minority in the Roman Commonwealth with having deliberately and successfully put into practice a precept that is cold-bloodedly commended by Strabo in a passage that has been quoted in V. C (i) (d) 6 (δ), p. 561, above.—A.J.T.

² Polybius: *Historiae*, Book VI, chap. 56.

³ For the figure of 'the saviour with the sword' see V. C (ii) (a), vol. vi, pp. 178-213, below.

succeed in establishing a cult in which his own office and person and dynasty are the objects of worship.¹

The classic example of this *tour de force* is the deification of human rulers in a disintegrating Hellenic World. The practice began, in the first generation after the breakdown, with the payment of divine honours in Samos to Lysander—the Lacedaemonian commander who had delivered the 'knock-out blow' in the Atheno-Peloponnesian War²—and it continued in the deification of Alexander the Great and his successors, until it reached its climax in the deification of Julius Caesar and Caesar Augustus and the subsequent Roman Emperors for the next two and a half centuries. For that length of time this worship of the Roman Emperors was a success, because it provided an appropriate means of expressing a sense of devout gratitude towards the Principate which was deeply and widely felt. Throughout that age a majority of the inhabitants of the Hellenic universal state which the Caesars had established were devoutly and sincerely grateful for the priceless gift of unity and peace which the Principate had conferred upon the Hellenic World at the end of four centuries of storm and stress; and, as they also appreciated the supreme difficulty of the achievement, as well as its supreme value for themselves, they were ready to acquiesce without much heart-searching (until the advent of Christianity) in the idea that the authors of such acts as this must be beings of a superhuman order.³

Hic vir, hic est, tibi quem promitti saepius audis,
Augustus Caesar, divi genus, aurea condet
saecula qui rursus Latio regnata per arva
Saturno quondam, super et Garamantas et Indos
proferet imperium.⁴

And this Virgilian acclamation of Augustus as a living god has an equally famous Horatian parallel:

Caelo tonantem credidimus Iovem
regnare; praesens divus habebitur
Augustus adiectis Britannis
imperio gravibusque Persis.⁵

To evoke such strong feelings as these for a worldly saviour and for a political institution is an impressive achievement. Yet the

² Plutarch: *Life of Lysander*, chap. 18 (citing Duris).

³ For the sense of the unity of Mankind that is awakened during, and in consequence of the disintegration of a civilization, see V. C (i) (d) 7, vol. vi, pp. 1-49, below. For the gratitude that is evoked by the founders and upholders of universal states, see also V. C (ii) (a), vol. vi, p. 181, below. For the penitence of Augustus see V. C (i) (c) 2, p. 78, and V. C (i) (d) 5, p. 435, above, and V. C (ii) (a), vol. vi, p. 187, below.

⁴ Virgil: *Aeneid*, Book VI, ll. 791-5. The same semi-religious note of veneration for Augustus is also struck by the same poet in *Aeneid*, Book VIII, ll. 678-81; in *Georgics*, No. I, ll. 500-1; and in *Eclagues*, No. I, *passim*.

⁵ Horace: *Carmina*, Book III, Ode v, ll. 1-4.

spontaneous emotional attitude on which the Imperial Cult in the Hellenic universal state depended for its vitality¹ did not survive the first collapse of the Roman Empire at the turn of the second and third centuries of the Christian Era. As soon as the storm rose again and the stress once more made itself felt, the Emperors themselves became conscious that their now fast wilting official divinity was incapable of standing the strain unaided; and those of them who were blessed with foresight and initiative began to cast about for some supernatural sanction behind and beyond their own tarnished and discredited Imperial Genius.² While there may have been nothing but the whim of a spoilt and childish pervert behind the religious revolution which was attempted by Elagabalus (*imperabat* A.D. 218-22) when this changeling-Caesar presented himself in Rome as the servant of the local Sun-God of the Syrian city of Emesa whose hereditary high priest he happened to be,³ we may confidently attribute a higher motive and a more serious purpose to Aurelian (*imperabat* A.D. 270-5)⁴ and to Constantius

¹ For the gratitude of the subjects—even more than the citizens—of the Roman Empire to Augustus and his successors in the Principate for the next two centuries see in particular two Greek inscriptions in honour of Augustus that are quoted in Gall, A. von: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter), p. 453, and in general Charlesworth, M. P.: 'Providentia and Aeternitas' in *The Harvard Theological Review*, vol. xxix, No. 2, April 1936; and the same scholar's Raleigh Lecture on *The Virtues of a Roman Emperor* (London 1937, Milford). For the corresponding transfiguration of Augustus, in his grateful subjects' minds, from an unscrupulous and ruthless dictator into a superhuman Saviour of Society see Wendland, P.: *Die Hellenistisch-Römische Kultur*, 2nd and 3rd ed. (Tübingen 1912, Mohr), pp. 143-4. Augustus was not, of course, the first Roman saviour to evoke this sense of gratitude in the hearts of the Greek and Oriental subjects of Rome and to have divine honours paid to him in consequence. In the preceding generation the same subjects had shown the same feelings in the same way towards Augustus's adoptive father Divus Julius and towards Julius's rival Pompey. It was Pompey who took the first steps on the Roman Government's behalf to restore order in regions which the Senate had been content to leave derelict during the hundred years (167-67 B.C.) that had elapsed since the end of the Third Romano-Macedonian War; and the impression that his work made on the beneficiaries was deep and lasting. Cicero testified that 'omnes nunc in iis locis Gnaeum Pompeium sicut aliquem non ex hac urbe missum sed de caelo delapsum intuentur' (*De Imperio Gnaei Pompeii*, chap. 41). And, nearly two centuries later, the Emperor Hadrian declared that, as he travelled over the World, he found it full of temples dedicated to Pompey (Gall, A. von, op. cit., p. 452).

² Even at the zenith of the *Pax Augusta* Divus Caesar had perhaps, after all, been an idol with feet of clay. Though he was acclaimed as a saviour,

'This salvation was merely on the material plane and was limited to life on Earth; and, though it may have brought relief and prosperity to the well-to-do and to the cultivated, it offered little or nothing to the masses, who still, as before, felt the heavy pressure of daily life, and who were incapable of improving their position by their own efforts. Caesar-worship gave just as little satisfaction to those who felt in their hearts the longing for something higher than earthly goods, and to whom the uncertain enjoyment of life on this Earth seemed as hollow and as nugatory as the wisdom of Philosophy and of the Enlightenment with their interminable discussions which left the imagination and the spirit cold.'—Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin 1923, Cotta), p. 381.

³ For Elagabalus's abortive attempt to establish his own divine namesake as the high god of the Roman Pantheon see the present Annex, pp. 685-8, below.

⁴ 'Aurelian . . . used to say that the soldiers deceived themselves in supposing that the destinies of the Emperors lay in their hands. For he used to aver that it was God who had bestowed the purple and . . . had decided the period of his reign.'—*Auctor Anonymus post Dionem*, Dindorf's edition, p. 229, quoted by Cumont, F.: 'L'Éternité

Chlorus (*imperabat* A.D. 292–306) when these Illyrian Emperors enlisted under the standard of an abstract and oecumenical Sol Invictus;¹ and we shall also notice that Constantine the Great (*imperabat* A.D. 306–37) took service in his turn, for a season, with his father's Solar tutelary god² before he transferred his allegiance, once for all, to one of the gods of the internal proletariat who, by Constantine's day, had proved Himself more potent than either Sol or Caesar. The pitched battle between Caesar-worship and Christianity which had opened with Decius's challenge in A.D. 249 and had closed with Galerius's capitulation in A.D. 311 had been deliberately provoked by a school of blind-eyed and high-handed occupants of the Imperial Throne who rejected the far-sighted policy of fortifying the Imperial Cult with the patronage of some higher divinity in favour of the foolhardy policy of attempting to impose upon all comers, human and divine, by sheer pressure of physical force, a political rite which could now manifestly no longer depend on its old inward spiritual sanction in the hearts of the worshippers.³ The failure of a Decius and a Galerius to maintain the Imperial Cult by persecution had the same significance as the failure of an Aurelian and a Constantius Chlorus to fortify it by subordinating it to a worship of the Unconquered Sun. Between them, the two failures proved conclusively that Caesar-worship, impressive though it might be, was nevertheless no more than a fair-weather cult which was incapable of riding a storm.

If we turn from the Hellenic to the Sumeric World, we shall observe that there is an analogue of Caesar-worship here in the cult of his own human person which was instituted—not by the founder of the Sumeric universal state, Ur-Engur (*imperabat circa* 2298–2281 B.C.),⁴ but by Ur-Engur's successor Dungi (*imperabat circa* 2280–2223 B.C.).⁵ We shall also infer—from the fact that

des Empereurs Romains' in *Revue d'Histoire et de Littérature Religieuses*, vol. i (Paris 1896, Macon Protat), p. 447. Compare Timoleon's saying that 'he gave thanks to God for having inscribed Timoleon's name upon His divine decision to save Sicily'.—Plutarch: *Life of Timoleon*, chap. 36.

¹ See V. C (i) (c) 2, p. 82, footnote 4, above, for these two forms of Sun-worship and for the contrast that they present to one another. For the work of the Illyrian Emperors see V. C (ii) (a), vol. vi, p. 207, below.

² See Baynes, N. H.: *Constantine the Great and the Christian Church* (London 1929, Milford), pp. 8 and 95–103, as well as the present Annex, pp. 693–4, below.

³ For the victory of the Christian Martyrs over the Roman Imperial Government see IV. C (iii) (b) 12, vol. iv, p. 227, and V. C (i) (d) 3, in the present volume, pp. 407–9, above. By Galerius's day the Caesar-worship that was then delivering the last desperate counter-attack upon an all but triumphant Christian Church was enlisting allies from every quarter to reinforce its anti-Christian front. It was promoting an archaic revival of historic pagan worship (see Geffken, J.: *Der Ausgang des Griechisch-römischen Heidentums* (Heidelberg 1920, Winter), pp. 28–30); it was fostering the worship of Sol Invictus; and it was patronizing Iamblichus's Neoplatonic Antichurch (see V. C (i) (d) 6 (δ), pp. 565–6, above, and V. C (i) (d) 8 (γ), vol. vi, p. 88, footnote 3, below).

⁴ For Ur-Engur and his work see I. C (i) (b), vol. i, pp. 106 and 109, above.

⁵ See Meyer, E.: *Geschichte des Altertums*, vol. i, part (2), 3rd ed. (Stuttgart and Berlin

Dungi changed the Imperial style and title from Ur-Engur's comparatively modest formula 'King of Sumer and Akkad' to the more pretentious formula 'King of the Four Quarters'¹—that, in calling upon his subjects to worship him as a god, this Sumeric emperor was appealing, as the Roman Caesars appealed, to the gratitude of Mankind towards a being from whose hands they were obtaining the boon of oecumenical unity and peace.² At the same time the records of Sumeric history that have been unearthed by the spade of the modern Western archaeologist inform us, fragmentary though they are, that the Sumeric Imperial Cult also resembled its Hellenic parallel in the further point of being a short-lived fair-weather contrivance. Dungi's three direct successors on the throne of 'the Empire of the Four Quarters' at Ur (*imperabant circa* 2222–2180 B.C.) duly claimed and received divine honours in their turns, and Ur-Engur, as the founder of the dynasty, appears to have been given a posthumous apotheosis.³ But after the collapse of the Third Dynasty of Ur there is only one pretender to dominion over 'the Four Quarters'—Libit-Ishtar of Isin (*imperabat circa* 2096–2086 B.C.)—who is known to have pretended to divinity as well.⁴ And, when the equivalent of Diocletian's and Constantine's work was performed for the Sumeric universal state by Hammurabi (*imperabat circa* 1947–1905 B.C.), after the bout of anarchy which had followed the collapse of the Dynasty of Ur and had continued under the ineffective rule of the Dynasty of Isin,⁵ we find that this Amorite counterpart of the great Illyrian soldiers

1913, Cotta), pp. 557–8, and Fish, T.: *The Cult of King Dungi during the Third Dynasty of Ur* (Manchester 1927, University Press, reprinted from *The Bulletin of the John Rylands Library*, vol. xi, No. 2, July 1927). The evidence marshalled by Fish shows that Dungi was worshipped as a god at Lagash, Umma, Drehem, and Ur, and possibly also at Nippur; that a temple (locality uncertain) had already been dedicated to him in his lifetime; and that offerings were made to him as a god (though the dated evidence for these offerings is all posterior to Dungi's death).

¹ Meyer, E., op. cit., vol. i, part (2), 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 557. See also the present Study, V. C (i) (d) 7, vol. vi, p. 2, below.

² On this point see V. C (i) (d) 7, vol. vi, pp. 1–6, below. The conscious association of emperor-worship with the idea of oecumenical unity is clearly attested in the Sumeric World by the fact that the title 'King of the Four Quarters', which was assumed by Dungi concurrently with his arrogation of divine honours to himself, was not Dungi's own invention but was a revival of the style and title of the Akkadian militarist Naramsin. For Naramsin had also anticipated Dungi in laying claim to divinity, as is indicated by the regular prefixing of the god-determinative to Naramsin's name in his official documents and by the affixing of the visual symbol of divinity—a pair of horns—to the conqueror's helmet on his victory stele (Meyer, op. cit., vol. cit., pp. 516 and 528–9). On the other hand, in the interval between Naramsin's generation and Dungi's, a pretension to divinity was not only asserted but was successfully established by Gudea of Lagash, who was no more than the parochial ruler of a single city-state (*ibid.*, p. 542). In claiming divinity without possessing oecumenical sovereignty Gudea could plead that his reign—coinciding, as it happened to do, with a lull in the Sumeric 'Time of Troubles' between the subsidence of Akkadian militarism and the onset of the Gutæan Völkerwanderung—was at any rate a time of local peace and prosperity.

³ *Ibid.*, pp. 558–9; Jeremias, C.: *Die Vergöttlichung der Babylonisch-Assyrischen Könige* (Leipzig 1919, Hinrichs), pp. 17–18.

⁴ *Ibid.*, pp. 18–21.

⁵ See V. C (ii) (b), vol. vi, pp. 297–8, below.

who came to the rescue of the Roman Empire adopted, on the religious issue, a policy which we have seen to have been likewise the policy of Aurelian and of Constantius Chlorus. Though in general Hammurabi was deliberately and avowedly restoring the universal state of Ur-Engur and Dungi,¹ there was one point in which he broke sharply with Dungi's practice. Instead of ruling as a god incarnate, like Dungi or Augustus, Hammurabi preferred, like Constantius or Constantine, to reign as the human servant of a transcendental divinity who, for this Amorite statesman, took the shape of the Babylonian double of Enlil: the high god Marduk-Bel.² It will be seen that, in the history of the disintegration of the Sumeric Society, the deification of human potentates was the exception, not the rule; and indeed the notion of treating a prince as a god incarnate seems to have been something distinctly foreign to the Sumeric temper and outlook.³

The Sumeric Emperor Dungi is not the only ruler of a universal state who has deified himself as the god incarnate of a 'Kingdom of the Four Quarters'. The self-same title was hit upon—in the opposite hemisphere and in an age that was divided from Dungi's by the lapse of more than three millennia—to designate the universal state of the Andean World;⁴ and the Sapa Inca ('Unique Inca')⁵ who was the sovereign of this American oecumenical empire was also worshipped, like Dungi, as a god incarnate.⁶ How this Incaic Imperial Cult would have fared if it had been granted the time to work itself out is a question that can never be answered; for the Andean universal state had been established for barely a century when it was overtaken by the Spanish conquest; and this

¹ For this see I. C (i) (b), vol. i, p. 106, footnote 2, above.

² Meyer, op. cit., p. 663. For the identification of Marduk of Babylon with Enlil of Nippur at this stage of Sumeric history see V. C (i) (d) 6 (8), pp. 529-30, above. In the Babylonian Society, which was affiliated to the Sumeric, Hammurabi's practice appears to have prevailed over Dungi's. It is true that the god-determinative was sometimes prefixed to the names of the barbarian Kassite kings of Karduniash (Meyer, op. cit., vol. cit., p. 633; Jeremias, op. cit., pp. 21-2); but this usage was intermittent and apparently capricious; and there is no reason to suppose that it was intended to be taken any more seriously than the caliphial style and title which was usurped, after the downfall of the 'Abbasid Caliphate of Baghdad, by its Iranian 'successor-states' (see Arnold, Sir T. W.: *The Caliphate* (Oxford 1924, Clarendon Press), chaps. 9-14). Pace Jeremias, in op. cit., there appears to be no serious evidence for any assumption of divinity by the kings of Assyria. In the Hittite Society—which, like the Babylonian, was affiliated to the Sumeric—'le roi n'est pas divinisé de son vivant . . . mais il l'est après sa mort: on ne dit pas de lui "il est mort", mais bien "il est devenu dieu" [compare the Roman Emperor Vespasian's expiring sally "puto deus fio"—A.J.T.J.]. Cette formule, fréquente dans les textes en langue hittite, n'est pas traduite littéralement dans les textes en akkadien, où l'on emploie les expressions en usage à Babylone.'—Delaporte, L.: *Les Hittites* (Paris 1936, Renaissance du Livre), p. 173.

³ See Meyer, op. cit., vol. ii, part (1), 2nd ed. (Berlin and Stuttgart 1928, Cotta), p. 512, footnote 1.

⁴ See V. C (i) (d) 7, vol. vi, p. 2, below, and Cunow, H.: *Geschichte und Kultur des Inkareiches* (Amsterdam 1937, Elsevier), pp. 75-6.

⁵ See *ibid.*, p. 74.

⁶ See Joyce, T. A.: *South American Archaeology* (London 1912, Lee Warner), p. 110.

was a storm of such violence that it swept away not only the worship of the Inca Emperor but the Incaic Empire itself, and the whole Andean culture with it, in one all-engulfing cataclysm. There are strong grounds, however, for believing that even the Inca Pachacutec (*imperabat circa* A.D. 1400-48), who may be regarded as the founder of the Andean universal state,¹ did not look upon the official worship of his own person and office as a cult which was capable of standing by itself; for it was Pachacutec who organized a Pan-Andean Pantheon in which the high god was not the Inca himself but his progenitor and protector the Sun-God of Corichanca.²

In another context³ we have already noticed the closeness of the resemblance which the Inca Pachacutec's work of theological and ecclesiastical organization bears to that of the Pharaoh Thothmes III; and indeed the divinity of the Pharaohs in its decline, though not at its apogee in the time of 'the Old Kingdom', seems, like the divinity of the Incas, to have been regarded and represented as derivative from that of the human ruler's celestial parent and patron. If the latter-day Pharaoh was 'the Good God', he enjoyed this divine status in virtue of being the adoptive son of the Sun-God Re.⁴ Moreover, we have observed that, throughout the long course of the disintegration of the Egyptiac Civilization from the time of the Pyramid-Builders onwards, the figure of the Pharaoh was progressively humanized through being gradually divested of its divine attributes.⁵ And Thothmes' decision to organize an Egyptiac Pantheon with Amon-Re at its head may perhaps

¹ See II. D (iv), vol. ii, p. 103, footnote 2, above.

² See V. C (i) (d) 6 (δ), p. 532, above, and the present Annex, p. 694, below.

³ In the first of the two places cited in the preceding footnote.

⁴ The Pharaonic title 'Son of Re' is rare in the inscriptions of the Fourth Dynasty and not much more frequent in those of the Fifth and Sixth Dynasties. It did not become part of the regular style and title of every Pharaoh until the time of the Heracleopolite princes and their successors of the Eleventh Dynasty (Meyer, *op. cit.*, vol. i, part (2), 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 204).

⁵ 'In becoming the son of the Ruler of the Universe the Pharaoh rises in status in one sense, but in another sense he sinks, through being subordinated to a higher religious idea. Vis-à-vis his father Re the King no longer stands on the footing of equality on which the living Horus had formerly stood among the gods; he is Re's obedient son who carries out his father's will. In consequence the Pharaoh of the following age is no longer "the Great God", as in the time of "the Old Kingdom"; he is now merely "the Good God"' (*ibid.*, p. 208).

For 'Adoptionism' in general see further V. C (ii) (a), vol. vi, pp. 271-5, below. While the living Pharaoh came to be adopted *ex officio* as a son of Re, the living monarchs of the Hindu overseas dominions of Camboja, Champa, and Java seem to have been identified with the gods worshipped in temples which these monarchs had founded. Thus, when Bhadravarman dedicated a temple to Shiva, the god was styled Bhadrésvara. More than this, when a king or any distinguished person died, he was commemorated by a statue which reproduced his features but represented him with the attributes of his favourite god. . . . Another form of apotheosis was to describe a king by a posthumous title indicating that he had gone to the heaven of his divine patron' (Eliot, *Sir Ch.: Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. iii, p. 115).

⁵ See IV. C (iii) (c) 2 (β), vol. iv, pp. 408-14, above.

be interpreted as a tacitly yet eloquently conclusive confession, on the Pharaoh's own part, that he himself was not, after all, an incarnation of the high god. Nor, perhaps, would it have lain in Thothmes' power to impose on his subjects any religious system at all—not even this one in which the Pharaoh's person was not the supreme object of worship—if the losing battle which the religion of the Egyptiac dominant minority had been fighting in the preceding age against the rising proletarian-born worship of Osiris had not been unexpectedly suspended to give place to an *union sacrée* against the alien worship of the god of the Hyksos.¹

Finally, we shall observe that in the Sinic World, as in the Egyptiac and Andean worlds, the human ruler of the universal state exercised his divine authority as a mandatory rather than in his own right. He was merely the Son of Heaven, and not a very god himself;² and even for this modest executory role, on which the Emperor's hold upon the loyalty of his subjects mainly depended, he was indebted to the Confucian school of philosophers, who invested the Imperial office with this halo of divinity at second hand as a *quid pro quo* when the Imperial Crown at length came to terms with Confucianism and established it as a philosophy of state. Even in the days of their adversity, before the capitulation of the Han Emperor Wuti,³ the Confucian scholars had known how to make a hostile empire-builder realize the potential value of their support.

'When the scholar Liu Chia quoted Confucian classics in the presence of the first emperor [of the Han Dynasty], he was cut short by this scolding: "You fool, I have conquered the empire on horseback; what use have I for your classics?" To this, Liu Chia retorted: "Yes, Sire, you have conquered the empire on horseback; but can you govern it on horseback?"' The Emperor thought that there was something in that, and told him to write a book on why the Ts'ins [had] lost their empire to *him*. The book was duly written and read to the Emperor chapter by chapter. He was pleased, and gave it the title "The New Book", which is preserved to this day.'⁵

² See Fitzgerald, C. P.: *China, a Short Cultural History* (London 1935, Cresset Press), pp. 214-15.

³ For Wuti's conversion to Confucianism, which was one of the momentous events in Sinic history, see Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), p. 173; Forke, A.: *Die Gedankenwelt des Chinesischen Kulturkreises* (Munich and Berlin 1927, Oldenbourg) p. 6; and the present Study, V. C (i) (d) 4, pp. 418-9, above, as well as the present Annex, pp. 707-8, below.

⁴ This is an exact Sinic equivalent of the modern Western *mot*: "The one thing that you cannot do with bayonets is to sit on them."—A.J.T.

⁵ Hu Shih: "The Establishment of Confucianism as a State Religion during the Han Dynasty" in *The Journal of the North China Branch of the Royal Asiatic Society*, vol. ix, 1929, p. 24.

Thereafter Liu Pang's successors on the throne of the Sinic universal state were wise enough to avoid their Ts'in predecessors' fate by coming to terms with the scholars who had inherited—or usurped—Confucius's academic chair;¹ and, as part of this politic *Ausgleich* between the sword and the pen, they were content to accept a status which might fall short of full divinity, but which had the substantial advantage of resting, not upon the arbitrary fiat of the emperors themselves, but upon the moral authority of a school of litterati whose prestige in the sight of the proletariat was rising at this time *pari passu* with the descent of their philosophy towards the proletarian level.² It will be seen that the Sinic Son of Heaven stood nearer to Aurelian the servant of Sol Invictus and to Hammurabi the servant of Marduk than he stood to any Divus Julius or Divus Augustus or deified Naramsin or Dungi. And this less than fully divine status into which the emperors of the Sinic universal state settled down in and after the reign of Han Wuti was taken over by the affiliated Far Eastern Civilization when a ghost of the Empire of the Han was conjured up by the Sui and the T'ang and the Sung,³ and again when, in the course of its disintegration, the main body of the Far Eastern Society was provided with a universal state of its own by the barbarian hands of Mongols and Manchus.⁴ It was only in the Japanese offshoot of the Far Eastern Civilization that an effective apotheosis was conferred upon two of the three great militarists through whose cumulative labours a Japanese 'Time of Troubles' was brought to an end by the establishment of a Japanese universal state at the turn of the sixteenth and seventeenth centuries of the Christian Era.⁵

¹ 'The Han Emperors entered into the closest possible association with Confucianism; they made its teachings into the foundation of their whole theory of state or (it would hardly be an exaggeration to say) into a hallowed state philosophy.'—Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), pp. 172-3.

² For the proletarianization of the Confucian philosophy in the Age of the Han see the passages quoted from Dr. Hu Shih in V. C (i) (d) 6 (δ), pp. 549 and 555-6, above.

³ This evocation of a ghost of the Sinic universal state in the main body of the affiliated Far Eastern Society has been touched upon in V. C (i) (d) 6 (α), p. 478, above, and is examined further in Part X, below.

⁴ See IV. C (ii) (b) 2, vol. iv, p. 87; V. C (i) (c) 1, in the present volume, pp. 53-4; and V. C (i) (c) 4, pp. 348-51, above.

⁵ The three founders of the Japanese universal state were, of course, Nobunaga (*dominabatur* A.D. 1568-82), Hideyoshi (*dominabatur* A.D. 1582-98), and Ieyasu (*dominabatur* A.D. 1598-1603; *imperabat* A.D. 1603-16 as a Shogun officially recognized by the Mikado). These three Japanese 'saviours with the sword' are touched upon further in V. C (ii) (a), vol. vi, pp. 186, 188-9, and 191, below. 'All three are now equal in the eyes of the [Japanese] Government, since they are listed as deities of First Class Government Shrines of Special Rank dedicated to those great ones, not of the Imperial House, who have rendered special service to the country' (Professor A. L. Sadler in a letter to the writer of this Study). Whether the posthumous honours originally conferred upon them were likewise equal seems to be a debatable question. According to the same scholar in the same letter, 'the honours received by Hideyoshi and Ieyasu were practically the same when conferred [cf. eundem: *The Maker of Modern Japan*:

The foregoing survey will perhaps have sufficed to demonstrate the congenital feebleness of cults that are propagated by political

The Life of Tokugawa Ieyasu (London 1937, Allen & Unwin), pp. 17, 20, 35, and 327-31; but the cult of the first was stifled and kept under a bushel very completely all through the Tokugawa Era, whereas that of Ieyasu was naturally elaborated. Nobunaga also received an equivalent deification; but, as his comparatively early death prevented him from becoming master of the whole Empire, as did the other two, he was therefore neglected.' Sir George Sansom appears to concur with Professor Sadler in regard to Hideyoshi and Ieyasu, but to differ from him in regard to Nobunaga, in the following passage from a letter to the writer of this Study: 'Ieyasu and Hideyoshi both received posthumous honours (from the Emperor). Hideyoshi was styled Toyokuni Daimyōjin, and Daimyōjin is a title given to important Shintō deities; whereas Ieyasu was styled Tōshōgū Daigongen, and *gongen* is the word for a manifestation of the Buddha in the form of a Shintō deity. I should say that Ieyasu's posthumous honours were greater. Ieyasu is, or was, spoken of as Gongen Sama, the divine manifestation *par excellence*. Nobunaga received only the posthumous name Sōgen-in, a Buddhist title which is not a sign of deification. All Buddhists are given such a posthumous name.'

When Ieyasu died, there was a dispute among the experts as to what the dead dictator's posthumous status was to be. An adept in the Zen Mahayanian Buddhism (see V. C (i) (c) 2, pp. 96-103, above), Suden, maintained 'that Ieyasu had told him that he wished to . . . remain or become a Buddha like anyone else, while Tenkai', who was an adept in Shintō, 'quoted his interview of a later date at which he had intimated his intention of becoming a divinity like the late Hideyoshi' (Sadler, *The Maker of Modern Japan*, p. 326). Tenkai's will prevailed; the apotheosis of Ieyasu under a syncretistic Shintō-Mahayanian title was carried out in due form at Nikko in A.D. 1617; and Tenkai devoted the rest of his life to the establishment of the new worship. 'For two hundred and sixty years To-sho-dai-Gongen remained the tutelary deity of the ruling powers, and, through them, of the whole land, until, after the interval of a few decades, his place was taken by the deity of the Meiji Jingu' (Sadler, *op. cit.*, p. 331).

Ieyasu's successors did not receive the high posthumous rank conferred upon him. The second and third Shoguns had splendid shrines built for them, but did not receive such high posthumous titles as Ieyasu' (Sir George Sansom, in the letter quoted above). Under the present régime in Japan Tokugawa Mitsukuni is, however, included, like the three founders of the Japanese universal state, among the deities of First Class Government Shrines of Special Rank.

The status of the Mikado seems to be ambiguous. Sir George Sansom observes, in the letter quoted above, that 'the reigning members of the Imperial House are not, in my opinion, regarded as living gods, though there is, I believe, a school of thought which endeavours to inculcate this conception. In the earliest Imperial rescripts the reigning emperor describes himself as Aki-tsu-Kami, "a Manifest God", but I do not think that this persisted.' Sir George Sansom's opinion on this point is supported by the fact that, under the present régime in Japan, the authorities aver, when dealing with foreign mission schools, that bowing to a Shinto shrine or to the portrait of the Emperor is *not* an act of worship (on this point see Holtom: *The National Faith of Japan: A Study in Modern Shintō* (London 1938, Kegan Paul), pp. 68-70). On the other hand, Professor Sadler, in the letter quoted above, expresses the opinion that 'the Emperor would seem to be a "*kami*" while living: e.g. the primary school text books published by the Government say: "We love him as a father and we reverence him as a deity" [see the verse quoted in Holtom, p. 79, from one of the national readers for primary schools published by the Department of Education at Tokyo.—A.J.T.]. The word used is the same as of Shintō deities, and the custom of doing reverence before the Palace—much encouraged—is the same also. Of course "*kami*" is not God Almighty by any means. . . . They are not immortal or omnipotent. It seems that Meiji Tenno even had shrines dedicated to him while living.' Sir George Sansom adds that 'the emperors are certainly regarded as of divine descent, and the ritual in the Imperial Palace [see Holtom, p. 173.—A.J.T.] includes worship by the Emperor of his divine ancestors, i.e. the Sun-Goddess, the first Emperor, and the Imperial line in general'. 'But this collective worship of the Imperial House may be correctly regarded as an aspect of the family worship of the Imperial Household' (Holtom, p. 173); and a dead emperor apparently does not, as an individual, become a recipient of divine honours automatically *ex officio*. Out of all the emperors and empresses of the past, historical or mythical, not more than twelve emperors and three empresses are to-day in receipt of public worship at Government shrines (Holtom, pp. 172-3).

The root cause of this ambiguity in the status of both the living and the dead is pointed out by Sir George Sansom in an illuminating *caveat*. 'In a country where ancestor worship is important, it is difficult to draw a line between the worship of a departed great man as a god, his worship as a hero, and his worship as a personal or

potentates from above downwards through the instrumentality of the propagators' political power. Even when such cults are political in essence, and religious only in form, and even when they correspond to a popular sentiment that is genuine and spontaneous, they seem to show little capacity for surviving storms; and they are at their weakest when they take the shape of a deification of their human authors. Caesar-worship is apt in course of time either to be abandoned altogether or else to be bolstered up by being placed under the aegis of some higher divinity who is not himself just Caesar masquerading as a god incarnate.

There is another class of cases in which a political potentate attempts to impose a cult which is not a mere political institution in a religious guise but is of a genuinely religious character; and in this field, too, we can point to instances in which the experiment has been a success. It appears, however, to be a condition of success in such cases that the religion which is being imposed in this fashion should already be 'a going concern'—at any rate in the souls of a minority of its political patron's subjects—and, even when this condition is fulfilled and when success is attained, the price that has to be paid turns out to be a prohibitive one; for a religion which, by an exertion of political authority, is successfully imposed upon all the souls whose bodies are subject to the ruler who is imposing it, is apt to gain this fraction of the world at the price of forfeiting any prospects that it may once have had of becoming—or remaining—a universal church.

For example, when the Maccabees changed, before the close of the second century B.C., from being militant champions of the Jewish religion against a forcible Hellenization¹ into being the founders and rulers of one of the 'successor-states' of a Seleucid Empire whose cultural policy they had succeeded in frustrating by force of arms within their own parochial radius, these violent-handed opponents of a persecuting Power immediately became persecutors in their turn. They turned the swords that had first been drawn in self-defence, in order to save the Jewish religion from extinction, to the new and sinister use of imposing this self-same Judaism upon the neighbouring non-Jewish populations—once subject, like the Jews, to the Seleucidae—whom the Maccabees now succeeded in bringing under their own rule. And this

national ancestor. The act of worship performed by a visitor to, say, the shrine of Ieyasu does not differ from the act of worship that he would perform before the tablets of his own ancestors or before the tomb of the Emperor Meiji.¹

¹ For the lapse of Judaism into militancy see I. C (i) (b), vol. i, pp. 90-1; II. D (v), vol. ii, p. 203; II. D (vi), vol. ii, pp. 234-6; II. D (vii), vol. ii, pp. 285-6 and 374; IV. C (iii) (b) 12, vol. iv, pp. 224-5; IV. C (iii) (c) 2 (α), vol. iv, p. 263; and V. C (i) (c) 2, in the present volume, pp. 68-9 and 125-6, above; and V. C (i) (d) 9 (γ), vol. vi, pp. 120-3, below.

Maccabaeen policy of religious conversion by political force did avail to extend the domain of the Jewish religion from its native Judaea over Idumaea and over 'Galilee of the Gentiles'¹ and over a narrow Transjordanian Peraea. Even so, however, this triumph of force was narrowly circumscribed; for it failed to overcome either the religious particularism of the Samaritans or the civic pride of the two rows of Hellenic or Hellenized city-states which flanked the Maccabees' dominions on both sides—one row along the Mediterranean coast of Palestine in Philistia and the other along its desert border in the Decapolis. In fact, the extension of the domain of the Jewish religion through the force of Maccabaeen arms was inconsiderable; and even the trivial gain of an expansion through persecution within these close-set limits was to cost the Jewish religion the whole of its spiritual future.

It is the supreme irony of Jewish history that the new ground captured for Judaism by the spear of Alexander Jannaeus (*regnabat* 102–76 B.C.) did bring to birth, within a hundred years, a Galilaean Jewish prophet whose message to his fellow men was the consummation of all previous Jewish religious experience, and that this inspired Jewish scion of forcibly converted Galilaean Gentiles was then rejected and done to death by the Judaeen leaders of the Jewry of his age.² In thus deliberately refusing the opportunity that was offered to it of realizing its manifest destiny of flowering into Christianity by opening its heart to the gospel of its Galilaean step-child, Judaism not only stultified its spiritual past but forfeited its material future into the bargain. In declining to recognize its expected Messiah in Jesus, Judaism was renouncing its birth-right in two great enterprises which eventually made the respective fortunes of two different daughters of Judaism by whom these enterprises were duly carried out in the fullness of time. In the first place Judaism was abandoning the fallow and fertile mission-field of the Hellenic universal state to a Christian Church that was to be driven into independence by its eviction from the Jewish fold; and in the second place Judaism was leaving to an Islam whose founder was to be rebuffed by the Jewish Diasporà in his native Hijāz³ the subsequent political task of reuniting a Syriac World which had been divided against itself as one consequence of the forcible intrusion of Hellenism upon Syriac

¹ Matt. iv. 15. For the unexpected and unintended effect of this Maccabaeen conquest of Galilee upon the history of Jewry and of the World see II. D (iii), vol. ii, pp. 73–4, above, and V. C (ii) (d), Annex II, vol. vi, pp. 477–8 and 499, below.

² On this point see II. D (iii), vol. ii, pp. 73–4, above.

³ The Prophet Muhammad's decision to found a new religion instead of finding his mission in the conversion of his pagan fellow countrymen to Judaism was expressed symbolically in his substitution of Mecca for Jerusalem as the *qiblah* towards which his followers were to face when they were performing their prayer-drill.

ground.¹ Instead of embracing either of these alternative opportunities for a great career when it had the refusal of both of them, Judaism preferred to fling itself into the forlorn hope of Zealotism—in order to be retrieved as a mere fossil,² by the tardy wisdom of Johanan ben Zakkai, from the wantonly incurred cataclysm of A.D. 70.³

The same policy of imposing a religious allegiance by the use of political force was adopted, with similar consequences, by the Sasanidae, another dynasty of Syriac anti-Hellenists who succeeded in Iran and 'Irāq in accomplishing once for all that patriotic task of eradicating Hellenism in which the Maccabees were only momentarily successful in their own more exposed position west of the Euphrates.⁴ In the much larger domain over which the Sasanidae succeeded in effectively asserting their political authority, they pursued the Maccabaean policy of using their political power as an instrument for imposing their own religious practices and beliefs upon their subjects.⁵ In this forcible conversion of the eastern half of the Syriac World to Zoroastrianism the Sasanidae obtained, scale for scale, about the same measure of success as had rewarded the corresponding endeavours of the Maccabees in their miniature *Machtgebiet* in Palestine. The Sasanidae were successful in making Zoroastrianism the prevalent religion within the frontiers of their own empire; but even within these limits they never succeeded in getting rid of every remnant of obstinately non-Zoroastrian religious allegiance; and they were never able to make their forcibly established church secure against raids on the part of Nestorian Christianity and other non-Zoroastrian faiths from beyond the frontiers, or even against outbreaks of heresy—Manichaean, Mazdakite, and so on—within the bosom of the Zoroastrian Church itself. On the other hand, as the price of this partial success in imposing itself, with the aid of the secular arm, upon the subjects of the Sasanian Crown, Zoroastrianism had to make sacrifices which were as heavy as those which were exacted from Judaism by the religious policy of the Maccabees.

¹ For this non-religious function of Islam see I. C (i) (b), vol. i, pp. 73-7, and V. C (i) (c) 2, in the present volume, pp. 127-8, above; and the present Annex, pp. 672-8, below.

² For Judaism as a fossil see I. B (iii), vol. i, p. 35; I. C (i) (b), vol. i, pp. 90-2; II. D (vi), vol. ii, p. 235; and II. D (vii), vol. ii, p. 286, above.

³ See V. C (i) (c) 2, pp. 75-6, above.

⁴ For the respective success of the Sasanidae and failure of the Maccabees to achieve an identical aim at different times and in different parts of the Syriac World see II. D (vii), vol. ii, pp. 285-6, and V. C (i) (c) 2, in the present volume, pp. 125-6, above. For the humiliating debt of the Maccabees, for their brief political *floruit*, to the play of the Balance of Power between the rival Seleucid and Roman representatives of a Hellenic dominant minority see the observation quoted from Tacitus (*Histories*, Book V, chap. 8) in V. C (i) (d) 1, p. 390, footnote 3, above.

⁵ See Pettazzone, R.: *La Religione di Zarathustra* (Bologna 1920, Zanichelli), pp. 184-7.

In the first place a politically regimented Zoroastrian Church had to abandon the mission-fields at its gates to rival churches which had refrained from selling their birthright of freedom.¹ The Oxus-Jaxartes Basin, with its vast hinterlands in the Eurasian Steppe and on the Steppe's Far Eastern coasts, became a debatable ground between a heretical Manichaean version of Zoroastrianism² and a Mahayanian version of Buddhism³ and a Nestorian version of Christianity,⁴ while the orthodox Zoroastrian Church stood aside without taking a hand in the competition for so great a prize.⁵ At the same time the militantly Zoroastrian Empire of the Sasanidae failed as signally as the Jewish Zealots had failed in an earlier age to complete by force of arms the achievement of expelling an intrusive Hellenism from the holdings that it still retained on Syriac ground. The official Sasanian dynastic programme of reconstituting the Achaemenian Empire of Darius remained unfulfilled from first to last, notwithstanding the perpetual wars of aggression, with a view to its accomplishment, which were waged against the Roman Empire by the Sasanian Power over a period of four centuries;⁶ and the demonic effort of the Sasanian Pādishāh Khusrū Parwiz in the last and most devastating of these Romano-Persian wars (*gerebatur* A.D. 603-28) proved as fatal to the Zoroastrian cause as the forlorn hope of the Jewish Zealots in the greatest of the Romano-Jewish wars (*gerebatur* A.D. 66-70) had proved, in its time, to the cause of Judaism.

The duel between Khusrū Parwiz and his Roman antagonist Heraclius ended in a reversion to the *status quo ante bellum* which left the Zoroastrian aggressor still more seriously enfeebled than his Christian victim. And all that Khusrū achieved was to prepare the way for the swift accomplishment, by an Islam-under-arms, of a war-aim which had never been attained by a Zoroastrianism-under-arms from beginning to end of the Sasanian régime down to Khusrū's own day. On the morrow of Khusrū's deposition from the throne by his own war-weary subjects the Primitive Muslim Arabs duly completed the political reunion of the Syriac World by biting off the Syriac provinces of the Roman Empire and

¹ The lifelessness of Zoroastrianism under the Sasanian régime is pointed out by Ameer Ali: *The Spirit of Islam* (revised edition, London 1922, Christophers), pp. xxxv-vi.

³ For the journey of the Mahāvāna from India to the Far East see II. D (vi), Annex, vol. ii, p. 405, footnote 1, and V. C (i) (c) 2, in the present volume, pp. 132-46, above.

⁴ For the spread of Nestorianism across Central Asia see II. D (vi), vol. ii, pp. 236-8, above.

⁵ See V. C (i) (c) 3, pp. 249-50, and V. C (i) (c) 2, Annex I, pp. 578-9, above.

⁶ See V. C (i) (c) 3, p. 216, above.

at the same bite swallowing the Sasanian Empire whole; and this preliminary and superficial act of political union was followed up by the gradual spread of Islam, under the aegis of the Arab Caliphate, until it became the uniform faith of a dissolving Syriac Society.¹ By the same token the destiny which was seized upon by Islam was forfeited by Zoroastrianism; and at the end of the story the religion which had allowed itself to be enticed into the false position of depending for its own advancement upon the political power of the Sasanidae had to pay the penalty of being reduced to a fossilized state and being driven forth from its native ground to live a lingering life-in-death as a mere 'Diaspora' among the Gentiles in the alien environment of the western seaboard of India.²

The present plight of the Zoroastrian Church would have been inconceivable to the predecessors of our latter-day Parsees in the age when Zoroastrianism—in virtue of having been established as the official religion of the Sasanian Empire, with the whole strength of the Sasanian Government's right arm behind it—was being professed with at any rate an outward show of devotion by all but a small minority of the inhabitants of a vast tract of Asia extending from the Euphrates on the south-west to the Murghab on the north-east. And the extremeness of the change in the fortunes of this once established church of Iran and 'Irāq in the course of the last thirteen centuries raises the question whether another faith—namely, the Imāmī form of Shi'ism—which is prevalent to-day over an area almost co-extensive with the domain of Zoroastrianism in the Sasanian Age,³ may not perhaps be destined in some future chapter of its history to suffer an equally sensational eclipse, considering that the latest chapter in the history of the Imāmī sect of Shi'ism has borne a singularly close resemblance to the Sasanian chapter in the history of the Zoroastrianism which once enjoyed the same status as the Shi'ah in the same region.

As the now long since ruined material fortunes of Zoroastrianism were made—for a spell of four centuries—at a single stroke when Ardashir, the Sasanian prince of Fars, overthrew his Arsacid overlord and established Zoroastrianism as the official religion of his own new empire early in the third century of the Christian Era, so the present material fortunes of the Imāmī sect of Shi'ism have been made by the career and policy of Shāh Ismā'il Safawī,⁴ who,

¹ The reason why Islam escaped the usual nemesis of 'higher religions' that take to politics is discussed on pp. 672-8, below.

² For Zoroastrianism as a fossil see I. B (iii), vol. i, p. 35; I. C (i) (b), vol. i, pp. 90-2; and II. D (vi), vol. ii, p. 236, above.

³ For the present extension of the domain of Imāmī Shi'ism in Iran and 'Irāq see II. D (vi), vol. ii, p. 255, with footnote 3, above.

⁴ For Shāh Ismā'il's momentous career see I. C (i) (b), Annex I, vol. i, pp. 366-88, above.

at the opening of the sixteenth century of the Christian Era, emulated Ardashir's achievements by first overthrowing his Āq Qōyūnlū Türkmen overlord and then carving out a new empire of his own in which he high-handedly imposed his ancestral faith of Imāmī Shi'ism upon the Sunnī majority of the inhabitants of the subjugated territories.¹ Is this forcibly propagated Imāmī Shi'ism destined at some future date to liquidate the sinister debt which it owes to the secular arm of Shāh Ismā'il and his Safawī successors by paying in full the price which has now long since been paid by Zoroastrianism for its propagation by similar means at the hands of Ardashir and his successors on the throne of the Sasanidae? While the question whether the Imāmī sect of Shi'ism will ever be penalized to the extreme degree of being reduced to the plight of an expatriated 'Diaspora' is manifestly one that can only be answered by the course of future events which the present generation will not live to see, it is a verifiable matter of fact that the first instalment of the price that once had to be paid by Zoroastrianism for the political patronage of the Sasanidae has been paid for the political patronage of the Safawīs by the Imāmī sect of Shi'ism already.

The original note of this variety of Shi'ism—a note which at first distinguished it more sharply than any other feature from the rival Ismā'ilī school—was its adherence to the principle of Non-Violence. The primitive Imāmī Shi'is, like the *Agudath Israel* in Jewry to-day,² held the view that the Millennium which they were awaiting would be inaugurated in God's own time by God's own action; and accordingly they conceived it to be the duty of the true believers to wait passively for the advent of the eagerly desired New Age instead of presumptuously attempting to anticipate this divine event by any human action of theirs.³ Possibly it was thanks to this disarming tenet that the non-violent Imāmī form of Shi'ism had been allowed to survive in a predominantly Sunnī world in which the intolerably violent Ismā'ilī sect had invited and incurred an almost complete extermination.⁴ However that may be, there can be little doubt that the Non-Violence of the Imāmī Shi'ah was one of the attractions that enabled it, in the fifteenth century of the Christian Era, to find a new mission-field, and to win a considerable number of new converts, in a universal

¹ For evidences of the numerical weakness of the Shi'ah in Iran on the eve of Shāh Ismā'il's forcible conversion of the Sunnī majority of the population see I. C (i) (b), Annex I, vol. i, pp. 361-2, above.

² For the contrast between the passivism of the *Agudath Israel* and the activism of the Zionists see V. C (i) (c) 2, p. 76; V. C (i) (c) 2, Annex III, p. 588; and V. C (i) (d) 4, Annex, p. 617, footnote 2, above.

³ For this original Imāmī doctrine see I. C (i) (b), Annex I, vol. i, p. 359, with footnote 2, above.

⁴ See I. C (i) (b), Annex, vol. i, p. 358, above.

state which had recently been established by Ottoman empire-builders in the domain of Orthodox Christendom.¹ The statesmen who were shaping the policy of the Ottoman Empire in that age found no reason to mistrust or oppose the peaceful penetration of their dominions by a religion which was debarred by its own principles from trespassing on the prerogative of the secular power by going into politics on its own account. These fair prospects of the Imāmī Shī'ah in its Anatolian mission-field were compromised, however, when in the middle of the fifteenth century Shaykh Junayd Safawī (*jungebatur* A.D. 1447-60)²—the reigning representative of a family of religious adepts in Gilān which by this time had come to be recognized as entitled to a hereditary spiritual leadership of the Imāmī Shī'ī community—betrayed one of the fundamental tenets of the sect of which he was the head by wantonly shifting the sanction for his authority from a spiritual to a military basis.³ In the next chapter of the story the Imāmī Shī'ī

¹ For the spread of the Imāmī form of Shī'ism into that region in that age see I. C (i) (b), Annex I, vol. i, pp. 365 and 382-3, and V. C (i) (c) 2, in the present volume, p. 111, above.

² For Shaykh Junayd's career see Hinz, W.: *Irans Aufstieg zum Nationalstaat im Fünfzehnten Jahrhundert* (Berlin and Leipzig 1936, de Gruyter), pp. 22-49, and V. Minorsky's review of Hinz's book in the *Deutsche Literaturzeitung*, 1937, Heft 23, 6th June, pp. 953-7. The pugnacity and aggressiveness of Junayd's character are shown up by the chronicle of his actions and experiences. His patent appetite for temporal power quickly made him suspect to his own sovereign Jahānshāh Qāra Qöyünlü; and, when he was deposed by this Türkmen war-lord from the headship of the Safawī Order of Ardabil, the Ottoman Government prudently refused him asylum in Ottoman territory, while those who did show him hospitality were soon given cause to repent of their good nature. In Qāramān he fell into a theological dispute with the head of the dervish *tekke* at Qöniyah which had received him as its guest, and his method of conducting the controversy was to try to raise a band of wild highlanders against the public authorities! In the dominions of the Mamlūks, to which he then managed to escape, he made himself such a nuisance in the derelict Crusader castle which he rented on the Jabal Arsūs, that the religious authorities at Aleppo complained to the Government at Cairo, with the result that Junayd was ejected from his castle by force of arms. The Ottoman viceroy of Jāniq, whither he next repaired, was glad to see him ride off on a holy war against the Orthodox Christian principality of Trebizond. When this pious enterprise miscarried, the Safawī adventurer settled down for three years at Uzun Hasan Aq Qöyünlü's court at Diyarbakr, where he received his host's sister in marriage. But even in a bed of roses Junayd was unable to rest. From Diyarbakr he returned to his native Ardabil, was expelled for the second time, and met his death in an unprovoked invasion of the dominions of the Shirvānshāh.

³ Shaykh Junayd's momentous new departure from the principles of the Imāmī Shī'ah and from the traditions of his own House has been touched upon in I. C (i) (b), Annex I, vol. i, pp. 366-7, above. In that context it has been suggested that Shaykh Junayd was tempted into taking up arms and going into politics by the sudden creation of a political vacuum in Iran and 'Irāq through the collapse of the Timurid Empire upon the death of Shāh Rukh in the very year of Shaykh Junayd's own accession (compare the similar temptation which beset and overcame the Maccabees upon the collapse of the Seleucid Empire in the latter part of the second century B.C.). In this connexion it may be recalled (see I. C (i) (b), Annex I, vol. i, p. 364, above) that, although the Safawī House had acquired the leadership of the Imāmī Shī'ī sect, it had not itself originally been of the Imāmī, or even of the Shī'ī, persuasion. The eponym of the House, Shaykh Safiyū'd-Dīn (*wvebat circa* A.D. 1252-1334) appears to have been a Sunni, and the first head of the House who is known for certain to have been an Imāmī Shī'ī is Shaykh Junayd's grandfather Shaykh Khwāja 'Alī (*pontificali munere jungebatur* A.D. 1392-1427). These non-Imāmī antecedents in the family tradition of Shaykh Junayd perhaps partly account for his lapse from the principles of a faith which his grandfather may have been the first member of the family to embrace.

missionary enterprise in the Ottoman Empire was frustrated altogether when Shaykh Junayd's grandson Shāh Ismā'il (*imperabat* A.D. 1500-24) carried his grandfather's resort to militancy a long—though not an illogical—stage farther by setting himself the dual ambition of winning an oecumenical empire by force of arms and then using a ubiquitous political power as an instrument for imposing his ancestral faith upon Mankind as a world religion.¹

In another context² we have seen that, in the event, Shāh Ismā'il failed signally to achieve his ambition in either of its two related aspects. His twenty-five-years-long career of military aggression did not avail either to expand the principality which he had inherited from his grandfather to the dimensions of a universal state or to promote the religion which he had inherited from his great-great-grandfather to the rank of a universal church. All that he achieved was to found a new empire in the central portion of the Iranic World and to impose the Imāmī form of Shi'ism by force upon a majority of the inhabitants of this broad but very far from world-wide realm.³ Even on the political plane his achievement was disappointing; for the extent of the territory which he was able to bequeath to his descendants was conspicuously narrower than that of the empire which Timur Lenk had left behind him a hundred years back; and on the religious plane the results of Shāh Ismā'il's career were utterly disastrous for the religion of which he was the official pontiff and champion.

One consequence—which followed inevitably from Ismā'il's general policy, even if the direct responsibility for it cannot be brought home to him in the present state of the evidence—was that the head of the Imāmī mission in the Ottoman dominions, Shāh Qūlī, took a cue from his Safawī master by taking up arms; and this resort to militancy was fatal to the cause of the Shī'ah in the Orthodox Christian World; for the insurrection of the Anatolian Shī'is against the Ottoman Government in A.D. 1511 was answered by the extermination of this disloyal Shī'ī 'Diaspora' in A.D. 1514, at the command of the Ottoman Pādishāh Selīm the Grim.⁴ Therewith the Imāmī Shī'ah lost its chance of becoming the universal church of a disintegrating Orthodox Christian Society; and in our own day, again, this would-be oecumenical religion has been inhibited, by the lasting effects of its irretrievable error of going into politics, from entering another new mission-field of even wider scope and greater promise. The orthodox form of the Imāmī Shī'ah is not to be found in the company of those 'higher

religions' that have latterly begun to compete for the conversion of souls in a Westernized 'Great Society'. On the other hand the list of competitors does include an unofficial and heretical offshoot of the Imāmī established church of the Empire of Iran in the shape of the Bahā'iyah,¹ a free daughter church which has reverted to that principle of Non-Violence which has been abandoned with such disastrous results by its politically compromised mother. The Bahā'iyah sect has been excommunicated by the Imāmī Mujtahids and been evicted from its Iranian homeland; but it is already apparent that these bitter experiences of persecution and expatriation have served this infant religion in good stead; for it has thereby been driven into looking beyond the Mediterranean and the Atlantic for new worlds to conquer in the strength of a principle which is apt to work as an 'open sesame' for any missionary religion that has the faith to embrace it.²

The new departure into which the Imāmī sect of the Shī'ah was led by Shaykh Junayd and his grandson Shāh Ismā'il has an analogue in the Hindu World in the militarization of the religious fraternity of the Sikhs³ by the sixth and tenth gurus in the Sikh pontifical succession. The sixth guru, Har Govind (*fungebatur* A.D. 1606-45), did for the Sikhs what Shaykh Junayd did for the Imāmī Shī'ah by putting arms into the hands of a community which his predecessors had already transformed from an embryonic church into an embryonic state;⁴ and the role of Shāh Ismā'il, the Imāmī militarist *à outrance*, was played in Sikh history by the tenth guru, Govind Singh (*fungebatur* A.D. 1675-1708).⁵ Morally the two militant Sikh gurus were perhaps less blameworthy than

¹ For the Bahā'iyah sect and the Bābī movement out of which it sprang see V. C (i) (c) 2, pp. 174-6, above.

² It will be seen that the Bahā'iyah stands to the Imāmī Shī'i established church of Iran as Manichaeism once stood to a Zoroastrian established church of Iran. On this analogy it will further be seen that the successful propagation of the Bahā'iyah, beyond the western bounds of Iran, across 'Iraḳ and Syria into Europe and America matches the successful propagation of Manichaeism, beyond the north-eastern bounds of Iran, across the Oxus-Jaxartes Basin on to the Eurasian Steppe and into the Far East (see p. 660, above).

³ For the origins of Sikhism see IV. C (iii) (b) 13, vol. iv, p. 231; V. C (i) (c) 2, in the present volume, p. 106; and V. C (i) (d) 6 (δ), p. 537, footnote 3, above. For the militarization of the Sikhs see Macauliffe, M. A.: 'How the Sikhs became a Militant Race' in *Supplement to the Journal of the United Service Institution of India*, vol. xxxii, July 1903, No. 152, pp. 330-58; eundem: *The Sikh Religion* (Oxford 1909, Clarendon Press, 6 vols.), lives of the sixth and tenth gurus in vols. iv and v respectively.

⁴ There seems to have been an intermediate stage in the evolution of the Sikh military machine out of the Sikh religious fraternity which had been founded by Nanak about a hundred years before Har Govind's time. In the last quarter of the sixteenth century of the Christian Era the Sikh community seems to have assumed a form which was already political though it was not yet warlike (see Eliot, Sir Ch.: *Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. ii, p. 268). Guru Angad's advice to a Mughal soldier who had come to ask him for spiritual guidance was that he should do his military duty; and the military virtues were commended by Guru Arjan, who was Har Govind's father and immediate predecessor (Macauliffe, *J.U.S.I.I.*, vol. cit., pp. 331 and 334).

⁵ See Eliot, op. cit., vol. ii, p. 270.

the two militant Safawī shaykhs; for, whereas the Safawīs were tempted into militancy by the sudden collapse of an aggressive Timurid empire which left the oppressor's former victims in the presence of a political vacuum,¹ the Sikhs were goaded into militancy by the tyrannical oppression of an aggressive Timurid empire which at that time still possessed and exercised both the will and the power to put its victims to death.² Yet, however we may assess the relative degrees of moral guilt, the penalty for the

¹ See p. 663, footnote 3, above.

² The fifth guru, Arjan, who was the father and immediate predecessor of Har Govind, was summoned to Lahore by Jahangir, obeyed the summons without recalcitrance, and was no sooner in the Mughal Emperor's power than he was commanded by the tyrant not to maintain any tenets that were incompatible with either Islam or Hinduism. When the guru refused to obey this Imperial command he was put to torture, and he died in captivity—enjoining, as his last injunctions, upon his son and heir Har Govind that he was to bear arms and to maintain an army (Macauliffe, *The Sikh Religion*, vol. iii, pp. 90-101; *J.U.S.I.I.*, vol. cit., p. 334). Again, the ninth guru, Tej Bahadur, was a man of peace who fell foul of the Mughal Emperor Aurangzib over the latter's misguided policy of trying to impose Islam by force upon his Hindu subjects. In answer to an appeal for support from the persecuted Brahmans of Kashmir, Tej Bahadur authorized them to tell Aurangzib that they were prepared to accept Islam if the Emperor could first succeed in converting Tej Bahadur himself. Thereupon Tej Bahadur was summoned by Aurangzib to Delhi; he obeyed the reigning Mughal Emperor's summons, as his ancestor and forerunner Arjan had obeyed Jahangir's; and history repeated itself to the bitter end; for Aurangzib no sooner had Tej Bahadur in his power than he put him under arrest, ordered him to embrace Islam, and finally beheaded him in A.D. 1675 (Macauliffe, *The Sikh Religion*, vol. iv, pp. 377-87; *J.U.S.I.I.*, vol. cit., pp. 341-3). It will be seen that Har Govind took to the sword under incomparably greater provocation than Junayd, whose father and predecessor Shaykh Ibrahim had died peacefully in his bed, and whose grievance against the world was the purely personal one of having been himself deposed, in favour of his uncle, from the headship of the Safawī fraternity, and having then been driven into exile (Hinz, W.: *Irans Aufstieg zum Nationalstaat im Fünfzehnten Jahrhundert* (Berlin and Leipzig 1936, de Gruyter), pp. 23-4). It is true that Shāh Ismā'il, unlike his grandfather Shaykh Junayd, was able to find in the mission of avenging his father's death a handsome pretext for his own persistence in his father's and his grandfather's warlike courses. Yet Shaykh Haydar Safawī's blood hardly cried aloud for vengeance so imperatively as Guru Arjan's or Guru Tej Bahadur's. For, whereas these two Sikh gurus were men of peace who had been inveigled into a tyrant's power and had then been put to death in cold blood, the Safawī Shaykh Haydar was a hard-bitten militarist who met his death on the battle-field in a war in which he himself was the aggressor (Hinz, op. cit., pp. 83-8). Thus a comparison of the respective histories of the militarization of the Imāmī Shī'is and the Sikhs seems to show that the Sikh gurus' aberration was less wanton than that of the Safawī shaykhs.

Both Har Govind and Govind Singh were, no doubt, fully conscious of the new departure that they were making. Har Govind signalized his accession to the guruship on the receipt of the news of his father's death in captivity by refusing to be invested with the hat and cord of a faqir, which were the Sikh guru's traditional insignia, and donning, instead, a turban with a royal aigrette and a sword-belt (Macauliffe, *The Sikh Religion*, vol. iv, p. 2; *J.U.S.I.I.*, vol. cit., pp. 334-6). Govind Singh—consciously following in his grandfather Har Govind's footsteps—trained his own children to arms, inculcated militarism in his followers by propaganda, instituted the military initiation rite of 'Baptism by the Dagger', and boasted 'that he would change his followers from jackals to tigers, and kill hawks with sparrows' (Macauliffe, *J.U.S.I.I.*, vol. cit., pp. 343-7). Yet neither Har Govind nor Govind Singh was able to carry his policy of militarization without opposition in his own household. Both gurus were opposed by the title collectors of the fraternity, and Har Govind was also opposed by his counsellor Bhai Budha and by his mother—the widow of the murdered Guru Arjan (Macauliffe, *The Sikh Religion*, vol. iv, p. 3, and vol. v, p. 6; *J.U.S.I.I.*, vol. cit., p. 335). Even after Har Govind's newly raised army had met and defeated the Mughals on the battle-field, a Sikh who was noted for his piety exhorted the guru to win security against attack by detachment from 'This World'—to which Har Govind could only reply that he was now too deeply implicated in mundane affairs to be able to draw back (Macauliffe, *J.U.S.I.I.*, vol. cit., p. 337).

social aberration was much the same. As a result of having taken up arms the Sikhs eventually succeeded in taking their revenge upon the descendants of their oppressors Jahangir and Awrangzib.¹ When the Timurid Mughal empire in India collapsed, in its turn, like Timur's own empire in South-Western Asia three hundred years earlier, the Sikhs were able to make themselves masters of one of the derelict provinces of this alien universal state into which a distracted Hindu World had been momentarily gathered together by the labours of Akbar and his successors; but in the act of achieving this vulgar worldly ambition the Sikhs were at the same time depriving the syncretistic Hindu-Muslim faith which they had inherited from their forefathers of any prospect which it might once have had of becoming the universal church of a Hindu Society in dissolution. On the religious side the Sikhs have even less success to boast of than the Safawis or Sasanidae or Maccabees. They have not even succeeded in imposing their own religion upon a majority of the inhabitants of those territories in North-Western India in which, for more than a century, the Sikhs themselves were the political masters. In the Panjab to-day the adherents of the Sikh religion account for no more than eleven per cent. of the present population of the province,² and in the total present population of the British Indian Empire the fraction represented by the Sikhs is infinitesimally small. Nor has the Sikh religion gained anything from the abrupt extinction of the Sikh 'successor-states' of the Mughal Empire by British arms in the fifth decade of the nineteenth century. *A priori* it might have been expected that the conversion of Hindu souls to Sikhism—which had received a check when Har Govind transformed the Sikh community from a politico-religious fraternity into a nation-in-arms, and when Govind Singh led his war-band on the war-path³—would have

¹ Eventually, not immediately. The immediate effect of Govind Singh's plunge into 'totalitarian' militarism was the total defeat and destruction of his army by the combined forces of the Mughal Power and the local Panjābi highland chiefs (compare the total defeat of the Safawī Shaykh Haydar's army by a combination between the forces of the Āq Qöyünlü war-lord Ya'qub and those of the Shirvānshāh in A.D. 1488). Though Govind Singh (unlike Haydar) escaped alive from the stricken field, his two eldest sons were killed in the rout, and his two youngest sons were betrayed to the Mughals and were put to death after having refused to accept the alternative of apostasy. Govind Singh himself became a fugitive in disguise, with his following reduced to five companions. Though he just outlived his conqueror Awrangzib, he never recovered his temporal power, and in dying he bequeathed his succession, not to any human guru, but to the Granth (Macauliffe, *J.U.S.I.I.*, vol. cit., pp. 350-5; Farquhar, J. N.: *Modern Religious Movements in India* (New York, 1919, Macmillan), p. 337).

² The *Report of the Indian Statutory Commission*, vol. 1 (London 1930, H.M. Stationery Office), p. 60, estimates the Sikh element in the population of the Panjab at 2½ million out of a total of 20½ million.

³ 'The Khālsā became strong to resist the Mughals, but their organization cut them off from their fellow countrymen, and made them practically a new caste. The transformation of the church into an army produced another evil result: living preaching ceased among the Sikhs, and their religious life began to go down' (Farquhar, J. N., op. cit., pp. 337-8).

begun to make progress again as soon as the Khālsā had been relieved of the incubus of military and political power through being forcibly reincorporated into the alien universal state which re-established itself in India, in the shape of a British instead of a Mughal Rāj, after the interlude of anarchy which had followed the Mughals' collapse.¹ Yet, so far from having profited by this salutary divorce from incongruous military and political activities, the Sikh religion has latterly shown a tendency to merge itself again into the circumambient Hinduism out of which it was originally differentiated through being blended with an Islamic alloy by the syncretistic religious genius of a Kabīr and a Nanak.²

We cannot close this survey of the effects that are apt to follow from the attempt to impose a religious allegiance by the use of the secular arm without turning to the ecclesiastical map of the modern Western World in order to inquire how far the present boundaries between the respective domains of Catholicism and Protestantism have been determined by the arms or the diplomacy of the parochial secular 'successor-states' of a medieval *Respublica Christiana*. No doubt the influence of external military and political factors upon the outcome of the religious conflict in Western Christendom in the sixteenth and seventeenth centuries ought not to be rated too high; for, to take two extreme cases, it is difficult to imagine that the action of any secular authority—however potent or however ruthless—could have availed either to retain the Baltic countries within the fold of the Catholic Church or to bring the Mediterranean countries over into the Protestant camp. At the same time there was an intermediate and debatable zone in which the play of the military and political forces that intervened in the religious strife of that age was certainly influential and was perhaps decisive; and this zone embraces such important portions of the modern Western World as Germany and the Low Countries and France and England. It was in Germany, in particular, that the classical formula *Cujus Regio Ejus Religio* was invented and applied;³ and we may take it that in Central Europe, at least, the secular princes

¹ The episode of Sikh political dominion in the Panjab between the fall of the Mughal Rāj and the rise of the British Rāj in India presents an analogy with the similar episode of Maccabaeen political dominion in Palestine between the fall of the Seleucid Empire and the extension of the Roman Empire over the ex-Seleucid territories west of the Euphrates (see V. C (i) (d) 1, p. 390, and the present Annex, p. 659, footnote 4, above).

² For this tendency of Sikhism to relapse into pure Hinduism see Eliot, op. cit., vol. ii, pp. 272-3. Compare the disappearance, in the Far Eastern World, of the syncretistic Taoist-Christian religion of the T'ai'p'ing, which turned militant (see V. C (i) (c) 2, p. 107, above) like the Hindu-Islamic religion of Sikhism, and unlike the Hindu-Christian Brahṃō Samāj.

³ This formula has been touched upon already, in a different context, in IV. C (iii) (b) 11, vol. iv, pp. 221-2, above.

—as well as those shepherds of souls who had gone into politics and had acquired the temporal sovereignty over some of the fragments of a shattered *Respublica Christiana*¹—did successfully make use of their military and political power in order to force down the throats of their subjects whichever of the two competing forms of Western Christianity the local potentate happened to favour for his own part. In the same glance we can also take the measure of the damage which our Western Christianity, Catholic and Protestant alike, has suffered in the sequel as a penalty for having thus allowed itself to become dependent on political patronage and consequently subservient to *raison d'état*.

One of the first instalments of the price which has been paid for these latter-day political liaisons by the Western Christian churches up to date has been the loss of the Catholic Church's mission-field in Japan; for the seedlings of Catholic Christianity which had been planted in Japan by Jesuit missionaries before the close of the sixteenth century were uprooted before the middle of the seventeenth century by the deliberate action of the rulers of a newly founded Japanese universal state, because these Japanese statesmen had come to the conclusion—after a cool-headed study of the evidence at their command—that the Catholic Church was an insidiously pliant ecclesiastical instrument of the formidable political ambitions of the Spanish Crown.² This forfeiture of a large and promising mission-field *in partibus infidelium* must be estimated, however, as a trifling loss by comparison with the spiritual impoverishment which the policy of *Cujus Regio Ejus Religio* was to inflict upon Western Christianity on the home front. For the readiness of all the competing factions of the Western Christian Church in the Age of the Western Wars of Religion to seek a short cut to victory by condoning, and even demanding, the imposition of their own doctrines upon the adherents of rival faiths by the application of political force was a spectacle which sapped the foundations of all belief in the souls for whose allegiance the warring churches were competing.³

A Louis XIV might be successful in forcing upon the Protestant minority of his subjects the tyrannical and inhuman choice between renouncing their religious convictions and being driven out of their ancestral homes to find asylum in distant countries out of

¹ For this enormity see IV. C (iii) (b) 11, vol. iv, pp. 220-1, above.

² The Western traders in whose wake the Jesuit missionaries had arrived in Japan had been, not Spanish, but Portuguese; but the Portuguese Crown had subsequently come to be associated with the Spanish in a personal union in which Spain was the predominant partner.

³ The sceptical and cynical spirit of the consequent Enlightenment is touched upon in IV. C (iii) (b) 3, vol. iv, pp. 142-3 and 150; in IV. C (iii) (b) 4, vol. iv, p. 184; in IV. C (iii) (b) 12, vol. iv, pp. 227-8; and in IV. C (iii) (c) 3 (α), Annex, vol. iv, pp. 643-5, above; and in V. C (ii) (b), vol. vi, pp. 316-18, below.

reach of the persecuting arm of the Most Christian King.¹ But, although the tyrant could thus enforce, within the frontiers of his own dominions, an outward show of conformity with his own creed and rite, he could neither dragoon his dissenting subjects' consciences nor prevent his cynically irreligious and childishly incongruous method of promoting an ecclesiastical cause from bringing religion of every kind into discredit in the secret places of the heart to which no spy could penetrate. Louis XIV's methods of barbarism eradicated Protestantism out of the spiritual soil of France only to clear the ground for an alternative crop of scepticism; and the spiritual history of France since the latter part of the seventeenth century is merely one outstanding example of an experience that has been common to the whole of our Western Society. In England, for instance, we can see the same sceptical temper setting in—here in reaction against a militant religiosity which had fed the flames of the Civil War—at the moment of the Restoration of A.D. 1660; and we can watch it setting hard after the Glorious Revolution of A.D. 1688. In fine, the effect of the unholy *mariage de convenance* between Religion and Politics was to make Religion itself anathema; and by the end of the seventeenth century the Lucretian verdict on Religion—'tantum religio potuit suadere malorum'²—had come to be endorsed by the enlightened minds of a paganly modern Western World. In the lurid light of the Religious Wars Religion now appeared in the guise of a sinister and anti-social frenzy—a veritable Erinys who was as ruthless in enlisting the secular potentate's sword as she was unscrupulous in paying her political hirelings in ecclesiastical coin for military services rendered. Here was a Fury who might have gone on torturing poor Western Humanity for ever more, if a rescue party of sharp-sighted philosophers had not made the opportune discovery that this demon had an Achilles' heel. The weak spot of Religion was its ridiculousness; and any man or woman whose eyes had been opened to this aspect of the maleficent power was thereby rendered immune against ever again being goaded into homicidal mania by the burlesque Fury's scourge. A horror relieved by ridicule was the defensive posture which had been assumed towards Religion by enlightened Western minds before the seventeenth century was over.³ It was an attitude of mind

¹ For the Huguenots' response to the challenge of penalization see II. D (vi), vol. ii, p. 250, above.

² Lucretius: *De Rerum Natura*, Book I, l. 101.

³ 'It is come, I know not how, to be taken for granted by many persons that Christianity is not so much as a subject of inquiry, but that it is now at length discovered to be fictitious. And accordingly they treat it as if in the present age this were an agreed point among all people of discernment, and nothing remained but to set it up as a principal subject of mirth and ridicule, as it were by way of reprisals for its having so

which sterilized Fanaticism at the cost of extinguishing Faith. And this state of mind has lasted from the seventeenth century into the twentieth.

Indeed, in our time this repudiation of a spiritual principle which is no doubt exposed, in human hearts, to the danger of being poisoned or perverted, but which is none the less the breath of human life, has been carried to such lengths in all parts of a Westernized 'Great Society' that it is beginning at last to be recognized for what it is. It is being recognized, that is to say, as the supreme danger to the spiritual health and even to the material existence of the Western body social—a deadlier danger, by far, than any of our hotly canvassed and loudly advertised political and economic maladies. This spiritual evil is now too flagrant to be ignored; but it is easier to diagnose the disease than to prescribe a remedy; for a lost religious faith is not like a standard article of commerce that can be ordered ready-made from a multiple store, nor again is it like an unquestioningly obedient dog that can be driven off at one moment with a kick and summoned back the next moment with a whistle. The spirit bloweth where it listeth, and we cannot expect it to revisit us on call in response to a tardy and casual summons. It will be hard indeed to refill the spiritual vacuum which has been hollowed in our Western hearts by a progressive decay of religious belief that has been going on by this time for some two and a half centuries; and this problem—which is the most formidable and at the same time the most urgent of all the problems that are remorselessly crowding in upon the present generation—has its origin, as we have seen, in a long continuing yet still unexhausted anti-Caesaro-papistical reaction.¹ We are still reacting against a subordination of Religion to Politics which was the crime of our sixteenth-century and seventeenth-century forebears.² The policy of *Cujus Regio Ejus Religio* is revenging itself up to the hilt, unto the thirteenth and fourteenth generation, upon the children of fathers who perpetrated and condoned this enormity.

If we take a synoptic view of the several surviving forms of Western Christianity in their present state, and compare them in

long interrupted the pleasures of the world.'—Butler, Bishop Joseph: *The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature*, advertisement (dated May, 1736) prefixed to the first edition.

¹ For the term 'Caesaro-papism' see IV. C (iii) (c) 2 (β), vol. iv, pp. 347 and 352, above.

² This still flowing lava-stream of *karma* can be traced back behind the Laodicean Enlightenment and the fanatical Wars of Religion to a medieval fountain-head; for in other contexts we have observed how the secularism and the parochialism which are two of the severest lesions in the social system of our Western Civilization in the Modern Age are due, both alike, to an excessively violent reaction against an excessively autocratic and centralizing tendency to which the Papacy succumbed in the course of its internecine conflict with the Hohenstaufen (see IV. C (iii) (b) 11, vol. iv, pp. 214-22, and IV. C (iii) (c) 3 (β), vol. iv, pp. 512-84, above).

respect of their relative vitality, we shall find that this varies inversely with the degree to which each of these sects has succumbed within the last four centuries to secular control. Unquestionably Catholicism is the form of Western Christianity that is showing the most vigorous signs of life to-day; and the Catholic Church—in spite of the lengths to which modern Catholic princes have gone, in certain countries and at certain times, towards asserting their own secular control over the life of the Church within their frontiers—has still never lost the inestimable advantage of being united in an oecumenical communion under the presidency of a single supreme ecclesiastical authority, while in the meantime ‘the Princes of the Church’ have, unwillingly yet auspiciously, been relieved, by the nineteenth-century encroachments of the secular Powers, of the fearful incubus of the ecclesiastical principalities.¹ Next to the Catholic Church in order of present vitality we shall probably find ourselves placing those ‘free churches’ of the Protestant persuasion which have extricated themselves from the control of the secular Governments in whose pockets these marsupial churches started life.² And we shall certainly place at the bottom of the list the Protestant ‘established churches’ which still remain tied to the body politic of this or that modern Western parochial state.³

The moral of this odious comparison seems plain. The diversity in the fortunes of the several fractions of the Western Christian Church in the Modern Age of our Western history is a piece of evidence which would appear to complete our empirical proof of the proposition that a religion stands to lose far more than it can hope to gain by asking for, or submitting to, the patronage of the civil power. There is, however, one conspicuous exception to this apparent rule which will have to be accounted for before the rule can be allowed to pass muster; and this exception is the case of Islam; for Islam did succeed in becoming the universal church of a dissolving Syriac Society⁴ in spite of having been politically compromised at an earlier stage and in an apparently more decisive way than any of the religions that we have passed under review in this survey up to this point.

We have seen that Zoroastrianism was compromised by the action of a dynasty of secular princes in an age when the Zoroas-

¹ For the extinction of the temporal power of the Pope and of the Transalpine Catholic prince-bishops see IV. C (iii) (b) 11, vol. iv, pp. 220-1, above. In depriving these prelates of their political authority the secular Powers of the modern Western World have perhaps done the same unintentional and unwelcome service to Catholicism as the British Rāj in India has done to the religion of the Sikhs in extinguishing the temporal power of the Khālsā (see the present Annex, pp. 667-8, above).

² For the free Protestant churches see IV. C (iii) (b) 11, vol. iv, p. 222, footnote 2, above.

³ See IV. C (iii) (b) 11, vol. iv, pp. 221-2, above.

⁴ For this achievement of Islam see II. D (vi), vol. ii, p. 235; II. D (vii), vol. ii, pp. 287-8; V. C (i) (c) 2, in the present volume, pp. 127-8; and V. C (i) (c) 4, pp. 370-1, above.

trian Church had already been in existence for at least three-quarters of a millennium and perhaps for a full thousand years.¹ Judaism was compromised by the action of a family of priests who took up arms against a persecutor at a time when they were not themselves the responsible heads of the Jewish hierarchy. The Sikh community and the Imāmī sect of the Islamic Shī'ah were both of them compromised in a more serious way, because they were both of them launched on a new career of militancy by pontiffs who—unlike the Maccabees—were the responsible heads of their respective churches at the time when they severally committed this flagrant breach of their spiritual trust. The case of the orthodox and original Islam, however, looks at first sight as though it were still more extreme than that of its heretical Imāmī offshoot; for the orthodox Islam was politically compromised within the lifetime of its founder by the action of no less responsible a person than the founder himself.

In another context² we have noticed that the public career of the Prophet Muhammad falls into two sharply distinct and seemingly almost contradictory chapters. In the first chapter Muhammad was entirely occupied in the preaching of a religious revelation by methods of evangelization that were purely pacific; in the second chapter he was mainly occupied in building up a political and military power and in using this power in the very way which has turned out, in other cases, to be disastrous for a religion that takes to it.³ In this Medinese chapter Muhammad used his new-found material power for the purpose of enforcing conformity with at any rate the outward observances of the religion which he had founded in the foregoing chapter of his career, before his momentous withdrawal from Mecca to Medina; and, on this showing, the *Hijrah* ought to mark the date which saw the ruin of Islam, and not the date which saw the making of its fortunes, if we are right in the thesis which we have established inductively as a result of our empirical survey up to this point. How are we to explain the hard fact that a religion which was launched upon the World as the militant faith of a barbarian war-band on the war-path should have succeeded in becoming a universal church in spite of having started under a spiritual handicap that might have been expected, on all analogies, to prove prohibitive?

When we set ourselves this problem in these terms, we shall find

¹ For the wideness of the discrepancy between the dates that have been assigned to the Prophet Zarathustra by different schools of modern Western scholarship see V. C (i) (c) 2, p. 121, above.

² In III. C (ii) (b), vol. iii, pp. 276–8, and III. C (ii) (b), Annex II, vol. iii, pp. 466–72, above.

³ For the political career of Muhammad see III. C (ii) (b), vol. iii, pp. 277–8, with III. C (ii) (b), Annex II, above.

several partial explanations which, between them, may perhaps amount to a solution.

In the first place we shall be able to discount a tendency which is rife—at least among Christian critics—to over-estimate the extent of the use of force in the propagation of Islam even after the *Hijrah*. For example, in the hour of Muhammad's long-delayed triumph over the men of his own house—those implacable Meccan enemies of his who had rejected his message and had driven him into exile—the now at last victorious prophet-under-arms who had so long been without honour in his own country distinguished himself by the moderation of the terms on which he accepted the capitulation of his obdurate kinsmen the Quraysh; and this example of self-restraint was emulated by the Prophet's successors in the temporal leadership of the Islamic Commonwealth. The show of adherence to the new religion which they exacted by force was limited to the performance of a small number of not very onerous external observances; and the forcible imposition of even this perfunctory conformity upon conquered unbelievers was not attempted beyond the limits of the Arabian no-man's-land in which the new state was filling a political vacuum and in which the new religion was supplanting, for the most part, nothing higher than a primitive paganism.¹ In the former dependencies and dominions of the Roman and Sasanian Governments which now fell into the hands of the Primitive Muslim Arab conquerors, no compulsion to embrace Islam was applied to any of 'the People of the Book'.² The choice which was actually offered to the conquered populations outside Arabia itself was not 'Islam or death'; it was 'Islam or a super-tax'.³ Even the Arab tribes on the Syrian

¹ The Jewish and Christian communities in the Yaman and the Jewish communities in the Hijāz were no more than islets in a sea of Arabian paganism. The extermination of the Hijāzi Jews and the forcible conversion of the Yamanī 'People of the Book' are among the worst of the political crimes that have to be laid to the account of the Prophet Muhammad and his immediate successors. These were, however, exceptions and not the rule of primitive Islamic policy.

² See IV. C (iii) (b) 12, vol. iv, pp. 225-6, above, and V. C (ii) (a), vol. vi, pp. 204-5, below. Officially 'the People of the Book', who, according to the *Shari'ah*, were entitled to religious toleration if once they tendered their political submission to the Islamic state, included the Jews and the Christians but not the Zoroastrians. In practice, however, the Zoroastrians were accorded, as a matter of grace, the toleration which the two Biblical sects received as a matter of right. In the Qur'an the Zoroastrians are only mentioned in the following passage:

'Surely those who believe [i.e. the Muslims] and those who are Jews and the Sabians and the Christians and the Magians and those who associate [others with Allah, i.e. the polytheists]—surely Allah will decide between them on the day of resurrection.'—Surah xxii. 17.

This solitary reference to the Zoroastrians in the Qur'an leaves their status in doubt. To which of the two sub-groups of non-Muslims is the Prophet consigning them? Is he intending the reader to bracket the Magians with the three sets of 'People of the Book' whose names immediately precede that of the Magians in this catalogue? Or with the polytheists, who are mentioned immediately after? In the event the Prophet's successors humanely and wisely gave the Zoroastrians the benefit of the doubt.

³ See IV. C (iii) (b) 12, vol. iv, p. 226, footnote 2, and IV. C (iii) (c) 2 (β), Annex III, vol. iv, p. 630, above.

and Mesopotamian and 'Irāqī fringes of the North Arabian Steppe who, before the conquest, had served the Roman and Sasanian Powers as their wardens of the Arabian marches,¹ were allowed by their victorious Muslim Arab kinsmen to remain faithful to Christianity if they chose;² and indeed in the first instance all but an inconsiderable minority of the newly elevated imperial people's vast concourse of newly conquered subjects took an honourable advantage of the tolerant choice that was offered them, and opted for paying super-tax in preference to turning renegade. Nor was this option made invidious for the non-Muslim subjects of the Arab Caliphate under the Umayyad régime which came to stay for a century after the brief antecedent dispensation of the four pre-Umayyad Commanders of the Faithful;³ for the Umayyad Caliphs were Laodiceans to a man,⁴ with the exception of 'Umar II (*imperator* A.D. 717-20).⁵

It was this century of Umayyad tolerance that gave Islam its opportunity to make its fortune by providing a universal church for the Syriac World instead of remaining merely the sectarian religion of a band of barbarian conquerors.⁶ It may be true that

¹ See I. C (i) (b), vol. i, p. 73, footnote 1, and Part III. A, Annex II, vol. iii, p. 398, above.

² See, for example, the evidence for the remarkably considerate treatment of the Christian Arab tribe of the Banu Taghlib, which is presented in Arnold, T. W.: *The Preaching of Islam*, 2nd ed. (London 1913, Constable), pp. 49-50. The Banu Taghlib's grazing grounds were in 'Irāq 'Arabī, in the environs of Ctesiphon.

³ The reigns of the first four Caliphs, taken together, lasted officially from A.D. 632 to A.D. 661, while the Caliphs of the Umayyad Dynasty reigned officially from A.D. 661 to A.D. 750 from first to last. *De facto*, however, the founder of the Umayyad Dynasty, Mu'āwiyah, had been master of Syria for some twenty years before his accession to the Caliphate was officially recognized after the death of the Caliph 'Alī (Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), p. 35). A striking piece of Christian testimony to the popularity of the Umayyad Caliph Yazīd I (*imperator* A.D. 680-3) has been cited in V. C (i) (c) 3, p. 226, above.

⁴ The prevailing attitude of the Umayyads towards Islam has been touched upon already in V. C (i) (c) 2, p. 128, footnote 5, above. For the scepticism, towards all religions, of the Caliph Mu'āwiyah, who not only founded the Umayyad Dynasty but also set the tone for his successors, see Wellhausen, op. cit., p. 84. The lukewarmness of this dynasty of caliphs towards the established religion of the commonwealth of which they were the secular heads is not at all surprising when it is remembered that the Umayyads were one of the leading families of that Meccan aristocracy which had obstinately opposed the Prophet Muhammad in defence of its vested interest in the local pagan divinities whose worship had made Mecca a goal of pilgrimage before Muhammad had called upon his countrymen to throw this lucrative local paganism away. After the Prophet's final triumph the Umayyads, like the rest of the Quraysh, were quick to see that their cranky fellow tribesman who had eventually succeeded in forcing his own new-fangled religion down their throats had incidentally brought within their reach opportunities of aggrandizement of which they could never have dreamed in 'the Days of Ignorance'. But the skill which was shown by Mu'āwiyah and his descendants in turning the unpalatable results of Muhammad's work to their own advantage, by entering into the fruits of their victorious adversary's material labours, did not imply any enthusiasm on their part for the religion of the prophet on whom they had contrived to take this ironical revenge. (On this point see further pp. 676-7, below.)

⁵ See Wellhausen, op. cit., p. 167.

⁶ It was in this latter capacity—as the distinctive faith of the trans-frontier barbarians in the Arabian section of the no-man's-land beyond the Syrian *limes* of the Roman Empire—that Islam made its first epiphany (see III. C (ii) (b), vol. iii, pp. 276-7; Part III. A, Annex II, vol. iii, pp. 450-1; V. C (i) (c) 2, in the present volume, p. 128; and V. C (i) (c) 3, in the present volume, p. 230, above).

this service was bound to be performed for that world in that age by some religion or other; for at that time the Syriac Society was craving to recover a unity which it had lost as a result of having been overrun by Hellenism a thousand years back; and, now that a unitary Syriac universal state had at last been re-established in the shape of the Arab Caliphate,¹ it was only to be expected that this reunion on the superficial plane of politics should be extended to a deeper plane of life through the establishment of a Syriac universal church within the political framework which the Caliphate had provided. This universal church must be the institutional embodiment of some 'higher religion'; but which of the religions in the field would now bring this body ecclesiastic to life? It by no means followed that Islam would succeed in an enterprise which a number of older religions—Judaism, Zoroastrianism, Nestorianism, Monophysitism—had already essayed without success.² Indeed, a garbled barbarian version of the indigenous Syriac faiths—and this was what Islam was by origin³—might actually have been expected, *a priori*, to prove less attractive to Syriac souls than the finer alternatives which they had already discarded. In these intrinsically adverse circumstances Islam, so far from achieving its historic success, would assuredly have suffered the same fate as Arianism if the Muslim Umayyads had pursued the intolerant ecclesiastical policy of the Arian Vandals,⁴ and had tried to impose Islam upon their Monophysite and Nestorian and Zoroastrian subjects as the Vandals did try to impose Arianism upon the Catholic and Donatist communities in the Roman provinces which Genseric had conquered in North-West Africa. These considerations seem to point to the perhaps unexpected conclusion that the prospects of an Islam which was not a particularly attractive religion in itself, and which had been gravely compromised by its own founder when he withdrew from his spiritual apostolate at Mecca and plunged into a political career at Medina, were retrieved by the crypto-pagan Umayyad usurpers of the Meccan Prophet's political heritage—and this for the paradoxical reason that the Umayyads were indifferent, or even positively hostile, to the propagation of the Islamic faith. For the most part, these worldlings were content to leave the religion of which they were officially the temporal trustees and champions to shift for itself while they cynically enjoyed the sweets of the lucrative office which they were holding on false pretences. And in so far as the progres-

¹ For this aspect of the Arab Caliphate see I. C (i) (b), vol. i, pp. 72-7, above.

² See II. D (vii), vol. ii, pp. 285-7, and V. C (i) (c) 2, in the present volume, pp. 125-8, above.

³ See III. C (ii) (b), vol. iii, p. 277, above.

⁴ See V. C (i) (c) 4, p. 358, above, and the present chapter, p. 679, below.

sive conversion of their non-Arab subjects to Islam did attract the Umayyad Caliphs' attention from time to time, we may suppose that it exercised—and annoyed—they first and foremost as a financial problem, since, for the Caliphial treasury, every conversion of a non-Muslim subject of the Caliphial Government to Islam brought with it a corresponding diminution of super-tax receipts.

Under these extraordinary conditions Islam had to make its own way among the non-Arab subjects of the Caliphate very largely on its own merits—as Zoroastrianism had once had to make its way among the non-Iranian subjects of the Achaemenidae¹—and without that fatal assistance from the secular arm which had afterwards been accepted by Zoroastrianism under the Sasanian régime. In these circumstances the spread of Islam outside the ranks of the Arab garrisons of the restored Syriac universal state was slow but at the same time sure; and, in the hearts of ex-Christians and ex-Zoroastrians who embraced the new religion in the face of the indifference, if not actually in the teeth of the displeasure, of their nominally Muslim Umayyad masters, Islam became a very different faith from what it had formerly been on the sleeves of Arab warriors who had worn it there as a denominational badge of a privileged political status. The new non-Arab converts not only took their adopted religion to heart: they also adapted it to their own intellectual outlook by doing for Islam what a Clement and an Origen had done for Christianity at a corresponding stage of its history.² They translated the crude and casual assertions of the Prophet of the Arabian external proletariat into the more subtle and more consistent terms of Christian theology and Hellenic philosophy; and it was in this clothing—in which it was clad by the spontaneous intellectual labours of non-Arab converts, and not by the political fiat of Gallionic-minded Arab empire-builders—that Islam was able to become the unifying religion of a Syriac World which had been reunited only on the superficial plane of politics by the sweep of the Arab military conquest.

Within a hundred years of Mu'awiyah's rise to political power the non-Arab Muslim subjects of the Caliphate had become strong enough, even in the military sense, to put down the Laodicean Umayyads from their seat and to enthrone in their place a dynasty whose devoutness reflected the religious temper of their supporters. In A.D. 750, when the favour of the non-Arab Muslim element among the subjects of the Caliphate gave the 'Abbasids the victory over the Umayyads, it is possible that the numerical

¹ For the religious policy of the Achaemenidae see pp. 704-5, below.

² See V. C (i) (c) 4, p. 367, and V. C (i) (d) 6 (8), p. 539, above.

strength of the religious faction which thus turned the scales in the balance of dynastic power was still as small in proportion to the total population of the Arab Empire as were the numbers of the Christians in the Roman Empire at the moment when Constantine overthrew Maxentius.¹ The mass-conversions of the subjects of the Caliphate to Islam probably did not begin before the first collapse of the 'Abbasid Power in the ninth century of the Christian Era, or reach their term until the final dissolution of the 'Abbasid Empire in the thirteenth century, and it can be said of these belated harvests in the Islamic mission-field—with greater assurance than could perhaps be felt in passing the same verdict on the mass-conversions to Christianity during the death-agonies of the Roman Empire in the fourth, fifth, and sixth centuries of the Christian Era—that they were the outcome of a spontaneous movement on the part of the masses themselves and not of political pressure on the part of their rulers. It is true that the 'Abbasids surpassed the Umayyads in their devotion to Islam in the measure in which Constantine surpassed Philippus Arabs in his devotion to Christianity; but it is at the same time true that the earlier 'Abbasids abstained, as conscientiously as Constantine himself, from misusing their political power for the purpose of forcing, upon an unbelieving majority of their subjects, a religion to which they themselves happened personally to be attached; and it is also a fact that the later 'Abbasids for the most part remained faithful to this policy of toleration, in honourable contrast to Constantine's successors. The Islamic counterparts of a Theodosius and a Justinian, who departed from the Constantinian policy and did misuse their political power in order to quench the smoking flax of unbelief, are few and far between² in a list of 'Abbasid Caliphs which stretches through five centuries.³

If the facts that have now been set forth may be considered to account satisfactorily for the exception which Islam might appear

¹ The numerical strength of the Christian element in the population of the Roman Empire in A.D. 312 is estimated at about 10 per cent. by Baynes, N. H.: *Constantine the Great and the Christian Church* (London 1929, Milford), p. 4.

² The most flagrant of the exceptions that prove the general rule of 'Abbasid tolerance is the Caliph Mutawakkil (*imperabat* A.D. 847–61) (see V. C (ii) (a), vol. vi, p. 205, footnote 7, below).

³ This greater constancy which was displayed by the Muslim 'Abbasid Caliphs, in contrast to the Christian Roman Emperors, in abiding by the policy of toleration, is not a matter for surprise; for, whereas the Emperor Constantine's policy of toleration had no sanction behind it except the Emperor's own personal will, the toleration that was practised by the 'Abbasids was founded, not upon a personal or dynastic caprice, but upon one of the standing orders of the religion which the rulers themselves professed. We have noted already (on pp. 674–5, above) that the *Shari'ah* made it obligatory for the Government of the Islamic Commonwealth to guarantee an effective religious toleration to all politically loyal non-Muslim subjects of the Islamic State who were 'People of the Book'. For the victory of this injunction of the *Shari'ah* over the blood-thirstiness of the Ottoman Pādīshāh Selim the Grim see p. 706, footnote 1, and V. C (ii) (a), vol. vi, p. 204, below.

at first sight to present to our empirically established general rule, then perhaps we can abide by our conclusion that, while it is not impossible for the secular power to obtain some measure of success in forcibly imposing upon its own subjects a religion which is already 'a going concern', the price which the politically compromised religion has to pay, as a rule, for a local enforcement by means of political pressure is the prohibitive price of forfeiting any prospects which that religion may previously have had of attaining—or retaining—universality.

The same prohibitive penalty for the moral offence of attempting to impose a religion by political force may also be incurred when the attempt is unsuccessful even within parochial limits. Indeed, such cases would appear to be at least as numerous as the cases, which we have so far been examining, in which there has been at least some measure of parochial success to be placed on the credit side of the account. Among the more notorious cases in which a religion that has accepted the compromising support of the secular arm has suffered an unmitigated loss—with no grain of even local advantage to set off against it—through the inability of the secular power to impose religious conformity by force even within its own frontiers, we may reckon the failure of the Roman Emperor Justinian to impose his own Catholic Orthodoxy upon his Monophysite subjects beyond the Taurus;¹ the failure of the East Roman Emperors Leo III and Constantine V to impose their own Iconoclasm upon their Iconodule subjects in Greece and Italy;² the failure of the Vandal masters of a barbarian 'successor-state' of the Roman Empire in North-West Africa to impose their own Arianism upon the Catholic and Donatist provincials;³ the failure of the British Crown to impose its own Protestantism upon its Catholic subjects in Ireland;⁴ the failure of the Timurid Mughal Emperor Awrangzib to impose his own Islam upon his Hindu subjects;⁵ and finally the failure of the Iranic militarist Nādir Shāh⁶ to bring back into the fold of the Sunnah the descendants of a people whose allegiance had been forcibly detached from the

¹ See V. C (ii) (a), vol. vi, p. 223, below.

² See IV. C (iii) (c) 2 (β), vol. iv, p. 352, footnote 5, above.

³ See V. C (i) (c) 4, p. 358, and the present chapter, p. 676, above.

⁴ See II. D (vii), Annex II, vol. ii, above.

⁵ In embarking upon this fatal policy Awrangzib was not only transgressing the injunctions of the *Shari'ah* in regard to 'the People of the Book' (a charter of toleration by which the Hindus had at least as good a claim as the Zoroastrians to benefit by analogy): he was also sinning against the light that had been seen by his ancestor Akbar, the enlightened founder of the universal state which Awrangzib's fanaticism brought to ruin. (For Akbar's religious experience and policy see the present Annex, pp. 699–704, below.)

⁶ See I. C (i) (b), Annex I, vol. i, p. 399, and V. C (i) (c) 1, in the present volume, pp. 44–5, above, as well as Browne, E. G.: *A Literary History of Persia*, vol. iv (Cambridge 1928, University Press), pp. 135–8, and Lockhart, L.: *Nadir Shah* (London 1938, Luzac).

Sunnah and transferred to the Shī'ah, little more than two hundred years before Nādir Shāh's day, by the act of an earlier Iranic militarist, Ismā'il Shāh Safawī.

These examples show that a signal failure frequently attends the efforts of political potentates to impose upon their subjects a religion of the rulers' choosing, even when this religion is already 'a going concern'; and *a fortiori* it would be difficult to point out a single instance of success in cases in which the system of practices and beliefs which the secular ruler has been attempting to inculcate from above downwards has been not a religion but a philosophy. On the other hand there are two celebrated instances of the failure of an imperial philosopher-missionary. The Roman Emperor Julian failed to establish Neoplatonism as the official philosophy of the Hellenic universal state,¹ and the Maurya Emperor Aṣoka likewise failed to establish the Hinayanian form of Buddhism as the official philosophy of the universal state into which the Indic World had been gathered up by Aṣoka's grandfather Chandragupta. This pair of failures is remarkable, considering the strength of the combination of conditions favourable to success under which Aṣoka and Julian alike embarked upon their respective spiritual missions.

In the first place the philosophies which the two emperors set out to propagate among their respective subjects were not arbitrary systems of the imperial propagandists' own invention, but were 'going concerns' which had been founded and developed by a succession of sages who had not had any political authority at their command but had won a following for their tenets on their intrinsic intellectual and moral merits, long before the birth and accession to power of their latter-day imperial patrons. This is true even of the Neoplatonism that was patronized by the Emperor Julian; for, as we have already observed,² the vein of artificiality and crankiness which is so prominent and so feeble a feature in this pagan counterblast to the Christian Church was not introduced into Neoplatonism by the Emperor Julian's personal caprice, but was inherited by the Neoplatonist emperor from the Neoplatonist hierophant Iamblichus.³

¹ Julian's failure is also touched upon in V. C (i) (c) 2, p. 147; V. C (i) (d) 6 (δ), pp. 565-7; V. C (i) (c) 2, Annex II, p. 584, above; and in V. C (ii) (a), vol. vi, pp. 222-3, below.

² See the quotation from Geffken in V. C (i) (d) 6 (δ), p. 565, above.

³ For an account of the Iamblichian Neoplatonic Antichurch see Bidez, J.: *La Vie de l'Empereur Julien* (Paris 1930, Les Belles Lettres), I^e Partie, chap. xi, 'Chez les Disciples de Jamblique', and chap. xii, 'Théurgie Chaldaïque et Mystères Néoplatoniciennes'; for the Emperor Julian's administrative organization of this Antichurch which he had inherited from the philosopher-hierophant Iamblichus see op. cit., III^e Partie, chap. ix, 'Théocratie'.

Among the host of non-Christian worships over which the philosopher's mantle of Plotinus and Plato was enthusiastically flung by Iamblichus and his successors—Julian

As for the state of the Hīnayāna in Aṣoka's day, there is no trace in it, at that stage, of those elements of decadence which may partly account for the fiasco of Iamblichus's and Julian's Neoplatonism. The Hīnayāna that was embraced by Aṣoka was a philosophy that was still in its intellectual and moral prime, like the Stoicism that was embraced by Marcus Aurelius.¹ In Aṣoka's case, at any rate, we cannot trace the failure of his mission to any inherent weakness in the philosophy of his choice.

Nor, again, can the failure of either Aṣoka or Julian be traced to any serious abuse of the enormous power and influence that were concentrated in the hands of both these emperors in virtue of their secular office. It is true that, in this matter again, Julian, with his impulsive and even passionate temperament, has laid himself open to criticisms against which the mortified monk Aṣoka is impregnable proof. Yet even Julian had in him enough of the true philosopher to restrain him from going very far in translating into action an animosity against Christianity which he did not attempt to pluck out of his heart. Julian's first act on succeeding to the supreme authority in the Roman Empire was to institute—as far as this could be done by Imperial decree—a

among the rest—the place of honour seems to have been assigned to the rites prescribed in a work called *The Chaldaean Oracles* from the pen of a Babylonian medicine-man, practising in *parthibus Hellenicis*, who was the namesake of Julian and the contemporary of Marcus Aurelius.

'Dans la théologie assez touffue de ces oracles, se détachait une figure qui, à elle seule, était presque un panthéon: Hécate-Rhée, déesse trimorphe, dont les cheveux se dressaient comme des flammes, dont les serpents enlacés entouraient les tempes et la ceinture, et qui, dans ses flancs, portait du côté droit l'âme du monde, du côté gauche la fontaine de vertu, et la Nature sous son échine.'

In this professedly Chaldaean divinity we seem to see the Minoan Goddess of the Snakes and the Helleno-Hittite Artemis of Ephesus with their features and attributes all exaggerated as they might have been in an Indic caricature; and, indeed, if the Emperor Julian had succeeded in making the medicine-man Julian's syncretistic religion prevail over Christianity, we may conjecture that the outcome would have been something quite as alien from the original philosophy of Plato as the Tantric or Lamaistic form of Mahayanian Buddhism is from the original philosophy of Siddhārtha Gautama.

Julian's policy was to retort to the Christian Church's tactics of stealing the intellectual thunder of the Hellenic philosophers by arming his own Neoplatonic Antichurch with the Christian Church's hierarchical organization and philanthropic activities (see V. C (i) (c) 2, Annex II, p. 584, above). His stumbling-block was the unresponsiveness of the surviving ministers of the non-Christian religions within the frontiers of the Roman Empire in Julian's day. The majority of those for whose support he appealed seem to have failed the Emperor—whether out of laziness or out of timidity or out of a sophisticated self-consciousness which shrank from the prospect of having to make a fool of itself at Don Quixote's dictation. Whatever the cause of this non-co-operation may have been, the result was that the Roman Emperor proved unable to emulate the work of the Pharaoh Thothmes III in 'the New Empire' of Egypt and the work of the Inca Pachacutec in the Andean universal state (for the success of these two non-Hellenic emperors in consolidating the local worship of their respective worlds into a single hierarchical organization see V. C (i) (d) 6 (δ), pp. 530–31 and 532, and the present Annex, pp. 652–4, above). If Julian had been able to enlist for his Antichurch the services of a hereditary corporation or caste of priests like the Magi or the Brahmins (see V. C (i) (d) 6 (δ), p. 542, above), then he might have been able to contend with the Christian Church on less unequal terms than those on which he actually had to fight his losing battle.

¹ For Marcus's notable abstention from any attempt to take advantage of his office in order to propagate his philosophy see the present Annex, p. 705, below.

régime of complete toleration for all the religions that were current among his subjects, without any official differentiation in favour of Paganism or to the detriment of Christianity.¹ When the pagan mob at Alexandria took the law into its own hands by lynching the late Emperor Constantius's Arian bishop George of Cappadocia—and two Christian civil servants along with him—in reprisal for their victim's vexatious treatment of the local pagan worshipers during the preceding reign, Julian did at least address a letter of remonstrance to the Alexandrians in which he condemned their crime in strong terms in despite of his own unconcealed sympathy for the cause in the name of which this crime had been perpetrated.² Finally, when Julian failed to live up to the ideal of toleration which he himself had proclaimed, the discriminatory measures against the Christians to which he then stooped were at any rate strictly negative. The emperor withheld from all professing Christians, *ex officio religionis*, the official licence without which they could not enter, or even remain in, the teaching profession;³ and there is some ground for believing that he also went to the further length of excluding the Christians from all branches of the public service: military, administrative, and judicial.⁴ Yet all this, taken together, falls far short of that first degree of persecution which is known as 'a dry terror' in the new technical terminology with which our modern Western political vocabulary has been enriched by the march of progress in the fourth decade of the twentieth century of the Christian Era. As for Açoka, he was not only innocent of even the slightest and most indirect recourse to the employment of political pressure for the propagation of the philosophy in which he had put his treasure: he was actually moved to embrace the Hīnayāna by a profound remorse for his own conduct in having once, though once only, resorted to that use of force which is the *ultima ratio regum*. The moral passion which inspired the Emperor Açoka's preaching of the philosophy of Siddhārtha Gautama was the obverse side of his horror at the misery which he himself had caused on that one occasion by waging a victorious war of aggression against the kingdom of Kalinga. After this appalling experience Açoka renounced the use of War as an instrument of his Imperial policy; placed his court on a vegetarian diet; abolished the Imperial Hunt; and made the slaughtering of animals illegal for all his subjects on fifty-six days per annum.⁵ So far was Açoka

¹ See Bidez, J.: *La Vie de l'Empereur Julien* (Paris 1930, Les Belles Lettres), pp. 227-9.

² Bidez, op. cit., pp. 233-5. The text of the letter will be found in Julian's *Œuvres Complètes*, tome i, 2^e partie: 'Lettres et Fragments', edited and translated by Bidez, J. (Paris 1924, Les Belles Lettres), pp. 69-72.

³ Bidez, *La Vie de l'Empereur Julien*, pp. 263-6.

⁴ Ibid., pp. 295-6.

⁵ This last measure was no doubt a rather authoritarian act of interference with the

from inflicting any disabilities upon the majority of his subjects who did not embrace the Emperor's own philosophical tenets that he deprecated an indulgence even in verbal polemics at the expense of any of the diverse religions that were professed in his dominions; and he set a personal example of magnanimity by bestowing benefactions upon at least one non-Buddhist sect of ascetics.¹ Assuredly it would have been impossible for any one in Aṣoka's position to be more scrupulous than Aṣoka was in refraining from taking any improper advantage of the formidable secular power which he happened to hold in his hands.

The foregoing evidence suggests that Aṣoka, at any rate, deserved to succeed in his mission, and that even Julian hardly deserved to fail. Yet Aṣoka, as well as Julian, did fail conspicuously. The inference would appear to be that the enterprise of attempting to inculcate a philosophy from above downwards into the souls of Mankind in the mass is, for some *a priori* reason, so forlorn a hope that it is doomed to failure even when it is undertaken by an emperor-monk of Aṣoka's heroic spiritual stature.

With the warning of Aṣoka's astonishing failure imprinted on our minds, we may feel certain in advance that a political potentate will be found impotent to propagate from above downwards a system of practices and beliefs when this system is not some philosophy that is already 'a going concern', but is a 'fancy religion' that has been imported from abroad, or been manufactured in his own throne-room, by the monarch himself. On this point we shall find our expectations confirmed by a survey of the classical instances.

The most extreme case of the kind that is on record is perhaps that of the Isma'īlī Shī'ī dissident Caliph al-Hākim bi'amrī'llāh the Fātimid (*imperabat* A.D. 996-1020); for, while we are able, from such knowledge as the uninitiated can obtain of the jealously guarded mysteries of Hākim's eclectic religion, to trace this and that borrowed element to its source—a source which may prove to be either Jewish or Christian or Zoroastrian or Manichaean or Gnostic or Mandaean or Pythagorean or Neoplatonic or Hindu²—'the basis and distinctive dogma of Druze theology' is to be found, not in any of these crumbs from the tables of richer faiths, but in the deification of Hākim himself as the last and most perfect of ten

liberty of the subject, but it can hardly be brought within the category of religious persecution.

¹ These facts of Aṣoka's spiritual experience and political practice are recorded—for the most part on the first-hand evidence of Aṣoka's own inscriptions—in Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), pp. 156-8 and 176-9.

² For an analysis of the sources of the syncretistic element in the religion of Hākim see Hitti, P. K.: *The Origins of the Druze People and Religion* (New York 1928, Columbia University Press), especially pp. 4 and 30-54. Hitti's work came into the present writer's hands too late to be mentioned in II. D (vi), vol. ii, p. 258, footnote 1, above.

successive incarnations of God: a divine and immortal Messiah who was to return in triumph to a world from which he had mysteriously withdrawn after a first brief epiphany.¹

It is true that this cardinal tenet of the Druse religion was not quite so unfamiliar or so shocking to the minds of Hākim's contemporaries in Hākim's world as might be supposed; for the conception of a god incarnate had been brought within the mental horizon of Islam by the intellectual commerce of Muslim theologians and philosophers with the Christian and Hellenic and Hindu systems of thought; and the Shi'ah, more particularly in the Ismā'īlī branch in which Hākim himself had been brought up, had already made the transition from theory to practice by virtually deifying 'Alī and the series of Imāms who were 'Alī's successors.² At the same time the worshippers of Hākim were careful to propitiate orthodox Muslim opinion by proclaiming themselves to be rigid unitarians;³ and we have seen already that they had done their best to make their new religion attractive to the surviving adherents or admirers of the older religions and philosophies which Islam had overlaid by decking their central dogma out in a variegated plumage which reflected some of the colours of almost every religion or philosophy under the sun. In fact, the inventors of the Druse religion showed a consummate skill in displaying their bizarre spiritual merchandise to the best possible advantage. And yet, as it turned out, this ingenuity was of little avail. The solitary success of the missionaries of the new faith was the conversion by the apostle Darazī, in A.D. 1016, of one tiny community in the Syrian district of Wādī'l-Taym, at the southern end of the Biqā' and at the foot of Mount Hermon.⁴ Not more than fifteen years after this—in A.D. 1031—'the door of the Unitarian Religion was closed' in the sense that the mission of converting the World was deliberately abandoned. Since then the Druse community has neither admitted converts nor tolerated apostates,⁵ but has remained a closed hereditary religious corporation whose members bear the name, not of the god incarnate whom they worship, but

¹ Hitti, *op. cit.*, pp. 26, 30, and 31. The concept of the Second Coming has been touched upon in this Study already in III. C (ii) (b), Annex I, vol. iii, pp. 462-5, above.

² For the precedents to, and parallels with, the deification of Hākim see Hitti, *op. cit.*, pp. 27-9. For the worship of 'Alī which has been adopted by the Druses' Syrian neighbours the Nusayriya, as an accretion to the older elements in the curious religion of this fossilized community, see II. D (ii), vol. ii, p. 56, above. This 'Alī-worship that has thus found its way into the Nusayri creed and ritual appears to be a travesty of the veneration paid to 'Alī by the Ismā'īlī Shi'is who forced their way into the Jabal Ansariyah in the Age of the Crusades (see II. D (vi), vol. ii, p. 258, above).

³ Hitti, *op. cit.*, p. 33. They actually assumed the name Muwahhidin, thereby forestalling the puritanical Sunnī Berber highlanders from the Atlas who adopted the same name in the twelfth century of the Christian Era with greater justification (see I. C (i) (b), Annex I, vol. i, p. 357; II. D (v), vol. ii, p. 204; and V. C (i) (c) 3, in the present volume, p. 247, above).

⁴ Hitti, *op. cit.*, pp. 18-21.

⁵ *Ibid.*, pp. 11-12.

of the missionary who first introduced them to Hākim's strange new gospel.¹ Ensconced in the highlands of Hermon and the Lebanon and the *massif* east of the Hawrān which has latterly come to be known as the Jabal-ad-Durūz *par excellence*, the Druse church universal *manquée* has become a perfect example of a 'fossil in a fastness';² and, by the same token, Hākim's 'fancy religion' has proved a fiasco.³

The same fate has overtaken the almost equally presumptuous attempt of the Syrian pervert Varius Avitus Bassianus to install as the high god of the official pantheon of the Roman Empire, not indeed his own person, but his own parochial divinity the Emesan Sun-God Elagabalus, whose hereditary high priest he was, and whose name he continued to bear by choice after a stroke of fortune had placed him on the Roman Imperial Throne under the official appellation of Marcus Aurelius Antoninus.⁴

Elagabalus's endeavour, like Hākim's, turns out upon examination to have been somewhat less fantastic than might be supposed; for, in transporting to Rome, and housing on the Palatine, the fetish-stone in which his divine homonym was believed to reside, he could appeal to a notable precedent. In the year 204 B.C., which was a venerably ancient date by the time of Elagabalus's accession to the purple in A.D. 218, the Roman Government of the day had likewise received with official honours, and likewise lodged on the Palatine—in this case, in the Temple of Victory—another fetish-stone which was believed to be charged with the divinity of the Pessinuntine mother-goddess Cybele;⁵ and from that day down to Elagabalus's own generation this Anatolian talisman had continued to be honoured in that place with traditional orgiastic rites—performed by eunuch-devotees—which were at least as outlandish in

¹ 'Druse' is a garbled form of the Arabic Durūz, which is the plural of Darazi.

² For such 'fossils in fastnesses' see II. D (vi), vol. ii, pp. 255-9, above. Hitti (in op. cit., p. 1) has hit upon the same apt simile for characterizing both the Druses and the Samaritans.

³ Apropos of the question of the sources of the Druse religion, it is perhaps worth noticing that the district in which it struck root was in the near neighbourhood of two other districts of Syria which had also given birth—simultaneously with one another, though this nearly a thousand years before the day of Hākim and Darazi—to two religions each of which likewise preached the divinity of a man as its cardinal doctrine. Christianity arose in the bosom of the Jewish community in Galilee, and the religion in which Simon Magus was worshipped as a god incarnate arose in the bosom of the Samaritan community immediately to the south (for the religion founded by, and centring upon the reputed divinity of, Simon Magus see Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin 1923, Cotta), pp. 267-302). The diversity of the respective fates of these three Syrian men-worshipping religions is instructive. The worship of Simon Magus died out in the third century of the Christian Era (Meyer, op. cit., p. 293); the worship of Hākim has survived as the peculiar faith of a parochial community in a fastness; the worship of Jesus has become the faith of a universal church.

⁴ See V. C (i) (c) 2, p. 82, footnote 4, and the present Annex, p. 649, above.

⁵ See II. D (vi), vol. ii, p. 216, and V. C (i) (c) 2, in the present volume, p. 82, above. In the former passage the date of the reception of the Pessinuntine stone at Rome has been erroneously given as 205 B.C. instead of 204 B.C.

Rome as the Syrian worship which the Emperor Elagabalus was seeking to acclimatize there now some four hundred years later. The sense of promiscuity, which had been constantly on the increase in Roman souls during the intervening span of time, might have been expected *a priori* to make Elagabalus's task an easier one than Publius Scipio's.¹ Why was it, then, that the worship of the Pessinuntine fetish which was introduced into Rome in 204 B.C. became a permanent and even an integral element in the Roman religion, whereas the kindred worship of the Emesan fetish which was introduced into Rome in A.D. 218 lasted no longer than the four years which saw out the reign of the emperor who was its patron?

The answer to this question is to be found in the difference in the psychological conditions which respectively attended the successful translation of Cybele to Rome and the abortive translation of Elagabalus.

The Senate's decision to negotiate the transfer of the Cybele-stone from Pessinus to Rome was taken in 205 B.C. at the climax of the Hannibalic War, at a moment when even the sophisticated Roman governing class was overwrought by the strain of the long ordeal to which the Commonwealth had been subjected, while the common people had been reduced by this time to a state of religious emotion which bordered on frenzy. The Senate was acting on precise instructions which had been obtained—or elicited by some shrewd mind—from a consultation of the Sibylline Books, as well as on a hint which was read into an oracle that had lately been received from Delphi; and, when the Government's action duly resulted in the arrival at Rome of the goddess who was to grant the Romans a speedy release from the unrelieved agony of the last fourteen years, the people were enthusiastic. On the day on which the salvation-bringing stone was borne in state from the strand of the Tiber to its new home in the Temple of Victory on the Palatine, 'the whole city poured out into the streets to greet it, while censers, with the incense burning, were placed in front of the doors along the route of the procession'. As the stone was passed from the hands of Scipio, who had received it from its escort on the ship, into the hands of the first ladies of the Commonwealth, who took their turns in carrying it on its way to its resting-place, the goddess was preceded by singers who called upon her 'to enter the city of Rome with good will in her heart and good

¹ Publius Cornelius Scipio had been chosen in 204 B.C. for the honour of bringing to land, from the ship in which it was being conveyed to Rome, the Pessinuntine stone-from-heaven. This choice had been made by the direction of the Delphic Oracle, which in the preceding year had instructed the representatives of the Roman Government to choose out the man of best character in Rome for performing this office (see Livy, Book XXIX, chap. 10, 11, and 14).

fortune in her train'. The day was kept as a feast day; and, when Cybele had been installed in her new shrine, 'the people came in crowds to bring their offerings to her there; a *lectisternium*¹ was celebrated; and games were held which were given the name of *Megalensia* and which became a standing entry in the Roman religious calendar.²

It will be seen that, in bringing the Pessinuntine fetish to the Palatine in 205-204 B.C., the Roman Senate was giving satisfaction to a popular demand which was not only spontaneous but was even passionate. On the other hand, in bringing the Emesan fetish to the Palatine in A.D. 218, Elagabalus was abusing his Imperial prerogative in order to gratify a personal whim of his own which found no echo in the hearts of the Roman populace. In other words, it was only in form that the two religious innovations were on a par with one another in point of being introduced from above downwards; for in fact it was Elagabalus's abortive innovation alone that was truly a transaction of this character. In the successful innovation which had been carried out by the Senate four hundred years earlier, a dominant minority had been humouring an internal proletariat by making themselves responsible for a popular act which was so repugnant to their own aristocratic tradition that they might never have brought themselves to perpetrate it if they had had nothing but their personal prejudices to consider.³ Here is the difference of circumstance which explains

¹ A *lectisternium* was a liturgy in which the images of the Gods were displayed in public round a banqueting table which was laid in their honour.—A.J.T.

² The passages in inverted commas in this paragraph are quoted from Livy, Book XXIX, chap. 14.

³ We may add that in all probability the Senate would have ignored even an insistent popular demand for the translation of the Pessinuntine fetish to Rome if this demand had been made in any other psychological circumstances than those prevailing in 205-204 B.C., when the Roman governing class, as well as the common people, was in an abnormal psychological condition. This seems probable when we observe the severity with which another foreign religion—the worship of Dionysus—which was perhaps not less popular than the worship of Cybele, while it was certainly less exotic, was repressed by the Senate less than twenty years later, in 186 B.C., after peace had been restored and the psychological tension of the war-years had been relaxed (see II. D (vi), vol. ii, p. 216, above). The subsequent policy of the Senate towards the worship of Cybele is described as follows by a modern Western scholar who is a master of the subject:

'Quand le Sénat apprit à mieux connaître la divinité que la Sibylle venait de lui imposer, il dut être fort embarrassé du cadeau qu'Attale lui avait fait. L'exaltation enthousiaste, le sombre fanatisme de la dévotion phrygienne contrastaient violemment avec la dignité calme, la réserve honnête de la religion officielle, et ils excitaient dangereusement les esprits. . . . Les autorités furent balancées entre le respect dû à la puissante déesse, qui avait délivré Rome des Carthaginois, et celui qu'elles éprouvaient pour le *mos maiorum*. Elles se tirèrent d'affaire en isolant complètement le nouveau culte, de façon à se prémunir contre la contagion. Défense fut faite à tout citoyen d'entrer dans le clergé de la déesse exotique ou de prendre part à ses orgies sacrées; les rites barbares, selon lesquels la Grande Mère voulait être adorée, furent accomplis par des prêtres phrygiens et des prêtresses phrygiennes. Quant aux fêtes célébrées en son honneur par le peuple tout entier, les *Megalensia*, elles n'avaient rien d'oriental mais furent organisées conformément aux traditions romaines. . . .

'Mais, malgré la surveillance policière qui l'entourait, malgré les précautions et les préjugés qui l'isolaient, la religion phrygienne vivait. Les esclaves, les affranchis, les

why it was that in 204 B.C. Cybele came to the Palatine to stay, whereas in A.D. 222 Elagabalus was ignominiously ejected from the Palatine as soon as the exercise of the arbitrary political power which had first installed and then maintained him there¹ was suspended by the overthrow and assassination of the intruding Syrian divinity's Imperial namesake and devotee.²

While it may not be so surprising to see an Elagabalus and a Hākim meet with utter failure in their endeavours to make their public political authority minister to their private religious caprice, we shall perhaps be more deeply impressed with the difficulty of propagating creeds and rites by political action from above downwards when we observe the equally striking ill-success of other

marchands asiatiques allaient se multipliant dans la plèbe, et ces Levantins avaient, pour la grande divinité de leur pays, une dévotion superstitieuse qui s'accordait mal avec les restrictions imposées par l'autorité. Une brèche avait été pratiquée dans la forteresse lézardée des vieux principes romains, et tout l'Orient finit par y passer' (Cumont, F.: *Les Religions Orientales dans le Paganisme Romain*, 4th ed. (Paris 1929, Geuthner), pp. 48-9 and 50).

¹ Elagabalus's arbitrary behaviour in this matter is described as follows in the life of this emperor in the so-called *Historia Augusta* ('Antoninus Heliogabalus', chaps. 3 and 5):

'Ubi primum ingressus est urbem, omisis quae in provincia gerebantur, Heliogabalum in Palatino monte iuxta aedes imperatorias consecravit, eique templum fecit, studens et Matris typum et Vestae ignem et Palladium et Ancilia et omnia Romanis veneranda in illud transferre templum, et id agens ne quis Romae deus nisi Heliogabalus coleretur. Dicebat praeterea Iudaeorum et Samaritanorum religiones et Christianam devotionem illuc transferendam, ut omnium culturarum secretum Heliogabali sacerdotium teneret. . . . Sacra Populi Romani sublatis penetralibus profanavit. Ignem perpetuum extinguere voluit. Nec Romanas tantum extinguere voluit religiones, sed per orbem terrarum—unum studens ut Heliogabalus deus unus ubique coleretur. Et in penum Vestae, quod solae virgines solique pontifices adeunt, irrupit . . . et penetrale sacrum est auferre conatus. . . . Signum . . . quod Palladium esse credebat abstulit et . . . in sui dei templo locavit. Matris etiam Deum sacra accepit et taurobolatus est ut typum eriperet et alia sacra quae penitus habentur condita. . . . ablatumque sanctum in penetrale dei sui transtulit. . . . Omnes sane deos sui dei ministros esse aiebat, cum alios eius cubicularios appellaret, alios servos, alios diversarum rerum ministros.'

Elagabalus's abuse of his political power in order to commit these insanely provocative acts of sacrilege is reminiscent of the sacrilegious excesses that are attributed to Hākim:

'Sunni Muslim historians . . . , remembering him as the heretic who abolished the Five Pillars of Islam and ordered the names of the early Caliphs [to be] associated with a curse in the public prayer, have portrayed him in terms of a medieval Nero, tyrannical and unbalanced to the point of mental derangement. The Christian historians . . . , associating his memory with the destruction of the Holy Sepulchre in Jerusalem, "leaving not one stone upon another", and the revival of the old regulations . . . which made it incumbent upon all Christians to wear distinctively coloured clothes with heavy wooden crosses dangling from their necks, were equally merciless in his condemnation' (Hitti, op. cit., pp. 26-7).

² While the fetish-stone of Pessinus met with better luck at Rome than the fetish-stone of Emesa, there is another fetish-stone at Mecca which has outdone its Pessinuntine as well as its Emesian counterpart by continuing to be an object of adoration from the dawn of Arabian history down to the present day. For this extraordinary survival the Meccan stone is, of course, indebted to the Prophet Muhammad, whose sagacity was as signal as was the folly of the Emperor Elagabalus. Instead of uprooting the Meccan stone and thereby destroying its religious potency, Muhammad preserved this primitive religious force, and harnessed it to the service of his own new religious dispensation, by leaving the Meccan stone *in situ*, without disturbing its traditional association with the worship of a parochial Meccan divinity whom Muhammad had promoted to ubiquity and omnipotence by identifying Allah, the god of the Ka'bah, with the Jewish and Christian God of the Universe (for the Meccan fetish-stone god's success in imparting his own name, on Muslim lips, to the One True God with whom he had thus been equated, see V. C (i) (d) 7, vol. vi, p. 44, below).

rulers who have attempted to take advantage of their political power for the promotion of some religious cause in which they have been interested from more serious and more estimable motives than the sheer desire to gratify a personal whim. There are rulers who have tried and failed to propagate a 'fancy religion' for reasons of state which may have been irrelevant or even irreligious yet at least have not been either personal or disreputable; and there are other rulers who have tried and failed to propagate a 'fancy religion' in which they themselves have devoutly believed, and which they have felt themselves on that account entitled in all good conscience, and perhaps even in duty bound, to communicate by all the means at their command to their suffering fellow men, in order to lighten their darkness and to guide their feet into the way of peace.¹

The classic example of the cold and calculated manufacture of a new religion for the service of a political end is the invention of the figure and the cult of Serapis by Ptolemy Soter—the founder of the Hellenic 'successor-state' of the Achaemenian Empire in Egypt. In embarking on this Machiavellian religious enterprise the Macedonian statesman was pursuing the politically respectable purpose of seeking to bridge the gulf between his Egyptian and his Hellenic subjects by bringing the two communities on to a new and virgin plot of religious ground which they were to be invited to cultivate in common;² and he enlisted a phalanx of experts whose talents were skilfully selected and co-ordinated for the attainment of the object which their employer had in view. A preliminary plan of religious operations was worked out for Ptolemy by a Hellenic-Egyptian committee of two members, in which the Hellenic side was represented by a scion of the hereditary Eumolpid priesthood of the Eleusinian Mysteries, Timotheus, while the Egyptian side was represented by one of the rare Philhellenes in the Egyptian hierarchy in the person of Manetho. A name for the new divinity was coined by combining and Hellenizing the native names of two Egyptian gods, Usur (Osiris) and Api (Apis); Timotheus contributed a 'Golden Legend' (*ἱερός λόγος*) to lend a supernatural sanction to the newly instituted worship; the Athenian philosopher Demetrius of Phalerum composed a set of paeans in the new god's honour; and the Athenian sculptor Bryaxis carved, for the original and central Serapeum at Alexandria, a statue which endowed Serapis with a distinctive visual shape.

¹ Luke i. 79.

² For this Ptolemaic manufacture of the Serapis-cult see Cumont, F.: *Les Religions Orientales dans le Paganisme Romain*, 4th ed. (Paris 1929, Geuthner), pp. 69-94; and Wendland P.: *Die Hellenistisch-Römische Kultur in ihren Beziehungen zu Judentum und Christentum*, 2nd and 3rd ed. (Tübingen 1912, Mohr), pp. 129-30.

Considering the atmosphere of cool professional calculation which surrounded this process of manufacturing a synthetic divinity to a prince's order, we may feel some surprise at the extent of the success that was actually achieved. Even in Egyptian circles the new worship did not altogether fail to gain a foothold—in spite of the hostility of a Thothmean hierarchy who, though now no longer centralized under the Theban High Priesthood of Amon-Re, were still in no mood to submit to being deprived of a monopoly which, by Ptolemy Soter's day, had been theirs for some twelve hundred years, and which they had successfully maintained, a thousand years back, against the legitimate Egyptian Pharaoh Ikhnaton's attempt to do for his new version of the Egyptian Sun-God what the Hellenic usurper was now trying to do for a new version of Osiris.¹ In the Hellenic World the success achieved by the new religion of Ptolemaic manufacture was more extensive—partly, no doubt, because the worship of Serapis had been deliberately accommodated to Hellenic tastes and traditions,² and partly thanks to the easy-going *êthos* of the Olympian Pantheon, whose members could not afford to be 'jealous gods'³ when they had to rub shoulders with one another either as pullulating creatures of imagination on the narrow summit of Olympus or as thronging statues of stone on the still narrower platform of the Acropolis of Athens. As soon as Bryaxis' chisel had called Serapis into a three-dimensional existence in the Hellenic style of representational art, Zeus and Dionysus and Asklepîos obligingly made room for a new recruit who had duly established an Olympian individuality of his own through a felicitous combination of features borrowed from all three of those older-established recipients of Hellenic worship. In the Hellenic World in the course of the five centuries beginning with Ptolemy Soter's own generation the worship of Serapis made its way on its own merits beyond the limited range of an ephemeral Ptolemaic Empire till it had penetrated to the remotest corners of a Hellenic universal state.⁴ It is significant, however, that, in terms of the purpose which had moved the first

¹ For the defeat of Ikhnaton by the Thothmean hierarchy see I. C (ii), vol. i, pp. 145-6, and V. C (i) (c) 2, in the present volume, p. 82, footnote 4, above, and the present Annex, pp. 695-6, below.

² This Hellenization of Serapis and his worship was not confined to the visual field. While the figure of the new god was adjusted to Hellenic eyes in the statue from the hand of the Hellenic artist Bryaxis, the liturgy was tuned to Hellenic ears by being drafted in the Greek language, and the ritual to Hellenic habits of feeling and thought by being modelled on the Eleusinian pattern.

³ For the un-Olympian 'jealousy' of the Syriac god Yahweh see V. C (i) (d) 7, vol. vi, pp. 39-40 and 45-7, below.

⁴ For the initiation of a trans-frontier barbarian war-lord into the mysteries of Serapis, while he was serving his time as a hostage on the Roman side of the Rhine, about half-way through the fourth century of the Christian Era, see V. C (i) (d) 6 (α), p. 461, footnote 5, above.

of the Ptolemies to build and launch Serapis' bark, the new religion was an utter failure.

While both Hellenes and Egyptians did take up this artificial religion of the Ptolemaic state in their different fashions and to their different degrees, they each went their own way in the worship of Serapis as in everything else, and concurred in nothing but their unanimous avoidance of the common ground on to which Ptolemy Soter had hoped to bring them by enticing both sets of worshippers into his synthetic divinity's precincts. Notwithstanding the skilfully managed inauguration of the worship of Serapis, the political union of Egyptians with Hellenes under the Ptolemaic régime continued to depend entirely upon the brute force of Hellenic arms; and, as soon as this Hellenic military ascendancy began to show signs of weakening, the Egyptian section of the Hellenic internal proletariat rose in armed revolt.¹ It was not the manufactured worship of Serapis that eventually translated into reality Ptolemy Soter's dream of cementing the compulsory political union between Egyptians and Hellenes by a voluntary union of hearts. The spiritual gulf between the two communities in the dominions of the Ptolemaic Empire was bridged at last by another religion which arose spontaneously out of the bosom of the proletariat in the *ci-devant* Ptolemaic province of Coele Syria a whole generation after the extinction of the last shadow of the Ptolemaic Power,² and which made its way from below upwards instead of being propelled from above downwards by the artful hand of a political potentate.

A similar failure attended the religious policy of the Illyrian soldier-emperors who set the Roman Empire on its feet again after its collapse in the middle of the third century of the Christian Era,³ when they endeavoured to replace—or at least to reinforce—a tottering Caesar-worship by giving the Hellenic universal state a new official religion consisting in the worship of an abstract Sol Invictus.⁴ This religious enterprise was taken up successively, yet in the end without success, by Aurelian and Constantius Chlorus and Constantine the Great; and the discomfiture of these forceful personalities is in some ways more striking than the miscarriage of Ptolemy Soter's project; for the Illyrians' inferiority to the Macedonian in the arts of statesmanship was more than offset by their personal sincerity and by the propitiousness of the

¹ See V. C (i) (c) 2, p. 68, above.

² The remains of the Ptolemaic Empire had been annexed to the Roman Empire by Augustus after the Battle of Actium in 31 B.C.

³ See V. C (ii) (a), vol. vi, p. 207, below.

⁴ For this episode of Hellenic religious history see V. C (i) (c) 2, p. 82, footnote 4, as well as the present Annex, pp. 649–50, above.

atmosphere of the age in which they happened to be living and working. The Sol Invictus in whose divine service the Illyrian soldier-emperors enlisted was not a sheer invention of his Imperial orderlies' minds. They had learned to know him as one of the established gods of the Danubian provinces in which they had been born and bred;¹ and, in their endeavour in later life to raise this god of their boyhood and their homeland to a position of supremacy in Heaven corresponding to the universal dominion which these *novi homines* themselves had won on Earth, we may feel certain that they were not so much actuated by Ptolemaic calculations as they were moved by a spiritual need which they felt in their own hearts and divined in the hearts of their subjects.²

¹ This worship of an abstract Sol Invictus, which was already 'a going concern' in the Lower and Middle Danube Basin by the third century of the Christian Era, was presumably a composite product of the radiation of the diverse sun-worships of South-Western Asia, which, at this distance from their respective points of origin, had blended into a single ray with a texture which was more ethereal than that of any of the fires from which it had emanated.

² We may reflect, however, that, if Sol Invictus had in fact succeeded in gaining the popularity which his Imperial votaries no doubt hoped and expected to see him acquire when they gave their patronage to his cult, he might have undergone a metamorphosis in the hearts and minds of the masses which would have been both surprising and distressing to an Aurelian or a Constantius Chlorus.

In the conception of the Illyrian emperors the Sun-God in whose service they had enlisted was a conservative divinity who presided in Heaven over the work of rescue and reconstruction to which his faithful servants were devoting their energies on Earth; for, although the Illyrian emperors were children of a proletariat who had been borne into power on the wings of the revolutionary upheaval of the third century of the Christian Era, they had made their fortunes and found their mission in salvaging a decadent civilization in which the decay had now gone so far that the children of a dominant minority had ceased to be capable of fending for themselves. This epiphany in a conservative role was not, however, the first appearance of the Sun-God above the Hellenic internal proletariat's horizon; and it is rather surprising that the part which this divinity had played in an earlier chapter of Hellenic history—a part for which the title of Sol Invictus would have been equally apt, though the performance in this previous act had been not conservative but revolutionary—should not have been recalled to proletarian minds, even after four centuries of oblivion, by the dreadful return, in the third century of the Christian Era, of those tribulations which had once evoked the revolutionary proletarian worship of *'Ἡλιος Ἐλευθέριος'* in the third and second centuries B.C.

The second and culminating phase of the 'Time of Troubles' which had preceded the foundation of the Hellenic universal state had seen an avatar of the Sun-God which was the very antithesis of Aurelian's idea of him. The proletarian Solar divinity of whom we catch a glimpse in the third-century romance of Iambulus and in the second-century insurrection of Aristonicus (see V. C (i) (c) 2, pp. 69, 70, 82, footnote 4, and 180, and V. C (i) (d) 1, p. 384, above, and V. C (i) (d) 11, vol. vi, Annex I, pp. 350-1, below) was the heavenly patron of an earthly commonwealth which was to be established by the arms of the militant votaries of this *'Ἡλιος Ἐλευθέριος'* in the place of the existing Hellenic system of society, in order to reinstate a disinherited internal proletariat in those natural Rights of Man of which they had been brutally and impiously divested by an inhuman dominant minority. The Sun-God of Iambulus and Aristonicus was the just and generous giver who lavished his light upon the poor man who was being oppressed as abundantly as upon the rich man who was this poor man's oppressor; the god's divine gift was the one amenity of life which that dominant minority was powerless to take away from a proletariat which it had succeeded in depriving of every other stake in This World except the procreation of children (see I. B (iv), vol. i, p. 41, footnote 3, above); Helios offered a heavenly city to all who, in the earthly city of destruction, were without a clod of earth to call their own or a night's shelter for a weary head; and it was this divinity's influence that inclined the hearts of slave-owners to emancipate their slaves, in anticipation of a future social state—depicted by Iambulus as already realized in his imaginary 'Islands of the Sun'—in which slavery would be unknown because every one alike would take his turn in performing every fatigue duty and filling every

Yet, in spite—or because—of this spiritual integrity which was so honourable a trait in the characters of the Illyrian Imperial votaries of Sol Invictus, the third and greatest of them was to find from his own experience that the worship of the god whose patronage had been bequeathed to him by his forefathers was not, after all, either sufficient in itself or significant except as a stepping-stone from a dead Caesar-worship to a higher religion which had arisen spontaneously in the bosom of the Hellenic internal proletariat, and had long since become 'a going concern' in despite of steady official disfavour and occasional official persecution. In the vision that resulted in Constantine's conversion to Christianity the votary of Sol Invictus saw that

'athwart the Sun—the earthly representation of the god to whom he owed this inherited allegiance—was cast the cross of light. What else could this mean for Constantine than a revelation of the identity of the god of his worship with the god of the Christians? "Whom therefore ye ignorantly worship, him declare I unto you." The secret of his father's monotheism was disclosed. Apollo—Sol—the pagan panegyrist two years before at Trier had celebrated as "salutifer"; it was true in a sense of which the orator had never dreamt. . . . "Sol Invictus"? What better description for the Victorious Christ?¹

If this brilliant reconstruction of the Emperor Constantine's personal religious experience is correct,² then we may follow the scholar who has made it in finding in this conscious identification of Sol with Christ the explanation of the continuance of the representation of Sol Invictus upon the coins that issued from Constantine's mint for eleven years after the Emperor's vision on the eve of the Battle of the Milvian Bridge.³ In any case Sol Invictus did give place to

office (for these traits of the Iambulan and Aristonican Helios see Bidez, J.: *La Cité du Monde et la Cité du Soleil chez les Stoïciens* (Paris 1932, Les Belles Lettres), pp. 34–50, and Tarn, W. W.: *Alexander the Great and the Unity of Mankind* (London 1933, Milford), pp. 9–10).

We may speculate whether this glowing revolutionary avatar of the Sun-God as *Ἡλιος Ἐλευθέριος* might not have reasserted itself in the third or fourth century of the Christian Era if the countenance of Constantius Chlorus's Sol Invictus had not been of too pale and sickly a cast to fire the imagination of the *jacquerie* who in Constantius's day were replaying the part of Aristonicus's 'Citizens of the Sun' under the more poetic names of Bagaudae or Circumcelliones.

¹ Baynes, N. H.: *Constantine the Great and the Christian Church* (London 1929, Milford), pp. 97 and 100.

² Professor Baynes's conjecture that Constantine transcended the worship of Sol Invictus by identifying Sol with Christ would appear to be supported by the well-established fact that in the calendar of the Christian Church the celebration of Christmas was deliberately assigned—at some moment in the reign of Constantine's son and immediate successor Constantius II—to the 25th December; for this date had long since been consecrated to the celebration of the *Natalis Invicti*, and its identification with Christmas Day was an act of ecclesiastical policy which directly contradicted and reversed the Church's previous rule of avoiding the celebration of Christmas on any date that was already associated with the worship of a pagan divinity (see Cumont, op. cit., pp. ix and 206–7; Wendland, op. cit., p. 159).

³ Constantine saw his vision of the Cross athwart the Sun in A.D. 312, whereas his coins bearing the image and superscription of Sol Invictus continued to be struck until A.D. 323 (Baynes, op. cit., p. 95).

Christ in the course of Constantine's reign; and, whether the process took the mental form of identification or that of repudiation, the result was conclusive—as was demonstrated by the failure of Constantine's nephew and ultimate successor the Emperor Julian to undo his uncle's work. It was in vain that Julian sought to rekindle the light of his forefathers' Solar divinity by the unpromising method of robbing him of the soldier-like simplicity which had been the secret of his strength and forcing him into the elaborate system of the Apostate's Neoplatonic Antichurch;¹ this point in Julian's religious policy shared the fate of the rest of his forlorn hope; and the fiasco made it impossible any longer to ignore the truth that, within less than a century of the date at which Aurelian had raised him to a position of oecumenical honour, Sol Invictus either had been transfigured out of all recognition or else was defunct beyond all possibility of being raised from the dead.

He saw a greater Sun appear

Then his bright throne or burning axletree could bear.

The abortive attempt to establish Sol Invictus as an oecumenical divinity in the ambit of a Roman Empire which had been salvaged from the débâcle of the third century of the Christian Era has an almost exact Incaic analogue. The founder of the Andean universal state, the Inca Pachacutec, likewise attempted to endow his variegated empire with a single supreme object of worship; and the Cuzcan, like the Illyrian, empire-builder tendered this high god to his subjects in the shape of a local Sun-God who happened to have a hereditary claim upon the emperor's own allegiance.² Pachacutec did his utmost to fortify his artificially established religion of state by endowing it—*more Incaico*—with a minutely regulated and strictly centralized ecclesiastical organization of the kind which the Roman Emperor Julian tried in vain to improvise for the benefit of his Neoplatonic Antichurch. Whether this overwhelmingly paternal Incaic official patronage would have helped or hindered the Sun-God of Corichanca, in the long run, in the effort to find his own feet as a high god of the whole Andean World is a question which can never receive its answer, since the experiment was cut short, within a hundred years of its initiation, by Pizarro's destructive conquest of the empire which Pachacutec had founded.³

¹ For the place assigned to Sol Invictus in Julian's theology see Julian's prose *Hymn to Helios*.

² For the Inca Pachacutec's organization of this oecumenical worship of the originally parochial Sun-God whose native seat was Corichanca, the Sun-temple at Cuzco, see V. C (i) (d) 6 (8), p. 532, and the present Annex, p. 653, above.

³ If the Andean universal state had been left in peace to live out its natural term, instead of being prematurely shattered, as it was by the impact of an alien civilization

There is yet a third historic case of a Sun-worship being inaugurated and propagated by the ruler of a universal state: namely, Ikhnaton's attempt to substitute for the orthodox Egyptiac Pantheon, under the presidency of Amon-Re, a worship of an etherial and only true God who made his Godhead manifest to human eyes in the Aton or Solar Disk.¹ So far as can be seen, Ikhnaton's attempt to establish this new religion of his was not inspired to any appreciable extent either by Machiavellian considerations of *raison d'état* or by Elagabalus's motive of exerting a despotic power and indulging a personal caprice. If Ikhnaton had been mainly concerned with the political problem of the ecclesiastical unification of the Egyptiac universal state, he would hardly have felt himself called upon to take action, since he would have found his problem practically solved for him already in the syncretistic pantheon and centralized hierarchy which had been effectively established by his predecessor and ancestor Thothmes III; and he would have been under no temptation to try, as he did try, to undo Thothmes' solid work at the cost of tearing a profound schism in the Egyptiac body social.² Nor, again, does Ikhnaton's *éthos* display any striking points of likeness to Hākim's. The demonic spiritual force that drove the Egyptiac emperor-prophet into an uncompromising defiance of the hallowed traditions as well as the vested interests of the society into which he had been born was not an insane egotism: it was a deep religious faith which, like Açoka's philosophical convictions,³ translated itself into evangelical works. The Imperial convert could not rest until he had communicated to his fellow men a divine revelation which

from the farther side of the Atlantic, we may guess that one of the determining factors in the career of the politically established worship of the Corichancan Sun-God would have been the temper animating the religious policy of the Imperial Government. In some respects the policy was drastic. For example, we have noted already (in V. C (i) (d) 6 (δ), p. 532, footnote 4, above) that the local idols and fetishes were physically removed from their native seats and deposited in the temple of Corichanca. On the other hand fetishes were included in the very short list of articles which were lawful objects of personal property (Joyce, T. A.: *South American Archaeology* (London 1912, Lee Warner), p. 158).

¹ See I. C (ii), vol. i, pp. 145-6, and V. C (i) (c) 2, in the present volume, p. 82, footnote 4, above.

² Ikhnaton's new religion did expressly stand for political unity inasmuch as it conceived of the Aton as a universal creator who shone with an equal benevolence upon the Egyptiac masters of 'the New Empire' and upon their non-Egyptiac subjects in Syria and in Nubia (see the passage from Ikhnaton's hymn to the Aton that is quoted in V. C (i) (d) 7, vol. vi, pp. 11-12, below). Yet even this conception of the brotherhood of all Mankind through the common beneficence of God seems to have been foreshadowed in a Hymn to Amon which is a monument of the orthodox Egyptiac religious thought of at least one generation before Ikhnaton's day. (On this point see Erman, A.: *The Literature of the Ancient Egyptians*, English translation (London 1927, Methuen), p. 290, footnote 4.) And there is no reason to suppose that, in transferring this *motif* from the religion of his forefathers to his own new-fangled worship, Ikhnaton was consciously concerned—as Ptolemy Soter assuredly was when he instituted the worship of Serapis—to forge out of a common religious allegiance a political bond between the Egyptiac and the non-Egyptiac section of his subjects.

³ See pp. 680-3, above.

he was convinced that he had received in order that he might serve as the appointed spokesman of a spiritual truth that had never before been broadcast. The religious motive by which Ikhnaton was inspired was disinterested as well as single-minded; and in its overflow into the secular field it showed itself to be a veritable well-spring of life whose waters possessed the miraculous power of dissolving the classicism of the contemporary Egyptian literature¹ and the formalism of the contemporary Egyptian visual art into a new pulsation of creative activity. In fact, Ikhnaton's revelation held out a promise of translating a legendary Egyptian miracle into a matter of historical fact by evoking new life out of a mummified corpse.² It will be seen that on every ground Ikhnaton deserved to succeed in his religious mission, while conversely the public to which he addressed himself had every reason to accept the emperor-prophet's message with alacrity and gratitude. And yet Ikhnaton's enterprise ended in a failure that was more extreme than Aurelian's or Ptolemy's, and not less extreme than Elagabalus's or Hākim's. This failure can only be attributed to the one conspicuous weakness in Ikhnaton's noble and beneficent endeavour. It was an attempt on the part of a political potentate to propagate a 'fancy religion' from above downwards; and the penalty which the new revelation had to pay for its Pharaonic origin was the implacable hostility which it aroused in the hearts of all the rest of the Egyptian dominant minority. In their eyes Ikhnaton was a detestable traitor; and this invincible opposition which the Egyptian emperor-prophet encountered among his own kind was not counterbalanced by any sympathetic response to his preaching in the hearts of the masses; for in their eyes the new heresy was just as remote and as incomprehensible as the old orthodoxy which it was striving to supersede. Ikhnaton fell between two stools; and this was a fall which all the merits of his character and his gospel were impotent to retrieve.³

¹ See V. C (i) (d) 6 (γ), p. 496, above.

² According to the Osiris-myth, Osiris' son Horus was begotten by his father in an act of sexual union between Osiris and Isis which took place after Osiris had met his death (see Erman, A.: *Die Religion der Ägypter* (Berlin and Leipzig 1934, de Gruyter), pp. 68-9).

³ 'An instructive parallel [to Ikhnaton's abortive religious reform] is afforded by the Iconoclastic Movement in the Byzantine Empire. There too the contradiction between the monotheism of the official doctrine of the Church and the current practice of daily worship led to an attempt to destroy the idolatrous images and forcibly depose the monks who were the head and front of the cult of them; there too there were quite a number of ecclesiastical dignitaries who sided with the Emperor; and there too the enterprise came to grief over a failure to reckon sufficiently with the strength of the religious feelings which the popular form of worship had behind it. The result was that, from that time onwards, the path of progress was closed to the Greek Church', in contrast to the subsequent history of the Western Church.—Meyer, E.: *Geschichte der Altertums*, vol. ii, part (1), 2nd ed. (Stuttgart and Berlin 1928, Cotta), pp. 414-15. For Iconoclasm and its sequel see the present Study, IV. C (iii) (c) 2 (β), vol. iv, p. 352, footnote 5, and IV. C (iii) (c) 2 (β), Annex II, vol. iv, pp. 594-5, above. For the

A similar congenital defect seems likewise to account for the abortiveness of Orphism. If our reconstruction of its history¹ is correct, this 'higher religion' was called into existence for the purpose of satisfying a spiritual hunger in Hellenic souls; and this hunger was not—like the craving which was answerable for the translation of the fetish-stone of Cybele from Pessinus to Rome in 204 B.C.²—a mere passing psychological effect of a temporary social ordeal, but was a deep and enduring demand for that spiritual bread which was not to be found in the social heritage of an adolescent and youthfully ravenous Hellenic Society. This yearning after a 'higher religion' is so strong a passion, and the spiritual vacuum which evoked it in the Hellas of the sixth century B.C. is so grave a malady, that it might have been expected *a priori* that any new religious system which offered even a partial satisfaction for this pressing religious need would enjoy a sensational vogue, unless its prospects were blighted by some inherent weakness. This weakness is not to be found in the provenance of the raw materials out of which Orphism was manufactured; for, although, as we have noticed in another context,³ these materials were exotic, the craftsmen who worked them up seem to have been careful to mould them into forms which were in harmony with the native Hellenic tradition.⁴ When we find that, in spite of this combination of uncommonly skilful workmanship with uncommonly favourable predisposing conditions, Orphism in fact missed fire, the fiasco can only be explained as being an ineluctable nemesis for the interestedness of the motives that were at work and for the disingenuity of the means that were employed in the operations of *entrepreneurs* who had set themselves to supply this spiritual demand for their own material profit. There appears to be ground for believing that the propagation of Orphism received its first impulse from the Athenian despots of the House of Peisistratus,⁵ who saw in this 'fancy religion' an apt instrument for their policy of confirming their political hold upon Attica by satisfying the diverse requirements of the formerly unprivileged

petrification which overtook not only the Egyptian religion but the whole of Egyptian life after Ikhnaton's failure see I. C (ii), vol. i, pp. 144–6, above. It may be noted that Ikhnaton (*imperabat circa 1370–1352 B.C.*) and Leo'Syrus (*imperabat A.D. 717–40*) were, philosophically speaking (see I. C (iii) (c), in vol. i, above), approximately contemporaries, if we equate the interregnum *circa 1675–1575 B.C.* in Egyptian history with the interregnum *circa A.D. 375–675* which was the prelude to the emergence of the Orthodox Christian Civilization.

¹ In V. C (i) (c) 2, pp. 84–7, above.

² See pp. 685–8, above.

³ In V. C (i) (c) 2, pp. 85–6, above.

⁴ For an illustration of this careful process of adaptation see Guthrie, W. K. C.: *Orpheus and Greek Religion* (London 1935, Methuen), pp. 104–7.

⁵ See V. C (i) (c) 2, p. 87, footnote 2, above. On the other hand Boulanger, A.: *Orphée* (Paris 1925, Rieder), pp. 18–29, argues that the cradle of Orphism is to be looked for, not in Attica, but in Magna Graecia.

classes in the Athenian body politic; and the agent of the Peisistratidae in this religious enterprise (if they are to be credited with it) was almost certainly Onomacritus,¹ an expert in religious lore whose recorded exploits make it highly probable that he approached the task which his political patrons had set him in the same cold-blooded spirit in which, some two hundred years later, Ptolemy Soter's commission to launch the worship of Serapis was executed by a Manetho and a Timotheus and a Demetrius and a Bryaxis.² However this may be, the authors of Orphism unquestionably fell between the same two stools as the Pharaonic author of the worship of the Aton.

'Orphism was too philosophical for the masses, too mythological for the intellectual pride of youthful philosophy.'³

Such modest success as Orphism did eventually achieve was posterior to the breakdown of the Hellenic Civilization and to the invasion of Hellenic souls by that sense of promiscuity which kept pace with the material expansion of the Hellenic World at the expense of alien societies.⁴

¹ Onomacritus's role is minimized by Boulanger (op. cit., pp. 33-5).

² For the evidence which suggests that Onomacritus may have invented the ritual and the mythology of the Orphic Faith and have composed the corpus of poetry which was put into circulation under the name of Orpheus in order to serve as the sacred scriptures of this manufactured church, see Guthrie, W. K. C.: *Orpheus and Greek Religion* (London 1935, Methuen), pp. 13, 58-9, 107-8, 115-16, 217. Onomacritus's standards of honesty are shown up in the following account, from the pen of Herodotus (Book VII, chap. 6), of the circumstances in which—in a later chapter of his career—the Attic theologian came to second his Peisistratid patrons in the house of exile at Susa in their successful efforts to confirm the Achaemenian emperor Xerxes in his project of attempting the conquest of European Greece—a project in which the *ci-devant* despots of Athens, as well as their Aleuad companions in misfortune who had once been the masters of Thessaly, saw a hope of their own restoration to the lordship from which they had been ejected by their former subjects.

'The Peisistratid exiles at Susa . . . used the same arguments with Xerxes as were used by the Aleuadae, and at the same time they tried to get at him in another way by bringing into action their Athenian fellow countryman Onomacritus, who was an expert in oracles and the editor of those of Musaeus. The Peisistratidae were able to command Onomacritus's services on this occasion because they had made up their quarrel with him before repairing to Susa. This quarrel had arisen out of the act of Hipparchus Peisistratus's son in exiling Onomacritus from Attica when he had been caught red-handed by Lasus of Hermione in the offence of interpolating a [spurious] oracle into the corpus of Musaeus's works. . . . For this offence Hipparchus had sent Onomacritus into exile—in a revulsion from the perpetual recourse which the despot had been by way of having to the theologian's services. However, when the Peisistratids took the road to Susa, Onomacritus was one of the party; and, when he had his audience with the Great King, the Peisistratids made such a song about him that he was graciously permitted to recite his oracles. In complying, Onomacritus took care to suppress everything that suggested the likelihood of a Persian reverse, and to pick out all the most auspicious passages.'

If, at an earlier stage of his career, Onomacritus was as unscrupulous as this in the execution of a Peisistratid commission to manufacture the Orphic religion, it is perhaps not to be wondered at if, in the event, Orphism proved no greater a success than the similarly manufactured worship of Serapis.

The parallel between Peisistratus's role in the launching of Orphism and Ptolemy Soter's role in the launching of the worship of Serapis is pointed out by Boulanger (op. cit., pp. 22-3). In Boulanger's belief, however, the expert services which Peisistratus employed for his purpose were not Attic but Italic. ³ Guthrie, op. cit., p. 238.

⁴ Before the breakdown of the Hellenic Civilization—an event which, in this Study,

Our present survey of abortive attempts to propagate 'fancy religions' by means of political patronage may fittingly close with a glance at the Timurid Mughal Emperor Akbar's abortive Din Ilāhī; for, while Akbar's failure was as extreme as the most signal of the comparable fiascos that we have already passed in review, the character and conduct of Akbar himself are so astonishingly Protean that, at one turn or another, they are reminiscent of almost every point that has come to our notice in the several illustrations of our 'law' that we have examined hitherto.¹

In point of completeness the failure of Akbar's enterprise has only two parallels in the list of failures which we have so far compiled; for, like Ikhnaton's substitution of the worship of the Sun-Disk for that of Amon-Re, and like Elagabalus's installation of the Sun-Fetish whose name he bore in the place of honour in the Roman Pantheon, Akbar's disestablishment of Islam to make way for a 'fancy religion' of his own manufacture did not outlive its Imperial author, but fell to the ground as soon as his death had deprived his religious experiment of the political sanction without which it would never have had the slightest chance of even being

we have equated with the outbreak of the Atheno-Peloponnesian War in 431 B.C.—the Orphics' language and a few of their ideas occasionally caught the fancy of philosopher or poet, but in general the gospel which they preached with such enthusiasm and confidence was a cry in the wilderness, because it was a gospel for which the age was not yet ready. . . . It has been said that the rise of mystical cult-societies, or non-social religious groups, seems to coincide with the breaking-up, in the sixth century [B.C.], of the old social units based on the theory or fact of blood-kinship. We see the morality of these old social units subjected to a searching test in Aeschylus. But of the Orphics it may be said with truth that they did not simply reflect and keep step with a social change which was taking place in the Greek World in which they lived (as the statement just quoted might seem to imply), but that they far outstripped that social change in promulgating a religious theory—that of the brotherhood of Mankind—which did not find even philosophical expression until the advent of the Stoics, and for its popular acceptance had to wait until the days of Christianity. . . . There was no place for a religion of this sort in an age when the ties of the family-unit were breaking up only to give place to the equally rigid demands, the new enthusiasms, of the growing city-state. . . . To find a wider response [Orphism] had to wait until the distinctive greatness and distinctive limitations of the Classical Age had broken down' (Guthrie, op. cit., pp. 235 and 238). According to this view the Neo-Orphism of the post-Alexandrine age was not, as Boulanger argues (in op. cit., pp. 58-9), a virtually new religion, but was the authentic Orphism blossoming, at last, in a kindlier social environment.

¹ The quantity of the points of coincidence between Akbar and his compeers will appear the more remarkable when we consider that these similarities were not the product of any conscious policy of imitation on Akbar's part. So far was Akbar from being influenced by the example of any of the other political patrons of 'fancy religions' whom we have mustered in our present review that, in all probability, he was not even aware of the existence of any of them with the possible exception of Hākīm (whom he would have heard of only through being taught to reprobate him). Even Aśoka, whose dominions had been almost exactly co-extensive with Akbar's own, was presumably unknown to Akbar, since there is no evidence to suggest that Buddhism was one of the several non-Islamic systems of belief with which Akbar found the opportunity to make himself acquainted (on this point see Smith, V. A.: *Akbar the Great Mogul*, 2nd ed. (Oxford 1919, Clarendon Press), p. 162, footnote 1, and p. 338). The only predecessors of Akbar whose example weighed with Akbar on the testimony of Akbar himself were the Prophet Muhammad and the war-lord 'Alā-ad-Dīn Khilji (*dominabatur* A.D. 1296-1316)—a predecessor with whom Akbar had in common the three points of being a Turk, being a Muslim, and being a militarist who followed his calling in an Indian arena (see Smith, op. cit., pp. 209-11).

given a trial. When we remind ourselves that Hākīm's fantastic self-deification is still cherished as the living faith of at any rate one fossilized community of converts, though more than nine hundred years have now elapsed since the death of the capricious founder of the religion of the Druses, and when we further reflect that the Orphic and Serapian churches, which were manufactured in such cold blood at the instance of a Peisistratus and a Ptolemy Soter, not only lived on for centuries after the deaths of their political promoters but also spread far and wide beyond the frontiers of the Peisistratean Principality and the Ptolemaic Empire, we can take the measure of the moral defeat which was suffered by the Dīn Ilāhī when its nominal adherents incontinently abandoned it to the last man upon receipt of the news that their Imperial master was no longer in a position to visit them with his political displeasure if they ceased to humour his religious vagaries.

As for the many-sidedness which is as conspicuous a feature as the ineffectiveness of Akbar's religious interests and activities, it is at best bewildering and at worst inexplicably self-contradictory; and therefore perhaps the least unpromising approach to the formidable task of attempting an analysis of this extraordinary genius will lie in bringing out the points that Akbar has in common with one or other of the Imperial philosophers and theologians and prophets and claimants to divinity whose failures we have already examined.

One vein in Akbar's genius showed itself in a detached intellectual curiosity and a temperate piety that are both of them reminiscent of the Roman Emperor Alexander Severus. It was in this vein that in A.D. 1575 Akbar established his 'Ibādat Khānah ('House of Worship') as a theatre for discussions of religious and philosophical questions between the representatives of different schools of Islamic thought;¹ and from that moment onwards we can watch the range of Akbar's curiosity constantly expanding. In A.D. 1578 he summoned to his court the Zoroastrian theologian Dastūr Meherji Rānā from Gujerat;² in 1579 he invited from Goa the first of the three successive missions of Jesuit fathers that were to visit his court before the close of his reign;³ in 1582 he sent for the Jain guru Hīravijaya;⁴ and, as the Emperor's circle of religious consultants widened by degrees to this, in Muslim eyes, shockingly latitudinarian radius, Akbar seems to have abandoned his exclusively inter-Muslim public disputations in favour of private sessions at which the representatives of all the different religions

¹ See Smith, *op. cit.*, pp. 130-4.

² For this first Jesuit mission see *ibid.*, pp. 169-76.

³ *Ibid.*, pp. 162-5.

⁴ *Ibid.*, pp. 166-8. Akbar's Jain consultant, like his Zoroastrian consultant, came from Gujerat.

with which he had successively placed himself *en rapport* were required to meet and debate with one another.¹ The results of these excursions into the comparative study of religions came to be reflected in Akbar's daily life in a personal system of private devotions which departed both from the hours and from the exercises of the canonical Islamic prayers, and 'consisted . . . in his latter days . . . largely of acts of reverence to the Sun, fire and light'.²

This intellectual vein, in which Akbar's heart was dominated by his head, was combined in his person with a mystical vein with which it might seem incompatible—if the evidence for the existence of both veins in this one personality were not as convincing as it happens in fact to be. The crucial event in Akbar's religious experience was a fit of ecstasy which came upon him suddenly and unawares in the midst of all the bustle and excitement of a *battue*; and this incident was not an isolated occurrence, for there had been a premonition of it at a date when Akbar was still in his boyhood, and the vein that here came to the surface was active underneath at every stage of Akbar's life.³ It was a response of this element in the emperor-mystic's soul to the admonitions of his Svetāmbara Jain mentor that moved Akbar to pay tribute to the principle of *Ahimsa* ('Non-Injury') by imposing on himself and on his subjects some of the same measures of self-denial which in the same part of the world, more than eighteen hundred years before, had been adopted by the Emperor Aṣoka under the influence of the Hinayanian Buddhism.⁴ Like Aṣoka, Akbar took to a vegetarian diet;⁵ like Aṣoka, he abolished the Imperial hunt; and, like Aṣoka, he established a close time in which the slaughtering of animals was made illegal.⁶

Though this mystical vein in Akbar's character presents a strong contrast to the intellectual vein which we have analysed above, the two veins might both have been expected to contribute—when it came to the practical enterprise of founding a new religion⁷

¹ Ibid., p. 133.

² Ibid., p. 349. Compare the account, that has been quoted above in V. C (i) (d) 6 (8), p. 549, of the private devotions of Alexander Severus in his eclectically furnished oratory.

³ Smith, op. cit., pp. 158-61 and 348-9.

⁴ See the present Annex, pp. 682-3, above.

⁵ Compare Smith, op. cit., p. 167, with the same author's *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), p. 177. It seems certain that Akbar, and probable that Aṣoka, prescribed the death-penalty as a punishment for human beings who infringed these laws for the prevention of cruelty to animals! Aṣoka, however, did, as we have seen, apply the principle of *Ahimsa* to his conduct towards human beings as well, in the capital point of renouncing the use of War as an instrument of his Imperial policy, whereas Akbar never denied himself the indulgence of extending the range of his empire by a pursuit of the practice of aggressive warfare.

⁷ For the institution of the Din Ilāhī see Smith, V. A.: *Akbar the Great Mogul*, pp. 211-22.

—towards informing this work of Akbar's hands with an ethereal and impersonal spirit; and there is one aspect of the Dīn Ilāhī in which this expectation might appear to have been fulfilled; for Akbar's 'fancy religion' was professedly a transcendental monotheism in which an ineffable Godhead was approached in the mind of Akbar—as in the kindred minds of Ikhnaton and Plato and Aurelian and Pachacutec—through an adoration of the Sun in his symbolic role as the Deity's counterpart in the Material Universe.¹ This transcendental aspect of the Dīn Ilāhī was overshadowed, however, by a contrary aspect in which the autocrat's 'fancy religion' can be seen ministering nakedly and unashamedly to its author's overweening egotism.

The promulgation of the new faith in A.D. 1582 was prefaced by two demonstrative assertions of a 'Caesaro-papism' that was as reminiscent of Elagabalus and Hākim as it was profoundly alien from the tradition and the *êthos* of the orthodox Sunnī Islam in which Akbar had been born and bred.² In June 1579 the Emperor insisted on assuming the function of saying the *Khutbah* in the general mosque in his brand-new capital of Fathpur-Sikrī;³ and in the September of the same year Shaykh Mubārak—a Sunnī doctor of the Law who pandered to Akbar's clerical ambitions—followed up this first step by promulgating, in the name of the Sunnī 'ulamā of the Empire, a manifesto⁴ conceding to the Emperor the last word in those questions of faith and doctrine which, according to the Sunnah, were soluble exclusively by the consensus of the 'ulamā themselves and lay entirely beyond the province of the temporal power—even where this was wielded by the Commander of the Faithful himself.⁵ Thereafter, when at the beginning of A.D. 1582 Akbar at last took the decisive step of overtly promulgating a new religion, an insistence upon the supreme spiritual authority of its Imperial maker—an authority that was supported by a pretension to a unique spiritual enlightenment—turned out to be the kernel of a so-called Dīn Ilāhī.⁶ Converts were called upon to sacrifice Religion, as well as Honour, Life, and Property, upon the demand of the emperor-pontiff; and, if the

¹ For Akbar's adoration—under Hindu as well as Zoroastrian influence—of the Sun in particular and of fire and light in general see Smith, *op. cit.*, pp. 164-5 and 349.

² For the 'Caesaro-papism' that has been the ruin of the Orthodox Christian Civilization see IV. C (iii) (c) 2 (β), vol. iv, pp. 364-405, and IV. C (iii) (c) 2 (β), Annex II, vol. iv, pp. 593-623, above.

³ Smith, *op. cit.*, pp. 176-7.

⁴ *Ibid.*, pp. 178-80.

⁵ For this fundamental rule of the orthodox Sunnī Muslim Faith see the authorities—particularly Arnold, T. W.: *The Caliphate* (Oxford 1924, Clarendon Press)—that are cited in Toynbee, A. J.: *Survey of International Affairs 1925*, vol. i (London 1927, Milford), pp. 25-30. Akbar's outrageous assumption of the authority of an 'ālim in virtue of being the local *sultān* of the Islamic community in Hindustan seems to have been first mooted by Shaykh Mubārak as early as A.D. 1573 (Smith, *op. cit.*, pp. 213-14).

⁶ See *ibid.*, pp. 213-17.

convert was a Muslim, a written declaration of his repudiation of Islam was required of him. In his special animus against the religion which he himself had deserted, the apostate Sunnī Akbar revealed the apostate Shī'ī Hākīm's cloven hoof; and, though he stopped short¹ of attempting to convert his Muslim subjects to the Dīn Ilāhī by force, Akbar did go so far as to sell into slavery beyond the frontiers of his own dominions a number of shaykhs and fakīrs who had been frank enough and bold enough to declare against the Emperor's spiritual pretensions.² There is even reason to believe that Akbar followed Hākīm to the length of at any rate playing with the idea of representing himself as an incarnation of the Deity.³

The utter failure of this fantastic caprice of an extraordinary genius may perhaps be considered to have completed our demonstration that *Cujus Regio Ejus Religio* is a political programme which is inexorably condemned to miscarry. And indeed the last word on this vain dream of autocrats intoxicated with *hybris* had already been uttered—and that not only before Akbar's time but also within Akbar's knowledge—by one of the councillors of Akbar's own predecessor and ensample, Sultan 'Alā-ad-Dīn Khiljī, at a privy council meeting at which 'Alā-ad-Dīn had divulged his intention of committing the very act of folly which Akbar did commit three hundred years later.

'Religion and law and creeds', declared the prince's councillor on this occasion, 'ought never to be made subjects of discussion by Your Majesty, for these are the concerns of prophets, not the business of kings. Religion and law spring from heavenly revelation; they are never established by the plans and designs of Man. From the days of Adam till now they have been the mission of prophets and apostles, as rule and government have been the duty of kings. The prophetic office has never appertained to kings—and never will, so long as the World lasts—though some prophets have discharged the functions of royalty. My advice is that Your Majesty should never talk about these matters.'⁴

The Khiljī prince to whom this counsel was addressed showed himself wiser in his generation than his more enlightened Timurid successor; for 'Alā-ad-Dīn prudently abandoned his foolhardy enterprise in deference to a warning which, in the same social

¹ Ibid., p. 209.

² Ibid., p. 221.

³ See *ibid.*, pp. 177–8, 218, and 351. This suspicion mainly rests upon the use of the phrase 'Allāhu Akbar' as one of the shibboleths of the new religion; for, while the traditional meaning of this pious ejaculation was 'Allah is without a peer', it was also capable of being interpreted as meaning 'Akbar is identical with Allah'.

⁴ Advice given to Sultan 'Alā-ad-Dīn by his councillor 'Alā-al-Mulk, the Kotwāl of Delhi (recorded in Ziyā-ad-Dīn Baranī's *Ta'rikh-i-Firūz Shāhī*, and quoted by Smith, in *op. cit.*, p. 210, from the English translation given in Elliot, H. M., and Dowson, J.: *The History of India as told by its own Historians* (London 1867–77, Trübner, 8 vols.), vol. iii, p. 170.

environment at the later date, was disregarded by Akbar to that self-willed emperor-pontiff's own exemplary discomfiture.

If the lesson of experience up to date thus proves to be that *Cujus Regio Ejus Religio* is a political programme which spells disappointment for any prince who may be rash enough to make it his own, a study of History will also bring to light a converse principle which is apt to prosper the handiwork of a prince who acts upon it, while even the prince who merely refrains from acting at variance with it may look forward to reaping at least the negative reward of escaping Akbar's and Hākim's fiasco. This counter-principle might be expressed in the antithetical catchword *Religio Regionis Religio Regis*; and we may conclude the present Annex by applying our usual test of an empirical survey to this second formula in its turn—reviewing in the first place the fortunes of those princes who have simply forborne from setting the principle at defiance, and in the second place the fortunes of those who have taken it for their positive rule of conduct.

Our catalogue of rulers who have profited by paying deference to the precept *Religio Regionis Religio Regis* in the merely negative way of keeping on the right side of the law must include the name of the Umayyad dynasty of Caliphs, since the Umayyads did refrain from attempting to force upon their subjects the faith to which they themselves officially subscribed, and did duly reap from this tolerance a reward which can be measured by contrasting the policy and the fortunes of the Umayyads with those of the Maccabees.¹ At the same time we cannot rate even the negative merit of the Umayyads very high, considering that every one of the Caliphs of this dynasty, with the single exception of 'Umar II, was supremely indifferent, if not positively hostile, to the Islam which he officially professed, and was therefore presumably free from any serious temptation to press upon the non-Islamic populations under his rule a religious diet for which their sovereign himself had so little appetite. A greater exercise of self-restraint may be discerned in the similar forbearance of the Achaemenidae, with the single exception of Cambyses in Egypt, from any attempt to indoctrinate their non-Zoroastrian subjects with the Zoroastrianism which was the domestic religion of the Achaemenian House;² for on the one hand the language of their inscriptions suggests that the Achaemenidae were keener converts to Zoroas-

¹ For the respective cases of the Umayyads and the Maccabees see the present Annex, pp. 675-7 and 657-9, above. For the case of the Umayyads see also V. C (ii) (a), vol. vi, p. 205, below.

² Cambyses' outrageous desecration and violent persecution of the Egyptian religion may perhaps be taken as evidence of a zeal for his own Zoroastrianism—though this Achaemenian fanatic had not time, in Egypt, to progress from the stage of repression to that of propaganda.

trianism than the Umayyads were to Islam,¹ while on the other hand the Achaemenidae showed themselves so scrupulous in acting up to their policy of extending toleration to all religions alike² as to have awakened, in the minds of some modern Western scholars, an uncharitable suspicion that such admirably tolerant princes may not after all have felt any very deep devotion to the faith which they personally professed. However that may be, it is at any rate beyond question that the Achaemenidae served their own interests better by their tolerance than their Sasanian successors and co-religionists served theirs by their fanatical efforts to impose their Zoroastrianism upon their subjects.³

Again, we may be sure that Marcus Aurelius never dreamt of making use of his Imperial prerogative in order to propagate among his subjects—either by precept, like Açoka, or, *a fortiori*, by ordinance, like Julian—the philosophy which was the staff of Marcus's own private life;⁴ and this negative service was certainly the best that Stoicism could have received at the hands of its Imperial professor. The Incas, too, notwithstanding their deliberate and systematic authoritarianism, had the wisdom to temper tyranny with discretion in the execution of their religious policy;⁵

¹ This is possibly truer of the earlier than it is of the later Achaemenian emperors of the House of Hystaspes; for a considerable departure from the strict demands of the Zoroastrian Faith seems to be implied in the public patronage which was extended by Artaxerxes II (*imperabat* 404–358 B.C.) to the worship of the goddess Anahita—a divinity who may in form have been incorporated into the Zoroastrian system of theology, but who was in fact a relic of the pre-Zoroastrian paganism which in all probability continued, from beginning to end of the Achaemenian Age, to be the everyday religion of a majority of the Great King's Iranian kinsmen inside as well as outside the frontiers of the Great King's dominions. While the Achaemenidae were thus inclining to revert from the new 'higher religion' which had been adopted by their House to an older paganism, the Magi, who, before the advent of the Prophet Zarathustra, had established a position for themselves as the hereditary priesthood of Iran, and who had therefore at first seen in Zoroastrianism a menace to their own vested interests, were reversing their original policy of opposition and were setting themselves to capture a Zoroastrianism which they had found themselves unable to suppress (see V. C (i) (d) 6 (δ), p. 542, above). Thus, in the Achaemenian Age, the Dynasty and the Magi were already beginning to converge towards the common ground on the religious plane that was to be the basis of their alliance on the political plane in the Sasanian Age. The political influence which the Magi were eventually to exercise upon the Sasanian Government does not, however, seem to have been acquired until after the fall of the Achaemenian régime (Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 125).

² The persecution of the Egyptian religion by Cambyses is the exception that proves the rule; for Darius the Great took pains to efface the traces of Cambyses' subversive work (see Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 163).

³ See the present Annex, pp. 659–61, above.

⁴ In assessing the motives of Marcus's abstention from philosophical propaganda it is difficult to know how much weight to assign to a scrupulousness of the Achaemenian kind and how much to the esoteric spirit of the Hellenic philosophers, who were mostly content to allow their philosophy to remain caviare to the vulgar (see V. C (i) (d) 6 (δ), pp. 559–62, above).

⁵ For one piece of evidence see the present Annex, p. 694, footnote 3, above. For the respect for local customs which was the general policy of the Incas, subject to the imposition of certain common rules of life in the interest of establishing a framework of social uniformity, see Baudin, L.: *L'Empire Socialiste des Inkas* (Paris 1928, Institut d'Ethnologie), p. 62.

and we may conjecture that, if the Incaic Empire had been allowed to live out its natural term, this touch of latitudinarianism in the religious sphere would have stood the Incas in better stead than a fanaticism of the kind which was subsequently displayed in this same Andean World by the Incas' Spanish conquerors and successors in their efforts to impose their own Catholic Christianity upon the Incas' former subjects; for these Spanish efforts seem to have been as fruitless in reality as they have been successful in appearance. Nor had the 'Osmanli contemporaries of either the Inca Pachacutec (*imperabat circa* A.D. 1400-48) or the Safawī militarist Ismā'il (*imperabat* A.D. 1500-24) or the Spanish King Philip II (*regnabat* A.D. 1556-98) or the Timurid Mughal Emperor Awrangzīb (*imperabat* A.D. 1659-1707) any cause to regret their own consistently maintained policy of tolerating, in conformity with the *Sheri'ah*, the religious practices and beliefs of the non-Muslim 'People of the Book' who had explicitly submitted to their rule; for the contrast between the long duration of the Ottoman régime and the swift discomfiture of each of those intolerant potentates gives the measure of the reward which the 'Osmanlis obtained for their persistence in resisting all temptations to treat their Christian subjects as the Spanish Crown treated its Muslim subjects and Shāh Ismā'il his Sunnī subjects and Awrangzīb his Hindus.¹

Perhaps the most remarkable, as well as the most honourable, examples of this politic forbearance from employing an autocrat's power in order to propagate the autocrat's religion are those in which a dynasty whose domestic faith has been on the point of triumphing by its own efforts over all the rival creeds has still refrained from dealing these defeated opponents their death-blow. In this magnanimous spirit the 'Abbasids refrained from anticipating the victory of Islam over Zoroastrianism and Nestorianism and Monophysitism in the dominions of the Caliphate,² while in the Indic World the Guptas similarly refrained from hastening the triumph of the rising Hinduism—which they themselves professed—over a Buddhism which was already declining towards its fall in the society which had brought it to birth. This generosity stands out in auspicious contrast to the implacable fanaticism with which,

¹ The exception which proves the rule of Ottoman tolerance is the massacre of the Anatolian Shi'is in A.D. 1514 (see I. C (i) (b), Annex I, vol. i, pp. 362 and 384, above). But this atrocity was committed at a moment of great public danger and under an extreme provocation; and even Sultan Selim I did not extend his persecution of the Shi'ah to his other non-Sunnī subjects—though there is a story that he did once try to trick his Sheykh-al-Islām into inadvertently sanctioning in advance a project which the Pādishāh had in mind for commanding all his Christian subjects—in utter contravention of the *Sheri'ah*—to embrace Islam under pain of death if they refused (for this story see V. C (ii) (a), vol. vi, p. 204, below).

² See p. 678, above, and V. C (ii) (a), vol. vi, p. 205, below.

in a dissolving Hellenic Society, a Gratian and a Theodosius and a Justinian pressed the pursuit of a retreating Paganism which was so manifestly incapable of rallying that Time could safely have been left to consummate the already assured victory of Christianity without any further aid from the autocrat's arm. In their behaviour in these circumstances it was assuredly the Hindu Guptas and the Muslim 'Abbasids, and not the Christian epigoni of Constantine the Great, who 'fulfilled' that 'which was spoken by Esaias the Prophet':

'Behold my servant, whom I uphold; mine elect, in whom my soul delighteth; I have put my spirit upon him: he shall bring forth judgment to the Gentiles. He shall not cry nor lift up nor cause his voice to be heard in the street. A bruised reed shall he not break, and the smoking flax shall he not quench: he shall bring forth judgment unto truth . . . and the isles shall wait for his law.'

If we now pass from our survey of these rulers who have merely refrained from trying to force their own religion upon their subjects,² and proceed to review, in their turn, those other rulers who have gone to the length of embracing their subjects' religion in place of the faith which the ruler-converts have inherited from their own forebears, we may find it illuminating to arrange our examples to the best of our judgement in the descending order of their comparative sincerity.

¹ Isa. xlii. 1-4, quoted in Matt. xii. 18-21.

² In passing, we may take note of two sets of rulers who have not refrained from trying to force their own religion upon their subjects, but who have nevertheless acknowledged that, in principle, Religion ought not to be inculcated by political coercion, and who have tried to reconcile their liberal theory with their illiberal practice by representing that the rites which they have been constraining their subjects to perform are not really religious rites at all, but are simply civic ceremonies which can be carried out by anybody without giving any legitimate ground for conscientious scruples. This was the attitude taken up by the Roman Imperial authorities towards Christian citizens or subjects of the Empire who professed conscientious objections against performing the ritual of emperor-worship. The same attitude is taken up to-day by the Japanese Imperial authorities in regard to the ritual of State Shinto:

'In the case of a civilized country there must exist freedom of faith. If Shintō is a religion, however, the acceptance or refusal thereof must be left to personal choice. Yet for a Japanese subject to refuse to honour the ancestors of the Emperor is disloyal. Indeed, a Japanese out of his duty as subject must honour the ancestors of the Emperor. This cannot be a matter of choice. It is a duty. Therefore this cannot be regarded as a religion. It is a ritual. It is the ceremony of gratitude to ancestors. In this respect the Government protects the shrines and does not expound doctrines.' (Ariga, Nagao: 'Shintō as a State Religion' in *Tetsugaku Zasshi*, vol. xxv, No. 280 (June 1910), p. 702, quoted by Holtom, D. C.: *The National Faith of Japan: A Study in Modern Shintō* (London 1938, Kegan Paul), pp. 69-70.)

The question whether State Shinto is a religion, which is answered in the negative by the Japanese authority above quoted, is discussed by Holtom in op. cit., pp. 289-316, and is answered by this Western scholar in the affirmative:

'Modern Shrine Shintō is a thorough-going religion. It is the state religion of Japan. In it we discern an extraordinary example of the survival, in the culture of the present day, of a form of national worship which presents interesting parallels with the state religions that dominated the civilizations of Western Asia and the Mediterranean area thousands of years ago' (p. 306).

Holtom's view is shared by Kato, Genchi: *A Study of Shinto, the Religion of the Japanese Nation* (Tokyo 1926, Meiji Japan Society), pp. 2-3.

On this criterion we shall perhaps be inclined to head our list with the Roman Emperor Constantine the Great and with the Sinic Emperor Han Wuti; for, however much Constantine in embracing Christianity, and Wuti in embracing Confucianism,¹ may have gained—and foreseen that he would gain—politically, those modern Western historians who see in the alleged conversion of these two emperors nothing more than a cynically calculated piece of hypocrisy² are assuredly guilty of a gross psychological anachronism in attributing to the children of a disintegrating Hellenic and a disintegrating Sinic Society a modern Western behaviour which is manifestly incompatible with the spirit of the time and place in which these alleged hypocrites actually lived. It seems far more probable that, if either Constantine or Wuti had been aware in his own heart that he was not acting in good faith, he would have found himself unable to keep up in the sight of his subjects a pretence with which he had ceased to be able to delude his own understanding. And therefore, when we have to explain to ourselves why Constantine did—after a previous declaration of allegiance to his ancestral tutelary deity Sol Invictus³—eventually come to the conclusion that it was his duty as a Roman Emperor ‘so far to disavow Rome’s past as himself to adopt’ a Christianity which was ‘professed by perhaps one-tenth of his subjects’,⁴ we

¹ For the Constantinian part which was played by Han Wuti in securing the adoption of Confucianism as the official philosophy of the Sinic universal state see Franke, O.: *Geschichte des Chinesischen Reiches*, vol. i (Berlin and Leipzig 1930, de Gruyter), pp. 295–320, and the present Study, V. C (i) (d) 4, in the present volume, pp. 418–19, and the present Annex, p. 654, above. In this partnership it was not the pliant temporal power but the triumphant philosophy that was the loser. A Confucianism that was already becoming intellectually debased as a result of the social *pammixia* in the Sinic universal state (see V. C (i) (d) 6 (δ), pp. 549 and 555–6, and the present Annex, pp. 654–5, above) was now also spiritually sterilized through being made official (Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), p. 235).

² This seems, for example, to be Franke’s opinion, to judge by the following passage in op. cit., vol. i, pp. 318–19:

‘A remote resemblance may be discerned between the respective positions of the Emperor Constantine and his successors, down to Theodosius the Great, in the Roman Empire in the fourth century, and of Kaoti and his successors, down to Wuti, in the Chinese Empire. Both found themselves confronted by a spiritual movement—Christianity in the one case and Confucianism in the other—with which they were forced to come to a reckoning. Both, in their own hearts, to start with, even if they were not positively inclined to reject this movement, were at any rate without any special penchant towards it: Constantine did not have himself baptized till he was on his death-bed. . . . Gratian and Theodosius were the first Roman emperors to confer an exclusive legality and right of protection in the Empire upon the orthodox Christian creed, while we have already seen what the Han emperors’ attitude was towards Confucianism. Both, however, were constrained by political circumstances to repress their personal feelings. The Roman Empire became Christian, and the Chinese Confucian.’

This equation of Wuti’s attitude towards Confucianism with the fanatical intolerance of Gratian’s and Theodosius’s devotion to Christianity seems as questionable as the associated equation of Constantine’s attitude towards Christianity with the contemptuous hostility which was publicly displayed towards Confucianism by Liu Pang [= Kaoti] according to the evidence that has been cited in this Annex, on p. 654, above, upon the authority of Dr. Hu Shih.

³ See the present Annex, pp. 650 and 693–4, above.

⁴ Baynes, N. H.: *Constantine the Great and the Christian Church* (London 1929, Milford), p. 4.

shall perhaps show ourselves both better psychologists and better historians if we seek an explanation which does not call in question the imperial convert's sincerity. We may make bold to conjecture that the determining consideration that moved Constantine to make a new departure which was apparently hazardous, and was certainly sensational, was the abiding effect of the impression that had been made upon him as a younger man by the experience of witnessing, at close quarters, the indomitable bearing of the Christian Church under the searching ordeal of the Galerian persecution.¹

The historical sense that warns us against attributing the conversion of a Constantine or a Wuti to motives that are anachronistically cynical will commend an even greater caution in interpreting in terms of an ephemerally and parochially modern Western attitude to life the conversions of barbarian conquerors who have been far less sophisticated than those converted rulers of universal states into whose derelict heritage these barbarians have forced an entry. In other contexts² we have observed that the barbarian conquerors who are converted promptly and outright from their primitive paganism to a 'higher religion' that is prevalent among their more civilized subjects are apt to be rewarded by being given a leading part to play in subsequent history; and we have also observed that the maxim 'Better late than never' holds good in this case, since the pagan or heretical barbarian rulers of 'successor-states' who capitulate to the established local orthodoxy at any time down to the eleventh hour are apt at any rate to escape destruction—even if they may have irretrievably forfeited their chances of achieving greatness—whereas the more stiff-necked barbarians who obstinately persist in their ancestral paganism or heresy are apt to pay the prohibitive price of ejection or annihilation. On this showing, a speedy and thorough-going conversion to the faith of his subjects is the barbarian conqueror's best policy from the standpoint of his own material interests; and yet it would be unwarrantable to assume that this has actually been the usual motive in the minds of those barbarians who have in fact undergone conversion before suffering the penalty for recalcitrance. For one thing, not one of these barbarian converts to a 'higher religion' has had the opportunity to acquaint himself with the array of precedents from which the historian's rational induction

¹ Our own contemporary the Chinese 'Christian General' Fêng Yu-hsiang is said to have been converted as a result of having witnessed, as a young man, the martyrdom of Western Christian missionaries during the 'Boxer' insurrection of A.D. 1899-1900.

² e.g., in V. C (i) (c) 4, pp. 355-7, above, in general, and also in I. C (i) (b), Annex I, vol. i, pp. 363-4; II. D (vi), vol. ii, p. 145; and III. A, Annex II, vol. iii, pp. 429, 439, and 450, in regard to the particular case of the conversion to Islam of the epigoni of the Mongol conquerors of Dār-al-Islām.

is laboriously extracted; but it is still more pertinent to reflect that, even if these data could be placed at the barbarian's disposal by some extraordinary *tour de force*, he would usually be unable and unwilling to turn them to account because he is both destitute of the training and innocent of the taste for making the cynical calculations of *Realpolitik*.¹

No doubt there have been individual exceptions to this general rule of barbarian 'mentality' and behaviour. For example, when we observe that the pagan Frankish war-lord Clovis announced his conversion to the Catholic Christianity of the native population of Gaul on the eve of his wars of aggression against the Arian Burgundians and Visigoths who were then still in occupation of the lion's share of the Gallic spoils of the Roman Empire, it is difficult to resist the suspicion that the barbarian mind of the covetous Frankish interloper was making the same Machiavellian calculations as are known to have been made in similar circumstances by the sophisticated minds of an Henri IV and a Napoleon Bonaparte. An exceptional political precocity may be one of those 'sports' that are part of the order of Nature; and our suspicion that Clovis may in fact have been a modern Western statesman born a thousand years before his due Transalpine date² is supported by the fact—which we have noticed already in another connexion³—that, in spite of the brilliance of his achievements and the importance of their historical effects, the founder of the Frankish power has not become one of the heroes of the Teutonic Epic. It looks as though there was some element in Clovis' character and career which had chilled the imagination and baffled the skill of the minstrels who created the 'heroic' poetry of the barbarian society in which Clovis 'lived and moved'; and this intractable something may have consisted precisely in the fact that this vulgarly successful barbarian 'had his being' in a forbiddingly alien intellectual and moral clime. If, however, this is really Clovis' case, it is probably an exceptional one. For the most part it seems likely that the barbarian converts to the ruling religious orthodoxy of their time and place have been moved far less strongly by conscious calculations of political expediency than by the glamour and prestige

¹ The barbarian war-lord may be exonerated from the imputation of being an addict to the vices of Civilization, without being idealized as 'the noble savage'. The sentimental and the 'realistic' portraits of him are equally out of focus, because each, in its way, is an attempt to depict him in modern Western dress. The barbarian who has entered by conquest into a disintegrating civilization's derelict heritage is prone, as we shall find (in Part VIII, below), to lose his *moral*; but the demoralization to which he succumbs is of a kind that is peculiar to the barbarian's own self in these particular circumstances.

² In Italy, in contrast to the Transalpine parts of Western Christendom, Clovis' *Realpolitik* would have been a normal phenomenon within eight hundred years of Clovis' actual date.

³ See V. C (i) (c) 3, Annex III, pp. 610 and 612-14, above.

of a culture which has not lost its power to captivate their imaginations and to daunt their spirits even after they have proved themselves more than a match for it in sheer physical force.¹

In order to find unquestionably authentic examples of a consciously cynical and deliberately calculating attempt to reap political profit by putting the principle of *Religio Regionis Religio Regis* into practice, we must descend to the Modern Age of a Western or Westernized Society; and in naming Henri IV and Napoleon I we have already recalled two of the outstanding cases in point that are to be found in this modern Western field. It only remains to mention the British practice²—which has been current by now for two hundred and fifty years and which is not the outcome of either conscious cynicism or deliberate calculation—for having in the sovereign of the United Kingdom a common member of the Episcopalian Established Church of England and of the Presbyterian Established Church of Scotland, so that, on whichever side of the Border he may happen to be resident at any moment, the King always finds himself at home in matters ecclesiastical as well as in matters secular.³ This thorough-going application of the principle of *Religio Regionis Religio Regis*⁴ has worked as well—at any rate from the political standpoint—for the last two and a half centuries as the previous attempts to regulate the ecclesiastical relations between England and Scotland on the principle of *Cujus Regio Ejus Religio* worked badly during the eighty-six years that intervened between the accession of King James VI of Scotland to the English throne and that of Prince William of Orange to the thrones of both kingdoms. The ecclesiastical status of the Crown that has resulted from the politico-ecclesiastical settlement achieved between A.D. 1688 and A.D. 1707 has indeed been the palladium of the Constitution of the United Kingdom ever since; for the formal equality at law between the respective ecclesiastical establishments of the two kingdoms has been symbolized, in a fashion that can be ‘understood of the people’ on both sides of the Border, in the visible fact that, on both sides alike, the King

¹ For example, it was no doubt the spiritual and cultural potency of the Mahāyāna, and not any mental operations of political arithmetic, that led to the conversion of the To Pa barbarian conquerors of one of the northern marches of the Sinic universal state at a moment when, as a matter of statistical fact, the Mahāyāna was already the established religion of some nine-tenths of these barbarian conquerors’ native Sinic subjects (for this estimate see Eliot, Sir Ch.: *Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. iii, pp. 249–50).

² Touched upon already in V. C (i) (d) 6 (δ), pp. 533–4, above.

³ This has only latterly been a matter of practical importance, since no king or queen ever set foot in Scotland during the first 133 out of the 250 years in question (A.D. 1688–1938).

⁴ *Religio Regionis Religio Regis*, but not *Religio Regionis Religio Civis*, since, in both England and Scotland during the period in question, the toleration of dissent has been as much a part of the politico-religious constitution of the country as has been the establishment of the two churches that are severally established in the two kingdoms.

professes a religion which is the officially established (though no longer the exclusively tolerated) religion of the land; and this palpably assured sense of ecclesiastical equality, which is itself the fruit of a spirit of mutual toleration in matters of religion, has provided the psychological foundation for a free and equal political union between two kingdoms which had previously been alienated from one another by a long tradition of hostility and which have never ceased to be differentiated by a wide disparity in area, population, and wealth. The successful negotiation of these formidable obstacles to a union of Scottish and English hearts is a political *tour de force* that is the *chef d'œuvre* of British statesmanship; and by the same token it may be taken as the culminating and decisive proof of our present thesis that *Religio Regionis Religio Regis* is a politically more profitable maxim than *Cujus Regio Ejus Religio* for princes to take as the cue for their ecclesiastical policy.

THE DISINTEGRATIONS OF CIVILIZATIONS (*cont.*)

C. THE PROCESS OF DISINTEGRATION (*cont.*)

(I) THE CRITERION OF DISINTEGRATION (*cont.*)

(d) SCHISM IN THE SOUL (*cont.*)

7. *The Sense of Unity*

IN our preliminary reconnaissance of the relations between the several alternative ways of behaviour, feeling and life in which human souls react to the ordeal of social disintegration, we have observed¹ that the sense of promiscuity, which we have just been studying in various manifestations of it, is a psychological response to a blurring and blending of the sharp individual outlines that are assumed by a civilization while it is still in growth and is therefore still differentiating itself from other representatives of its kind;² and in this connexion we have observed that the same experience may alternatively evoke another response—an awakening to a sense of unity—which is not only distinct from the sense of promiscuity but is its exact antithesis. The painful perturbing dissolution of familiar forms, which suggests to weaker spirits that the ultimate reality is nothing but a chaos, may reveal to a steadier and more penetrating spiritual vision the truth that the flickering film of a phenomenal world in which the forms of outward things take shape only to disappear again is an illusion which cannot for ever obscure the everlasting unity that lies behind.³

This spiritual truth, like other truths of the kind, is apt to be apprehended first by analogy from some outward visible sign; and the portent in the external world which gives the first intimation of a unity that is spiritual and ultimate is the unification of a human society into a universal state through a prosaically brutal process of internecine warfare between parochial states which has

¹ In V. C (i) (d) 1, vol. v, p. 381, above.

² For the differentiation that accompanies, and bears witness to, the growth of a civilization see III. C, vol. iii, pp. 377-90, above.

³ In the Hellenic World *post Alexandrum* this revelation of unity was apprehended and given expression by Zeno, the founder of the Stoic school of philosophy (Bidez, J.: *La Cité du Monde et la Cité du Soleil chez les Stoïciens* (Paris 1932, Les Belles Lettres), p. 50). In applying his apprehension of this truth to the problem of Man's place in the Universe, Zeno parted company with the Cynics. 'Apprenant à l'homme à se considérer non comme une simple partie (*μέρος*), mais comme un membre (*μέλος*) d'un vaste organisme social, . . . Zénon donne à l'esprit purement négatif et frondeur du cynicisme un espoir positif' (*ibid.*, pp. 29-30; cf. p. 10). For the Hellenic conception of the *Cosmopolis*, which was in large measure the Stoics' work, see V. C (i) (d) 7, Annex, pp. 332-8, below.

ended at last in the exclusive and unchallenged dominion of one sole surviving belligerent.

The dawn of a sense of unity on this pedestrian political plane of life is commemorated in the titles in which some of the universal states that have come into existence up to date have proclaimed their rulers' own conception of their nature and function.¹ For example, the prince of the Eleventh Egyptian Dynasty who was the founder of the Egyptian universal state styled himself 'the Uniter of the Two Lands',² and his Sumeric counterpart Ur-Engur gave his similar political handiwork the title of 'the Kingdom of Sumer and Akkad'. Ur-Engur's successor, Dungi, abandoned this mere enumeration of his empire's two principal component parts for the abstract and comprehensive title of 'the Kingdom of the Four Quarters';³ and precisely the same formula was invented independently by the Incas—in another hemisphere and at a Time-remove of more than three thousand years—to designate the universal state into which they had united the political surface of the Andean World.⁴ Again,

¹ Pretensions to oecumenical power can be expressed in the action of a rite or ceremony as well as in the words of a style and title; and the Indic Society established a practical test for pretensions of the kind in 'the antique rite of the horse-sacrifice (*aśva medha*), which, according to immemorial tradition, could only be performed by a paramount sovereign and involved as a preliminary a formal and successful challenge to all rival claimants to supreme power, delivered after this fashion:

"A horse of a particular colour was consecrated by the performance of certain ceremonies, and was then turned loose to wander for a year. The King, or his representative, followed the horse with an army, and, when the animal entered a foreign country, the ruler of that country was bound either to fight or to submit. If the liberator of the horse succeeded in obtaining or enforcing the submission of all the countries over which it passed, he returned in triumph with all the vanquished rājas in his train; but if he failed he was disgraced, and his pretensions ridiculed. After his successful return a great festival was held, at which the horse was sacrificed" (Smith, V. A.: *The Early History of India*, 3rd ed. (Oxford 1914, Clarendon Press), p. 200, quoting Dowson, J.: *Classical Dictionary of Hindu Mythology and Religion, Geography, History, and Literature* (London 1879, Trübner), s.v. *Aśvamedha*).

The first recorded performance of this imperial rite seems to be its celebration by Pushyamitra, the usurper who overthrew the Maurya Dynasty—and attempted in vain to enter into the imperial heritage of Chandragupta and Aśoka—*circa* 185 B.C. (see Smith, op. cit., pp. 200-2). Thereafter, upon the reintegration of the Indic universal state by the Gupta Dynasty after a long interlude of Helleno-Nomad intrusion, the traditional horse-sacrifice was celebrated in succession by Samudragupta, *circa* A.D. 351 (Smith, op. cit., p. 288), and by his grandson Kumāragupta (*imperabat*, A.D. 413-55) (Smith, op. cit., p. 299). The last recorded performance of the horse-sacrifice is its celebration by a scion of the Gupta Dynasty after the death of the Thānēsari emperor Harsha in A.D. 647 (Smith, op. cit., p. 313).

² Meyer, E.: *Geschichte des Altertums*, vol. i, part 2, 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 257. According to Breasted, J. H.: *The Development of Religion and Thought in Ancient Egypt* (London 1912, Hodder & Stoughton), pp. 314-15, 'it was universalism expressed in terms of imperial power [by the emperors of "the New Empire" in and after the reign of Thothmes III] which first caught the imagination of the thinking men of the Empire, and disclosed to them the universal sweep of the Sun-God's dominion as a physical fact, whereas 'commercial connexions, maintained from an immemorially remote past, had not sufficed to bring the great world within the purview of Egyptian thinking'. As evidence of the awakening of Egyptian minds, in the time of 'the New Empire', to a sense of world-unity, Breasted (op. cit., pp. 315-17) quotes a hymn to the Sun-God which was composed in the reign of Amenhotep III (*imperabat*, *circa* 1405-1370 B.C.).

³ Meyer, op. cit., vol. cit., p. 557. See also the present Study, V. C (i) (d) 6 (δ), Annex, vol. v, p. 651, above.

⁴ See V. C (i) (d) 6 (δ), Annex, p. 652, above, and Cunow, H.: *Geschichte und Kultur des Inkareiches* (Amsterdam 1937, Elsevier), pp. 75-6; Markham, Sir C.: *The*

the sovereign of the Achaemenian Empire, which served as a universal state for the Syriac World, asserted the oecumenical range of his rule by styling himself 'King of the Lands' or 'King of Kings'¹—a title which was laconically translated into Greek in the one word *Βασιλεύς* without even an introductory definite article.² The same claim to exercise an oecumenical authority over a united world is embodied, with complete explicitness, in the phrase *T'ien Hia*—'All that is under Heaven'—which was the official title of the Sinic universal state of the Han; and the transmission, not only of this verbal formula, but also of the outlook which it conveys, from the Sinic Society to the main body of the affiliated Far Eastern Society is attested—among a mass of other evidence—by the terms of a letter from the Manchu Emperor Ch'ien Lung (*imperabat* A.D. 1735–96) to King George III of Great Britain which has been quoted already in this Study.³ The Roman Empire which served the Hellenic World as a universal state came to be equated in the Latin language with the *Orbis Terrarum*⁴ and in Greek with the *Οἰκουμένη* in the sense of the whole of the inhabited world; and the consciousness, in Hellenic souls, of the unity of Mankind, for which the Roman Empire provided an outward visible symbol, may be illustrated by quoting from the works of two writers of the second century of the Christian Era—one a philosopher and the other a historian—who were both of them living under the aegis of an oecumenical Roman Peace.

In a passage in which his main concern is to point out the limitations of Caesar's power, Epictetus begins by remarking:

'You see that Caesar appears to provide us with a great peace, because there are no longer any wars or battles or any serious crimes of brigandage or piracy, so that one can travel at any season and can sail from the Levant to the Ponent.'⁵

Incas of Peru (London 1910, Smith Elder), p. 173. In the Mexic World, where the establishment of an indigenous universal state by Aztec empire-builders was forestalled by a Spanish conquest, the sense of unity which thus never achieved its expression on the political plane seems to have expressed itself, by anticipation, on the religious plane in a conception of the world as a unity articulated into four quarters for ritual purposes (see Spinden, H. J.: *Ancient Civilisations of Mexico and Central America* (New York 1922, American Museum of Natural History), p. 207).

¹ Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), pp. 24–6.

² This verbal recognition of the uniqueness of the status and office of the Achaemenian Great King was a striking act of homage on the lips of Hellenes who were defying his efforts to extend his oecumenical authority over their own city-states.

³ In I. C (iii) (b), vol. i, p. 161, above.

⁴ See Vogt, J.: *Orbis Romanus* (Tübingen 1929, Mohr). This scholar points out (pp. 23–7) that, while the Romans did have an inkling, in the first century of the Christian Era, that *noster orbis* was not the only one on the face of the Earth (as is indicated in such expressions as Lucan's 'orbis qua Romanus erat' (*Pharsalia*, Book VIII, ll. 211 seqq.)), nevertheless 'the equation of the Roman Empire with the entire *Oecumene* continued to be the predominant point of view'.

⁵ Epictetus: *Dissertations*, Book III, chap. 13, § 9. The sequel, in which Epictetus goes on to draw the contrast between the *Pax Augusta* and the *Pax Philosophica*, is

And this unification of the whole of Mankind under a Roman peace, which Epictetus mentions in order to belittle the achievement, is belauded by Appian in the enthusiastic introduction to his *Studies in Roman History*:

'A few more subject nations have been added by the emperors to those already under the Roman dominion, and others which have revolted have been reduced to obedience; but, since the Romans already possess the choicest portions of the land and water surface of the Globe, they are wise enough to aim at retaining what they hold rather than at extending their empire to infinity over the poverty-stricken and unremunerative territories of uncivilized nations. I myself have seen representatives of such nations attending at Rome on diplomatic missions and offering to become her subjects, and the Emperor refusing to accept the allegiance of peoples who would be of no value to his Government. There are other nations innumerable whose kings the Romans themselves appoint, since they feel no necessity to incorporate them into their empire. There are also certain subject nations to whom they make grants from their treasury, because they are too proud to repudiate them in spite of their being a financial burden. They have garrisoned the frontiers of their Empire with a ring of powerful armies, and keep guard over this vast extent of land and sea as easily as though it were a modest farm.'¹

In this picture of a Hadrian or an Antoninus Pius dealing with the barbarians of his own entourage with that judicious mixture of benevolence and disdain which Ch'ien Lung employed in dealing with the ambassadors of the South Sea Barbarian King George III, we see Rome holding at bay a generation of men who are importing her to place her empire at their disposal as an instrument for giving satisfaction to a sense of unity which is demanding fulfilment in an outward political form. The Roman Emperor of Appian's day does not have to 'go out into the highways and hedges and compel them to come in, that' his 'house may be filled:'² so far from his being called upon to be a conqueror, his task is to act as the warden of a kingdom that 'suffereth violence, and the violent take it by force'³—in so far as the Emperor, in his wisdom, allows them to have their way.

In truth, neither the Roman Empire nor any other universal state could have either established itself in the first instance or maintained itself thereafter if it had not been led on to fortune upon a tide of desire for political unity which had mounted to its flood as a 'Time of Troubles' approached its climax.⁴ In Hellenic

quoted in the present chapter, p. 16, footnote 2, and at greater length in V. C (i) (d) 10, p. 142, below.

¹ Appian: *Romaica*, Prooemium, 7.

² Luke xiv. 23.

³ Matt. xi. 12.

⁴ This yearning to give political expression to an awakened consciousness of the unity of Mankind is not confined to the Dominant Minority and the Internal Proletariat who

history this longing—or, rather, the sense of relief at its belated satisfaction—breathes through the Latin poetry of the Augustan

find their satisfaction for it in becoming respectively the citizens and the subjects of a universal state: as Appian testifies, it also arises out of an analogous experience, and finds satisfaction in an analogous way, among the External Proletariat in the no-man's-land beyond the stationary artificial *limes* of a universal state which has not arrived at a 'natural frontier' (see V. C (i) (c) 3, vol. v, pp. 208-10, above).

In this case, as in the other, the consciousness of unity is awakened by a violent process of external unification on the political plane of life. We have seen that, in the course of the 'Time of Troubles' of a disintegrating civilization, the parochial states into which the society has articulated itself in its growth-stage destroy one another through an internecine warfare which ends in the establishment of one universal state by a sole surviving victor. In a similar way the incessant border-warfare, along the *limes* of an established universal state, between the garrisons on the one side and the outer barbarians on the other, results in the break-up of the primitive barbarian tribes and in their replacement by war-bands. These war-bands conform—on a miniature scale and with a barbarous crudity—to the pattern of the adjoining universal state to whose challenge they are a response (see V. C (ii) (a), pp. 230-3, below: one striking example of this, which has been noticed in V. C (i) (c) 3, vol. v, pp. 270-1, above, is the establishment of the steppe empire of the Hiongnu in answer to that of the Sinic universal state of the Prior Han); and one of the ways in which this conformity shows itself is the role which is played by such war-bands, as well as by universal states, in evoking a consciousness of unity out of an experience of *pammixia*. A war-band, like a universal state, is apt to express this consciousness in its style and title. For example, we may see an analogue of the Achaemenian 'Kingdom of the Lands' in the 'Pamphyli', who were one of the bands that descended upon the derelict domain of the Minoan World in the last wave of the post-Minoan Völkerwanderung, and an analogue of the Sinic 'All that is under Heaven' in the 'Alemanni' who broke through the Roman *limes* and ensconced themselves in a salient between the upper courses of the Rhine and the Danube during the bout of anarchy through which the Roman Empire passed in the third century of the Christian Era (see V. C (i) (c) 3, Annex I, vol. v, p. 593, above). Such names tell their own story; and the social change to which they testify is a replacement of the primitive bonds of kinship by a pan-barbarian comradeship—based on the personal loyalty of a *comitatus* to a war-lord—which is incompatible with the primitive sense of tribal particularism as well as with the complementary sense of solidarity within each tribe. (For this change see Chadwick, H. M.: *The Origins of the English Nation* (Cambridge 1907, University Press), pp. 162-4 and 175; eundem: *The Heroic Age* (Cambridge 1912, University Press), pp. 391 and 443; and the present Study, V. C (ii) (a), in the present volume, pp. 228-36, and especially pp. 231-2, below.) A classic case is that of the war-bands (*druzhinas*) of the Scandinavian barbarian 'successor-states' of the Khazar steppe empire in the Khazars' former sphere of influence in the Russian forests. Both the princes and their war-bands were entirely without 'stability' (in the monastic sense of an enduring attachment to a single community in a single place). The principalities ranked in a definite order of precedence; a prince had to follow a *cursus honorum* which kept him perpetually on the move from one principality to another of higher rank; and the war-bands trekked at their masters' heels. In the twelfth century, 'as before, the *druzhina* was a mixed company. In the tenth and eleventh centuries the Varangians, as we know, had been the predominant element in them. In the twelfth century alien elements also "join up". Besides native Slavs and Russified descendants of the Varangians we also find recruits of alien race from East and West, members of neighbouring communities, Turks, Berendeyans, Polovci, Khazars, even Jews, Ugrians, Liakhi, Lithuanians, and the Chuds' (Kliutschewskij, W. [Kluchevski, V.]: *Geschichte Russlands*, vol. i (Berlin 1925, Obelisk Verlag), pp. 197-8).

This passage from an old-fashioned tribalism to a new-fangled social sense which is individualistic in one aspect but universalistic in another is reflected in the Teutonic barbarians' 'heroic' poetry, in which 'nationalism in the narrower sense—i.e., in the interests of the poet's own nation or tribe—seems to be altogether wanting' (Chadwick, *The Heroic Age*, p. 34; cf. p. 335; Meyer, E.: *Geschichte des Altertums*, vol. ii, part (x), 2nd ed. (Stuttgart and Berlin 1928, Cotta), p. 295). The same Universalism is likewise characteristic of the 'heroic' poetry of the Russians (Chadwick, H. M. and N. K.: *The Growth of Literature*, vol. ii (Cambridge 1936, University Press), pp. 92 and 94) and the Achaeans; and it also displays itself—in this case in combination with Anthropomorphism—in the religion of the Teutons, the Achaeans, and the Aryas, who, all alike, worshipped a pantheon conceived in the image of a barbarian war-band with a war-lord at its head (see the present Study, I. C (i) (b), vol. i, pp. 95-100; II. D (vii), vol. ii, p. 316; II. D (vii), Annex V, vol. ii, pp. 434-7; and V. C (i) (c) 3, vol. v, pp. 230-3, above). 'The same gods were, to a large extent at least, recognized everywhere. Whether by

Age; and we children of the Western Society in the present generation are aware from our own experience how poignant this longing may be in an age when the unity of Mankind is being striven for unavailingly. In our day the universal state for which we yearn—the oecumenical commonwealth that will establish its peace from end to end of a Westernized and, by the same token, tormented world—has not yet made its epiphany even on the horizon; yet, in anticipation of its coming, its style and title—‘The Great Society’—has been coined by a twentieth-century English sociologist¹ as a Western equivalent for the Hellenic *Οἰκουμένη* and for the Sinic ‘All that is under Heaven’.

It is this great longing for Peace on Earth after the tribulation of a ‘Time of Troubles’ that has moved the subjects of the founders or preservers of the universal states to venerate them as Saviours of Society² or actually to worship them as gods incarnate.³ And even the historian’s colder judgement will single out, as the greatest of all men of action, those oecumenical rulers—a Cyrus, an Alexander, an Augustus—who have been touched with pity for the sufferings of their fellow men and, having caught the vision of the unity of Mankind, have devoted their personal genius and their political power to the noble enterprise of translating this dearly bought ideal into a humane reality.

Alexander’s vision of Homonoia or Concord⁴ never faded out of the Hellenic World so long as a vestige of Hellenism remained in existence; and the compelling spiritual power of his humanitarian gospel is impressive in view of the recalcitrance of his Macedonian companions towards his efforts to induce them to fraternize with their defeated Iranian antagonists, and the equally stubborn recalcitrance of the rest of the Greeks towards his ordinance that the ruling faction in every city-state should reopen the gates to their exiled opponents of the contrary party. All but a few of the

borrowing or by identification of cults they had ceased to be merely tribal deities. . . . Tribal ideas gave way to Universalism both in the cult of higher powers and in the conception of immortality’ (Chadwick: *The Heroic Age*, pp. 424 and 443). A parochial tribalism was likewise transcended in the abortive movements of resistance to an irresistible tide of European colonization that were set in motion among the North American Indians at different times between A.D. 1762 and A.D. 1886 by a series of barbarian prophets (see V. C (i) (c) 3, vol. v, pp. 328–32, above); and the subordination of an unusually obstinate tribal particularism to a new sense of Panarab brotherhood was the essence of the immense political achievement of the barbarian Prophet Muhammad in the Arabian hinterland of the Roman Empire.

⁴ The credit for having been the first to catch this vision in the Hellenic World is disputed between Alexander of Macedon and Zeno of Citium by their respective modern Western champions: W. W. Tarn (*Alexander the Great and the Unity of Mankind* (London 1933, Milford)) and J. Bidez (*La Cité du Monde et la Cité du Soleil chez les Stoïciens* (Paris 1932, Les Belles Lettres)). See now also Tarn: ‘Alexander, Cynics and Stoics’ in *American Journal of Philology*, vol. lx, 1, Whole Number 237 (Baltimore, January 1939, Johns Hopkins University Press).

Macedonian officers whom their royal leader had cajoled or dragooned into embarking with him on the pacific adventure of taking in marriage an Iranian bride might brutally repudiate their unwanted Oriental wives as soon as Alexander had been laid in his premature grave.¹ Yet, some three hundred years after Alexander's death, we find Caesar Augustus putting Alexander's head on his Roman signet-ring as an acknowledgement of the source from which he was seeking inspiration for his arduous work of bringing a tardy peace and unity to a Hellenic World which Alexander's successors had thrown back into disunion and discord;² and some two hundred years after Augustus's time, again, this Alexandrine tradition of humanitarianism still had power to move so coarse-grained and brutal a soul as Caracalla's³ to complete the process—which Julius Caesar had lavishly begun and Augustus cautiously continued—of conferring the Roman citizenship upon the subject majority in the population of the Roman Empire.⁴ Nor did Alexander's example merely influence the action of these later oecumenical rulers who sat in Alexander's seat and caught from that eminence Alexander's bird's-eye view of all his fellow men; the leaven also worked its way down through the variegated strata of a Hellenic Society which had now annexed the children of four submerged alien worlds to the Hellenic internal proletariat. It was Alexander's spirit that moved one Roman centurion at Capernaum to make his humble appeal to Jesus to heal his servant by simply speaking the word without coming under his roof,⁵ and that emboldened another Roman centurion at Caesarea to invite Peter to his house.⁶ It was Alexander's spirit, likewise, that inspired the Greeks who had come up to Jerusalem in order to worship at the feast to ask the disciples of Jesus whether their Master would grant them an audience;⁷ and we may believe that the same Alexandrine vision of the unity of Mankind was the human inspiration in the mind of Jesus himself⁸ when he broke out into

¹ Seleucus set an honourable but not a widely followed example in remaining faithful to Apame.

² Tarn, *op. cit.*, p. 18, citing Suetonius: *Augustus*, chap. 50. For the treachery of Alexander's successors towards Alexander's ideals see V. C. (ii) (b), pp. 289-90, below.

³ For Caracalla's role in Hellenic social history as a blatant example of the vulgarization of the Dominant Minority see V. C. (i) (d) 6 (α), vol. v, p. 455, above.

⁴ According to our literary authorities, Caracalla's *Constitutio Antoniniana* conferred the citizenship upon *all* inhabitants of the Empire who were still juridically *peregrini*. Mommsen disputed this and suggested that even Caracalla's extension of the franchise was perhaps limited to those inhabitants of the Empire who were already in possession of some local civic franchise. Since Mommsen's day a fragment of the text of the *Constitutio Antoniniana* itself has come to light in *Papyrus Giessen 40*, but the surviving text is so ambiguous, and the lacunae are susceptible of being filled by so many alternative and equally plausible conjectural restorations, that the discovery has not conclusively disposed of Mommsen's query. (See Jones, A. H. M.: 'Another Interpretation of the *Constitutio Antoniniana*' in *The Journal of Roman Studies*, vol. xxvi, part 2 (1936).)

⁵ Matt. viii. 5-13 = Luke vii. 1-10.

⁶ Acts x.

⁷ John xii. 20-2.

⁸ If Jesus's breaking of the bounds of Jewry in his intercourse with his fellow men

a paean of exultation upon learning of the Greeks' request,¹ and again when, in his encounters with the dissident woman of Samaria² and with the Hellenized woman of Phoenicia,³ he broke away from an inhuman Jewish tradition of non-intercourse with unbelievers.⁴

If we are convinced that Alexander's gospel of the unity of Mankind did indeed possess this power of creating concord between souls so far removed in time and creed and class from the Macedonian warrior-visionary, then we shall find ourselves impelled to search for the source from which this extraordinary power was derived; and, if we address our inquiry in the first instance to a humanist of the modern Western school,⁵ he will probably reply that the Brotherhood of Man is one of those fundamental truths which, once seen, are recognized, in the same flash, as being self-evident; and he will be likely to add that the duty and desire to serve Humanity require no sanctions outside themselves in any human heart that has become sensitively aware of its kinship with all its fellows. *Homo sum, humani nihil a me alienum puto.*⁶ The validity of the principle of Altruism is taken for granted by modern Western humanists of every sect. The Communist, for instance, believes, as devoutly as the Positivist,⁷ that Man's ultimate duty is owed to his fellow men in a Universe in which Humanity is monarch of all it surveys, because Man has no God above him;⁸ and yet we have seen reasons for believing that the dynamic elements in Communism—the springs of the action that has made Communism a force in contemporary human affairs—are derived, albeit unconsciously, from a trinity of theistic religions, if we are right in tracing back some of these elements to Christianity and others to Christianity's two forerunners, Judaism and Zoroastrianism.⁹ If we now return to our inquiry into the basis of the Human-

was indeed partly inspired by the spirit of Alexander, this is not to say that Jesus himself was ever conscious of acting under Alexander's influence, but simply that Alexander's spirit was 'in the air' of Palestine in Jesus's day.

ism of Alexander, shall we find the theistic vein that is latent in Marx's Humanism anticipated in Alexander's vision?

There was, we must allow, in Alexander's life one arresting experience on the ordinary human plane which might have been sufficient, in and by itself, to open Alexander's eyes to the intellectual falsity and the moral indefensibility of the current Hellenic dichotomy of Mankind into 'Hellenes' and 'Barbarians'; and that was his sensational discovery of the unexpected virtues of his defeated Iranian adversaries. In the hostile caricature which had been the convention in Hellas during the interval of 146 years by which Alexander's passage of the Hellespont was separated from Xerxes' unluckier crossing of the same straits in the opposite direction, the Persian grandees had been held up to odium as monsters of luxury, tyranny, cruelty, and cowardice; and now, when Xerxes' abortive aggression had been avenged at last up to the hilt by Alexander's victorious *riposte*, the Macedonian champion of Hellas learnt, through the intimate and illuminating intercourse of warfare, that these arch-barbarians were in reality men capable of showing a bravery in battle and a dignity in defeat which even a Spartan might envy.¹ The deepness of the impression which this unlooked-for discovery made upon Alexander's mind is notorious; but, if we go on to ask whether, in Alexander's opinion, this experience of his own, or others like it, would suffice in themselves to awaken in human souls a consciousness of the unity of Mankind and a will to act upon this great discovery, our evidence (scanty though it is) will inform us explicitly that the answer is in this case in the negative. It is recorded that at Opis, in Babylonia, Alexander once offered up a prayer that his Macedonians and his Persians might be united in *Homonoia*;² and Plutarch reports³ as one of Alexander's sayings:

'God is the common father of all men, but he makes the best ones peculiarly his own.'

If this 'logion' is authentic it tells us that Alexander's anthropology differed from that of Marx in the fundamental point of resting on an avowed theological foundation instead of professedly hanging in the air. It tells us that Alexander discovered the truth that the brotherhood of Man presupposes the fatherhood of God—a truth which involves the converse proposition that, if the divine father of the human family is ever left out of the reckoning, there is no possibility of forging any alternative bond of purely human texture which will avail by itself to hold Mankind together.

¹ See V. C (i) (c) 1, vol. v, pp. 51-2, above.

² For the significance of this prayer see Tarn, op. cit., p. 19.

³ Plutarch: *Life of Alexander*, chap. 27 (cited in Tarn, op. cit., pp. 25 and 41).

The only society that is capable of embracing the whole of Mankind is a superhuman *Civitas Dei*; and the conception of a society that embraces all Mankind and yet nothing but Mankind is an academic chimaera.

If Alexander was indeed the Prometheus who enriched the Hellenic World with a knowledge of this heavenly truth,¹ the care with which the precious revelation was handed down to later generations is impressively attested in the teachings of a Stoic philosopher who was born not much less than four hundred years after Alexander's death.

'Slave, wilt thou not bear with thine own brother, who has Zeus to his forefather and has been begotten like a son from the same sperms, and in the same emission from Heaven, as thyself? If the station in which thou hast been posted here below happens to be one that is somewhat superior to thy brother's, wilt thou have the face to take advantage of that in order to make thyself a tyrant? Wilt thou not remember what thou art thyself and who are these thy subjects—remember, that is to say, that they are thy kinsmen and thy brothers, both in the order of Nature and in their being of Zeus's lineage?'—'Yes, but I have rights of property over them, while they have none over me.'—'Do you perceive the objects upon which your eyes are set? They are set upon the Earth and upon the Pit and upon the wretched laws of a society of corpses, instead of being set upon the laws of the Gods. . . .'²

'What kind of love was it that Diogenes felt for his fellow men? It was the kind that befitted a sage who was the servant of Zeus—a love that was devoted to the creature's welfare yet was at the same time submissive to the Creator's will. In virtue of this, Diogenes alone among men had every land on Earth for his native country, without there being one single spot where he did not find himself at home. When he was taken captive, he felt no homesickness for Athens or for his Athenian friends and acquaintances. He became intimate with the pirates themselves, and did his best to reform them. And when he had been sold into slavery he led just the same life in Corinth afterwards as he had led in Athens before. Nor would he have behaved any differently if he had been packed off to Ultima Perrhaebia.'³

Epictetus's Diogenes has won his freedom of 'the Great Society' of the Hellenic *Οἰκουμένη* by taking the road from Man through God to Man which Paul lays down for his Colossians. In the philosopher's colder and more sophisticated way, Diogenes too, as Epictetus portrays him, has

'put off the old man with his deeds and . . . put on the new man which is renewed in knowledge after the image of him that created him—where there is neither Greek nor Jew, circumcision nor uncircumcision,

¹ For the mode of Western controversy over this question see p. 6, footnote 4, above.

² Epictetus: *Dissertationes*, Book I, chap. 13, §§ 3-5.

³ Ibid., Book III, chap. 24, §§ 64-6.

Barbarian, Scythian, bond nor free; but Christ is all, and in all,¹ [because Christ is God Incarnate, and] 'God that made the World and all things therein . . . hath made of one blood all nations of men for to dwell on all the face of the Earth, . . . that they should seek the Lord, if haply they might feel after him and find him—though he be not far from every one of us; for in him we live and move and have our being, as certain also of your own poets have said: "For we are also his offspring".'²

Thus we see a prophet of the internal proletariat of the Hellenic Society proclaiming in unison with a statesman and a philosopher of the dominant minority the truth that the unity of Mankind is a goal which men can attain by way of the common fatherhood of God and (Paul would add) through the new revelation of the common brotherhood of Christ, but not through any exclusively human endeavours in which God's leading part is left out of the reckoning. If it is true on the one hand that 'where two or three are gathered together in my name, there am I in the midst of them',³ it is equally true—as is signified in the legend of the Tower of Babel⁴—that, 'except the Lord build the house, their labour is but lost that build it; except the Lord keep the city, the watchman watcheth but in vain'.⁵ The common experience of the Hellenic 'Time of Troubles' taught this truth to Alexander the Greek and to Paul the Jew, to Epictetus the Hierapolitan bondsman⁶ and to Diogenes the freeman of the city of the *Οἰκουμένη*; but the Hellenic Society has not been singular either in passing through great tribulation or in learning this lesson by suffering this affliction. In the Egyptian World, more than a thousand years before Alexander made his pilgrimage to the oasis-oracle of Amon, the unity of Mankind was numbered among the mighty works of the divinity, manifested in the Sun-Disk, who was worshipped by Ikhnaton.

'The lands of Syria and Nubia and the land of Egypt—thou puttest every man in his place and thou suppliest their needs. . . . Thou art lord

¹ Col. iii. 9-11. In these words of Saint Paul there is perhaps an echo of some lines of Menander (fragment 533 in Koch's edition):

ὅς ἂν εὖ γεγονὼς ᾗ τῇ φύσει πρὸς τὰγαθά,
καὶν Αἰθίοψ ᾗ, μήτηρ, ἐστὶν εὐγενής.
Σκύθης τίς; ὀλεβρός· ὁ δ' Ἀναχαροῖς οὐ Σκύθης;

² Acts xvii. 24-8. The quotation τοῦ γὰρ καὶ γένος ἐσμέν is from the exordium of Aratus's *Phaenomena*, l. 5, which had been echoed in the Stoic philosopher-poet Cleanthes' *Hymn to Zeus*, l. 4: ἐκ σοῦ γὰρ γένος εἶσ' . . . or ἐκ σοῦ γὰρ γενόμεσθ' . . .

³ Matt. xviii. 20. This Christian 'logion' is presumably derived from a Jewish 'logion'—preserved in more than one passage of the Talmudic literature—which runs: 'Where two or three are gathered together to study the Torah, the Shekinah is in the midst of them.'

⁴ Gen. xi. 1-9.

⁵ Ps. cxvii. 1-2.

⁶ Epictetus appears to have been born at Hierapolis (the Carian or the Syrian?) and only to have settled at Nicopolis after having been expelled from Italy (see H. Schenkl's edition of the *Dissertationes* (Leipzig 1894, Teubner), p. iv).

of them all, who wearieth himself on their behalf; the lord of every land, who ariseth for them. . . . All far-off peoples—thou makest that whereon they live.¹

And in the Western World of the present generation a truth which has been strenuously combated by a school of Western humanists for the past five hundred years has at last been boldly and abruptly reaffirmed by a philosopher who is a Frenchman in culture and a Jew by origin.

In a book entitled *Les Deux Sources de la Morale et de la Religion*² the veteran metaphysician Monsieur Henri Bergson has expounded his ethics and his politics at an age of life at which the philosopher's intellect has received the tempering of the man's experience; and Bergson's central theme in this work of his old age is the thesis that there is no terrestrial road along which Man can make the transit from a primitive Ishmaelitish tribalism to an oecumenical concord of all Mankind. Between the tribe and Mankind there is a great gulf fixed, and on the terrestrial plane this chasm is utterly impassable, since the social bond which holds the tribe together is a solidarity for parochial self-defence against a world of human enemies beyond the tribal pale; and a complete removal of this external human pressure would threaten the tribe with dissolution by depriving it of the hostile environment on which it depends for its cohesion. The denizens of the deep sea, whose frames have been built for bearing the enormous pressure of the mass of water that weighs upon them at these formidable depths, are said to burst asunder, long before they reach the surface, if the deep-sea fisherman catches them in his toils and strives to drag them up to the air and light; and in much the same way a tribe of men—though it may be capable of expanding from the dimensions of a kaffir kraal to a British Empire embracing one-fifth of the living generation of Mankind and extending over a quarter of the land-surface of the Globe—is perhaps doomed *a priori* to fall to pieces, long before it comes within sight of attaining an oecumenical universality, at the point, wherever this may lie, where the centripetal outer forces that have been holding it together lose their preponderance over the centrifugal forces from within that are for ever pushing it to dissolve apart. If ever this critical point is reached, the human statesman who has dreamed the dream of elevating his tribe into an oecumenical society must find himself

¹ Ikhnaton's hymn to the Aton, as translated in Erman, A.: *The Literature of the Ancient Egyptians*, English translation (London 1927, Methuen), p. 290. In V. C (i) (d) 6 (δ), Annex, vol. v, p. 695, with footnote 2, above, it is suggested that Ikhnaton's proclamation of the unity of Mankind—in virtue of their common enjoyment of the ubiquitous beneficence of the Aton—was a disinterested expression of a genuine intuition and was not the political manoeuvre of a prince whose real concern was to unify a multi-national empire.

² Paris 1932, Alcan.

awakened to a harsh reality in which he is offered the cruel choice between falling back into tribalism and stumbling on into anarchy. On this showing, the attempt to make the transit to an oecumenical society from a parochial tribe is doomed *a priori* to failure so long as it is made on the terrestrial level; and the last word of Bergson's philosophy is a declaration that this transit—which Man must somehow make if he is not to perish from off the face of the Earth—can only be made across a bridge that vaults over an impassable terrestrial gulf by rising to the height of Heaven. The whole of Mankind can never dwell together in a brotherly unity¹ until men have learnt to exchange their intrinsically conflicting as well as parochial tribal loyalties for one common allegiance to a heavenly king.²

This is the final intuition of a modern Western philosopher who stands, in his ripe old age, at the apex of a pyramid of thought that is the cumulative product of the philosophical labours of five industrious centuries of Western mental 'output'; yet the truth which it has cost our philosophers all this time and toil to win by their own lights has been picked up casually by our anthropologists 'out of the mouth of babes and sucklings'.³ The all but annihilated rear-guard of a Primitive Man whom a sophisticated *Homo Occidentalis* alternately pities and abhors for his ignorance of his social solidarity with the main body of Mankind outside the tribal zariba, has never ceased to take for granted the solidarity between the tribe on its narrowly circumscribed terrestrial allotment and the tribal gods in a circumambient Universe;⁴ and, however parochial the 'savage's' horizon may be on the plane of sheerly human life on the surface of this planet, his soul still lives and moves in a spiritual environment with a superhuman dimension which the modern Western humanist has deliberately excluded from his reckoning. The humanist purposely concentrates all his attention and effort upon a purely human cross-section of life which he abstracts from the totality of his spiritual environment by a mental operation that is performed for the practical purpose of bringing human affairs under human control. Yet Reality cannot in truth be eluded by begging the question that is involved in the postulate that 'Man is the measure of all things';⁵ and therefore the unity of Mankind can never be established in fact except within a framework of the unity of the superhuman Whole of which

¹ Ps. cxxxiii. 1.

² This Bergsonian thesis is examined further in Part VII, below.

³ Ps. viii. 2.

⁴ This element in the *Weltanschauung* of Primitive Man has been touched upon by anticipation in IV. C (iii) (c) 2 (β), vol. iv, p. 351, above.

⁵ This saying, which is attributed to Protagoras, is alluded to by Plato in his *Theaetetus*, 183 B.

Humanity is a part. An oecumenical society must preserve or recapture those spiritual dimensions which the tribal societies possess as their birthright if the house with the broader terrestrial site is to stand as stalwartly as its terrestrially diminutive neighbour. However large its area on Earth, Man's universe cannot give Man's spirit room to breathe unless it also extends from Earth to Heaven; and our modern Western school of humanists have perhaps been peculiar, as well as perverse, in planning to reach Heaven¹ by raising a titanic Tower of Babel on terrestrial foundations in three dimensions—as though it were sheer physical distance, and not any difference in mode of spiritual being, that divided and distinguished Heaven from Earth. When we compare this grossly mundane plan of operations which has governed the outlook and behaviour of the Western Society in its Modern Age with the reactions of other civilizations to a comparable social experience, we shall become aware of a contrast. In the Sinic World, for example, the craving for unity that was evoked by a 'Time of Troubles' was never confined to the terrestrial plane.

'To the Chinese of this period the word One (unity, singleness, &c.) had an intensely emotional connotation, reflected equally in political theory and in Taoist metaphysics. And indeed the longing—or, more accurately, the psychological need—for a fixed standard of belief was profounder, more urgent and more insistent than the longing for governmental unity. In the long run Man cannot exist without an orthodoxy, without a fixed pattern of fundamental belief.'²

If this comprehensive Sinic way of pursuing the quest for unity may be taken as the norm,³ and our modern Western cult of an arbitrarily insulated Humanity may be written off as something exceptional or even pathological, then we should expect to see the practical unification of Mankind and the ideal unification of the Universe accomplished *pari passu* by a spiritual effort which would not cease to be one and indivisible because it manifested itself simultaneously in diverse fields. As a matter of fact, we have

¹ Gen. xi. 4.

² Waley, A.: *The Way and its Power* (London 1934, Allen & Unwin), Introduction, pp. 69-70.

³ There is, however, at least one modern Western scholar who claims for the camp of Humanism not only Confucius but all the Sinic philosophers with the possible exception of Mo-tse.

'Confucius eut, semble-t-il, l'idée . . . de faire reposer toute la discipline des mœurs sur un sentiment affiné de l'humanisme. . . . La conception confucienne du *jen* ou de l'homme accompli, et qui mérite seul le nom d'homme, s'inspire d'un sentiment de l'humanisme qui peut déplaire, mais qu'on n'a pas le droit de celer. . . . Seul, semble-t-il, lui paraissait bienfaisant et valable un art de la vie jaillissant des contacts amicaux entre hommes policés. . . . Sauf Mō tseu (s'il faut admettre que ce prédicateur croyait à sa rhétorique), il n'est point, dans l'antiquité, de sage chinois qui ait véritablement songé à fonder, sur des sanctions divines, la règle des mœurs. . . . La sagesse chinoise est une sagesse indépendante et tout humaine. Elle ne doit rien à l'idée de Dieu' (Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), pp. 473, 486, 489, and 588).

observed already¹ that when, after the breakdown of a civilization, a number of parochial communities are fused together into a universal state, the process of political unification is apt to be accompanied, on the religious plane of ritual and theology, by an incorporation of the diverse parochial divinities into a single pantheon which reflects, and is reflected in, the concomitant change in the order of human life on Earth.² As the internecine warfare between conflicting parochial states results in the supremacy of a single victor and in the subjugation of all the rest, so the parochial god of the victorious human community—an Amon-Re of Thebes or a Marduk-Bel of Babylon—becomes the high god of a pantheon into which the gods of the defeated human communities are marshalled in order that henceforth they may fetch and carry or stand and wait at the pleasure of their new master.

It will be seen, however, that the condition of human affairs which finds its superhuman reflexion in a pantheon of this kind is the situation immediately after the genesis of a universal state, and not the constitution into which a polity of that type eventually settles down in the course of the age that follows its establishment; for the ultimate constitution of a universal state is not a hierarchy which preserves its constituent parts intact and merely converts their former equality as sovereign independent states into a hegemony of one of them over the rest. A political structure which, on the morrow of its establishment, may have been accurately described as 'the Kingdom of the Lands' solidifies in the course of time into a unitary empire articulated into standardized provinces; and a corresponding process of concentration concurrently transforms the Pādishāh or King of Kings—in fact, if not in name—into a solitary autocrat who delegates his plenary authority to creatures of his own instead of simply keeping his foot upon the necks of kinglets whose forefathers had been his own forefathers' peers. In fact, in a fully seasoned universal state which, in maturing, has developed true to type, there are two salient features which dominate, between them, the entire social landscape. On the one hand there is a monarch whose task and title-deeds alike consist in keeping the peace among his subjects by the exercise of his sovereign will; and on the other hand there is the law which is the instrument for translating the monarch's will into action. And in a world of men that is governed on this plan the Universe as a

¹ In V. C (i) (d) 6 (8), vol. v, pp. 529-32, above.

² This morphological correspondence between the universal state and the pantheon that are constructed by the Dominant Minority at the close of the 'Time of Troubles' has its analogue, in the history of the External Proletariat, in the similar correspondence between the barbarian war-band and the barbarian pantheon of Olympus or Asgard (see I. C (i) (b), vol. i, pp. 96-7; II. D (vii), Annex V, vol. ii, pp. 436-7; and V. C (i) (c) 3, vol. v, pp. 230-3, above).

whole is likely to be conceived on a corresponding pattern. If the human ruler of a universal state is at once so powerful and so beneficent that the subjects whom he has delivered from the nightmare of a 'Time of Troubles' are easily persuaded to worship him in person as a god incarnate,¹ then, *a fortiori*, they will be prone to see in him a terrestrial likeness of a heavenly ruler who is likewise unique and omnipotent—a god who is no mere God of Gods like Marduk-Bel or Amon-Re, but who reigns alone as the One True God with mere angels for his ministers and with no other god in existence to share, even in a subordinate role, a divinity which would not be truly divine if it were not strictly indivisible. Again, the law in which the human emperor's will is translated into action is an irresistible and ubiquitous force which suggests, by analogy, the idea of an impersonal 'Law of Nature': a law which governs not only the regular alternations of night and day and winter and summer but also the more wayward movements of the winds and tides and the impenetrably mysterious distribution of joy and sorrow, good and evil, and reward and punishment on those deeper levels of human life where Caesar's writ ceases to run.²

This pair of concepts—a ubiquitous and irresistible law and a unique and omnipotent deity—will be found at the heart of almost every representation of the unity of the Universe that has ever taken shape in human minds in the social environment of a universal state;³ but a survey of cosmologies of this kind will show us that they tend to approximate to one or other of two distinct types.

¹ For this phenomenon of Caesar-worship in universal states see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 648–57, above.

² The limitations upon Caesar's power are pointed out by Epictetus in the sequel to the passage that has been quoted in this chapter on p. 3, above:

'Can Caesar also bring us peace from fever and from shipwreck, or from conflagration or earthquake or thunderbolt? Yes, and from love? Impossible. And from grief? Impossible. And from envy? A sheer impossibility in every one of these predicaments. But, unlike Caesar, the doctrine (λόγος) of the philosophers does promise to bring us peace from these troubles too' (Epictetus: *Dissertationes*, Book III, chap. 13, § 10).

This Stoic distinction between the two different kinds of peace has (as has been pointed out by Professor N. H. Baynes in *The Journal of Roman Studies*, vol. xxv, part (1), 1935, p. 85) a Christian counterpart in:

'Peace I leave with you; my peace I give unto you. Not as the World giveth give I unto you' (John xiv. 27).

For the context of the passage of Epictetus see V. C (i) (d) 10, p. 142, below.

³ The Sinic representation of the unity of the Universe which crystallized under the Ts'in and Han régimes must be declared, however, to be an exception to our rule if we are to follow the guidance of Monsieur Marcel Granet in his *La Pensée Chinoise* (Paris 1934, Renaissance du Livre). The formula in which this modern Western scholar sums up (in op. cit., p. 586) his own reading of 'l'esprit des mœurs chinoises' is 'Ni Dieu, ni Loi'; and he gives his grounds for this dictum in other passages of the same book.

'Ché Houang-ti [She Hwang-ti], quand il fonda l'Empire, pensa établir le règne de la Loi. Le régime n'a pas duré. Les Chinois l'ont honni, reprochant aux Légistes leur dureté, leur cruauté. Les Légistes étaient coupables, en effet, d'avoir cru à l'unique vertu de la discipline. . . . Ils ont eu le goût des jugements impartiaux, des évaluations objectives, des arguments concrets. Ces esprits positifs et déjà épris de rigueur scientifique n'ont obtenu qu'un succès fugitif. Les Sophistes n'ont pas réussi à faire accepter

There is one type in which the Law is exalted at the expense of God and another in which God is exalted at the expense of the Law. And we shall also find that the emphasis on the Law is characteristic of the philosophies of the Dominant Minority, while the religions of the Internal Proletariat incline to subordinate the majesty of the Law to the omnipotence of God.

This differentiation of outlook is not difficult to understand if we can imagine ourselves, by turns, in the position of each of the parties. The Achaemenian Emperor and the Persian grandees who were his ministers in the government of the Syriac universal state were acutely conscious of the potency of a Law which was not merely the engine of the Imperial administration but was also a force in itself—the Law of the Medes and Persians which altereth not¹ and which insists inexorably ‘that no decree nor statute which the King establisheth may be changed’,² though the King himself may labour till the going down of the Sun³ to revoke the royal decision that has passed—once made—out of the playground of personal caprice into the realm of the immutable. On the other hand the impotent and insignificant Jewish subjects of the Great King, who knew nothing of the *arcana imperii*,⁴ were vividly aware, and whole-heartedly grateful, when the Great King deigned to take notice of their plight and to speak the saving word. A Cyrus who delivered them from a Babylonish captivity⁵ and an Artaxerxes who intervened at the critical moment to avert the imminent miscarriage of the work of reconstruction that an Ezra or a Nehemiah was carrying out under the Great King’s patronage⁶—these were personalities whose power and will for good made an enduring impression upon the ‘folk-memory’ of the broken peoples over whom they had cast their beneficent aegis.

Such considerations may explain why it is that the mind of the

par les Chinois l'idée qu'il existât des termes contradictoires. De même, les Légistes n'ont pas réussi à accréditer la notion de règle constante et la conception de la Loi souveraine (pp. 470-1). . . .

‘Puisque tout dépend de congruences, tout est affaire de convenances. La Loi, l’abstrait, l’inconditionnel sont exclus—l’Univers est un—tant de la Société que de la Nature. . . . On tient à conserver à toutes les notions, même à celle de Nombre, même à celle de Destin, quelque chose de concret et d’indéterminé qui réserve une possibilité de jeu. Dans l’idée de règle, on ne veut guère voir que l’idée de modèle. La notion chinoise de l’Ordre exclut, sous tous ses aspects, l’idée de Loi’ (p. 590).

This Sinic refractoriness to the concept of Law has its complement in an imperviousness to the concept of God.

‘Les Chinois n’ont aucune tendance au spiritualisme. À peine trouve-t-on la trace, dans les croyances populaires, d’un animisme inconsistant. . . . L’incrédulité, chez tous les sages, est totale, bien plus souriante qu’agressive. . . . Les dieux . . . n’ont aucune transcendance. Trop engagés dans le concret, trop singuliers, ils manquent aussi de personnalité. Et chez aucun sage, en effet, aucune tendance au personnalisme ne se remarque, pas plus qu’au spiritualisme’ (p. 587).

⁴ Tacitus: *Annals*, Book II, chap. 36.

Internal Proletariat is apt to dwell upon the omnipotence of God and the mind of the Dominant Minority upon the supremacy of the Law. It must be repeated, however, that the distinction which we are here seeking to draw between two different types of cosmology is no more than a matter of emphasis, and that, in almost every cosmology which a disintegrating civilization brings to birth, both the two fundamental concepts—the concept of God and the concept of Law—are to be found not only coexisting but also interwoven with one another, whatever their respective proportions may be. If we examine some proletarian-born religion—say, Judaism or Islam—in which the personality of God is emphasized to a degree at which it seems to overshadow and overwhelm everything else in the Universe, we find nevertheless that the human worshipper is commanded to observe a rigid law with scrupulous exactitude as the form of human service which is most pleasing in the eyes of the Almighty. Conversely, if we follow out the history of Buddhism—one of the philosophies of the Dominant Minority that carried a belief in Law to the logical extreme of denying the existence of personality, either human or divine¹—we find this austere psychological discipline of Siddhārtha Gautama undergoing its extraordinary transformation into the ‘higher religion’ of the Mahāyāna in order to satisfy souls that cannot be content with a godless Universe by offering them objects of worship that are personal, immortal, and omnipotent divinities in everything but name.²

Having placed this reservation upon the distinction that we are seeking to establish, we may now survey, in succession, those representations of the unity of the Universe in which Law has been exalted at the expense of God, and those other representations in which God overshadows the Law which He promulgates.

In the systems in which ‘Law is king of all’³ we can watch the personality of God growing fainter as the Law that governs the Universe comes out into sharper focus.

In our own Western World, for example, within the last three hundred years, the Triune God of the Athanasian Creed has faded by stages, in an ever-increasing number of Western minds,⁴ as

¹ Sir S. Radhakrishnan, in *Gautama the Buddha* (London 1938, Milford), pp. 31–50, contends that Siddhārtha Gautama himself did not deny the existence either of God or of the Self, and that he conceived of *Nirvāna*, not as a negation of existence, but as ‘a different, deeper mode of life’ which ‘is peace and rest in the bosom of the Eternal’.

² For the metamorphosis of the Primitive Buddhism into the Mahāyāna see V. C (i) (c) 2, vol. v, pp. 133–6, above.

³ *Nóμος πάντων βασιλεύς*.—Herodotus, Book III, chap. 38, quoting Pindar.

⁴ See, for example, Mr. H. G. Wells’ account—quoted in V. C (i) (d) 1, vol. v, p. 381, footnote 3, above—of his own successful efforts, as a boy, to eliminate from his picture of the Universe the figure of God which his mother had taken care to implant in his mind.

Physical Science, in its hitherto uninterruptedly triumphal progress, has extended the frontiers of its intellectual empire over one field of existence after another—until at last, in our day, when Science is laying claim to the whole of the Spiritual as well as the Material Universe, we see God the Mathematician fading right out into God the Vacuum. This modern Western process of evicting God to make room for Law to reign in His stead was anticipated in the Babylonian World in the eighth century B.C. when the discovery of the periodicities in the motions of the stellar cosmos¹ inveigled the Chaldaean *mathematici*, in their enthusiasm for the new science of Astrology, into transferring their allegiance from Marduk-Bel to the Seven Planets; for these hitherto less honoured 'rulers of the heavenly spheres' were remote and inexorable powers by comparison with the old familiar tutelary deity of the Land of Shinar, whose votaries had always known where to find him and how to propitiate him, seeing that he was a god in human form with one foot firmly planted in the soil of Babylon and the other in the soil of Nippur.²

In the Indic World, again, when the Buddhist school of philosophy worked out to their extreme conclusions the logical consequences of the psychological law of *Karma*,³ the divinities of the Vedic Pantheon were the most signal victims of this aggressive system of 'totalitarian' spiritual determinism. These barbaric gods of a barbarian war-band were now made to pay dearly, in their unromantic middle age, for the all too human wantonness of a turbulent youth. They suffered the same fate as the Roman patricians when these discomfited aristocrats forfeited all that was politically valuable in their ancestral privileges without obtaining the right to vote in the *concilium plebis* or to offer themselves as candidates for the Tribunate. In a Buddhist Universe in which all consciousness and desire and purpose was reduced to a succession of atomic psychological states which by definition were incapable of coalescing into anything in the nature of a continuous or stable personality, the Gods were automatically reduced to the spiritual stature of human beings on a common level of nonentity. In such a Universe, what serious difference could it make whether the fly

¹ See V. C (i) (c) 1, vol. v, pp. 56-7, above.

² For the manufacture of Marduk-Bel through an identification of the god of Babylon with the lord god of Nippur see V. C (i) (d) 6 (8), vol. v, p. 529, above.

³ See V. C (i) (d) 4, vol. v, pp. 427-9, above. The law under which *Karma* operates is itself conceived of as *Rta* or as *Dharma*. 'All things and beings are under the power of Law. They follow a certain course prescribed for them. . . . *Rta*, the moral order, is not the creation of a god. It is itself divine and independent of the Gods. . . . *Dharma* is the immanent order. It denotes the Law of Nature, the chain of causation. . . . "Who is, venerable sir, the King of Kings?"—"Dharma is the King of Kings" (Radhakrishnan, Sir S.: *Gautama the Buddha* (London 1938, Milford), pp. 36-7, quoting the *Anguttara-Nikāya*, sutra 3).

on the wheel was a human gnat or a divine bluebottle? And what could it matter whether the small deer scampering through the aisles of the towering temple were mannikin mice or godling rats? Yet in their practical treatment of this wretched rabble of the self-enslaved bondsmen of Desire—this motley crowd in which men and gods were tumbling over each other pell-mell under the sage's coldly contemptuous eye—the Buddhist philosophers did still take the trouble to differentiate between the two species in one way that was wholly to the disadvantage of Man's superhuman companion in insignificance. The mouse-like human being was eligible, *ex officio humanitatis*, for admission to the only career that was worth following in a world of suffering and illusion; and from this strait way of release the rat-like god was excluded *a priori, ex officio divinitatis*. Any human being might become a Buddhist monk or nun, if only he or she could stand the ascetic ordeal; and, for this renunciation of the pleasures of *l'homme moyen sensuel*, the compensation that was offered was enormous. Even the subdued philosophy of Primitive Buddhism held out to the steadfast arhat the prospect of ultimately attaining for himself (or, strictly speaking, for his own tangled spillikin-pile of psychological states) a release from the Wheel of Existence and an entry into the oblivion of *Nirvāna*; and the flamboyant religion of the Mahāyāna, which was the Buddhist philosophy's changeling child, outbid its foster mother by bringing within the reach of any one of its human children the nobler and more inspiring aim of becoming a Bodhisattva or candidate for the sublime role of Buddhahood. Thus Buddhism, in both its philosophical and its religious presentation, did offer Man, at a price, a way out of the *impasse* in which he found himself entrapped on the Buddhist map of the Universe. On the Gods, however, the Hīnayāna and the Mahāyāna unanimously closed the doors of mercy; for 'the Gods are laymen'.¹

In the Hellenic World the gods of Olympus fared better than they deserved if their deserts are to be measured by the punishment that was meted out by a Buddhist justice to their Vedic cousins; for, when the Hellenic school of philosophers came to conceive of the Universe as a 'Great Society' of supra-terrestrial dimensions whose members' relations with one another were

¹ Thomas, E. J.: *The History of Buddhist Thought* (London 1933, Kegan Paul), p. 217. This laicity of the Gods was taken so much in earnest that in a Mahayanian sutra a chapter in which the Mahayanian Buddhist doctrine is expounded in exoteric terms that can be understood of the people is formally addressed to the Gods, as a hint that it is an *œuvre de vulgarisation* (ibid., loc. cit.). The Buddha's own view seems to have been that 'the Gods are merely angels who may be willing to help good Buddhists, but are in no wise guides to Religion, since they need instruction themselves' (Eliot, Sir Ch.: *Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. i, p. xxii).

regulated by Law and inspired by Homonoia or Concord,¹ they wrote into the constitution of this *Cosmopolis* the principle of equality before the Law which was the constitutional palladium of the best conducted terrestrial Hellenic city-states. In this Hellenic philosophers' Universe the Gods were at any rate no worse off than their human fellow citizens, even if they no longer enjoyed those traditional privileges which they had never earned and had often abused. And Zeus, who had started life as the disreputable war-lord of the Olympian war-band, was now morally reclaimed and handsomely pensioned off by being elected to the Honorary Presidency of the *Cosmopolis* with a status not unlike that of some latter-day Western constitutional monarch who 'reigns but does not govern'—a king who meekly countersigns the decrees of Fate² and obligingly lends his name to the operations of Nature.³

Our survey has now perhaps made it apparent that the Law which eclipses the Godhead may present itself in a variety of modes. It is a mathematical law that has enslaved the Babylonian astrologer and the modern Western man of science; a psychological law that has captivated the Buddhist ascetic; and a social law that has won the allegiance of the Hellenic philosopher. If we pass next to the Sinic World, where the concept of Law has not found favour, we shall find the Godhead being eclipsed here again by an Order⁴ which in the Sinic *Weltanschauung* presents itself as

¹ For this Hellenic conception of the Universe as a society see further V. C (i) (d) 7, Annex, below.

² Zeus is explicitly coupled with Fate in the famous verses of the Stoic philosopher Cleanthes which have been quoted in Part III. A, vol. iii, p. 47, footnote 1, and again in V. C (i) (d) 4, vol. v, p. 421, above.

³ The brutal truth was that the only way of making Zeus respectable was to emasculate him; and this *ultima ratio* was eventually applied, in desperation, by the god's philosopher-physicians, who found their patient's lascivious propensities too difficult to cope with by any less drastic means, even for such skilful practitioners as they were. Yet this Stoic solution of the problem of Zeus was a sheer counsel of despair; and Hellenic souls did not resign themselves to it until the Hellenic Civilization was far gone in its decline. During the century immediately preceding the breakdown of 431 B.C., when the noblest souls in Hellas were being inspired by a spiritual yearning which was not yet divorced from hope, the Athenian poet Aeschylus tried to convert Zeus into the One True God of a 'higher religion'.

Zeus! Zeus, Whate'er He be,
If this name He love to hear
This He shall be called of me.
Searching earth and sea and air
Refuge nowhere can I find
Save Him only, if my mind
Will cast off before it die
The burden of this vanity.

(Aeschylus: *Agamemnon*, ll. 160-7, Gilbert Murray's translation.)

Zeus, however, showed no inclination at all to dance to Aeschylus's piping; and the sublime poet's attempt to enlist the *ci-devant* captain of the Olympian troop in the cause of providing bread, instead of a stone, for hungry Hellenic souls was an even greater failure than his disreputable fellow countryman Onomacritus's attempt to manufacture a higher religion *de toutes pièces* (see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 697-8, above).

⁴ See the quotations from Granet on p. 16, footnote 3, above.

a kind of magical congruence or sympathy between the behaviour of Man and that of his environment.

While the action of the environment upon Man is recognized, and manipulated, in the Sinic art of geomancy, the converse action of Man upon the environment is controlled and directed by means of a ritual and an etiquette which are as elaborate and as momentous as the structure of the Universe which they mirror and at the same time modify.

'L'homme et la Nature ne forment pas deux règnes séparés, mais une *société* unique. Tel est le principe des diverses techniques qui réglementent les attitudes humaines. C'est grâce à une participation active des humains et par l'effet d'une sorte de *discipline civilisatrice* que se réalise l'Ordre universel. À la place d'une *Science* ayant pour objet la connaissance du Monde, les Chinois ont conçu une *Étiquette* de la vie qu'ils supposent assez efficace pour instaurer un Ordre total.'¹

The Sinic way of conceiving Time and Space has furnished Sinic intelligences with

'les cadres d'une sorte d'art total: appuyé sur un savoir qui nous semble tout scolastique, cet art tend à réaliser, par le simple emploi d'emblèmes efficaces, un aménagement du Monde qui s'inspire de l'aménagement de la Société. . . Précisons en disant que les sectes ou écoles se sont toutes proposé de réaliser un *aménagement* de la vie et des activités humaines prises dans leur *totalité*—entendez: dans la totalité de leurs prolongements, non seulement sociaux, mais cosmiques. Chaque maître professe une sagesse qui dépasse l'ordre moral et même l'ordre politique.'²

And, on the same principle,

'le Total, *Yi*, l'Entier, c'est le pouvoir universel d'animation qui appartient au Chef, Homme Unique. Toute la conception chinoise des Nombres (comme . . . la conception du Yin et du Yang³ et comme . . . la conception de Tao⁴) sort de représentations sociales, dont elle n'a aucunement cherché à s'abstraire. . . L'ordre de l'Univers n'est point distingué de l'ordre de la Civilisation.'⁵

The human master of the ceremonies who makes the World go round is the monarch of the Sinic universal state;⁶ and, in virtue of the superhuman scope of his function, the Emperor was offi-

¹ Granet, *op. cit.*, p. 24.

⁴ See the present Study, III. C (i) (c), vol. iii, p. 187, and V. C (i) (d) 4, vol. v, pp. 416-17, above.—A.J.T.

⁵ Granet, *op. cit.*, pp. 298 and 389.

⁶ This Sinic conception of a magical order of the Universe with the magician himself for its hub is manifestly much less far removed from the *Weltanschauung* of Primitive Man than are the Hellenic and Indic and Babylonian and Western conceptions of Cosmic Law, analogous to Human Law, which we have examined above; and accordingly we shall not be surprised to find Sinic notions foreshadowed in our records of less highly sophisticated human readings of the relation between Man and his environment. For example, the following two passages in the Homeric Epic, which catch a Western reader's attention because they are so startlingly out of gear with the order of the Universe as it presents itself to Western intelligences, would be so immediately and

cially styled the Son of Heaven; yet this Heaven who, in the Sinic Society, was the adoptive father of the magician-in-chief, was as pale as the sky on a frosty winter day in Northern China.

'Création savante de la mythologie politique, le Souverain d'En-haut n'a qu'une existence littéraire. Ce patron dynastique, chanté par les poètes de la cour royale, n'a jamais dû jouir d'un grand crédit auprès des "petites gens", ainsi que semble le prouver l'échec de la propagande théocratique de Mō tseu [Mo-tse]. Confuciens ou Taoïstes ne lui accordent aucune considération. Pour eux, les seuls êtres sacrés, ce sont les Saints ou les Sages.'¹

Indeed, this celestial stalking-horse of the human manipulator of the Sinic Universe had so faint a personality that, in the affiliated Far Eastern Society at the turn of the seventeenth and eighteenth centuries of the Christian Era, the Jesuit missionaries in China raised a storm when—in their eagerness to translate the doctrines of Christianity into terms that would be familiar and agreeable to their prospective converts²—they employed the Chinese word for Heaven, *T'ien*, to render their Latin word *Deus*. In A.D. 1693 the Papal Vicar-General of the Chinese province of Fukien, Bishop Maigrot, issued an edict prescribing that *Deus* must henceforth be rendered in Chinese no longer by the single word *T'ien* (Heaven)

completely intelligible to a Far Eastern reader that he might be tempted to indulge in the fancy that the Hellenic poet was here taking a leaf out of the Sinic classics.

ἡ γὰρ σευ κλέος οὐρανὸν εὐρὺν ἰκάνει
ὥς τέ τευ ἡ βασιλῆος ἀμύμονος, ὃς τε θεοῦδῃς
ἀνδράσιν ἐν πολλοῖσι καὶ ἰφθίμοισιν ἀνάσσει
εὐδικίας ἀνέχῃσι, φέρῃσι τε γαῖα μέλαινα
πυρρὸς καὶ κριθάς, βριθοὶ τε δένδρεα καρπῶ,
τίκτῃ τ' ἔμπεδα μῆλα, θάλασσά τε παρέχῃ ἰχθῦς
ἐξ εὐηγεσίης, ἀρετῶσι δὲ λαοὶ ὑπ' αὐτοῦ.

Odyssey, Book XIX, ll. 108-114.

ὥς δ' ὑπὸ λαίλαπι πᾶσα κελαυνή βέβριθε χθὼν
ἡματ' ὀπωρινῶν, ὅτε λαβρότατον χέει ὕδωρ
Ζεὺς, ὅτε δὴ ῥ' ἀνδρεσσὶ κοτεσσάμενος χαλεπήνῃ,
οἳ βίῃ εἰν ἀγορῇ σκολιὰς κρίνωσι θέμιστας,
ἐκ δὲ δίκην ἐλάσσει, θεῶν ὅπιν οὐκ ἀλέγοντες·
τῶν δὲ τε πάντες μὲν ποταμοὶ πληθῶναι ῥέοντες,
πολλὰς δὲ κλιτὺς τότ' ἀποτμήγουσι χαράδραι,
ἐς δ' ἄλλα πορφυρέην μεγάλη στενάχουσι ῥέουσαι
ἐξ ὀρέων ἐπὶ κάρ, μινύθει δὲ τε ἔργ' ἀνθρώπων·
ὥς ἵπποι Τρωαὶ μεγάλα στενάχοντο θέουσαι.

Iliad, Book XVI, ll. 384-93.

Cf. Hesiod: *Works and Days*, ll. 213-47, and Euripides: *Medea*, ll. 410-13.

¹ Granet, op. cit., p. 587. It will be seen that the Sinic philosophers were of one mind with their Indic *confrères* in assigning a higher rank in the hierarchy of Existence to a disciplined human being than to a volatile divinity. (For the Buddhist sages' attitude towards the gods of the Vedic Pantheon see pp. 19-20, above.)

² For the parallel between the abortive attempt of the Jesuits to facilitate the conversion of the Far Eastern World to Christianity, by transposing the Christian religion into terms of the Sinic philosophy, and the successful restatement of Christianity in terms of the Hellenic philosophy by the Alexandrian Fathers of the Church see V. C (i) (c) 4, vol. v, pp. 365-7, and V. C (i) (d) 6 (δ), vol. v, p. 532, above.

but by the phrase *T'ien Chu* (the Lord of Heaven);¹ in 1704 Bishop Maigrot's edict was confirmed by a decree of Pope Clement XI;² and the prospects of Catholicism in China were compromised—as it proved, beyond rehabilitation—when, in December 1706, Bishop Maigrot was summoned into the Emperor K'ang Hsi's presence and was dismissed into banishment for his outrageous presumption in venturing to dispute with the Son of Heaven himself on the meaning of the Chinese word *T'ien*, although he was convicted by the Emperor, in a personal colloquy, of being quite unversed in the Sinic philosophy and even ignorant of the Chinese language.³

This unhappy controversy might never have arisen if, in the Sinic World some two thousand years before the day of the Manchu Emperor K'ang Hsi and the French Bishop Maigrot, an enrichment of the Sinic conception of the magical order of the Universe had not brought with it a proportionate impoverishment of the Sinic conception of the Godhead. For the *T'ien* whose personality was so faint that a Papal Vicar-General was unwilling to recognize in him a counterpart of the Christian *Deus* (notwithstanding the willingness of the Son of Heaven to wield his immense authority under an alleged mandate from this nebulous power) was an abstraction from an earlier *Shangti* ('Supreme Ancestor')⁴ whose claim to have been a personal god would appear to be less open to doubt.⁵

If we now turn our attention again for a moment to the Hellenic World, and re-examine the Neoplatonic *Weltanschauung*, we may be struck by its similarity to the Sinic *Weltanschauung* which we have just been considering; and we shall notice that, although this Neoplatonic conception of the Universe, unlike its Sinic counterpart, was abortive, it did nevertheless have the effect, even in

¹ Jenkins, R. C.: *The Jesuits in China* (London 1894, Nutt), p. 25.

² *Ibid.*, p. 33.

³ *Ibid.*, pp. 28, 91, and 110-112.

⁴ 'Supreme Ancestor' is the rendering of the term *Shangti* that is given in Fitzgerald, C. P.: *China, a Short Cultural History* (London 1935, Cresset Press), p. 36. The fuller title *Hao-t'en Shangti* is analysed in Maspéro, H.: *La Chine Antique* (Paris 1927, Boccard), p. 162, footnote 1, as follows:

'La traduction de cette expression doit être considérée comme très approximative, car son sens exact n'est en réalité pas connu. La signification de presque tous les termes est douteuse: celle de *hao* paraît bien avoir été perdue dès le temps des Han. . . . *Chang* [Anglicé 'Shang'] peut signifier en haut, au propre, ou suprême, au figuré. Même les mots *t'ien* et *ti* sont loin d'être simples: étant donné l'antiquité de l'expression, le sens de *t'ien* est douteux; on a remarqué depuis longtemps la forme humaine donnée anciennement au caractère qui sert à écrire ce mot, ce qui semble indiquer une conception anthropomorphe du ciel; et le mot correspondant des langues thaï, *t'en*, désigne les dieux célestes, tandis que le ciel physique, le firmament, est désigné par le mot *fa*. Quant au mot *ti*, il paraît être au propre une désignation des dieux célestes, et ses sens usuels (titre rituel d'un empereur défunt, et, en général, empereur) n'en sont que des dérivations.'

⁵ In this matter of degree of personality the Sinic *Shangti* perhaps stands to the Sinic *T'ien* as the Indic *Varuna* stands to the Hellenic *Uranus*.

embryo, of taking the colour out of the Solar divinity with the worship of whom Neoplatonism was associated. During the time when—in and after the bout of anarchy into which the Hellenic Society fell in the third century of the Christian Era—this last creative work of Hellenic minds was assuming the systematic shape which it wears in the fourth-century tract *De Diis et Mundo*,¹ the highly individual personalities and sharply distinctive visual forms of an Apollo and a Mithras were fading into the abstraction of a Sol Invictus,² and Aurelian's abstract Sol was paling in his turn into Julian's wintry Helios—a shadow-king of the Universe who, in Julian's constitution of the Cosmic Commonwealth, was relegated to the honorary presidency that had been assigned to Zeus by Zeno³ and Cleanthes.

The substitution of Julian's Helios and Aurelian's Sol Invictus for a Mithras and an Apollo in the penultimate chapter of Hellenic history has an exact parallel in Ikhnaton's attempt to substitute the new-fangled worship of an intentionally abstract Sun-Disk for the historic worship of a Protean Amon-Re;⁴ and we may speculate whether, if the Egyptiac emperor-prophet's work had not died with him, it might not have resulted in a radical revision of the whole of the Egyptiac *Weltanschauung* on lines which would have exalted the conception of Law at the expense of the conception of the Godhead.⁵

Andean history affords another instance in which the abrupt and violent intervention of an external force—in this case, the Spanish conquest—may have anticipated the working out of the ultimate consequences of the deliberate substitution of a relatively faint and tenuous representation of the One True God for a relatively clear and concrete one. We have already observed⁶ that the organization of an Egyptiac Pantheon, under the presidency of Amon-Re, on the initiative of the Pharaoh Thothmes III, has an analogue in the Inca Pachacutec's organization of an Andean Pantheon under the presidency of the Sun-God of Corichanca; but there is a further

¹ This illuminating document can now be studied in the admirable edition by Nock, A. D.: *Sallustius 'Concerning the Gods and the Universe'*, edited with Prolegomena and Translation (Cambridge 1926, University Press).

² For Sol Invictus see V. C (i) (c) 2, vol. v, p. 82, footnote 4, and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 649-50 and 691-4, above.

³ There is a touch of irony in the fact that the Hellenized Syriac philosopher who reduced the Olympian war-lord to a dignified state of impotence on the pretext of paying him honour was called, in Greek, by a name which engaged him to approach Zeus in the spirit of a devotee rather than in that of a disciplinarian.

⁴ For Ikhnaton's fiasco see I. C (ii), vol. i, pp. 145-6, and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 695-6, above.

⁵ In the opinion of Breasted, J. H.: *The Development of Religion and Thought in Ancient Egypt* (London 1912, Hodder & Stoughton), p. 332, 'it is clear that' Ikhnaton 'was projecting a world religion'.

⁶ In V. C (i) (d) 6 (δ), vol. v, pp. 530-2, above. See also V. C (i) (d) 6 (δ), Annex, vol. v, pp. 652-4, above.

analogy between the histories of the Andean and Egyptian societies on the religious plane to which we have not yet paid attention. If the Andean World had its Thothmes III in the person of the Inca Pachacutec, it also had its Ikhnaton in the person of Pachacutec's immediate predecessor the Inca Viracocha;¹ for this emperor took up, and commended to his subjects, the worship of a creator-god² who was the namesake of his Imperial devotee.³ The Andean religious innovator, however, was wiser in his generation than his Egyptian counterpart.

In his zeal for his own conception of the One True God⁴ Ikhn-

¹ Viracocha *imperabat circa* A.D. 1347-1400; Pachacutec *imperabat circa* A.D. 1400-48.

² For this Andean creator-god see Means, P. A.: *Ancient Civilizations of the Andes* (New York 1931, Scribner), pp. 422-40; Cunow, H.: *Geschichte und Kultur des Inka-reiches* (Amsterdam 1937, Elsevier), pp. 175-85. This divinity was known on the Plateau by the name of Viracocha (Means, op. cit., p. 119) and on the Coast by the name of Pachacamec (Means, op. cit., pp. 184-5), and (according to Cunow, op. cit., p. 179) the two names mean respectively 'Earth Creator' and 'World Animator'; but these two general names probably replaced a host of previous local names, since they are both of them taken from the Quichua language (Means, op. cit., pp. 422-3), which was the *lingua franca* of the Incaic Empire (see V. C (i) (d) 6 (γ), vol. v, pp. 523-4, above). Means (in op. cit., pp. 424-5) brings forward reasons for believing that this Viracocha-Pachacamec was indigenous on the Plateau; that he was originally a sky-god; and that his worship can be traced at least as far back as a period in the growth-stage of Andean history, *circa* A.D. 600-900, which is known among the archaeologists as Tiahuanaco II. This was a period in which, as in the time of the Incaic Empire, there was an active cultural intercourse between the Plateau and the Coast.

³ In this matter of names the Inca Viracocha's adoption of the name of the sky-god of Tiahuanaco is analogous to the gesture which the Pharaoh Amenhotep IV made when he took to calling himself Ikhnaton ('Aton is satisfied') in preference to his proper name Amenhotep ('Amon is at rest')—with, however, the significant difference that the Inca missionary of a new religion did not go out of his way to insult the religion of his fathers. An exact parallel to the Inca Viracocha's identification of himself with a god to whom he was peculiarly devoted is to be found in the assumption of the name Elagabalus by the Roman Emperor Marcus Aurelius Antoninus *alias* Varius Avitus Bassianus (see V. C (i) (c) 2, vol. v, p. 82, footnote 4, and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 685-8, above).

⁴ It may be noted in passing that the Aton, like Viracocha (Cunow, op. cit., pp. 179 and 183-4), was adored by his votaries as the creator and sustainer of the Universe; and the likeness between the Pharaoh's and the Inca's respective conceptions of God—at any rate in this aspect of the divine activity—may be illustrated by a comparison between the following extracts from two hymns: the hymn to the Aton which has been recovered by our modern Western archaeologists from the debris of Ikhnaton's Counter-Thebes at Tell-el-Amarna, and of which the text may be read in Erman, A.: *The Literature of the Ancient Egyptians*, English translation (London 1927, Methuen), pp. 288-91; and a hymn to Viracocha which is translated by Means, op. cit., p. 438, from sources described on p. 477, footnote 27.

The Egyptian hymn runs:

'Beautiful is thine appearing in the horizon of Heaven, thou living Sun, the first who lived. . . .

'Thou who createst (male children?) in women, and makest seed in men! Thou who maintainest the son in the womb of his mother, and soothest him so that he weepeth not—thou nurse in the womb. Who giveth breath in order to keep alive all that he hath made.'

The Andean hymn runs:

'O conquering Viracocha!

Ever-present Viracocha!

Thou who art without equal upon the Earth!

Thou who art from the beginnings of the World until its end!

Thou gavest life and valour to men, saying:

"Let this be a man."

And to woman, saying;

"Let this be a woman."

Thou madest them and gavest them being.

aton tilted against an established religion which by his day was virtually impregnable against attack owing to the consolidation of all its forces, human and divine, into a single hierarchy and a single pantheon by the act of Ikhnaton's own predecessor and ancestor Thothmes III a hundred years before.¹ The Inca Viracocha would not have had to reckon with so formidable a resistance if he had attempted, in Ikhnaton's fashion, to take the fortress of the established religion by assault; for in the Andean World the equivalent of the work of Thothmes III was not carried out until after Viracocha had been succeeded by Pachacutec on the throne of the Incaic Empire. Nevertheless the Inca Viracocha, in his activities on behalf of the god whose name he bore, was careful not to embroil himself with the Sun-God of Corichanca who was the ancestral patron of the Incaic Dynasty. And accordingly, when the Inca Pachacutec set himself to translate his predecessor's ideas into practice, he was able to promote the respective worships of the Creator-God and the Sun-God simultaneously and side by side—in contrast to what happened in the Egyptian World, where Ikhnaton's tactics not only drove Aton and Amon into conflict with one another, but turned their quarrel into a fight to the death.

By contrast, the Inca Pachacutec adroitly preserved the peace between the Creator-God Viracocha and the Corichancan Sun-God by insisting upon the diversity of their natures, spheres, and roles. At his Pan-Andean synod of priests he waited till he had obtained the assembly's consent to the organization of a pantheon of the historic local divinities, with the Corichancan Sun-God at their head, before he made, on his personal initiative, the more surprising, and perhaps also more contentious, suggestion that, side by side with this consolidation of all the other existing worships of the Andean World, a separate cult of Viracocha the Creator should be instituted for the benefit of the spiritual *élite*.² Possibly the consent of the synod to this second of the Inca's two proposals, as well as to the first of them, was the more readily accorded because Pachacutec simultaneously proposed a differentiation in the respective material provisions that were to be made for the service of the Corichancan President of the Pantheon and for that of his creator-colleague. While the Corichancan Sun-God was endowed with estates and revenues in every province and parish of 'the Land of the Four Quarters', as was meet and right for a divinity who was the heavenly patron and counterpart of the Sapa Inca himself, the etherial Viracocha needed no special

¹ Thothmes III *imperabat solus circa 1480-1450 B.C.*; Ikhnaton *imperabat circa 1370-1352 B.C.*

² Means, *op. cit.*, pp. 427-8; Markham, Sir C.: *The Incas of Peru* (London 1910, Smith Elder), pp. 97-8.

endowments or memorials in a world that must everywhere and always bear witness to its Creator's power and glory by the sheer fact of its own existence. In the whole Incaic Empire no more than two temples dedicated to Viracocha are vouched for by the surviving records of Andean history.¹

Supposing that the wayward goddess Fortune had permitted the Incaic Empire to live out the full term of life of a universal state, instead of bringing Pizarro from the farther side of the Atlantic to make havoc of Pachacutec's work within less than a hundred years, we may speculate whether the paternal, authoritarian, collectivist régime which Pachacutec had brought to perfection would have come, in course of time, to be reflected in some representation of the Universe as a commonwealth governed, *more Hellenico*, by a social law, but with a constitution of the Spartan rather than of the Athenian pattern. If we may allow our imagination to picture the development of an Andean *Weltanschauung* on such lines as these, then perhaps—on the analogy of what happened to Zeus—we may also imagine the *ci-devant* sky-god Viracocha being relegated to an Honorary Presidency of the Cosmic Phalanstery.²

We have now to consider those other representations of the constitution of the Universe in which its unity presents itself as the work of an omnipresent and omnipotent Godhead, while the Law which can be discerned in the Universe's structure and movement and life is regarded as being a manifestation of God's will, instead of being thought of as a sovereign unifying force which regulates the actions of gods and men alike if it leaves any place at all in the picture for anything that could be counted as divine.

We have observed already³ that this concept of a unity of all

¹ Means, *op. cit.*, pp. 428-9.

² There is, of course, the alternative possibility that Viracocha—unlike Zeus—might have risen to the occasion of the spiritual crisis under stress of which he was suddenly called upon by his worshippers to play a greater role than that for which he had been previously cast. We have already quoted, on page 21, footnote 3, the famous lines of Aeschylus in which the Hellenic poet expresses his yearning for an epiphany of Zeus in which his worshippers might be able to discern the lineaments of the One True God. This passage of Greek poetry has a remarkable Quichuan parallel in the following passages from a hymn to Viracocha which is translated by Means, *op. cit.*, pp. 437-8, from sources described on p. 447, footnote 26:

'Viracocha, Lord of the Universe!
Whether male or female. . .
Where art Thou?
Would that Thou wert not hidden from this son of Thine!

Creator of the World,
Creator of Man,
Great among my ancestors,
Before Thee
My eyes fail me,
Though I long to see thee.'

³ On pp. 15-18, above.

things through God, as well as the alternative concept of a unity of all things through Law, is conceived by human minds through an analogy from the constitution which a human universal state inclines to assume as, after its foundation, it gradually crystallizes into its final shape. In this process of crystallization we have seen that the human ruler of the universal state, who at the outset is literally a King of Kings, eliminates the client princes who were once his peers and thereby transforms his own constitutional status from a suzerainty to a monarchy in the literal sense of that word. If we now examine what happens simultaneously to the gods of the diverse peoples and lands which the universal state has absorbed into its own body politic, we shall find that there is an analogous change in the reciprocal relations of these objects of human worship. In the place of a pantheon in which a high god exercises a suzerainty over a community of other gods who were once his peers, and who have not lost their divinity in losing their independence, we see emerging a single God whose uniqueness is His essence.

This religious revolution is apt to begin with a general change in the relations between divinities and worshippers. Within the framework of a universal state there is a tendency for all divinities to divest themselves of the bonds that have hitherto bound each of them up with some particular parochial human community. A divinity who has started life as the patron *de jure* and servitor *de facto* of some single tribe or town or valley or mountain now enters on a wider field of action by learning to appeal on the one hand to the Soul of the individual human being and on the other hand to the whole of Mankind; and, as each *genius loci* simultaneously steps out into this wider world which has at last been opened up for him by human empire-builders, there tends to arise, under the aegis of a political peace, a religious competition between rival worships which ends, like the foregoing physical warfare between parochial states, in the victory of some single competitor over all the rest. The course of this religious revolution, as it worked itself out in the arena of the Achaemenian Empire, has been described by Eduard Meyer in a passage which demands quotation in our present context, not only on account of the brilliance of its observation and analysis, but also because the particular chapter of religious history that is here recorded is typical of what is apt to happen on the religious plane of life within the political framework of any universal state.

'The most persistent effects of the Achaemenian Empire—effects which are still exerting a direct influence upon our own present age—are to be found in the domain of Religion. The Achaemenian régime

saw the beginning of a transformation of religions that cut very deep. This development was assisted by the fact that the Achaemenian emperors treated the religions of their subjects with a large-hearted considerateness¹ and sought to erect them into props for their own policy; but a still more potent factor was the mere existence of an empire which embraced the whole World as the Achaemenian Empire did.

'In ancient times Religion had been the most vital expression of the political community. It was the Gods that enabled the State to keep alive, to maintain itself in conflict with other Powers, and to increase in power and prosperity. But all that had changed since the national states, one after another, had been deprived, at the very least, of their political independence and had mostly been annihilated, so that the inhabitants of all the civilized countries of South-Western Asia had had to accustom themselves to seeing their fate decided by foreigners. Occasionally this experience led to a repudiation of the native divinity who had shown himself so weak and powerless that his worship had patently ceased to be worth while. But, so far as can be seen, this consequence was drawn only by isolated individuals. Among people in the mass the belief in the reality of the native divinities was too deeply rooted for there to be any possibility of the people tearing themselves away from their traditional objects of worship. And there was a way out of the dilemma which was always open: either the god was angry, or else he had helped the adversary's cause to triumph because it was the cause that deserved to win. Cyrus is in Babylon the legitimate king who has been elected by Marduk, while Nabonidus is the apostate who has been rejected. In the eyes of the Prophets of Israel the victory of the Assyrians and Chaldaeans over the Prophets' countrymen is the work of the victims' own national god. He wills to chastise his people, and even to annihilate them, because they fail to understand his true nature; and he demonstrates his power all the more dazzlingly by bestowing the gift of world domination upon a nation which knows nothing of him and which fondly imagines that he is one of the powers whom it has vanquished. Others try to console themselves with the idea by which the Delphic Oracle attempted to justify its behaviour towards Croesus: above the god there stands a still mightier power to which the god has to submit—either an inexorable Fate of an impersonal kind (the Necessity of the Orphics), or else the verdict of some supreme Ruler of the Universe.²

'In any case the inevitable result is a revolution in the old concept of God. Already, through a theological extension of a naïve faith, the national gods had everywhere become cosmic powers as well—powers whose creative, life-giving, preservative activity embraces Heaven and Earth. Now, with the annihilation of the National State and the cessation of public life, the political side of the divinity falls away and the universal concept alone survives. Manners and customs converge; the

¹ For the religious policy of the Achaemenidae see also the present Study, V. C (i) (d) 6 (δ), Annex, vol. v, pp. 704–5, above.—A.J.T.

² In this last sentence Meyer is, of course, referring to the alternative road which we have already reconnoitred in this chapter and which leads, not towards an Almighty God, but towards a Sovereign Law.—A.J.T.

nations mingle with one another—partly in the peaceful way of commercial intercourse, partly through the coercive action of the rulers; in many cases even the native language disappears before the face of the great languages that are the vehicles of Civilization.¹ In these circumstances the national community falls back more and more upon Religion: that is, upon the worship of the gods who are indigenous in its homeland, and upon the scrupulous observance of their ritual. This very process, however, endows the local religion with a capacity to extend its range beyond the old national frontiers. The worshippers of a given divinity are now no longer the members of the national community who have been born into that divinity's service and are beholden to him for their very existence: his worshippers are now those who acknowledge him and remain faithful to him, whether they be members of the national community or not; and this turns religion into something that is at once individual and universal. The god is no longer expected to bring public prosperity to the body politic: what every one expects of him is personal prosperity and individual advantage for the worshipper himself. And accordingly the foreigner can pray to this god just as well as some one who has inherited his relation to the god from his ancestors. So the divinity becomes an independent self-subsistent power which operates from its seat of worship and offers grace and blessing to all the World. This is how these divinities are regarded by the Achaemenian Imperial Government. The Government grants privileges and endowments to all the larger shrines; and at all of them sacrifices and prayers are offered for the well-being of the Emperor. The immediate ground for this policy is a desire to make capital for the Government out of the high prestige which the shrine possesses in the eyes of the subject population; but the Government is also moved by a genuine belief that these divinities are mighty powers and that it cannot be anything but an advantage to stand well with them.

Thus Universalism and Individualism become the characteristic features of all religions and all worships. Every worship claims to be the highest, and if possible the only legitimate, one; every divinity claims to be a great cosmic power; and they all of them address themselves no longer—or no longer exclusively—to a national community, but primarily to each individual human being—promising him all kinds of profit, both on Earth and in the Other World, and this with greater certitude than any other god can offer. This religious revolution was not accomplished at one stroke, but it begins in the Achaemenian Age.² This age witnesses the prelude to the great competition between religions which fills the later centuries of Antiquity.

¹ For the spread of such *lingue franche* see the present Study, V. C (i) (d) 6 (y), vol. v, pp. 483–527, above.—A.J.T.

² The progress of the same religious revolution during the Roman Imperial Age is noticed by Spengler, O.: *Der Untergang des Abendlandes*, vol. i (Munich 1920, Beck), pp. 576–7. A corresponding religious revolution from a public communal to a private personal relation between the Soul and God took place in the Indic World at the birth of the Mahāyāna and of Hinduism (see V. C (i) (c) 2, vol. v, pp. 135 and 138, above), and in the Egyptian World during the two centuries beginning with the generation of Ikhnaton (Breasted, J. H.: *The Development of Religion and Thought in Ancient Egypt* (London 1912, Hodder & Stoughton), pp. 348–9 and 355–6).—A.J.T.

'It has also now become possible to pay respect to a divinity at a distance from his local habitation and in detachment from his native soil and from his own people; for the bond which unites god and worshipper is no longer national or political but is personal and therefore indissoluble. Slaves and merchants and artisans who are permanently expatriated carry their divinity with them, found new shrines for him, and win adherents for him in foreign parts, while conversely the stranger who arrives at a seat of worship pays the divinity the tribute of his devotion and can be permanently won for this divinity's service.

'Hence all worships begin to make an active propaganda. They either bestir themselves to widen the circle of the devotees of the shrine and to heighten its prestige and influence far and wide beyond mere parochial limits, or they seek to raise the ideas and the ritual of their religion to a status of commanding importance. For instance, the Babylonian and Egyptian priests broadcast their wisdom everywhere; the priests of the Pessinuntine Mother of the Gods, and those of kindred Anatolian and Syrian worships, enlist from all quarters a circle of fanatical adherents who are prepared to castrate themselves in the service of the divinity and to range over the face of the Earth as mendicant monks. These cults do not, any of them, make outright war upon those of the other gods: they merely relegate them to a position of inferiority, or demand at any rate a recognized position for themselves side by side with them. There are, however, certain religions that do not recognize the legitimacy of alien cults at all (the attitude of Zoroastrianism), or that even go so far as to condemn them as the most grievous sin against their own god (the attitude of Judaism). Their exclusiveness makes these religions all the more active in trying to win foreign adherents who, by their acceptance of the revelation, will save themselves from perdition and at the same time will bear witness among the nations to the power of the Only True God and will thereby raise the status of the god's worshippers in the eyes of the World. The teaching of Zarathustra, which was the religion of the ruling nation, addressed itself, from the very beginning, to the whole Human Race and therefore never had an exclusive national character. The religion of Yahweh did not completely lose, but did recast, its original nationalism under the impact of the blows of Fate which descended on the Jewish people; and, after achieving this transformation, it began to enlist proselytes all the more actively for coming late into the mission-field.

'Inwardly, too, the religions begin to become assimilated to one another. All the worships of the Oriental World now pass through the same process as the parochial worships of the cantons of Egypt. The only surviving differences between them are simply differences of name and of the minutiae of liturgical practice. In substance all these worships are now indistinguishable¹—all gods having become sun-gods and all goddesses heaven-goddesses—and this convergence has the para-

¹ 'En général la religion était partout la même; les dieux seuls étaient différents; et, si leurs cultes s'étendaient quelquefois, c'était en se mêlant et non en se chassant réciproquement des contrées où ils étaient reçus.'—*Œuvres de Turgot* (Paris 1844, Guillaumin, 2 vols.), vol. ii, p. 621 ('Géographie Politique').—A.J.T.

doxical effect of stimulating their militant competition with each other. Spiritually, politically, and socially the plane on which the several religions live becomes more and more uniform, and this leads to the formation of uniform religious general ideas which present themselves in the individual worships and individual religions with merely superficial differentiations. No one can any longer find satisfaction in the old notion that the divinity to whom he pays devotion is a local power whose operation is confined to a particular territory. Every one thinks of his god as the epiphany of a universal cosmic power, which both rules the Earth and guides the destiny of Man—as a sun-god or a heaven-god if she is female. Hence in Syria and Phœnicia “the Lord of Heaven” (*Be’elšamin*) acquires ever greater prestige. He is “the good god who rewards his devotees” in the language of later inscriptions, and he is also the Thunderer on High. Sometimes the divinity is invoked without being named. For example, the inscriptions on Palmyrene altars of the Hellenistic Age invoke “Him whose name is praised unto Eternity, the Gracious, the Compassionate”. Side by side with this Unnamed God, Bêl, “the Guider of Fate”, pushes his way in from Babylonia. One feels how close the individual gods have come to one another—how, in some sense, each of them is simply an epiphany of the others. Even the Jews, in addressing themselves to foreigners, designate their god, not as Yahweh, but as “the Heaven-God of Jerusalem”; and by this designation they present him to their Persian masters as the peer of Ahuramazda.¹

One reason why these formerly parochial and variegated divinities were thus being drawn into an ever closer conformity with one another was because they were now subject, all alike, to the influence of a single ensample; and this loadstone was the human monarch of a universal state which had provided the political container for this religious ferment.

‘Après la conquête de Babylone par Cyrus, le culte mazdéen s’installa dans cette antique métropole et un grand nombre de mages s’y établirent. Entre eux et les Chaldéens, un voisinage plusieurs fois séculaire amena des rapports de confraternité, et ainsi le mazdéisme importé en Chaldée subit l’ascendant de la religion autochtone. Toute la théologie des mages se pénétra d’astrologie. Dans cette astrologie chaldéopersique, le gouvernement du ciel, pour demeurer le patron et le modèle des puissances terrestres, dut se prêter à une transformation. A la hiérarchie de justiciers établie là-haut par les anciens Chaldéens, se substitua l’idée d’une royauté sidérale analogue à l’Empire des Achéménides. Puis, cette notion nouvelle d’un palais étoilé se répandit partout où s’imposait la suprématie des Perses et elle s’y perpétua dans le

Cf. eundem: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), pp. 17-19, and *Geschichte des Altertums*, vol. i, part (2), 4th ed. (Stuttgart and Berlin 1921, Cotta), pp. 153-7.

culte. "L'inscription de Nemroud-Dagh¹ parle des trônes célestes de Zeus Oromasdes, et un bas-relief nous le montre assis sur un trône, le sceptre à la main." Hostanès se le figure de même, les anges ou messagers divins faisant cercle autour de lui. Dans des textes nombreux, on retrouve un souvenir, lointain parfois, de la croyance qui fit comparer le Maître du Monde avec le Grand Roi, et ses assesseurs avec des satrapes. C'est de là que devait venir, avec l'idée d'un Royaume des Cieux, si familière à nos esprits, la conception stoïcienne d'une Cité du Monde gouvernée par les planètes et les étoiles fixes, auxquelles les hommes sont assujettis.²

The closing sentence of this last quotation brings us back to the now familiar forking-point of the road which we are attempting to survey; but this time we have not to follow out the branch leading towards a Cosmic Law, which we have explored already, but the other branch which leads towards a Unique and Omnipotent God; and in this direction the first landmark that we shall notice is the influence of the Achaemenian Monarchy upon the Jewish conception of the God of Israel.³

'In the Jewish religion, the [heavenly] court, by which Yahweh is waited upon, is elaborated on a Babylonian pattern, even though certain old native conceptions may account for the origin of the idea.'⁴

And, in Jewish minds, this new conception of Yahweh had worked itself out to completion by about 166-164 B.C., which appears, from internal evidence, to have been the approximate date of the writing of the prophetic part of the Book of Daniel.

'I beheld till the thrones were cast down, and the Ancient of Days did sit, whose garment was white as snow, and the hair of his head like the pure wool; his throne was like the fiery flame, and his wheel as burning fire.

'A fiery stream issued and came forth from before him; thousand thousands ministered unto him, and ten thousand times ten thousand stood before him; the judgment was set and the books were opened.'⁵

¹ See V. C (i) (d) 6 (8), vol. v, p. 547, footnote 2, above.—A.J.T.

² Bidez, J.: *La Cité du Monde et la Cité du Soleil* (Paris 1932, Les Belles Lettres), pp. 7-8.

³ The Jews appear to have taken this turning deliberately, for they rejected and condemned the science of Astrology because they perceived the fundamental incompatibility of its belief in an inexorable mathematical law with a belief in God as an omnipotent personality (Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Berlin 1921, Cotta), p. 54).

⁴ Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 172. In his *Ursprung und Anfänge des Christentums*, vol. ii (Berlin 1921, Cotta), pp. 58-9, the same scholar points out that Yahweh is already conceived in the likeness of an Achaemenian emperor in Zech. iii, which was written circa 519 B.C., as well as in the *Book of Job*, which was written about a century later.

⁵ Dan. vii. 9-10. This precise and vivid picture of Yahweh in the likeness of an Achaemenian Great King appears to have been borrowed by Judaism from Zoroastrianism. According to von Gall, A.: *Basileia tou Theou* (Heidelberg 1926, Winter), p. 268, 'the Ancient of Days . . . has nothing whatever in common with the god Yahweh, whom the Jews would never have visualized in this shape; the Ancient of Days is Ahuramazda,

The Achaemenian Great King is not, however, the only monarch of a universal state in whose likeness his subjects have shaped their conceptions of an Almighty God. In the Egyptiac World, for example,

'the conception of the Sun-God as a former king of Egypt, as the father of the reigning Pharaoh, and as the protector and leader of the nation, still a kind of ideal king, resulted in the most important consequences for Religion. The qualities of the earthly kingship of the Pharaoh were easily transferred to Re. . . The whole earthly conception and environment of the Egyptian Pharaoh were soon, as it were, the "stage properties" with which Re was "made up" before the eyes of the Nile-dweller. When, later on, therefore, the conception of the human kingship was developed and enriched under the transforming social forces of the Feudal Age,¹ these vital changes were soon reflected from the character of the Pharaoh to that of the Sun-God.'²

who was portrayed by the Persians as he is described in Dan. vii. 9'. Cf. Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii, pp. 195-9. The profoundness of the effect which this Iranian image exerted upon the Syrian imagination, when once it had been transmitted from the Iranian to the Syrian province of the Syriac World, is revealed by a comparison of several scattered pieces of evidence. The most celebrated testimony is the reproduction of the passage quoted above from Daniel (vii. 9-10) in Revelation (i. 13-16), where we see a Christian writer who wishes to present a visual image of his Christ in His glory drawing upon the Iranian imagery of a Jewish work which by this time was not much less than three centuries old. It is perhaps not less significant that one of the features in this literary image is reported to have been simulated 'in real life', by means of a trick, by at least two Syrian men of action who were as far separated from one another in time as the respective authors of the Book of Daniel and the Revelation of Saint John the Divine. Both these tricksters were violent-handed futurist leaders of the Hellenic internal proletariat; and, while the respective arenas in which they fought were far apart—Eunus's arena being in Sicily and Bar Kōkabā's in Palestine—their respective birthplaces were both on Syrian soil, since Eunus is known to have come from Apamea and Bar Kōkabā was presumably Palestinian-born. If both of them practised the same trick at dates divided by so wide an interval—Eunus in the seventh decade of the second century B.C., and Bar Kōkabā in the fourth decade of the second century of the Christian Era—this must mean that in Syria, at any time during the three centuries following the publication of the Book of Daniel, a proletarian agitator who preached insurrection, and who promised to lead his insurgent followers to victory on the strength of a divine commission which he claimed to hold, would be expected to give material evidence of this divine patronage by himself performing one of the prodigies that is attributed, in the Iranian imagery, to the Ancient of Days. According to Dan. vii. 10, 'a fiery stream issued and came forth from before him', while, according to Revelation i. 16, this flame came 'out of his mouth' in the shape of 'a sharp two-edged sword'. Now, according to Diodorus, Books XXXIV-XXXV, chap. 2, §§ 6-7, Eunus 'used to emit fire and flame from his mouth, with a certain display of divine possession (*ἐν θείῳ σαταμῶν*), by means of an apparatus; and this was the setting in which he used to declaim his prophecies. He used to take a nutshell or something of the sort, bore two holes in it on opposite sides, stuff it with fire and enough fuel to keep the fire alight, and then put it into his mouth and flare out sometimes sparks and sometimes flame by blowing into it. In the days before he rose in revolt, Eunus used to declare that the Syrian Goddess had granted him an epiphany and had told him that he was to become a king' (see V. C (ii) (a), Annex II, p. 383, below). Similarly, according to Saint Jerome, *Adversus Rufinum*, Book III, chap. 31 (= Migne: *Patrologia Latina*, vol. xxiii, col. 480), Bar Kōkabā 'used to put a lighted straw into his mouth and fan it into flame by blowing into it, in order to create the illusion that he was vomiting fire'. Presumably this trick was designed to lend authority to Bar Kōkabā's claim to be the Messiah (i.e. 'the Lord's Anointed').

¹ i.e. the Egyptiac 'Time of Troubles'. For this transformation of an earlier Egyptiac conception of the kingship see also the present Study, IV. C (iii) (c) 2 (β), vol. iv, pp. 408-14, above.—A.J.T.

² Breasted, J. H.: *The Development of Religion and Thought in Ancient Egypt* (London 1912, Hodder & Stoughton), pp. 16-17, cited already in I. C (ii), vol. i, p. 141, above.

In the Sinic World, likewise, we find the same mental imagery already taking shape during the 'Time of Troubles' which preceded the foundation of a Sinic universal state by Ts'in She Hwang-ti. At any rate, the philosopher Mo-tse, who lived from the fifth into the fourth century B.C.,

'pour réfréner les vices des tyrans . . . évoque, à la suite des poètes de la cour royale, l'idée du Ciel Justicier, du Souverain d'En-haut, patron dynastique. Aussi parle-t-il de la Volonté du Ciel (*T'ien tche*) avec les mêmes termes, à peu près, qu'il emploie pour exiger une entière soumission aux décisions du souverain.'¹

This pair of illustrations from the histories of other civilizations may serve to show that the course of religious evolution in the Syriac World, within the political framework of the Achaemenian Empire and its Seleucid 'successor-state',² was not anything exceptional, but was a normal development which exemplifies a general rule. In the political and social circumstances to which the foundation of a universal state gives rise, a number of previously parochial divinities simultaneously assume the insignia of the newly established terrestrial monarch and then compete with one another for the sole and exclusive dominion which these insignia imply, until at length one of the competitors annihilates all the other claimants and thus establishes his title to be worshipped as the One True God. This outcome of the Battle of the Gods is analogous to that of the terrestrial struggle for existence between human princes during the disintegration of a civilization; for, in the course of the two successive rounds in which this political conflict works itself out, one of the competitors first either annihilates or subjugates all his peers in the internecine warfare of a 'Time of Troubles', and afterwards peacefully yet relentlessly eliminates those of them who have temporarily survived the establishment of a universal state by reconciling themselves to becoming client princes of a victorious King of Kings—with the result that the victor-suzerain turns into a monarch who, in his final plenitude of power, is the sole embodiment of royalty and vehicle of sovereignty and source of authority in his world. There is, however, one vital point on which the analogy that we have been drawing does not hold.

In the constitutional evolution of a universal state the universal monarch whom we find enthroned in solitary sovereignty at the end of the story is usually a direct successor—in an unbroken constitutional sequence—of the Pādīshāh, or overlord of client

¹ Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), p. 495.

² For the transmission to the Seleucid Monarchy of the Achaemenian Empire's function as a political *foyer* for acts of religious creation see Part I. A, vol. i, pp. 5-6, above.

princes, under whose auspices the story opens.¹ When an Augustus who had been content to make his authority felt in Cappadocia or Palestine or Nabataea by maintaining a general superintendence over local kings or tetrarchs was succeeded in due course by a Hadrian who administered these former principalities as provinces under his own direct rule, there was no break in the continuity of the dominant power; for Hadrian, no less than Augustus, was master of the Hellenic *Οἰκουμένη* in virtue of being the head of the Roman State, and he was still exercising this Roman authority in the form of the Principate—a subtle institution which was the principal heirloom in Augustus's political legacy. In fact, the universal state with which the Hellenic World had originally been endowed by Roman empire-builders had not ceased to be a Roman Empire in consequence of the subsequent process by which the former client-states had been administratively *gleichgeschaltet* through being assimilated to the provinces that had been under the direct government of the Princes and the Senate from the beginning. On the other hand, in the corresponding and contemporary religious change, continuity, so far from being the rule, is a theoretically possible exception which it might be difficult to illustrate by historical examples.

The writer of this Study cannot, indeed, call to mind a single case in which the high god of a pantheon has ever served as the medium for an epiphany of God as the unique and omnipotent master and maker of all things. Neither the Corichanean Sun-God nor the Theban Amon-Re nor the Babylonian Marduk-Bel nor the Vedic Dyauspitar nor the Olympian Zeus has ever revealed the countenance of the One True God beneath his own Protean mask.

¹ There is, however, at least one conspicuous exception to this rule in the constitutional history of the Sinic universal state. In the first place the founder, Ts'in She Hwang-ti, attempted to carry through by force, within the span of a single reign, a process of *Gleichschaltung* which, in the constitutional history of the Roman Empire, was spread over a period of not much less than two centuries. In the second place this ruthless radicalism evoked an equally violent reaction which did not indeed destroy the universal state that had just been founded by this empire-builder of the House of Ts'in, but did depose Ts'in She Hwang-ti's dynasty in favour of a *novus homo* whose ancestors had had no part or lot in the Ts'in Dynasty's empire-building work. In the third place the *parvenu* founder of the Prior Han Dynasty tried to repair Ts'in She Hwang-ti's error, and to avoid the Ts'in Dynasty's fate, by abandoning the radical policy of *Gleichschaltung* and centralization for a conservative policy of re-establishing the *cité* parochial states of the Sinic World as client kingdoms under the *parvenue* dynasty's suzerainty. In the fourth place the Han Dynasty soon discovered, by trial and error, that this attempt at political devolution was after all an anachronism; and they then reverted to Ts'in She Hwang-ti's policy of centralization—but this time with greater tact and at a gentler pace. We can transpose the constitutional history of the Sinic universal state into Hellenic terms by imagining what might have happened if the Battle of Actium had been won, not by Octavian, but by Antony and Cleopatra. In that imaginary event the Hellenic universal state which had been established by Roman arms in the course of the preceding two hundred years might have been ruled for the next four centuries by a Government seated at Alexandria and administering Roman Italy as a client republic or even as a subject province. (The psychological reaction of the Alexandrians to the chagrin of having just missed their 'manifest destiny' is examined in V. C (ii) (a), pp. 217-19 below.)

And even in the Syriac universal state, where the god who was worshipped by the Imperial Dynasty was not a divinity of this synthetic kind and was also not a product of *raison d'état*,¹ the deity through whose lineaments the existence and the nature of a One True God became apparent to Mankind was not Ahuramazda the god of the Achaemenidae: it was Yahweh the god of the Achaemenian emperors' insignificant Jewish subjects. This victory of Yahweh over Ahuramazda, and over all the other divinities of the Achaemenian Empire and its 'successor-states' who had been competing with the once parochial god of Israel and Judah for the superlative honour of becoming an eviphany of God Almighty, is the triumph that is celebrated in the Eighty-second Psalm:

'God standeth in the congregation of the mighty; he judgeth among the gods. . . .

' "I have said: *Ye are gods, and all of you are children of the Most High*;

' "But ye shall die like men, and fall like one of the princes."

'Arise, O God; judge the Earth; for thou shalt inherit all nations.'²

The note of this paean is not pitched too high; for, while Asshur's following had dwindled, by the time when the Jewish poem was written, to as small a company³ as Ahuramazda's worshippers muster to-day,⁴ these stricken gods' rival Yahweh—whose Chosen People was first trampled under foot by the Assyrians and then raised from the dust by the Achaemenidae—has grown into the God of Christendom and Islam as well as the God of Jewry. This contrast between the ultimate destinies of the rival divinities and the momentary fortunes of their respective followers makes it evident that the religious life and experience of generations born and bred under the political aegis of a universal state is a field of historical study which offers to the observer some striking and momentous examples of the phenomenon of *Peripeteia* or 'the reversal of roles';⁵ and in fact it is not an exception, but the rule, for the particular representation of the Godhead which is singled out for becoming a vehicle of the revelation of the unity of God, in this unitary political phase of the disintegration of a civilization, to be an obscure divinity of humble antecedents. At the same time

this original lowliness and obscurity are not the only features that are characteristic of the divinities that are cast for this overwhelming role.

When we look into the nature and *êthos* of Yahweh as these are portrayed for us in the scriptures that we have inherited from his pre-Christian worshippers, two other features immediately strike the eye. On the one hand Yahweh is in origin a local divinity—in the literal sense *glebae adscriptus* if we are to believe that he first came within the Israelites' ken as the *jinn* inhabiting and animating a volcano in North-Western Arabia, and in any case a divinity who struck root in the soil of a particular parish, and in the hearts of a particular parochial community, after he had been carried into the hill country of Ephraim and Judah as the divine patron of the barbarian war-bands who broke into the Palestinian domain of 'the New Empire' of Egypt in the fourteenth century B.C.¹ On the other hand Yahweh is 'a jealous god',² whose first commandment to his worshipper is: 'Thou shalt have no other gods before me.'³ It is not, of course, surprising to find these two traits of provincialism and exclusiveness displayed by Yahweh simultaneously; for a god who keeps strictly to his own local domain may be expected to be equally strict in warning off any neighbouring gods who show a disposition to trespass. What is, however, surprising—and even repellent, at any rate at first sight—is to see Yahweh continuing to exhibit an unabated intolerance towards the rivals with whom he courts a conflict when, after the overthrow of the parochial kingdoms of Israel and Judah and the establishment of a Syriac universal state in the shape of the Achaemenian Empire, the *ci-devant* god of two small upland principalities steps out into a wider world and aspires, like his neighbours, to win for himself the worship of all Mankind. In this oecumenical phase of Syriac history the persistence of Yahweh in maintaining the intolerant attitude and outlook that were legacies from his parochial past was an anachronism which was undoubtedly out of tune with the

¹ See I. C (i) (b), vol. i, p. 102, and V. C (i) (c) 3, Annex III, vol. v, p. 611, above.

² Exod. xx. 5 and xxxiv. 14; Deut. v. 9 and vi. 15; Joshua xxiv. 19.

³ Exod. xx. 3; Deut. v. 7 and vi. 14. According to Woolley, Sir L.: *Abraham* (London 1936, Faber), chap. 6, pp. 234-5 and 244, the 'jealousy' which is one of the outstanding characteristics of Yahweh the God of Moses was already characteristic of the nameless God of Abraham, of Isaac, and of Jacob with whom Yahweh came to be identified by Abraham's descendants in the Mosaic Age. In Woolley's view Abraham's God was the Family God that had been worshipped in every household in Ur, and it was of the essence of this Family God that 'he could admit no alien worshippers and have no outside interests'. In persisting in the worship of this Family God when he left the city gods of Ur behind him, Abraham became, not indeed a monotheist, but at least 'monolatrous'. It will be seen that the God of Abraham (if Woolley is right) resembled the God of Moses in the point of exclusiveness, but differed from him in not being tied to any particular locality. While the worship of Yahweh was bound up with Yahweh's successive local habitations on Sinai, at Bethel, and in Jerusalem, the God of Abraham, of Isaac, and of Jacob was worshipped by his Nomadic votaries wherever they happened to pitch their moving tents.

temper that was prevalent in that age among the host of *ci-devant* local divinities of Yahweh's kind, who for the most part were conducting their tournament in a spirit of 'live-and-let-live' and 'give-and-take'.¹ This unamiable anachronism was, nevertheless, as we shall see, one of the elements in Yahweh's character that helped him to win his astonishing victory.

It may be instructive to look into these two traits of provincialism and exclusiveness more closely, taking the provincialism first and the exclusiveness second.

The choice of a provincial divinity to be the vehicle for an epiphany of a God who is omnipresent and omnipotent and unique might seem at first sight to be an inexplicable paradox; for, while the Jewish and Christian and Islamic conception of a God with these attributes² has indisputably been derived, as a matter of historical fact, from the figure of a Yahweh who makes his first appearance on the terrestrial scene as the Thunderer of Sinai or as the Ba'al of Shiloh, it is equally indisputable that the theological content, as opposed to the historical origin, of the idea of God which is common to these three monotheistic religions sprung from a single Syriac root is immeasurably different from the primitive representation of Yahweh, and bears a far closer resemblance to a number of other conceptions to which, as a matter of historical fact, the Islamic-Christian-Jewish conception is either indebted less deeply or even—in some of the cases in question—not indebted at all, so far as we can tell. In point of universality the Islamic-Christian-Jewish conception of God has less in common with the primitive representation of Yahweh than it has with the picture of the high god of a pantheon—an Amon-Re or a Corichancan Sun-God or a Marduk-Bel—whose authority at any rate extends in some sense over the whole of the Universe, even though the divinity by whom this supreme power is exercised be neither omnipotent nor unique. Or, if we take as our standard of comparison the degree of the spirituality that the different conceptions of God display, here the latter-day Jewish and Christian and Islamic conception of God has more in common with the abstractions of the philosophic schools: with an Andean Viracocha, an

¹ The abnormality of the exclusiveness that was displayed, in different degrees of militancy, by both Judaism and Zoroastrianism in the Achaemenian Age, is noticed by Eduard Meyer in the passage quoted on p. 32, above.

² It was because Christianity had inherited from Judaism the conception of a God who was unique that the Hellenes looked upon the Christians as being no better than atheists (see IV. C (iii) (c) 2 (β), vol. iv, p. 348, and the passage quoted from the writings of the Emperor Julian in V. C (i) (c) 2, Annex II, vol. v, p. 584, above). 'To the mind of a Roman there was something atheistic in Yahweh's claim to be the only god in existence. For the Roman, *One God was no god*' (Spengler, O.: *Der Untergang des Abendlandes*, vol. ii (Munich 1920, Beck), p. 567). See further V. C (ii) (a), Annex II, in the present volume, p. 536, below.

Egyptiac Aton, a Neoplatonic Helios, a Confucian T'ien, a Stoic Zeus, and even, perhaps, with a latter-day Western 'God the Mathematician'. For the primitive figure of Yahweh, as we see it (through a glass darkly) in the panorama of the Pentateuch, appears equally gross whether we compare it with these philosophic abstractions or with our own idea of the God whose countenance has been astonishingly revealed to us through Yahweh's features. Why is it, then, that, in a mystery play which has for its plot the revelation of God to Man, the supreme role of serving as the vehicle for the divine epiphany has been allotted, not to an etherial Aton or even to an imperial Amon-Re, but to a barbaric and provincial Yahweh whose qualifications for playing this tremendous part might seem, on our present showing, to be so conspicuously inferior to those of so many of his unsuccessful competitors?

The answer to this hard question may perhaps be found in calling to mind one element in the latter-day Jewish and Christian and Islamic conception of God which we have not yet mentioned. We have dwelt so far upon certain qualities which are as prominent in this etherial representation of God as they are conspicuous by their apparent absence from the character of the primitive Yahweh—the three sublime qualities of uniqueness and omnipotence and omnipresence. Yet, for all their sublimity, these three attributes of the Divine Nature are in themselves no more than conclusions of the human understanding; they are not experiences of the human heart; and, while it is no doubt possible for a human soul which has made its first discovery of God on the intellectual plane to enter into communion with Him thereafter on that higher level of spiritual intercourse on which human beings are able to love, as well as know, their human fellow creatures, the attainment of communion with God along a path on which the heart has to wait upon the head is evidently 'hard and rare'. Few human souls have succeeded, like Ikhnaton or Akbar, in winning the *Visio Beatifica* for themselves by this intellectual approach;¹ fewer still have succeeded, like Zarathustra, in communicating to others a vision that has been gained in this primarily intellectual way; and this will not surprise us when we consider what element in God's nature it is that we have so far left out of account; for it is an element that is no mere attribute but is rather the very essence of the Divine Nature as it presents itself to us—an essence apart from which the Godhead could hardly be imagined as existing or as being capable of having any attributes ascribed to it.

For Man, God's essence is that He is a living god with whom

¹ For the failure of Ikhnaton and Akbar to become founders of new religions see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 695-6 and 699-704, above.

a living human being can enter into a spiritual relation that is recognizably akin to his spiritual relations with the living human beings among whom Man lives his earthly life as a social creature. This fact of being alive is the essence of God's nature for human souls that are seeking to enter into communion with Him, and at the same time it is the hardest element in God's nature for human beings to grasp, since this living god has to be apprehended by our human faculties without the aid of those physical evidences of life—a visibility and a tangibility—that are offered by all other living beings that come within Man's ken. And, if it is thus the most difficult part of the knowledge of God to know Him in this essential way, this difficulty is evidently at its maximum for a spiritual explorer who attempts an intellectual approach to his divine goal, since an intellectual apprehension of God's attributes is a way of knowing God which is more remote than any other from the direct communion of Life with Life. The seeker after God who takes this intellectual path is like some climber who gains his first footing on the mountain-side at the point which is not only farthest from the summit but which is also separated from it by the deepest chasms and the sheerest precipices. It is manifestly less difficult—however difficult it still may be—for a human soul which is already in enjoyment of a direct communion with God to enlarge its comprehension of the Divine Nature by grafting a branch of intellectual knowledge on to the living stem of its intuitive religious experience. In short, the natural order of aspiration in any human endeavour to find the way to God is the order which is followed in Francis Thompson's poem:

O world invisible, we view thee,
 O world intangible, we touch thee,
 O world unknowable, we know thee,
 Inapprehensible, we clutch thee!

We can now perhaps see why our latter-day Islamic-Christian-Jewish conception of God has grown, as it has, out of the primitive figure of Yahweh and not out of the sophisticated constructions of the philosophers; for this quality of being alive, which is the essence of God as Jews and Christians and Muslims believe in Him to-day, is likewise the essence of Yahweh as he makes his appearance in the Old Testament.¹ 'For who is there of all flesh that

¹ In the minds of the Israelites this property of 'life' or 'existence' in the god whose worship they had inherited from their forefathers eventually came to loom so large that, at least in official parlance, the genuine traditional name of the god was distorted into conformity with a false etymology which sought to derive the name itself from the outstanding property of the god who bore it. The true form of Yahweh's name appears to have been *Yahô* or *Yahû*; for this is the form in which it figures in the compound proper names into which it enters—and this not only in the Hebrew names in the Old Testament, but also in certain non-Israelite names, some of which are of earlier date (e.g. in compound names current in Shinar in the time of Hammurabi, at Hamath in the time of

hath heard the voice of the living god speaking out of the midst of the fire, as we have, and lived?'¹—is the boast of Yahweh's Chosen People after his epiphany to them on Sinai. And it is this same assurance that the god whom they worship is a living god that nerves the Israelites to invade and occupy the Palestinian provinces of 'the New Empire' of Egypt,² and afterwards to match themselves against the rival Philistine claimants to Pharaoh's derelict Palestinian heritage.³ When this living God of Israel encounters in turn an abstract Zoroastrian Ahuramazda⁴ and an abstract

Sargon, and at Damascus in the time of Esarhaddon). Moreover, Yahū is the form of his name under which the god was worshipped in the fifth century B.C. at Elephantine by the Jewish, or Judaeo-Samaritan, garrison of that frontier-fortress of the Achaemenian Empire. This original Yahū has been twisted into Yahwēh to give the word the appearance of being the third person singular of the imperfect tense of the verbal root HYH, signifying 'existence'—though the correct form of this is not *yahwēh* but *yihyēh*. In Exodus iii. 13-15 this name is represented as being revealed by its divine owner to Israel through the mouth of Moses; and in this place the distortion is carried a stage farther than usual; for while in verse 15 the Lord instructs Moses to declare to Israel that 'Yahwēh the god of your fathers . . . hath sent me unto you' and 'this is my name for ever', in the preceding verse the Lord reveals his name to Moses, not in the third person as Yahwēh (purporting to mean 'He is'), but in a corresponding first person as Ehyēh (purporting to mean 'I am'). This Ehyēh is so far removed from the original Yahū that its origin would be an enigma if we did not happen to know the intermediate term. (For this etymological evidence of the Israelites' sense of the vitality of their god see van Hoonacker, A.: *Une Communauté Judéo-Araméenne d'Éléphantine, en Égypte, aux v^e et v^e siècles av. J.-C.* (London 1915, Milford), pp. 67-73. See also Pauly-Wissowa: *Real-Encyclopädie der Classischen Altertumswissenschaft*, neue Bearbeitung, Halbband xvii, cols. 698-721, s.v. Iao.)

¹ Deut. v. 26.

² Joshua iii. 10.

³ 1 Sam. xvii. 26 and 36.

⁴ Ahura Mazdāh means 'God the Wise'; and in the Zoroastrian conception of him he is as abstract as the Stoic Zeus, even if there be truth in the conjecture that the Iranian, like the Hellenic, abstraction has been drawn out of an historical divinity who, in the Iranian case, would be Varūna, the Aryan counterpart of the Greek Ūranus (for this conjecture see Christensen, A.: *L'Iran sous les Sassanides* (Copenhagen 1936, Levin & Munksgaard), p. 28). Ahuramazda was conceived of by the Prophet Zarathustra as a One True God who was served by attendant spirits of less than divine rank—though, in the Gathas, these spirits, too, are called *ahuras*, like God Himself. The abstractness (see Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), p. 59) of the beings who constitute the Zoroastrian Host of Heaven is as evident in Zarathustra's names for these *amesha spentas* as it is in his name for the God whom they serve. They are called (see Christensen, op. cit., pp. 29-30) Vohū Manah ('Good State of Mind'), Asha Vahishta ('The Best Truth'), Khshathra Vairya ('The Desirable Kingdom [of God]'), Ārmaiti ('Submission'—compare Muhammad's term 'Islām'), Haurvatāt ('Integrity' or 'Health'), Ameretāt ('Immortality'), Sraosha ('Obedience'). It is astonishing that this hierarchy of undisguised abstractions should have been substituted by a prophet of the External Proletariat for an anthropomorphically conceived barbarian pantheon—the Iranian counterpart of the Vedic Pantheon of the Aryas—whose members were the hereditary objects of worship of Zarathustra's world; yet, in order to clear the Universe for exclusive occupation by the creatures—or discoveries—of his own penetrating thought, Zarathustra had the audacity to degrade the traditional Iranian gods (the *daēvas*) to the rank of demons in the service of another abstraction: Angra Mainyāush (Ahriman), 'the enemy spirit' or adversary of Ahuramazda. It is still more astonishing to find that this artificial, abstract, and universal religion gradually supplanted the traditional Iranian paganism—though this at the price of incorporating into itself a considerable amount of incongruous pagan ritual and myth. The secret of this success—in which Zoroastrianism is perhaps unique among religions and philosophies of this abstract kind—can hardly be ascribed to the royal patronage which Zarathustra won for his new faith in his own lifetime, and which was retained by Zoroastrianism until the end of the Achaemenian régime; for the Achaemenian Emperors took care not to force upon their subjects the religion which they had embraced for themselves (see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 704-5, above); and the intolerant enforcement of a Zoroastrian orthodoxy by the Sasanidae in a later age, so far from proving beneficial to Zoroastrianism, had a disastrous effect upon its destinies

Stoic Zeus and an abstract Constantinian Sol Invictus¹ and an abstract Neoplatonic Helios, it becomes manifest that Yahweh

*ολος πέπνυται, τοι δὲ σκιαὶ αἰσσοῦσιν.*²

For the primitive figure of Yahweh has grown into the Christian conception of God by annexing the intellectual attributes of these abstractions without deigning to acknowledge the debt or scrupling to obliterate their names.³ The completeness of Yahweh's victory in this series of encounters is pointed by its contrast with what happened when another barbaric and parochial yet aggressively living god—the divine patron of the Arabian city-state of Mecca, who was known within the Ka'bah as Allāh, 'the god' *sans phrase*—came to be identified by the Prophet Muhammad with the omnipresent and omnipotent and unique God of Jewry and Christendom.⁴ The Ba'al of Mecca who was thus suddenly magnified by the fiat of a man of genius did not contribute a single new attribute to the intellectual conception of the One True God whose *alter ego* Allāh was now proclaimed to be; but he has given proof of his vitality by imposing his own provincial name upon the God of the Universe on the lips of all the myriads of human beings in every part of the World who have come to know God through embracing Islam.

(see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 659–61, above). A more powerful adventitious aid was the eventual enlistment of the Magi (V. C (i) (d) 6 (δ), vol. v, p. 542, above) in the service of an upstart faith which they had at first done their utmost to stamp out (compare the enlistment of the Brahmins in the service of Hinduism (V. C (i) (c) 2, vol. v, pp. 137–8, above) and the enlistment of the Egyptian priesthood in the service of the worship of Osiris (I. C (ii), vol. i, p. 144, above)). But in the main we must attribute the remarkable success of Zarathustra's religion to the force of the Prophet's character and to the truth and profundity of his ideas. The eight concepts of the Devil, the Last Judgement, Salvation, the Saviour, Transfiguration (Frashōkarati), the Millennium, the Kingdom of God (Khshathra Vairya), and Immortality, which, between them, cover so large a part of the fields of Christian and Islamic theology, are all derived from Zoroastrianism through a Jewish channel (for the Zoroastrian origin of the Jewish eschatology see von Gall, A.: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter), pp. ix–x and 156–7; for the Zoroastrian origin of the Jewish belief in Immortality see *ibid.*, p. 160).

¹ For an interpretation of Constantine's vision of the Unconquerable Christ revealing his cross athwart the disk of the Unconquerable Sun see the passage quoted from N. H. Baynes in V. C (i) (d) 6 (δ), Annex, vol. v, p. 693, above.

² *Odyssey*, Book X, l. 495, quoted in Polybius, Book XXXVI, cap. 8.

³ In the Christian diffraction of the Unity of God into a Trinity of Persons we can observe the extent of the Christian Theology's intellectual debt to the abstract religions and philosophies with which Judaism and Christianity had collided between the sixth century B.C. and the fourth century of the Christian Era. While in the Second Person of the Trinity the quality of being a living god has been brought home to human hearts, with quite a new emotional vividness and spiritual force, by a God who has renounced the unmitigated transcendence of Yahweh in order to become incarnate, the First Person of the Trinity is represented in the iconography of the Christian Church, as He is in the Book of Daniel (see p. 34, footnote 5, above), in the likeness of the Zoroastrian representation of Ahuramazda, and the Third Person of the Trinity is virtually identical in name, as well as in function, with the first of the Zoroastrian *amesha spentas*, Vohū Manah. In this theological plagiarism Christianity has done Zoroastrianism not a wrong but a service, for 'it is not until it has been taken up into Christianity that the *Weltanschauung* of the Iranian prophet begins to have its greatest effect in the field of world history' (Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), p. 441).

⁴ See V. C (i) (d) 6 (δ), Annex, vol. v, p. 688, footnote 2, above.

If this persistent quality of being alive is the obverse of Yahweh's primitive provincialism,¹ we may find that the exclusiveness which is an enduring as well as an original trait in Yahweh's character has also some value which is indispensable for the historic role which the God of Israel has played in the revelation of the Divine Nature to Mankind.

This value begins to become apparent as soon as we consider the significance of the contrast between the ultimate triumph of the 'jealous god' of two puny and ephemeral Syriac principalities and the ultimate fiasco of the high gods of the pantheons of the two neighbouring societies which, between them, ground the political structure of the Syriac World to pieces, as a pair of converging icebergs might crush a frail kayak. In respect of being rooted in the soil and of flowing with the sap of visible and tangible life, both Amon-Re and Marduk-Bel could measure themselves against Yahweh on equal terms, while they had the advantage over him in being associated, in the minds of their hereditary worshippers, with the colossal worldly success of their native Thebes and Babylon—a success which was ascribed to the zeal and prowess of these great tutelary divinities on their peoples' behalf, whereas Yahweh's people had been left, in their abasement and captivity, to solve as best they could the problem of vindicating the benevolence and omnipotence of a tribal divinity who had apparently abandoned his tribesmen in their hour of need, without lifting a finger to defend them against a ruthless alien aggressor.² If, in spite of these telling points in their favour, Marduk-Bel and Amon-Re were outstripped, as they were, by Yahweh in the competition between divinities under the Achaemenian régime, we can hardly avoid ascribing their failure to their innocence of Yahweh's jealous vein; for the absence of this trait was as conspicuous in the characters of both the Egyptian and the Babylonian high god as its presence was in the character of their obscure yet victorious Palestinian rival. A freedom—for good or for ill—from the spirit of exclusiveness is implicit in the hyphen which links the two parts of these synthetic divinities' respective names; for, if jealousy had been the ruling passion of either of the original constituents in either case, then neither of these composite high gods could ever even have come into existence.³ No wonder that Marduk-Bel and Amon-Re were as tolerant of polytheism beyond the bounds of

¹ Compare the effect of the same quality in enabling natural languages of an originally no more than local currency to defeat artificial languages like Esperanto in the competition for becoming *lingue franche* (see V. C (i) (d) 6 (y), vol. v, pp. 492-3, above).

² For the solution of this problem which Yahweh's Jewish worshippers worked out, see the passage quoted from Eduard Meyer on p. 30, above.

³ For the manufacture of Amon-Re and Marduk-Bel as a symptom of the sense of promiscuity in the field of Religion see V. C (i) (d) 6 (δ), vol. v, pp. 529-31, above.

their own loose-knit personalities as they were tolerant of the disunity in their Protean selves. Both of them alike were born—or, more accurately speaking, were manufactured—to be content with their primal status of suzerainty over a host of other beings who were no less divine, and not even much less potent, than they were; and, by the same token, this congenital lack of ambition doomed them both to drop out of the competition for a monopoly of divinity when Yahweh's devouring jealousy would as surely spur him on to run to the end this race that had been set before them all.¹

The same relentless intolerance of any rival was also manifestly one of the qualities that enabled the God of Israel, after he had become the God of the Christian Church, to outrun all his competitors once again in another Battle of the Gods which was fought out this time in the arena of the Roman Empire. These rival candidates for the spiritual allegiance of the Hellenic internal proletariat were of diverse natures and origins—a Syriac Mithras, an Egyptiac Isis, a Hittite Cybele—but they were in unanimous accord with each other, and in unanimous disagreement with their eventual conqueror, in being ready to enter into a compromise. They would have been willing either to partition the vast population of the Hellenic universal state into as many separate flocks as there were competing divinities, or to find a niche for each and all of the divine competitors in each and every human soul, or even to allow the ingenuity of their hierophants to incorporate these hitherto rival gods into a joint-stock company for a common exploitation of the vast new virgin territory which lay open to the Oriental divinities in a Hellenic World whose native gods were now too decrepit to be capable any longer of fighting even on their own ground in defence of their traditional

¹ Heb. xii. 1. The enterprise of our modern Western archaeologists has disintegrated at Elephantine, in Upper Egypt, the records of one exception to the rule of Yahweh's jealousy which proves the rule to have had the value that we have just attributed to it. In the Aramaic papyri relating to the affairs of the Jewish, or Judæo-Samaritan, garrison of Elephantine under the Achaemenian régime we find that in this community of Yahû-worshippers the god did not enjoy a monopoly of worship but had at least four associates—'Anath-Yahû, 'Anath-Bethel, Ašm-Bethel, Haram-Bethel—of whom the first two, at any rate, were goddesses (see Meyer, E.: *Der Papyrusfund von Elephantine*, 2nd ed. (Leipzig 1912, Hinrichs), pp. 54-63). These associates of Yahû at Elephantine appear to have been, not survivals from a pre-monotheistic phase of Yahû-worship, but accretions contributed by a Samaritan element in the community at Elephantine (for this explanation see van Hoonacker, op. cit., pp. 73-85, especially p. 82; for the political origin and religious history of the Samaritans see V. C (i) (c) 2, vol. v, p. 125, footnote 1, above). The most interesting feature in the testimony of the Elephantine papyri from our present point of view is the fact that, fragmentary though they are, they inform us, not only that Yahû of Elephantine was a less jealous god than Yahweh of Jerusalem, but also that the worship of Yahû at Elephantine failed to survive. One of the documents is a letter, written in 408-7 B.C., which recounts the destruction of the temple of Yahû by the local priests of the Egyptiac god Khnum with the connivance of the Persian military commandant at Elephantine. And the worship of the easy-going Yahû of Elephantine, in contrast to the worship of the jealous Yahweh of Jerusalem, seems to have perished in the ruin of the shrine in which it had been carried on in this particular place.

rights.¹ This easy-going, compromising spirit was fatal to the rivals of the God of Tertullian when they had to face an adversary who could not be content with a less than 'totalitarian' victory because any abatement of his own exclusive claim to divinity would be, for him, a denial of his own essence.

The most impressive testimony to the value of the jealous vein in Yahweh's *êthos* is perhaps afforded by a piece of negative evidence that comes from an Indic World in which the God of Israel did not begin to make his existence felt until after the religion of the Indic internal proletariat had set hard in an indigenous form² that it still retains to-day.³ In the Indic World, as elsewhere, the process of social disintegration was accompanied by the development of a sense of unity, and this made itself felt very forcibly on the religious plane—as was to be expected in a society in whose *habitus* the religious vein was dominant.⁴ In response to an ever more insistent craving in Indic souls to apprehend the unity of God, the myriad divinities of the Indic internal proletariat gradually coalesced or dissolved into one or other of the two mighty figures of Shiva and Vishnu.⁵

'Vishnu is really all the other gods. Just as he is identical with Brahman and Çiva, so he condescends to manifest himself in beings which do not claim to be self-existent or without beginning. It involves some partial limitation of his own nature, some Docetic assumption of a temporary form. Çaiṇa piety reached the same end in a different way. "Victorious is the Eternal Sthānu (the 'Steadfast' or 'Stable'), whose one body is formed by the coalescence of all the gods": so ran the dedication of King Kakusthavarman (*regnabat* A.D. 500-50) on a great tank in Mysore adjoining a temple of Çiva.⁶

¹ For this decrepitude of the native Hellenic divinities by the time of the foundation of the Roman Empire see I. C (i) (a), vol. i, p. 57; II. D (vi), vol. ii. pp. 215-16; and IV. C (iii) (c) 2 (β), vol. iv, p. 349, above.

² For the elements and *êthos* of Hinduism see V. C (i) (c) 2, vol. v, pp. 137-8, above.

³ In essentials Hinduism appears to have attained its present form by the time of the Gupta Dynasty (*imperabant circa* A.D. 350-480, or, on a stricter reckoning, *circa* A.D. 390-470: see I. C (i) (b), vol. i, p. 85, footnote 1, above). On the other hand, Islam—which is the vehicle in which the 'jealous god' of Israel has made his epiphany on Indian soil—did not begin to impinge upon the Hindu World, even in the outlying and isolated province of Sind, until after the beginning of the eighth century of the Christian Era, and did not sweep over Hindustan until the turn of the twelfth and thirteenth centuries (see IV. C (ii) (b) 2, vol. iv, pp. 99-100, above).

⁴ For this dominance of the religious vein in the *habitus* of both the 'apparented' Indic and the 'affiliated' Hindu Society see the quotations from Sir Charles Eliot in III. C (iii), vol. iii, pp. 384-5 and 388, above.

⁵ The stage in the process of transcending a primitive polytheism which is represented, in the history of Indic religion, by the absorption of all other divinities into either Vishnu or Shiva was never completed in the Babylonian and Egyptian worlds. There does, however, seem to have been an inchoate and abortive tendency, in the time of 'the New Empire' of Egypt, for Amun-Re to attract into his own personality some, at least, of the other divinities of the Thothmean Pantheon—to judge by certain passages from the Egyptian religious literature of that age that have been quoted in V. C (i) (d) 6 (δ), vol. v, p. 531, above.

⁶ Carpenter, J. Estlin: *Theism in Medieval India* (London 1921, Williams & Norgate), p. 290.

With a former multiplicity of local divinities thus absorbed into the personality of one or other of two alternative Lords of the Universe, Hinduism has reached the stage that was reached by the religion of the Syriac internal proletariat¹ in the Achaemeno-Seleucid Age, when the mighty figures of Ahuramazda and Yahweh confronted one another as the two survivors on a stricken field of battle between a host of divinities who had been contending for the prize of becoming the vehicle for a revelation of the unity of the Divine Nature. This penultimate stage on the road towards the apprehension of the unity of God was attained by Hinduism at least fifteen hundred, and perhaps two thousand, years ago; and yet, in all the time that has elapsed since then, Hinduism has never taken the final step that was taken by the Syriac religion when Yahweh—intolerant of even a single peer—disposed of Ahuramazda by swallowing him whole. In Hinduism the concept of an Almighty God, instead of being unified, has been polarized round the mutually complementary and by the same token antithetic figures of two equally-matched candidates who have persistently refrained from settling accounts with one another.

In face of this strange situation we are bound to ask ourselves why Hinduism has accepted, as a solution for the problem of the unity of God, a compromise which, so far from offering a genuine solution, involves an unresolved contradiction inasmuch as it is really impossible to conceive of a godhead that is omnipresent and omnipotent—as Vishnu and Shiva each claim to be—without being at the same time unique. As soon as we put this question, the answer stares us in the face. The reason why Hinduism has come to this tragic halt within sight of a goal towards which it has travelled over so long a road is because neither Shiva nor Vishnu is a 'jealous god' in Yahweh's vehement vein. So far from that, the *êthos* of both these Hindu divinities bears a manifest resemblance to that of the Hittite and Egyptian and Syriac divinities—a Cybele and an Isis and a Mithras—whom the God of Israel overthrew after he had become the God of Christianity. In the same easy-going spirit Vishnu and Shiva have always preferred a compromise to a fight to the death; and it might have been expected *a priori* that, in a world where they did not find themselves confronted by any implacable rival, they would have been able to strike their compromise with an impunity that was impossible for Mithras and Cybele and Isis in an arena in which the Christians' 'jealous god' was also one of the combatants. Yet, as it has turned out, the fortunes of Shiva and Vishnu have been hardly happier than

¹ For the Syriac counterparts of the worships of Shiva and Vishnu see V. C (i) (c) 2, vol. v, p. 138, above.

those of their counterparts in the Roman Empire. They have been spared annihilation only to meet the more ironic fate of being reciprocally frustrated and stultified by one another. And this failure to apprehend the unity of God in a world in which the God of Israel has not been on the scene seems to indicate that the jealousy of Yahweh, which at first sight is so repellent, has a value that transcends its sheer survival-value in a struggle for existence between competing divinities. Its transcendent value lies in the disconcerting fact that a divinity who is credited by his worshippers with this spirit of uncompromising self-assertion proves to be the only medium through which the profound and therefore elusive truth of the unity of God has been firmly grasped hitherto by human souls.

8. *Archaism*

(α) *Archaism in Institutions and Ideas.*

Having now taken stock of the alternative ways of behaviour and feeling that present themselves to souls who are born into a socially disintegrating world, we may pass on to a consideration of the alternative ways of life that lie open to be followed in the same challenging circumstances; and here we may begin with that way which, in our preliminary reconnaissance of this stage in our Study, we have labelled 'Archaism'¹ and have defined² as an attempt to remount the stream of life—breasting the current and taking salmon-leaps up cataracts and waterfalls—in the hope of regaining one of those quiet upper reaches that in 'Times of Troubles' are regretted the more poignantly the farther they have been left behind.³

In making an empirical survey of examples of this phenomenon of Archaism, we shall perhaps obtain a clearer view if we once again divide the landscape up into those four fields—Conduct, Art, Language, and Religion—which we have already plotted out in the course of a preceding inquiry into the sense of promiscuity.⁴

¹ In V. C (i) (d) 1, vol. v, p. 383, above.

² In V. C (i) (d) 1, vol. v, pp. 383–4, above.

³ In recalling our definition of the term Archaism, it may be timely to remind ourselves of the limitations which we are placing upon it in this Study. For our purposes Archaism means an attempt to recapture some elements from the past of the society of which the archaist himself is a member. We are not taking Archaism to mean any and every attempt at a reversion to something in the Past; for we are not including in our use of the term those renaissances of elements in an 'apparented' civilization which an 'affiliated' civilization sometimes achieves. On the conception of History which we are trying to work out in this Study, such renaissances are contacts between different civilizations in the Time-dimension, whereas Archaism is a movement which does not range outside the bounds of the single civilization to which the archaist himself belongs. From our standpoint this difference between Archaism within the Time-horizon of a single civilization and the contact in Time between two different civilizations is more important than the feature—common to Archaism and Contact in Time—of being an attempt at a reversion to the Past.

⁴ See V. C (i) (d) 6, vol. v, above.

We shall find, however, that in these two different surveys our four fields are not completely coextensive in their several areas, and that this divergence arises from an inward diversity between the two states of mind which are the respective objects of study in the two cases. The sense of promiscuity is a spontaneous, un-self-conscious feeling which sometimes asserts itself, as we have seen, in defiance of tradition and of law and of public opinion and even of the taste and conscience of the person or persons whom the sense of promiscuity is overpowering and carrying away. By contrast, Archaism is a deliberate, self-conscious policy of attempting to swim against the stream of life at the bidding of a conscience and a taste and a public opinion and a law and a tradition which spur the swimmer into attempting his arduous *tour de force*; and accordingly we shall find that in the field of conduct Archaism expresses itself in formal institutions and formulated ideas rather than in un-self-conscious manners, and in the linguistic field in points of style and theme, which are matters of convention and, as such, are amenable to the control of the will, as well as in points of vocabulary, accident, and syntax, in which the wayward spirit of the vulgar tongue is apt to outwit the 'high-brow' purist's most straitly pedantic intentions.

If we now begin our survey by entering upon the field of institutions and ideas, our best plan of operations will be to start by taking a glance at institutional Archaism in detail and then to follow the spread of the archaistic state of mind over a wider and wider area till we arrive, in the end, at an 'ideological' Archaism which is all-pervasive because it is an Archaism-on-principle.

We have already come across one example of an archaistic resuscitation of a particular rite in our survey of civilizations that have come to a standstill on the threshold of life.¹ We have seen² how in Plutarch's day, which was the heyday of the Hellenic universal state, the ceremony of scourging Spartiate boys at the altar of Artemis Orthia—an ordeal which, in Sparta's prime, had been taken over from a primitive fertility-ritual and had been incorporated into the Lycurgean *agôgê*—was being practised at Sparta once again, though now with a pathological exaggeration which is one of the characteristic notes of Archaism in all its manifestations. In the Indic World, too, we have noted³ that the horse-sacrifice, which was a traditional Indic method of asserting a title to an oecumenical authority, was resuscitated first by Pushyamitra, the usurper who overthrew the Mauryas in the second century B.C., and afterwards—more than five hundred years later—by the

¹ In Part III. A, vol. iii, above.

² In Part III. A, vol. iii, p. 77, above.

³ In V. C (i) (d) 7, p. 2, footnote 1, above.

Guptas. It is easy to guess that Pushyamitra and Samudragupta in turn were moved to make this archaistic demonstration of their legitimacy by an inward doubt about the validity of their respective claims to a sovereignty on the oecumenical scale; and it was assuredly an inward loss of certainty about the boasted eternity of Rome that moved the Emperor Philip to celebrate, with the utmost solemnity and magnificence, the traditional *Ludi Saeculares* when, in A.D. 248, the Roman Empire was enjoying a momentary breathing-space in the midst of a bout of anarchy that was threatening to put an end to its very existence.¹

If we pass from recurrent rites to permanent institutions, we shall observe that, in this age in which the Roman Commonwealth appeared to be on the point of dissolution, the revival of the *Ludi Saeculares* in A.D. 248 was followed in or about A.D. 250² by the re-establishment of the venerable office of the censorship. And if we cast our eyes back to the 'Time of Troubles' from which the bout of anarchy in the third century of the Christian Era was divided by a span of effective Roman Peace, we shall see the Gracchi attempting to deal with the economic and social crisis which was the aftermath of the Hannibalic War by legislating for the restoration of a system of peasant-proprietorship which they believed to have been prevalent in the *Ager Romanus* at a date more than two hundred years before their own day.³ If we turn from the Hellenic to the Western World, we shall find an analogue of the re-establishment of the Roman censorship in the third century of the Christian Era in the re-enhancement, in the twentieth century, of the prestige and popularity of the British Crown to a height at which they had never stood at any time since the death of Queen Elizabeth in A.D. 1603.⁴

¹ The *Ludi Saeculares* had been first revived—or had been originally invented—by Augustus in 17 B.C., and had since then been celebrated by Claudius in A.D. 47, by Domitian in A.D. 88, by Antoninus Pius in A.D. 147 (according to Bury, J. B.: *A History of the Roman Empire from its Foundation to the Death of Marcus Aurelius* (London 1913, Murray), p. 524), and by Septimius Severus in A.D. 204. The celebration by Philip in A.D. 248 was officially in honour of the completion of the first millennium of Rome's existence, counting from the legendary date of the foundation of the city. For the symbolic meaning and psychological effect of the ritual act *condere saeculum* see Wendland, P.: *Die Hellenistisch-Römische Kultur*, 2nd and 3rd ed. (Tübingen 1912, Mohr), p. 144.

² The date is given as the 27th October, 251, in the so-called *Historia Augusta*, 'Valeriani Duo', chap. 5, § 4; but this can hardly be right, since by that date the Emperor Decius, who was the author of this archaistic measure, was in all probability already dead, and the true date must have been prior to the Emperor's departure from Rome for the campaign against the Goths in which he was to meet his death. (See Schiller, H.: *Geschichte der Römischen Kaiserzeit*, vol. 1, part (2) (Gotha 1883, Perthes), p. 807, footnote 3.)

³ See IV. C (iii) (c) 3 (β), vol. iv, p. 508; V. C (i) (c) 2, vol. v, pp. 70-1 and 78; and V. C (i) (d) 1, vol. v, pp. 388-9, above; and V. C (ii) (a), in the present volume, pp. 219-20, below.

⁴ The prestige and popularity which the British Crown was enjoying in the year 1937 would have astonished even the most sharp-sighted observer of the politics of the United Kingdom in 1837, on the eve of the accession of Queen Victoria—supposing that

If we pass from particular institutions to constitutions extending over the whole domain of political life, we shall observe that the revalorization of the medieval institution of the Crown in Great Britain has been contemporaneous with the organization in Italy of a 'corporative state', and that this is supposed to be a restoration of a political and economic régime which was in force in 'the Middle Ages' in Northern Italy and in the rest of the medieval Western city-state cosmos, and which was based, in its original form, upon the medieval trade-guilds. This modern Western Fascist 'corporative state' is a veritable *πάτριος πολιτεία* ('ancestral constitution') of the kind which was so prominent a portent in a disintegrating Hellenic World both during the Hellenic 'Time of Troubles' and after the establishment of a Hellenic universal state in the shape of the Roman Empire.

The slogan 'patrios politeia' implies the claim that a newly inaugurated constitution is in reality an old-established one which is now being brought back into force after an unmerited and unfortunate interval of disuse and oblivion. In the history of the decline and fall of the Hellenic Civilization we find this claim being made, within twenty years of the breakdown of 431 B.C., by the Athenian reactionaries who succeeded, through a *coup d'état*, in imposing upon the Athenian Dêmos the short-lived oligarchic constitution of the year 411. This 'Régime of the Four Hundred' was hailed by its supporters as a return to the Constitution of Cleisthenes and perhaps even to the Constitution of Solon. In a similar tone Agis and Cleomenes—the two Spartan martyr-kings who successively staked and lost their lives on a policy of political and social Archaism in the third century B.C.—proclaimed that they were restoring the Constitution of Lycurgus and that they ought therefore to be applauded as reformers instead of being execrated as revolutionaries.¹ At Rome in the second century B.C.

our imaginary observer could have returned to life after the lapse of a hundred years. It is true that in 1937 the Crown performed a practical service—for which there had been no demand a hundred years back—as a personal link between the several fully self-governing states members of the British Commonwealth of Nations (for this latter-day role of the British Crown see Part II. B, vol. i, pp. 190-1, and IV. C (iii) (b) 5, vol. iv, p. 187, above). Yet a contemporary English observer would not be disposed to believe that the twentieth-century revalorization of the Crown had been wholly, or even mainly, due to any such utilitarian constitutional considerations. The deeper reason why the British Crown was now once more attracting to itself the affections and the hopes of its subjects in the United Kingdom was because the English in this generation had a feeling—which was not the less strong for being unacknowledged—that England had now passed her political zenith. It was this feeling that was sapping the prestige and popularity of Parliament—the master institution of England in her maturity—and was restoring the prestige and popularity of the Crown, which had been the master institution of an age of political adolescence to which the twentieth-century Englishman was now wistfully looking back.

¹ See Part III. A, vol. iii, pp. 76-7; V. C (i) (c) 2, vol. v, p. 78; and V. C (i) (d) 1, vol. v, pp. 388-9, above; and V. C (ii) (a), in the present volume, pp. 219-20, below.

the Gracchi professed—and this, no doubt, with the same good faith as their Heracleid forerunners at Sparta—to be exercising the office of the Tribune of the Plebs in the fashion that had been intended at the time when, at the turn of the fourth and third centuries, the dissident Plebeian *imperium in imperio* had been re-absorbed into the legitimate Roman body politic in virtue of a sagacious political compromise.¹

In the same Roman Commonwealth a hundred years later the dictatorship—which by that time had come to be the only possible instrument for appeasing a *stasis* which the Gracchi had provoked—was commended to the *ci-devant* governing class by an Augustan Archaism which was as *rusé* as the Gracchan Archaism had been *naïf*. The assassination of Octavian's adoptive father Divus Julius had shown that the sheer necessity and urgency of establishing a dictatorial régime were not enough to guarantee immunity from criminal violence to a statesman who was attempting to perform this invidious public service. So far from that, the mere admission of the need for a dictatorship was a crushing indictment of the class in whose hands the government of the Roman Commonwealth had been concentrated for the past two centuries. If the Ordo Senatorius were to be forced to confess that a dictator could no longer be dispensed with, then it would be confessing in the same breath its own complete political and moral failure; and the fate of Caesar the dictator-god had shown that it was impossible to extort this confession from the Roman aristocracy without driving them, in the act, into a homicidal frenzy of exasperation. The adoptive Caesar Octavianus might lack the genius of the genuine Caesar the God, but he did possess, in the highest degree, the capacity for learning by experience; and, when the crime of 44 B.C. confronted Octavian with the problem of how to wield Caesar's powers without courting Caesar's fate, he contrived a solution which earned him the titles of Augustus and Pater Patriae and enabled him to become the true founder of the long-yearned-for Hellenic universal state.²

Augustus's solution of the political crux of the age was to 'save the face' of the Ordo Senatorius by tacitly inviting its members to collaborate with him in an open constitutional conspiracy. The unavowed bargain which he induced them to accept was a 'division of powers' in which Augustus received the substance while the

¹ For this chapter of the constitutional history of the Roman Republic see IV. C (iii) (b) 9, vol. iv, p. 205; IV. C (iii) (c) 3 (β), vol. iv, p. 508; V. C (i) (c) 2, vol. v, pp. 70-1; V. C (i) (d) 1, vol. v, pp. 388-9, above; and V. C (ii) (a), pp. 219-20, below.

² For Augustus's role and achievement see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 648-9, above, and V. C (ii) (a), in the present volume, pp. 187 and 190, below.

Senate retained the form; and the offer—which would have been rejected as an insult by the *ci-devant* Roman governing class in its heyday—was accepted by their epigoni with alacrity and gratitude. In consequence, Augustus died in his bed at a ripe old age more than forty years after he had settled down into his dictatorship under the disarming title of Princeps Senatus; and throughout those four decades every urgent autocratic act that he had performed had been juridically warranted by the constitutionally well-established powers of the traditional republican magistracies which the Senate had officially conferred upon him. *De facto* the nature and scope and effect of these powers were magnified out of all recognition by being combined in the person of a single incumbent upon whom they had been conferred in some cases in perpetuity and in the rest with a frequency of iteration which had no historical precedent. Yet this patent fact that the ancient republican magistracies amounted cumulatively to a dictatorship was never allowed—either by Augustus of the one part or by the Senate of the other—to disturb the constitutional fiction that the Princeps Senatus was wielding no power which was alien to the ancient republican constitution of the Roman Commonwealth; and this archaistic constitutional make-believe actually provided so solid a foundation for a new political structure that the Augustan Principate endured for the best part of three hundred years.¹

It is also significant that the meticulous respect that was shown by Augustus, throughout the period of his constitutional rule, for the theory of the sovereignty of the Senate, was equalled and even surpassed towards the close of this three-hundred-years' period after having been cast aside, with various degrees of brutality, by the first emperor's earlier successors from Tiberius onwards. In the breathing-spaces in that half-century of political convulsions, between A.D. 235 and A.D. 284, which was the prelude to a liquidation of the Augustan Principate to make way for an absolute monarchy on the Sasanian pattern, the Senate found itself once again being treated with an honour which it had seldom known since the death of Augustus himself. The struggle against the proletarian dictatorship of Maximinus Thrax was conducted by the Gordians—and, after their deaths, by Maximus and Balbinus—as the Senate's nominees and mandatories. And even after Gallienus had deprived the Ordo Senatorius of their last shreds

¹ It will be seen that Divus Caesar, with his reckless radicalism, is the Hellenic counterpart of a Sinic Ts'in She Hwang-ti, while Augustus, with his artful Archaism, is the counterpart of Liu Pang, the *novus homo* who became the founder of the Prior Han Dynasty. (For this contrast between Ts'in She Hwang-ti and Liu Pang see V. C (i) (d) 7, p. 37, footnote 1, above. For the general distinction between the two classes of saviours with the sword who respectively fail and succeed in an attempt to establish a universal state see V. C (ii) (a), pp. 186-91, below.)

of effective power,¹ and after Aurelian had given the Hellenic World a foretaste of the despotism that was to be imposed upon it, once for all, by Diocletian within less than ten years of Aurelian's death, we find the Army engaging with the Senate in an unprecedented contest in courtesy in which each party insisted, *more Japonico*, that the other should accept the honour of electing Aurelian's successor, until at last the Senators admitted defeat by consenting to nominate one of their own number. In A.D. 275 it was strange indeed to see a proletarian soldiery submitting to the command of a cultivated civilian who was already seventy-five years old; but it was even stranger—when the anxieties and fatigues of his incongruous task brought the aged Emperor Tacitus to his grave within six months of his investiture with the purple—to see his virile successor Probus, who was a peasant-soldier of the same rough Illyrian stock as Aurelian and Diocletian, declining to assume the Imperial title, though he was already the candidate of the Army and the master of the Empire *de facto*, until he had asked for and obtained the Senate's ratification of the Army's choice. Thus, in the constitutional history of the Roman Commonwealth, the Senate was never treated with a greater show of deference than at a moment when it was on the point of losing the last shadow of a sovereignty which by that time had been in abeyance *de facto* for the best part of four centuries.² So strong was the archaistic impulse in a society which was obsessed with the problem of self-preservation under a threat of imminent death.

If we turn from a disintegrating Hellenic to a disintegrating Sinic World, we shall be able here to observe the emergence of a constitutional Archaism of a more comprehensive scope, extending from public into private life and from institutions to ideas.

The challenge of the Sinic 'Time of Troubles' produced a spiritual ferment in Sinic minds which displayed itself both in the Confucian humanism of the fifth century B.C.³ and in the later

¹ According to Parker, H. M. D.: *A History of the Roman World from A.D. 138 to 337* (London 1935, Methuen), pp. 178–81, Gallienus (*imperabat solus* A.D. 260–8) made Senators ineligible for appointment to military commands and perhaps also deprived the Senatorial governors of provinces of their authority over the troops stationed in their districts. (This conjecture is based on Aurelius Victor, *De Caesaribus*, 33, 34, as read in the light of the evidence of inscriptions.)

² The Senate's loss of control over the reins of government *de facto* is to be dated neither from the victory of Augustus over Antony at Actium in 31 B.C. nor from the formation of the Second Triumvirate in 43 B.C. nor from the formation of the First Triumvirate in 60 B.C., but rather from the civil war of 90–81 B.C. The Sullan restoration was already an archaistic *tour de force*; and it was the tragedy of the Roman constitutionalists of the generation of Cicero and Cato Minor that they had been born into an age in which the dictatorship was overdue and in which the surviving simulacrum of Senatorial government was a delusive anachronism.

³ For the humanistic ethos of Confucius himself see the passages quoted from Granet in V. C. (i) (d) 7, p. 14, footnote 3, above.

and more radical schools of the 'Politicians' and 'Sophists' and 'Legists';¹ but this burst of spiritual activity was ephemeral.

'Ce sont les efforts tentés par les gouvernements de potentats (dont certains jouaient les despotes éclairés) pour édifier l'État sur un ordre social rénové qui sont à l'origine des concurrences corporatives et des polémiques sectaires par lesquelles se signalent les v^e, iv^e et iii^e siècles. Beaucoup d'idées fécondes furent alors brillamment défendues. Aucune n'a réussi à modifier profondément la mentalité des Chinois. . . . Comme les solutions proposées l'attestent, toute l'activité de pensée que ces problèmes ont provoquée a été déterminée par une crise sociale où le système féodal et la conception traditionnelle de l'Étiquette auraient pu sombrer. L'ordre féodal, cependant, est, pour le fond, demeuré vivace. L'agitation philosophique qui donne tant d'intérêt à la période des Royaumes Combattants a abouti au triomphe de la scolastique. Un conformisme archaïsant a renforcé le prestige de l'Étiquette et de tout le vieux système de classifications, de comportements, de convenances.'²

This revulsion towards the Past can be seen at its clearest in the fate which overtook the Confucian humanism.

'En même temps que s'atténuait l'inspiration humaniste, s'accroissait l'attachement à un décorum archaïsant. Plutôt qu'à observer les comportements de l'homme en cherchant à affiner le sens de la dignité humaine, les héritiers infidèles du Maître s'employèrent à subordonner l'ensemble du savoir à l'étude des traditions rituelles.'³

From this attitude of mind it is a short step to the Archaism-on-principle of Tong Chong-chu (*vivebat circa* 175-105 B.C.), an Imperial civil servant of the Prior Han régime who succeeded in making a *reductio ad absurdum* of the bureaucratic outlook by working out a system for subjecting every administrative act to the test of an historical precedent.

'C'est en se servant des précédents, c'est-à-dire grâce à une interprétation des faits de l'histoire, qu'on justifiera, mais aussi qu'on pourra condamner, les décisions du prince et de ses conseillers. Ceux-ci et leurs décrets se trouveront jugés par le Ciel et le peuple, dès qu'un savant, ayant produit un *fait historique*, l'aura interprété en montrant quel fut, jadis, dans une *situation déclarée analogue* à telle situation actuelle, le jugement du peuple et du Ciel.'⁴

Another example of Archaism-on-principle in a different sphere is the cult of a largely fictitious Primitive Teutonism which has

¹ For a conspectus of the sects and schools of thought which were brought into existence by the ordeal of the Sinic 'Time of Troubles' see Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), Book IV, chaps. 1-3, and Waley, A.: *The Way and its Power* (London 1934, Allen & Unwin), Introduction.

² Granet, op. cit., pp. 423-4 and 417-18.

³ Ibid., p. 553. A still later stage in the metamorphosis of Confucianism, when it degenerated into sheer sorcery, has been touched upon in V. C (i) (d) 6 (δ), vol. v, pp. 549 and 555-6, above.

⁴ Granet, op. cit., p. 577.

been one of the provincial products of a general archaistic movement of Romanticism in the modern Western World.

This curious superstition has arisen within the last hundred years in certain provinces of Western Christendom in which the current vernacular happens to be some twig of the Teutonic branch of the Indo-European family of languages. The postulates are that the Teutonic language has been spoken, *ab initio*, by a blonde and blue-eyed race; that this race is autochthonous in Northern Europe; and that the region, the race, and the language are all of them uniquely noble.¹ After having afforded a harmless antiquarian gratification to some nineteenth-century English historians and instilled a perhaps more tiresome racial self-conceit into some twentieth-century American ethnologists; this cult of an imaginary Primitive Teutonism has latterly revealed its true nature by becoming—in the watchword 'Blood and Soil'—the palladium of the post-war National-Socialist Movement in the German Reich. We are here confronted with an exhibition of Archaism which would be pathetic if it were not so sinister.² A great modern Western nation which has been brought, by the spiritual malady of this Modern Age,³ within an ace of an irretrievable national collapse, has apparently lost faith in the panoply of a modern Western culture which has not availed to save it from this dreadful experience; and, in a desperate effort to find a way out of the trap into which the recent course of history has inveigled it, this distraught and disillusioned Germany has turned away from a future prospect of interminable humiliation and horror, and has doubled back upon its own historical past. This is, no doubt, a trail which has only to be retraced in the reverse direction in order to lose itself sooner or later in the darkness of the primeval forest out of which our common Teutonic ancestors first emerged into notoriety some two thousand years ago; but it remains to be proved that the *Urwald* is an earthly paradise!

In this latter-day German archaistic resort to a fancied saving grace of the pristine tribal lair and the primitive tribal stock there is a touch of the Sinic style of Archaism with its *flair* for the primitive solidarity between the human tribe and the tribe's non-human environment; but in this modern Western variation on a

¹ The racial facet of this delusion has been examined already in this Study in II. C (ii) (a) 1, vol. 1, pp. 207-49, above.

² At the moment of revising this passage for publication in November 1938 the German National-Socialist cult of 'Blood and Soil' had already earned this epithet. For, although it had not so far precipitated a European War, it had already let loose, inside the Reich, an outburst of savage Anti-Semitism.

³ Germany's troubles in the present generation can be ascribed, without dispute, to the contemporary *Zeitgeist* of the Western Society of which Germany herself is a fraction, though it might be more difficult to arrive at an agreement on the minor question of assessing the relative responsibilities of the Germans and their neighbours.

Sinic theme the subtle Sinic touch is incongruously combined with the simple animal instinct which prompts a baby kangaroo in the zoological gardens of a great metropolis to take refuge in its mother's pouch after it has been put out of countenance by the collective stare of an inquisitive crowd of human spectators.

Yet another form of Archaism-on-principle is the hankering after 'a return to Nature' or to 'the simple life';¹ and in our modern Western Society, since the days of Jean-Jacques Rousseau and Marie Antoinette, this itch has been apt to seek relief in a variety-show of cranks and affectations—in unfavourable contrast to the corresponding reaction of the Taoist sages of a disintegrating Sinic World, who turned their minds towards the soberer simplicity of the archaic village communities out of which the now decadent Sinic Society had originally sprung.²

'L'idéal politique des maîtres taoïstes paraît avoir été un régime de minuscules communautés paysannes. Dans une bourgade isolée, un saint (vénéreé comme un dieu du sol) peut, de la façon la plus modeste, exercer ses pouvoirs indéfinis. T'chouang tseu déclare que tout va bien dans l'Empire lorsqu'on laisse libre cours aux traditions locales qu'il nomme les maximes villageoises.'³

This archaistic ideal is commended in the nineteenth chapter of the *Tao Te King*:⁴

Banish wisdom, discard knowledge,
And the people will be benefited a hundredfold.
Banish human kindness, discard morality,
And the people will be dutiful and compassionate.
Banish skill, discard profit,
And thieves and robbers will disappear.
If when these things are done they find life too plain and unadorned,
Then let them have accessories;
Give them Simplicity to look at, the Uncarved Block to hold,
Give them selflessness and fewness of desires.

In the eightieth chapter of the same work the same ideal picture is drawn again, but this time with a vividness which conveys, in

¹ This hankering, which in one aspect is an expression of archaistic-mindedness, has another aspect in which it is a gesture of *abandon* (see V. C (i) (d) 1, vol. v, p. 377, and V. C (i) (d) 2, vol. v, p. 403, above).

² See Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), pp. 109-10, for the view that this hankering after a return to 'the simple life' is a symptom of social senescence.

³ Granet, op. cit., p. 547. While the Taoists were the chief advocates of an archaistic return to the simple life during the final paroxysm of the Sinic 'Time of Troubles' in the fourth and third centuries B.C., this idea was not the monopoly of any one of the numerous Sinic schools of philosophy that were evoked by the challenge of being born into that terrible age. There was, for instance, an archaistic vein in the philosophy of Mencius (*vivebat*, 372-289 B.C.) (Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), pp. 187-9 and 192-4).

⁴ The following English translations are taken from Waley, A.: *The Way and its Power* (London 1934, Allen & Unwin).

a few strokes of the Sinic brush, the essence of an Archaism that is elaborated by Plato in page after page of *The Republic* and *The Laws*.

'Given a small country with few inhabitants, he could bring it about that though there should be among the people contrivances requiring ten times, a hundred times less labour, they would not use them.¹ He could bring it about that the people would be ready to lay down their lives and lay them down again in defence of their homes, rather than emigrate. There might still be boats and carriages, but no one would go in them; there might still be weapons of war, but no one would drill with them. He could bring it about that "the people should have no use for any form of writing save knotted ropes, should be contented with their food, pleased with their clothing, satisfied with their homes, should take pleasure in their rustic tasks. The next place might be so near at hand that one could hear the cocks crowing in it, the dogs barking; but the people would grow old and die without ever having been there."²

To an English reader of the *Tao Te King* the note of this passage is already familiar in Gray's *Elegy Written in a Country Churchyard*; and in the England of the present writer's day this archaic life was still being lived—in an unbroken continuity with the Past—by some, at least, of the inhabitants of the tract of Yorkshire country-side in which he wrote these lines. If there is any grain of truth in Tong Chong-chu's belief that the lessons of History may elucidate the signs of the times,³ it may be surmised that, to-day, there are children already born in London or in Leeds who will live to be overwhelmed by a passionate archaistic impulse to throw away their motor-cars and wireless sets and Lewis guns and bombing-planes in order to free their hands for handling 'the poor crooked scythe and spade' that are fabled once upon a time to have bestowed a homely happiness upon the modern English urban proletariat's far-off rustic ancestors when; in an unwittingly Taoist vein, 'they kept the noiseless tenor of their way along the cool sequester'd vale of life'.

(β) *Archaism in Art.*

The vogue of Archaism in Art is something so familiar to modern Western Man that he is apt to take it for granted without ever becoming conscious of it. For the most conspicuous of the

¹ Compare the legend of the latter-day Chinese pilot that has been recounted in III. C (i) (c), vol. iii, pp. 188-9, above.—A.J.T.

² The passage within double quotation marks is, in Waley's view, a quotation from an earlier Taoist work (see Waley, op. cit., p. 242, footnote 1). In more concrete and prosaic terms this Taoist Sinic idea is also expressed by the Positivist Western philosopher Comte in his suggestion that the great national states of the modern Western World should be broken up into *Kleinstaaten* on the scale of the Grand Duchy of Tuscany (see Caird, E.: *The Social Philosophy and Religion of Comte* (Glasgow 1885, MacLehose), pp. 239-40).

³ See p. 56, above.

arts is Architecture; in almost every great city of the Western World in A.D. 1938 at least nine-tenths of the buildings then standing were less than a hundred years old;¹ and our modern Western architecture had already been falling under the dominion of Archaism at the time—by then a hundred years back—when this orgy of building had begun.² Thus the worker who travels twice a day between his suburban dormitory and his urban factory or office has registered automatically, on his visual memory, the print of innumerable Neo-Gothic railway-stations and churches, while, if he is a worker in New York, his eye will have become equally well accustomed to the millions of square feet of Neo-Colonial³ brickwork that cast a cloak of archaistic decency over the steel-and-concrete skeletons of the sky-scrapers. If our breadwinner is not in too much of a hurry to glance at the marble bas-relief that crowns the entrance to that Colonial-brick-skinned mammoth office-building, he may find to-day that the lines of the carving have been cunningly reduced to the clumsy stiffness of the pre-Romanesque Dark Ages;⁴ and, if he actually has the leisure to step into the Neo-Gothic ironwork of this municipal art gallery, he may stumble here into a roomful of 'Pre-Raphaelite' pictures.

This triumph of Archaism over the visual arts is, indeed, one of the dominant features in our modern Western urban landscapes; but it is not, of course, a phenomenon that is peculiar to our

¹ The European traveller becomes aware of this as soon as he visits the United States or any other overseas country that is Western in its culture. At first he is surprised to find that cities which are not more than one hundred or two hundred years old can look—when viewed from bus-roof or train-window—so little different from the cities of his own European home, which can count their age in thousands of years instead of hundreds. It is only on second thoughts that it occurs to him that, in all but one or two of the European cities that are to-day in the full swim of modern Western life, nine-tenths of the buildings are no older than ten-tenths of those in Buffalo or Pittsburgh. This is true not only of Manchester and Berlin, but even of London and Cologne and Paris and Milan.

² In this connexion it may be well to draw attention once again to the distinction, pointed out on p. 49, footnote 3, above, between Archaism within the limits of the experience of a single society and that contact in the Time-dimension between two different civilizations which displays itself in what is commonly called a renaissance. In the modern Western World, for example, the Neo-Gothic Archaism of the architecture of the past hundred years has been a reaction against the fashion, which had been prevalent for some three or four centuries before that, of discarding almost every vestige of a native Western style in order to ape the alien architecture of the Hellenes.

³ The Americans use the term 'Colonial' for the eighteenth-century style of architecture which the English call 'Georgian'.

⁴ The primitivism of one school of modern Western sculpture has suggested the following reflexions to a contemporary Western biologist:

'To my mind, the closest analogy to the evolution of a given group is the history of the art and literature of a civilization. The clumsy primitive forms are replaced by a great variety of types. Different schools arise and decline more or less rapidly. Finally a period of decline sets in, characterized by Archaism like that of the last ammonites. And it is difficult not to compare some of the fantastic animals of the declining periods of a race with the work of Miss Sitwell, or the clumsy but impressive with that of Epstein. The history of an animal group shows no more evidence of planning than does that of a national literature. But both show orderly sequences which are already pretty capable of explanation.'—Haldane, J. B. S.: *Possible Worlds* (London 1928, Chatto & Windus), p. 43.

Western Society. If a Londoner travels to Constantinople instead of travelling to New York, and watches the pageant of the sun setting over the ridge of Stamboul, he will see, silhouetted against the sky-line, dome after dome of the mosques which—under an Ottoman régime that has provided the main body of Orthodox Christendom with its universal state¹—have been constructed, with a profoundly archaistic servility, upon the pattern of the Big and the Little Haghía Sophía: the two Byzantine churches whose audacious defiance of the fundamental canons of the classical Hellenic order of architecture had once upon a time proclaimed in stone the emergence of an infant Orthodox Christian Civilization out of the wreckage of a Hellenic World which had already ceased to live.²

If we turn to the decline and fall of this Hellenic Society to which our own, as well as the Orthodox Christian, is affiliated, and watch what the cultivated Emperor Hadrian was doing with his wealth and leisure in the pale clear sunshine of a Hellenic 'Indian Summer',³ we shall see him spending a considerable part of both in furnishing his suburban villa with expertly manufactured copies of the masterpieces of Hellenic sculpture of the archaic period (that is to say, the seventh and sixth centuries B.C.). The taste of a generation of connoisseurs who were too highly refined to appreciate the obvious and were too exquisitely sensitive not to shiver at the mildest touch of a frost in which they could recognize the herald of an approaching winter, found the masterliness of the Hellenic sculptor's art in its fifth-century maturity too self-confident—and at the same time perhaps too painfully close to the verge of the débâcle—to be valued quite at its proper worth. On the other hand the archaic style appealed to the sophisticated intellects of Hadrian's generation as something precious and *recherché*, while it captivated their unconscious selves by instilling a suggestion of the dewy freshness of dawn into the still and stale air of a monotonous evening. In combination, these two distinct motives for preferring the archaic to the classical style made an irresistible appeal to the Hellenic *virtuosi* of Hadrian's day. And similar considerations will explain why it was that, in the latter stages of the long-drawn-out dotage of the Egyptiac Society, the artistic style of 'the Old Kingdom'—the style which had distinguished the growth-stage of Egyptiac history in a remote antiquity

¹ See Part III. A, vol. iii, pp. 26-7; IV. C (ii) (b) 1, vol. iv, p. 70; V. C (i) (c) 1, vol. v, p. 54; and V. C (i) (c) 4, vol. v, p. 348, above.

² In IV. C (ii) (a), vol. iv, pp. 54-5, above, it has been argued that the Byzantine breach with a Hellenic past in the domain of Architecture was deliberate.

³ For the view that an ostensible 'Golden Age' of the Hellenic World, during the reigns of the Roman Emperors Nerva to Marcus inclusive, was really no more than an 'Indian Summer', see IV. C (ii) (b) 1, vol. iv, pp. 58-61, above.

before the beginning of the 'Time of Troubles'—was taken as a pattern by the Saïte Pharaohs of the Twenty-Sixth Dynasty after an interval of some two thousand years.

(γ) *Archaism in Language and Literature.*¹

When the spirit of Archaism is moved to express itself in the field of Language and Literature, the supreme *tour de force* to which it can address itself here is to bring a 'dead language'² to

¹ In this field, Archaism—in the sense of a deliberate return to some form of language or style of literature or range of thought and feeling that has fallen into disuse—has to be distinguished from a mere conservatism which clings, perhaps more often than not out of sheer inertia and with no deliberate policy at all, to a form of language that has ceased to be intelligible or to a style of literature that has ceased to be serviceable or to a range of thought and feeling that has ceased to come natural. The commonest examples of such linguistic and literary conservatism are to be found in one or other of the two moulds of legal formulae and religious liturgies: for instance, in the Norman-French tags in our twentieth-century English judicial and parliamentary procedure, and in the Latin Liturgy of the Catholic Church. Other examples of the preservation, in a living liturgy, of a language that is dead in every other usage are the survival of the Attic *koinē*, Old Slavonic, and Classical Georgian in different versions of the Liturgy of the Orthodox Christian Church; the survival of Classical Syriac, Classical Armenian, Classical Coptic, and Ge'ez in different versions of the Liturgy of the Monophysite Christian Church; the survival of Classical Syriac in the Liturgy of the Nestorian Christian Church; and the survival of Classical Hebrew in the religious life of Jewry.

The Egyptiac Society is perhaps unique in having performed twice over the *tour de force* of preserving a form of language until it has become unintelligible—and this not merely in a liturgy but in a profane literature. 'As far back as we can trace it, the Egyptian language displays signs of being carefully fostered'; the works of literature that were written in this Classical Egyptian during the Egyptiac 'Time of Troubles' and the earlier days of the Egyptiac universal state (*circa* 2424–1770 B.C.) 'were read in the schools five hundred years later; and from their language and style no one dared venture to deviate'. The spoken language, however, went its own way, until 'finally . . . the difference . . . became so great that the classical language could scarcely be understood by ordinary people. In the great revolution at the end of the Eighteenth Dynasty which we associate with the name of Amenophis IV [Ikhnaton] these shackles also were broken. Men began to write poetry in the actual language of the day; and in it is composed the beautiful Hymn to the Sun, the manifesto of the Reformed Religion. But, whereas the other innovations of the heretical régime disappeared after its collapse, this particular one survived—doubtless because the conditions hitherto existing had become impossible.' Once more, however, a cultural conservatism was to prevail in Egyptiac intelligences over a human thirst for life. The 'New Egyptian Literature, which, as we might suppose, had set out to be really popular, did not long pursue this course. . . . For something like five centuries this later literature appears to have been cultivated, and then its language also became a dead one, which the boys at school had to learn!' (Erman, A.: *The Literature of the Ancient Egyptians*, English translation (London 1927, Methuen), pp. xxiv–xxvi; see also the present Study, IV. C (ii) (a), vol. iv, p. 55, footnote 3, and V. C (i) (d) 6 (γ), vol. v, p. 496, above).

This incorrigible conservatism which clings blindly to whatever it may happen to have in hand is evidently not the same thing as an Archaism which deliberately drops what it has been holding in order to set the hand free for grasping at some lost treasure of the Past.

² The term 'dead language' is ordinarily used to describe a language which has fallen into disuse merely as a spoken vernacular, while remaining in use as a vehicle for Ritual or Law or Science or even for Belles Lettres; but, strictly speaking, a language which is in this position (e.g. Latin in the position which it now occupies in the modern Western World) is only half dead. The truly dead languages are those of which some inscribed or written monument has been recovered by the ingenuity of our modern Western archaeologists after the rediscovered language has been not merely in disuse but in oblivion for hundreds or thousands of years—a sequence of death, burial, and disinterment which has been the history of Etruscan, Lycian, Ancient Egyptian both 'Old' and 'New' and 'Demotic', Sumerian, Akkadian, Elamite, Urartian, the Old Persian of the Achaemenian inscriptions, Tokharian, and so on. The criterion of 'deadness' in this stricter sense is that the disinterred texts have to be deciphered either from internal evidence or by the lucky discovery of some bilingual or multilingual

life again by putting it back into circulation as a living vernacular; and such an attempt is being made to-day, under our eyes, in several places in our Westernized World.

In this instance the impulse has come from the modern Western movement of Nationalism, which we have defined in this Study as a transference of interest from the whole to the part and as a withdrawal of loyalty from the Creator in order to bestow it upon the creature.¹ A community that has succumbed to this grave spiritual malady is apt to resent its cultural debt to the society of which it is itself a fragment, and in this frame of mind it will put itself to great trouble and inconvenience for the sake of transposing its culture into a shape that can be certified as being parochially 'national' throughout. One of the staples of such a 'national culture' is a 'national language'; and, while most of the nationalized communities of the modern 'Great Society' have found their 'national language' ready to hand, there are some which have been reduced to the laborious and ludicrous expedient of fabricating the 'mother-tongue' that they are determined to possess, in the temper of a *nouveau riche* who furnishes himself with portraits of appropriate ancestors. In our latter-day Westernized World the would-be self-sufficient nations that have found themselves destitute of natural linguistic resources have all taken the road of Archaism as the readiest way of obtaining a supply of the linguistic commodity of which they are in search. At the present moment there are at least five nations in our world that are engaged in producing a distinctive national language of their own by the process of putting back into circulation as a living vernacular some language which has long since ceased to be current in any but an academic sphere. The five nations whom the writer of this Study has in mind are the Norwegians, the Irish, the Ottoman Turks, the Greeks, and the Zionist Jews; and it will be seen from this roll-call that none of them is a chip of the original block of Western Christendom. The Norwegians and the Irish are respectively remnants of an abortive Scandinavian and an abortive Far Western Christian Civilization which came into collision with the Roman Christendom in the first chapter of our Western history and were successively defeated and devoured by this more puissant neighbour.² The Ottoman Turks and the Greeks are recently Western-

inscription in which one of the other languages employed is some language that has never ceased to be studied (as, for example, a key to Ancient Egyptian was found in the Rosetta Stone, on which one version of the text is engraved in the Attic *κοινή*). Some of these genuinely dead languages (e.g. Etruscan and Lycian) still remain undeciphered because no illuminating bilingual inscription has been found. There is probably no example of any attempt to resuscitate a language that is 'dead' in this stricter sense.

¹ See Part I. A, vol. i, p. 9; IV. C (iii) (b) 4 and 5, vol. iv, pp. 156-90; IV. C (iii) (c) 2 (a), vol. iv, p. 261; and IV. C (iii) (c) 2 (β), vol. iv, p. 303, above.

² See II. D (vii), vol. ii, pp. 322-60, above.

ized contingents of the Iranic Society in the one case and of the main body of the Orthodox Christian Society in the other. The Zionist Jews are a fragment of a fossil of alien origin which has been embedded in the body of Western Christendom since its pre-natal days.

The need which the Norwegians feel to-day for the production of a modern Norwegian national language is the historical consequence of a political eclipse under which the Kingdom of Norway lay from A.D. 1397, which was the date of the Union of Calmar,¹ until A.D. 1905, when Norway at length recovered her complete political independence. During the greater part of this period of more than 500 years—from 1397, that is to say, until 1814—Norway was politically united with Denmark under conditions which made her culturally as well as politically subordinate to her sister kingdom; and in these circumstances the indigenous Scandinavian literature in the Norse language—a literature which was now no more than a decadent relic of an abortive Scandinavian Civilization—gave place in Norway to a version of the modern Western literature which was written in Danish by Norwegian hands,² though on Norwegian lips its pronunciation was modified into harmony with the contemporary Norwegian vernacular. Thus, when the Norwegians set themselves tentatively *post* 1814, and resolutely *post* 1905, to fit themselves out with a national culture which was to be complete according to the specifications of a conventional French or English pattern, they found themselves without any literary medium, except one of foreign mintage, for conveying modern Western ideas, and without any mother-tongue except a peasant *patois* which had ceased to be a vehicle for the long since extinct Scandinavian literature without ever having been refashioned into a vehicle for a Norwegian version of the modern literature of the Western World. Confronted with this awkward gap in the linguistic department of their national outfit, the Norwegian nationalists have been trying to produce a Norwegian language that will serve peasant and townsman alike by fulfilling simultaneously both the two requirements of being national and being cultivated; and the method that they have followed has

¹ See II. D (v), vol. ii, p. 175, above.

² In Norway the indigenous Scandinavian literature in the Norse language died out in the fourteenth century; and by the sixteenth century Old Norse had ceased to be generally intelligible to the literate public in Norway—as is testified by Laurents Hanssøn and other sixteenth-century Norwegian men-of-letters who on this account were already beginning to make translations out of foreign languages not into Norse but into Danish for the benefit of Norwegian readers. On the other hand, in Iceland, where the indigenous Scandinavian literature in Norse had attained its greatest brilliance (see II. D (iii), vol. ii, pp. 94–6, and II. D (vii), vol. ii, pp. 356–9, above), there has been no comparable break in the tradition, either linguistic or literary. Any one who is literate in the living form of Icelandic Norse can still read the Classical Icelandic Norse literature without difficulty down to the present day.

been to provide a substitute for an orally Norwegianized Danish (the *Bokmaal*) by cultivating the contemporary Norwegian vernacular into a New Norse (*Ny Norsk*)¹—in the hope that a *patois* which has shown its mettle in the past by providing the linguistic resources for the creation of a Classical Scandinavian literature may prove strong enough to-day to stand the strain of being suddenly called upon to serve as a vehicle for the ponderous mental panoply of modern Western Man.²

These Norwegian nationalists' Irish contemporaries and counterparts are seeking a similar solution for a linguistic problem of their own which is the same in substance while presenting greater difficulties in almost every detail. In Ireland the British Crown has played the political role of the Danish Crown in Norway,³ and this with much the same linguistic and cultural consequences. The language of the politically dominant Power has come to be the channel through which the dominated people has obtained its

¹ A satirical caricature of the *Maalstrevers*' endeavours has been drawn by Ibsen in *Peer Gynt*:

But ere modern times began
 'Twas the great Orang-utan
 O'er the forest ruled supreme,
 As he chose could fight and scream. . . .
 Ah, but then the foreign yoke
 Came and marred the speech he spoke;
 On the ape descended quite
 'Twice two hundred years of night. . . .
 I have striven to protect
 Our primeval dialect,
 To restore it, and to preach
 General liberty of screech:
 Screeched myself, to show the ways
 It was used in tribal lays.

(G. M. Gathorne-Hardy's translation.)

² While the stimulus which has moved the Norwegian *Maalstrevers* to act has been the modern Western psychosis of Nationalism, the confidence that has nerved them to attempt their *tour de force* has been fortified by the fact that the Norse language has acquitted itself brilliantly once before as a medium for a literature. This archaistic inspiration of the *Maalstrever* movement is apparent in the work of its originator, Ivar Aasen (*vivebat* A.D. 1813-96). Aasen's essay in creating a New Norse literary language was eclectic. He did not try (as some of his successors have tried) to keep within the limits of this or that local living Norwegian dialect; he wrote in a composite language for which a number of different dialects were laid under contribution; and in making his selection he showed an unmistakable preference for those elements in the living Norse *Sprachgut* that were the most closely akin to the Old Norse of the Classical Scandinavian literature, without paying so much attention to the utilitarian consideration of whether the living elements of speech that happened to possess this archaistic title to nobility were also the elements that enjoyed the widest contemporary currency. In this indirect way the Old Norse language of the Classical Scandinavian literature has made its influence felt in the formation of the New Norse that has been called into existence in order to serve as an instrument for modern Western thought. On the other hand the *Maalstrevers* have found it impracticable to extend their sources of linguistic supply by drawing direct upon the vocabulary or upon the style of the extant literature in Old Norse, owing to the remoteness of the Classical Scandinavian literature from that of the modern West in subject and setting and ethos.

³ Since a Danish reader might take objection to this comparison, the English author of this Study will anticipate his critic by making the admission that England has much more to regret in looking back on her behaviour towards Ireland than Denmark has in looking back on hers towards Norway.

access to the literary sources of the modern Western culture; but in the Irish case the resulting difficulties have been aggravated by two unfortunate facts: in the first place the intrusive Teutonic English is far more alien from the native Celtic Irish than Danish is from the sister Norwegian twig of the same Scandinavian branch of a single Teutonic stem;¹ and in the second place the English language has latterly supplanted the Irish language in Ireland not merely as the medium of culture and government but also as the vernacular tongue of the common people—except for a small minority of the peasantry in a few remote and backward districts along the western coast.² Accordingly, in Ireland it is an even greater *tour de force* than it is in Norway to attempt to conjure a cultivated national language out of a peasant *patois*; and in these more desperate circumstances the Irish have resorted to an expedient of which the Norwegians have fought shy. The Irish have tried to lend a rubble foundation the strength to bear the weight of the massive superstructure which they are proposing to build upon it by grouting it with the vocabulary of an ancient and long since extinct literature³—in the hope that, through being reconditioned in this exotic way, it may become capable of serving as a vehicle for the modern Western culture. A foreign observer of this Irish experiment may well feel that Archaism could no farther go—at any rate in the linguistic field. Yet, if the observer happens to be an Englishman, it would ill become him to smile at the extravagance of the nationalism of his Irish neighbours. He would do better to reflect that, if—as seems only too probable—the archaistic *tour de force* of attempting to rehabilitate the Irish

¹ This difference, however, has counted for less than might have been expected; for in the sight of the Norwegian *Maalstrevers*—who have warped their vision by wearing the spectacles of Nationalism—the Danish language is not a sister Scandinavian language to be called in aid, but a hostile foreign language to be expelled from the national territory. The negative process of eliminating everything Danish from the literary language of Norway has been the most assiduous and the most successful of the activities of the *Maalstrever* movement; and for the sake of getting rid of a Danish word these Norwegian linguistic nationalists do not hesitate to alloy their New Norse with an outlandish vocabulary which is neither Scandinavian nor even Teutonic but French, Latin, or Greek in origin.

² This replacement of Irish by English as the vernacular language of the great majority of the Irish people is a recent event. As lately as a hundred years ago Irish was still prevalent among the peasantry in all parts of the island outside the Dublin Pale and the Ulster Plantations. This spread of English at the expense of Irish is to be explained partly by the sheer impassability of the gulf between the two languages (which made it impossible to blend them and therefore necessary to make a choice between them) and partly by the advantage which English acquired through becoming an oecumenical *lingua franca*. Thanks to its attainment of this status, English was employed as a matter of course in the nineteenth century as the vehicle for the spread of education in Ireland; and it was also propagated unintentionally by every Irish emigrant to the United States of America who eventually came home to settle down—or even merely to pay a passing visit to his family.

³ This indigenous Irish literature did not survive the tribulations of the seventeenth century of the Christian Era, and its *floruit*—the age in which its surviving masterpieces were composed—was a thousand years before that.

language proves to be a disastrously heavy incubus upon the cultural life of a small and till recently backward people, then this will be one more item on the list of unhappy legacies that Ireland has inherited from her ill-starred political association with the English observer's own country.

The linguistic Archaism in which the Ottoman Turks have been indulging under the late President Mustafâ Kemâl Atatürk's régime is perhaps more wanton than the Norwegian, but certainly less tragic than the Irish, excursion along the same regressive path. Modern Ottoman Turkish—as it was until the other day, when the archaizers took it in hand—was a language which, in point of vocabulary, was in much the same condition as modern English, and this for much the same reasons. The ancestors of the modern Turks, like those of their English contemporaries, were outer barbarians who had trespassed on, and squatted in, the derelict domain of a broken-down civilization; and the descendants of both sets of barbarians have made the same use of the vehicle of language as a means for acquiring a tincture of civilization. Just as the English have enriched their meagre primitive Teutonic vocabulary by loading it with a wealth of borrowed French and Latin and Greek words and phrases,¹ so the 'Osmanlis have encrusted their plain Turkish with innumerable jewels of Persian and Arabic speech.² The result, in both cases, has been to endow a poverty-stricken barbarian language with a richness in means of expression which might be envied by the great culture-languages themselves; and the English-speaking peoples, for their part, are still modestly content to enjoy this borrowed abundance without dreaming of repudiating it as a national disgrace. The nationalism of the English-speaking peoples is, however, a native growth and therefore a mild one; for Nationalism is a cultural virus which appears to work with a potency that is proportionate to its novelty. At any rate, this spiritual infection from the West has been taken so seriously by the Ottoman Turks that they have come to the conclusion that they would be unworthy of their Eurasian Nomad ancestors if they forbore to purify their ancestral language from the foreign accretions which it has acquired in the course of an unfortunate but ephemeral episode in its long and glorious history. When it is remembered that the Persian and Arabic element in Modern Turkish is at least as large and as important proportionately as the French and Latin and Greek element in Modern

¹ In taking on board this exotic cargo the medieval English were not guilty of the same wanton extravagance as the modern Norwegians (see p. 66, footnote 1, above). They were filling an empty hold and not jettisoning one cargo in order to make room for another.

² See V. C (i) (d) 6 (y), vol. v, p. 516, above.

English, it will be seen that, in this enterprise of cleansing his native tongue, the Ghāzi set himself a task with which none but a hero could grapple; and the Turkish hero's method of setting about it was the method which he had previously employed in ridding his native country of the alien elements in its population. In that graver crisis Mustafā Kemāl had evicted from Turkey an old-established and apparently indispensable Greek and Armenian middle class, on the calculation that, when once the social vacuum had been produced, sheer necessity would compel the Turks to fill it by taking upon their own shoulders social tasks which hitherto they had lazily left to others. On the same principle the Ghāzi afterwards evicted the Persian and Arabic words from the Ottoman Turkish vocabulary; and, by this drastic measure, he demonstrated what an astonishing intellectual stimulus can be given to mentally sluggish peoples (such as his Turks and our English are) when they find their mouths and ears remorselessly deprived of the simplest verbal necessities of life. In these dire straits the Turks have latterly been ransacking Cuman glossaries, Orkhon inscriptions, Uighur sutras, and Chinese dynastic histories in order to find—or fake—a genuine Turkish substitute for this or that sternly prohibited Persian or Arabic household word; and for an English spectator these frantic lexicographical labours at Angora and Stamboul are an awe-inspiring spectacle; for they give him an inkling of tribulations that the future may hold in store for English-speakers too, if ever the day should come when 'pure English' in the literal sense is required of us by some masterful 'Saviour of Society' as a sacrifice on the altars of our English 'blood and soil'.

If we turn from modern Turkey to modern Greece we shall find here a linguistic Archaism which has the same political background as the Irish and Norwegian examples which we have already examined—with the Turks in Greece taking the place of the English in Ireland and of the Danes in Norway as the political villains of the piece. Rather more than a hundred years ago the Greek insurgents against the Ottoman Pādishāh succeeded, thanks to the intervention of a Western France and England and a Westernized Russia, in carving out of a moribund Ottoman Empire the nucleus of a sovereign independent Greek national state, and they then at once set out to lead a new life as a fledgling Greek nation on Western lines. For this cultural adventure, however, they found themselves equipped linguistically with nothing better than a peasant *patois*¹ which was incapable, as it stood, of serving

¹ At the time of the foundation of the present Greek national state (A.D. 1829-32) the Modern Greek *patois* was by no means so near the point of extinction as the Modern Irish *patois* was at the time of the foundation of the Irish Free State (A.D. 1921). On the other hand it was not (as the Modern Norwegian *patois* was in A.D. 1905) the common

as a vehicle for expressing the ideas of the contemporary West, in whose intellectual life these politically emancipated Greeks were now eager to participate. In their impatience at this obstacle in their Westward path the Greeks anticipated the Irish in resorting to the expedient of reconditioning their *patois* for its strange and exacting new task by grouting it with injections of an antique form of the language—a form which in the Greek case had long since fallen out of use in every sphere except the Liturgy of the Greek-speaking patriarchates of the Orthodox Church. But, in making this same experiment of producing a new language by calling an old one back to life, the Greeks have had to wrestle with a problem which is the antithesis of the difficulty which has confronted the Irish. Whereas the Irish have been handicapped, like the Turks, by the scantiness of the nutriment that they have been able to extract for a living *patois* out of a dead culture-language, the modern Greeks have been overwhelmed by an *embarras de richesses*. For the liturgical Greek which has served their turn is not, like Old Irish (and Old Norse), the fragile blossom of a culture that died in its infancy. The liturgical Greek is the Attic *κοινή*; and, in audaciously drawing upon this reservoir of Ancient Greek, with its vast floating wealth of Pagan as well as Christian literature, the patriots who have been trying to force the growth of a Modern Greek culture-language have been in danger, not of seeing their irrigation-channel run dry, but of bringing down a spate which might obliterate the living *patois* instead of invigorating it. In fact, the besetting temptation in the path of this Modern Greek linguistic Archaism has been to draw upon the resources of Ancient Greek too lavishly; for, in themselves, these resources are almost inexhaustible; and the short cut to the supply of any Modern Greek linguistic need is always to open yet another Attic sluice-gate. These archaistic excesses have provoked a modernist reaction; and the artificial 'language of the purists' (*ἡ καθαρεύουσα*) has been answered in a caricature of the 'popular language' (*ἡ δημοτική*) which is no less artificial in its own contrary way, since it pounces upon every vulgarity that it spies in the gutter, while it avoids every classicism with as prim a pedantry as the champions of the opposing purism display in ejecting even the healthiest Turcisms and Italianisms from their stilted vocabulary. This battle in a Westernized Greece between the advocates of alternative

language of the whole population of the new kingdom. Even within its original narrowly drawn frontiers—which excluded large Greek-speaking and still larger Greek-feeling populations—the Kingdom of Greece included considerable tracts in which the vernacular of the peasantry was not Greek at all. In Attica, for instance, the capital of the new kingdom, which had been placed at Athens, was surrounded by an Albanian-speaking peasantry.

artificial languages has been as bitter in its way as the feud between Constantinians and Venizelists.¹

Our fifth instance of linguistic Archaism in the 'Great Society' of the present day is the reconversion of Hebrew into a vernacular language of everyday life on the lips and in the ears of the Zionist Jews from the Diaspora who have settled in Palestine;² and this is the most remarkable case of all the five; for, whereas none of the other four languages in question, not even the Irish, has ever quite ceased to be spoken or heard, more than twenty-three centuries have passed since the original Hebrew vernacular was supplanted by Aramaic in Palestine itself,³ while even in North-West Africa, where the Hebrew language was introduced by the Israelites' neighbours the Phoenicians and not by the Israelites themselves, it does not seem to have lingered on much later than the lifetime of Saint Augustine (*decessit* A.D. 430).⁴ For more than two thousand years past the language that a Jewish child has learnt at its mother's knee has been the mother-tongue of one or other of the Gentile peoples among whom Jewry has been dispersed abroad: Aramaic or Greek or Latin; Arabic or Castilian; German⁵ or Russian or English.⁶ For all this length of time, until within living memory, Hebrew has survived only as the language of the liturgy of the Jewish Church and of the scholarship that is concerned with the study of the Jewish Law. And then, in the course of a single generation, this 'dead language' has been brought out of the synagogue and has been converted into a vehicle for conveying the modern Western culture—at first in a newspaper

¹ Greece is perhaps the only country in Christendom—either Orthodox or Western—in which popular disturbances over the question of translating the Bible out of a classical language into the vulgar tongue have been excited, not against a veto upon the project of translation, but against a threat to carry the project into effect!

² Zionism has been touched upon already in this Study in II. D (vi), vol. ii, pp. 252-4, above.

³ Hebrew was ceasing to be spoken by the Jewish community in Palestine as early as the third quarter of the fifth century B.C. on the testimony of Nehemiah (Neh. xiii. 24, already quoted in V. C (i) (d) 6 (y), vol. v, p. 499, footnote 5, above). At the present day the Aramaic which supplanted Hebrew (see I. C (i) (b), vol. i, pp. 80-1, and V. C (i) (d) 6 (y), vol. v, p. 491, above) and which was afterwards supplanted in its turn by Arabic has likewise become extinct in Palestine and all but extinct throughout Syria. The Aramaic language's last surviving Syrian citadel is the Jabal Qalamūn, an isolated range of hills which rises beyond the north-eastern fringe of the Ghūtah of Damascus and juts out farther in the same direction into the Hamād. In this fastness an Aramaic dialect is still spoken in the villages of Ma'lūlah, Bakh'ah and Jubb 'Adīn. 'The dialect differs very considerably from the vernacular Syriac of the Nestorian Christians in Persia and Kurdistan, so that the communities are not mutually intelligible. 'The dialect of these villages is said to be largely mixed with Arabic, and is never written. Classical Syriac is here and elsewhere used in the liturgies of some of the churches' (British Admiralty Naval Staff Intelligence Division: *A Handbook of Syria, including Palestine* (London 1920, H.M. Stationery Office), p. 196).

⁴ See III. C (i) (a), vol. iii, p. 138, footnote 3, above.

⁵ That is, the Jewish dialect of German known as Yiddish (Jüdisch).

⁶ The Gentile language spoken by a particular Jewish community at a particular date has not, of course, always been the language of the country in which that community has been domiciled at the moment. For example, at the present moment the Jews in the ex-Ottoman countries speak Castilian and the Jews in Poland German.

press in the so-called 'Jewish Pale' in Eastern Europe, and now latterly in the schools and the homes of the Jewish community in Palestine—where the children of Yiddish-speaking immigrants from Europe and English-speaking immigrants from America and Arabic-speaking immigrants from the Yaman and Persian-speaking immigrants from Bukhārā are all growing up together to speak, as their common language, a tongue which, in Palestine, has not been heard on children's lips since the days of Nehemiah.

These five cases of linguistic Archaism in our contemporary Westernized World are all in some degree abnormal in the sense of being, all of them, cases in which a community that is not one of the original members of the Western Society has resorted to Archaism in the linguistic field as one of its ways and means of qualifying itself for naturalization, by fitting itself out with all the equipment that any nation is expected to possess if it is to be admitted to the Western comity. Yet the very fact that Archaism should have come in so handy for this purpose seems to indicate that there must be a strong archaistic vein in our latter-day Western nationalism, at any rate in its linguistic facet.

This alliance between linguistic Archaism and linguistic Nationalism in the modern, or 'post-modern', Western World has a parallel in the Hellenic World in the days of the Hellenic universal state.

'In Roman Imperial times the antiquarian interest in local dialects is reflected in the revival of their use in parts of Greece where for some two centuries previously the Attic *κοινή* had been in general use, at least in inscriptions. So, for example, in the case of Lesbian, Laconian, and to some extent in Elean, where examples of rhotacism reappear in the first and second centuries A.D. It is impossible to determine in every case whether this was a wholly artificial revival of a dialect which had long ceased to be spoken, or was an artificial elevation to written use of a dialect which had survived throughout the interval as a *patois*. The latter is true of Laconian; but for most dialects we have no adequate evidence as to the length of their survival in spoken form.'¹

In the Hellenic World, however, this symptom of social decline in the shape of linguistic Archaism was no mere adjunct of a parochial nationalism, but was something more pervasive than that,

¹ Buck, C. D.: *Introduction to the Study of the Greek Dialects* (Boston 1910, Ginn), p. 161. In the anthology of inscriptions in non-Attic Greek dialects that forms part of this book the author has included one archaistic inscription in Lesbian Aeolic which can be dated from internal evidence to some year between 2 B.C. and A.D. 19 [No. 24], and four archaistic inscriptions in Laconian Doric [Nos. 70-3] which all date from the second century of the Christian Era—a century in which the Hellenic craze for Archaism was at its height in every field. The reason why it can be asserted with assurance that the Laconian dialect continued to be spoken as a peasant *patois*, during the interval between its natural demise and its artificial revival as a culture-language worthy of being inscribed on stone, is that this dialect continues to be spoken down to the present day along the remote and isolated eastern seaboard of Laconia. This 'Tsakonian' *patois* is the only surviving form of spoken Greek that is not derived from the Attic *κοινή*.

and very much more important. For in the course of the disintegration of the Hellenic Society this movement asserted itself not only in official or semi-official records but also in the field of literature.

If you examine a book-case filled with a complete collection of the books, written in Ancient Greek before the seventh century of the Christian Era,¹ that have survived until the present day, you will soon notice two things: first that the overwhelmingly greater part of this surviving corpus of Ancient Greek literature is written in the Attic dialect, and second that, if this Attic part of the corpus is arranged chronologically, it falls apart into two distinct groups. In the first place there is an original Attic literature which was written at Athens in the fifth and fourth centuries B.C. by Athenians² who were writing, un-self-consciously and unaffectedly, in the language which they themselves were at the same time speaking and hearing in the course of their daily life in their native country. In the second place there is an archaistic Attic literature which was produced over a period of some six or seven centuries—from the last century B.C. to the sixth century of the Christian Era—and was the work of authors who for the most part did not live at Athens and did not speak Attic as their native tongue—indeed, a number of them were not born speakers of any dialect of Greek at all.

The geographical range over which these Neo-Attic writers are distributed is almost as wide as the *Οἰκουμένη* itself. If we take half a dozen of the non-Christian names, without calling upon the Christian Fathers, we can muster Josephus of Jerusalem and Aelian of Praeneste and Marcus Aurelius of Rome and Lucian of Samosata and Julian of Constantinople (or, ought we to say, 'of Paris'?) and Procopius of Caesarea. Yet, in spite of this wide diversity of origin, the Neo-Atticists display an extraordinary uniformity in one point which, for them, was the essence of their work. In their Attic vocabulary and Attic syntax and Attic style they are, one and all, frank and servile and shameless imitators. They have even bequeathed to us some of the grammars and the glossaries—indispensable tools of their literary craft—which they

¹ This *terminus ante quem* has to be inserted because, from the eighth to the fifteenth century of the Christian Era inclusive, a copious literature in the Ancient Greek language was produced in the Orthodox Christian World, and much of this medieval Greek literature (which corresponds to the medieval Latin literature of Western Christendom) has also survived. On the criterion laid down at the beginning of this chapter (see p. 49, footnote 3, above) this medieval Greek literature is the offspring, not of Archaism, but of 'Contact in Time'.

² Athenians in the geographical sense of natives of Attica, but not necessarily in the political sense of citizens of the Athenian state. For example, the advocate Lysias, whose Attic is unsurpassed in its purity, was politically a resident alien whose devotion to Athens did indeed win for him the Athenian franchise, but did not avail to enable him to retain it.

laboriously compiled for themselves by making a minute and exact study of the linguistic idiosyncrasies of their ancient Athenian examples. They were determined to make their pens proof against solecisms, and they achieved their ambition. Indeed, their success in the game of archaistic writing is vouched for by the very fact that the works of these Neo-Atticists have been preserved in quantities that are at first sight astonishingly voluminous—by comparison either with the actual volume of the surviving Athenian Classics or with the probable volume of the Ancient Greek literature as a whole.

The explanation is that, at the critical time, on the eve of the final dissolution of the Hellenic Society, when the question 'to be or not to be' was being decided for each and every Ancient Greek author by the prevailing literary taste of the day, the test question for copyists was 'Is it pure Attic?' rather than 'Is it great literature?'; and the certified specimens of pure Attic were apt to be picked out for recopying on their formal Attic merits, without any invidious discrimination between a Plato of Athens and a Lucian of Samosata. The consequence is that we find ourselves in possession of a number of works in Neo-Attic which have comparatively little intrinsic merit; and, if some miracle were to give us the chance of making over again, for ourselves, the choice that has actually been made for us by the Atticomaniac copyists of the Imperial and the Post-Imperial Age, we would gladly exchange this mediocre Neo-Attic stuff for one-tenth of that quantity of the mighty works of Greek literature which are now lost to us. Among these lost works are almost all the masterpieces of the third and second centuries B.C.; and these were allowed to drop out of circulation for ever simply because the great Greek writers of that age, like their greater predecessors in the fifth and fourth centuries, wrote un-self-consciously and unaffectedly in the current Greek of their own time and place, and therefore wrote for the most part in a vulgar Attic *κοινή*¹ which the Neo-Attic archaizers of the succeeding age—with their laboriously cultivated hyper-sensitiveness to fine shades of language and style—found almost too excruciating to read and *a fortiori* uninviting to copy out. Why spend labour on preserving these horrors when the only sure result would be to imperil the Attic purism of future generations?

It is this perversely archaistic outlook that has deprived us of all but a fragment of the work of Polybius of Megalopolis (*vivebat circa* 206–128 B.C.),² an author whose surviving literary remains

¹ For this Attic *κοινή* see V. C (i) (d) 6 (γ), vol. v, pp. 494–5, above.

² For the life of Polybius as an illustration of the movement of Withdrawal-and-Return see III. C (ii) (b), vol. iii, pp. 310–18, above.

proclaim him to have been one of the four greatest historians who ever wrote in Ancient Greek from beginning to end of the life-span of the Hellenic Society,¹ and who—perhaps just because he had so much to tell—was content to write in the pedestrian style of his generation. This loss of the work of Polybius is merely one conspicuous illustration of the severity of the losses that have been inflicted upon us by the Neo-Attic Archaism of the Imperial Age of Hellenic literary history. The Greek literature that was written neither in original nor in archaistic Attic has been reduced to shreds and tatters; and the papyri which our modern Western archaeologists have recovered from deposits made in Egypt in the Ptolemaic and the Roman Age have restored to us less of the vulgar Attic Greek literature of the Hellenic 'Time of Troubles' than might have been expected. The truth is that the Epimethean fixation upon an Attic literary past took possession of Greek minds at the very time when Greek texts began to be deposited in Egypt in consequence of the conquest of the Achaemenian Empire by Alexander. And thus even to-day, when we have had the benefit of half a century of papyrological enterprise and ingenuity, our extant specimens of non-archaistic post-Alexandrine Greek literature are still substantially confined to two sets of works: on the one hand the bucolic poetry of the third and second century B.C., which was preserved as a literary curiosity for the sake of its precious Doric; and on the other hand the Greek text of the Jewish and Christian Scriptures—the Septuagint crowned by the New Testament—which was safeguarded by a religious conviction that these linguistically bizarre specimens of the Attic *κοινή* with an Aramaic flavouring were direct utterances of the Living God.²

The Atticism which triumphed in the Archaistic Age of Hellenic history was not the only literary exercise in which the archaists indulged. Our surviving body of Neo-Attic Greek literature has its pendants in the Neo-Ionic pieces of Lucian³ and in the Neo-Homeric epic poetry which was cultivated by a long line of antiquarian scholars⁴ ranging from Apollonius Rhodius, whose lifetime

¹ Two of the four are, of course, indisputably Thucydides and Herodotus; and most Hellenists would probably allow Polybius the third place. As for the fourth place, in the humble opinion of the writer of this Study it should be assigned, not to Xenophon, but to Procopius.

² It was this belief in the verbal inspiration of the Bible that compelled even the most Attically educated of the Christian Fathers to assess the value of this stylistically barbarous farrago on its intrinsic spiritual merits. If they had not been under the discipline of this religious categorical imperative, we may suspect that the vocabulary and style of the Greek Bible would have been intolerable for the Origenes and Basils and Gregories and John Chrysostoms.

³ e.g. his *Περὶ τῆς Ἀστρολογικῆς* and his *Περὶ τῆς Συρίνης Θεοῦ*.

⁴ 'My learned friend'—a form of reference which is in use between fellow barristers in the Law Courts in London at the present day—is the stock epithet for a poet in the language of those Latin poets of the last century B.C. who had learnt their trade from the Greek poets of the Alexandrian school! This usage of the word *doctus* tells a tale.

extended from the third into the second century B.C., through Quintus Smyrnaeus in the fourth century of the Christian Era to Nonnus Panopolitanus, who may have lived to see the fifth century pass over into the sixth.¹

The archaistic resuscitation of the Attic dialect of Greek to serve as a vehicle for a voluminous Neo-Attic literature has an exact parallel in Indic history in the resuscitation of Sanskrit in comparable volume for a similar purpose.²

The original Sanskrit had been the vernacular of the Eurasian Nomad horde of the Aryas, who had broken out of the Steppe and had flooded over Northern India, as well as over South-Western Asia and Northern Egypt, in the second millennium B.C.;³ and on Indian ground this language which had come in on the lips of barbarian invaders had been preserved in the Vedas, a corpus of religious literature which had become one of the cultural foundations of an Indic Civilization that had arisen on the site of the Aryas' Indian camping-grounds after the dust of the Aryan invasion had subsided. By the time, however, when this Indic Civilization had broken down and entered upon the path of disintegration,⁴ Sanskrit had passed out of current usage and had become a classical language which continued to be studied because of the enduring prestige of the literature that was enshrined in it. As a medium of communication in everyday life, Sanskrit had by this time been replaced by a number of younger local vernaculars which were all alike derived from Sanskrit but which had come, in process of time, to be so far differentiated both from their parent and from one another that—from a practical, if not from a philological, point of view—they had become separate languages.⁵ One of these

¹ This linguistic Archaism which is so prominent a feature of the Greek literature of the decline and fall was no doubt stimulated by a literary convention which had established itself in Hellas long before the breakdown of 431 B.C. This convention consisted in allocating a particular dialect to a particular genre of literature, whatever might be the native dialect of the author by whom this genre was being practised. For example, the Attic tragedians of the fifth century B.C. wrote their choruses in an artificial kind of Doric which had come to be recognized as the proper medium for lyrics; and as early as the eighth or seventh century B.C., or whatever the date may have been at which Hesiod was writing, the Homeric dialect—an archaic Ionic with a tincture of Aeolic in it—had become so completely *de rigueur* for any Greek poet who was writing in hexameters that it was employed by the Ascran author of *The Works and Days* as a matter of course, though this Homeric Greek was almost as remote from Hesiod's native Boeotian Aeolic as it was from the native Attic *κοινή* of Apollonius and Quintus and Nonnus.

² This resuscitation of Sanskrit is also discussed in this Study in V. C (i) (c) 3, Annex II, vol. v, p. 606, footnote 3, above.

³ For the long and widely divergent ramifications of the Völkerwanderung of the Aryas see I. C (i) (b), vol. i, pp. 104-7, and p. 111, footnote 1; II. D (vii), vol. ii, pp. 388-91; and V. C (i) (c) 3, vol. v, pp. 263-4, above.

⁴ In other contexts (e.g. in I. C (i) (b), vol. i, p. 87, and in IV. C (ii) (b) 1, vol. iv, pp. 66-7, above) we have seen reason to date the breakdown of the Indic Civilization before the birth of Siddhārtha Gautama the Buddha, and perhaps even before the end of the eighth century B.C.

⁵ Franke, R. O.: *Pāli und Sanskrit in ihrem historischen und geographischen Verhältnis*

prākṛits—the Pāli of Ceylon—was employed as the vehicle of the Hinayanian Buddhist Scriptures, and several others were employed by the Emperor Aṣoka (*imperabat* 273–232 B.C.) as vehicles for the edicts which he caused to be inscribed at various places in his extensive dominions.¹

Aṣoka's object in varying the prākṛit which he employed according to the locality in which he was employing it was to make sure that his edicts should be intelligible to the local population in each of the districts where they were inscribed. Intelligibility was for him a major consideration, to which he sacrificed the trivial convenience of establishing a single standard official language for the whole of his empire. And the ruler of a universal state who thus forbore to insist upon the use of any one current local vernacular at the expense of the rest would presumably have scouted, *a fortiori*, the suggestion that he should address his subjects in a language which—like Sanskrit in Aṣoka's day—had long since passed out of spontaneous use. Nevertheless, just such an artificial revival of Sanskrit was started, at a point within the frontiers of Aṣoka's empire,² at latest immediately after, and possibly even before, the Emperor Aṣoka's death;³ and this archaizing linguistic movement steadily extended its range⁴ until, by the sixth century of the Christian Era, the triumph of the Neo-Sanskrit language over the prākṛits was complete on the Indian mainland⁵—leaving Pāli to survive as a literary curiosity in the solitary island fastness of Ceylon.

Thus our extant corpus of Sanskrit literature, like our extant corpus of Attic Greek literature, falls into two distinct portions:

auf Grund der Inschriften und Münzen (Strassburg 1902, Trübner), pp. 65–6, 90, and 139–40. The geographical lines of division between these local prākṛits were not clear-cut; the respective ranges of the various dialectical peculiarities overlapped (op cit., p. 126).

¹ See V. C (i) (d) 6 (γ), vol. v, p. 498, above.

² The geographical centre of dispersion of this archaistic movement for the revival of Sanskrit is shown by the epigraphical evidence to have been the Ganges-Jumna Duab between the foot of the Himalayas and the city of Mathurā (Franke, op. cit., p. 83).

³ Franke (in op. cit., p. 87) dates the beginning of the Neo-Sanskrit movement before the end of the third century B.C.

⁴ The spread of the use of Neo-Sanskrit from its starting-point in the Ganges-Jumna Duab into other parts of India was gradual, and some of the stages can be dated. In inscriptions Neo-Sanskrit did not begin to replace Pāli in any part of the Indic World until the last century B.C. (Franke, op. cit., pp. 50–1); and, even in Northern India, it was not until the second century of the Christian Era that Neo-Sanskrit inscriptions became so numerous relatively to inscriptions in Pāli (ibid., p. 52). In the Deccan Pāli was still holding the field in the second century of the Christian Era, and only began to give way to Neo-Sanskrit in the third century; and in this region some Pāli inscriptions have been discovered which date from as late as the fourth century (ibid., p. 51). There are also extant a number of documents in a mixed language—part Pāli and part Neo-Sanskrit—and these can be arranged in a series showing the gradual transition from a Pāli with an infusion of Sanskrit in it to a Sanskrit with a trace of Pāli in it (ibid., pp. 53–4). In the first century of the Christian Era Pāli was still predominant in the grammatical terminations, but in the second century the Sanskritisms became much more sharply pronounced (ibid., p. 59).

⁵ Ibid., p. 53.

an older portion which is original and a younger portion which is imitatively archaistic.¹

Up to this point we have confined our attention to matters of language and style, without pausing to consider that this linguistic Archaism is unlikely to have been cultivated as an end in itself.² It is, however, manifestly improbable *a priori* that even a pedant would condemn himself to the hard labour of resuscitating a language which had passed out of circulation unless he were moved by some strong desire to make use of the 'dead language', when he had duly succeeded in reviving it, in order to convey to his fellow men some literary message—a complex of emotions or a system of ideas—which was of capital importance in the archaist's own estimation. We must therefore go on to inquire into the literary purposes for which the Neo-Sanskrit and the Neo-Attic linguistic vehicles were actually employed. Were they used for mere literary exercises in genres which were just as much *vieu jeu* as their linguistic medium? Or was there a contrast between the Archaism of the medium and the spirit of the ideas and emotions which the medium was made to convey?

If we put this question first apropos of the Neo-Sanskrit literature we shall find that the archaic vehicle has in fact been used principally for the conveyance of something which is not merely new but is also charged with a creative vitality; for the main use to which the Neo-Sanskrit language has been put has been to serve as a vehicle for the Scriptures of the Mahāyāna and Hinduism;

¹ In the Attic Greek literature the original and the archaistic portions are not only distinct, but are separated from one another chronologically, as we have seen, by an interval of not much less than a quarter of a millennium between the latest Athenian works in original Attic and the earliest non-Athenian works in Neo-Attic. In making a corresponding survey of the Sanskrit literature it is impossible to draw so sharp a line. The Sanskrit Epic, for example, which, in the form in which it has come down to us, is undoubtedly a work of the Neo-Sanskrit Age, may also (as is pointed out in V. C (i) (c) 3, Annex II, in vol. v, above) contain an original Sanskrit element which it is impossible now to disengage from its Neo-Sanskrit recensions and accretions. Thus, in the Epic, we have one outstanding work of Sanskrit literature which cannot be classified as belonging wholly either to the Neo-Sanskrit or to the original Sanskrit stratum.

² Before leaving the subject of purely linguistic Archaism we may take notice, in the Syriac World, of the epic poet Firdawsi's policy of restricting to a minimum the quota of the Arabic vocabulary in the New Persian language in which he was writing. (For the infusion of Arabic into New Persian see I. C (i) (b), vol. i, p. 80, above, and V. C (i) (d) 6 (γ), vol. v, p. 501, above.) This is undoubtedly a case of linguistic Archaism; but Firdawsi's archaistic impulse was not very strong; for it did not occur to him to write in Pehlevi, and he was probably unaware of the existence of the two dialects of Old Iranian—uncontaminated by any Semitic taint—that are familiar to us as the respective vehicles of the Achaemenian inscriptions and of the oldest stratum of the Avesta.

The archaistic purge by which Firdawsi relieved the New Persian language of an intrusive Arabic vocabulary has a parallel in which New Persian has been the victim instead of being the beneficiary. The Hindi form of Hindustāni 'was derived from Urdū by ejecting all words of Arabic and Persian birth, and substituting in their place words borrowed or derived from the indigenous Sanskrit' (*The Imperial Gazetteer of India*, new edition (Oxford 1907, Clarendon Press), p. 366, quoted already in V. C (i) (d) 6 (γ), vol. v, p. 518, footnote 2, above). It is one of the curiosities of history that these Hindu archaists should have been missionaries of an alien religion and culture.

and these were a pair of new-born 'higher religions'—Hinduism being a direct product of the religious experience of the internal proletariat of the Indic Society, while the Mahāyāna was a metamorphosis of the Buddhist philosophy of the Indic dominant minority.¹ Was the Neo-Attic language turned to any corresponding account? The answer is in the affirmative; for the corpus of Neo-Attic literature includes both the works of the Neoplatonic philosophers and those of the Christian Fathers. Yet, if we leave our answer at that, it will be misleadingly incomplete; for neither the Neoplatonic Philosophy nor the Christian Theology was the 'subject-matter' for the sake of which the Attic language was so laboriously reconstructed. That tremendous labour of love and learning was lavished upon a dead Attic dialect without any intention of using it to convey a living message. The purpose of the Atticists was indeed the exact contrary of that. The vision that inspired them was the prospect of re-creating a linguistic medium through which they would be able to walk—for all the world like Alice through her looking-glass—out of the living social environment of their own time and place into a dead social environment which could only be recaptured, if it could ever be recaptured at all, by the magic of a literary make-believe.

'Eloquence was now not valued because it affected the practical decisions of the Present, but because it transported men into the Past. Probably more than any other generations of men, before or since, the Greeks of the first Christian centuries found their pleasure in living by imagination in a Past five hundred years gone by. The events of those hundred and eighty years long ago, from the Battle of Marathon to the death of Demosthenes, stood out in peculiar illumination; all that followed was grey. It was as if those hundred and eighty years were the only ones that counted in human history: things had then really happened, events in which it was worth being interested. When you went from the commonplace streets of your town into the hall where a great orator was to speak and submitted yourself to that flow of words, the rhetoric acted, as some drugs do, to carry you into a wonder-world. If the cities of the Greek World had ceased for centuries to have the determination of great events in their hands, the Greeks could still, as in an opium dream, find themselves among the multitude in the Pnyx and listen to Demosthenes thundering against Philip. How much the interval of time between the fourth century B.C. and the present was considered, as far as was possible, non-existent, one may see by the rhetorical sermons of Maximus of Tyre, a contemporary of Marcus Aurelius. They are full of illustrative references and anecdotes, but no allusion, I think, to anything later than the fourth century B.C., except a few references to Epicurus in the third century, and a solitary reference to Carneades in the second. We forget, while the spell of Maximus

¹ See V. C (i) (c) 2, vol. v, pp. 133-8, above.

holds us, that such a thing as Rome, such a person as Caesar, has ever existed. A still odder indication of this habit of thought may be found in a reference to Stoics in the *Protrepticus* of Iamblichus, a Greek writer of an even later century than Maximus of Tyre—an indication all the more striking because it is incidental and not supposed, apparently, to cause any surprise. Iamblichus, round about the year A.D. 300, refers to the founders of the Stoic school as *οἱ νεώτεροι*.¹ His standpoint is that of Pythagoras or Plato, and thus philosophers of the third century B.C. appear as "the moderns" or "the more recent"—philosophers separated from Iamblichus by an interval of time as great as separates us from Dante or Chaucer! Centuries later than the third century B.C. do not count.²

This pathetic endeavour to circumvent the remorseless flow of Time by dodging back into a dead and buried Past through a literary door made of mirror-glass began on the morrow of the breakdown of the Hellenic Society and was never abandoned so long as anything that could call itself Hellenism remained in existence. On the morrow of the breakdown we find Plato representing his fictitious dialogues as taking place, not at the time when the author himself was thinking the thoughts which the dialogues expound, or when he was putting these thoughts into words or setting the words down on paper: every dialogue is deliberately ascribed to some date that is prior to the death of Socrates; and for Plato the judicial murder of Socrates in 399 B.C., rather than the outbreak of the Atheno-Peloponnesian War in 431 B.C., was the symbolic catastrophe which proclaimed the breakdown of the Hellenic Civilization. The *dramatis personae* are carefully chosen to fit these imaginary dates, and their ages and outlooks are portrayed in conformity with this archaistic regression.³ Since Plato (*vivebat circa* 430–347 B.C.) himself was born immediately after the outbreak of the fatal war, and was still a young man at the time of the inexpiable judicial murder, the Time-span involved in this Platonic Archaism is not more than half a lifetime. This, however, was only the first move in a game that was to be played, as the centuries passed, with an ever-growing extravagance until, in the Hellenic World of the second century of the Christian Era, we are treated to the spectacle of a new Socrates being commemorated by

¹ Page 118 of the Teubner text.

² Bevan, E. R.: 'Rhetoric in the Ancient World' in *Essays in Honour of Gilbert Murray* (London 1936, Allen & Unwin), pp. 208–10.

³ 'His dialogues are not only a memorial to Socrates, but also to the happier days of his own family. Plato must have felt the events of the end of the fifth century keenly, but he is so careful to avoid anachronisms in these dialogues that no one could ever guess from them that they were written after Kritias and Charmides had met with a dishonoured end' (Burnet, J.: *Greek Philosophy: Part I, Thales to Plato* (London 1914, Macmillan), pp. 208–9. Cf. pp. 211–13). For the detachment which was a different and a deeper response of Plato's soul to the challenge of social disintegration see V. C (i) (d) 1, vol. v, pp. 394–6, above, and V. C (i) (d) 10, in the present volume, pp. 132–48, below.

a new Xenophon. Arrian's digest of Epictetus's dissertations is a conscious repetition of Xenophon's act in writing the *Memorabilia*; and the Nicomedian public servant of a Roman Imperial Government can never forget that his literary mission is to follow in the footsteps of an Athenian man-at-arms and man-of-letters who was Arrian's senior by about five hundred years, and whose life had been lived, and *Weltanschauung* been formed, in utterly different social circumstances.

Strange though this Neo-Atticism may appear, the most extraordinary feat of linguistic and literary Archaism in the Hellenic World in the Imperial Age has still to be recorded. In this age, once again, a captive Greece succeeded in captivating her Roman conqueror;¹ and this time she led him a dance; for she now prevailed upon him to fall into step with her retreat, after having once upon a time carried him along with her in the last halting stage of her broken advance; and for the Roman this reverse movement in the train of his Greek Muse meant harking back, not to the glories of an original Attic literature of the fifth and fourth centuries B.C., but to the crudities and curiosities of his own ancestors' first attempt to reclothe Greek literature in a Latin dress.

This disease of literary Archaism which the Romans caught from the Greeks in the Imperial Age did not begin to show itself in Latin literature until about a hundred years after Greek literature had succumbed to it; but, when once the infection had taken, its ravages were rapid; and before the end of the second century of the Christian Era the Latin version of Hellenism was quite as far gone as its Greek ensample in a decline that could only end in utter sterility.

The sickening of the Latin genius with this fatal malady can be observed in Tacitus's *Dialogus de Oratoribus*, which is represented as having taken place in the sixth year of the reign of the Emperor Vespasian (A.D. 74-5).² One of the topics of the dialogue³ is a disputation over the relative merits of 'the ancients' and 'the moderns'; and, although the cause of 'the moderns' is championed in spirited language by an advocate who holds up to scorn the perversity of those archaists 'who read Lucilius in preference to Horace and Lucretius in preference to Virgil',⁴ the argument is eventually broken off because the cause of 'the ancients' is assumed to be invincible.⁵ The Latin literary Archaism of Tacitus's genera-

¹ Horace: *Epistolae*, Book II, Ep. i, l. 156.

² Tacitus: *Dialogus*, chap. 17, § 3.

³ Chaps. 14-26.

⁴ Tacitus: *Dialogus*, chap. 23, § 2.

⁵ Tacitus: *Dialogus*, chap. 27, *init.* The rest of the work is devoted to considering not *whether*, but *why*, the eloquence of 'the ancients' (i.e. of Latin orators of the last generation before the establishment of the *Pax Augusta*) was superior to that of 'the moderns' (i.e. the characters in the dialogue and their younger contemporaries of Tacitus's own generation). In this inquiry Tacitus starts from a change for the worse in

tion¹ kept, however, within the bounds of moderation, since the oldest 'ancients' with whom the speakers in the *Dialogus* are seriously concerned are those of the generation of Cicero. Thereafter the deterioration was rapid, for Tacitus himself may have lived to see the principate of Hadrian, and the Latin poet whom Hadrian preferred to Virgil was not the austere Lucretius but the uncouth Ennius. The still more exotic taste of Marcus Aurelius's African tutor Fronto found the greatest merit in the most archaic Latin literature that had survived; and Fronto's Archaism was pushed to a further degree of extravagance by his disciple Aulus Gellius.²

The bilingual folly of this Greek and Latin literary Archaism of the second century of the Christian Era might have been pilloried as the extreme case of its kind, if it were not a matter of attested historical fact that, in this wild-goose chase, Hellenism has been outrun by Sinism.

'Les Chinois, quand ils parlent et quand ils écrivent, s'expriment uniformément en employant des formules consacrées. . . . La littérature chinoise est une littérature de centons. Quand ils veulent prouver ou expliquer, quand ils songent à raconter ou à décrire, les auteurs les plus originaux se servent d'historiettes stéréotypées et d'expressions convenues, puisées à un fonds commun. Ce fonds n'est pas très abondant et, d'ailleurs, on ne cherche guère à le renouveler. Une bonne partie des thèmes qui ont joui d'une faveur permanente se retrouvent dans les productions les plus anciennes et les plus spontanées de la poésie chinoise. . . . Le rôle des centons n'est pas moins grand dans la prose que dans la poésie, dans le style savant que dans la langue vulgaire. . . . Un lecteur attentif des Annales chinoises hésite constamment: veut-on lui présenter des faits particuliers, singularisés, ou lui apprendre ce qu'il convient de faire ou de ne pas faire? La rédaction en termes rituels

domestic life: modern parents do not give the same personal attention as their predecessors gave to the upbringing of their children, but leave it all to servants. He goes on to discuss the changes in the system of apprenticeship for public speaking; and here he has some severe strictures to make upon the modern schools of rhetoric. But his most trenchant point is that fine oratory is the fruit of turbulent times, and that the inevitable price of good government is an atmosphere of dullness which gives human wits no stimulus. 'Magna eloquentia, sicut flamma, materia alitur et motibus excitatur et urendo clarescit' (chap. 36, § 1). Already, half-way through the principate of Augustus, 'longa temporum quies et continuum populi otium et assidua senatus tranquillitas et maxime principis disciplina ipsam quoque eloquentiam sicut omnia alia pacaverat' (chap. 38, § 2). 'Nemo eodem tempore adsequi potest magnam famam et magnam quietem' (chap. 41, § 5). These concluding chapters of the *Dialogus* are a brilliant essay on the theme that Caesar's peace (unlike the Peace of God) is a Yin-state which is not at all conducive to creativity. In a work of a later generation on the same subject (Longinus[?]: *De Sublimitate*, chap. 44), Tacitus's political explanation of the decay of eloquence is re-examined, but is rejected in favour of the alternative thesis that the root of the evil is not the public vice of despotism but the private vices of avarice and self-indulgence.

¹ The fictitious date of the *Dialogus* is placed by Tacitus, *more Platonico*, about half a generation earlier than the author's own *floruit*.

² For this Latin literary and linguistic Archaism of the Antonine 'Indian Summer' in the second century of the Christian Era see Parker, H. M. D.: *A History of the Roman World from A.D. 128 to 327* (London 1935, Methuen), pp. 47-8.

s'explique-t-elle simplement par un parti pris de stylistes ou bien l'histoire n'a-t-elle à conter qu'une succession d'incidents rituels? Il n'y a pas à décider: en fait, le goût des formules toutes faites n'est que l'un des aspects d'une adhésion générale à une morale conformiste. . . . Comme les annalistes, les philosophes chinois sont des conteurs d'historiettes. Dans les ouvrages de tous genres, on trouve, utilisées à satiété, les mêmes anecdotes — si bien qu'un lecteur occidental lisant pour la première fois une œuvre chinoise éprouve presque inmanquablement une impression de déjà lu.¹

When even the earliest of our surviving specimens of Sinic literature—the poetry collected in the *She King* which apparently dates from the Sinic Civilization's growth-stage—already displays this archaistic mental orientation towards the Past, we shall not be surprised to find literary Archaism carrying all before it in the succeeding age of disintegration, and capturing, quickly and completely, the Confucian school of philosophy.

'La passion d'enseigner en commentant signale le fléchissement du goût pour les formes pragmatiques d'enseignement auxquelles Confucius dut apparemment son prestige. Le Maître avait essayé de faire reconnaître la valeur d'une psychologie positive en habituant ses disciples à réfléchir en commun à propos d'incidents journaliers. Ses successeurs enseignèrent en *commentant* les vers du *Che King* aussi bien que les formules du *Tch'ouen ts'ieou*, les aphorismes chers aux devins tout comme les adages des maîtres des cérémonies. Dès la fin du *v^e* siècle, on pouvait les accuser de ne s'attacher qu'à un savoir livresque et de n'accorder de valeur qu'aux semblants rituels.'²

If this were a verdict on the Hellenic thought of the Neo-Attic Age, there might be nothing more to be said; but in studying the actions of Sinic souls we must never forget to reckon with the dexterity of a Sinic genius which delights in the use of unpromising means for the attainment of unexpected ends.

'Si les auteurs s'appliquent à parler par proverbes, ce n'est point qu'ils pensent de façon commune; c'est que la bonne façon, et la plus fine, de faire valoir leur pensée, est de la glisser dans une formule éprouvée dont elle empruntera le crédit. Les centons possèdent une sorte de force, neutre et concrète, qui peut, de façon latente, se particulariser à l'infini, tout en conservant, dans les applications les plus singulières, un égal pouvoir d'inviter à agir. . . . Les poèmes du *Che King* qui sont écrits dans la langue la plus proverbiale sont assurément ceux (l'opinion publique en fait foi) où se sont signifiées les pensées les plus subtiles. La même règle vaut pour les œuvres de tous les temps, de tous les genres. Les poésies les plus riches en expressions consacrées sont les plus admirées. Dans aucune, les formules convenues ne se pressent autant que dans ces sortes de méditations mystiques où le

¹ Granet, M.: *La Pensée Chinoise* (Paris 1934, Renaissance du Livre), pp. 57, 58, 68, 69, and 70.

² *Ibid.*, p. 553.

lyrisme chinois donne sa note la plus haute. La densité en centons ne mesure pas seulement le savoir traditionnel du poète: la densité la plus forte est la marque de la pensée la plus profonde.¹

This Sinic art of turning the trick of literary Archaism from a barren conceit into a potent charm, whose compelling power can strike down to the subconscious fundament of the Soul and then stir it to the depths, will be no secret to any Jewish or Christian or Islamic writer who has had the good fortune to have been equipped for his work by being educated in accordance with the tradition of his forefathers; for the language of the Bible or the Qur'an will have been imprinted on his memory in his childhood as indelibly as the language of the Sinic Classics on the memory of the Far Eastern litteratus; and a mind thus inalienably enriched with the treasures of its native spiritual heritage will be master of that alchemy which knows how to evoke something new out of an allusion to something old or, in other words, how to transmute an act of mimesis into an act of creation.

(δ) *Archaism in Religion.*

In the field of Religion, as in the fields of Language and Art and Institutions, it is possible for a Western student of history at the present day to study the phenomenon of Archaism at first hand within the limits of his own social environment.

Within the past hundred years France, England, and Germany in turn have each been the scene of an archaistic religious movement. In France and in England this religious Archaism has been the expression of a homesickness for the ceremonial and the atmosphere of a medieval Western Christianity; and it is a remarkable spectacle to see this homesickness overcoming two modern Western institutions that have travelled so far from their medieval Christian origins as the Positivist school of philosophy and the Anglican Church: an artificial philosophy that has been manufactured in a Humanistic workshop,² and a parochial Protestant

¹ Ibid., pp. 65 and 68; cf. pp. 73-4.

² The Humanism which has been one of the governing principles of our Western culture in its so-called 'Modern Age' has been touched upon already in IV. C (iii) (c) 2 (α), vol. iv, pp. 300-3, and in V. C (i) (d) 7, in the present volume, p. 8, above. Comte's purpose in appropriating the trappings of a medieval Western Christianity for the use of his own 'Religion of Humanity' was not, of course, to revive the worship of the god who had previously been honoured with these rites. On the contrary, Comte was determined to replace the Christians' personal God by a collective Humanity, and to present this 'vrai Grand Être' to his own Positivist disciples as the proper recipient for the traditional divine honours. Comte's 'Religion of Humanity' has been touched upon already in IV. C (iii) (c) 2 (α), vol. iv, pp. 300-1, above, in this aspect, as an example of the idolization of an ephemeral self. And this element of anti-Christian idolatry in 'the Religion of Humanity' is, of course, much more important than the element of pseudo-Christian Archaism with which we are concerned in the present context.

This pseudo-Christian Archaism, which Comte (*vivebat* A.D. 1798-1857) gradually worked out on lines of his own (see Caird, E.: *The Social Philosophy and Religion of*

Church that is borne upon the political establishment of one of the national states of the modern Western World. Yet this regression of a French Positivism and a British Anglo-Catholicism towards the religion of medieval Western Christendom is not so startling a phenomenon as the corresponding movement of Hauerism in post-war Germany, where the spiritual strain to which the German people has been continuously subject since July 1914 has eventu-

Comte (Glasgow 1885, MacLehose), pp. 238-47, and Berdyaev, N.: *The Meaning of History* (London 1936, Bles), pp. 163-4), was perhaps originally suggested to his mind by the ideas of two thinkers of an older generation, Joseph de Maistre (*vivebat* A.D. 1754-1821) and C. H. de Rouvroy, Comte de Saint-Simon (*vivebat* A.D. 1760-1825). De Maistre was a thorough-going archaist who advocated a revival of the Hildebrandine *Respublica Christiana* under the exclusive and absolute sovereignty of the Pope as the only effective antidote to the Revolution; and his ideas were already familiar by the time when Comte was growing up (de Maistre's masterpiece, *Du Pape*, was finished in 1817 and published in 1819 (Lyon, Rusand, 2 vols.)). Saint-Simon's aim was different; for to his mind the institutions of medieval Western Christendom were outworn, and he wished to replace them by modern equivalents which would perform corresponding functions. Science was to be substituted for the Church, and Industry for Feudalism. These Saint-Simonian ideas were set forth in an unfinished work, *Nouveau Christianisme* (Paris: Bossange, Sautelet), which was published in 1825; and in 1826 Comte wrote his *Considerations on the Spiritual Power* (English translation in *Early Essays on Philosophy translated from the French of Auguste Comte* by Henry Dix Dutton (London, n.d., Routledge)), in which he propounded his own scheme for enlisting an ecclesiastical Archaism in the service of an anthropolatrous Paganism. 'The social condition of the most civilized nations imperiously demands the formation of a new spiritual order as the first and chief mode of ending the Revolutionary Period which began in the sixteenth century and thirty years ago entered on its last stage' (p. 297). 'It would be easy to form empirically a clear idea of the functions of the modern spiritual power by a careful study of those which devolved upon the Catholic clergy at the period of their greatest vigour and complete independence, that is to say, from about the middle of the eleventh to nearly the end of the thirteenth century. . . . For every social relation that fell within the province of the Catholic clergy, an analogous attribute will be found in the new political system as a function of the modern spiritual power' (p. 298). We must emancipate ourselves 'from the pernicious prejudices generally inspired by the Critical Philosophy towards the spiritual system of the Middle Age' (p. 299). On the other hand, due allowance must be made for 'the extreme difference' between the medieval and the modern state of Western Civilization (p. 299); and on this head Comte criticizes de Maistre and the other contemporary philosophers of 'the retrograde school'. 'In them we may remark the radical inconsequence which consists in directly transferring to modern societies considerations exclusively drawn from the observation of medieval societies so essentially different. Associated, moreover, as they invariably are, with projects for restoring a system whose destruction, already almost completed, is henceforward irrevocable, they tend in the present state of men's minds rather to fortify than to uproot the general prejudice against every spiritual power' (p. 351, footnote 2). The details of Comte's own system were afterwards worked out in a *Positivist Calendar* (1849), in which 'Benefactors of Humanity', more *Alexandri Severi* (see V. C (i) (d) 6 (δ), vol. v, p. 549, above), were substituted for Saints, and thereafter (in 1852) in *The Catechism of Positivism or Summary Exposition of the Universal Religion in Thirteen Systematic Conversations between a Woman and a Priest of Humanity* (English translation, second edition: London 1883, Trübner, with a reprint, at the end, of the *Positivist Calendar*). In the latter work Comte's thesis that Catholicism, on new intellectual foundations, will finally preside over the spiritual life of a reorganized Modern Society (*Positive Philosophy*, vol. v, p. 344) is illustrated by the presentation of Humanity as an 'incomparable goddess' (*Catechism*, English translation, p. 58) in the lineaments of the Theotókos. 'Never will Art be able worthily to embody Humanity otherwise than in the form of Woman. . . . The Symbol of our goddess will always be a woman of thirty with her son in her arms' (*Catechism*, pp. 84 and 99).

In taking the traditional image of the Theotókos and renaming it 'Humanity', Comte was following a precedent which had been set by the Christian Church itself when, in its formative age in the early centuries of the Christian Era, it had made its own image of Mary in the traditional likeness of Isis or Ishtar or Cybele.

It is only in England, and not in his native France, that Comte's dream of establishing a Positivist Church with a corporate life and an order of public worship has come true.

ally betrayed its severity in the desperateness of the reaction in which a certain number of tormented German souls are now seeking to find relief.

Professor Hauer is adjuring his countrymen not merely to repudiate a modern phase of the Western Civilization which to-day, in retrospect, may well be looked askance at by any of its children, but actually to break away from the Western Christianity which is the common primal root and stem of every modern branch of the Western Society. The watchword of Professor Hauer is 'Back to the paganism in which our Teutonic forebears found happiness before they were captivated by an alien Judaistic superstition and an alien Romance culture'. The Hauerites' bugbear is Charlemagne, who in their eyes has been the arch-betrayer of the German Race. They cannot forgive this all-powerful German master of an infant Western Europe for having employed his power in suppressing the paganism of the Saxon barbarians in the outer darkness beyond the north-east frontier of the Austrasian dominions; for, in incorporating Saxony into Western Christendom, Charlemagne, in the Hauerites' view, was capturing for Christ and for Rome the last continental stronghold of a pure and undefiled German culture.¹ And they picture the German paganism which Charlemagne stamped out—and which they themselves are now proposing to revive—in a shape which bears no recognizable likeness to the historical worship of the deified war-lord Woden and his deified war-band.² The religion with which the Primitive Germans are credited by the Hauerites is a worship of the One True God through the symbol of physical light; and, in their sophisticated enthusiasm for this imaginary religious intuition of their primitive ancestors, they would almost have us believe that the valley of the Spree, and not the valley of the Nile, was the scene of Ikhnaton's enlightenment.

In 1938 it was impossible for an English observer to tell how seriously this Neo-Pagan movement in Germany had to be taken as an indication of the religious destiny of the Western World as a whole; but he could hardly be mistaken in citing this portent of Hauerism as evidence that Western souls were no longer proof

¹ Less hysterical modern students of Charlemagne's work will be inclined to censure the Austrasian militarist, not for setting out to reclaim his Saxon neighbours from their pestilent barbarism by converting them from their barren paganism, but for attempting to achieve an admirable social purpose by means of the pernicious instrument of military force. In the present Study Charlemagne's behaviour towards the Saxons has been criticized on this ground already in II. D (v), vol. ii, p. 167; II. D (vii), vol. ii, pp. 345-6; IV. C (iii) (c) 2 (β), vol. iv, pp. 322-3; IV. C (iii) (c) 3 (α), vol. iv, pp. 488-90, and IV. C (iii) (c) 3 (β), vol. iv, p. 523, above.

² For this by no means primitive pagan religion of the North-European external proletariat of the Hellenic World in its 'heroic age' see V. C (i) (c) 3, vol. v, pp. 230-3, above. The historical religion of the German participants in a post-Hellenic Völkerwanderung is reflected, not in Professor Hauer's theology, but in Herr Hitler's politics.

against being captivated by a religious Archaism even when this offered itself in an extravagant fancy-dress.

The three living examples of Archaism in the religious field which have met our eyes in the contemporary Western World¹ are none of them impressive; for, while the German movement is patently rabid, the French and English movements are no less patently sentimental. If we now transfer our attention from our own world to the Hellenic, and concentrate it upon that moment in the Hellenic Society's disintegration when Augustus was bringing a Hellenic 'Time of Troubles' to an end by establishing a Hellenic universal state, we shall encounter here an experiment in religious Archaism which may command our admiration.

'The revival of the State religion by Augustus is at once the most remarkable event in the history of the Roman religion, and one almost unique in religious history. . . . The belief in the efficacy of the old cults had passed away among the educated classes; . . . the mongrel city populace had long been accustomed to scoff at the old deities; and . . . the outward practice of religion had been allowed to decay. To us, then, it may seem almost impossible that the practice, and to some extent also the belief, should be capable of resuscitation at the will of a single individual, even if that individual represented the best interests and the collective wisdom of the State. For it is impossible to deny that this resuscitation was real; that both *pax deorum* and *ius divinum* became once more terms of force and meaning. Beset as it was by at least three formidable enemies, which tended to destroy it even while they fed on it, like parasites in the animal or vegetable world feeding on their hosts—the rationalizing philosophy of syncretism,² the worship of the Caesars,³ and the new Oriental cults⁴—the old religion continued to exist for at least three centuries in outward form, and to some extent in popular belief.'⁵

This long-enduring success of Augustus's enterprise of reviving the native religion of the Roman people is remarkable indeed; for

¹ If it be asked why Protestantism has been omitted from a list in which Anglo-Catholicism has been included, the answer is that Anglo-Catholicism is, while Protestantism is not, an example of Archaism in the sense in which the term is used in this Study. In our terminology Protestantism is a case, not of Archaism within the compass of the life of a single civilization, but of the 'Contact in the Time-dimension' between two different civilizations; for, in its endeavour to return to the practice and the spirit of the Primitive Church and to recover this spirit and practice by taking the Canon of Scripture as its exclusive authority, Protestantism was seeking to establish a direct contact with the extinct Syriac Civilization which was the source of the Jewish headwaters of the stream of Christianity. On this showing, the modern Western religious movement known as Protestantism falls into the same category as the medieval Italian and modern Transalpine Western intellectual and aesthetic movement known as the Renaissance, which was an attempt to establish a direct contact with Hellenism. (For the popular confusion of this Renaissance of Hellenism with the radiation of the medieval Italian culture into Transalpine Europe see IV. C (iii) (c) 2 (α), vol. iv, p. 275, footnotes 1 and 2, above.) Both Protestantism and the Western Renaissance are discussed in Part X, below.

⁵ Warde-Fowler, W.: *The Religious Experience of the Roman People* (London 1911,

at first sight the Roman statesman's experiment might appear to a modern Western observer to have been not less cold-blooded than the French philosopher Comte's and not less crack-brained than the German professor Hauer's. We may pay tribute to Augustus's insight in recognizing that the spiritual void in the souls of his countrymen and contemporaries must be filled with something or other by any would-be Saviour of Society who was seriously setting himself to heal the wounds of the Hellenic World with the balm of a Roman Peace; for the Romans could not confer an outward peace upon their neighbours until they had established an inward peace within themselves. We may acknowledge Augustus's perspicacity in perceiving that the sophisticated philosophies of the dominant minority were 'caviare to the vulgar',¹ and that the Caesar-worship in which he was capitalizing the popular gratitude towards himself was at best a fair-weather cult which could not be expected to outlast the temporary reprieve that Augustus's exertions had won for the Hellenic Society and for the Roman Commonwealth.² We may also sympathize with Augustus's desire to stem the tide of *pammixia* and proletarianization by damming back the inflow of 'the new Oriental cults'. But when we have conceded all this, we may still find it difficult to understand why Augustus should have attempted the *tour de force* of bringing the native Roman religion back to life. Why did he not put the whole of his Roman treasure in the Greek gods of Athens and Delphi and Eleusis in an age which found Rome already completely acclimatized to the Hellenic culture and at least half-conscious that it was now her mission to salvage a Hellenic Society which she had done so much to wreck in the preceding chapter of Roman and Hellenic history? These Greek divinities might lack the vitality of their aggressive Oriental rivals, but no competitor could eclipse their matchless dignity and grace. Why, then, was Augustus not content with the notable addition that he had made to the array of Roman shrines in which these Greek divinities were installed?³ Was not his Roman religious task fulfilled when he had received into his own house on the Palatine with all due honour the Greek Apollo who, at the crisis of Augustus's career, had sent him victorious in the decisive naval engagement below the cliffs of Actium?⁴

Macmillan), pp. 428-9. The whole of Lecture xix should be read by any one who wishes to obtain a comprehensive view of Augustus's archaistic work in the field of Religion.

⁴ Actus haec cernens arcum intendebat Apollo
desuper: omnis eo terrore Aegyptus et Indi,
omnis Arabs, omnes vertebant terga Sabaei.

Virgil: *Aeneid*, Book VIII, ll. 704-6.

Why must he go on to experiment in the extravaganza of attempting also to revive the native Roman religion in its primitive unhellenized nakedness? The ethics of this brutally business-like Roman religion of 'Do ut des' must be laughed away as childish if they were not to be condemned as immoral; and, as for the quaint rites in which this Roman commerce between men and gods had been transacted since the dawn of history, they could hardly be taken seriously nowadays by any one but an antiquary.¹ Would not the resuscitation of this ridiculous native hocus-pocus compromise, instead of crowning, the rest of Augustus's endeavours to win back for Religion at Rome the repute and authority which it had lost? What, then, could have moved so astute a statesman as Augustus to pin his faith to this relic of a primitive past as his sovereign means for evoking that spiritual rally in Roman souls on which the statesman-saviour no doubt rightly set such store?

The vindication of Augustus's apparently unpromising essay in religious Archaism is to be found in the sequel; for, if we date the Augustan reinstatement of the primitive Roman religion from his celebration of the *Ludi Saeculares* in 17 B.C.,² we shall find that Augustus's work of archaistic reconstruction lasted not merely for three centuries, but for four;³ that, even at the end of that long

¹ The existing fragments of the *Antiquitates Rerum Divinarum* of Marcus Terentius Varro (*vivebat* 116-28 B.C.) show that the prince of Roman antiquaries made his study of the official religion of the community into which he had been born in a spirit of thorough-going scientific detachment.

² This is a more significant date than 12 B.C., which was the year in which Augustus became Pontifex Maximus; for the celebration of the *Ludi Saeculares* was an act of religious policy for which Augustus was free to choose his own time, whereas the date of his assumption of the office of Pontifex Maximus was determined for him by the length of the life of the previous incumbent. If Augustus had abused his dictatorial powers in order to anticipate Lepidus's death by evicting him from an office of which the traditional tenure was for life, the would-be restorer of the prestige of the native Roman religion would simply have been defeating his own purpose.

³ Three centuries is the duration claimed for Augustus's work by Warde-Fowler in the passage quoted above; and it is true (see Geffken, J.: *Der Ausgang des Griechisch-Römischen Heidentums* (Heidelberg 1920, Winter), pp. 20-5) that in Rome itself, as well as all over the Roman Empire, *circa* A.D. 240-60, there seems to have been a sudden cessation of pagan cults, on the negative evidence of a widespread breaking off of the serial records of acts of worship in inscriptions. At Rome the records of the proceedings of the Arval Brethren and those of the celebration of the rite of the Taurobolium both alike break off in A.D. 241. On the Nubian border of Egypt, at Ethiopian Talmis, and in the Fayyûm, there are corresponding breaks in the local records after the years A.D. 244, 248, and 250 respectively. At Olympia the last victor inscription is of the year A.D. 261, and the last cult inscription of the year A.D. 265. In Macedonia, where the inscriptions testify to an increase of ritual and liturgical activity in the second quarter of the third century of the Christian Era, the records break off, nevertheless, in A.D. 265. It is only in Attica and in Syria that the series of inscriptions runs on through the third century without a break. At the turn of the third century and the fourth century, however, there was a deliberate and systematic revival of pagan worship all over the Empire by the pagan emperors of the Diocletianic school who were at war with Christianity (see V. C. (i) (d) 6 (δ), vol. v, pp. 565-6, and V. C. (i) (d) 6 (δ), Annex, vol. v, p. 650, footnote 3, above); and this revival gave another hundred years' lease of life to the Augustan paganism at Rome, as well as to the pagan worships of other parts of the Empire.

Time-span, it did not simply fall to pieces of itself but was deliberately demolished by the fanaticism of the pagan archaist-emperor's latter-day Christian successors Gratian and Theodosius;¹ and that, so far from being accepted with the indifference with which so many similar acts of religious sabotage were received in other parts of the Hellenic World of the age,² this attack upon the once artificially resuscitated paganism of Rome aroused a heart-felt opposition which expressed itself first in a fifteen-years-long constitutional struggle over an altar and statue of Victory (A.D. 382-94)³ and finally in a military *pronunciamento*—engineered by the pagan Frankish mercenary Arbogastes—in which the Christian soldier-emperor Theodosius's title to the Imperial office was audaciously disputed by the pagan professor of literature Eugenius (A.D. 392-4).⁴ The tenacity to which these facts bear witness is evidence that Augustus had, after all, been as competent a builder in his reconstruction of Religion at Rome as in the rest of his handiwork; and we must infer that he knew what he was about when he insisted upon reviving the primitive native Roman religion besides completing the acclimatization of the Greek religion on Roman soil. Augustus must have divined that this native religion, crude and discredited though it might be, had a hold on Roman hearts which an imported Hellenism could never acquire on its own merits, however nicely it might suit the taste of cultivated Roman palates. He therefore deliberately grafted these foreign slips on to a native stem; and this was the secret of the strength of the stately tree whose grain almost turned the edge of a Christian axe four hundred years later.⁵

If we turn from the Hellenic World to the Japanese offshoot of the Far Eastern Society, we shall find, in a latter-day Japanese attempt to revive the native Japanese variety of Primitive Pagan-

¹ See IV. C (iii) (b) 12, vol. iv, pp. 226-7, above.

² It is true that the pagan revolt in the West which was headed by the rhetor Eugenius in A.D. 392-4 had been anticipated at Alexandria by a similar revolt, likewise under professorial leadership, in A.D. 391 (Geffken, op. cit., p. 157). On the other hand the cessation of the Olympian Games, after their last celebration in the year A.D. 393 (ibid., p. 159), does not seem to have made the same stir as the removal of the altar and statue of Victory from the Senate House at Rome.

³ The altar and statue of Victory were removed from the Senate House at Rome by the orders of the Emperor Gratian in A.D. 382; and this act—which was intended to be, and was taken as being, symbolic—moved the cultivated pagan aristocracy of the capital to protest with all the vigour that was compatible with their loyalty to the Imperial Government. The last petition for restitution was rejected in A.D. 394. The statue had been brought to Rome from Tarentum and set up in the Curia Julia by Caius Julius Caesar.

⁴ Fuller accounts of the last stand of Augustus's archaistically reconstructed Roman paganism will be found in Gibbon, E.: *The History of the Decline and Fall of the Roman Empire*, chap. xxxviii; and in Dill, S.: *Roman Society in the Last Century of the Western Empire* (London 1905, Macmillan), Book I: 'The Tenacity of Paganism'.

⁵ The compositeness of the grain of the Roman paganism that was given this long new lease of life through the arts of Augustus is illustrated by the fact that the statue over which this Roman paganism fought its last fight was a piece of Greek workmanship.

ism which is traditionally known as Shinto,¹ another essay in religious Archaism which has points in common, not only with Augustus's achievement and with Professor Hauer's conceit, but also with the religious policy which Bismarck attempted to carry out after the foundation of the Second German Reich.

In degree of extravagance the revival of Shinto shows a greater likeness to Hauerism than to Augustus's work; for, whereas the native Roman paganism which Augustus successfully revived was in his time still 'a going concern' in the sense that it had never been officially disestablished, the movement for the resuscitation of the native Japanese paganism did not begin until more than a thousand years had passed since this primitive religion had been partly supplanted, partly absorbed, and partly informed² by the higher religion of the Mahāyāna. The Mahāyāna began to make its spiritual conquest of Japan in the course of the sixth century of the Christian Era³—more than two hundred years before the date at which Christianity was thrust upon Saxony at Charlemagne's sword-point. And the archaistic revival of Shinto was started in the seventeenth century of the Christian Era⁴—at a date which was likewise rather more than two hundred years before a 'return to Woden' began to be preached in modern Germany.

In Japan, as in Germany, the first phase of the movement was academic. The Japanese resuscitation of Shinto was put in train by a Buddhist monk named Keichū (*vivebat* A.D. 1640–1701) whose interest in the subject seems to have been primarily philological;⁵ Keichū was followed by Motoori Norinaga (*vivebat* A.D. 1730–1801), who was not only a scholar but was also a theorist applying his scholarship to an imaginary reconstruction of an obliterated ancestral faith;⁶ and Motoori Norinaga was followed in his turn

¹ Shinto means 'the Way of the Numina' (to use an impersonal Latin word which may be a better translation of the Japanese original than 'gods' or 'spirits'). See Holtom, D. C.: *The National Faith of Japan: A Study in Modern Shintō* (London 1938, Kegan Paul, Trench, Trubner), pp. 13–14. The modern revival of Shinto is known as Fukko Shinto ('Restoration Shinto') (*ibid.*, p. 44).

² See V. C (ii) (c) 2, vol. v, p. 97, footnote 3, and p. 147, footnote 1; V. C (i) (d) 6 (8), vol. v, p. 528, footnote 2, above.

³ In this first chapter of its history in Japan the Mahāyāna, while nominally professed by all subjects of the Emperor, was not in fact comprehended and assimilated by Japanese souls outside the narrow limits of a sophisticated court circle. The propagation of the Mahāyāna among the masses, in popular forms which the common man could understand, did not begin until after the onset of a 'Time of Troubles' in the latter part of the twelfth century of the Christian Era (see V. C (i) (c) 2, vol. v, pp. 97–8, above).

⁴ Its antecedents can, however, be traced back as far as the fifteenth century (Holtom, *op. cit.*, pp. 39–41).

⁵ There was a general revival of Japanese studies at and after the close of the seventeenth century (Murdoch, J.: *History of Japan*, vol. iii (London 1926, Kegan Paul), p. 468). Holtom (*op. cit.*, pp. 45–8) presents, as Motoori's principal predecessor, not Keichū but Kamo-no-Mabuchi (*vivebat* A.D. 1697–1769).

⁶ In Japan in the middle of the eighteenth century there was a general romantic revival of interest in the Japanese national past (Murdoch, J.: *History of Japan*, vol. i (London 1910, Kegan Paul), p. 11). Motoori himself was both anti-rationalist and Anti-Sinic (Murdoch, *op. cit.*, vol. iii, pp. 476–90). In this Anti-Sinism Motoori had had

by Hirata Atsutané (*vivebat* A.D. 1776-1843), who was not only a theorist but was also a controversialist, and who launched an attack, in the name of Shinto, upon the exotic religion of the Mahāyāna and the exotic philosophy of Confucianism.¹

It will be seen from the dates that the archaistic revival of a primitive Japanese paganism was put in hand, like Augustus's resuscitation of a primitive Roman paganism, immediately after the foundation of a universal state; for in Japanese history the universal state that put an end to an antecedent 'Time of Troubles' was the Tokugawa Shogunate which was the fruit of the successive labours of Nobunaga and Hideyoshi and Ieyasu in the later decades of the sixteenth and the earlier decades of the seventeenth century of the Christian Era.² Whereas, however, the reinstatement of the Roman paganism was carried out almost at one stroke by the fiat of a political dictator, the revival of Shinto began as a work of private enterprise³ which took two hundred years to advance—or regress—from the Varronian objectivity of a Keichū to the Rosenbergian militancy of a Hirata Atsutané.

The Neo-Shinto movement had just arrived at this militant stage when the Japanese universal state was prematurely shattered by the impact of an aggressively expanding Western Civilization. The rigorously maintained artificial isolation which had enabled the Japanese to live for a quarter of a millennium as though Japan were 'All that was under Heaven' had to be abandoned in the third quarter of the nineteenth century of the Christian Era in favour of a diametrically opposite strategy of self-defence in which Japan was to hold her own in a no longer avoidable Western environment by learning to live as one of the nations of a Westernized World. And when, upon the Revolution of 1867-8, this abrupt change from a negative to a positive attitude towards the outer world was given a symbolic expression in the liquidation of the Tokugawa Shogunate and the official restoration of an Imperial Dynasty which had been reigning (though not always governing) in an unbroken succession since the dawn of Japanese history,⁴ the now

forerunners. Kada Adzumaro (*vivebat* A.D. 1669-1736) had presented to the authorities in A.D. 1735 a memorial advocating Japanese as against Sinic studies; and the campaign against an alleged contamination of Japanese by Sinic culture had been continued by Mabuchi (see Murdoch, *op. cit.*, vol. iii, pp. 473-5).

¹ The facts mentioned in this paragraph are taken from Anesaki, M.: *History of Japanese Religion* (London 1930, Kegan Paul), pp. 307-9.

² See IV. C (ii) (b) 2, vol. iv, pp. 88, 92, and 94; and V. C (i) (d) 6 (8), Annex, vol. v, pp. 655-7, above, as well as V. C (ii) (a), in the present volume, pp. 186, 188-9, and 191, below.

³ The Tokugawa régime had a leaning towards Buddhism and regarded the Neo-Shinto movement with suspicion as a threat to the security of the Tokugawa Shogunate. The Neo-Shintoists' idealization and deification of the Imperial House did, in fact, prepare the ground for the Restoration of A.D. 1868.

⁴ During the Japanese 'Time of Troubles' and universal state the Imperial Dynasty at Kyoto had, of course, been leading an obscure and shadowy existence on sufferance

militant Neo-Shinto movement so exactly accorded with a *Zeitgeist* in which a no longer practicable xenophobia was being converted into terms of the archaistically romantic Nationalism of the modern West that it looked for a moment as though a once academic conceit was now to have its fortune made for it by being taken under the potent patronage of the new régime.

"The first step taken by the new Government in regard to Religion was an attempt to establish Shinto as the religion of the State. The . . . National Cult Department . . . an institution for ceremonial observance, having little to do with matters of really religious or political significance . . . was given the highest position among the government offices, and Shinto was proclaimed the national cult or State Religion.¹ This meant at the same time a vigorous suppression of Buddhism, because it was a foreign religion and had flourished under the protection of the Shogunate Government. All privileges granted to the Buddhist clergy were abolished, and a large part of the properties belonging to the Buddhist institutions was confiscated. A reign of persecution was started. Buddhists were driven out of the syncretic Shinto sanctuaries which they had been serving for ten centuries or more. Buddhist statues, scriptures and decorations in those temples were taken out and set on fire or thrown into the water. The "purification" of the Shinto temples was achieved, and the severance of Buddhism and Shinto ruthlessly carried out. . . .²

"At one time it seemed as if Buddhism would be swept away by the persecution, but the danger brought Buddhist leaders to united action. . . . In the official circles, too, some realized that an entire suppression of Buddhism was neither desirable nor possible,³ and the Government was induced gradually to modify their religious policy. The National Cult was replaced by an Ecclesiastical Board in 1872,⁴ under which a central board of preachers was to superintend religious instructions. . . . The Board was abolished in 1877, and the Buddhist bodies were granted autonomy. Shinto was treated in the same way;⁵ and its church bodies

from the militarists who were governing—or misgoverning—the Japanese World in the Imperial Dynasty's name.

¹ This Department of Shinto was set up as early as the first month of the first year of Meiji (A.D. 1868), and was reorganized three times before the close of the fourth year of the Meiji Era. Official instructors in Shinto were appointed by the Imperial Government in November 1870 (Holtom, op. cit., pp. 54-5).—A.J.T.

² For further details of this persecution see Holtom, pp. 56-8.—A.J.T.

³ The persecution was producing a disturbing and disruptive effect at a time of stress in which there was an urgent need for national stability and unity (Holtom, pp. 58-9).—A.J.T.

⁴ While the National Cult Department had been concerned exclusively with Shinto, the new Ecclesiastical Board or Department of Religion had Buddhism as well as Shinto under its aegis (Holtom, p. 59). After having failed, between A.D. 1868 and A.D. 1872, to drive Buddhism off the field by force, the Imperial Government next tried, from 1872 to 1875, to brigade Buddhism with Shinto and to drill the pair of them into working in double harness as a dual state religion (ibid., pp. 59-61). In 1875 this second experiment in regulating the relations between Church and State was abandoned in its turn.—A.J.T.

⁵ The Imperial Government gave up the last remnants of its control over the appointment and dismissal of priests of private sects—Buddhist and Shinto alike—in A.D. 1884 (Holtom, p. 62).—A.J.T.

gradually emerged out of the State Religion,¹ while the ceremonies in the Court and the communal Shinto cult were regarded as having nothing to do with religious teaching, but as civic institutions.² Thus subsided the frenzy of Shinto revival.³

The Western reader will not have failed to notice the curious analogy between this unsuccessful offensive which was launched against the Mahayanian Buddhist Church by a new régime in Japan and the contemporary attack—likewise ending in failure—which was made upon a Christian Catholic Church by a new régime in Germany. Like Bismarck, the architects of the Japanese Imperial Restoration were intoxicated by their success in endowing their country with a new political structure which appeared to answer to the needs of the times; and, like Bismarck again, they conceived it to be their duty, and imagined it to lie within their power, to make the new Nationalism prevail in the religious as well as in the secular sphere. In Japan, as in Germany, the nationalists had to be taught by a humiliating experience that the 'higher religions' which have sprung from the ruins of disintegrating civilizations with a message to deliver to all Mankind cannot easily be dragooned to suit the momentary exigencies of parochial politics.⁴

Our survey of Archaism in the field of Religion has not been exhaustive; for the examples which we have cited from the histories of three civilizations—the Western, the Hellenic, and the Far Eastern—can all be duplicated if we go farther afield. If

¹ The legal separation of the autonomous private Shinto sects from the state-regulated public Shinto establishment was carried out in A.D. 1882 (Holtom, op. cit., pp. 67-8). In 1938 thirteen private Shinto sects enjoyed official recognition, and their aggregate membership was estimated at little less than 17,400,000 (ibid., p. 69). Of these sects, six had been already in existence in the Tokugawa Period (A.D. 1600-1867), six had come into existence during the Meiji Period (A.D. 1868-1912), and one, which took final shape in the Meiji Period, had existed in the Tokugawa Period in an inchoate form (Kato, Genchi: *A Study of Shintô, the Religion of the Japanese Nation* (Tokyo 1926, Meiji Japan Society), p. 1). 'The one conspicuous point of identity between the Shintô of the State and that of the people lies in the deities that are honoured. The *kami* of Sect Shintô and those of State Shintô are for the most part one and the same' (Holtom, op. cit., p. 69). The private Shinto sects differ from State Shinto and resemble the 'higher religions' in the point of having personal founders (ibid., p. 68; Kato, op. cit., p. 210).—A.J.T.

² See V. C (i) (d) 6 (δ), Annex, vol. v, p. 707, footnote 2, above. On this point Kato, in op. cit., pp. 2-3, expresses the opinion 'that even this State Shintô, which some Japanese go so far as to speak of as no religion at all, is in reality nothing short of evidence of a religion interwoven in the very texture of the original beliefs and national organization of the people, camouflaged though it may be as a mere code of national ethics and State rituals, and as such apparently entitled only to secular respect. . . . Shintô—the State Shintô as well as the Sectarian Shintô—is in very truth a religion.' This authoritative Japanese opinion must carry weight.—A.J.T.

³ Anesaki, M.: *History of Japanese Religion* (London 1930, Kegan Paul), pp. 334-6.

⁴ This is a truth against which the ministers of the 'lower religions' rebel. In the words of a priest of the Atago [State Shinto] Shrine of Kyoto, quoted by Holtom, op. cit., p. 293:

"The shrines are Religion. They are real Religion. They are perfect Religion. If the statement will be permitted, it may be said that Christianity and Buddhism are side movements in Religion. They are incomplete religions. They are secondary religions."

we glance, for instance, at the Hindu World under the British Rāj, we may espy in the Arya Samāj¹ an analogue of the Neo-Shinto movement in its early days under the Tokugawa Shogunate. If we glance at the Babylonian World, we may see in Nabonidus an emperor of the Babylonian universal state who might have anticipated Augustus's archaistic *tour de force* if he had not come to grief through being too poor a politician and too keen an archaeologist. And, if we glance at the Iranian World, we may recognize a contemporary parallel to Professor Hauer's extravaganza of proposing to resuscitate a pre-Christian German paganism in the not less extravagant conceit, with which some play has been made in the Turkey of President Mustafā Kemāl Atatürk, of bringing back to life a dead and buried pre-Islamic Turkish wolf-worship.² Perhaps, however, we have already carried our survey far enough to bring out the psychological relation between the phenomenon of religious Archaism and the experience of social disintegration.

(ε) *The Self-Defeat of Archaism.*

If we now turn back and take a synoptic view of all the four fields in which we have been watching Archaism at work, we shall notice that in each field one or two of the examples which we have examined in order to discover what Archaism is are also illustrations of an apparent tendency in Archaism for the movement to defeat itself.

In the field of Institutions we can watch the two Heracleidae at Sparta, and in their footsteps the two Gracchi at Rome, embark on the archaistic enterprise of re-establishing an ancestral constitution which is still nominally in force but which has admittedly been ignored and even violated with a scandalous laxity. The young reformers are whole-heartedly sincere and enthusiastic in their pursuit of their archaistic aim; and yet their well-meant activities produce results which are the exact opposite of their single-minded intentions.³ Instead of achieving a reform they actually let loose a revolution which does not come to rest again until it has swept the last remnants of the *πάτριος πολιτεία* away. Again, in the field of Art, we see a Pre-Raphaelitism which is athirst to drink at the fountain-head of the Western artistic tradition being led by its archaistic quest into an anti-realism that dries up all the water brooks and leaves a desert in which nothing can

¹ An account of the Arya Samāj will be found in Farquhar, J. N.: *Modern Religious Movements in India* (New York 1919, Macmillan), pp. 101-29.

² We do know something about the pre-Islamic Nestorian Christianity which gained some hold upon the Turks in Central Asia before they began to drift into Dār-al-Islām (see II. D (vi), vol. ii, pp. 236-8, and V. C (i) (c) 3, vol. v, p. 250, above); but it might be difficult to identify with assurance the mortal remains of a Turkish wolf-totem which, if authentic, must be pre-Christian as well as pre-Islamic.

³ Plutarch brings out this point in his *Comparison of Agis and Cleomenes with the Gracchi*, chap. 5.

live except the demon of Futurism. In the field of Language we see the efforts to call back to life an extinct form of Turkish or Hebrew or Irish succeeding in their *tour de force* of conjuring articulate and intelligible speech out of the silence of the grave—but this only at the price of defeating the archaists' own intentions by composing a new language which the simpletons who once spoke the original language as their mother-tongue might find it difficult either to speak or to understand.¹ In the field of Religion we see the would-be archaist Julian embarrassing the official representatives of a paganism which he is trying to bolster up by expecting these priests of Hellenic divinities to behave as though they were clergy of the Christian Church;² and we also see another would-be religious archaist, Nabonidus, positively enraging the priesthood of the Babylonian World to a degree of exasperation at which they are ready to welcome the alien invader Cyrus with open arms as a liberator from an indigenous régime which has insisted upon making itself intolerable.

These instances of Archaism defeating itself are too numerous and too consistent to be dismissed as mere tricks of Chance. It looks as though there must be something in the essence of Archaism that drives it into self-defeat in frustration of its conscious purpose; and we may be able to put our finger on this disconcerting factor when we remind ourselves that Archaism sets out to be no mere academic exercise but a practical way of life, and that what it promises to do is to grapple with the urgent human problem of combating the malady of social disintegration. If he is to justify his pretensions the archaist has to convince the philistine majority of his public that the nostrum which he is offering them is demonstrably capable of restoring an ailing social system to health. In fact, the archaist is pledged to 'make things work' again; and this formidable commitment compels him to become a man of action instead of remaining the pure archaeologist that, in his heart, he would probably prefer to be.

¹ There is a story—*ben trovato, se non vero*—that an eminent scholar of pure English extraction, who had spent his life in Dublin on the archaistic task of resuscitating the Irish language, at last made up his mind to harvest the reward for his long labour of love by holding converse with the survivors of an Irish-speaking peasantry on the banks of the Shannon. By the time when he reached his destination our scholar's eagerness had mounted to such a pitch that he burst into a torrent of his own Neo-Irish in the face of the first native whom he encountered on alighting from the train. After listening in silence for a minute or two with a look of blank incomprehension on his face, the native interrupted the visitor's flow of speech by remarking politely, in excellent English: 'I am sorry, but I don't know any German.' The scholar's choice vocabulary—culled from ancient Irish epics—had been no more intelligible to the bilingual westerner than so much Double-Dutch; and, finding himself thus surprisingly addressed in a language which he could not recognize as being either English or Irish, he had jumped to the conclusion that the gentleman who was addressing him must be one of those German engineers who were at that time superintending the construction of the Shannon Dam.

² See V. C (i) (c) 2, Annex II, vol. v, p. 584, above.

The point may be illustrated by considering the contrast between an archaeologist's and a dentist's way of dealing with a decayed tooth. When an archaeologist disinters a palaeolithic burial his business is to preserve his trove in a glass case in the exact condition in which he found it below the sod; so all that he has to do to the skeleton's teeth is to coat them with some chemical that will arrest their decay at the point which it has already reached. His problem is a simple one; for in the museum curator's keeping these teeth have no further function except to lie still and be looked at; their biting days are over once for all. The dentist's problem is not so easily solved; for what the dentist has to do with the decayed tooth of his living patient is not to provide an archaeologically-minded public with an informative 'museum piece', but to provide a live human being with a tooth that will stop aching and get back to work; so the dentist sets about 'restoring' the tooth in a way that would outrage the archaeologist's sense of professional honour. The dentist's first act is to whittle away the surviving remnant of the authentic original tooth by grinding out all the rotten parts; his second act is to fill the cavity, which he has thus deliberately enlarged, with foreign matter that will bite as hard as though it were the natural ivory. When the dentist has accomplished each of these two things he proudly assures his patient that he has given the old tooth a new lease of life; but this admirable dentistry would infuriate our archaeologist if he fancied himself as a headhunter. 'This charlatan', he would protest, 'professes to have restored that tooth when, as a matter of fact, as you can verify if you will look, he has removed the greater part of what was left of the real tooth and has then tried to cover his fraudulent tracks by inserting a mass of foreign matter which has been skilfully designed to deceive the layman's eye and make him believe that the "denture" at which he is looking is a genuine antiquity and not (as it really is) a fake. This so-called dentistry is nothing but an impudent deception of a credulous public.'

We may leave our two *dramatis personae* to continue an argument in which they will never be able to agree; but, if we have made it clear that Archaism is a kind of dentistry and not a kind of archaeology—notwithstanding the similarity of the names and the archaist's mistaken belief that they mean the same thing—then we may find that we have arrived at an explanation of the paradoxical fact that Archaism so often ends in defeating its own quite sincerely archaeological intentions. The archaist would, in fact, appear to be condemned, by the very nature of his enterprise, to be for ever trying to reconcile Past and Present; and the proneness of their competing claims to prove incompatible is the weakness of

Archaism as a way of life. The archaist is on the horns of a dilemma which is likely to impale him, whichever way he may lean. If he tries to restore the Past without taking the Present into consideration, then the impetus of Life—an elemental force which he can never arrest—will shatter into fragments the brittle shell that he is bent on retrieving. On the other hand, if he consents to subordinate his whim of resuscitating the Past to the task of making the Present *viable*, then, in the name of restoration, he will be led on and on into 'scrapping' so much of what is left of the Past, and introducing so much new masonry to reinforce the remnant, that his pious work of 'reconstruction' will be difficult to distinguish from the Vandalism of naked demolition and replacement. On either alternative the archaist will find, at the end of his labours, that unwittingly or unwillingly he has been playing the futurist's game. In labouring to perpetuate an anachronism he will in fact have been opening the door to some ruthless innovation that has been lying in wait outside for this very opportunity of forcing an entry.

9. *Futurism*

(α) *The Relation between Futurism and Archaism.*

There is an antithesis between Futurism and Archaism that is brought out by the mere juxtaposition of the two words; yet the obvious difference of orientation which distinguishes these two ways of life is not so significant as are the characteristic features that they have in common. Futurism and Archaism are, both alike, attempts to break with an irksome Present by taking a flying leap out of it into another reach of the stream of Time without abandoning the plane of mundane life on Earth. And these two alternative ways of attempting to escape from the Present but not from the Time-dimension also resemble one another in the further point of being *tours de force* which prove, on trial, to have been forlorn hopes.¹ The two movements differ merely in the direction—up or down the Time-stream—in which they make their two equally desperate sorties from a position of present discomfort and distress which neither the futurist nor the archaist has any longer the heart to hold; and this difference of direction is not a difference of kind. At the same time, Futurism does differ materially from Archaism in the degree in which it goes against the grain of human nature; for, while human beings are prone to seek refuge from a disagreeable Present by retreating into a familiar Past,² they are

¹ These points of likeness between Futurism and Archaism have been touched upon, by anticipation, in V. C (i) (d) 1, vol. v, pp. 383-5, above.

² An illustration of this tendency on the political plane is the well-known human

equally prone to cling to a disagreeable Present rather than strike out into an unknown Future.

The spectacle of Time perpetually marching forward over the corpse of a Present that Time's scythe is perpetually mowing down is so appalling to human minds that they are apt to recoil into a passionate yearning for continuity, in the spirit of the mortal worshipper's prayer to an immortal God in the Hundred and Second Psalm:

'I said: "O my God, take me not away in the midst of my days: thy years are throughout all generations.

' "Of old hast thou laid the foundation of the Earth, and the Heavens are the work of thy hands.

' "They shall perish, but thou shalt endure; yea, all of them shall wax old like a garment; as a vesture shalt thou change them, and they shall be changed;

' "But thou art the same, and thy years shall have no end.

' "The children of thy servants shall continue, and their seed shall be established before thee." '1

In this expression of the pathos of Syriac souls in one chapter of the long-drawn-out disintegration of the Syriac Society we see Humanity seeking to win an exemption from the doom of being carried away on the inexorable flow of the Time-stream by catching at the skirts of a divine Eternity which is naïvely conceived of as a Present prolonged into infinity.²

This natural human horror at the ever imminent prospect of the annihilation of a Present which can never really be prolonged can no doubt be counteracted, and even overcome, either by a philosophical fortitude in facing hard facts without flinching or by a religious intuition of a 'larger hope' lightening the darkness of death.

The philosophical response to the challenge of Mutability is to

weakness of recalling 'elder statesmen' to power in times of political crisis (as, for example, they were recalled in many of the countries that were belligerents in the General War of 1914-18). This is one of the classic examples of a vein of Archaism that is instinctive and unreasoning. A rational calculation would lead to the conclusion that these 'elder statesmen' are the last people to whom a community can safely commit its destinies in an emergency, since, *ex hypothesi*, these 'dug-outs' are doubly incapacitated—in the first place by the lassitude of old age and secondly, and more seriously, by the obsolescence of their outlook and their habits. It is virtually impossible for them to be abreast of the times, considering that the experience on which they have been formed is bound to have been thrown out of date by the very onset of the crisis which the 'elder statesmen' have to thank for their recall.

¹ Ps. cii. 24-8.

² The yearning that is expressed in this passage is foredoomed to frustration, not because it is utterly impossible under all conditions for the Human Soul to enter into God's mode of being by attaining union with Him, but because it is not possible to achieve this spiritual transfiguration without rising above the mundane plane of life. The prayer in the last verse is for a continuity of human social life in This World as a miraculous special dispensation from the 'law'—truly cited in the three preceding verses—which condemns all the works of God's creation, *qua* creatures, to be ephemeral. As a statement, and a magnificent statement, of this 'law', vv. 25-7, without vv. 24 and 28, have already been quoted in II. C (ii) (b) 1, vol. i, p. 285, above.

be heard in the concordant voices of an Epicurean poet and a Stoic emperor whose consensus on this crucial point reveals a fundamental unity of outlook at the heart of two classic expressions of the Hellenic philosophy which are superficially antagonistic to one another.¹

Lucretius strikes a note which is as true to the temper of his Master as it is remote from the spirit that is vulgarly attributed to the Epicurean school:

cedit enim rerum novitate extrusa vetustas
semper, et ex aliis aliud reparare necessest. . . .
materies opus est ut crescant postera saecula,
quae tamen omnia te vita perfuncta sequentur;
nec minus ergo ante haec quam tu cecidere, cadentque.
sic alid ex alio nunquam desistet oriri,
vitaque mancipio nulli datur, omnibus usu.²

This Epicurean poetry is echoed by Marcus Aurelius in Stoic prose:

'You are afraid of Change? But nothing can happen without Change; it is something that is of the essence of the nature of the Universe. You cannot even take a hot bath without the fuel undergoing one kind of change, or digest your dinner without the food undergoing another. In fact, without the possibility of Change there could be no satisfaction for any of our needs; and in this light it becomes evident that, when it is your own turn to change into something other than yourself, this is all in the day's work—just another necessity of Nature. . . . In Nature's hands the sum of things is like a lump of wax. At one moment she moulds it into a toy horse; then she kneads up the horse in order to mould the same stuff into a toy tree; then she makes it into a mannikin, and then into something else. The duration of each of these successive shapes is infinitesimally short, but where is the grievance? Does it do a packing-case any more harm to be broken up than it does it good to be knocked together?'³

The religious response to the challenge which Philosophy meets in this way is to be found in the New Testament in two variants of one simile:

'That which thou sowest is not quickened except it die,'⁴

and

'Except a corn of wheat fall into the ground and die it abideth alone, but if it die it bringeth forth much fruit.'⁵

¹ For the relation between Epicureanism and Stoicism see V. C (i) (d) 1, vol. v, p. 394, above, and V. C (i) (d) 10, *passim*, in the present volume, pp. 132-48, below.

³ Marcus Aurelius Antoninus: *Meditations*, Book VII, chaps. 18 and 23.

⁴ 1 Cor. xv. 36.

⁵ John xii. 24.

In these flashes of religious light¹ an apparently merciless sacrifice of a sensitive Present to a callous Future is seen as an illusion in which the growing-pains of a single immortal soul have been falsely construed into a war to the knife between two irreconcilable adversaries. On this view the underlying reality is not an inconsequent Mutability but a triumphant Withdrawal-and-Return—a reality which is as glorious as the illusion is repulsive.² Yet, whether they thrill us with their ecstasy or impress us with their fortitude, these two diverse reactions to the prospect of annihilation still testify with one accord to the unnaturalness of a Futurism which spurns the Present instead of clinging to it and which springs forward to meet the Future instead of cowering back to put off the moment of its inevitable impact.

Here is a psychological *tour de force* which is keyed to a distinctly higher pitch than its archaistic alternative; and, in view of this striking difference between Futurism and Archaism in degree

¹ It is curious to observe the diffraction of these beams of light from the New Testament in the labyrinthine preciosity of a modern Western poet. Yet it is indeed the same spiritual truth that is declared in Edmund Spenser's *Faerie Queene*, Canto vii, Stanza 58, in the judgement given by Nature in the contest between Mutability and Jove for the lordship of the Universe:

I well consider all that ye have sayd,
And find that all things stedfastnes doe hate
And changed be: yet being rightly wayd
They are not changed from their first estate;
But by their change their being doe dilate;
And turning to themselves at length againe,
Doe worke their owne perfection so by fate:
Then over them Change doth not rule and raigne;
But they raigne over Change, and doe their states maintaine.

The hope of transfiguration which is implicit in this movement of Withdrawal-and-Return is enlarged upon in the following stanzas in the eighth canto of the same poem:

When I bethinke me on that speech whyleare,
Of Mutability, and well it way:
Me seemes, that though she all unworthy were
Of the Heav'ns Rule; yet very sooth to say,
In all things else she beares the greatest sway.
Which makes me loath this state of life so tickle
And love of things so vaine to cast away;
Whose flowring pride, so fading and so fickle,
Short time shall soon cut down with his consuming sickle.

Then gin I thinke on that which Nature sayd,
Of that same time when no more Change shall be,
But stedfast rest of all things firmly stayd
Upon the pillours of Eternity,
That is contrayr to Mutabilitie:
For all that moveth doth in Change delight,
But thence forth all shall rest eternally
With Him that is the God of Sabbatho hight:
O that great Sabbatho God, grant me that Sabbath's sight.

² The two passages here quoted from the New Testament have been quoted already—the Pauline passage at greater length—in the analysis of the movement of Withdrawal-and-Return in III. C (ii) (b), vol. iii, p. 258, above. In the two passages of Greek poetry that are quoted on the preceding page of the same volume the opposite belief that the appearance of annihilation is no illusion but is an ultimate as well as inexorable reality is expressed with a poetic pathos which reflects the same mood of resignation as the Stoic and Epicurean note of philosophic fortitude, notwithstanding the difference of tone between these two alternative variations on one theme.

of abnormality, it is remarkable to observe that a lighter penalty is exacted for the wider aberration. While Archaism, as we have seen,¹ is frequently required to pay the crushing penalty of defeating its own aim by collapsing into Futurism, we shall find that Futurism is sometimes rewarded for its greater transgression by being allowed to transcend itself through rising into Transfiguration. If we may liken the catastrophe of Archaism to the crash of a motor-car which skids right round on its tracks and then rushes to destruction in the opposite direction to that in which the unhappy driver was steering before the machine escaped from his control, the happier experience of Futurism may be likened to that of a passenger on board a motor-driven vehicle who believes himself to be travelling in a terrestrial omnibus and observes, with deepening dismay, the ever-increasing roughness of the *terrain* over which he is being carried forward, until suddenly—at the moment when it looks and feels as though an accident can no longer be staved off—the vehicle rises from the ground at a turn of the unseen pilot's wrist and soars over crags and chasms in its own element. While the archaist driver of our imaginary motor-car fares worse than he has had reason to fear, the futurist passenger in our imaginary aeroplane fares better than he has had any right to expect.

(β) *The Breach with the Present.*

The Breach in Manners.

The futuristic, like the archaistic, way of breaking with the Present can be studied empirically in a number of different fields of social activity; but we need not always map these out on precisely the same lines. We may vary the map to suit the subject; and in our study of Futurism it may prove convenient to deal separately with Manners and with Institutions; to bring Language and Literature and the Visual Arts together under the common head of Secular Culture; and to take Religion by itself, as we have taken it before in our studies of Archaism and of the Sense of Promiscuity.

In the field of Manners the first gesture in which Futurism is wont to advertise itself is the exchange of a traditional for an outlandish costume; and in the ubiquitously—though still no more than superficially—Westernized World of the present day² we have already been offered the spectacle of a host of non-Western societies, from China to Peru, abandoning a hereditary and distinctive

¹ In V. C (i) (d) 8 (ε), pp. 94-7, above.

² For the superficiality of the Westernization (so far as it has yet gone) of the surviving non-Western Societies see I. B (iii), vol. i, pp. 35-6, above.

dress and conforming to a drably exotic Western fashion as an outward and visible sign of their voluntary or involuntary enrolment in a vastly swollen Western internal proletariat.

The most famous, as well as the earliest, example of a forcible process of external Westernization is the shaving of beards and banning of kaftans in Muscovy at the turn of the seventeenth and eighteenth centuries of the Christian Era by order of Peter the Great.¹ In the third quarter of the nineteenth century this Muscovite revolution in costume was emulated in Japan. And in our own Post-War Age similar circumstances have evoked similar acts of tyranny in a number of non-Western countries in which a long-postponed course of Westernization is now being taken by forced marches under the lash of local dictators. In the forcibly Westernized Turkey of President Mustafâ Kernâl Atatürk the unveiling of the women² has been the counterpart of the shaving of the men in the forcibly Westernized Muscovy of Peter the Great; but in the Islamic World of this age the main battle of Futurism in the field of dress has been fought over the question of masculine head-gear, which in this society has been traditionally invested with a greater social and even political significance than any other article of dress.³ The landmarks in the progress of this struggle are the Turkish law of November 1925 which has made it compulsory for all male Turkish citizens to wear hats with brims,⁴ and the corre-

¹ The shaving of Muscovite beards was executed not merely by Peter's orders but actually by the futurist Tsar's own hand upon certain conspicuous countenances. This was, in fact, the gesture by which Peter, upon his return from his Western tour in the autumn of A.D. 1698, elected to announce his programme of forcible Westernization to some of the dignitaries of his hitherto Byzantine empire when they presented themselves in order to welcome him home; and we may be sure that this 'positive act', performed by the Tsar in person, had a greater effect upon the Muscovite imagination than the elaborate official regulations, *more Occidentali*, by which it was followed up. Some details of Peter's futuristic campaign against the traditional Muscovite costume have already been set out in III. C (ii) (b), vol. iii, p. 283, footnote 1, above. In taking this plunge into a forcibly imposed sartorial Futurism, Peter was blindly perpetuating the methods, while abruptly reversing the policy, of his recent predecessors on the Muscovite Imperial Throne. Before Peter's accession the Government of Muscovy had been more conservative than the people, and its exercise of a tyrannical authority in the domain of dress had therefore taken the form of a veto upon innovations. In the reign of Peter's own father Alexei (*imperabat* A.D. 1645-76) the wearing of Polish costume had been forbidden by a law of A.D. 1675 (see Brückner, A.: *Peter der Grosse* (Berlin 1879, Grote), p. 218); and in the same reign the offence of adopting the Western style of coiffure had been punished by excommunication and dismissal from office (Brückner, *op. cit.*, p. 220). The father's tyrannical Conservatism, however, was a mild affliction by comparison with the son's tyrannical Futurism; for Peter's father had merely been lagging a short distance behind a small minority of his subjects, whereas Peter was forging far ahead of the vast majority of his.

² See Toynbee, A. J., and Boulter, V. M.: *Survey of International Affairs*, 1928 (London 1929, Milford), pp. 202-3.

³ See *ibid.*, pp. 203-5, and *Survey of International Affairs*, 1936 (London 1937, Milford), pp. 777-8, as well as Toynbee, A. J.: *Survey of International Affairs*, 1925, vol. i (London 1927, Milford), pp. 73-5.

⁴ The passage of this law had the effect of forcing all male Turkish citizens into making a breach with one of the outward observances of Islam; for the Islamic form of prayer requires the worshipper both to keep his head covered and to touch the ground with his forehead; and it is impossible to observe both these prescriptions in any head-

sponding decrees of Rizā Shāh Pehlevī of Iran and King Amānallāh of Afghanistan which followed in 1928.¹

The Islamic World in the twentieth century of the Christian Era is not the only arena in which a hat with a brim has been adopted as the battle-crest of a militant Futurism. In the Syriac World in the fourth decade of the second century B.C. the High Priest Joshua—who was the leader of a faction in Jewry which was eager at that time to repudiate at least the external trappings of the Jewish community's native cultural heritage—was not content to advertise his programme by the verbal gesture of hellenizing his own name from Joshua into Jason. The 'positive act' which provoked the demonic reaction of the Maccabees was the adoption by the younger priests of the Temple in Jerusalem, at Joshua's instigation, of the broad-brimmed felt sun-hat which was the distinctive headgear of the pagan dominant minority in the Achaemenian Empire's Hellenic 'successor-states'. In the sight of

dress with a brim. In the summer of the year 1929 the writer of this Study noticed the embarrassment which the new law was then inflicting upon the devout worshippers in the Mosque of Sultan Mehmed Fātih in Stamboul (see Toynbee, A. J.: *A Journey to China* (London 1931, Constable), p. 69); and it is difficult not to suspect—though perhaps no less difficult to prove—that this was one of the effects which the law was deliberately designed to produce. It is noteworthy that this futuristic imposition of the Western brimmed hat upon male Turkish citizens in 1925 followed hard upon the heels of a short-lived archaistic fashion of wearing the *galpāq*, a brimless black lambskin cap which was a trivial part of the Ottoman Turks' heritage from the Eurasian Nomad minority of their ancestors. It will be seen that the wearing of the *galpāq* was the equivalent, in the field of dress, of the linguistic Archaism that has been purifying the Ottoman Turkish language of the non-Turkish elements in its vocabulary (see V. C (i) (d) 8 (γ), pp. 67–8, above). The change from the archaistic Eurasian *galpāq* to the futuristic Western Homburg hat was abrupt; for as late as April 1923, when the writer of this Study paid his first visit to Angora, he soon discovered that the hat which he had brought on his own head from London was anathema in Anatolia because in Turkish eyes it was then still a symbol of the imperialism of the Western Powers and of the self-assertiveness of the Orthodox and Gregorian Christian *ra'īyeh*. The *galpāq*, which was so soon to be supplanted by this ex-enemy headgear, had already supplanted the *fez*; and the *fez*, too, had been an innovation in its day. It had been introduced by Sultan Mahmūd II (*imperabat* A.D. 1808–39) as an alternative to the invidiously distinctive variety of headgear that had previously been either obligatory or customary in the Ottoman Empire. It is noteworthy that Mahmūd does not appear to have made the wearing of the *fez* compulsory except for public servants.

¹ Rizā Shāh banned the sugar-loaf-shaped felt *kulāh*—which, on the evidence of Achaemenian bas-reliefs, had been the customary Persian male headgear since at least the fifth century B.C.—but he was prudent enough to make a compromise with the susceptibilities of his subjects in selecting his compulsory substitute. Instead of following the precedent of the Turkish law of November 1925, Rizā Shāh constrained his male subjects to wear, not the civilian Western hat of the day, but the so-called *Kulāh Pehlevī*, a fancy head-dress, designed by the Shah himself, more or less on the pattern of the contemporary headgear of officers in the French Army. King Amānallāh—who had to deal with a population which was still more conservative than that of Persia—made the mistake which Rizā Shāh avoided. Amānallāh did attempt to follow the Turkish example; and this was the crowning folly that cost him his throne (see V. C (i) (c) 3, vol. v, p. 333, above, and V. C (ii) (a), in the present volume, p. 234, below). On the other hand, in the relatively progressive 'successor-state' of the Ottoman Empire that has been established in 'Irāq, the first sovereign, King Faysal b. Husayn, exercised an even greater prudence than Rizā Shāh; for the 'Faysal cap' which he introduced is modelled, not on the peaked cap of the French Army, but on the soft and brimless forage-cap of the British Army, in which any devout Muslim can perform his prayer-drill without impediment.

the orthodox Palestinian Jews of the day this spectacle was as shocking as it would be to the eyes of our twentieth-century Palestinian Arab Muslims if the Grand Mufti of Jerusalem were to air himself in the Haram-ash-Sharīf with a sola topee on his head. And in the Jewish case in point the rapid progress of the futurist furore was soon to give the puritans reason; for the young priests of Yahweh did not confine their revolutionary cult of Hellenism to the wearing of the *petasus*. Their Hellenic headgear was not so shocking as the Hellenic nakedness with which they practised Hellenic sports in a Hellenic palaestra. Hellenic athletic competitions led on to Hellenic dramatic festivals; and, almost before the conservatively orthodox majority of the Palestinian Jewish community had realized what was happening, the 'raging tearing campaign' of Futurism had arrived at its sacrilegious culmination.

'They shall pollute the sanctuary of strength and shall take away the daily sacrifice, and they shall place the abomination that maketh desolate.'¹

Jason's futuristic campaign had started as a voluntary movement; and, for all its radicalism, it had not trespassed beyond the limits of a secular field of action in which it might give offence to Jewish taste without driving Jewish consciences to desperation. But the Jewish High Priest Jason had been working under the patronage of the Seleucid Emperor Antiochus Epiphanes; and the patron held in the hollow of his hand a client who was merely the prelate of one of those diminutive temple-states which were embedded

¹ Dan. xi. 31. The crescendo movement of Jason's futurist 'ramp' is depicted, in colours which are as vivid as they are unflattering, in a celebrated passage in the Second Book of Maccabees:

'After the passing of Seleucus [IV] and the accession of Antiochus the God Manifest (so called), Jason the brother of Onias wormed his way into the High Priesthood. He achieved this by petitioning the King and promising him 360 talents of silver per annum, besides 80 talents from other sources of revenue. In addition he undertook to levy another 150 talents if he were also empowered by royal authority to establish a physical training centre (*γυμνάσιον*) and a youth club (*ἐφηβείον*) and to register the inhabitants of Jerusalem as citizens of Antioch. The King gave his assent; and the new High Priest had no sooner taken up the reins of office than he set himself to transform his countrymen into Hellenes. He brushed aside the royal charter that had been secured to the Jews by the efforts of John the father of Eupolemus, and he made havoc of their lawful institutions in order to make room for impious innovations. He took a peculiar pleasure in installing his physical training centre under the very shadow of the citadel, enrolling the pick of the youth, and putting them into slouch hats (*ἀρμένις* . . . *τοὺς κρατίστους τῶν ἐφήβων* . . . *ὑπὸ πέτασον ἤγαγεν*). Indeed, the unparalleled profanity of Jason, who behaved more like an enemy of Religion than like a High Priest, gave Hellenism such a vogue and Renegadism such an impetus that the priests lost interest in the Liturgy, looked down upon the Temple, neglected the sacrifices and cared for nothing but to enter themselves for competitions in discus-throwing and to take their part in all the impious performances in the ring. They despised what their forefathers had honoured, and regarded Hellenic notions as the best in the world. In retribution for this they were overtaken by serious misfortunes and received their punishment at the hands of the very nation whose ways they had admired and wanted to ape in every particular. The laws of Heaven cannot be defied with impunity, as the sequel will show' (2 Macc. iv. 7-17).

here and there in the vast body politic of the Seleucid Empire.¹ When it suited Antiochus's convenience he sold Jason's office over Jason's head to a rival aspirant² who was not only a higher bidder for the Jewish High Priesthood but was also a more violent futurist; and, when the evicted Jason descended upon Jerusalem from his asylum in Transjordan and expelled his supplanter by a *coup de main*, Antiochus promptly took advantage of the opening given him by this act of Jewish rebellion in order to intervene personally with a high hand. He marched on Jerusalem; crushed the revolt; installed a Macedonian garrison; confiscated the treasure of the Temple for the benefit of his own insatiable exchequer; and put (as he supposed) the finishing touch to the work of Hellenization, in which Jason had played his part as pioneer, by courteously identifying 'the Heaven-God of Jerusalem'³ with the Olympian Zeus and graciously providing the necessary statue of the god—portrayed in the Emperor's own image—to fill the void in a hitherto bleakly vacant Holy of Holies.⁴ 'The Abomination of Desolation, spoken of by Daniel the Prophet, standing where it ought not,'⁵ was the swift and fearful nemesis of Joshua-Jason's futuristic escapade.⁶

The ultimate outcome of this Jewish essay in Futurism in the second century B.C. was not a triumph like Peter the Great's but a fiasco like Amānallāh's; for the Seleucid Power's frontal attack upon the Jewish religion evoked a Jewish reaction of a violence⁷ with which Epiphanes and his successors found themselves unable to cope.⁸ Yet the fact that this particular essay in Futurism

¹ For these temple-states, which were the debris of shattered civilizations, see IV. C (iii) (c) 2 (β), vol. iv, p. 312, footnote 1, and p. 422, footnote 3; IV. C (iii) (c) 3 (α), vol. iv, p. 471; and IV. C (iii) (c) 3 (β), vol. iv, pp. 515-18, above.

² We have no record of the Jewish name which was hellenized into Menelaus by Joshua-Jason's supplanter (Bevan, *Jerusalem under the High Priests* (London 1904, Arnold), p. 80).

³ For this description of Yahweh, under which the tribal god of Jewry had been commended by the Jews themselves to the notice of the Pagan World, see the passage quoted from Eduard Meyer in V. C (i) (d) 7, p. 33, above.

⁴ For the measures taken by Antiochus Epiphanes at Jerusalem see Bevan, *op. cit.*, pp. 81-2.

⁵ Mark xiii. 14; cf. Matt. xxiv. 15.

⁶ The swiftness of the nemesis is impressive if it is true that Antiochus's devastating act of introducing the Hellenic idol into the Jewish Holy of Holies followed within eight years of Jason's apparently innocuous act of putting his young priests into Hellenic hats.

⁷ See V. C (i) (c) 2, vol. v, pp. 68 and 72-3, above.

⁸ Eduard Meyer, in *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), p. 143, makes a suggestive comparison between Antiochus Epiphanes and the Hapsburg Emperor Joseph II. The Seleucid Empire was already labouring under the shock of its collision with Rome by the time when Antiochus Epiphanes (no doubt unwittingly) challenged Jewry to a fight to the death with the Emperor's Hellenism. Within ten years of the conquest of Coele Syria by Antiochus the Great in 198 B.C. the Seleucid conqueror of the Ptolemy had been routed by Scipio Asiagenus at Magnesia and had been compelled, as part of a peace settlement which was dictated to him by the Roman Government, to consent to a drastic limitation of Seleucid armaments. And Antiochus Epiphanes himself had been publicly humiliated by a Roman Commissioner before the walls of Pelusium (see V. C (i) (d) 6 (γ), Annex I, vol. v, p. 628, footnote 2,

happens to have been abortive does not make it any the less instructive; and one of the points which it illustrates is the impossibility of indulging in Futurism within fore-appointed limits. The essence of Futurism is a breach with the present; and, when once there has been a lesion at any point in the fabric of social life, the rent will extend itself and the threads will continue to unravel—even if the original rift was minute and even if the point at which it was made lay on the outermost fringe of the web. The *êthos* of Futurism is intrinsically 'totalitarian'; and the evidence which points to this conclusion is by no means confined to the single instance which has led us up to it. Just as the Jew who takes to wearing the *petasus* soon learns to frequent the palaestra and the amphitheatre, so the Muscovite who has been dragooned into wearing a Western wig goes on to dance the fashionable Western dances and play the fashionable Western card-games, while in a later generation the Turk in a Homburg hat and the Persian in a Pehlevî cap cannot be kept off the football field or out of the cinema hall. In these cases, as in that, the abandonment of a traditional style of dress leads on to a general revolution in manners; and this is not the end of the futurist rake's progress. For, while in the Islamic World to-day the post-war fever of Futurism is still in the innocuous preliminary external stage of the Jewish movement under Jason's brief régime, Japan, who anticipated Turkey by three-quarters of a century in discarding her traditional male costume, is already being haunted by the spectre of 'dangerous thought', while in Russia—where the change of costume occurred about a century and three-quarters earlier than in Japan—the process has culminated in our day¹ in a campaign against the ancestral religion of the land

above) only a few months before he stormed the walls of Jerusalem and desecrated the Temple. The main lines of Epiphanes' ill-starred policy can all be traced back to the effects of Roman pressure. His abortive campaign of forcible Hellenization was an ill-judged effort to reinvigorate his empire by consolidating it. His abortive invasion of Egypt was a hazardous attempt to take advantage of the Romans' preoccupation with Perseus in order to secure a belated territorial compensation for the loss of the former possessions of the Seleucid Monarchy north-west of Taurus. The financial straits which tempted Antiochus to resort to the fatal expedient of robbing his Jewish subjects of their temple-treasures were the price of his own costly military adventure in Egypt following upon the payment of the heavy war-indemnity which had been exacted by the Romans from his predecessor Antiochus the Great. Before the Seleucid Government was pushed or led into these fatal courses in consequence of its encounter with Rome, its yoke had weighed lightly, by comparison with the rival Ptolemaic Government's yoke, upon its Oriental subjects' necks (see V. C (i) (c) 2, vol. v, p. 65, above).

¹ The pace of Futurism in Russia has, of course, been much slower than the pace at which it moved in Palestine in the second century B.C.; for while, as we have seen, the installation of 'the Abomination of Desolation' in the Holy of Holies may have followed within eight years of the adoption of the *petasus* by Joshua-Jason's young men, there is an interval of no less than 228 years between the date of Peter the Great's effective accession to power in A.D. 1689 and the date of the Bolshevik Revolution of A.D. 1917. This difference of pace is evidently due to one signal difference in the course of events. The hand which placed the statue of Zeus Olympius in the Temple of Yahweh at Jerusalem was the hand of an alien intruder; and the fact that Antiochus was not a Jew but a Greek accounts both for the swiftness with which the Palestinian drama reached its culmina-

which is being conducted with a far more powerful 'drive' than Antiochus was able to put into his casual assault upon the traditional worship of Yahweh.

On this showing, we may expect to see Futurism invade the sanctuary of Religion sooner or later in any society in which this contagious way of life has once asserted itself in the trivial and frivolous spheres of dress and recreation; but in its victorious advance from the outworks to the citadel of the Soul a futuristic movement has to traverse the intermediate zones of Politics and Secular Culture; and we must therefore take a survey of its effects in these two fields before pursuing our inquiry into the supreme effort to break with the Present which Futurism makes when it turns its batteries upon the ancestral religion of a society whose less intimate ancestral institutions have already been razed to the ground in the earlier stages of the offensive.

The Breach in Institutions.

In the political sphere Futurism may express itself either geographically in the deliberate obliteration of existing landmarks and boundaries or socially in the forcible dissolution of existing corporations, parties, and sects or 'liquidation' of existing classes or abolition of existing organs or offices of state; and it may be convenient to survey separately some of the outstanding examples of its operation in these two different fields, though in practice a futuristic political revolution is apt to extend over both fields if it has succeeded in making headway in either one of them.

The classical example of a systematic obliteration of landmarks and boundaries for the express purpose of producing a breach of political continuity is the redrawing of the political map of Attica by a successful revolutionary, Cleisthenes the Alcmaeonid, *circa* 507 B.C. Cleisthenes' aim was to transform a loosely-knit polity, in which the claims of kinship had hitherto usually prevailed over those of the community whenever the two allegiances had come into conflict, into a unitary state in which the obligation of citizenship would in future override all lesser loyalties. He perceived that these lesser loyalties, which he wished to weaken or break, were strong in virtue of their possessing 'a local habitation and a name';¹ and accordingly he replaced—or at any rate overlaid—the

tion and for the fierceness of the reaction which eventually rendered the whole movement abortive. If Joshua-Jason's Seleucid patron and master had had the wisdom to refrain from intervening in person, and had left the Jewish futurist movement to work itself out at its own natural pace under exclusively Jewish auspices, it is conceivable that the first century of the Christian Era might have witnessed an eradication of the worship of Yahweh by Jewish hands instead of witnessing, as it did, the outburst of Jewish Zealotism which culminated in the great Romano-Jewish War of A.D. 66-70 (see V. C (i) (c) 2, vol. v, p. 68, above).

¹ Shakespeare: *A Midsummer Night's Dream*, Act v, Scene 1, l. 17.

traditional Attic *phylae* and *phratritiae* and *genê* with a brand-new set of artificially invented and arbitrarily delimited *phylae* and *trittyes* and *dêmi* which would foster the allegiance of their members to the all-embracing city-state of Athens of which these new geographical circumscriptions, unlike the old kin-groups, were mere articulations without any prior or independent life of their own.¹

This precedent from Hellenic history has been followed in our Western World by the makers of the French Revolution—whether consciously, as part of their cult of Hellenism, or because they lighted independently upon the same means for compassing an identical end. Aiming at the political unification of France as Cleisthenes had aimed at that of Attica, these French political futurists did in fact adopt the Cleisthenic device of abolishing the old provincial boundaries and levelling the old internal customs barriers in order to turn France into a unitary fiscal area subdivided for administrative convenience into departments whose monotonous uniformity and strict subordination were intended to efface the memory of the historic provinces with their persistent traditions of diversity and autonomy. To-day the departments of France bid fair to prove, as the demes of Attica proved, the most durable monuments of the revolution whose fiat first traced their boundaries on the map; and already this feat of geographical Futurism in France has had repercussions in other parts of

¹ Cleisthenes' revolutionary reconstruction of the political map of Attica was justified by its fruits; for it did produce precisely that overriding sense of loyalty to the state which it had been intended to produce; and, with this artificial reinforcement, the Athenian civic consciousness developed a strength and tenacity which could bear comparison even with the Spartiates' public spirit. The brilliance of Cleisthenes' success as a revolutionary may perhaps be accounted for in part by the fact that this Athenian political futurist was also the scion of a noble house with a strong family tradition. At any rate, whether for this or for some other reason, Cleisthenes was one of those rare revolutionaries that have had the insight to understand the potency of Conservatism and the wisdom to harness this mighty social force for their own purposes. When Cleisthenes set himself to replace the four historic *phylae* of Attica with ten brand-new *phylae* of his own invention, he took pains to invest his new creations with an air of antiquity and a halo of sanctity. He solved the delicate problem of providing his new ten tribes with names by drawing up a panel of a hundred names of mythical Attic heroes and then persuading the Oracle at Delphi (where the Alcmaeonidae had influence) to designate ten as being the most appropriate (Aristotle: *Institutions of Athens*, chap. 21). The Cleisthenic 'tribes' thus started life with a religious sanction which soon gave them as powerful a hold upon the allegiance of the citizens enrolled in them as if they had been in existence since time immemorial; and this new allegiance to the ten Cleisthenic tribes, in contrast to the old allegiance to the four Ionic tribes, had the effect of fortifying, instead of competing with, the members' simultaneous allegiance to the Athenian city-state. (It is true that in Attica the Ionic tribes, too, in their day, may have started as artificial articulations of the body politic which were copied, in this case, from Miletus or some other city-state of Ionia in which these tribes were an indigenous institution representing the several 'swarms' of migrants in the post-Minoan Völkerwanderung whose political union in their new place of settlement had brought a new body politic to birth (see II. D (iii), vol. ii, pp. 97-8, above). But, if the introduction of the Ionic tribes into Attica really had been an anticipation of Cleisthenes' invention of his ten tribes, the earlier political revolution had miscarried; for by Cleisthenes' time the Ionic tribes in Attica had become incorporated into the indigenous kin-group organization of *phratritiae* and *genê*.)

Europe. It is true that the departments on the French model which were instituted under the Napoleonic régime in those tracts of Italy, Germany, and the Low Countries that were incorporated into the Napoleonic Empire and its client states did not survive the downfall of Napoleon and the consequent reduction of France to her old limits by the re-establishment of the frontiers of A.D. 1792. Yet, although these departments in the French Revolutionary style *in partibus peregrinorum* were themselves ephemeral, their negative effect upon the political map of Europe has been lasting and profound; for in the short period of their currency they did effectively obliterate the pre-existing political landmarks, and thereby they cleared the ground for the erection of a united Italy and a united Germany whose makers have been persistently inspired by the pattern of a united France until, in our own day, they have turned imitation into caricature by carrying it to 'totalitarian' lengths.¹ In Germany under the National-Socialist régime Herr Hitler has been following out at any rate one of 'the Ideas of 1789' in his move to replace the *Länder* of the Reich, with their unwelcome historic associations of dynastic particularism, by *Gaue* in which the essential unity of the Reich will be proclaimed in the very artificiality of these new-fangled geographical articulations.²

While Herr Hitler has been experimenting—with a caution that seems alien from the Nazi *êthos*—in this enterprise of remapping 'the Third Reich' on futuristic lines, his 'opposite number' Monsieur Stalin has given characteristic expression to the Bolshevik *êthos* in the geographical field by carrying to completion a far more radical rearticulation of the internal divisions of the Soviet Union.

The thoroughness of the breach of continuity which has been made by Stalin in this sphere becomes apparent when the new administrative map of the Union of Soviet Socialist Republics³ is superimposed upon the old administrative map of the Russian Empire; for it would be hard to find a sector where the two sets of lines coincide. The autonomous Uzbek khanates and Cossack republics have been swept away as unceremoniously as the subdivisions of those territories that used to be under the direct administration of St. Petersburg; and these old administrative

¹ See V. C (i) (d) 6 (γ), Annex I, vol. v, pp. 636-42, above.

² In theory the *Gaue* into which the National-Socialist Party has been remapping 'the Third Reich' for certain purposes are archaistic restorations of the tribal communities into which the German-speaking population of the Continent of Europe was divided in the Dark Ages, before the establishment of the Holy Roman Empire. The practical purpose, however, which these new *Gaue* are intended to serve is the futuristic aim of obliterating the vestiges of the dynastic states into which Germany broke up as the Holy Roman Empire weathered away.

³ See the English text of the Constitution (Fundamental Law) of the Union of Soviet Socialist Republics adopted [on the 5th December, 1936] at the Extraordinary Eighth Congress of Soviets of the U.S.S.R. (Moscow 1937. Co-operative Publishing Society of Foreign Workers in the U.S.S.R.), chap. 2, arts. 13 and 22-7.

units have been replaced by a complicated hierarchy of new ones—ranging from the constituent states of the Union down to a number of autonomous republics and districts within their respective borders—which bears no relation whatsoever to the old administrative 'lay-out'. Stalin's motive in carrying out his geographical revolution has been the same as Hitler's and Cleisthenes'. His aim, like theirs, has been to make sure that the common allegiance of his fellow citizens to the commonwealth as a whole shall be stronger than their parochial allegiance to any lesser geographical unit. In pursuing this identical aim, however, Stalin has acted with a subtlety in which he is perhaps a pioneer. Whereas his predecessors and contemporaries have all alike sought to attain their purpose of weakening the existing parochial loyalties by effacing the landmarks to which these loyalties have attached, Stalin has pursued the exactly contrary policy of satisfying, and even anticipating, the cravings of parochialism on the shrewd calculation that an appetite is more likely to be stifled by satiety than it is to be extinguished by starvation.

Stalin has perceived in advance that one of the most formidable impediments to the triumph of the Marxian 'ideology' among the peoples of the Soviet Union is likely to be the attraction of the alternative 'ideology' of Nationalism—a competing Western political idea which has already captured some of the most highly cultivated peoples of the Union, such as the Ukrainians, Georgians, and Armenians, and which is likely to continue to spread until its leaven—or virus—will have infected even the most remote and backward tribes in the mountain-fastnesses of the Caucasus and Altai and in the tundras beyond the Arctic Circle. Recognizing that this unwelcome triumph of Nationalism is at least as probable as the triumph of the Communism which it is his mission to promote, Stalin has set himself to prevent the plague of Nationalism from taking a virulent form by applying the homoeopathic treatment of inoculation. He has thrown open to the peoples of the Union so wide a scope for the satisfaction of nationalist proclivities as to reduce to a minimum the danger that nationalist grievances may be used as a 'red herring' to draw the peoples' feet away from the path of Communism which Stalin wishes them to tread.

In this field, at any rate, Stalin knows what he is about; for he is himself a Georgian by birth and he has thus had a direct experience of the stimulating effect of the old Imperial Russian policy of repression upon national movements among non-Russian subjects of the Tsar. It is therefore perhaps not improbable—in the light of the sequels to the French Revolution of A.D. 1789 and to the Attic Revolution of 507 B.C.—that the futuristic recasting of the

administrative map of the Soviet Union under Stalin's auspices may prove to be the most durable monument of the Russian Revolution of A.D. 1917. And in that event Stalin—who in other connexions may chiefly be remembered as a politician who slyly shepherded his silly sheep back out of the Marxian wilderness in the direction of the bourgeois fold—will also have a second title to fame as a statesman whose brilliant political homoeopathy saved some sixteen per cent. of the land-surface of the planet from being ravaged by the Western political plague of Nationalism with the extreme virulence that is symptomatic of an 'ideological' germ when it is attacking bodies social that have not been preconditioned for resisting it.

Unhappily the homoeopathic treatment which the All-Union Communist Party, under Stalin's inspiration, have applied to the problem of Nationalism within the frontiers of the Soviet Union has not been their policy in dealing with corporations and parties and sects and classes. In this field their Futurism has taken the form of a 'totalitarian' intolerance, and here their pernicious example—which has itself been inspired by the outlawry of the Noblesse in the French Revolution—has been all too faithfully followed by the National-Socialist Party in Germany.

As for the breach in Institutions which takes the form of an abolition of existing organs or offices of state, we may cite, as a classical example, the abolition of the Roman Consulate by the Roman Emperor Justinian.¹

The Breach in Secular Culture and in Religion.

In the field of Secular Culture the classic expression of Futurism is the symbolic act of the Burning of the Books. In the Sinic World the Emperor Ts'in She Hwang-ti, who was the revolutionary first founder of the Sinic universal state,² is said to have systematically confiscated and burnt the literary remains of the philosophers who had flourished during the Sinic 'Time of Troubles', for fear that a transmission of this 'dangerous thought' might thwart his own design of inaugurating a brand-new order of society.³ And in the Syriac World the Caliph 'Umar, who was the veritable reconstructor of the Syriac universal state after it had been in abeyance during a millennium of Hellenic intrusion upon the Syriac World,⁴ is reported to have written, in reply to an

¹ See V. C (ii) (a), p. 224, below.

² See V. C (ii) (a), p. 187, below.

³ According to Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), p. 171, the 'dangerous thought' that Ts'in She Hwang-ti was particularly anxious to suppress was the Mencian version of Confucianism.

⁴ For the Arab Caliphate as a 'reintegration' or 'resumption' of the Achaemenian Empire see I. C (i) (b), vol. i, pp. 73-7, above.

inquiry from a general who had just received the surrender of the city of Alexandria and had asked for instructions as to how he was to dispose of the famous library,

'If these writings of the Greeks agree with the Book of God, they are useless and need not be preserved; if they disagree, they are pernicious and ought to be destroyed.'¹

According to the legend, the contents of a library which had been accumulating for more than 900 years were thereupon condemned to be consumed as fuel for the heating of the public baths.

Whatever may be the proportions of fiction and fact in these tales that attach to the names of 'Umar and Ts'in She Hwang-ti, the burning of the books at Münster under the militant Anabaptist régime of A.D. 1534-5,² and in the whole of Germany after the advent of Herr Hitler to power on the 30th January, 1933, is authentic history; and the motive which inspired our modern Western National Socialists was undoubtedly that which the legend ascribes to the Sinic futurist dictator.

Herr Hitler's Turkish contemporary President Mustafā Kemāl Atatürk succeeded in producing an even sharper breach with the Turkish cultural heritage by means of a less drastic but possibly more effective device. The Turkish dictator's aim was nothing less than to wrench his fellow countrymen's minds out of their inherited Iranic cultural setting and to force them, instead, into a Western cultural mould; but, as an alternative to burning the books in which the treasures of Iranic culture are enshrined, he contented himself with insisting upon a change of Alphabet. A law which was duly passed by the Great National Assembly at Angora on the 1st November, 1928, gave legal currency in Turkey to a version of the Latin Alphabet which had been worked out for the conveyance of the Turkish language at the dictator's orders; and the same law went on to prescribe that all newspapers, magazines, pamphlets, advertisements, and public signs must be printed in the new Alphabet on and after the coming 1st December; that all business of public services, banks, and companies must be conducted in it, and all books printed in it, on and after the 1st January 1929; that all administrative and legal forms, documents, and records must be conceived in it on and after the 1st June 1929; and that, as from the last-mentioned date, the public was to correspond in the new Alphabet with government departments,

¹ The anecdote is recounted by Gibbon in his inimitable manner (*The History of the Decline and Fall of the Roman Empire*, chap. li).

² For this outbreak at Münster in these years see V. C (i) (c) 2, vol. v, pp. 167 and 170, above. For the particular incident of the Burning of the Books see Carew Hunt, R. N.: 'John of Leyden' in *The Edinburgh Review*, No. 507, vol. 249, January 1929, p. 86.

banks, and companies.¹ The passage and enforcement of this law made it unnecessary for the Turkish Ghāzi to imitate the Arab Caliph's melodramatic gesture. The classics of Arabic, Persian, and Ottoman Turkish literature had now been effectively placed beyond the reach of a rising generation of Turkish boys and girls who might otherwise perhaps have been beguiled by the taste of these forbidden fruits into rebelling against the destiny of Westernization to which they had been devoted by the will of their dictator. There was no longer any necessity to burn the ancient books when the Alphabet that was the key to them had been put out of currency. They could now be safely left to rot on their shelves in the assurance that they would soon be as completely undecipherable as a Sinic scroll or a Babylonian tablet to the whole of the Turkish-reading public save for a negligible handful of specialist scholars.²

In the banning of a script or the burning of a book the breach with a cultural tradition is symbolized in a physical act; but the essence of cultural Futurism is a mental revolution, and this may be effectively carried through without being advertised in any outward visible sign. The destruction of the library at Alexandria, for example (if we may believe that the legend contains some kernel of fact), was only one particular expression of the impulse to break with Hellenism which was inherent in Primitive Islam;³ and this impulse itself was inherited by the Primitive Muslims from Christian and Jewish predecessors; for the revolt of Islam was merely the victorious climax of a persistent attempt—perpetually sustained and renewed in despite of repeated discouragements and failures—to liberate a submerged Syriac Civilization from the incubus of a Hellenism which had originally imposed itself on the Syriac World by naked force of arms.⁴ In its first phase this Syriac reaction against Hellenism had taken the form of an archaistic recoil into the native Syriac tradition by way of a pathologically meticulous observance and elaboration of the Mosaic or the Zoroastrian law.⁵ In its later phases the same

¹ See Toynbee, A. J., and Boulter, V. M.: *Survey of International Affairs, 1928*, III A (viii), especially pp. 228–30.

² The change of Alphabet in Turkey in A.D. 1928 has been touched upon already in IV. C (ii) (a), vol. iv, pp. 52–4, above, where it has been pointed out that the change has been due to a deliberate act of policy and not to a loss of technique.

³ At a later stage, of course, the Syriac Civilization in a more sophisticated Islamic guise drew more copiously upon the mental riches of the Hellenic culture than it had ever been willing to draw in times when it had still been politically and even militarily subject to a Hellenic ascendancy. This cultural contact between the Syriac and Hellenic societies in the Age of the 'Abbasid Caliphate is examined further in Part IX, below.

⁴ For this role of Islam in the conflict between the Syriac and Hellenic cultures see I. C (i) (b), vol. i, pp. 90–1; II. D (vi), vol. ii, p. 235; II. D (vii), vol. ii, pp. 285–8; and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 675–8, above.

⁵ This phenomenon of 'Zealotism', which is one of the regular psychological concomitants of the contact of civilizations in the Space-dimension, is examined further in Part IX, below.

reaction found a futurist expression in a campaign to reconvert from Hellenism the *ci-devant* Syriac masses who in the meantime had been converted to this alien culture in a more or less superficial way through being forcibly enrolled in the Hellenic internal proletariat. This subterranean mental strife, which gradually prepared the ground for 'Umar's lightning victory in a more flamboyant form of warfare, is described in the following passage from the pen of a modern Western master of the subject:

'The supremacy of the intellect and the disciplined acquisition of knowledge by the understanding, which finds its perfected expression in the [Hellenic] philosophical systems—though it is also striven after by Judaism, in Sirach, in his pursuit of the *Chokmah* or Divine Wisdom, as well as in the interpretation of the Law—is ousted by the forces of emotion: the longing for redemption and for the gift of a peace that passeth all understanding; the longing for a direct union with the supernatural world of God. This longing finds its satisfaction in the expectant approach to the Godhead and in the mystical, intuitive form of knowledge (*Gnosis*) to which this opens the way. In spite, or rather just by reason, of its intellectual derangement, this *Gnosis* has the power to create an inner sense of certainty, to overcome doubt, and to lull the understanding to sleep; and so the mediator between God and Man—the "Son"—calls the simple souls to him and reveals this knowledge to them, while they, for their part, make it their own with alacrity and carry it with ease. The grain of truth that lies in *credo quia absurdum*¹ has found here an ideal expression. The phrase towers high above all the repeated attempts—from Paul's spurts of rabbinical logic onwards—to unite and harmonize faith with the rational form of knowledge. It enunciates the contradiction between them quite clearly without any mitigation of its harshness. . . .²

'What we are witnessing here is the passing of the sceptre from the educated to the uneducated—from the upper strata, whose creative force and capacity for achievement are exhausted,³ to the masses below them. The process moves steadily forward towards completion during the early centuries of the Christian Era, and it manifests itself first in the great religious movement that sets in at the birth, and even before the birth, of the Empire. This is the framework within which Christianity spreads⁴ until finally it conquers all its competitors (though not

¹ For the authentic words of Tertullian see V. C (i) (d) 6 (δ), vol. v, p. 564, above.—A.J.T.

² In the passage here omitted Eduard Meyer depreciates the attempts of Clement of Alexandria and Origen and their successors to restate the creed of Christianity in terms of Hellenic philosophy. For a different appreciation of the work of these Christian Fathers see the present Study, V. C (i) (c) 4, vol. v, pp. 366–7, and V. C (i) (d) 6 (δ), vol. v, p. 539, above.—A.J.T.

³ The degeneration of creative into dominant minorities has been examined in this Study in IV. C (iii) (a), vol. iv, pp. 123–4 and 131–2; V. C (i) (a), vol. v, p. 20; and V. C (i) (b), vol. v, pp. 23–35, above.—A.J.T.

⁴ The futurist note can in fact be heard in those passages from the New Testament and from the works of Saints Ambrose and Augustine that have been quoted in this Study respectively in IV. C (iii) (c) 1, vol. iv, pp. 246–9, and in V. C (i) (d) 6 (δ), vol. v, p. 564, footnote 4, above. In those other contexts they have been quoted for the

without being influenced and modified by them profoundly). But the movement has a far wider sweep than that. It embraces every department of cultural, spiritual, and social life and attains a complete supremacy with the establishment of the absolute military monarchy and the régime of the soldier-emperors from the third century onwards.¹

On the intellectual plane the triumph of Futurism is consummated when the heirs of the intellectual tradition of a once creative but now merely dominant minority proclaim their own mental bankruptcy by positively repudiating the cultural heritage which they have failed to defend against the futurist attack and voluntarily embracing the anti-intellectual faith which has been the deadliest weapon of their futurist assailants.² The Hellenic Enlightenment had extinguished its own lamp long before Justinian set the seal upon an accomplished fact by closing the now benighted Athenian schools.³

The illustrations of Futurism in this intellectual sphere that have come to our attention at an earlier point⁴ have been drawn from the histories of the Hellenic and Sinic and Indic civilizations in the course of their disintegration; but there are other illustrations nearer home that stare us in the face; for a futurist assault upon the intellectual heritage of our Western Society is a recent yet already conspicuous feature of our own current history. This contemporary Western vein of anti-intellectual Futurism is in fact a common element in movements which might seem at first sight to be remote from one another. The same animus can be detected in the harmlessly theoretical speculations of the gentle French philosopher Bergson and in the militantly practical policy of the Fascist and Communist worshippers of the idol of 'the Totalitarian State'.⁵

Thought and literature are not, of course, the only provinces of secular culture in which the heritage of the Present from the Past is exposed to a futurist attack. There are other worlds for Futurism to conquer in the visual and aural arts; and in another context⁶

testimony which they bear to an objective truth—the operation of the principle of *περιπέτεια* or 'the reversal of roles'—which is one of the fundamental facts of life. But in enunciating an objective truth these passages also incidentally express a subjective state of mind, and that is the spirit of the futurist who feels it to be his mission to cast out and tread under foot the salt that has lost his savour (Matt. v. 13).—A.J.T.

¹ Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i (Berlin and Stuttgart 1921, Cotta), pp. 289–90. Compare the quotation from C. G. Jung in V. C (i) (d) 6 (δ), vol. v, pp. 567–8, above.

² This metamorphosis of philosophies into religions has been examined in V. C (i) (d) 6 (δ), vol. v, pp. 545–68, above.

⁶ In IV. C (ii) (a), vol. iv, pp. 51–2, above.

we have already had occasion to take notice of the impulse which, in our own Western World in our own day, is leading us to abandon our traditional Western styles of music and dancing and painting and sculpture in favour of outlandish innovations. It is, in fact, our modern Western innovators in those fields who have coined the word 'Futurism' in order to apply it to their own handiwork in assertion of a claim to originality. In their case this boast is proved false by the testimony of a bizarre borrowed plumage which flagrantly betrays its incongruous Tropical African and pseudo-Byzantine origins. The title 'futurist' might have been assumed with better right by the genuine Byzantine school of architecture and the other visual arts which, in an offensive that started in the third and triumphed in the sixth century of the Christian Era, made itself mistress of the entire domain of a moribund Roman Empire by attacking and supplanting the Hellenic school with one hand and the Egyptiac with the other.¹

There is one notorious form of Futurism in the field of the visual arts which stands on common ground between the two spheres of Secular Culture and Religion, and that is Iconoclasm. The Iconoclast resembles the modern Western champion of cubist painting or syncopated music in his repudiation of a traditional form of Art, but he is peculiar in confining his hostile attentions to Art in association with Religion, and in being moved to this hostility by motives that are not aesthetic but are theological. The essence of Iconoclasm is an objection to a visual representation of the Godhead or of any creature, lower than God, whose image might become an object of idolatrous worship; but there have been differences in the degree of rigour with which this common underlying principle has been translated into practice by different Iconoclastic schools. The most celebrated school is the 'totalitarian' one that is represented by Judaism and, in imitation of Judaism, by Islam.

'Thou shalt not make unto thee any graven image, or any likeness of anything that is in heaven above or that is in the earth beneath or that is in the water under the earth. Thou shalt not bow down thyself to them nor serve them; for I the Lord thy god am a jealous god.'²

This ban upon all visual art without exception is the logical form of Iconoclasm for a religion which claims to be coextensive with life itself and which therefore refuses to recognize any distinction between one sphere of life which is religious and another which is secular. On the other hand the Iconoclastic movements which have arisen within the bosom of the Christian Church have accommodated themselves to a distinction which Christianity, in con-

¹ See IV. C (ii) (a), vol. iv, pp. 51 and 54-5, above.

² Exod. xx. 4-5.

trast to both Judaism and Islam, has always accepted from the earliest date to which we can trace back the Christian *Weltanschauung*. Though the eighth-century outbreak of Iconoclasm in Orthodox Christendom and the sixteenth-century outbreak in Western Christendom may have been respectively inspired, at any rate in part, by the examples of Islam in the one case and of Judaism in the other, they did not either of them follow the Judaic-Islamic school in going the length of banning the visual arts *in toto*. They did not carry their offensive into the secular field; and even in the strictly religious field, to which both the Western and the Orthodox Christian Iconoclasts confined their attack, the latter eventually acquiesced in a compromise with their Iconodule adversaries which might seem to have given the 'image-worshippers' the best of the bargain. In return for the concession that all three-dimensional representations of persons who were objects of Christian adoration should thenceforth be banned by a tacit common consent the Orthodox Christian Iconoclasts conceded, for their part, that two-dimensional representations should be countenanced even in the religious sphere;¹ and this arbitrary and irrational ecclesiastical distinction between sculpture and painting² was justified of its political fruits, since it did bring a permanent truce to the controversy over images in the Orthodox Church.

In Iconoclasm the spirit of Futurism in the religious field has expressed itself symbolically in a physical act of destruction which is comparable to the burning of books and the banning of scripts in the secular sphere; but here too the same spirit also can be, and has been, at work without any visible advertisement of its activity; and the Iconoclastic movements which we have just been passing in review are manifestations of a Futurism in the religious field which extends beyond Iconoclasm over a vastly wider range of religious life. In our surveys of the internal and external proletariats³ that are generated by the schism in the body social of a broken-down and disintegrating civilization we have observed that both branches of the Proletariat have been apt to express in religious, as well as in political and economic, forms their revolt against the ascendancy of a dominant minority and their repudiation—which

¹ Officially the images were restored in Orthodox Christendom in A.D. 843 without any limitations or reservations; but the perpetuation of the Iconoclasts' ban in respect of three-dimensional representations was not the less effective for being unavowed (see Bury, J. B.: *A History of the East Roman Empire, A.D. 802-867* (London 1912, Macmillan), pp. 152-3).

² Presumably the distinction was based on the qualification of the term 'image' by the epithet 'graven' in the Second Commandment. Yet the commandment goes on (in the passage quoted above) to forbid the use of visual art in general, *sans phrase*, and it has never occurred either to the Jews or to the Muslims to draw the distinction which is the basis of the present practice of the Orthodox Christian Church.

³ See V. C (i) (c) 2 and 3, *passim*, in vol. v, above.

is partly the cause of the revolt, and partly its consequence—of that dominant minority's cultural heritage. We have traced the origins of the 'higher religions' (in so far as their appearance on the scene of mundane history may be explicable in sociological terms) to the reactions of internal proletariats; and we have likewise found that external proletariats have tended to assert their social individuality on the religious plane either by appropriating to themselves some peculiar version, or perversion, of a 'higher religion' or alternatively by creating a barbarian pantheon of their own in the likeness of a war-lord's war-band. The spirit in which these proletarian-born religions are embraced by their human foster-parents—as distinct from the sometimes utterly different spirit which these religions reveal in themselves—is manifestly an expression of Futurism in the sense which we have given to the word in this Study; and, on this showing, Futurism in the religious field extends over an enormous range—which need not be re-explored here,¹ since we have attempted to survey it already in bringing the Proletariat on to our stage.

(γ) *The Self-Transcendence of Futurism.*

Futurism is a way of life which leads those who seek to follow it into a barren quest of a goal that is intrinsically unattainable. Yet though the quest is barren and may be tragic it need not be without value or importance; for it may guide the baffled seeker's feet into a way of peace² along which he will perhaps allow himself to be drawn now that he has stumbled upon it apparently by chance, though he might not have been willing deliberately to choose it in the first instance.

Futurism in its primitive nakedness is, as we have seen,³ a counsel of despair which, even as such, is a *pis aller*; for the first recourse of a soul which has despaired of the Present without having lost its appetite for life on the mundane level is to attempt to take a flying leap up the Time-stream into the Past; and it is only when this archaistic line of escape has been tried in vain, or has shown itself, without need of trial, to be manifestly impracticable, that the Soul will nerve itself to take the less natural line of Futurism⁴ as a last resort, and will attempt, in a recoil from some

¹ It will suffice to recall our previous references to the forcible suppression of the Hellenic paganism by the Christian Roman Emperors Gratian and Theodosius the Great (see IV. C (iii) (b) 12, vol. iv, pp. 226-7, and V. C (i) (d) 8 (δ), in the present volume, p. 89, above).

² Luke i. 79.

³ In V. C (i) (d) 9 (α), pp. 97-101, above.

⁴ Futurism is not only less natural than Archaism psychologically: it is also sociologically more difficult than Archaism to embark upon (though not more difficult to carry through to success, considering that Archaism and Futurism are both intrinsically incapable of succeeding). The reason why Futurism is more difficult than Archaism to launch is to be found in the fact (which we have noticed in V. C (i) (d) 1, vol. v, p. 398,

grievously shattered hope, to leap out of a blank and dreary Present, not up-stream into a Past which is at any rate familiar, even if it be now beyond recapture, but down-stream into a Future that is conceived of as a state in which the shattered hope can be repaired and resumed and realized.

The nature of this pure—and by the same token purely mundane—Futurism can best be illustrated by citing some of the classic historical examples of it.

In the Hellenic World, for instance, in the second century B.C. thousands of Syrians and other highly cultivated Orientals were deprived of their freedom, uprooted from their homes, separated from their families, and shipped overseas to Sicily and Italy to serve as a 'labour-force' for plantations and cattle-ranches in areas that had been devastated in the Hannibalic War.¹ For these expatriated slaves, whose need for a way of escape out of the Present was extreme, an archaistic recoil into the Past was out of the question. They could not dream of finding their way back to Syria; and, even if the physical feat of repatriation had been practicable, they could hardly feel homesick for an alien Seleucid régime or for the Seleucids' equally alien Achaemenian or Neo-Babylonian or Assyrian predecessors. The pre-Assyrian cosmos of Syriac city-states in which their ancestors had once been truly at home was now buried deep in oblivion. These Syriac slaves who had been conscripted into the ranks of a Hellenic proletariat in a new world overseas could therefore not look back; they could only look forward; and so, when their oppression became intolerable and they were goaded into physical revolt, the objective which they set before their eyes, in order to give themselves heart in their almost desperate enterprise, was to bring to pass an entirely new thing. They made it their aim to establish a kind of inverted Roman Commonwealth in which the existing order of Hellenic Society was to be turned upside down by an exchange of roles between the present slaves and their present masters. The project was audacious, but in the circumstances it was not fantastic. In a universe in which it had been possible for the insurgent slaves themselves to suffer the extreme change of fortune which they had already experienced, what reason was there to suppose that the top-dog of to-day was immune from the possibility of meeting the same fate to-morrow, or that the bottom-dog of to-day, for his

above) that, while Archaism makes its first appearance in the ranks of the Dominant Minority, Futurism first arises in the Proletariat. This makes the launching of an archaistic enterprise relatively easy and that of a futuristic enterprise relatively difficult, because, in any disintegrating society, the Dominant Minority is *ex hypothesi* in the saddle and the Proletariat *ex hypothesi* under the harrow.

¹ See II. D (vi), vol. ii, pp. 213-16; III. C (i) (b), vol. iii, pp. 168-71; and V. C (i) (c) 2, vol. v, pp. 66 and 69-70, above.

part, was debarred from the possibility of living to see his own fortune's wheel come round again full circle?

In an earlier chapter of Syriac history the Jews had reacted in a similar way to the destruction of the sovereign independent Kingdom of Judah.¹ After they had been swallowed up in the Neo-Babylonian and Achaemenian Empires and been scattered abroad among the Gentiles they could not hope with any conviction for an archaistic return to the Pre-Exilic dispensation in which Judah had lived a life of parochial isolation. A hope that was to be convincing must not be conceived in terms of a social environment which had disappeared beyond recall; and, since they could not live without some lively hope of extricating themselves from a present in which they were unwilling to acquiesce, the Post-Exilic Jews were driven into looking forward to the future establishment of a Davidic kingdom in a shape which had no precedent in Judah's political past. The Jews now dreamt of the epiphany of a scion of David's House who would restore David's kingdom in the only fashion that was now conceivable in a world which had been first shattered and then refashioned by the sweeping strokes of a Sargon and a Nebuchadnezzar and a Cyrus. If the New David was effectively to reunite all Jewry under his rule—and what but this was his mission?—in an age in which the living generation of Jews was scattered over the face of the Earth, then he must gird himself to acquire a dominion to which his forebears had never aspired in the highest flights of their ambition. He must wrest the sceptre of the world-empire from the hands of its present holder and must make Jerusalem become to-morrow what Susa was to-day and what Babylon had been yesterday. In order to reunite the Jews he must now reign as King of Kings over Jews and Gentiles alike. And why, after all, should the coming champion of Jewry not attain this pinnacle of power and glory? In a world in which a Cyrus or Seleucus could rise and a Cambyses or Antiochus the Great could fall with the speed of the lightning when it flickers between the Earth and the Firmament,² why should not a Zerubbabel have as good a chance of world dominion as a Darius, or a Judas Maccabaeus as an Antiochus Epiphanes, or a Bar Kōkabā as a Hadrian?³

A similar dream once captivated the imaginations of 'the Old Believers' in the Russian province of Orthodox Christendom. In the eyes of these Raskolniks the Tsar Peter's version of Orthodoxy was no Orthodoxy at all; and yet at the same time it was impossible

¹ The Jewish reaction has been discussed in IV. C (iii) (b) 12, vol. iv, pp. 224-5; V. C (i) (c) 2, vol. v, pp. 68-9; and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 657-9, above.

² Luke x. 18.

³ For the belief in the omnipotence of Chance which is apt to prevail in times of social disintegration—and this with equal potency, whether the belief be unconscious or unavowed or explicit—see V. C (i) (d) 4, vol. v, pp. 412-19, above.

to imagine the old ecclesiastical order triumphantly reasserting itself in the teeth of a secular government that was now omnipotent as well as Satanic. The Raskolniki were therefore driven to hope for something which had no precedent, and that was for the epiphany of a Tsar-Messiah who would be able as well as willing to undo the Tsar-Antichrist's sacrilegious work and restore the Orthodox Faith in its pristine purity because he would combine absolute mundane power with perfect piety. The Raskolniki hugged this wild hope, because their only alternative was the bleak prospect of waiting grimly for the Last Judgement.¹

The significant common feature of these historic exhibitions of naked Futurism is that the hopes in which the futurists have sought refuge and relief have all been set upon a purely matter-of-fact fulfilment in the ordinary and familiar mundane way; and this feature is conspicuous in the Futurism of the Jews—about which we happen to be unusually well informed because it has left behind it a documentary record of its history.

After the destruction of the Kingdom of Judah by Nebuchadnezzar in 586 B.C. the Jews again and again put their treasure in the hope of establishing a new Jewish state on the same purely mundane plane whenever the play of oecumenical politics gave them even the slightest encouragement for embarking on a fresh attempt to translate their dream into reality.² The brief bout of anarchy through which the Achaemenian Empire passed between the death of Cambyses and the triumph of Darius the Great saw Zerubbabel's attempt (*circa* 522 B.C.) to make Jerusalem the capital of a new Davidic Kingdom.³ In a later chapter of history the longer interregnum in the rule of the Hellenic dominant minority over its subject territories on Syriac ground west of Euphrates—an interregnum which was merely the incidental and temporary by-product of a family quarrel between the Seleucid and the Roman representatives of the domineering alien power⁴—was mistaken by

¹ See Wallace, D. Mackenzie: *Russia* (London 1877, Cassell, 2 vols.), vol. ii, chap. xx, pp. 12-13; Brückner, A.: *Peter der Grosse* (Berlin 1879, Grote), pp. 535-8; Mettig, C.: *Die Europäisierung Russlands im 18. Jahrhundert* (Gotha 1913, Perthes), pp. 161-72.

² This dream was dreamed, in the years immediately after the Exile, by the author of the Book of the Prophet Ezekiel (Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), pp. 180-1); and the first attempt to translate it into reality was made by the first party of Jewish exiles in Babylonia who availed themselves of Cyrus's permission to them to return to Judaea. "There was as yet no thought of founding a church; the intention was to restore the political community, or at any rate a fraction of it, a 'remnant', which was to provide a nucleus for the Messianic Empire that was shortly to be expected" (*ibid.*, p. 192).

³ For Zerubbabel's enterprise and its failure see *ibid.*, vol. iii (Stuttgart 1901, Cotta), pp. 194-6; eundem: *Der Papyrusfund von Elephantine*, 2nd ed. (Leipzig 1912, Hinrichs), p. 68; Gall, A. von: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter), pp. 188-97.

⁴ For the family likeness, displayed in a similarity of constitutional structure, between the Roman Commonwealth and the Seleucid Monarchy see IV. C (iii) (c) 2 (β), vol. iv, pp. 311-13, above.

the Jews for a triumph of the arms of the Maccabees;¹ and a majority of the Palestinian Jewish community² were so heedlessly carried away by this mirage of mundane success that they were willing—as ‘Deutero-Isaiah’ had been willing four hundred years earlier³—to throw overboard the now long-consecrated tradition that the founder of a new Jewish state must be a son of David, and to cry ‘Hosanna’ to a son of Hasmon instead, just because at the moment the Maccabee might appear to have accomplished what should have been a Davidic Messiah’s appointed mundane task.⁴ Nor were the Jews cured of their crudely futuristic hope of a new mundane Jewish commonwealth when in due course the Hellenic political ascendancy, from which Palestine had temporarily been released when the Romans had hamstrung the Seleucid Monarchy,⁵ was reimposed in the more formidable shape of a dominion exercised in *partibus Syriacis* by Rome herself.

It was, of course, inevitable that Rome should eventually fill a vacuum which Rome herself had created. However unwillingly, she was bound to step into her Seleucid victims’ shoes; and, considering that the Jews had been no match for their old Seleucid masters until the Romans had deliberately tilted the scales in the Jewish insurgents’ favour, it was evident that a Jewish community whose political fortunes Rome had made by one touch of her little finger would find their new Roman masters irresistible when once Pompey had decided to remove the Hasmonaean pawn from the Palestinian square of Rome’s oecumenical chess-board. If the

¹ Tacitus’s biting censure of this Jewish error of political judgement has been quoted already in V. C (i) (d) 1, vol. v, p. 390, footnote 3, above. In a different context the unhappy outcome of the Maccabees’ divagation into politics has been discussed in V. C (i) (d) 6 (8), Annex, vol. v, pp. 657–9, above.

² It was to the credit of the Pharisees that they did not let themselves drift with the tide of popular feeling, but parted company with the Maccabees just when, and just because, the Maccabees put their treasure in the establishment of an earthly kingdom.

³ ‘Deutero-Isaiah’—the sixth-century writer of a politico-religious work which has been appended to the genuine text of the real Isaiah and now figures there as chaps. xl–lv—hails Cyrus, the founder of the Achaemenian Empire, as the Lord’s Anointed (Isa. xlv. 1), in the wild hope that the Persian conqueror may be moved to bestow his world-empire upon the Jews!

⁴ For the new era which Simon Maccabaeus inaugurated in 142 B.C. to commemorate the establishment of his new Jewish state, see V. C (i) (d) 9 (β), Annex, in the present volume, p. 344, footnote 5, below. So far from being able to claim descent from David, the Hasmonaeans were not even members of the Tribe of Judah. As priests they traced their origin back, not to Judah, but to Levi. Davidic Messianism came into its own again after the ‘mediatization’ of the Hasmonaean principality by Pompey in 63 B.C. (Lagrange, M.-J.: *Le Messianisme chez les Juifs* (Paris 1909, Gabalda), p. 10).

⁵ In the year 162 B.C. the Seleucids’ stud of war-elephants at Apamea was literally hamstrung, in execution of instructions from the Senate at Rome, by the orders of Roman commissioners who were visiting the military head-quarters of the Seleucid Empire on a tour of precautionary inspection (see V. C (i) (c) 3, vol. v, p. 215, footnote 3, above). This barbarity cost the chairman of the commissioners, Gnaeus Octavius, his life, since it was one of the outrages that moved Leptines to assassinate him (for the hamstringing of the elephants see Appian: *Studies in Roman History*, ‘Rome and Syria’, chap. 46; for the assassination of Octavius see the present Study, V. C (ii) (a), in the present volume, p. 219, footnote 1, below).

Jews had been unable to shake off by their own unaided efforts the yoke of a Seleucid Monarchy which had been only one, and that by no means the strongest one, of five contemporary Great Powers in the Hellenic arena, how could the Jews hope to measure themselves against a Rome who in the meantime had swept away not only the Seleucid Monarchy but every other rival Power in the Hellenic World and had thereby transformed her own sole surviving empire into a state that was universal and omnipotent? The answer to these questions was as clear as day to the Idumæan dictator Herod. He never forgot that he was ruler of Palestine solely by the grace of Rome and of Augustus; and so long as he reigned over the Palestinian Jews he contrived to save them from the nemesis of their own folly.¹ Yet, instead of being grateful to Herod for teaching them so salutary a political lesson, his Jewish subjects would not forgive him for being right;² and as soon as his masterly—and masterful—hand was removed they took the bit between their teeth and bolted down their futuristic path till they crashed into the inevitable catastrophe.³ Nor, even then, did a single physical demonstration of Rome's omnipotence suffice. The experience of A.D. 66–70 was not enough to cure the Jews of Futurism. The Diasporà had to repeat the appalling experiment in A.D. 115–17, and the Palestinian Jewry to make yet another trial of it in A.D. 132–5,⁴ before the hope of a new mundane Jewish commonwealth was finally extinguished.⁵ Bar Kōkabā in A.D. 132–5 was pursuing the same end by the same means as Zerubbabel about the year 522 B.C.⁶ It had taken the Jews more than six and a half centuries to learn by an agonizing process of trial and error that Futurism simply would not work.⁷

If this were the whole Jewish story it would not be an interesting

¹ So long as Herod the Great was on the throne the Messianic movement in Jewry was tentative and undecided (Lagrange, *op. cit.*, p. 12).

² Messianism began to raise its head after Herod had turned against Religion in 25 B.C. The first Messianic conspiracy—in which the wife of Herod's brother Pheroras played a leading part—was hatched *circa* 7–6 B.C. (*ibid.*, pp. 13 and 16).

³ The first serious Messianic crisis was precipitated by Herod the Great's death in 4 B.C. Messianic insurrections became frequent after the death of Herod Agrippa I in A.D. 44 (*ibid.*, pp. 17 and 21–2).

⁴ For these Jewish insurrections against the Roman Imperial Government see the authorities cited in V. C (i) (c) 2, vol. v, p. 68, footnote 3, above.

⁵ The word 'finally' holds good, notwithstanding the recent rise of Zionism; for Zionism is a mimesis of the contemporary Nationalism of the Western World and is not a revival of the Jewish Futurism which was extinguished at last in the blood of the followers of Bar Kōkabā.

⁶ Bar Kōkabā's coinage seems to show that he set up a regular Jewish state (see *ibid.*, pp. 317–18).

⁷ The impracticability of Futurism is reflected in the spirit of the Apocalyptic genre of literature in which it found expression. 'C'est un recul très caractérisé du sentiment religieux tel qu'on le trouve dans les grands prophètes et les psalmistes — recul mal dissimulé par un élan disproportionné vers l'inaccessible et l'insondable. . . . L'apocalypse, tournée toute entière vers l'avenir, se préoccupe surtout des révolutions attendues. . . . Les maîtres, moins attentifs aux circonstances de l'intervention divine, sont dominés par les idées absolues qui doivent être la règle de la vie.'—*Ibid.*, pp. 135 and 147.

one, for it would be nothing but a monotonously repetitive record of the inevitable and well-deserved misfortunes of a stiff-necked people that was its own worst enemy. But this obstinate pursuit of Futurism is, of course, only half the story—and the less important half at that. The whole story is that, while some Jewish souls went on clinging to a mundane hope in the teeth of a succession of disillusionments, other Jewish souls—and even some of the same souls in a different mood or through a different spiritual faculty—were gradually taught by the repeated failure of this earthly quest to put their treasure elsewhere. In the process of discovering the bankruptcy of Futurism the Jews made the further tremendous discovery of the existence of the Kingdom of God; and century by century these two progressive revelations—one negative but the other positive—were being unfolded simultaneously. The expected founder of the new mundane Jewish commonwealth was conceived of, appropriately enough, as a king of human flesh and blood who would not miraculously live for ever but would prosaically found a hereditary dynasty.¹ Yet the title under which this future Jewish empire-builder was predicted—and under which every successive pretender to the role was acclaimed, from Zerubbabel through Simon Maccabaeus down to Simon bar Kōkabā²—was not *melek*, which in the Hebrew vocabulary was the simple word for 'king' with no special connotations: the word that became current and consecrated in this special futurist sense was *m'shiha*,³ meaning 'the Anointed', and this was an abbreviation for 'the Anointed of the Lord'. Thus, even if only in the background, the god of the Jews was associated with the hope of the Jews from the beginning; and as the mundane hope inexorably faded away the divine figure loomed ever larger until, in the end, it dominated the whole horizon.

To call a god in aid is not, of course, in itself an unusual procedure. It is probably as old a practice as Religion itself for a person or people that is embarking on some formidable enterprise to invoke the protection of their traditional tutelary divinity; and it would have been strange if the Syrian slaves had not called upon the name of the Dea Syra, Atargatis,⁴ when they rose in revolt against their Greek masters and Roman rulers in Sicily, or if the

¹ On this point see Gall, A. von: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter), pp. 256-7.

² For the recognition of Simon (or Symeon) bar Kōkabā as the Messiah by Rabbi Aqiba see *ibid.*, p. 395, and Lagrange, *op. cit.*, p. 316.

³ According to von Gall, *op. cit.*, p. 173, footnote 1, the title which in Greek is translated *Χριστός* and transliterated *Messias* is the Aramaic equivalent *m'shiha* of an original Hebrew *m'shiach*.

⁴ See V. C (i) (c) 2, vol. v, p. 130, footnote 5, and V. C (i) (d) 7, in the present volume, p. 34, footnote 5, above, and V. C (ii) (a), Annex II, in the present volume, p. 383, below.

Jews had not called upon the name of Yahweh when they ventured to measure their strength against the might of a Darius or an Antiochus or a Nero or a Trajan or a Hadrian. The new departure lay not in the claim—expressed in the title 'Messiah'—that the people's human champion had the sanction of a god behind him;¹ what was new, and also momentous, was the conception of the patron divinity's nature and function and power; for, while Yahweh did not cease to be thought of as the parochial god of Jewry in a certain sense, it was in another and wider aspect than this that he was pictured as the divine protector of 'the Lord's Anointed'.

This widening of the conception of the protecting divinity was indeed imperatively demanded by the mundane situation of the day; for the Jewish futurists *post* 586 B.C. were, after all, engaged upon no ordinary political enterprise. They had set their hands to a task which was, humanly speaking, an impossible one; for, when they had failed to preserve their independence, how could they rationally hope to reconquer it—and, what is more, to supplant their own conquerors in the lordship of the World—by the strength of their own right arm? To succeed in this tremendous undertaking they must have behind them a god who was not only competent to see fair play but was also capable of redressing a balance that, on any human reckoning, was hopelessly inclined against this god's terrestrial protégés. If the protégés were engaged on a forlorn hope, then the protector must be nothing less than omnipotent—and it would follow from this that he must also be actively and whole-heartedly righteous; for only an all-powerful godhead who cared for righteousness above everything else would be both able and willing to exert himself with effect on behalf of a people whose cause was just but whose worldly position was insignificant.

'For he that is mighty hath done to me great things, and holy is his name. . . .

'He hath showed strength with his arm; he hath scattered the proud in the imagination of their hearts.

'He hath put down the mighty from their seats and exalted them of low degree.'²

This, and nothing less than this, must be the power and the performance of the divinity who stood behind the devoted human leader of a futurist forlorn hope; and it was not only the Jewish

¹ For a survey of other instances in which a mundane power that has come to feel itself unequal to its task has called a god in aid and has placed itself under this divine patron's aegis, see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 649-57, above.

² Luke i. 49 and 51-2.

futurists that were forcibly led by their experience in the realm of politics to this conclusion in the realm of theology. The Yahweh who revealed himself behind the Jewish Messiah had his counterparts in the Ahuramazda who was the god behind the Zoroastrian Saošyant (Saviour)¹ and in the Helios who was the god of Aristicus's Heliopolitae.² In the same hard school of Futurism three separate contingents of proletarians made—each independently, under as many different names and aspects³—the same sublime discovery of the One True God.⁴

When once this discovery has been made, a drama which, up to this point, has been played on a terrestrial stage by human actors with mundane aims acquires a new protagonist and at the same time is transposed into a higher spiritual dimension. The human champion who has been the hero hitherto—in virtue of being cast for the part of leading his brethren out of a mundane Wilderness into a mundane Promised Land—now sinks to a subordinate role, while the divinity who has originally been called in aid merely in order to give supernatural power to the human elbow of 'the Lord's Anointed' now comes to dominate the scene. God comes to be recognized as the sole but sufficient saviour of a people that has learnt by bitter experience that its human champion is after all impotent, under any auspices, to save it in its dire extremity. The human champion himself cannot be made equal to what has now proved to be a superhuman task by the expedient of consecrating him with a divine unction. A human Messiah is not enough. God himself must condescend to play the part, which He alone can effectively play, of serving His people as their saviour and their king.⁵

¹ See V. C (i) (d) 11, p. 163, footnote 1, below.

² For the Heliopolitae see IV. C (iii) (c) 3 (β), vol. iv, p. 507; V. C (i) (c) 2, vol. v, pp. 69–70 and 179–82; V. C (i) (d) 1, vol. v, p. 384; and V. C (i) (d) 6 (δ), Annex, vol. v, p. 692, footnote 2, above, and V. C (i) (d) 11, Annex I, in the present volume, p. 351, below.

³ For the contrast between the two different aspects of the One True God which were apprehended respectively in the Jewish conception of Yahweh and in the Zoroastrian conception of Ahuramazda see V. C (i) (d) 7, pp. 43–4, above.

⁴ This discovery has already been dealt with—as an aspect of the sense of unity—in V. C (i) (d) 7, pp. 37–49, above. In other contexts (e.g. in V. C (i) (c) 2, vol. v, p. 82, footnote 4, and in V. C (i) (d) 6 (δ), Annex, vol. v, pp. 649–57, above) it is pointed out that the rulers of universal states are apt (under pressure of the same political necessity that drives the leaders of proletarian futurist *émeutes*) to fall back upon the sanction of a tutelary deity to make good the failure of their own personal prestige.

⁵ The emergence of the conception of Yahweh as king in the course of the development of the religion of Post-Exilic Jewry is traced in detail by Freiherr A. von Gall in *Baaieta roū Oeou* (Heidelberg 1926, Winter). "The hope of a Messiah—i.e. the hope for the reappearance of a king of David's line—can, of course, be only of purely Jewish Post-Exilic origin. The impulse from which this hope started was given by the short-lived kingdom of Zerubbabel. But as far as the majority of the Jews were concerned it seems—so far as we can judge from the surviving literature—that the national form of Messianic hope was still rejected even then. For pious Jews in the mass, Yahweh was and remained the king of the expected new kingdom. This yearning for the kingship of Yahweh himself was stronger than the yearning for the kingship of Yahweh's Anointed"

By this time any modern Western psycho-analyst who is reading these lines and knows his duty will be raising his eyebrows. 'What you have proclaimed as a sublime spiritual discovery turns out,' he will interject, 'now that you have explained what you mean, to be nothing but a surrender to that infantile desire to escape from reality which is one of the besetting temptations of the human psyche. You have described how some unhappy people who have foolishly set their hearts on an unattainable aim attempt to shift the intolerable burden of being saddled with an impossible task from their own shoulders to those of a series of intended substitutes. Their first conscript is a purely human champion; then, when he cannot avail, they exchange him for a human champion whose humanity is reinforced by an imaginary divine backing; and finally, when even "the Lord's Anointed" breaks down, the fools in desperation signal S.O.S. to a wholly fictitious divine being whose alleged omnipotence is expected to make up for the proven impotence of his human inventors. For the psychological practitioner this rake's progress in escapism is as familiar a story as it is a melancholy one.'

In taking account of this criticism we shall readily agree with the psycho-analyst's strictures upon the childishness of calling on a supernatural power to perform a mundane task which we have first wilfully chosen for ourselves and have then discovered to be beyond our own strength. We shall also find, on consideration, that many of the futurists whom we have had under observation have in fact fallen into this spiritual error and have duly paid the material penalty which our psychological practitioner would no doubt have predicted. In the Jewish case in point there were certain schools of Jewish futurists who did persuade themselves that Yahweh would take upon himself his worshippers' self-appointed mundane tasks and would miraculously make up for

(*ibid.*, p. 250). In von Gall's belief the title of king—which was already applied to Yahweh before the destruction of the mundane kingdom of Judah in 586 B.C.—was originally a mere cult title which he bore (in accordance with a Canaanite practice that was pre-Israelite and non-Israelite) in his capacity of city-god of the *ci-devant* Jebusite city of Zion (*ibid.*, pp. 41-2). According to von Gall it was this originally perhaps no more than formal title that suggested the later idea of conceiving of Yahweh as king in a more significant sense. Von Gall follows the growth of the idea in 'Deutero-Isaiah' [i.e. Isa. xl-lv] (pp. 178-88) and in the Books of the Law (pp. 199-208). He seeks to demonstrate that in the Achaemenian Age this hitherto purely native Jewish notion of Yahweh's kingship came to be informed and enriched by the Zoroastrian notion of a Last Judgement that was to be conducted by Ahuramazda (pp. 219-45). And he shows how the conception of Yahweh the god-king of Zion eventually enlarged itself in Jewish minds from the idea of a parochial tutelary divinity of a Palestinian highland fastness into that of a universal and omnipotent godhead who was king of the whole World and of all Mankind, and who would one day exercise, from his seat in Zion, the royal prerogative of oecumenical dominion that was already his by right. This direct reign of Yahweh from Zion was to be inaugurated by a general judgement in which Gentiles as well as Jews would be summoned to present themselves in Zion before the universal god-king-judge's judgement-seat (*ibid.*, pp. 235-6).

their natural disappointments; and these Jewish futurists did, as we have seen, all come to a bad end. There was the melodramatic suicide of the Zealots who faced hopeless military odds¹ in the fanatical faith that the Lord of Hosts would be a host in himself on the side of his self-constituted human instruments; and there has been the prosaic self-stultification of the Quietists who have argued from the same erroneous premisses² to the exactly opposite—but in the end not less hopeless—practice of abstaining from taking any action of their own in a mundane cause which they have decided to register as God's affair.³ At the same time, however, we shall remember that the fanaticism of the Zealots and the Quietism of the *Agudath Israel* are not the only responses to the challenge from the Hellenic dominant minority that were made by the Jewish contingent of the Hellenic internal proletariat. There was the response of the school of the Rabbi Johanan ben Zakkai⁴ and there was the response of the Christian Church;⁵ and, while these two other responses both resemble Quietism in the negative feature of being non-violent, they differ from Quietism and Zealotism alike in the far more important positive point that they have ceased to set their heart upon the old mundane purpose of Futurism and have put their treasure, instead, in a purpose which is not Man's but God's and which therefore can only be pursued in a spiritual field of supra-mundane dimensions.

This point is of capital importance because it disposes, in these cases, of the criticism which our psycho-analyst can direct against both the Zealots and the Quietists with such deadly effect. To call in God cannot be denounced as an infantile attempt to escape from the hard necessity of facing the defeat of a human endeavour if, in the act of invocation, the human actor simultaneously withdraws his *libido* from his previous mundane aim. And conversely, if the act of invocation does produce so great and so good a spiritual effect as this in the human soul that performs it, that would appear *prima facie* to give ground for a belief that the power which has been invoked is not a mere figment of the human imagination. At any rate, the onus of proof may now reasonably be laid upon

¹ See V. C (i) (c) 2, vol. v, p. 68, above.

² The Quietists hold in common with the Zealots the erroneous idea that God will have made it His own business to fulfil a purpose which His worshippers have chosen for themselves and which is therefore intrinsically mundane. On the other hand they charge the Zealots with impiety (and in this they are surely right) for supposing that, for the accomplishment of a purpose which *ex hypothesi* God has indeed made His own to the best of His worshippers' belief, God can have any need of help from human volunteers. If we accept, for the sake of the argument, the premiss from which both the Quietists and the Zealots start, we must find in the Quietists' favour.

³ For this attitude, which is illustrated by the present aloofness of the *Agudath Israel* from Zionism, see V. C (i) (c) 2, vol. v, p. 76, and V. C (i) (c) 2, Annex III, vol. v, p. 588, above.

⁴ See V. C (i) (c) 2, vol. v, pp. 75-6, above.

⁵ See V. C (i) (c) 2, vol. v, pp. 72-4, above.

the sceptic; and, pending his reply, we may allow ourselves to hold that our description of this spiritual reorientation as a discovery of the One True God was after all correct. A human make-believe about the future of This World has given place to a divine revelation of the existence of an Other World. Through the disappointment of a mundane hope we have been admitted to an apocalypse or discovery of a reality which has been there all the time behind the scenes of the narrow man-made stage that has hitherto set the limits of our field of vision and of action.¹ The veil of the Temple has been rent in twain.

It remains for us to take note of some of the principal stages in the accomplishment of this immense feat of spiritual reorientation.

The social circumstances in which Man gains his first inkling that God's purpose is other than, and better than, Man's own, are vividly depicted in the following analysis of the religious experience of the peoples of the Syriac and Babylonian worlds under the Achaemenian régime:

'The complete state of blessedness, on which human hopes are set, is [evidently] not granted by the Divinity to his worshippers in this present time; if it were, the faithful would be bound to triumph over all their adversaries and to see the supremacy of their god acknowledged by all other nations. This means that the full power of the Divinity is not destined to manifest itself until some future date; at the present moment the Divinity is still engaged in a struggle. The process of shaping the World is not yet at an end; the ideal state of things has not yet been attained; the adversaries have not yet been annihilated. It is quite natural that such eschatological hopes should assume the most lively shape among nations, and in religions, which are being subjected to some particularly severe pressure—such hopes were developed by the Prophets of Judah from as early a date as Isaiah's. But they were not alone in this; for Zarathustra's teaching likewise conceives of life as a struggle between two great powers—a struggle which is to close with the victory of Ahuramazda.² The struggle is pictured on the lines of the Gods' great struggles at the creation of the World—a creation that has not reached its complete conclusion—and so Eschatology becomes a repetition and transformation of the creation-myths.³ This is the

¹ The quest that originally led us into this Study was the hope of seeing through the 'shimmer of relativity in the foreground of historical thought' (Part I. A, vol. i, p. 16, above). We have already observed that the ordeal of social disintegration may awaken a sense of unity (V. C (i) (d) 7, in the present volume, pp. 1-49, above). And we have noted how the two successive blows of the Crucifixion and the Ascension evoked the Acts of the Apostles (II. D (iv), vol. ii, pp. 111-12, above).

² According to the same scholar (Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), p. 113), Zoroastrian influences played their part in the translation of the Jewish conception of the Last Judgement from political into ethical terms.—A.J.T.

³ Compare von Gall, op. cit., p. 236: 'The Kingdom of God, which manifests itself at the end of all things, also existed at the beginning of all things' (citing Deut. xxxiii. 5, and Ps. lxxiv. 12). Compare, further, Spengler, O.: *Der Untergang des Abendlandes*, vol. i (Munich 1920, Beck), p. 614, apropos of the *Weltanschauung* of the Western

point in which the Babylonian Mythology has exercised its greatest influence. It has become the basis of a general conception which has found its way into religions of the most diverse kinds.¹

The essence of this conception is that a mundane scene which was once looked upon as a stage for human actors (either with or without superhuman backers) is now regarded as a field for the progressive realization of the Kingdom of God. At first, however, this new idea of the transfiguration of one world by the spiritual irruption of another world of a higher spiritual dimension largely clothes itself, as is to be expected, in imagery that is derived from the old futurist idea of a mundane kingdom which is distinguished from the present state of mundane affairs simply by its position in the Time-stream and by its standard of mundane well-being, and not by any intrinsic difference of spiritual quality. Against this mental background 'Deutero-Isaiah' draws the lineaments of a Kingdom of God² which transcends, while including, the idea of a mundane kingdom,³ but transcends it merely in the point that both Man and Nature are depicted as experiencing a supernatural and miraculous beatification, and not in the deeper sense of exceeding the familiar mundane dimensions of spiritual experience. 'Deutero-Isaiah's' Kingdom of God is really nothing but a new Earthly Paradise—a Garden of Eden adapted to the requirements of a human society which is still mundane though it is no longer primitive—and a distinct advance in spiritual insight is achieved when this new Earthly Paradise comes to be thought of as only a transitory state⁴ which may last, perhaps, for a Millennium but which is destined, at the end of its allotted term, to pass away with the passing of This World itself.

This World must pass in order to give place to an Other World beyond it; and it is in that Other World that the true Kingdom of God is now seen to lie; for the king who is to reign during the

Civilization: 'To-day, in the sunset of the Scientific Age, at the stage when Scepticism is winning the day, the clouds part, and the morning landscape stands out once more with unmistakable clarity.'—A.J.T.

¹ Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), pp. 173-4.

² See von Gall, op. cit., pp. 181-3.

³ The mundane kingdom which is included in 'Deutero-Isaiah's' Kingdom of God is imagined (see the present chapter, p. 122, footnote 3, above) as an Achaemenian Empire in which Cyrus has taken Zion instead of Susa for his capital and the Jews instead of the Persians for his ruling race, because the God of Israel has revealed to him that it is He (and, by implication, not Ahuramazda) who has enabled Cyrus to conquer the World (Isa. xlv. 1-6). In this day-dream 'Deutero-Isaiah' is exposing himself, with a vengeance, to the censure of our imaginary psycho-analyst. He is conscripting Yahweh to inspire Cyrus to turn the feats of Persian arms to the benefit of the Jews in order that the latter may be compensated for their inability to preserve the independence of their own petty principality of Judah by being invested with the lordship of a universal state! Jewry's thirst to gain a new mundane kingdom was so deep that the Jewish prophet was prepared to recognize the Gentile as 'the Lord's Anointed' (Isa. xlv. 1) if that would secure the fulfilment of these Jewish hopes.

⁴ See von Gall, op. cit., index, s.v. *Zwischenreich*.

Millennium on a glorified Earth is not yet God himself but is merely a Messiah who is God's terrestrial deputy. 'The Lord's Anointed' is, indeed, now portrayed as a supernatural figure, and is no longer thought of as an historical human potentate—a Cyrus or a Zerubbabel or a Simon Maccabaeus or a Simon bar Kōkabā—who is singular only in having God's authority behind him. This supernatural Messiah is all of a piece with a world that has been reconverted into an Earthly Paradise for the last Millennium of its existence. But it is manifest that the construction of a miraculous Millennium in This World, pending the replacement of This World by another, is an untenable attempt at a compromise between two ideas which are not only quite distinct but are also in the last resort mutually incompatible. The first of these ideas is the hope of a mundane kingdom which in no way differs from the present in its spiritual quality and is merely projected into the future in order to give scope for make-believe. The second idea is that of a Kingdom of God which is not in Time at all—either present, future, or past—and which differs from all temporal mundane states in the radical way of being in a different spiritual dimension, but which, just by virtue of this difference of dimension, is able to penetrate our mundane life and, in penetrating, to transfigure it.¹ For making the arduous spiritual ascent to the vision of Transfiguration from the mirage of Futurism the eschatological scheme of a Millennium may be a convenient mental ladder; but when once the height has been scaled the ladder can be allowed to fall away; and therewith the mundane Futurism which has evoked a vision of the Other World in response to the challenge of its own unescapable bankruptcy will at last have been completely transcended.

'The Pharisaic pietist had already learnt under the Hasmonaeans to turn away from This World to Heaven, to the future; and now, under Herod, all the current of national feeling which had been set running during the last generations in such strength beat against a blind wall, and itself found no outlet save through the channels opened by the Pharisee. It was among the people bent down beneath that iron necessity that the transcendental beliefs, the Messianic hopes, nurtured in the Pharisaic schools, spread and propagated themselves with a new vitality. The few books of Pharisaic piety which have come down to us—*Enoch*, the *Psalms of Solomon*, the *Assumption of Moses* and others—show us indeed what ideas occupied the minds of writers, but they could not

¹ Physical similes for spiritual truths are bound to be imperfect and are not unlikely to be misleading; but, in terms of our modern Western Physical Science, the spiritual action of the Other World on This World might perhaps be likened to the play of Radiation upon Matter or to the sweep of a comet's tail through a cluster of planets. This simile of Radiation has been employed already in V. C (i) (d) 1, vol. v, pp. 396-7, above. For some alternative similes see V. C (i) (d) 11, in the present volume, pp. 157-61, below.

have shown us what we learn from our Gospels: how ideas of this order had permeated the people through and through; how the figure of the Coming King, "the Anointed One", the "Son of David", how definite conceptions of the Resurrection, of the Other World, were part of the ordinary mental furniture of that common people which hung upon the words of the Lord. . . . But . . . the Christ whom the Christian worshipped was not the embodiment of any single one of those forms which had risen upon prophetic thought; in Him all the hopes and ideals of the past met and blended; the heavenly Son of Man and the earthly Son of David, the Suffering Servant of the Hebrew Prophet and the Slain God of the Greek Mystic, the Wisdom of the Hebrew sage and the Logos of the Greek philosopher, all met in Him; but He was more than all.¹

10. *Detachment*

Our inquiries into the nature and working of Futurism and Archaism have now led us to the conclusion that neither of these two ways of life is permanently *viable* and that the failure of both of them is accounted for by the same fatal error. They are both doomed to fail because both are attempts to perform the impossible acrobatic feat of escaping from the Present without rising above the spiritual plane of mundane life on Earth.² The difference between them is a superficial difference of direction; and a flying leap out of the Present which aims at alighting in another reach of the Time-stream is bound to land disastrously on the rocks just the same whether the leaping fish's unattainable goal happens to lie up stream or down it. Archaism, as we have seen, defeats itself by veering round disconcertingly in mid air and recoiling like a boomerang along a futurist course which runs exactly counter to its aim, while Futurism transcends itself—in the act of coming disastrously to grief—by rending the veil of mundane appearances and bringing into view, beyond them, an Other World of a higher spiritual dimension. The way of life in this Other World is thus revealed to human souls on Earth through a recognition of the bankruptcy of one of the two alternative ways of seeking a change of life without leaving the mundane level; the mystery of Transfiguration is apprehended in a reaction against the fallacy of Futurism. But the bankruptcy of Archaism—which the archaist, in his pursuit of his own fruitless quest, is equally bound to recognize sooner or later—may also bear fruit in a spiritual discovery. The recognition of the truth that Archaism is not enough is a challenge to which the baffled archaist must respond by taking

¹ Bevan, E.: *Jerusalem under the High Priests* (London 1904, Arnold), pp. 158 and 162.

² See V. C (i) (d) 1, vol. v, pp. 383-5; V. C (i) (d) 9 (α), in the present volume, pp. 97-8; and V. C (i) (d) 9 (γ), pp. 118-19, above.

some new spiritual departure, unless he is prepared to resign himself to an irretrievable spiritual defeat; and his line of least resistance is to convert a flying leap that is heading for disaster into a flight that will evade the problem of landing by taking permanent leave of the ground. An experience of the impracticability of Archaism inspires a philosophy of Detachment; and we shall do well to examine this simpler way of rising above the mundane level¹—a way which is the archaist's last resort when he finds himself at bay—before we venture to peer into the mystery of Transfiguration.

The experience of life which leads to the conclusion that the only way of life which solves the problem of life is to detach oneself from life has been sketched with an elegant irony in the following imaginary dialogue from the pen of a Hellenic man-of-letters who lived in the Age of the Antonines without mistaking an 'Indian Summer'² for a return of spring.

Charon: 'I will tell you, Hermes, what Mankind and human life remind me of. You must, before now, have watched the bubbles rising in the water under the play of a fountain—the froth, I mean, that makes the foam. Well, some of those bubbles are tiny, and these burst at once and vanish, while there are others that last longer and attract their neighbours till they swell to a portentous bulk—only to burst without fail sooner or later in their turn, as every bubble must. Such is human life. The creatures are all inflated—some to a greater and others to a lesser degree—and there are some whose inflation lasts as long as the twinkling of an eye, while others cease to be at the moment of coming into being; but all of them have to burst sooner or later.'

Hermes: 'Your simile is as apt as Homer's simile of the leaves.'³

Charon: 'Yet, ephemeral though these human beings are, you see, Hermes, how they exert themselves and compete with one another in their struggles for office and honours and possessions—though one day they will have to leave all that behind and come to our place with nothing but one copper in their pockets. Now what do you think? Here we are on an exceeding high mountain. Shan't I shout to them at the top of my voice and warn them to abstain from useless exertions and to live their lives with Death constantly in mind? I will say to them: "You silly fellows, why are you so keen on all that? You had better stop putting yourselves through it. You are not going to live for ever. None of these earthly prizes is everlasting; and nobody, at death, can carry away any of them with him. One day, as sure as fate, the owner will be gone—as naked as he came—and his house and estate and money will pass for ever after to a constant succession of alien possessors." Supposing I

¹ This philosophy of Withdrawal-without-Return has been touched upon already, by anticipation, in III. C (ii) (b), vol. iii, pp. 254-5, above.

² For this diagnosis of the so-called 'Golden Age' of Hellenic history under the régime of the Antonines see IV. C (ii) (b) 1, vol. iv, pp. 58-61, above.

³ Quoted in this Study in III. C (ii) (b), vol. iii, p. 257, above.—A.J.T.

were to shout this at them, or something like it, and could make myself heard, don't you think they might stand to benefit enormously and might also become vastly more sensible than they now appear to be?'

Hermes: 'I am afraid, Charon, you are suffering under an amiable delusion. I don't think you realize the condition to which they have been reduced by their ignorance and self-deception. Even with a gimlet you couldn't now open their ears—they have plugged them and plugged them with wax (as Odysseus treated his companions for fear that they might hear the Sirens singing). They wouldn't be able to hear you, even if you screamed till you burst. In the world of men Ignorance produces the same effect as Lethe in your Hades. All the same, there are a few of them who have refused to put the wax into their ears; and these few do see life steadily, know it for what it is, and incline towards the truth.'

Charon: 'Then shan't we shout to *them*, anyway?'

Hermes: 'Well, even that would be superfluous. You would only be telling them what they knew already. You can see how pointedly they have drawn away from the rest and how disdainfully they are laughing at what is going on. Obviously they are finding no satisfaction at all in all that, and are planning to make a "get-away" from Life and to seek asylum with you. You know they are not exactly loved by their fellow creatures for showing up their follies.'

Charon: 'Well played, sirs! But how terribly few there are of them, Hermes.'

Hermes: 'Quite as many as are wanted.'¹

Having thus brought on to our stage the exponents of the philosophy of Detachment, we may stay to watch them performing their spiritual exercises. We shall find, as we look on, that the practice of Detachment rises through successive degrees from an initiatory act of still reluctant resignation to a climax at which the adept deliberately aims at self-annihilation.

The attitude of mere resignation is illustrated by the consensus between an Epicurean poet and a modern Western Hellenist who has been professor and poet in one.

Quae mala nos subigit vitae tanta cupido?
certa quidem finis vitae mortalibus adstat
nec devitari letum pote quin obeamus . . .
nec prorsum vitam ducendo demimus hilum
tempore de mortis nec delibare valemus,
quo minus esse diu possimus forte perempti,
proinde licet quot vis vivendo condere saecula;
mors aeterna tamen nilo minus illa manebit,
nec minus ille diu iam non erit, ex hodierno
lumine qui finem vitae fecit, et ille,
mensibus atque annis qui multis occidit ante.²

¹ Lucian: *Charon*, 21.

² Lucretius: *De Rerum Natura*, Book III, ll. 1077-9 and 1087-94.

A lighter English echo of these massive Lucretian lines can be heard in the following verses of Housman's:

From far, from eve and morning
And yon twelve-winded sky,
The stuff of life to knit me
Blew hither: here am I.

Now—for a breath I tarry
Nor yet disperse apart—
Take my hand quick and tell me,
What have you in your heart.

Speak now, and I will answer;
How shall I help you, say;
Ere to the wind's twelve quarters
I take my endless way.¹

The effort of making this act of resignation to Death may be eased by the reflection that Death automatically draws his own sting, since he cannot extinguish life without also extinguishing consciousness, pain, and desire.

Nil igitur mors est ad nos neque pertinet hilum,
quandoquidem natura animi mortalis habetur;
et, velut anteacto nil tempore sensimus aegri,
ad conflendum venientibus undique Poenis
omnia cum belli trepido concussa tumultu
horrida contremuere sub altis aetheris oris,
in dubioque fuere utrorum ad regna cadendum
omnibus humanis esset terraque marique,
sic, ubi non erimus—cum corporis atque animai
discidium fuerit quibus e sumus uniter apti—
scilicet haud nobis quicquam (qui non erimus tum)
accidere omnino poterit sensumque movere,
non si terra mari miscebitur et mare caelo.²

Here again there are English echoes playing round the Latin theme.

Men loved unkindness then, but lightless in the quarry
I slept and saw not; tears fell down, I did not mourn;
Sweat ran and blood sprang out and I was never sorry:
Then it was well with me, in days ere I was born.³

And since this peace-before-birth is a mirror of the peace-after-death from which it is barely separated in time by the brief

¹ Housman, A. E.: *A Shropshire Lad*, xxxii.

² Lucretius: *De Rerum Natura*, Book III, ll. 830-42.

³ Housman, A. E.: *A Shropshire Lad*, xlviii.

convulsion of life, the living Englishman may keep up his courage by thinking of the dead Roman.

The gale, it plies the saplings double,
It blows so hard, 'twill soon be gone:
To-day the Roman and his trouble
Are ashes under Uricon.¹

It is the same consolation that is offered by a Stoic philosopher in less harsh language:

'He sounds the retreat, throws open the door, and calls to you "Come". Come whither? Why, to nowhere very dreadful, but only to where you came from. Come to something that is familiar and akin. Come to the elements: fire to fire, earth to earth, breath to breath, moisture to moisture.'²

Death automatically brings oblivion; and anyway the enjoyment of life has limits which are inexorable because they are inherent in the nature of life itself. Life is a movement which has its own proper curve and span. Its secret lies in a succession; and therefore time unduly drawn out can bring nothing but satiety and boredom.

'When you have come to the end of the time that has been allowed you for watching the procession and taking part in the festivities, will you make a fuss', asks our Stoic philosopher, 'on getting the signal to leave, about making your bow and saying "thank you" for the treat and then taking your departure?'—'Yes I will, because I still want to go on having a good time.'—'You are not the only one. But, after all, festivities can't last for ever. So you really must come away and take your leave with at least a show of gratitude and good grace. You must make way for others. Others have to put in an appearance as you have done in your time, and when they present themselves they must be found room and lodging and board. But, if the first-comers won't get out of their light, there will be nothing left for them. Don't be greedy; don't be insatiable; don't take up the whole world.'³

Time is up, and, what is more, you are not likely to enjoy yourself if you overstay your welcome.

Praeterea versamur ibidem atque insumus usque
nec nova vivendo procuditur ulla voluptas.
sed, dum abest quod avemus, id exsuperare videtur
cetera; post aliut, cum contigit illud, avemus
et sitis aequa tenet vitai semper hiantis. . . .
omnia perfunctus vitai praemia marces. . . .
nunc aliena tua tamen aetate omnia mitte,
aequo animoque agendum humanis concede: necessest.⁴

¹ Housman, A. E.: *A Shropshire Lad*, xxxi.

² Epictetus: *Dissertationes*, Book III, chap. 13, § 14.

³ Ibid., Book IV, chap. 1, §§ 105-6.

⁴ Lucretius: *De Rerum Natura*, Book III, ll. 1080-4, 956, 961-2.

Nor does the nemesis of satiety lie in wait only for individual human beings; it overtakes whole generations.

Nil erit ulterius quod nostris moribus addat
posteritas: eadem facient cupientque minores.¹

In fact,

'One generation passeth away and another generation cometh, but the Earth abideth for ever. . . . The thing that hath been, it is that which shall be, and that which is done is that which shall be done, and there is no new thing under the Sun.'²

These words of a Syriac sceptic whose mind had perhaps been chilled by a breath of the cold wind of Hellenic philosophy are echoed—in accents that are chillier still—in the meditations of a Roman Stoic sage:

'The rational soul ranges over the whole Cosmos and the surrounding void and explores the scheme of things. It reaches into the abyss of boundless Time and not only comprehends, but studies the significance of, the periodic new birth (τὴν περιοδικὴν παλιγγενεσίαν³) of the Universe. These studies bring the rational soul to a realization of the truth that there will be nothing new to be seen by those who come after us and that, by the same token, those who have gone before us have not seen anything, either, that is beyond our ken. In this sense it would be true to say that any man of forty who is endowed with moderate intelligence has seen—in the light of the uniformity of Nature—the entire Past and Future.'⁴

The purchase given by tedium for levering the Soul away from its attachment to life is so familiar a commonplace of the philosophers that an anthology of variations on the theme culled from Seneca's works alone would be almost enough to fill a volume.⁵

Nor need any one wait till he has reached the point of satiety in order to make the, after all, obvious discovery that mundane life, as it is lived by the *homme moyen sensuel*, is at best insipid.

Lie down, lie down, young yeoman;

The Sun moves always west;

The road one treads to labour

Will lead one home to rest.

And that will be the best.⁶

¹ Juvenal: *Satires*, No. 1, ll. 147-8.

² Eccles. i. 4 and 9.

³ For the history of this word παλιγγενεσία see V. C (i) (b), vol. v, p. 27, footnote 2, above.—A.J.T.

⁴ Marcus Aurelius Antoninus: *Meditations*, Book XI, chap. 1 (compare Book VII, chap. 49, and the present Study, IV. C (i), vol. iv, p. 28, footnote 2, above). 'The entire past and future' (τὰ πάντα τὰ καινὰ καὶ τὰ παλαιὰ) sounds like a reminiscence of a Hesiodic formula (τὰ πάντα καὶ τὰ καινὰ καὶ τὰ παλαιὰ, *Op. et Dies*, 32; cf. l. 38)). If there is really a reminiscence of Hesiod here, it illustrates the change of mood that had come over Hellenic minds between Hesiod's and Marcus's day; for Hesiod imagined that he needed the inspiration of the Muses to gain a knowledge which in Marcus's view is known to the average man of forty as a matter of course.

⁵ See, for example, Seneca: *Epistulae Morales*, Ep. xxiv, § 26; Ep. lxxvii, §§ 6 and 17-20; Ep. lxxviii, § 26.

⁶ Housman, A. E.: *A Shropshire Lad*, vii, *ad fin.*

That is depressing; but (since sordidness is worse than insipidity) it is not so repulsive as this:

Tu vero dubitabis et indignabere obire?
mortua cui vita est prope iam vivo atque videnti,
qui somno partem maiorem conteris aevi
et vigilans stertis nec somnia cernere cessas
sollicitamque geris cassa formidine mentem.¹

This drabness of the plain man's life is painful enough. Yet it is not so excruciating as that morbid restlessness of the idle rich which Lucretius depicts with deadly acumen in a passage that has been quoted near the beginning of this Study as an epitome of the state of mind of the Dominant Minority.²

Any one who has ever been in this state of mind, or who has even had an inkling of it at second hand through being haunted by Lucretius's lines, will be inclined to agree with Seneca that life is a synonym for punishment;³ and he may even be persuaded to agree with Lucretius that life is a Hell on Earth:

Atque ea nimirum quaecumque Acherunte profundo
prodita sunt esse, in vita sunt omnia nobis. . . .
hic Acherusia fit stultorum denique vita.⁴

Lucretius's intuition is Macbeth's experience:

Better be with the dead,
Whom we, to gain our peace, have sent to peace,
Than on the torture of the mind to lie
In restless ecstasy. Duncan is in his grave;
After life's fitful fever he sleeps well.⁵

But Macbeth lives on to sound still deeper depths of horror.

To-morrow and to-morrow and to-morrow
Creeps in this petty pace from day to day
To the last syllable of recorded time;
And all our yesterdays have lighted fools
The way to dusty Death. Out, out, brief candle!
Life's but a walking shadow, a poor player
That struts and frets his hour upon the stage

¹ Lucretius: *De Rerum Natura*, Book III, ll. 1045-9.

² Ibid., ll. 1053-70, quoted in I. C (i) (a), vol. i, p. 55, above. This is another Lucretian theme on which Seneca has composed variations: e.g. in *De Tranquillitate*, chap. 2, §§ 6-15 (where Lucretius, Book III, l. 1068, is quoted), and in *Ep. Mor.* iii, § 5.

³ 'Si velis credere altius veritatem intuentibus, omnis vita supplicium est.'—Seneca: *Ad Polybium*, chap. 9, § 6.

⁴ Lucretius: *De Rerum Natura*, Book III, ll. 978-9 and 1023. The intervening lines are occupied with an ingenious analysis of the genuine terrestrial equivalents of the legendary tortures of Tantalus, Tityus, and Sisyphus and the legendary horrors of Tartarus, Cerberus, and the Furies. (For a hypothesis regarding the origin of these Hellenic legends see V. C (ii) (a), Annex II, pp. 522-3, below.)

⁵ Shakespeare: *The Tragedy of Macbeth*, Act III, Scene 2, ll. 19-23.

And then is heard no more: it is a tale
Told by an idiot, full of sound and fury,
Signifying nothing.¹

If life is as grim as that, death must be, by comparison, agreeable.

Numquid ibi horribile apparet, num triste videtur
quicquam, non omni somno securius exstat?²

Seneca justifies his equation of life with punishment³ by comparing the experience of living with that of being adrift on a stormy sea 'from which the only haven is the harbour of death'.⁴

Suave, mari magno turbantibus aequora ventis,
e terra magnum alterius spectare laborem;
non quia vexari quemquamst iucunda voluptas,
sed quibus ipse malis careas quia cernere suave est.⁵

But, if that is sweet, it must be sweeter still to be totally insensible: to know nothing of others' feelings, besides feeling nothing oneself.

Ay, look: high heaven and earth ail from the prime foundation;

All thoughts to rive the heart are here, and all are vain:

Horror and scorn and hate and fear and indignation—

O why did I awake? When shall I sleep again?⁶

'When you will', replies the philosopher; for the time to take action is at hand, and there are effective ways of detaching oneself from life that can be followed if only one is in earnest to the point of willing not merely the desirable end but also the arduous means.

'Ethical prowess (*ἀρετή*) can and will produce felicity (*εὐδαιμονίαν*) and invulnerability (*ἀνάθειαν*) and well-being (*εὖροίαν*) . . . and there is one way only by which well-being can be reached: the way of Detachment (*ἀπόσπασις*) from all morally neutral values (*τῶν ἀπροαιρέτων*). You must not allow yourself to have a sense of property in anything; you must surrender everything to God and to Chance . . . and must concentrate upon one thing only—the thing that is truly your own, and in which no outside power can interfere.'⁷

Spiritual exercises in the practice of Detachment fill many of these 'Leaves from a Stoic Philosopher's Note-Book' out of which

¹ Ibid., Act v, Scene v, ll. 19–28.

² Lucretius: *De Rerum Natura*, Book III, ll. 976–7.

³ See the sentence quoted on p. 138, footnote 3, above.

⁴ Seneca: *Ad Polybium*, chap. 9, § 7: 'In hoc tam procelloso et ad omnes tempestates exposito mari navigantibus nullus portus nisi mortis est.'

⁵ Lucretius: *De Rerum Natura*, Book II, ll. 1–4.

⁶ Housman, A. E.: *A Shropshire Lad*, xlviii; the same theme is handled with a lighter touch in li.

⁷ Epictetus: *Dissertationes*, Book I, chap. 4, § 3, and Book IV, chap. 4, § 39.

the foregoing sentences have been culled.¹ But if we follow the path of Detachment far enough we shall find ourselves sooner or later turning from a Hellenic to an Indic guide; for, far though the disciples of Zeno may go, it is the disciples of Gautama that have had the courage to pursue Detachment all the way to its logical goal of self-annihilation.²

Detachment is, indeed, a matter of degree. One may play at it in the game of a sophisticated 'return to Nature' that was played by a Marie Antoinette in her Parisian dairy and by a Theocritus in his Coan harvest-field.³ One may carry this game to the length of a pose,⁴ as it was carried by a Diogenes in his tub and by a Thoreau in his wigwam.⁵ One may genuinely stake one's life—as an anchorite in the desert or as a yogi in the jungle—upon the efficacy of this would-be solution of the problem which life presents. But a traveller along the path of Detachment who is to reach the goal and win the reward must do more than stake his life on the quest; he must detach himself from life to the point of being in love with nothing but its negation.⁶

To do this, of course, means flying in the face of human nature, and even a willing spirit may be tempted to humour the weakness of the flesh by accepting the assistance of a god to waft it on its way towards so formidable a destination.

With the great gale we journey
That breathes from gardens thinned,
Borne in the drift of blossoms
Whose petals throng the wind;
Buoyed on the heaven-heard whisper
Of dancing leaflets whirled
From all the woods that autumn
Bereaves in all the World.

¹ e.g. see also Book I, chap. 29, *περί εὐσταθείας*, and Book II, chap. 2, *περί ἀραπαρίας*.

² The Epicurean Hellenic ideal of imperturbability (*ἀραπαρία*) seems to have been conceived and pursued independently in a disintegrating Sinic Society by Hsün-tse, the founder of a school of Confucian philosophy which was the antithesis of the school of Mencius (see Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), p. 201). But the Sinic, like the Hellenic, sages seem to have flinched from going to Indic extremes.

³ See V. C (i) (d) 1, vol. v, p. 377; V. C (i) (d) 2, vol. v, p. 403; and V. C (i) (d) 8 (α), in the present volume, pp. 58-9, above. The game that is described in Theocritus's Seventh Idyll and in Lucretius's *De Rerum Natura*, Book II, ll. 20-33 (on which Seneca has embroidered in *Ep. Mor.* xc, §§ 40-3), is also portrayed in the picture by Giorgione that goes by the name of *La Fête Champêtre*.

⁴ A Detachment that is no more than a game or a pose may be suspected of being *Abandon* masquerading in a pretentious disguise (see V. C (i) (d) 2, vol. v, p. 403, above).

⁵ See Thoreau, H. D.: *Walden, or Life in the Woods* (Boston 1854, Houghton Mifflin).

⁶ It is the aim of the Hinayanian Buddhist sage to make his way, through exercises in spiritual concentration, into other and higher worlds of which the keynote is a toning down of feelings to a 'veiled indifference (*Nivṛta-Avyakṛta*)' (Stcherbatsky, Th.: *The Conception of Buddhist Nirvana* (Leningrad 1927, Academy of Sciences of U.S.S.R.), p. 11).

And midst the fluttering legion
 Of all that ever died
 I follow, and before us
 Goes the delightful guide,
 With lips that brim with laughter
 But never once respond,
 And feet that fly on feathers,
 And serpent-circled wand.¹

If one is really going to walk over the edge of a precipice, is it not best to let oneself be led over it in this agreeable way by Hermes Psychopompus? Perhaps it is better to make certain of the guide's identity before putting ourselves in his hands. And, when we look into it, we shall find that the bearer of this imposing Hellenic title is a will-o'-the-wisp who also answers to the Nordic name of the Pied Piper of Hamelin. The Piper hypnotizes children into falling in at his heels; but the trance in which they follow him does not end for them in an escape from life; it ends instead in their sitting in darkness and the shadow of death in the bowels of a mountain into which the deceitful magician entices them. And, even without having the Teutonic fairy-tale to warn him, the Indic candidate for arhatship knows by intuition that the Hellenic expedient of a conducted tour to *Nirvāna* is a snare and a delusion. If one takes an anaesthetic, one cannot commit hara-kiri; and in order to achieve the greater *tour de force* of spiritual self-annihilation one must be alertly aware, from first to last, of what one is about. The key that unlocks the gate of *Nirvāna* is not an aesthetically agreeable hypnosis but an arduous and painful mental strife of the kind that is prescribed in the following passage from a work of the Hinayanian Buddhist philosophy.

'In one who abides surveying the enjoyment in things that make for grasping, craving (*tanhā*) increases. Grasping is caused by craving, coming into existence by grasping, birth by coming into existence, and old age and death by birth. . . . Just as if a great mass of fire were burning of ten, twenty, thirty or forty loads of faggots, and a man from time to time were to throw on it dry grasses, dry cow-dung, and dry faggots; even so a great mass of fire with that feeding and that fuel would burn for a long time. . . .

'In one who abides surveying the misery in things that make for grasping, craving ceases. With the ceasing of craving, grasping ceases; with the ceasing of grasping, coming into existence ceases; with the ceasing of coming into existence, birth ceases; and, with the ceasing of birth, old age and death cease. Grief, lamentation, pain, dejection, and despair cease. Even so is the cessation of all this mass of pain.'²

¹ Housman, A. E.: *A Shropshire Lad*, xlii.

² *Upādāna-sutta*, ii. 84, quoted in Thomas, E. J.: *The History of Buddhist Thought* (London 1933, Kegan Paul), p. 62.

The reward that awaits the whole-hearted seeker after Detachment at his journey's end is described by our Hellenic philosopher in a characteristically political simile.

'You see that Caesar appears to provide us with a great peace, because there are no longer any wars or battles or any serious crimes of brigandage or piracy, so that one can travel at any season and can sail from the Levant to the Ponent.¹ But tell me now: can Caesar also bring us peace from fever and from shipwreck, or from conflagration or earthquake or thunderbolt? Yes, and from love? Impossible. And from grief? Impossible. And from envy? A sheer impossibility in every one of these predicaments. But, unlike Caesar, the doctrine (λόγος) of the philosophers does promise to bring us peace from these troubles too.² And what does that doctrine tell us? "My children", it says, "if you listen to me, then, wherever you are and whatever you are doing, you will not be overtaken by sorrow or by anger or by a consciousness either of constraint or of frustration. You will go through with it in a state of invulnerability (ἀπαθείς διάξερε), in which you will be free from all these ills." This is a peace that is proclaimed not by Caesar (how *could* Caesar proclaim it for us?) but by God through the voice of Philosophy (διὰ τοῦ λόγου). And the philosopher who possesses that peace is master of the situation even when he is single-handed. For he can look the World in the face as he thinks to himself; "Now no evil can befall me. For me there exists no such thing as a brigand or an earthquake. For me there is nothing anywhere but peace, nothing but imperturbability (πάντα εἰρήνης μεσά, πάντα ἀταραξίας)." ³

This Hellenic simile veils a metaphysical belief which is embraced in its elemental nakedness by a hardier Indic school of thought.

'The world-process is . . . a process of co-operation between . . . subtle, evanescent elements; and such is the nature of *dharma*s that they proceed from causes and steer towards extinction. Influenced by the element *avidyā*, the process is in full swing. Influenced by the element *prajñā*, it has a tendency towards appeasement and final extinction. In the first case streams of combining elements are produced which correspond to ordinary men; in the second the stream represents a saint.⁴ The complete stoppage of the process of phenomenal life corresponds to a Buddha. . . . The final result of the world-process is its suppression:

¹ This sentence has been quoted already, apropos of the actual *Pax Augusta*, in V. C (i) (d) 7, p. 3, above.—A.J.T.

² These sentences have been quoted already in V. C (i) (d) 7, p. 16, footnote 2, above.—A.J.T.

³ Epictetus: *Dissertationes*: Book III, chap. 13, §§ 9-13.

⁴ With his body still alive
The saint enjoys some feeling,
But in Nirvāna consciousness is gone
Just as a light when totally extinct.

Verses quoted by Candrakīrti, and, after him, by Stcherbatsky, Th.: *The Conception of Buddhist Nirvāna* (Leningrad 1927, Academy of Sciences of U.S.S.R.), p. 184.

Absolute Calm.¹ All co-operation is extinct and replaced by immutability (*Asamskṛta* = *Nirvāna*). . . . The Absolute (*Nirvāna*) is inanimate, even if it is something. It is sometimes, especially in popular literature, characterized as bliss; but this bliss consists in the cessation of unrest (*dukkha*). Bliss is a feeling, and in the Absolute there neither is a feeling nor conception nor volition nor even consciousness. The theory is that consciousness cannot appear alone without its satellites, the phenomena of feeling, volition, &c.; and the last moment in the life of a Bodhisattva, before merging into the Absolute, is also the last moment of consciousness in his continuity of many lives.²

This absolute Detachment has perhaps never been attained, or at least never as a permanent state, outside the school of the Indic philosopher Siddhārtha Gautama.³ As an intellectual achievement

1

The body has collapsed,
Ideas gone, all feelings vanished,
All energies quiescent
And consciousness itself extinct.

Ibid.

² Stcherbatsky, Th.: *The Central Conception of Buddhism and the Meaning of the Word 'Dharma'* (London 1923, Royal Asiatic Society), pp. 74 and 53. The same author, in *The Conception of Buddhist Nirvana* (Leningrad 1927, Academy of Sciences of U.S.S.R.), p. 40, describes the Hinayanian conception of *Nirvāna* as representing 'some indefinite essence of . . . forces which were active in phenomenal life but are now extinct and converted into eternal death'. See also, however, Radhakrishnan, Sir S.: *Gautama the Buddha* (London 1938, Milford), pp. 41-6, cited in this Study already in V. C (i) (c) 2, vol. v, p. 134, footnote 1, and in V. C (i) (d) 7, in the present volume, p. 18, footnote 1, above, for the view that *Nirvāna*, in Siddhārtha Gautama's own conception of it, is not a negation of existence but is 'a different, deeper mode of life' which 'is peace and rest in the bosom of the Eternal'.

³ The *Nirvāna* that is the normal and permanent goal of the Hinayanian Buddhist arhat was, however, perhaps apprehended as a rare and fleeting experience by Plotinus, whose Neoplatonism was the last of the schools of Hellenic philosophy.

'The ecstatic trance, in which the distinction between the mind and its ideas, the self and self-knowledge, passes away, is not, so Plotinus would have us believe, a mere swooning and eclipse of the Soul while the World goes booming on, but a flight of the Alone to the Alone. Sense and spiritual contemplation and mystic union are psychological states corresponding to cosmic climes, and growth in self-knowledge may be described also as a journey of the Soul through the Universe to its far-off home. Only this should be noted, that the actual attainment of the noetic state, when once the Soul has been released from the bondage of rebirth, brings a cessation of what we regard as personal existence. The heaven of the Nous has no place for memory of the Soul's past lives, and Being there is not an immortality that denotes conscious continuity; it is rather a blissful forgetfulness. And the last stage of identification with the One is a complete loss of identity' (More, P. E.: *Hellenistic Philosophies = The Greek Tradition from the Death of Socrates to the Council of Chalcedon: 399 B.C.-A.D. 451*, vol. ii (Princeton 1923, University Press), pp. 197-8).

On this showing, Plotinus's *Visio Beatifica* might be described as an entry into *Nirvāna* that is momentary instead of being permanent, but which is genuine for so long as it lasts. On the other hand the common essence of the Neoplatonic and the Hinayanian Buddhist experience is apparently not to be found in the experience of either the Christian or the Islamic school of mysticism.

'*Fanā*', an important technical term of Sūfism, meaning "annihilation, dissolution". The Sūfī who attains perfection must be in a kind of state of annihilation. . . . The origin of the Muslim conception of *fanā* has . . . to be sought in Christianity, from which it seems to be borrowed. This conception simply means the annihilation of the individual human will before the will of God—an idea which forms the centre of all Christian mysticism. The conception thus belongs to the domain of ethics and not in the slightest degree to that of metaphysics, like the *nirvāna* of the Hindu. . . . The author of the *Kashf al-Mahjub* expressly states that *fanā* does not mean loss of essence and destruction of personality, as some ignorant Sūfīs think' (*Encyclopaedia of Islam*, vol. ii (London 1927, Luzac), p. 52).

it is imposing; as a moral achievement it is overwhelming; but it has a disconcerting moral corollary; for perfect Detachment casts out Pity, and therefore also Love, as inexorably as it purges away all the evil passions.

The intellectual reasonableness of this appalling moral conclusion is most easily demonstrable in the case of the Gods, for whom the human philosophy of Detachment can hardly find room except in the contemptible role of spoilt children of the Universe.¹

The habitat of these unedifying privileged beings is the nearest thing to an unearned *Nirvāna*² (a virtual contradiction in terms!) that Epicurus admits into his Cosmos.

Apparet divom numen sedesque quietae
 quas neque concutiunt venti nec nubila nimbis
 aspergunt neque nix acri concreta pruina
 cana cadens violat semperque innubilis aether
 integit, et large diffuso lumine rident.
 omnia suppeditat porro Natura neque ulla
 res animi pacem delibat tempore in ullo.³

This Lotus-Eaters' 'no-man's-land'⁴ was necessarily incommensurable with, and therefore also necessarily insulated from, the habitat of Mankind.

Illud item non est ut possis credere, sedes
 esse deum sanctas in mundi partibus ullis.
 tenuis enim natura deum longeque remota
 sensibus ab nostris animi vix mente videtur;
 quae quoniam manuum tactum suffugit et ictum,
 tactile nil nobis quod sit contingere debet.
 tangere enim non quit quod tangi non licet ipsum.
 quare etiam sedes quoque nostris sedibus esse
 dissimiles debent—tenues, de corpore eorum.⁵

It follows that neither the world which Mankind inhabits nor Mankind itself is of the Gods' creation. And, apart from the sheer physical impossibility of the hypothesis, what conceivable motive could the Gods have had for creating anything, even if they had had the power?

¹ The tendency of Philosophy to depreciate God in magnifying Law has been examined in V. C (i) (d) 7, pp. 18-28, above.

² In Stcherbatsky, Th.: *The Conception of Buddhist Nirvana* (Leningrad 1927, Academy of Sciences of U.S.S.R.), p. 15, it is pointed out that the saints in the Hīnayānian *Nirvāna* are, like the gods in the Epicurean *μετακόσμου* (see footnote 4, below), quiescent, inactive, and possessed of bodies of a special atomic structure.

³ Lucretius: *De Rerum Natura*, Book III, ll. 18-24.

⁴ The term is strictly applicable; for Epicurus parked his gods in his *μετακόσμου*, which, in the language of our modern Western astronomy, might perhaps be translated as 'inter-nebular spaces'.

⁵ Lucretius: *De Rerum Natura*, Book V, ll. 146-54.

Quid enim immortalibus atque beatis
 gratia nostra queat largiri emolumentum
 ut nostra quicquam causa gerere aggrediantur?
 quidve novi potuit, tanto post, ante quietos
 inicere ut cuperent vitam mutare priorem?¹

Nor, whatever the myths may say, have the Gods ever intervened in human affairs, any more than they have been responsible for bringing the human race into existence.

Omnis enim per se divom natura necessest
 immortalis aeo summa cum pace fruatur
 semota ab nostris rebus seiunctaque longe.
 nam privata dolore omni, privata periculis,
 ipsa suis pollens opibus, nil indiga nostri,
 nec bene promeritis capitur neque tangitur ira.²

And Lucretius's point has been anticipated, in still more shocking lines of Latin verse, by his predecessor Ennius:

Ego deum genus esse semper dixi et dicam caelitem,
 sed eos non curare opinor quid agat humanum genus;
 nam, si curent, bene bonis sit, male malis, quod nunc abest.

It would indeed be uncomplimentary to hold the Gods responsible for works which 'ail from the prime foundation'.

Quod si iam rerum ignorem primordia quae sint,
 hoc tamen ex ipsis caeli rationibus ausim
 confirmare aliisque ex rebus reddere multis,
 nequaquam nobis divinitus esse paratam
 naturam rerum: tanta stat praedita culpa.³

But there is another and a deeper reason why it would be impious to credit the Gods with having anything to do with the World, and this is that a perfect Detachment is the very hall-mark of Divinity.

'Being blissful and incorruptible means having no bothers oneself and causing none to others, and this in turn means being detached from all feelings of anger or of gratitude. All that kind of thing is a sure sign of infirmity.'⁴

In a famous work of Indic literature a god is duly made to glory in the Detachment which, in the passage just quoted, is attributed by a Hellenic philosopher to the Godhead *a priori*.

¹ Ibid., Book V, ll. 165-9.

² Ibid., Book II, ll. 646-51.

³ Ibid., Book V, ll. 195-9.

⁴ Epicurus, quoted in Diogenes Laertius: *The Lives of the Philosophers*, Book X, chap. 139: τὸ μακάριον καὶ ἀφθαρτον οὐτ' αὐτὸ πρᾶγματ' ἔχει οὐτ' ἄλλω παρέχει, ὥστ' οὐτ' ὀργαῖς οὐτ' ἐχθρίαις συνέχευται· ἐν ἀσθενείᾳ γὰρ πᾶν τὸ τοιοῦτον. This passage is also to be found in a Latin translation in Cicero: *De Natura Deorum*, Book I, chap. 17 (section 45). The same equation of action with infirmity is made in a passage of Plotinus which has been quoted in this Study in III. C (ii) (b), vol. iii, p. 254, footnote 4, above.

'I am indifferent to all born things; there is none whom I hate, none whom I love.'¹

These words are placed in the mouth of a god, but it is a human ideal that they express; for the tribe of philosophers is not less prone than the tribes of Thracians and Ethiopians² to portray the Gods in their human makers' image; and the same poem elsewhere extols the same inhumanly complete Detachment as the hall-mark, not of divinity, but of perfection in the soul of a human being.

'He whose mind is undismayed in pain, who is freed from longings for pleasure, from whom passion, fear and wrath have fled, is called a man of abiding prudence, a saintly man. He who is without affection for aught, and whatever fair or foul fortune may betide neither rejoices in it nor loathes it, has wisdom abidingly set.'

'The man whose every motion is void of love and purpose, whose works are burned away by the fire of knowledge, the enlightened call "learned".'

'The learned grieve not for them whose lives are fled nor for them whose lives are not fled.'³

To the Indic sage's mind this heartlessness is the adamant core of philosophy; and the same conclusion was reached independently by the Hellenic philosophers as a result of following likewise to the bitter end a parallel line of escape from life. The Hellenic sage who had struggled out into the sunshine of enlightenment might perhaps feel a greater sense of social obligation to return to the Cave where the vast majority of his former fellow prisoners were still languishing;⁴ but this difference, such as it was, between the Hellenic and the Indic philosopher's code was superficial; for, even if he did return, the Hellenic philosopher was merely to go through the motions of showing mercy upon his suffering fellow creatures. He was not only free, but was in duty bound, to leave his heart behind him. This personal obligation, which the Hellenic philosopher remorselessly laid upon himself, to preserve at all costs his hard-won invulnerability has been described by a modern Western scholar⁵ in terms so startling that we might be inclined to suspect him of rhetorical exaggeration if there were not chapter and verse to warrant every statement to which he commits himself.

'The Wise Man was not to *concern* himself with his brethren . . . he was only to serve them.'⁶ Benevolence he was to have, as much of it as

¹ Bhagavadgītā, ix. 29 (English translation by Barnett, L. D. (London 1920, Dent), pp. 129-30).

² See the quotation from Xenophanes at the beginning of Part I. A, vol. i, p. 1, above.

³ Bhagavadgītā, ii. 56-7; iv. 19; ii. 11 (Barnett's translation (cited in footnote 1, above), pp. 94, 104, 88).

⁴ For Plato's simile of the Cave see III. C (ii) (b), vol. iii, pp. 249-52, above.

⁵ Bevan, E. R.: *Stoics and Sceptics* (Oxford 1913, Clarendon Press), pp. 66-7.

⁶ 'The sage will not feel pity, because he cannot feel it without himself being in a pitiful state of mind; but everything else that is done by those who do indulge in that

you can conceive; but there was one thing he must not have, and that was love. Here, too, if that inner tranquillity and freedom of his was to be kept safe through everything—here too, as when he was intending to acquire objects for himself, he must engage in action without desire.¹ He must do everything which it is possible for him to do, shrink from no extreme of physical pain, in order to help, to comfort, to guide his fellow men, but whether he succeeds or not must be a matter of pure indifference to him. If he has done his best to help you and failed, he will be perfectly satisfied with having done his best. The fact that you are no better off for his exertions will not matter to him at all. Pity, in the sense of a painful emotion caused by the sight of other men's suffering, is actually a vice.² The most that can be allowed when the Wise Man goes to console a mourner, is that he should feign sympathy as a means of attaining his object; but he must take care not to feel it. He may sigh, Epictetus says, provided the sigh does not come from his heart.³ In the service of his fellow men he must be prepared to sacrifice his health, to sacrifice his possessions, to sacrifice his life; but there is one thing he must never sacrifice: his own eternal calm.⁴

emotion will also be done by him—and this readily and high-mindedly. He will succour a sorrowful neighbour without joining in his grief. He will give a helping hand to the castaway, hospitality to the exile, alms to the destitute. . . . He will allow a mother's tears to purchase the freedom of her son, will release the prisoner from his chains and the gladiator from his barracks, and will even give burial to the criminal's corpse. But he will do all this without any mental agitation or any change of countenance' (Seneca: *De Clementia*, Book II, chap. 6, §§ 1-2).—A.J.T.

¹ 'If you are kissing a child of yours—or a brother, or a friend—never put your imagination unreservedly into the act and never give your emotion free rein, but curb it and check it (like the mentors who stand behind the conqueror in his triumphal car to prompt him to remember that he is only a human being). It is up to you to be your own prompter and to remind yourself that the being whom you love is mortal, so that what you are loving is not your own property. It has been given to you only temporarily, and the gift is not irrevocable or absolute. It is like a fig or a bunch of grapes that one has at the appointed season; and if one goes on craving for it in wintertime one is a fool. It is equally foolish to crave for one's son or one's friend out of season; that is just another form of asking for figs in winter. . . . Indeed, there is no harm in accompanying the act of kissing the child by whispering over him: "To-morrow you will die"' (Epictetus: *Dissertationes*, Book III, chap. 24, §§ 85-8). The whole chapter—which is entitled "The impropriety of being emotionally affected by what is not under one's control"—is more or less apposite.—A.J.T.

² 'Pity is a mental illness induced by the spectacle of other people's miseries, or alternatively it may be defined as an infection of low spirits caught from other people's troubles when the patient believes that those troubles are undeserved. The sage does not succumb to suchlike mental diseases. The sage's mind is serene and is immune from being upset by the incidence of any external force. The noblest ornament of human nature is greatness of soul; but such greatness is not compatible with grief; for grief bruises the mind and prostrates it and shrivels it up; and the sage does not allow that to happen to him—even in calamities that are his own. . . . Pity is next-door neighbour to pitifulness (*misericordia vicina est miseriae*). . . . Pity is a vice of minds too prone to be appalled at the sight of misery. If you expect the sage to feel pity, you might almost as well expect him to weep and wail at somebody else's funeral' (Seneca: *De Clementia*, Book II, chap. 5, §§ 4-5, and chap. 6, § 4).—A.J.T.

³ 'I do not say that it is inadmissible to groan; the point is that the groan must not come from the heart' (Epictetus: *Dissertationes*, Book I, chap. 18, § 19). It would perhaps be unfair to Epictetus to overlook the fact that this precept is given apropos of a physical pain afflicting oneself. At the same time Dr. Bevan is no doubt fairly entitled to assume that the precept has a wider application than this in Epictetus's philosophy.—A.J.T.

⁴ 'The sage will always keep the same calm and unmoved countenance—which he could not do if he permitted himself to feel sorrow' (Seneca: *De Clementia*, Book II, chap. 5, § 5).—A.J.T.

Nor, among the dominant minority in a disintegrating Hellenic Society, was this repulsive ideal a mere uncoveted monopoly of a handful of pedants and prigs. The most sensitive and lovable and popular of all the Latin poets has deliberately drawn his hero in the unfeeling philosopher's image; and his heartlessness is the sign in which Aeneas conquers at the crisis of his career, when he successfully steels himself—like an oak standing up to a storm—against Anna's supreme appeal on Dido's behalf.

Mens immota manet; lacrimae volvuntur inanes.¹

A modern Western Hellenist has used his art to preach this sophisticated philosophy in the name of the plain man. In the grave—'in the nation that is not'—sings a Shropshire Lad,

Lovers lying two by two
Ask not whom they sleep beside,
And the bridegroom all night through
Never turns him to the bride.²

Yet, in pressing its way to a conclusion which is logically inevitable and at the same time morally intolerable, the philosophy of Detachment ultimately defeats itself; and it is in vain that its exponents wring a grudging recognition of their fortitude, and even of their nobility, out of the petrified hearts of their audience. In the very act of unwilling admiration we are vehemently moved to revolt. It was the sorrows of Dido and not the virtues of Aeneas that appealed to Saint Augustine in his unregenerate youth; and he lived to write as a saint in middle age: 'It is not true that "No god ever enters into relations with Man"—even if Plato did say so, as Apuleius says he did.'³ The philosophy of Detachment does not, after all, provide a solution for the problem which it sets out to solve; for in consulting only the head and ignoring the heart it is arbitrarily putting asunder what God has joined together.⁴ This philosophy falls short of the truth by refusing to take account of the Soul's duality in unity; and therefore the philosophy of Detachment has to be eclipsed by the mystery of Transfiguration. The Hīnayāna makes way for the Mahāyāna,⁵ Stoicism for Christianity, the arhat for the Bodhisattva,⁶ the sage for the saint.

¹ Virgil: *Aeneid*, Book IV, l. 449.

² Housman, A. E.: *A Shropshire Lad*, xii.

³ Augustine, *De Civitate Dei*, Book IX, chap. 16, quoting Apuleius: *De Deo Socratis*, chap. 4, § 21 (edited by Lütjohann, Chr.: Greifswald 1878, Kunike): 'Nam, ut idem Plato ait, "nullus deus miscetur hominibus [θεὸς δὲ ἀνθρώπων οὐ μίγνυται.—*Symposium*, 203 A]", sed hoc praecipuum eorum sublimitatis specimen est, quod nulla adtractatione nostra contaminantur.'

⁴ Matt. xix. 6.

⁵ For the eruption of the Mahāyāna out of the Hīnayāna see V. C (i) (c) 2, vol. v, pp. 133-6, and V. C (i) (d) 6 (δ), vol. v, p. 552, above.

⁶ For the antithesis between Bodhisattva and arhat see further V. C (i) (d) 11, p. 164, footnote 3, below.

11. *Transfiguration*

We have found that the experience of being constrained to live in the adverse social environment of a disintegrating civilization confronts the Soul with a spiritual problem which is, no doubt, demanding a solution all the time but which can be more or less successfully ignored or evaded so long as the Soul is able to float lazily on the flowing tide of a civilization that is still in growth. When this latent problem of life is forced upon the Soul's attention by the hard fact that a way of life which has hitherto been taken for granted is now failing to work, the Soul is driven into searching for a substitute, and we have already passed in review three different attempts to find one; but, so far, our survey has brought us each time to the dead end of a blind-alley. The way of Archaism ends in self-defeat, the way of Futurism in self-transcendence, the way of Detachment in self-stultification. There is, however, one way left for us still to explore, and that is the way to which we have provisionally given the name of Transfiguration.¹

As we gird up our loins to take this fourth and last turning a clamour of disapproving and derisive voices assails our ears. Shall we allow ourselves to be intimidated by this chorus of protest? Shall we abandon at this point a course of exploration which has hitherto proved as disappointing as it has been laborious? It is tempting to yield to the promptings of weariness and disillusionment. Yet, before we do give in, it may be well to consider whether we really wish to resign ourselves to remaining imprisoned in a city of destruction—like rats in a trap—so long as there is still one possible egress left untried. And it may also be well to ask ourselves whether the hostile chorus is really a bad augury. For whose, after all, are these voices that are eager to deter us? When we look the hostile chorus in the face we see before us nothing more formidable than the sullen countenances of the baffled philosophers and futurists (the archaists have been so deeply discouraged by their own fiasco that they have not had the heart to join in the outcry). Are these familiar companions of our previous journeys now likely to give us good advice? Will they not be prone to be unduly discouraged by their own unfortunate experience, and unduly sceptical about an alternative road which might conceivably arrive at the goal which the roads of Futurism and Detachment have failed to reach? And is their unquestionable eminence in their respective spheres of action and of thought a cogent reason for accepting their authority? May not this be the moment to remind ourselves of the principle of *περιπέτεια*—‘the reversal of

¹ See V. C (i) (d) 1, vol. v, pp. 390 and 396-7, above.

roles'—upon which we have stumbled at an earlier stage of our inquiry?¹ This principle of irony and paradox is mighty in its operation. A study of history reveals in every act and scene of the play the truth that

'God hath chosen the foolish things of the World to confound the wise; and God hath chosen the weak things of the World to confound the things which are mighty.'²

This truth which we can thus verify empirically is also known to us intuitively. And in the light and the strength of it we may brave the disapproval of futurists and philosophers alike by stepping boldly out in the footprints of a guide who is neither Simon bar Kōkabā nor Hermes Psychopompus.

'The Jews require a sign and the Greeks seek after wisdom; but we', writes Paul to the Corinthians, 'preach Christ Crucified—unto the Jews a stumblingblock and unto the Greeks foolishness.'³

Why is Christ Crucified a stumbling-block to futurists who have never succeeded in eliciting the sign which they require? And why is He foolishness to philosophers who for their part have never succeeded in discovering the wisdom after which they seek? If we press these two questions, we may not only put ourselves in a position to take a more exact measure of those two spiritual blind-alleys: we may also (and this is of much greater moment) be able to make some progress in exploring the mysterious way of life along which the Apostle is beckoning us.

Christ Crucified is foolishness to the philosopher (be he of a Greek or of an Indian school) because the philosopher's ultimate aim is Detachment; and therefore the philosopher cannot comprehend how any reasonable being who has once attained that forbidding goal can be so perverse as deliberately to relinquish what he has so hardly won. What is the sense of withdrawing simply in order to return?⁴ This passes the understanding of a philosopher who knows by his own experience how heavy a toll of fortitude and perseverance the feat of withdrawal must have taken from any human being who has successfully achieved it. And *a fortiori* the philosopher is completely nonplussed at the notion of a God who has not even had to take the trouble to withdraw from an unsatisfactory World, because He is completely independent of it by virtue of His very divinity, but who nevertheless deliberately enters into the World, and subjects Himself there to the utmost agony

¹ In IV. C (iii) (c) 1, vol. iv, pp. 245-61, above. See also V. C (i) (d) 6 (δ), vol. v, pp. 561-5, above.

² 1 Cor. i. 27, quoted already in IV. C (iii) (c) 1, vol. iv, p. 249, above.

³ 1 Cor. i. 22-3.

⁴ For the contrast between the pagan philosopher's withdrawal and the Christian mystic's withdrawal-and-return see III. C (ii) (b), vol. iii, pp. 249-63, above.

that God or Man can undergo, for the sake of a race of beings of an immeasurably inferior order. 'God so loved the World that He gave His only begotten Son?'¹ That is the last word in folly from the standpoint of a seeker after Detachment. 'He saved others; himself he cannot save!'²

The fact is that

'Mankind has two different ideals before it; and I do not see how the ideal of Detachment is compatible with the ideal of Love. If we choose one, we must forgo the other; each ideal appears faulty when judged by the measure of the other. With the one goes to a large extent the intellect of Ancient Greece and of India, with the other the Christian Church and the hearts of men, the *anima naturaliter Christiana*; for neither in Greece nor India nor China have the philosophers been the whole of the people—nor their philosophy the whole of the philosophers.

'There have been things tending to obscure this divergence between the two ideals. The language used by the Stoics or Buddhists about benevolence may often be taken to be inspired by the Christian ideal of Love. On the other hand the Christian ideal has involved Detachment from many things, from "the care of this world and the deceitfulness of riches"³ and the lusts of other things, and much of the language used about this sort of Detachment in Christian books may seem to point to the ideal of Ancient Greece and India.⁴ The Stoic sage strenuously labouring to do good and indifferent whether good is done, sighing with his stricken friend, but not from the heart, is a figure serving well to bring home to us the difference. And we may see, I think, that the Stoics and sages of India could say no less without giving up their whole scheme.

'If the supreme end is Tranquillity, of what use would it be to set the Wise Man's heart free from disturbance by cutting off the fear and desire which made him dependent upon outside things, if one immediately opened a hundred channels by which the World's pain and unrest

¹ John iii. 16. This view of what God's feeling and attitude and purpose and action may be seems to have been a Syriac discovery (see V. C (ii) (a), p. 276, footnote 5, below). ² Mark xv. 31. ³ Matt. xiii. 22.

⁴ For example, the following words of Saint John of the Cross might readily be taken in a Stoic or Hinayanian Buddhist sense at a first reading:

'There is no Detachment if desire remains. . . Detachment . . . consists in suppressing desire and avoiding pleasure; it is this that sets the Soul free, even though possession may be still retained. It is not the things of This World that occupy or injure the Soul, for they do not enter within, but rather the wish for, and desire of, them, which abide within it. The affection and attachment which the Soul feels for the creature renders the Soul its equal and its like, and the greater the affection the greater will be the likeness. Love begets a likeness between the lover and the object of his love' (Saint John of the Cross: 'The Ascent of Mount Carmel' in *The Mystical Doctrine of Saint John of the Cross* (London 1934, Sheed & Ward), p. 10).

'This Christian practice of Detachment differs, nevertheless, from the pagan practice in a fundamental point which is indicated by the inclusion of the words 'for the creature'. And these three words give the key, not only to this passage, but to the whole spirit and aim of the Christian mysticism. The unspoken—because unquestioned—premiss of the argument is that the motions of affection and attachment are only to be inhibited in so far as they are directed towards the creature and not towards the Creator. The aim of the Christian practice of Detachment is not to mortify love but to vivify it when it is a love of God. And the truth that 'love begets a likeness between the lover and the object of his love' is as true of the love of God as it is of the love of the things of This World.—A.J.T.

could flow into his heart through the fibres, created by Love and Pity, connecting his heart with the fevered hearts of men all round? A hundred fibres!—one aperture would suffice to let in enough of the bitter surge to fill his heart full. Leave one small hole in a ship's side, and you let in the sea. The Stoics, I think, saw with perfect truth that if you were going to allow any least entrance of Love and Pity into the breast, you admitted something whose measure you could not control, and might just as well give up the idea of inner Tranquillity at once. Where Love is, action cannot be without desire; the action of Love has eminently regard to fruit, in the sense of some result beyond itself—the one thing that seems to matter is whether the loved person really is helped by your action. Of course you run the risk of frustrated desire and disappointment. The Stoic sage was never frustrated and never disappointed. Gethsemane, looked at from this point of view, was a signal breakdown. The Christian's Ideal Figure could never be accepted by the Stoic as an example of his typical Wise Man.¹

No, and neither could the Stoic's Ideal Figure ever be accepted conversely by the Christian as a prototype of his Christ or even as an analogue of his Christian saint. The shortcomings of the pagan philosophy from the Christian standpoint have been starkly exposed by a saint—who has the advantage of being a philosopher as well—in an argument which proceeds from the Christian postulates that 'God is Love'² and that 'perfect Love casteth out fear'.³

In the Hellenic philosophy there are two schools of thought with regard to those mental emotions which are called in Greek *πάθη* and in Latin either "perturbations" (in the usage of Cicero and others) or "affections" (alias "affects") or else "passions" (a more exact translation of the Greek, which is employed, for example, by Apuleius). These perturbations or affections or passions are declared by one school to attack the sage too [as well as the plain man], only in the sage they are moderate and subject to reason, so that the mind maintains its supremacy and imposes on these passions a system of laws which restrain them within proper bounds. This school is the Platonico-Aristotelian. . . . But there is another school, represented by the Stoics, which does not admit that the sage is attacked by any passions of this kind at all. . . . When all is said, [however,] the difference of view, in regard to passions and mental perturbations, between the Stoics and other philosophers is infinitesimal; for both schools agree in seeking to make the mind and reason of the sage immune from the passions' dominion. . . . The Christian doctrine, [on the other hand,] subordinates the mind itself to God, to be ruled—and aided—by Him, and subordinates the passions to the mind, to be governed—and curbed—by it until they are converted into instruments of justice. Consequently in our Christian discipline the question that is asked is not *whether* the religious mind feels anger, but *why* it feels it; not *whether* it feels sadness, but *what* makes it sad;

¹ Bevan, E. R.: *Stoics and Sceptics* (Oxford 1913, Clarendon Press), pp. 69-70.

² 1 John iv. 8 and 16.

³ 1 John iv. 18.

and not *whether* it feels fear, but *what* it is afraid of. To be angry with the sinner in order that he may receive correction; to be sorry for the sufferer in order that he may win liberation; to be fearful for the soul in peril lest it may go to perdition: I can hardly imagine these emotions being deliberately condemned by any one in his senses. Yet even the emotion of pity is usually censured by Stoics. . . . Far better, far more humane, and far more consonant with religious feeling is what Cicero says in his praise of Caesar: "None of your virtues is more admirable or more lovable than your sense of pity." After all, what is pity but sympathy in our own heart for somebody else's misery—a sympathy which peremptorily commands us to give our help if we can? And this emotion works in the service of reason when pity is bestowed without prejudice to justice—as, for example, when we give to the needy or forgive the penitent. Yet, while such a master of language as Cicero did not hesitate to call this sense of pity a virtue, the Stoics are not ashamed to include it in the catalogue of the vices. . . . [Well,] if emotions and affections which come from a love of the good and from a holy charity are to be called vices, we might as well allow the real vices to be called virtues. . . .

'If we are entirely without these emotions while we are subject to the infirmity of this [earthly] life, that really means that there is something wrong with our way of living. The Apostle abhorred and castigated certain persons whom he has described as being, among other things, *without natural affection*;¹ and one of the psalms, likewise, censures those of whom it says: *I looked for some to take pity, but there was none.*² To be entirely without pain while we are in this place of misery is assuredly "a state which can only be purchased at a prohibitive price in inhumanity of mind and in insensibility of body"—as has been felt, and been put into words, even by one of the secular men-of-letters. On this showing, the state which in Greek is called *ἀπάθεια*³ (and which in Latin would be called "impassibility" if that were a possible Latin word)⁴ may be a thoroughly good state, and even an extremely desirable one,⁵ but is quite incompatible with this life if we understand this state (which is a mental, not a physical, experience) to mean living without those affections which assail us, and upset our minds, in an irrational way. This is the verdict, not of nonentities, but of the most profoundly religious and extremely just and holy souls. *If we say that we have no sin, we deceive ourselves, and the truth is not in us.*⁶ "Invulnerability" (*ἀπάθεια*) in this sense will not be achieved until Man is without sin. As

¹ Rom. i. 31.

² Ps. lxxix. 20.

³ This Greek word *ἀπάθεια* is rendered in this Study (for reasons given in V. C (i) (d) 1, vol. v, p. 394, footnote 1, above) by the English word 'invulnerability' and not by the English word 'apathy'.—A.J.T.

⁴ This word which Saint Augustine has coined on the pattern of a Greek original, only to reject it as an inadmissible monstrosity, has, of course, since been adopted as a technical term in the theological vocabulary of the Western Christian Church.—A.J.T.

⁵ In examining and criticizing the Peripatetic and Stoic ideal of 'Imperturbability' Saint Augustine quotes (*De Civitate Dei*, Book IX, chap. 4, *ad fin.*), as an illustration of the admirable element in it, the Virgilian line (*Aeneid*, Book IV, l. 449) which has been quoted in this Study in V. C (i) (d) 10, p. 148, above.—A.J.T.

⁶ 1 John i. 8.

things actually are, a life without outward misdemeanor is as good a life as we can aspire to; but any one who imagines that he is living without sin is not achieving freedom from sin but is merely rejecting the chance of forgiveness. On the other hand, if "invulnerability" is to be taken in the other sense of a state in which the mind is completely proof against any feeling, surely every one would consider an insensibility of this degree to be something worse than all the vices. So, while it can be said without absurdity that the perfect state of beatitude will know no sadness and will feel no prick of anxiety, nobody who is not altogether blinded to the truth will say that in that state there will be no love and no joy. If, however, "invulnerability" merely means a state in which there is no fear to terrify us and no anguish to torment us, such "invulnerability" is to be shunned in this life if we desire to live it, as it should be lived, in God's way, but it is to be frankly hoped for in that blessedly happy life which is promised to us as our everlasting future condition. . . .

"The eternal life of blessed happiness will have a love and a joy which will be not only right states of feeling but also assured states, while it will be wholly free from anxiety and anguish. . . . As for the commonwealth—or society—of the irreligious who are living not in the way of God but in the way of Man . . . it is convulsed by these depraved feelings, which upset it like mental diseases. And, if this commonwealth has any citizens who make some show of controlling such emotions and more or less keeping them within bounds, they become elated with such an irreligious pride that any success that they may have in reducing their mental distress is counterbalanced by a proportionate degree of mental inflation, while if there are a few of them who—moved by a vanity which is as inhuman as it is rare—have set their hearts on making themselves entirely proof against being affected by any emotion whatever in any way, such creatures merely lose their last shred of humanity without ever attaining to a true tranquillity. For a thing does not become right just through being hard, or wholesome just through being stupid."¹

Having followed Saint Augustine in this counter-attack upon the philosophers in whose sight Christ Crucified is foolishness,²

¹ Saint Augustine: *De Civitate Dei*, Book IX, chaps. 4 and 5, and Book XIV, chap. 9.

² The first draft of the present chapter drew from Professor Gilbert Murray, who kindly read it at that stage, a defence of the philosophers which the writer of this Study is glad to be able now to incorporate into the final draft, in the hope that it may serve here as a corrective to any bias in his own presentation of the issue between the way of Detachment and the way of Transfiguration.

"You take late Stoicism in one of its most over-intellectualized doctrines as standing for Greek philosophy altogether: mere intellect as against Christian love. But compare Zeno, fragment 263, where the thing that binds his *πολιτεία* together is "*ἔρως*, and that "*ἔρως* a god. Compare also fragment 88, where the motive spirit is no "merely an *anima rationalis*, but also creates beauty. This is different from pure intellectualism. Again, according to Aristotle, *Metaphysics*, 1072 B, the Final Cause produces motion by being loved. It is the love of God, "*ἔρως*, that produces all the motion of the World. Of course they tended to shrink from the use of the word "*ἔρως*, just as the Christians did; but Epicurus's *Φιλία* is pretty strong. Fragment 52: *ἡ Φιλία περιχορεύει τὴν Οἰκουμένην κηρύττουσα δὴ πᾶσιν ἡμῖν ἐγείρεσθαι ἐπὶ τὸν μακαρισμόν*—it dances round the World calling us to awaken to our blessedness. Also fragment 28: we must run risks for the sake of *Φιλία*. Compare fragments 23 and 78, where the two things that matter are *Σοφία* and *Φιλία*."

The writer of this Study heartily agrees that there is a strong vein of Christianity in

we may go on to deal with the futurists for whose feet He is a stumbling-block.

The Crucifixion is a stumbling-block in the way of Futurism because the death on the Cross bears out—by a logic of events that leaves nothing more to be said—the declaration of Jesus that His Kingdom is not of This World;¹ and, for the Jewish Zealot, this declaration is a contradiction in terms which is not just fatuously illogical but is shockingly impious. The sign which the futurist requires is the announcement of a kingdom which will be bereft of all meaning if it is not to be a mundane success. With what intent has Yahweh promised to send his Chosen People a king who will reign over them as 'the Lord's Anointed'? And by what token will this Messiah be recognized? The Messiah's token and task is to be, as we have seen,² the seizure of the sceptre of world-dominion out of the hands of some Darius or Antiochus or Caesar, and the raising of the Jews to the rank of ruling race in place of the Persians or the Macedonians or the Romans, as the case may be.

'Thus saith the Lord to his Anointed, to Cyrus [or Zerubbabel or Simon Maccabaeus or Simon bar Kōkabā or whatever may be the name of the hero of the hour], whose right hand I have holden, to subdue nations before him (and I will loose the loins of kings, to open before him the two-leaved gates; and the gates shall not be shut):

' "I will go before thee and make the crooked places straight; I will break in pieces the gates of brass and cut in sunder the bars of iron; and I will give thee the treasures of darkness³ and hidden riches of secret places."'⁴

How was this authentically futurist conception of a Messiah to be reconciled with the words of a prisoner who answered Pilate

'Thou sayest that I am a king',⁵

and then went on to give so fantastic an account of the royal mission on which he claimed that God had sent him?

'To this end was I born, and for this cause came I into the World, that I should bear witness unto the truth.'⁶

The disconcerting words might perhaps be contested or ignored,

many of the exponents of Hellenism—and, conversely, a strong vein of Hellenism in many of the exponents of Christianity. In quoting Hellenic expressions of the philosophy of Detachment and Christian expressions of the religion of Love he has not meant to imply either that the Christians have never fallen below the ideal of Love or that the Hellenes have never risen above the ideal of Detachment. He has not been attempting to make a critique of either Christianity or Hellenism. His sole concern has been to bring out the respective meanings of Detachment and Transfiguration by quoting testimonies that his readers will accept as *loci classici*.

⁴ Isa. xlv. 1-3 (i.e. 'Deutero-Isaiah'), cited in V, C (i) (d) 9 (γ), p. 122, above.

⁵ John xviii. 37.

⁶ John xviii. 37.

but the malefactor's death could neither be undone nor be explained away; and we have observed, in the classic case of Peter's ordeal, how grievous this stumbling-block was.¹

The Kingdom of God, of which Christ Crucified is King, is in fact spiritually incommensurable with any kingdom that could ever be founded or ruled by a Messiah envisaged as an Achaemenian world-conqueror who has been turned into a Jew and been projected into the future. As far as this *Civitas Dei* enters into the Time-dimension at all, it is not a mere dream of the future but is a spiritual reality which is at all times present in This World² besides existing—and, indeed, just because it exists—as well in an Eternity and an Infinity that are in a supra-mundane spiritual dimension.³ If there are any moments in Time which can in some sense be regarded, in a Christian *Weltanschauung*, as historical dates of particular irruptions of God's Kingdom into This World, they are moments that are hallowed by descents of the Holy Ghost—upon Jesus at his baptism or upon the Apostles on the Day of Pentecost.⁴ When

'they asked of him saying: "Lord, wilt thou at this time restore again the Kingdom to Israel?" . . . he said unto them: "It is not for you to

¹ See V. C (i) (d) 1, vol. v, pp. 392-3, above.

² The interpretation of Luke xvii. 21 has been discussed in V. C (i) (d) 1, vol. v, p. 396, footnote 1, above.

³ See V. C (i) (d) 9 (γ), p. 131, footnote 1, above.

⁴ This is perhaps the point where the gulf between the conception of Transfiguration and the conception of Futurism is at its narrowest. For, while on the one side the transfiguration of This World through its irradiation by the Kingdom of God is conceived of as being in some sense apprehensible as an historical process in Time, it is also true on the other side, as we have had occasion to notice already, that in the *Weltanschauung* of Futurism the difference between the present régime against which the futurist is in revolt and the future kingdom on which his hopes are set is not regarded as being simply—or even, 'in the last analysis', essentially—determined by the difference between the present and the future tense of the verb 'to be'.

When he is driven into a corner by the bankruptcy of his mundane policy the futurist eventually admits, as we have seen (in V. C (i) (d) 9 (γ), pp. 128-31, above), that the stormy advent of the kingdom of his hopes will be in the nature of an apocalypse rather than of an act of creation. The triumphant destruction of the present dispensation, when this is at last duly achieved, will not be like the clearing of a hitherto encumbered site for the erection of a brand-new building. It will be like the rending of a veil in order to bring into view a hitherto invisible kingdom that has been in existence in the background all the time and has merely been awaiting the hour appointed for its revelation. Even at the earlier stage at which the futurist's hope of a substantial mundane success has not yet evaporated he will be willing to admit that the catastrophe to which he is looking forward is in the nature of a revolution; and, as we have observed in another context (in IV. C (iii) (b) 1, vol. iv, pp. 135-6, above), Revolution shares with Revelation the particular feature that concerns us here. The outbreak of a revolution in the bosom of a body social is not an event that can be explained in terms of that body alone without reference to anything existing outside it. The superficial phenomenon of the violent substitution of new elements for old elements in the structure of the body in which the revolution is taking place is always found to be the effect of a less obvious yet more significant piece of action in a larger field; and this action consists in the play, upon the revolutionary body, of some external force which must, *ex hypothesi*, have been in operation, and therefore in existence, before the outbreak of the revolution of which this foreign body has been the cause.

On this showing, it would seem as though the abstract conception of Futurism cannot be minted into the coin of concrete thought without being stiffened by the addition of a transfigurational alloy which is decidedly foreign to it.

know the times or the seasons which the Father hath put in his own power. But ye shall receive power after that the Holy Ghost is come upon you."¹

The presence of the Kingdom of God in This World is manifested in the operation of the Spirit; and this operation, which since the beginning of Time has never been withheld—though it may now and then have been suddenly intensified—transfigures the World and, in transfiguring, redeems it, according to a tenet that is at the same time a touchstone of Christianity.

'In the conception of the Church—that is, the organized body of believers—as a thing in itself, to be worked for and fostered, lies the true point of difference between Catholicism and Gnosticism, between Aphraates and *The Acts of Thomas*. To the convert of Judas-Thomas there was literally nothing left on this Earth to live for. . . . The old civilization was doomed, but this religious Nihilism puts nothing in its place. To the orthodox Christian, on the other hand, the Church stood like Aaron between the dead and the living, as a middle term between the things of the Next World and of This. It was the Body of Christ and therefore eternal; something worth living for and working for. Yet it was in the World as much as the Empire itself."²

But how can the Kingdom of God be authentically in This World and yet also be essentially not of it?³ This is a question which we are bound to ask but cannot be sure of being able to answer, since it brings to light an apparent contradiction in our conception of the relation between the subject and the object of the act of Transfiguration, and this problem may be intractable to attempts to solve it in terms of logic; but, if we are willing to acknowledge that the nature of Transfiguration is a mystery that passes our understanding—as we have seen that it has passed the understanding of philosophers whose intellects have certainly not been inferior to ours!—we may perhaps be rewarded for a sober recognition of the limits of our intellectual power by finding ourselves able to peer into the mystery through the imagery that conveys the intuition of the poets.

Perhaps the simplest image of the relation of the Kingdom of God to This World is a geometrical simile. We may liken their relation to that between a cube and one of the squares that are presented by the solid figure's faces. If the cube were not there the square would not be there either; yet this does not mean that the relation of square to cube is that of part to whole; for part and whole must be things of the same kind, whereas square and cube are figures of different dimensions.

¹ Acts i. 6-8.

² Burkitt, F. C.: *Early Eastern Christianity* (London 1904, Murray), pp. 210-11.

³ This question is implicit in John xvii. 16 and in 1 John ii. 15-17.

This simile incidentally brings out one of the differences between the Christian conception of the Kingdom of God and the Hellenic conception of the *Cosmopolis*;¹ for the 'City of Zeus' is described by Marcus Aurelius as 'a supreme commonwealth' of which the 'City of Cecrops' and the other commonwealths of that order 'are no more than houses'.² In this description the relation between a mundane commonwealth and the *Cosmopolis* is clearly defined as a relation of part to whole; and this means that the *Cosmopolis*, unlike the *Civitas Dei*, is conceived of as being a society of the same spiritual dimensions as the oecumenical empire of Rome or the parochial city-state of Athens. If, in the imagery of our simile, we once more represent our mundane society by a square, then the *Cosmopolis* will assume the likeness, not of a cube, but of the surface of a chess-board, which differs geometrically from the single chequer in nothing but the superficial feature of extending over an area that is sixty-four times larger.

An alternative image of the relation between the *Civitas Dei* and This World may be drawn from a recent enrichment of our archaeological knowledge which has been a surprising and exciting consequence of our acquisition of the art of flying.

The new technique of aerial photography has lately been revealing to us traces of the handiwork of our human predecessors which for ages past have been totally invisible to successive generations of human beings who have been living and working—ploughing and building—on the very sites on which these traces are imprinted. So long as we have had our feet on the ground, in immediate contact with these enduring marks which our predecessors' labours have left on the face of the Earth, we have been totally blind to something that has been lying there under our noses. It is only in the air that our eyes have been opened; for it is not until we have parted company with the surface of the Earth, and have climbed in our aeroplane to an altitude at which we seem to have lost all contact with the ground for practical purposes, that we begin to enjoy this novel enhancement of our powers of visual observation. The fact is that the hitherto unobserved physical traces of past human activities consist of undulations or discolorations which are so slight in themselves that they are only visible in a field of vision of a vastly wider sweep than can be commanded by an eye that is approximately on their level. To be perceived they must be caught in a bird's-eye view;³ and, now that we are

¹ See V. C (i) (d) 7, Annex, pp. 332-8, below.

² Marcus Aurelius Antoninus: *Meditations*, Book III, chap. 11, and Book IV, chap. 3, quoted in V. C (i) (d) 7, Annex, p. 335, below.

³ Even on a bird's-eye view the traces that are a matter of colour and not of contour are often invisible on the bare ground and only come to light in the springing corn; for

able to emulate the vision of a hawk or kite by training upon the ground from an aeroplane a camera fitted with a telescopic lens, we can demonstrate to the astonished yokel, whom we have taken up with us on our survey-flight, that his native village lies within the circumvallation of a Roman camp of which he and his forebears have never suspected the existence—although they have in fact been sleeping every night within that historic rampart, and have been crossing it daily as they have plodded to and fro between their cottages and their fields, from generation to generation.

The relation of the English village to the Roman camp offers us an image of the relation between This World and the *Civitas Dei* that may give us some further insight into that mystery. At any rate, if we work the simile out, we shall find that it presents a number of illuminating aspects.

In the first place we see two settlements—camp and village—coexisting on the same site. In the second place we see that it is possible for them to coexist—in defiance of the geometrical axiom that two different objects cannot simultaneously occupy the same space—because the respective modes of their simultaneous existence are not identical in quality. The fields and cottages of the village provide the inhabitants with physical food and shelter; the ramparts of the camp have provided them with institutions and ideas in virtue of which they are now living together as social animals. In the third place we see that, although the village is palpable whereas the camp is not even visible except on a bird's-eye view, the inhabitants of the site are dependent on the camp, as well as on the village, for commodities which are necessities of life. Indeed, the camp's contribution is, if anything, more important than the village's if it is true, as it seems to be, that, in the course of the evolution of Life, Sub-Man had to become a social animal as a preliminary step towards becoming human.¹ Without the social heritage which they have derived from the invisible empire of which the camp has been an outpost, the inhabitants of the palpable village would find themselves unable to keep up that social co-operation which is the necessary moral condition for the upkeep of their material well-being.

There is yet another point, which is perhaps the most significant of the truths that our simile brings to light; and this is that the existence of the empire, and its effect on the villagers' lives, are

the cause of the discoloration is a slight change in the chemical composition of the soil through a replacement of the natural strata by man-made deposits consisting in part of the debris of human artifacts; and, even in an aeroplane photograph, this local difference in the soil may not be apparent except when it is reproduced—and, in the process, exaggerated—in the colour and height and thickness of a crop that has been sown on the site.

¹ See I. C (iii) (c), vol. i, p. 173, footnote 3, above.

facts which are entirely independent of the beneficiaries' awareness of them. The moment at which the yokel first descried the outline of the camp—as he leant over the side of the aeroplane with the archaeologist at his elbow to tell him where to look and what to look for—was not, of course, the moment at which he first began to draw benefit from the legacy of the oecumenical empire of which the camp was once a local *point d'appui*. As a matter of fact, he began to draw his profit in times before he was born or conceived; for the social heritage which he derives from the empire has been handed down to him by a long line of ancestors. And the fact of the empire's existence has been having its effect just the same, even though the villagers may not have been aware till this moment that their village lay within the empire's bounds—and perhaps not even aware that there was any such thing as this empire within their horizon.

Even if they do now begin to perceive—as a consequence of a belated Pischah-sight from the cock-pit of a newly invented flying-machine—some glimmer of what the empire has been doing all the time for them, as well as for their forefathers, their belated discovery of the empire is even now not likely to extend very far beyond the immediate neighbourhood of their own local habitat. Will the local clue that has just been given them enable them to infer that the empire that has swum into their ken has a vastly wider ambit than the field of vision which has been opened up to them by a single flight in an aeroplane circling just above their home parish? Have they the imagination to picture in their mind's eye the long roads running from camp to camp, and through forum and municipium, till they lead to Rome and out of Rome again to the banks of the Danube and the Euphrates and to the fringes of the Syrian and the Libyan desert? Can they conceive of a Roman Peace which spreads its mantle over Dura and Duros-torum and Timgad as well as over Verulam and Chester? And can they comprehend that the effect which the Roman Empire is having upon their own lives is also being exerted upon the lives of their contemporaries in distant countries under different climes? It hardly seems probable that a majority of the latter-day beneficiaries of the Roman Empire will have gained even an inkling of the full extent of the Roman domain, or of the full range of the Imperial Government's operation, from their discovery of the presence of a Roman camp within the bounds of their English parish; and we can conceive of a state of affairs in which all knowledge of the Roman Empire has been irretrievably lost; for even those physical traces that are, as it happens, still visible from the air might easily have vanished completely in the course of the centuries that went

by before aeroplanes were invented. If that had been the order of events, and if our air-survey had therefore after all brought no Roman camp into view on the site of our English village, would this defeat for Archaeology have wiped off the slate of History either the fact or the effect of the Roman Empire's existence? The answer is, of course, in the negative; and the truth which we can grasp in its mundane application to the Roman Empire can be seen by analogy to be true of the Kingdom of God—and of that Kingdom's King.

"That was the true light which lighteth every man that cometh into the World. He was in the World, and the World was made by Him, and the World knew Him not."¹

To know Him—and, through Him, the Kingdom over which He reigns—it is not enough for our yokel in his aeroplane to see the World with the eye of a hawk. The man must be given an eye which not only magnifies but also penetrates into other dimensions. What he needs is the eye of a poet,

To see a world in a grain of sand
And a heaven in a wild flower,
Hold Infinity in the palm of your hand,
And Eternity in an hour.²

And the poet who has this vision of the transfiguration of This World by the Kingdom of God must also be something of a prophet, for he must have an intuition of the Godhead which poetry alone cannot give him. The act of Transfiguration is a mystery because it is an act of God and an effect of God's presence—and this is a truth which has been less obscure to the Jewish futurist than to the Greek philosopher.

"The world which was set forth in the philosophy of Poseidonius had many features in common with the world of "Enoch", but "Enoch's" world was not an end in itself. "Enoch" tells us of the World to show us that everything in it is prepared for the inevitable Judgement of the Most High. . . . There is no Great Day in the world of Poseidonius . . . [and] this is the world that Israel refused to accept. The rarefied air of the Stoic heaven was one in which the Jew did not easily breathe. . . . He demanded an ultimate reward for his labour, even at the price of punishment for his faults: otherwise the World seemed to him meaningless. And so, when the Jew does contemplate the World as a whole, as is done in "Enoch", it is all placed under the eye of God, who made it and whose Judgement upon it will give it its meaning. . . . In the last resort the difference between Poseidonius and "Enoch", between late Hellenic Civilization and the Jews that refused to be dominated by it, is symbolized in the sentence from the Fourth Book of Ezra, which says

¹ John i. 9-10.

² Blake, William: *Auguries of Innocence*.

directly and in so many words: "The Most High hath not made one world, but two".¹ This is the essential thing, the central doctrine that animates all the Apocalypses. . . . And those who cling to the belief that human history is not altogether meaningless and that it marches, however slowly and haltingly, to a definite goal, ought to regard the ideas enshrined in books like "Enoch" with sympathy.²

In this revelation of a reality which the veil of Futurism masks until it is rent, the relation between the Kingdom of God and This World can be seen—now no longer in an image but direct (albeit still darkly, through a glass)³—as a manifestation of God's all-pervading presence and activity.

O world invisible, we view thee,
O world intangible, we touch thee,
O world unknowable, we know thee,
Inapprehensible, we clutch thee!

Does the fish soar to find the ocean,
The eagle plunge to find the air—
That we ask of the stars in motion
If they have rumour of thee there?

Not where the wheeling systems darken
And our benumbed conceiving soars!—
The drift of pinions, would we hearken,
Beats at our own clay-shuttered doors.

The angels keep their ancient places—
Turn but a stone and start a wing!
'Tis ye, 'tis your estrangèd faces,
That miss the many-splendoured thing.⁴

But how in fact can God's will be done on Earth as it is in Heaven? In the technical language of Theology the omnipresence of God involves His immanence in This World and in every living soul in it, as well as His transcendent existence on supra-mundane planes of being. In the Christian conception of the Godhead His transcendent aspect is displayed in Gōd the Father and His immanent aspect in God the Holy Ghost; but the distinctive and also crucial feature of the Christian Faith is the doctrine that the Godhead is not a Duality but a Trinity in Unity, and that in His aspect as God the Son the other two aspects are unified in a Person who, in virtue of this mystery, is as accessible to the human heart as He is incomprehensible to the human understanding. In the person of Christ Jesus—Very God yet also Very Man—the divine society and the mundane society have a common member who in

³ 1 Cor. xiii. 12.

⁴ Thompson, Francis: *In No Strange Land*.

the order of This World is born into the ranks of the Proletariat and dies the death of a malefactor, while in the order of the Other World He is the King of God's Kingdom—and a King who is God Himself and not God's less-than-divine deputy.¹

¹ This Christian conception of Christ the King has points both of likeness to and of difference from both of the two Jewish conceptions of Yahweh the King (see V. C (i) (d) 9 (γ), p. 126, footnote 5, above) on the one hand, and of the Messiah on the other. Christ is, like Yahweh, a king who is also God; but at the same time Christ's divinity differs from Yahweh's in being not exclusively transcendent; and on this account Christ's kingship can be felt as a concrete and personal exercise of royal authority, whereas the awful remoteness and aloofness of the God of Israel from his worshippers makes it difficult for them to conceive of Yahweh's kingship as a real function which is something more than a formal title of honour. In this point of realism—and it is a point of capital importance—the figure of Christ the King bears less resemblance to that of Yahweh the King than to that of the Messiah; and it is no accident that the very name of Christ is derived historically from the title (in its Greek dress) of the king whose coming was awaited by the Jewish futurists. The Christian idea of Christ's kingship agrees with the Jewish expectation of the Messiah's kingship in conceiving of the kingship as a reality; but at the same time it differs from this Jewish expectation in believing the king to be God instead of expecting him to be a man sent by God as His human deputy. This point of difference—and it is of not less capital importance than the point of likeness—between the Christian view of Christ and the Jewish view of the Messiah comes out in the significant fact that the connotation of the word 'Christ' has been exactly reversed in the process of being taken over into the Christian out of the Jewish vocabulary. In its literal and original meaning of 'the Lord's Anointed' the title 'Christ' signifies that its bearer is himself some one other than, and lower than, God who has invested him with his office. On the other hand, in the Christian usage the name 'Christ' signifies that its bearer is God besides being the man who bears the name of Jesus. For a Christian, calling Jesus 'Christ' proclaims Him to be God as well as man, while for a Jew the addition of the title 'Christ' to the name Jesus would rule out the possibility of Jesus being a god (e.g. one of the false gods worshipped by the Gentiles), and would certify that he was a purely human emissary of Yahweh.

On this criterion the Zoroastrian figure of the Saošyant or Son of Man, who is to be the king of the *Zwischenreich* for the period of the Millennium (see V. C (i) (d) 9 (γ), pp. 126 and 130–1, above), is to be classed with the Jewish figure of the Messiah who is to be the king of the future Jewish universal state, and not with the Christian figure of Christ who is the king of the Kingdom of God. It is true that the Saošyant is credited with certain apparently superhuman qualities and powers, but it is none the less clear that he is conceived of as being, like the Jewish Messiah, both less than divine and other than the One True God. The essential humanity of the Saošyant is guaranteed by his lineage—he is to be of the seed of Zarathustra, as the Messiah is to be of the seed of David—and his relation to Ahuramazda, like the relation of Yahweh's Anointed to Yahweh, is that of an agent and emissary, not that of an aspect or avatar. (See Gall, A. von: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter), index, s.vv. *Saošyant* and *Menschensohn*.)

In the Jewish conception of the Messiah the point of capital importance about his birth is his legitimate descent in the male line from David, and this of course rules out all idea of the Messiah being born of a virgin (see V. C (ii) (a), p. 268, footnote 5, below). According to von Gall, op. cit., p. viii, however, Jesus rejected the role of the Jewish Messiah in identifying himself with the Zoroastrian Son of Man, and, according to the Zoroastrian Mythology (ibid., pp. 126 and 418–19; cf. Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. ii (Stuttgart and Berlin 1921, Cotta), p. 68), both the Son of Man and the Primal Man, of whom the Son of Man is an avatar, are virgin-born. Apart from his virgin birth, the Zoroastrian Son of Man has other features and prerogatives—'pre-existence, a touch of something godlike, Last Judgement, Ascension into Heaven' (von Gall, op. cit., p. 414)—which the Jewish Messiah lacks. The difference between the indigenous Jewish conception of the Messiah and the new figure introduced by the importation, into Jewish minds, of the Zoroastrian conception of the Son of Man is pointed out by Lagrange, M.-J.: *Le Messianisme chez les Juifs* (Paris 1909, Gabalda), p. 96:

'Le Messie . . . élevé à ces hauteurs, est désormais au niveau des conceptions eschatologiques les plus étendues et les plus spiritualisées. Il y pourra figurer beaucoup plus aisément que le Messie, fils de David, roi d'Israël et conquérant. Mais il faut constater aussi que ce n'est plus le même personnage. Ce n'est pas une solution du problème posé par des conceptions nouvelles et par la tradition sur l'homme-Messie; c'est l'option exclusive d'un des deux éléments qu'il eût fallu concilier.'

But how can two natures—one divine and the other human—be both present at once in a single person? We must be able to give some answer to this question if we are to be sure that we are not just reciting a meaningless form of words when we say that the link between the Kingdom of God and the Society of This World consists in the possession of a common member who is truly native to each of these two diverse spiritual climes. Answers, cast in the form of creeds, have been worked out by Christian Fathers in terms of the technical vocabulary of the Hellenic philosophers; but this metaphysical line of approach to the problem is perhaps not the only one open to us. We may find an alternative starting-point in the postulate that the divine nature, in so far as it is accessible to us, must have something in common with our own; and, if we look for one particular spiritual faculty which we are conscious of possessing in our own souls and which we also can attribute with absolute confidence to God—because God would be spiritually inferior even to Man (*quod est absurdum*) if this faculty were not in Him but were nevertheless in us—then the faculty which we shall think of first as being common to Man and God will be one which the philosophers wish to mortify,¹ and that is the faculty of Love.

This stone which both Zeno and Gautama have so obstinately rejected is become the head of the corner² of the temple of the New Testament.³ In the instruction given to Nicodemus, Love is

¹ See V. C (i) (d) 10, pp. 145–8, and the present chapter, pp. 150–4, above.

² Matt. xxi. 42 (quoting Ps. cxviii. 22). In this Study this text has been quoted already in IV. C (iii) (c) 1, vol. iv, p. 248, above.

³ Love has also become the axle-tree of the vehicle of the Mahāyāna; and its conquest of Buddhism is more surprising than its outburst in Christianity; for the Christian religion of Love is in conscious and deliberate revolt against the Stoic philosophy of Detachment, whereas the Mahayanian religion of Love purports to be fulfilling the Hinayanian law and not destroying it—though, in Hinayanian eyes, the Mahayanian Bodhisattva is a Hinayanian arhat *manqué* (see V. C (i) (d) 10, p. 148, above). The Bodhisattva is in fact an arhat who, at the moment when his age-long efforts to attain Detachment have brought him at last to the brink of *Nirvāna*, refrains from immediately entering into his rest through taking the final step that would precipitate him into the bliss of self-annihilation, and decides, instead, to postpone the consummation of his own spiritual career—and this, may be, for countless ages more—in order to devote himself to the self-imposed task of helping other beings, by communicating to them some of the light of his own enlightenment, to reach, and perhaps to pass, the verge on which the Buddha-to-be now himself stands voluntarily poised (see Thomas, E. J.: *The History of Buddhist Thought* (London 1933, Kegan Paul), pp. 169–72). A follower of Christ will agree with the follower of the Mahāyāna that the Bodhisattva who, for love of his fellows, forbears to drink of the liberating elixir of Lethe when the cup is at his lips, is overcoming the Self in a far profounder sense than the arhat who exercises his duly earned right to consummate his own self-annihilation without being deterred by any pity for a groaning and travailing creation. The labour of Love to which the Bodhisattva dedicates himself is not unworthy to be compared with the self-sacrifice of Christ; and there is a Mahayanian counterpart of the Christian Kingdom of God in the Paradise into which a being who finds himself in the toils of This World may be born at his next birth if in his present life he has called, in a spirit of true faith, upon the name of the Bodhisattva whose name is Amitābha ('Measureless Light') or Amitāyus ('Measureless Life'). It is true that this analogy is imperfect. In the first place Amida is not God; in the second place his Paradise is not an eternal abode, but only a *Zwischenreich* beyond which the nonentity of *Nirvāna* still *patet immane et vasto respectat hiatus*

revealed as being both the motive that moves God to redeem Man at the price of incarnation and crucifixion,¹ and the means that enables Man to win access to God.² The working of Love in God's heart—in moving God to suffer death on the Cross—is brought out in the Synoptic Gospels in their account of the circumstances in which Jesus announces to His disciples that His destiny is the Passion instead of being a Jewish Messiah's conventional worldly success. He forbears to reveal to them this, for them, appalling truth until His divinity has been guessed by Peter and has been manifested in the Transfiguration; but, as soon as He has made His epiphany as God, He at once breaks silence about His Passion.³ The meaning of these revelations in this sequence surely is that a Love which loves to the death is the essence of God's nature. As for the working of Love in human hearts as a means of access for Man to God, it is extolled as the sovereign—and sole indispensable—means to this supreme end of Man in the thirteenth chapter of the First Epistle of Paul the Apostle to the Corinthians. And, if we try to take a comprehensive view of the constitution of the *Civitas Dei*, and inquire what miraculous spiritual force it is that makes it possible for its diverse members, human and divine, to dwell together in unity,⁴ we find that Love is the life-blood of this supra-mundane body social and the *arcanum imperii*⁵ of its divine king. The secret is divulged in the fourth chapter of the First Epistle General of John. The love of God for Man—as manifested to Man in Christ Crucified—calls out in Man an answering love for God; and this love of Man for God (which is also a manifestation of the spirit of a God-head who is immanent in the Soul of Man, as He is in all things)⁶

(Eliot, Sir Charles: *Japanese Buddhism* (London 1935, Arnold), p. 106); and in the third place the bliss of Amida's 'Pure Land' is depicted as that of a sort of ethereal Lotus-Eaters' Garden of Eden (ibid.), like the bliss enjoyed by the Hellenic gods in the Epicurean *intermundia* (see V. C (i) (d) 10, p. 144, above). There is, however, one feature of capital importance that is common to the *Civitas Dei* as conceived of by Saint Augustine and to the Paradise of Amida as conceived of by, for example, Ryōyō Shōgei (*vivebat* A.D. 1314–1420), a Japanese Mahayanian Father who was the Seventh Patriarch of the Jōdo Sect (see V. C (i) (c) 2, vol. v, pp. 96–103, above), and who taught that 'Amida is omnipresent and his Paradise is simply absolute reality—if we can change our point of view and see things as they really are, we can be in the Pure Land here and now' (Eliot, op. cit., p. 385). (For the vein of personal devotion (*bhakti*) in the Mahāyāna see V. C (i) (c) 2, vol. v, pp. 134–6, and V. C (i) (c) 4, vol. v, pp. 361–2, above; for the Japanese adaptation of the Mahayanian cult of Amitābha see cap. cit., vol. cit., pp. 96–103, above.)

¹ John iii. 13–17.

² John iii. 3–8.

³ For this association between Jesus's prediction of His Passion and the immediately antecedent revelations of His divinity see V. C (i) (c) 2, vol. v, p. 74, and V. C (i) (d) 1, vol. v, pp. 392–3 above, and V. C (ii) (a), Annex II, in the present volume, p. 383, below.

⁴ Ps. cxxxiii. 1.

⁵ Tacitus: *Annals*, Book II, chap. 36.

⁶ This love of Man for God, which is both a response to, and a manifestation of, God's love for Man, is expounded as follows by Saint Thomas Aquinas: *Summa Theologiae*, 2 a, 2 ae. Q. 24. Art. 2: 'Charity (*Caritas*) is a kind of friendship (*amicitia*) of Man towards God, which is founded upon the communication [by God to Man] of eternal bliss. This communication, however, is of the order, not of the gifts of Nature, but of

flows on Earth along the channel of Man's love for his human brother.

'Beloved, if God so loved us, we ought also to love one another. No man hath seen God at any time. If we love one another, God dwelleth in us and His love is perfected in us.'¹

In virtue of this Love which is equally human and divine and which is therefore able to circulate through all the members of the *Civitas Dei*, the Kingdom of God has a peace of its own which is not the philosophic peace of Detachment.² It is in these negative terms that the Peace of God is enigmatically proclaimed by Christ the King:

'Peace I leave with you; my peace I give unto you. Not as the World giveth give I unto you.'³

The riddle is wrestled with—and read, perhaps, as far as it can be read by human minds on Earth—in the following passage of Saint Augustine's *magnum opus*:

'The peace of the Heavenly Commonwealth (*caelestis civitatis*) is a perfectly organized and perfectly harmonious common participation in the enjoyment of God and of one another in God (*societas fruendi Deo et invicem in Deo*).⁴ . . . The commonwealth of the irreligious, in which

the gifts of Grace, because, as is written in Romans vi. 23, "the gift of God is eternal life". It follows that Charity itself likewise exceeds the capacity of Nature; but something that exceeds the capacity of Nature cannot either be natural or be acquired through natural faculties, because a natural effect cannot transcend its own cause. It follows that Charity cannot either be implanted in us by Nature or be acquired by natural powers. It can only be acquired by an inpouring of the Holy Spirit, who is the love of the Father and the Son, and whose indwelling in us is identical with the creation of Charity in us (*cuius participatio in nobis est ipsa Caritas creata*).⁵

This divine transfiguration of the human Soul has also been described by Plato (*Theaetetus*, 176 A-B) in words that he puts into the mouth of Socrates:

'Evil cannot cease to be, for there must ever be something that is the antithesis of the good; and it cannot be situate in Heaven; so it must necessarily haunt This World and prey upon Mortality. So one must seek to fly, as quickly as may be, hence thither. This flight consists in becoming as like to God as it is possible for Man to be (*φύγη δὲ ὁμοίωσις θεῷ κατὰ τὸ δυνατόν*). And becoming like to God means becoming rationally righteous and holy (*ὁμοίωσις δὲ δίκαιον καὶ ὁσιον μετὰ φρονήσεως γενέσθαι*).⁶ In these three sentences Plato successively rejects the mundane Utopias of Archaism and Futurism; takes the path of Detachment; and pushes on to the goal of Transfiguration without halting at the station of *Nirvāna*. If he had added, with Saint Thomas, that Transfiguration (*ὁμοίωσις*) cannot be achieved by Man's natural powers, but only by a gift of God's grace, this passage would have been completely Christian. And in another passage (*Letters*, No. 7, 341 C-D), where he writes of 'light caught from a leaping flame', he has come very near to describing the miracle of Pentecost. Transfiguration is, as we have seen (in III. C (ii) (a), vol. iii, pp. 245-6, above), the ideal relation for which Mimesis is an unsatisfactory substitute. If we now ask ourselves what it is in Transfiguration that Mimesis lacks, we shall answer, with Saint Thomas, that it is the gift of God's grace.

¹ I John iv. 11-12. For the modern Western philosopher Bergson's intuition of the truth that a common love for the One True God is the only feeling that can effectively take the place, and fulfil the function, of that common hatred of some human enemy which is the emotional bond between the members of a primitive society, see V. C (i), (d) 7, pp. 12-13, above, and Part VII, below.

² For the contrast which Epictetus draws between the *Pax Augusta* and the *Pax Zenonica* see V. C (i) (d) 7, pp. 3 and 16, footnote 2, and V. C (i) (d) 10, p. 142, above.

³ John xiv. 27.

⁴ This definition is also given, in the same words, in the passage quoted in V. C (i) (d) 11, Annex II, p. 367, below.—A.J.T.

God does not bear rule or receive obedience—an obedience that consists in offering sacrifice to Him alone, so that the mind rules the body, and the reason the vices, with uprightness and loyalty—such a commonwealth will be without the reality of justice. For, although the mind may appear to be ruling the body, and the reason the vices, quite creditably, neither of them will be at all properly fulfilling its task if it is not itself serving God in the way in which God Himself has ordained that He should be served. For how can a soul be mistress of the body and of the vices if it is ignorant of the True God and is not amenable to His rule? . . . The very virtues that it believes itself to possess—the virtues through which it rules the body and the vices—are vices rather than virtues if this soul addresses them to the winning or the holding of anything except God. For, while some people consider that the virtues are genuine and sincere precisely when they are addressed to themselves and are not cultivated for any ulterior object, the truth is that in such conditions they become puffed up and conceited, and are accordingly to be accounted not virtues but vices. What gives life to a physical organism is something which does not proceed from it but which is above it; and, analogously, what gives happiness in life to a human being is something which does not proceed from human nature but which is above human nature.¹

The last sentence of this passage perhaps points to the solution of that spiritual problem which is inexorably presented to the Soul by the poignant experience of mundane life in a disintegrating society. We have found that it is impossible to escape from an intolerable Present either by taking flying leaps up or down the stream of Time or again by seeking to achieve a complete Detachment from life at the cost of annihilating the Self. We have now gained a glimpse of an alternative way of life which does promise 'to give light to them that sit in darkness and in the shadow of death, to guide our feet into the way of peace';²

and this happy issue out of our afflictions is to be found in enrolling ourselves as citizens of a *Civitas Dei* of which Christ Crucified is king. This way of taking our departure from the City of Destruction is not an act of truancy; it is 'a withdrawal according to plan'; and the plan—as Christ's Passion proclaims—is not to save ourselves by escaping from a dangerous and painful mundane entanglement, but to seize the initiative in order, at our own peril, to save the City of Destruction from its doom by converting it to the Peace of God. For the human citizen of the City of God who is still in the flesh, this movement of spiritual withdrawal-and-return may entail—if the soldier is singled out for special

¹ Saint Augustine: *De Civitate Dei*, Book XIX, chaps. 13, 24, and 25.

² Luke i. 79.

honour—an act, not of truancy, but of martyrdom; but the martyr's goal is not Gautama's goal of self-annihilation: it is Christ's goal of self-fulfilment through self-surrender. 'To this end was I born, and for this cause came I into the World.'¹

The member of a disintegrating mundane society who has taken this road has a surer hope, and therefore a deeper happiness, than the merely 'once-born' member of a mundane society that is still in growth; for he has learnt the saving truths that 'the Most High hath not made one world, but two',² and that the human wayfarer who still finds himself a sojourner in This World is not on that account beyond the pale of the Other World but is travelling all the time within the domain of the Kingdom of God and is at liberty to live as a citizen of this omnipresent commonwealth here and now, if he is willing with all his heart to pay allegiance to Christ the King and to take upon himself those obligations of citizenship which Christ has consecrated by voluntarily fulfilling them in person. This entry into the Kingdom of God is a second birth;³ and, for the 'once-born' denizen of This World, the discovery that it is possible to obtain this freedom⁴ is like finding treasure hid in a field, or finding one pearl of great price.⁵ Such a trove is to be bought even at the cost of selling all that the finder has. And the reckoning of spiritual values that is made in these two parables of the Kingdom of God has been anticipated by the testimony of the first and greatest and most Christian of all the Hellenic philosophers:

'In the struggle that will decide whether good or evil is to prevail in us the issue is immeasurably greater than at first sight it might seem to be; and therefore we must not allow ourselves to be carried away by anything in the World—not by honours, not by riches, not by power, and not by poetry either. For none of these things is worth the price of neglecting Righteousness and the rest of what constitutes Virtue. . . . We must do everything that lies in our power to attain to Virtue and Wisdom in This Life. The prize is so splendid and the hope is so great.'⁶

¹ John xviii. 37.

² John iii. 3-8.

³ 4 Ezra vii. 50, quoted already on p. 162, above.

⁴ Acts xxii. 28.

⁵ Matt. xiii. 44-6.

⁶ Plato: *Republica*, 608 B, and *Phaedo*, 114 C. These two passages are brought into this relation with each other by More, P. E., in *Christ the Word = The Greek Tradition from the Death of Socrates to the Council of Chalcedon: 399 B.C.-A.D. 451*, vol. iv (Princeton 1927, University Press), p. 175, footnote 8. The original Greek runs: Μέγας . . . ὁ ἀγών, . . . μέγας, οὐχ ὅσος δοκεῖ, τὸ χρηστόν ἢ κακὸν γενέσθαι, ὥστε οὔτε τιμὴ ἐπαρθέντα οὔτε χρήμασιν οὔτε ἀρχῇ οὐδέμᾳ οὐδὲ γε ποιητικῇ ἀξίον ἀμελήσαι δικαιοσύνης τε καὶ τῆς ἄλλης ἀρετῆς (608 B) . . . ἀλλὰ . . . χρη . . . πᾶν ποιεῖν ὥστε ἀρετῆς καὶ φρονήσεως ἐν τῷ βίῳ μετασχεῖν καλὸν γὰρ τὸ ἄλλο καὶ ἡ ἐλπίς μεγάλη (114 C). With these passages of Plato, More, in loc. cit., brings into comparison Sophocles: *Electra*, ll. 1491-2: λόγων γὰρ οὐκ ἔστιν ἄγών, ἀλλὰ σῆς ψυχῆς περί, and also Saint Athanasius: *Ep. ad Episc. Aegypti et Libyae*, chap. 21 (Migne, J.-P.: *Patrologia Graeca*, vol. xxv, col. 588): ὡς τοῦ περὶ παντὸς ὄντος ἡμῖν ἀγώνος. The same reckoning of spiritual values is to be found in Mark viii. 36-7 (= Matt. xvi. 26, and Luke ix. 25), and in Lucretius: *De Rerum Natura*, Book III, ll. 1071-5 (already quoted in I. C (i) (a), vol. i, p. 55, footnote 3, above).

(e) PALINGENESIA

We have now completed our survey¹ of four experimental ways of life which are so many exploratory attempts to find some practicable alternative to a familiar habit of living and moving at ease in a growing civilization. When this comfortable road has been remorselessly closed by the catastrophe of a social breakdown, these four ways present themselves as the alternative possible by-passes. One piece of knowledge that we have gained from our survey of them is some notion of the essential differences between their respective natures.

We have found that the paths of Archaism and Futurism are two alternative substitutes for the growth of a civilization which are both of them incompatible with growth of any kind, since they both deliberately aim at a breach of continuity, and the principle of continuity is of the essence of the movement of growth in whatever terms we may try to describe or define it. Archaism is an attempt to take a flying leap out of the mundane Present backwards into an already vanished mundane Past, while Futurism is an attempt to take a similar leap forwards into a still invisible mundane Future. In both of these *tours de force* the would-be breach of continuity is precisely what makes the spiritual acrobatic feat attractive to those souls that attempt it; and the common vice of Futurism and Archaism is thus not only manifest but also manifestly fatal. Futurism and Archaism are sheer negations of growth, and that is the whole of their tragedy. On the other hand, Detachment and Transfiguration, which are another pair of alternative substitutes for the swan-path of a growing civilization, both differ alike from Archaism and from Futurism in what is the capital point; for, unlike Archaism and Futurism, Detachment and Transfiguration are both of them reactions to the breakdown of a civilization which are still, in themselves, ways of growth—if we are to judge by the criterion of growth that we have tried to work out in an earlier part of this Study.²

The essential feature in which the movements of Detachment and Transfiguration diverge from those of Archaism and Futurism is, as we have seen, that they are not attempts to escape from the Present without abandoning the level of mundane life, but are endeavours to act upon a belief that there can be no salvation from that sickness of the Soul which the breakdown of a civilization brings to light through any less radical remedy than a change of spiritual clime or dimension;³ and this is another way of saying

¹ In V. C (i) (d) 8-11, above.

² See Part III. C (i) (c) and (d), vol. iii, pp. 174-217, above.

³ See V. C (i) (d) 1, vol. v, p. 394, above.

that both Detachment and Transfiguration are examples of that 'transference of the field of action' from the Macrocosm to the Microcosm which manifests itself qualitatively in the spiritual phenomenon of 'etherialization'.¹ If we are right in believing that these are symptoms of growth, and right again in believing that every example of human growth will always be found to have a social as well as an individual aspect,² and if we are also bound to assume *ex hypothesi* that the society to whose growth the movements of Detachment and Transfiguration thus bear witness cannot be any society of the species 'civilizations'—considering that a disintegrating society of that species is the City of Destruction from which either movement is an endeavour to escape—then we can only conclude that the movements of Detachment and Transfiguration bear witness to the growth of a society, or societies, of some other kind or kinds.

Is the singular or the dual the right number to use in referring to the social medium in which our two movements of Detachment and Transfiguration take place? The best way to approach this question may be to ask ourselves another: What is the difference between the two movements of Detachment and Transfiguration in terms of social growth? If they are both of them manifestations of social growth and yet are different from one another, does their difference reflect a distinction between two species of society which differ specifically from one another as well as from the species called 'civilizations'? Or does the difference between Detachment and Transfiguration reflect a difference of social growth which is not one of kind but merely one of degree? Are the two movements both of them manifestations of the growth of a single species of society—and perhaps even of a single unique representative of this species—at two different points on a course that runs through a succession of stages from genesis towards prime? When we put our question in this way, we shall see that we already have grounds for giving it the second of the two possible answers; for we have already apprehended³—though this not yet in terms of growth but so far only in terms of direction—the relation which our two movements bear to one another. While Detachment is a simple movement of sheer withdrawal, Transfiguration is a compound movement whose first beat is likewise a withdrawal but whose second beat is a return. The difference between an act of

¹ See Part III. C (i) (c) and (d), vol. iii, pp. 174–217, above.

² This belief follows from the fact that Man is 'by nature a social animal', in the sense that Man's pre-human ancestors did not, and could not, become human until they had first attained to sociality. (For Aristotle's thesis and Eduard Meyer's argument in favour of it see I. C (iii) (c), vol. i, p. 173, footnote 3, above.)

³ In V. C (i) (d) 1, vol. v, pp. 394–7; V. C (i) (d) 10, in the present volume, pp. 132–3; and V. C (i) (d) 11, p. 151, footnote 4, above.

withdrawal and an act of withdrawal-and-return¹ is not a difference between one road and another but merely a difference in the number of stages traversed. And these two different degrees of progress may both be attained on a single road along which both the travellers are moving in the same direction.

The actual identity of the road in the case of the two progresses here in question can be tested and confirmed by taking account of the goal. We have seen what is the goal of that movement of withdrawal-and-return which we have called Transfiguration. The aim of Transfiguration is to give light to them that sit in darkness² and to make the darkness comprehend this light that is shining in it;³ and this aim is pursued by seeking the Kingdom of God in order to bring its life, which is 'the light of men',⁴ into action—or rather into visibility, since God is in action always and everywhere—in the field of life in This World. The goal of Transfiguration is thus the Kingdom of God. And there is a manifest difference, which is not just one of place but rather one of dimension and of kind, between this *Civitas Dei* and the pair of mundane Utopias—a 'City of Cecrops' and a 'City of the Sun'—that are the respective goals of Archaism and of Futurism. But what is the relation between the *Civitas Dei* and the *Nirvāna* that is the goal of Detachment? Are these two supra-mundane goals of human endeavour two mutually exclusive alternatives? Or is only one of the two truly a goal, while the other is merely a halting-place on the way? We have seen already that the second of these two theoretical possibilities is the fact. The Hinayanian Buddhist arhat, for whom *Nirvāna* is the be-all and end-all, is, in terms of Bergson's simile,⁵ like the driver of a locomotive who has mistaken a station for the terminus; and the arhat's misapprehension is shared by the Bodhisattva who, out of compassion towards other living beings, stays poised on the brink of *Nirvāna* for aeons of aeons. The Bodhisattva is like an engine-driver who, having come within view of the station and having seen that the signal just this side of it permits him to pass, pulls up at the signal-box and quixotically sets the signal against himself. But there is also another driver whose train is neither the Hīnayāna nor the Mahāyāna, and that is the Christian mystic who recognizes the station for what it is and manfully opens the throttle again, after the momentary pause which the time-table prescribes, without being deterred by the blackness of the tunnel that engulfs the track

¹ The nature of this compound *motif* of Withdrawal-and-Return has been examined in III. C (ii) (b), vol. iii, pp. 248–63, above.

² Luke i. 79.

³ John i. 5.

⁴ John i. 4.

⁵ See the passage of Bergson that has been quoted in III. C (ii) (a), vol. iii, pp. 234–5, above.

when this station has been left behind. This driver knows that he has not yet reached the terminus; and his will to reach it is so strong that it carries him through that 'dark night' in which the road that leads to the goal of the movement of Transfiguration makes its crucial reversal of direction from 'withdrawal' towards 'return'.¹

It would thus appear that, in bearing witness to the growth of some kind of society that is neither a civilization nor a Utopia, the two movements of Detachment and Transfiguration are two pieces of evidence for a single passage of life. Both of them are reactions to the disintegration of a civilization; and, in the imagery of the Sinic *Weltanschauung*, the disintegration of a civilization discharges itself, as we have seen, in a full cycle of the alternating rhythm of Yin-and-Yang.² In the first beat of the rhythm a Yang-movement which has been destructive passes over into a Yin-state which is a peace of exhaustion; but the rhythm is not arrested at the dead point (as the philosophy of Detachment seeks to quench Life in *Nirvāna*); it passes over again from the Yin-state into a Yang-movement which, this time, is not destructive but is creative (like the Christian Faith that carries the Soul on beyond Detachment into Transfiguration). This double beat of the rhythm of Yin-and-Yang is that rendering of the *motif* of Withdrawal-and-Return on which we stumbled not far from the beginning of the present Part of our Study, and for which we there provisionally coined the name of Schism-and-Palingenesia.³ Our intervening study of 'schism'—first in the Body Social and then in the Soul—has been long and laborious; but it has led us to the threshold of 'palingenesia' at last.

In this Study the word 'palingenesia', like the word 'proletariat',⁴ has been commandeered to serve our purpose; and in the act of laying hands upon it we have noted⁵ that its literal meaning—'recurrence of birth'—has in it an element of ambiguity. The 'recurrence' might refer exclusively to the event of birth or alternatively its reference might extend to the nature of the thing born; and, while in the latter use the word 'palingenesia' would mean a repetitive rebirth of something that has been born before, in the former use it would mean an unprecedented new birth of something that is now being born for the first time. We have observed

¹ See the passages quoted from Bergson in loc. cit. and in III. C (ii) (b), vol. iii, pp. 255-6, above.

² For Yin-and-Yang see Part II. B, vol. i, pp. 201-4; for the analysis of the disintegration of a civilization in terms of Yin-and-Yang see V. C (i) (b), vol. v, p. 26, above.

³ In V. C (i) (b), vol. v, p. 27, above.

⁴ For the sense in which the word 'proletariat' is used in this Study see I. B (iv), vol. i, p. 41, footnote 3, above.

⁵ In V. C (i) (b), vol. v, p. 27, footnote 2, above.

in the same place that a recurrent birth of some identical thing was probably the idea in the minds of the Stoic philosophers by whom (as far as can be ascertained) the word 'palingenesia' was originally coined; but we have kept a free hand for ourselves to use the word in our own context in either of two meanings that are both of them equally legitimate. We have now to decide for ourselves which of the alternative meanings we are to adopt.

Are we to use 'palingenesia' in the sense of a rebirth of the actual civilization that is in course of disintegration? This would be a literal application of one of the two possible meanings of the word; but this cannot be our meaning; for it is a meaning which expresses the aim, not of Transfiguration, but of Archaism.¹

Then is our 'palingenesia' to mean, not, perhaps, the literal rebirth of an existing civilization that is in disintegration, but the replacement of this now irretrievably damaged specimen by another representative of the same species? This cannot be our meaning either; for that is the aim, not of Transfiguration, but of Futurism; and, if the process is repeated *ad infinitum* and is translated from the mundane on to the cosmic scale, the result is the cyclic rhythm² which, in the history of Hellenic thought, was proclaimed to be the fundamental 'law' of the Universe by Stoic and Epicurean philosophers who apparently were not put out by the incongruity between their rotativist conception of the nature of Reality and their ethical aim of Detachment.

The Indic philosophers who have pursued the same aim have had the courage to bend their theories into conformity with it, and have set themselves to break the Wheel of Existence as the only sure way of escape from being broken on it. Is the *Nirvāna* that is attained by a complete extinction of desire the 'palingenesia' that we have in mind? No, that is impossible; for *Nirvāna* and 'palingenesia' are terms that are mutually exclusive. The very definition of *Nirvāna* is that this is the state that supervenes when birth has ceased to recur; and, however far-fetched the imagery to which we may have recourse in attempting the impossible feat of depicting 'a perfect and absolute blank', we can be certain beforehand that this particular image will have no place in our picture.

¹ In this archaistic meaning *παλιγγενεσία* is synonymous with *ἀποκατάστασις*—the noun of which the verb is used in Mark ix. 12: 'Elias verily cometh first and restoreth (ἀποκαθιστᾷ) all things.' In the Jewish *Weltanschauung* of Jesus's age this archaistic 'restoration' was not an end in itself, but was merely a prelude to the fulfilment of the futuristic hope of a Messianic kingdom; and the Archaism had accordingly acquired a certain Messianic tinge. Elias' restoration of Israel to its state in the age before the beginning of the Syriac 'Time of Troubles' was to be not just a restoration but a supernaturally glorified revision of the vanished past (see V. C (i) (d) 9 (γ), pp. 130-1, above).

² For the cyclic theory of the rhythm of the Universe see IV. C (i), vol. iv, pp. 23-38, above.

Nirvāna may be a new state—whether of existence or of non-existence or of both or of neither—but the process by which this state of absolute negativity is reached cannot be conceived of as a ‘birth’ by any stretch of the imagination.

There is one other alternative meaning which the word ‘palin-genesia’ can bear. If it means neither the rebirth of a disintegrating mundane society nor the new birth of another representative of the same mundane species nor yet the attainment of a supra-mundane state which is reached by escaping from all birth of every kind, it can only mean an attainment of another supra-mundane state to which the image of birth can be illuminatingly applied because this other state is a positive state of life—though this in a higher spiritual dimension than the life of This World. That is the ‘palingenesia’ of which Jesus speaks to Nicodemus,¹ and which He proclaims in another place in the same Gospel as the sovereign aim of His own birth in the flesh.

‘I am come that they might have life, and that they might have it more abundantly.’²

That is a ‘palingenesia’ in which the work of creation is resumed, but not as a ‘vain repetition’.

Neuen Lebenslauf
Beginne

Tönen darauf.³

The theogony which the Muses had once recited to one of the shepherds of Ascrea at the moment when a growing Hellenic Civilization had been bursting into flower⁴ finds its antiphony in another theogony which was sung to shepherds of Bethlehem by

¹ John iii. 3–8.

² John x. 10.

³ Goethe: *Faust*, ll. 1622–6, quoted already in II. C (ii) (b) 1, vol. i, p. 289, above. Dey, J.: *Παλιγγεσία* (Münster i. W. 1937, Aschendorff), pp. 161–2 and 167–8, points out that, in Saint Paul's theology, the spiritual rebirth of the Soul is conceived of as the beginning of a process, not as the end of one. This Pauline ‘palingenesia’ does not bring with it a simultaneous and instantaneous spiritual perfection. It rather introduces into the Soul a spiritual leaven, and Time and Effort are of the essence of the subsequent process of leavening the lump.

⁴ In retrospect it is manifest that Hesiod's poetry is a product of the eve of the brief flowering-time of the Hellenic culture; but such an account of Hesiod's place in history would have astonished and exasperated the poet himself. Hesiod believed that he was living in the last stage of a long course of social decline; and his cry of anguish (*Works and Days*, ll. 174–201) at the harrowing thought that he has been born into the Iron Age is the most poignant passage of any in his surviving poems. Was Hesiod tragically mistaking the ferment of growth for the disintegration of decay? Or was he anticipating, in a flash of intuition, one of the two possible answers to a question which was to be propounded by Plato long afterwards, on the morrow of the Hellenic Society's breakdown? Plato once asked himself, as we have seen (in IV. C (i), Annex, vol. iv, pp. 585–8, above), whether the true catastrophe of a civilization might prove to be its rise and not its fall. Was Hesiod answering this question before it had been framed?

angels¹ at a moment when a disintegrating Hellenic Society was suffering the last of the agonies of its 'Time of Troubles' and was falling into the coma of a universal state. The birth of which the angels then sang was not a rebirth of Hellas and not a new birth of other societies of the Hellenistic species. It was the birth in the flesh of the King of the Kingdom of God.

(II) AN ANALYSIS OF DISINTEGRATION

(a) THE RELATION BETWEEN DISINTEGRATING CIVILIZATIONS AND INDIVIDUALS

The Creative Genius as a Saviour.

The problem of the relation between civilizations and individuals has already engaged our attention in the course of our attempt, in an earlier part of this Study,² to analyse the process of growth; and, now that we have come to the point at which we must attempt to make a corresponding analysis of the process of disintegration, the same problem presents itself again. This time, however, we need not start from first principles, as we found it advisable to start when the problem confronted us first; for the elements of this problem are the same in both sets of circumstances. If the institution which we call a society consists in the common ground between the respective fields of action of a number of individual souls,³ then we may take it that this is its constant and uniform consistency so long as it is in existence at all. In respect of this fundamental point it makes no difference whether the society happens to be in growth or in disintegration. In either of these two possible phases of social life it is equally true that the source of action is never the society itself, but is always some individual soul;⁴ that the action which is an act of creation is always performed by a soul which is in some sense a superhuman genius;⁵ that the genius expresses himself, like every living soul, through action upon his fellows;⁶ that in any society the creative personalities are always in a minority;⁷ and that the action of the genius upon souls of common clay operates more rarely by the perfect method of direct illumination than through the second-best expedient of a kind of social drill which enlists the faculty of mimesis in the souls of the uncreative rank-and-file and thereby

¹ For this assonance between Hesiod: *Theogony*, ll. 1-34, and Luke ii. 8-20, see further V. C (i) (d) 11, Annex I, pp. 363-4, below.

² In III. C (ii) (a), vol. iii, pp. 217-48, above.

³ For this definition of what a society really is, see *ibid.*, p. 230, above.

⁴ *Ibid.*, pp. 230-1, above.

⁶ *Ibid.*, pp. 234-7, above.

⁵ *Ibid.*, pp. 232-4, above.

⁷ *Ibid.*, pp. 237-44, above.

enables them to perform 'mechanically' an evolution which they could not have performed on their own initiative.¹ All this is ground that is fundamental to the problem of the relation between a civilization and the individual souls that are its 'members', whatever the phase through which the civilization may be passing; and, since we have covered this ground already, we need not go over it again, but may proceed at once to look into the more superficial features in which the fundamentally constant and uniform relation between the society and the individual does differ according to whether the society happens to be moving in one or the other of its two alternative directions.

What differences, then, can we detect? Do we find, for instance, that, when a society stops growing and begins to disintegrate, the individuals who take the lead are no longer creative personalities? If the change from growth to disintegration did involve such a change as this in the nature of the society's leadership, then that would be a difference which could hardly be treated as superficial; but as a matter of fact we have discovered already that the difference in the leadership of a society when it is growing and when it is disintegrating is not the difference between creativity and the absence of it. For, while it is true that one of the symptoms of social breakdown and causes of social schism is the degeneration of a minority that has been able to take the lead in virtue of being creative into a minority that attempts to retain the lead by sheer physical domination,² we have also seen that the Secession of the Proletariat—which is the answer that the Dominant Minority evokes from the members of the society whom it shuts out from its now closed and privileged circle—is achieved under the leadership of creative personalities for whose activity there is now no scope except in the organization of opposition to the incubus of uncreative powers that be.³ Thus the change from social growth to social disintegration is not accompanied—either as cause or as effect—by an extinction of the creative spark in the souls of individuals or by a change from creative to uncreative leadership. Creative personalities continue to arise and also continue to take the lead in virtue of their creative power. All that happens is that they now find themselves compelled to do their old work from a new *locus standi* in a society which, in breaking down, has been rent by a schism.

¹ III. C (ii) (a), vol. iii, pp. 244-8, above.

² For this degeneration of a creative into a dominant minority see I. C (i) (a), vol. i, pp. 53-5; V. C (i) (a), vol. v, pp. 17-20; and V. C (i) (c) 1, vol. v, pp. 35-58, above. For the inherent weakness in the device of mimesis which is at least partly responsible for this disaster see III. C (ii) (a), vol. iii, pp. 245-8; III. C (ii) (b), vol. iii, p. 374; and IV. C (iii) (a), vol. iv, pp. 122-33, above.

³ See V. C (i) (b), vol. v, pp. 29-35, above.

Then does the difference lie in the occasion that brings a potential creativity into action? In a growing civilization, as we have seen,¹ a creative personality comes into action by taking the lead in making a successful response to some challenge which confronts him in common with the uncreative rank-and-file of the society of which they are all 'members'. In a disintegrating civilization Challenge-and-Response is still the mould of action in which the mystery of creation takes place,² but the creative leader's task now begins at a different stage and has a different objective. In a growing civilization the creator is called upon to play the part of a conqueror who replies to a challenge with a victorious response; in a disintegrating civilization the same creator is called upon to play the part of a saviour who comes to the rescue of a society that has failed to respond because the challenge has worsted a minority that has ceased to be creative and that has sunk into being merely dominant. Perhaps we have here put our finger upon the true nature of the change in the relation between the rank-and-file of a society and its creative leader when the society passes out of growth into disintegration. It is a difference in the character of the spiritual warfare that the society is waging. In terms of this military simile a growing society is taking the offensive and therefore looks for the leadership of a conqueror who will show it how to capture fresh ground for its advance, whereas a disintegrating society is trying to stand on the defensive and therefore requires its leader to play the more thankless—but by the same token perhaps also more heroic—part of a saviour who will show it how to hold its ground in a rearguard action.

It follows that, in a disintegrating society, the would-be saviour will appear in diverse guises that will vary with his choice of his defensive strategy and tactics. There will be would-be saviours *of* a disintegrating society who will refuse to despair of the Present and will lead forlorn hopes in an endeavour to turn the tide and to convert the rout into a fresh advance, without being willing to 'retreat according to plan' for the sake of even temporarily breaking off contact with an enemy who has at any rate momentarily gained the upper hand. There will also be saviours *from* a disintegrating society who will seek salvation along one or other of four alternative possible ways of escape which we have reconnoitred already.³ The saviours who belong to these other four schools will all agree in ruling out the idea of trying to hold the present front line, and *a fortiori* the idea of trying to push it forward. They will all begin

¹ In II. C (ii) (b), vol. i, pp. 271-338, and Part II. D, vol. ii, *passim*, above.

² Challenge-and-Response cannot fail to be found anywhere where there is Life, since our formula is simply a description of Life itself in terms of Will.

³ In V. C (i) (d) 8-11, pp. 49-168, above.

operations by executing a strategic retreat from the disintegrating social structure of the mundane Present; but it is only in this first negative step that they will take the same line. The saviour-archaist and the saviour-futurist will try to evade the problem of facing defeat by attempting to elude the enemy altogether. The archaist will seek to elude him by making a forced march to a position so far to the archaist's own rear, and so deeply ensconced in the jungle-clad fastnesses of the Past, that the enemy will never be able to follow him up. The futurist will seek to achieve the same result by the bolder method of putting his troops on board aeroplanes and landing them far in the rear, not of his own lines, but of the enemy's. There remain the two alternative strategies of Detachment and Transfiguration, and the saviour from a disintegrating society who follows one or the other of these will appear in quite a different guise. Along the path of Detachment he will present himself as a philosopher taking cover behind the mask of a king, and along the path of Transfiguration as a god incarnate in a man.¹ Let us try to apprehend the present object of our study as he passes through this series of Protean metamorphoses.

The Saviour with the Sword.

The would-be saviour of a disintegrating society is necessarily a saviour with a sword; but a sword may be either drawn or sheathed, and the swordsman may be discovered in either of two corresponding postures. Either he may be laying about him with naked weapon in hand, like the Gods in combat with the Giants as they are depicted on the Delphic or on the Pergamene frieze, or else he may be sitting in state, with his blade out of sight in its scabbard, as a victor who has 'put all enemies under his feet'.² The second of these postures is the end towards which the first is a means; and, though a David or a Hêrâklês, who never rests from his labours until he dies in harness, may be a more romantic figure than a Solomon in all his glory or a Zeus in all his majesty, the labours of Hêrâklês and the wars of David would be aimless exertions if the serenity of Zeus and the prosperity of Solomon were not their objectives. The sword is only wielded in the hope of being able to use it to such good purpose that it may eventually have no more work to do; but this hope is an illusion; for it is only in fairyland that swords cut Gordian knots which cannot be untied by fingers. 'All they that take the sword shall perish with the sword'³

¹ According to Pauly-Wissowa: *Real-Encyclopädie der Klassischen Altertumswissenschaften*, Halbband v, col. 1215, this conception of the Saviour as a god incarnate is an Oriental idea which is foreign to the connotation of the Greek word σωτήρ in its original Hellenic usage. On this question see V. C (ii) (a), Annex II, *passim*, below.

² 1 Cor. xv. 25 (a reminiscence of Ps. cx. 1).

³ Matt. xxvi. 52.

is the inexorable law of real life; and the swordsman's belief in a conclusive victory is an illusion. While David may never be allowed to build the Temple, Solomon's building is built only to be burnt by Nebuchadnezzar; and, while Hēraklēs may never win his way in this life to the heights of Olympus, Zeus plants his throne upon the formidable mountain's summit only to court the doom of being hurled in his turn into the abyss into which his own hands have already cast the Titans.¹

Why is it that a disintegrating society cannot, after all, be saved by the sword even when the swordsman is genuinely eager to return the weapon to its scabbard at the earliest possible moment and to keep it there—unused and unseen—for the longest possible period of time? Is not this twofold action of drawing and sheathing again a sign of grace which ought to have its reward? The warrior who is willing to renounce, at the first opportunity, the use of an instrument which he is only able now to lay aside because he has just used it so successfully must be a victor who is also a statesman, and a statesman who is something of a sage. He must have a large measure of saving common sense (*σωφροσύνη*) and at least a grain of the more etherial virtue of self-control (*ἐγκράτεια*).² The renunciation of War as an instrument of policy is a resolution which promises to be as fruitful as it is noble and wise; and, whenever it is taken with sincerity, it always arouses high hopes.

Iam Fides et Pax et Honos Pudorque
priscus et neglecta redire Virtus
audet, apparetque beata pleno
Copia cornu.³

In these lines, written to be sung at a public celebration of the beginning of a new era of Hellenic history which was to reproduce a happier past,⁴ Horace seems to be consciously chanting the palinode to Hesiod's poignant lament over the reluctant retreat of the two saving goddesses Aedōs and Nemesis from Earth to Olympus under pressure of the onset of the Age of Iron.⁵ Why

¹ In the theodicy of Aeschylus Zeus succeeds in avoiding the doom that has overtaken his predecessors Uranus and Cronos (see *Agamemnon*, ll. 160–83, and Professor Gilbert Murray's reconstruction of the denouement of the Promethean Trilogy which has been touched upon in this Study in Part III. B, vol. iii, pp. 116–17, above). Aeschylus did not foresee the humiliation that was to be inflicted upon Zeus by the philosophers of a later age of Hellenic history, whose policy towards Zeus was to bind him on his Olympian throne in gilded chains in order that he might serve their turn as a *roi fainéant* for their *Cosmopolis* (see V. C (i) (d) 7, pp. 20–1, above, and V. C (i) (d) 7, Annex, pp. 337–8, below).

² For this virtue—which is one of those that find scope in societies that are in disintegration—see V. C (i) (d) 1, vol. v, p. 377, and V. C (i) (d) 2, vol. v, pp. 399–403, above.

³ Horace: *Carmen Saeculare*, ll. 57–60.

⁴ For the *Ludi Saeculares* as an expression of Archaism see V. C (i) (d) 8 (α), p. 51, with footnote 1, above.

⁵ Hesiod: *Works and Days*, ll. 197–201. (For Hesiod's philosophy of history see V. C (i) (e), p. 174, footnote 4, above.)

are these seemingly legitimate expectations doomed to be disappointed—as they were in the signal failure of the *Pax Augusta* to achieve the perpetuity that was of the essence of the poet's hopes? Is there, then, 'no place of repentance'?¹ Can the Triumvir who has once perpetrated, and profited by, the proscriptions never truly transfigure himself into a Pater Patriae? The answer to this agonizing question has been given in an Horatian ode by an English poet upon the return of a Western Caesar from a victorious campaign in which the victor seemed at last to have triumphantly completed his military task. A poem which purports to be a paean in honour of a particular victory sounds the knell of all Militarism in its last two stanzas:

But thou, the War's and Fortune's son,
March indefatigably on;
And, for the last effect,
Still keep the sword erect.

Besides the force it has to fright
The spirits of the shady night,
The same arts that did gain
A power, must it maintain.²

This classically phrased verdict upon the career of the earliest would-be saviour with the sword in the modern history of our Western Civilization has a sting in its tail which pricks with a still sharper point in the nineteenth-century *mot* that 'the one thing which you cannot do with bayonets is to sit on them'. An instrument that has once been used to destroy life cannot then be used to preserve life at the user's convenience. The function of weapons is to kill; and a ruler who has not scrupled 'to wade through slaughter to a throne' will find—if he tries to maintain his power thereafter without further recourse to the grim arts which have gained it—that sooner or later he will be confronted with a choice between letting the power slip through his fingers or else renewing his lease of it by means of another bout of bloodshed. The man of violence cannot both genuinely repent of his violence and permanently profit by it. The law of *Karma* is not evaded so easily as that. The Saviour with the Sword may perhaps build a house upon the sand but never the house upon a rock.³ And he will not be able to build for Eternity vicariously by the expedient of a division of labour between a blood-guilty David and an innocent Solomon; for the stones with which Solomon builds will have been of David's hewing; and the veto pronounced against the father—

¹ Μετανοίας γὰρ τόπον οὐκ ἔσται.—Heb. xii. 17, apropos of Esau.

² Marvell, Andrew: *An Horatian Ode upon Cromwell's Return from Ireland*.

³ Matt. vii. 24-9.

'Thou shalt not build an house for my name, because thou hast been a man of war and hast shed blood'¹—spells doom for a house built by the son on the father's behalf.

This ultimate failure of all attempts to win salvation with the sword is not only proclaimed in poetry and myth and legend; it is also demonstrated in history; for 'the iniquity of the fathers' who have had recourse to the sword is visited 'upon the children unto the third and fourth generation'.² In our own day the descendants of the Protestant English military colonists whom Cromwell planted in Ireland to hold a conquered Catholic country down have been evicted from their ancestors' ill-gotten estates by the very weapons of violence and injustice to which they owed their cursed heritage; and, at the moment when these words were being written in August 1937, the wealth of a British community of business men in a treaty-port and settlement at Shanghai which had been founded on the iniquity of 'the Opium War' of A.D. 1840-2 was being destroyed by Japanese and Chinese hands which had been schooled in Militarism by the example of past British success in temporarily transmuting military violence into commercial profit. Nor are these two judgements of History exceptional. The classic saviours with the sword have been the captains and the princes who have striven to found or have succeeded in founding or have succeeded in preserving or have striven to preserve the universal states into which the disintegrating civilizations pass when they have lived through their 'Times of Troubles' to the bitter end; and, although the passage from 'Time of Troubles' to universal state is apt to bring with it so great an immediate relief for the tormented children of a disintegrating society that they sometimes show their gratitude to the successful founder of a universal state by worshipping him as a god,³ we shall find, when

¹ 1 Chron. xxviii. 3.

² Exod. xx. 5 and xxxiv. 7; Num. xiv. 18.

³ For the deification of political potentates in general, and of the sovereigns of universal states in particular, see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 648-57, above. It has been suggested in that context that it would hardly be possible for a ruler to secure formal worship as a god without having already won the gratitude and affection of his subjects in the capacity of a human saviour; and indeed the deification of a ruler might almost be described as the translation of this spontaneous popular feeling into official language. But, if it be true that no ruler who has not been recognized as a saviour can be a successful candidate for deification, it is by no means true that, conversely, the official conferment of divine honours is a necessary consequence of the existence of the feeling which it presupposes. For example, the feeling for a living Augustus which is expressed by Virgil in the passages in which he hails the founder of the Hellenic universal state as a god (see V. C (i) (d) (δ), Annex, p. 648, with footnote 4, above) is matched in depth and sincerity by the feeling which is expressed for the same Roman Emperor in a work written more than a quarter of a century after his death by Philo of Alexandria. In his *Legatio ad Gaium*, §§ 143-7, the Jewish philosopher salutes Augustus with a paean of praise.

'What of the hero who towered above the ordinary level of human nature in all the virtues, and who—to signify his combination of supreme dictatorial power with supreme distinction of character—was the first to be called Augustus (a title which he did not inherit from his forefathers like an heirloom, but which he did transmit to his

we come to study these universal states more closely,¹ that they are at best ephemeral, and that if, by a *tour de force*, they obstinately outlive their normal span they have to pay for this unnatural longevity by degenerating into social enormities² which are as pernicious in their way as either the 'Times of Troubles' that precede the establishment of universal states or the interregna that follow their break-up at the normal age.

The association between the histories of universal states and the careers of would-be saviours with the sword does not merely testify in a general way to the inefficacy of force as an instrument of salvation: it enables us to survey the evidence empirically by giving us a convenient clue for sorting out the would-be saviours of this kind and marshalling them in an order in which it becomes possible to pass them in review.

The first to march past will be the tragic battalion of would-be saviours with the sword who have slashed—with blades as futile as the Danaids' sieves—at the welling wars of a 'Time of Troubles'.

In the Hellenic 'Time of Troubles' (*circa* 431–31 B.C.) we can perceive, in the first generation, the gallant figure of a Lacedae-

successors fraught with a dignity with which he himself had first invested it)? At the moment when Augustus took charge of the government of the World, he found the World's affairs in a state of perturbation and confusion. Islands were competing for primacy with continents, and continents with islands, under the leadership and championship of the most eminent men in Roman public life. More than that, the prime divisions of the Habitable World were struggling for political supremacy—Asia against Europe and Europe against Asia—and the nations of the two contending continents had risen up, even from the ends of the Earth, and had set themselves to wage devastating wars against one another in all habitable lands and on all navigable seas. Everywhere there were battles and sea-fights, until almost the entire human race was on the verge of complete annihilation through mutual slaughter—but for one man, one leader, Augustus, who deserves to be called the Averter of Catastrophe (*ἀλεξίκακον*). This is that Caesar who calmed the storms that had broken in every quarter, and who cured the plagues that had descended from South and East—upon Hellenes and Barbarians alike—and had run like wildfire right away to West and North, disseminating horrors over the intervening lands and seas. This is he who did not merely loosen, but actually struck right off, the fetters in which the World had lain fast bound and crushed. This is he who put an end both to open wars and to clandestine wars in the shape of brigandage. This is he who cleared the sea of pirates and filled it with merchantmen. This is he who salvaged all the city-states and set them at liberty; who brought order out of disorder (*ὁ τὴν ἀραδίαν εἰς τάξιν ἀγαγών*); who tamed and reconciled all the unsociable, savage nations; who multiplied Hellas in a host of replicas of herself (*ὁ τὴν μὲν Ἑλλάδα Ἑλλάδι πολλαῖς παραυήσας*); who hellenized the most vital sections of the world of Barbarism; the Guardian of Peace; the distributor, to each and all, of what was their due; the benefactor who bestowed, without stint, on the public every gift that he had to give, and who never in his life hoarded up for himself any treasure that was fine or good.

This prose of Philo's is as magnificent a tribute, in its way, as Virgil's verse. Yet this Jewish enthusiast for Augustus and his work would have rejected as a shocking blasphemy any suggestion that he should express his gratitude towards a human saviour by paying him those divine honours that, in Philo's belief, were payable exclusively to the One True God. Philo can have been under no temptation to worship his human hero Augustus in place of the God of Israel—though it is possible that Philo's mind may have moved in the inverse direction and that his conception of the providence of God may have been influenced by his acquaintance with the providence of Augustus (for this interesting conjecture see Charlesworth, M. P.: *The Virtues of a Roman Emperor* (London 1937, Milford), p. 18).

¹ In Part VI, below.

² For the social enormities that are the alternatives to revolutions see IV. C (iii) (b) 1, vol. iv, pp. 135–7, above.

monian Brasidas giving his life to liberate the Greek city-states in Chalcidicê from an Athenian yoke—only to have his work undone within less than half a century by other Lacedaemonian hands which were to open the way for a Philip of Macedon to place a heavier yoke upon the neck of every state in Hellas save Sparta herself.¹ At Brasidas' heels stalks the sinister figure of his countryman and contemporary, Lysander, who successfully liberated the Greek city-states along the Asiatic shores of the Aegean and gave the Athenian 'thalassocracy' its *coup de grâce*—only to bring upon the former subjects of Athens the chastisement of Lacedaemonian scorpions in place of Attic whips and to set his own country's feet upon a path that was to lead her, in thirty-three years, from Aegospotami to Leuctra. Thereafter each successive generation adds some figure to our parade. We see a Theban Epaminondas liberating the Arcadians and Messenians and punishing Sparta as Lysander had punished Athens—only to stimulate the Phocians to inflict the same punishment on Thebes herself. We see a Macedonian Philip ridding Hellas of the Phocian scourge and being hailed as 'friend, benefactor, and saviour'² by the Thebans and Thessalians who had been the principal sufferers from it—only to extinguish the freedom of these two Hellenic peoples that once had been so naïve as to 'think the whole world of him'.³ And we see an Alexander seeking to reconcile the Hellenes to a Macedonian hegemony by leading them on the quest of making a common prize of the entire Achaemenian Empire—only to lose for Macedon the hegemony which his father had won for her, and to feed the flames of Hellenic civil war by pouring into the rival war-chests of his own successors a treasure which the Achaemenidae had been accumulating for two centuries.⁴

A parallel and contemporary procession of unsuccessful saviours with the sword can be observed in that other half of the Hellenic World which lay to the west of the Adriatic.⁵ We have only to recite the catalogue of their names—Dionysius the First and Dionysius the Second, Agathocles and Hiero and Hieronymus—in order to perceive that the failure of each of these dictators in turn is proclaimed in the bare fact of his needing a successor to grapple with the same task all over again. In another context⁶ we have seen that the problem of saving Hellenism in the west by establishing

an *union sacrée* which would be strong enough to resist the dual pressure of Syriac rivals from Africa and barbarian interlopers from Italy remained unsolved until the fertile seed-bed of Hellenic culture in Sicily was devastated by being turned into the arena of a struggle for oecumenical dominion between Carthage and Rome.

The 'Times of Troubles' of other civilizations present similar spectacles. In the Sumeric 'Time of Troubles' (*circa* 2677-2298 B.C.) we find Sargon of Agade (*dominabatur circa* 2652-2597 B.C.) being besought by the Assyrian pioneers beyond Taurus to deliver them out of the hand of the local barbarians;¹ and we see Naramsin (*dominabatur circa* 2572-2517 B.C.) representing himself on a notorious stele as the deliverer of the plains of Shinar from the depredations of the highlanders of Gutium.² But Naramsin's, if not Sargon's, title to rank as a saviour is impugned by the ensuing bout of Gutaean domination over the heart of the Sumeric World (*circa* 2429-2306);³ for this barbarian counterstroke was the nemesis of Akkadian militarism. In the Orthodox Christian World the same battalion of would-be saviours is represented by figures who are more sympathetic without being more effective. In the main body of Orthodox Christendom we see Alexius Comnenus (*imperabat* A.D. 1081-1118)⁴ snatching a prostrate East Roman Empire out of the jaws of Normans and Saljūqs with all the intrepidity of a David rescuing his lamb from the lion and the bear.⁵ And a century later we see a Theodore Lascaris refusing to despair of the republic after the unprecedented and overwhelming catastrophe of A.D. 1204, and turning at bay, behind the walls of Nicaea, against the Frankish conquerors of the holy city of Constantine. But all this Byzantine heroism was in vain. For in the tragic history of the East Roman Empire the French Goliath who came prowling on the Fourth Crusade did not, after all, share the fate of the Norman bear and the Saljūq lion; and the eventual recapture of Constantinople by Michael Palaeologus, which seemed at the moment to have crowned Theodore Lascaris' work with a posthumous success, proved in the sequel only to have sealed the East Roman Empire's doom by showing the 'Osmanlis the way from the Asiatic to the European side of the Black Sea Straits.⁶ In the history of the Russian offshoot of the Orthodox Christian

⁵ 1 Sam. xvii. 34-6.

⁶ For the Nicene Greek reoccupation of Constantinople as a prelude to the establishment of a universal state in Orthodox Christendom by the 'Osmanlis see Part III. A, vol. iii, p. 27, above, and V. C (ii) (b), in the present volume, p. 298, footnote 7, below.

Society we may discern counterparts of an Alexius Comnenus and a Theodore Lascaris in Alexander Nevski (*regnabat* A.D. 1252-63) and Dmitri Donskoi (*regnabat* A.D. 1362-89), who wielded their swords for the salvation of the Russian World, during its separate 'Time of Troubles' (*circa* A.D. 1078-1478), from the simultaneous assaults of Lithuanian pagans and Teutonic Crusaders on the north-west¹ and of Mongol Nomads on the south-east.² These Russian heroes of Orthodox Christendom were happier in their generation than their Greek peers, since the fort which they held so valiantly against such heavy odds was not, in the next chapter of the story, to fall into alien hands. Yet Alexander and Demetrius were no more successful than Alexius or Theodore in fulfilling their personal task of bringing a 'Time of Troubles' to an end.

These saviours with the sword whose lot has fallen in 'Times of Troubles' are patently cast in the mould of Hêraklê's without a touch of Zeus; but the next battalion that comes marching at their heels consists of half-castes between the Herculean and the Jovian type who are not dispensed from performing Hercules' labours but are also not condemned to perform them without any hope of obtaining Jove's reward. These Jovian Herculese or Herculean Joves are the forerunners of the successful founders of universal states. They play the part of a Moses to a Joshua or an Elias to a mundane Messiah or a John the Baptist to a Christ³ (if the would-be saviours of a mundane society may properly be brought into comparison with the harbingers of a kingdom which is not of This World). Some of these forerunners die without passing over Jordan or obtaining more than a Pisgah-sight of the Promised Land, while there are others who succeed in forcing the passage and in momentarily planting the standard of their kingdom on the farther bank; but these audacious spirits who seek to wrest a premature success out of the hands of a reluctant Destiny are visited, for their temerity, with a punishment that is escaped by their peers who recognize, and bow to, their fate; for the universal states which they prematurely set up collapse, like houses of cards, as swiftly as they have been erected; and the jerry-builders' abortive labours only find a place in history as a foil to display the solidity of the work of successors who retrieve the disaster by rebuilding the fallen edifice in granite instead of pasteboard.

The Moses who dies in the Wilderness is represented in Hellenic history by a Marius, who showed the way for a Julius to follow in the next generation, though Marius's own hesitant and clumsy

¹ See II. D (v), vol. ii, p. 172, and Part III. A, Annex II, vol. iii, p. 424, above.

² See II. D (v), vol. ii, p. 154, and V. C (i) (c) 3, vol. v, pp. 311-12, above.

³ For the analogy between Elias and John the Baptist see Matt. xvii. 10-13, and Mark ix. 11-13.

moves towards the establishment of an egalitarian dictatorship not only failed to introduce a reign of order but grievously aggravated an existing state of anarchy. In the Japanese offshoot of the Far Eastern Society we may perceive—in a different social setting—a more constructive counterpart of Marius in a Nobunaga who girt up his loins to break in the wild horses of an unbridled feudalism.¹ And Nobunaga, in his turn, has a more sympathetic Andean counterpart in an Inca Viracocha who spent in heroically stemming the torrent of Chanca invasion an energy which might otherwise have earned the reward of anticipating the achievements of a Pachacutec.² In the main body of Orthodox Christendom the career of the Inca Viracocha is matched by that of the 'Osmanlı Bâyezîd Yilderim, who came within an ace of anticipating Mehmed the Conqueror's double achievement of capturing Constantinople and settling scores with Qāramān, when 'the Thunderbolt' was blasted in mid-action by the sudden and irresistible impact of a still mightier military force.³ In the main body of the Far Eastern World the Manchu restoration of a Mongol-built universal state was more to the credit of the forerunner Nurhachi (*regnabat* A.D. 1618–25), who never set foot inside the Great Wall, than it was to the credit of his *fainéant* successor Shun Chih (*imperabat* A.D. 1644–61), in whose reign the seat of the Manchu power was triumphantly transferred from Mukden to Peking. In the Sumeric World the task of throwing off a Gutæan yoke was taken in hand by Utüchegal of Erech (Uruk) before it was carried through by Ur-Engur of Ur.

Next to this vanguard who see, but never set foot on, the Promised Land comes a second company of forerunners who momentarily subdue the monster of anarchy—but this not so decisively that he cannot raise his head or show his teeth again.

In the Hellenic World a Pompey and a Caesar divided between them the task of reforming a Roman anarchy into a Roman Peace—only to share the guilt of undoing their common work by turning their arms against each other.

Heu quantum inter se bellum, si lumina vitæ
attigerint, quantas acies stragemque ciebunt. . . .
ne, pueri, ne tanta animis adsuescite bella
neu patriæ validas in viscera vertite vires.⁴

¹ Nobunaga assumed dictatorial power *de facto* in A.D. 1568, and he was effectively master of more than half the provinces of Japan when he met a premature death by violence in A.D. 1582 (Sansom, G. B.: *Japan, A Short Cultural History* (London 1932, Cresset Press), pp. 397 and 401).

² For the Inca Viracocha's career see II. D (iv), vol. ii, pp. 102–3, above. In the Inca's career, as in Marius's, the outstanding feat was the stemming of a tide of barbarian invasion.

³ For the 'Osmanlı Bâyezîd Yilderim's career see II. D (iv), vol. ii, p. 102, above.

⁴ Virgil: *Aeneid*, Book VI, ll. 828–9 and 832–3.

But remonstrance fell on deaf ears; the rival war-lords condemned a world which it was their joint mission to save to be scarified by another bout of Roman civil war; and the victor triumphed only to be 'rejected', like Esau, 'when he would have inherited the blessing', and to find 'no place of repentance, though he sought it carefully with tears'.¹ Caesar did not expiate the deaths of Pompey and Cato by his famous clemency² in the hour of his apparent omnipotence. The slayer who had stayed his sword from further slaughter had nevertheless to die by the daggers of defeated adversaries whose lives he had spared; and in dying this tragic death Caesar bequeathed yet another bout of civil war as his unwilling legacy to a piteous world which he had sincerely desired to save. The sword had to take a further toll of life and happiness before the task which Caesar and Pompey had so lightly thrown to the winds was well and truly executed at last by Caesar's adopted son.

Augustus did succeed, after the overthrow of the last of his adversaries, in demobilizing the swollen armies that were left on his hands on the morrow of the Battle of Actium;³ and in the Sinic World Ts'in She Hwang-ti performed the same hazardous feat of statesmanship after he had destroyed the last rival of Ts'in by the conquest and annexation of Ts'i.⁴ But this touch of grace in the heart of the violent-handed Sinic Caesar did not relieve his handiwork. The Sinic universal state which the Ts'in Emperor had put together fell to pieces at his death;⁵ and the work had to be done all over again by Han Liu Pang.

In Syriac history Ts'in She Hwang-ti and Divus Julius have their counterpart in Cyrus, the would-be bringer of a *Pax Achæmenia* to a world that had been lacerated by a *furor Assyriacus*. It was in vain that Cyrus (as the story goes) paid heed to the sign sent from Heaven by Apollo and repented of the evil that he thought to do⁶ unto Croesus.⁷ Instead of burning his vanquished adversary alive, Cyrus took Croesus for his trusted counsellor—only (according to the Herodotean tale)⁸ to lose his life, years afterwards, through acting on bad advice which Croesus had given

¹ Heb. xii. 17, quoted on p. 180, footnote 1, above.

² See V. C (i) (c) 2, vol. v, p. 78, above.

³ For the penitence of Augustus see V. C (i) (c) 2, vol. v, p. 78; V. C (i) (d) 5, vol. v, p. 435; V. C (i) (d) 6 (8), Annex, vol. v, p. 648, above; and V. C (i) (d) 7, Annex, in the present volume, p. 332, footnote 1, below. This penitence evoked a gratitude which in turn expressed itself in a deification of the repentant militarist (see the third of the four passages here cited).

⁶ Jer. xviii. 8.

⁷ The story is told by Herodotus in Book I, chaps. 86-7, and has been cited in this Study already—in its application to Croesus—in IV. C (iii) (c) 1, vol. iv, p. 252 above.

⁸ Herodotus, Book I, chaps. 206-14.

him in good faith. The last word on Cyrus's career was spoken by the queen of the Nomads when she promised to satisfy the Persian war-lord's insatiable appetite for blood; and Tomyris duly carried out her threat on the stricken field by filling a wine-skin with the blood of the slain and dabbling in it the lips of Cyrus's corpse. Nor was it only Cyrus himself who perished by the stroke of the weapon which he had drawn; for the death of the Achaemenid empire-builder was capped by the collapse of his imposing edifice. Cambyses played the same havoc with Cyrus's *Pax Achaemenia* as a Gaius and a Nero played with Octavian's *Pax Augusta*; and Darius had to salvage Cyrus's ruined work, as Vespasian salvaged Augustus's and Liu Pang Ts'in She Hwang-ti's.

In the same Syriac World more than a thousand years later, when the Arab war-lord 'Umar brought a long interlude of Hellenic intrusion to a tardy end by emulating the Persian war-lord Cyrus's lightning-swift feats of conquest, the captor of Jerusalem showed the same clemency as the captor of Sardis—only to demonstrate once again that, for the would-be saviour with the sword, there is 'no place of repentance'. Once again a sword-built edifice collapsed as soon as the builder's sword-arm had been put out of action. After 'Umar's death his work—like Cyrus's—was first shamefully wrecked and then brilliantly salvaged—though, in the history of the Caliphate, Cambyses' and Darius's roles were both of them played, turn and turn about, by the versatile genius of a single Arab statesman. Mu'āwīyah coldly condemned a world that had just been exhausted by the last round of an inconclusive struggle between Rome and Persia to be further harried by an Arab civil war in order that the astute Umayyad might filch the political heritage of the Prophet Muhammad out of the incompetent hands of the Prophet's own cousin and son-in-law.¹

In the Japanese offshoot of the Far Eastern World we see Hideyoshi bringing the work of his master Nobunaga to the verge of completion²—only to divert his energies, with a Julian levity, to the wanton enterprise of carrying the flame of war into Korea³ before stamping out the last embers of it in Japan, with the result that Hideyoshi's work had to be re-performed after his death⁴ by Ieyasu at the cost of a Battle of Sekigehara⁵ and a siege of Ōsaka.⁶ In genius Hideyoshi was as conspicuously superior to Ieyasu as Julius was to Octavian; and the moral of both the Japanese and the Hellenic story is that of Aesop's fable of the Hare and the Tortoise.

¹ For the irony of this outcome of Muhammad's political career see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 675-7, above.

⁴ In A.D. 1598.

⁵ In A.D. 1600.

⁶ In A.D. 1614-15.

A mediocre ability which never deviates from the pursuit of a single aim may go farther in politics than a wayward genius which is master of everything except its own caprice. Yet this moral is perhaps not borne out by the history of the establishment of the Mughal Rāj which served as a universal state for the Hindu World. In this Mughal version of the play Bābur was the Cyrus whose work was undone by a Humāyūn who was as unfortunate as 'Alī and as disastrous as Cambyses; and Akbar was the Darius who retrieved the disaster and reconstructed the edifice; yet, if Bābur and Akbar were to be measured against one another in respect of either genius or caprice, it would be Akbar and not Bābur who would carry off the palm.¹ If we turn our attention from the Mughal Rāj, which was the first to provide the Hindu World with a universal state, to the British Rāj, which took up the same task after the Mughal Rāj had prematurely broken down, we shall notice, here too, a distinction between the respective achievements of two successive generations of British empire-builders: the generation of the Wellesleys (*circa* A.D. 1800-30), who revealed the promise of a *Pax Britannica* when they broke the power of Tipu Sahib in Mysore and of the Marāthās in the Deccan; and the generation of the Lawrences (*circa* A.D. 1830-60), who turned promise into performance by breaking the still more formidable power of the Sikhs in the Panjab and then riding the storm of a Mutiny in which the newly launched ship of British state in India came as near to foundering as the Achaemenian Empire came in the general revolt against the tyranny of Cambyses.

There is, however, a third company in our battalion of forerunners, and this is composed of Herculeases who hand on to successors the fruits of their own labours without ever tasting these fruits for themselves, but also without any break or setback. In the Babylonian World, Nabopolassar (*imperabat* 626-605 B.C.) spent his life in compassing the death of the Assyrian tiger in order that Nebuchadnezzar (*imperabat* 605-562 B.C.) might sit, unchallenged, on the throne of a Neo-Babylonian Empire which could not stand secure until Nineveh lay in ruins. In the Indic World, when the Indic universal state which had been founded by the Mauryas was re-established by the Guptas, Samudragupta (*imperabat circa* A.D. 330-75) played Nabopolassar to Chandragupta II's Nebuchadnezzar (Chandragupta II Gupta *imperabat circa* A.D. 375-413).² These forerunners whose heritage is transmitted in peace are not far from being true founders of universal states; and, if we now pass to these, we shall find the roll-call easy to recite.

¹ For Akbar's genius see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 699-704, above.

² See V. C (i) (d) 9 (β), Annex, pp. 341-2, below.

The true founder of the Hellenic universal state was Augustus (rather than Divus Julius); of the Sumeric, Ur-Engur;¹ of the Egyptiac, Mentuhotep IV² (the prince of the Eleventh Dynasty who reigned *circa* 2070/60–2015 B.C. and established the so-called 'Middle Empire'). In Egyptiac history Mentuhotep IV has a double in the person of Amosis³ (the first sovereign of the Eighteenth Dynasty and the founder of the so-called 'New Empire') owing to the extraordinary restoration of the Egyptiac universal state after an interlude of barbarian rule.⁴ If we pass from the Egyptiac to the Andean World, we shall find that the Inca Pachacutec's claim to be the true founder of the Andean universal state—a claim which is implicit in the title 'World Changed for the Better'⁵—is borne out by the facts of Andean history.⁶ And, to continue our catalogue, Nebuchadnezzar (rather than Nabopolassar) was the true founder of the Babylonian universal state,⁷ and Chandragupta Maurya the founder of the Indic universal state,⁸ while Chandragupta II Gupta⁹—an Indic empire-builder who lived and reigned nearly 700 years after Chandragupta Maurya's day—is entitled to rank as the second founder of the Indic universal state, since it was he who made the decisive contribution¹⁰ to its reconstruction after an interlude of Hellenic intrusion. To resume: Han Liu Pang (rather than Ts'in She Hwang-ti) was the true founder of the Sinic universal state; Darius I (rather than Cyrus) the true founder of the Syriac universal state; and Mu'āwīyah (rather than 'Umar) the true second founder of the Syriac universal state, inasmuch as Mu'āwīyah was the true founder of the Arab Caliphate which took up and carried through the Achaemenian Empire's uncompleted task¹¹ after an interlude of Hellenic intrusion upon Syriac ground which had lasted for the better part of a millennium.¹² In the main body of Orthodox Christendom the *Pax Ottomanica*, which performed the functions of a universal

¹ See I. C (i) (b), vol. i, p. 106; V. C (i) (d) 6 (γ), vol. v, p. 497; and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 650–1, above; and V. C (ii) (b), in the present volume, pp. 296–7, below.

³ See I. C (ii), vol. i, p. 138, above.

⁴ For this peculiar feature of Egyptiac history see *ibid.*, pp. 138–9, above.

⁵ For the meaning of the title 'Pachacutec' see further V. C (ii) (a), Annex I, p. 374, footnote 2, below.

⁶ See I. C (i) (b), vol. i, p. 121, and II. D (iv), vol. ii, p. 103, above.

⁷ See II. D (v), vol. ii, p. 138, above.

⁸ See I. C (i) (b), vol. i, p. 86, above.

⁹ For the Gupta Dynasty's role in Indic history see *ibid.*, p. 85, above.

¹⁰ This decisive contribution was the annexation of the Saka 'satrapy' in Western India; and that event, which took place at some date in the last decade of the fourth century of the Christian Era (see *ibid.*, p. 86, above, and V. C (i) (c) 3, Annex II, vol. v, p. 604, above), must have been the work of Chandragupta II Gupta (*imperabat* A.D. 375–413).

¹¹ See I. C (i) (b), vol. i, pp. 76–7, above.

¹² Alexander the Great broke into Syria in the year 333 B.C.; the Emperor Heraclius evacuated Syria in A.D. 638.

state, was established by Mehmed 'the Conqueror' of Constantinople.¹ In the Russian offshoot of Orthodox Christendom the founder of the universal state was the Tsar Ivan III (*imperabat* A.D. 1462-1505), since the decisive event in the expansion of the Principality of Moscow into an oecumenical empire was the annexation of the Republic of Novgorod in A.D. 1478.² In the main body of the Far Eastern World the *Pax Mongolica* was established by Chingis Khan. In the Japanese offshoot of the Far Eastern Society the true founder of the universal state was Ieyasu (rather than Hideyoshi). In the Hindu World the true founder of the Mughal Rāj was Akbar³ (rather than Bābur), while the true founders of the British Rāj were the Lawrences (rather than the British empire-builders of the preceding generation).

To the eyes of an historian of a later age, who can see the careers of these founders of universal states in the light of a distant sequel, their Jovian figures do not stand out as being strikingly different from the Herculean figures of their predecessors. But to the eyes of a contemporary observer, who cannot see things in perspective, there seems to be all the difference here between failure and success. The founders of the universal states appear at the moment to have triumphantly achieved a success which their predecessors have striven for manfully but in vain; and the genuineness of this success appears to be guaranteed not merely by the effectiveness of the founders' own lives and deeds (however eloquently these facts may speak), but most decisively of all by the prosperity of the founders' successors. Solomon's glory is the most telling evidence for David's prowess. Let us therefore now continue our survey of saviours with the sword by passing in review these Solomons who are born into the purple. The swords of the *porphyrogeniti* are speciously muffled in the folds of an imperial robe; and, if ever we see them show their true colours by displaying the hidden blade, we shall always find that this act of self-betrayal has been prompted by wantonness and not enjoined by necessity. If salvation with the sword is to be 'justified of her children',⁴ it must be now, in this Solomonian generation, or never in the whole history of the disintegrations of civilizations. So let us inspect our Solomons closely.

¹ In the estimation of later generations of 'Osmanlis it was Mehmed the Conqueror who raised the Ottoman Power to the rank of an oecumenical empire; but the credit for this achievement properly belongs neither to Mehmed the Conqueror (*imperabat* A.D. 1451-81) nor to his forerunner Bāyezid the Thunderbolt (*imperabat* A.D. 1389-1402), but to their predecessor Murād I (*imperabat* A.D. 1360-89), since the decisive event in the establishment of the *Pax Ottomanica* was the conquest of Macedonia in A.D. 1371-2, and not the capture of Constantinople in A.D. 1453.

² See IV. C (ii) (b) 2, vol. iv, p. 88; V. C (i) (c) 3, vol. v, p. 312, above; and V. C (ii) (b), in the present volume, p. 309, below.

³ See V. C (i) (c) 3, vol. v, p. 304, above. The decisive event which raised the Mughal Rāj to the rank of an oecumenical empire was the annexation of Gujerat in A.D. 1572.

⁴ Matt. xi. 19; Luke vii. 35.

The reigns of these Solomons constitute those relatively happy periods of partial peace and prosperity which look like 'Golden Ages' if we confine our view to the life-spans of the universal states in which they occur, but which can be seen to be really 'Indian Summers' as soon as we extend our field of vision to include the whole life-span of the civilization in whose history the coming and going of a universal state is only one of a number of incidents in a long tale of disintegration.¹ An empirical survey of these 'Indian Summers' will bring out two salient features of this historical phenomenon. We shall find that they display a striking uniformity of character combined with an equally striking inequality of duration.

We have seen that the Hellenic 'Indian Summer' began at the accession of the Emperor Nerva in A.D. 96 and ended at the death of the Emperor Marcus in A.D. 180; and these eighty-four years amount to not much less than a quarter of the total duration of a *Pax Romana* which, in the terms of the conventional chronology which dates by public events, may be reckoned to have begun in 31 B.C., on the morrow of the Battle of Actium, and to have ended in A.D. 378, on the day of the Battle of Adrianople. The 'Indian Summer' which the main body of the Far Eastern World enjoyed under the *Pax Manchuana* lasted rather longer than this, if its beginning is to be equated with the definitive subjugation of the South by the Emperor K'ang Hsi in A.D. 1682, and its end with the death of the Emperor Ch'ien Lung in A.D. 1796. In the history of the Egyptiac Society the 'Indian Summer' of 'the New Empire' lasted longer still—from the accession of Thothmes I *circa* 1545 B.C. to the death of Amenhotep III in 1376 B.C. But all these spans are surpassed in the duration of the 'Indian Summer' of 'the Middle Empire', which was the original Egyptiac universal state; for this first Egyptiac 'Indian Summer' was almost coeval with the Twelfth Dynasty, which reigned, from first to last, *circa* 2000–1788 B.C.;² and, even if we date the onset of winter from the death of Amenemhat III in 1801 B.C.,³ the spell of sunshine covers half the total duration of a *Pax Thebana* that lasted in all for about four centuries, if its beginning is to be equated with the accession of Mentuhotep IV *circa* 2070/2060 B.C.⁴ and its end with the irruption of the Hyksos *circa* 1660 B.C.⁵

These 'Indian Summers' that have lasted through successive

¹ For the nature of these 'Indian Summers' see IV. C (ii) (b) 1, vol. iv, pp. 58–61, above.

⁵ Meyer, *op. cit.*, vol. cit., pp. 302 and 305.

reigns, and in at least one case for almost the whole period of a dynasty, differ notably in length from other 'Indian Summers' which are also manifestly authentic examples of the same social phenomenon, but which have not outlasted the reign of some single sovereign with whose name they are identified.

In the history of the Sumeric universal state, for instance, the 'Indian Summer' was confined to the reign of the Emperor Dungi (*imperabat circa* 2280-2223 B.C.), whose death was followed by a rapid onset of winter. In the history of the Andean universal state the 'Indian Summer' of Tupac Yupanqui's reign (*imperabat circa* A.D. 1448-82) began to fade out in the reign of his immediate successor Huayna Capac;¹ and the first touch of frost made itself felt in the feud between Huayna Capac's rival heirs, before the Incaic Empire—and, with it, the Andean Civilization itself—was wiped out by the sudden swoop of a storm-cloud from the unsuspected farther shore of a distant Atlantic. In Indic history a Mauryan 'Indian Summer' in the reign of the Emperor Açoka (*imperabat* 273-232 B.C.) was followed in 185 B.C. by the blight of Pushyamiitra's usurpation of power,² while a Guptan 'Indian Summer' in the reign of Kumaragupta I (*imperabat* A.D. 413-55) was followed, in the very year of the serene emperor's death, by the blight of an irruption of Eurasian Nomads which was the first wave of a devastating deluge.³ The Sinic 'Indian Summer' scarcely extended beyond the limits of the reign of the Emperor Han Wuti (*imperabat* 140-87 B.C.), whose 'forward policy' against the Eurasian Nomads was possibly the 'beginning of evils' in the history of a Prior Han Dynasty which both attained and passed its zenith in Wuti's lifetime.⁴ In the history of the *Pax Mongolica* in the main body of the Far Eastern Society the 'Indian Summer' in the reign of the Great Khan Qubilay (*imperabat* A.D. 1259-94) was followed in A.D. 1368 by the eviction of the Mongols from Intramural China.⁵ In the history of the Arab Caliphate the celebrated 'Indian Summer' in the reign of Hārūn-ar-Rashīd (*imperabat* A.D. 786-809) shines out so brilliantly thanks to the depth of the darkness in which this pool of light is framed. The splendours of an 'Abbasid Caliph who was profiting by the cumulative results of the labours of a long line of Umayyad predecessors are set off on the one hand by an antecedent bout of anarchy in which Hārūn's 'Abbasid forebears had wrested the Caliphate out of the Umayyads' grasp, and on the

¹ For this view see Means, P. A.: *Ancient Civilizations of the Andes* (New York 1931, Scribner), p. 274.

² See I. C (i) (b), vol. i, p. 86, above.

³ See *ibid.*, p. 85, above.

⁴ See V. C (i) (c) 2, vol. v, p. 142, footnote 4, and V. C (i) (c) 3, vol. v, p. 271, above, and V. C (ii) (b), in the present volume, p. 295, below.

⁵ See II. D (v), vol. ii, p. 121; IV. C (ii) (b) 2, vol. iv, p. 387; and IV. C (iii) (c) 3 (a), vol. iv, p. 491, above.

other hand by a subsequent débâcle, in which Hārūn's 'Abbasid successors fell into a humiliating bondage to their own Turkish body-guard.

In the main body of Orthodox Christendom the *Pax Ottomanica* produced its 'Indian Summer' in the reign of Suleymān the Magnificent (*imperabat* A.D. 1520-66)—an 'Osmanli prince who emulated 'in real life' the legendary glory of his Davidic namesake. Suleymān's Western contemporaries were affected like the Queen of Sheba by the vastness of this latter-day Solomon's dominions and the abundance of his wealth and the grandeur of his buildings; 'there was no more spirit in' them.¹ Yet the curse which the biblical Solomon lived to bring down on himself was also incurred by Suleymān. 'The Lord said unto Solomon: "Forasmuch as this is done of thee, and thou hast not kept my covenant and my statutes which I have commanded thee, I will surely rend the kingdom from thee and will give it to thy servant."'² In another context³ we have observed that Suleymān the Magnificent was the Ottoman Pādishāh who sapped the foundations of the Ottoman social system by making the first breach in the fundamental rule that the Pādishāh's Slave-Household must be recruited from persons who were infidel-born, and that Muslim freemen should be ineligible for enlistment *ex officio religionis*.⁴ In tolerating the enrolment of Janissaries' sons among the '*Ajem-oghlans*, Suleymān opened the flood-gates for a disastrous dilution of the Janissary Corps; and this self-inflicted catastrophe duly rent the kingdom from the 'Osmanli Pādishāh and gave it to his 'human cattle' the *ra'īyeh*.

If we now turn our eyes from the main body of Orthodox Christendom to its offshoot in Russia, we may hesitate at first sight to recognize a counterpart of Suleymān the Magnificent in his contemporary Ivan the Terrible (*imperabat* A.D. 1533-84). Are a reign of terror and an 'Indian Summer' compatible? The two atmospheres will strike us as being so sharply antipathetic to one another that we may question the possibility of their co-existing in a single place and time. Yet the record of Ivan the Terrible's achievements may compel us to admit that his reign was an 'Indian Summer' of a sort;⁵ for this was the reign which saw the prince of

¹ 1 Kings x. 5.

³ See *ibid.*, pp. 34-5, above.

⁴ 1 Kings xi. 11.

⁵ There are other reigns in the histories of other universal states which we may be content to annotate with a question-mark. In the history of the Tokugawa Shogunate, which fulfilled the functions of a universal state in the disintegration of the Far Eastern Civilization in Japan, can we, for example, discern two shafts of autumn sunlight flickering round the reigns of the Shoguns Iemitsu (*fungebatur* A.D. 1622-51) and Yoshimune (*fungebatur* A.D. 1716-44)? The reader may perhaps find his own answers to this pair of questions if he consults Sansom, G. B.: *Japan, A Short Cultural History* (London 1932, Cresset Press), p. 447, and Murdoch, J.: *A History of Japan*, vol. iii (London 1926, Kegan Paul), p. 314.

Muscovy assume the style and title of an East Roman Emperor and justify this audacity by the conquest of Qāzān and Astrakhan and the opening-up of the White Sea and Siberia. This was assuredly an 'Indian Summer', albeit with thunder in the air; and this reading of Ivan the Terrible's reign is confirmed by the sequel. Before the Emperor's death a shadow was thrown athwart the sinister sunlight of his reign by the outcome of a war for the acquisition of a sea-board on the Baltic which dragged on even longer than the war subsequently waged for the same purpose by Peter the Great,¹ but which ended in a miserable failure that was at the opposite pole from Peter's brilliant success. And when Ivan had gone to his account the strokes of misfortune fell thick and fast upon the body politic which he left behind him. The year 1598 saw the extinction of the House of Rurik, and the years 1604-13 saw a temporary collapse of the Russian Orthodox Christian universal state² from which it did not fully recover till the reign of Peter the Great.

If we now glance back at our catalogue of 'Indian Summers' that have endured for longer than a single reign, we shall observe that these too, for all their staying-power, have succumbed to the onset of winter in the end. In the Hellenic World Marcus was followed by Commodus, and Alexander Severus by 'the Thirty Tyrants'. In the main body of the Far Eastern Society Ch'ien Lung was followed by Hung Hsiu-ch'uan.³ In the Egyptian World in the days of 'the New Empire' Amenhotep III was followed by an Amenhotep IV who has made himself notorious under his self-chosen title of Ikhnaton, while in the days of 'the Middle Empire' the long series of majestically alternating Amenemhats and Senwosrets gave way at last to a dynasty in which no fewer than thirteen

¹ Ivan the Terrible's War of Livonia lasted for twenty-five years (from A.D. 1558 to 1583); Peter's Northern War lasted for twenty-two years (from A.D. 1700 to 1721: see III. C (ii) (b), vol. iii, p. 283, footnote 3, above).

² This period of collapse at the close of the first chapter in the history of the Russian Orthodox Christian universal state has been remembered by Posterity as the 'Time of Troubles' *par excellence* (see I. C (i) (a), vol. i, p. 53, footnote 2; II. D (v), vol. ii, pp. 157 and 176; IV. C (ii) (b) 2, vol. iv, pp. 90 and 91; V. C (i) (c) 3, vol. v, p. 311, footnote 2, above; and V. C (ii) (b), in the present volume, p. 311, below); and it is from this original Russian use of the phrase that we have borrowed it, in this Study, to denote one particular stage in the disintegration of any broken-down civilization. This stage is the chapter that opens with the breakdown itself and closes with the partial recovery that accompanies the eventual establishment of a universal state; and in the history of the Russian Orthodox Christendom the 'Time of Troubles' in this technical sense would run from the decline of the power of the Principality of Kiev in the last quarter of the eleventh century of the Christian Era (see Kliutschewskij, W. [Kluczevskij, V.]: *Geschichte Russlands*, vol. i (Berlin 1925, Obelisk Verlag), p. 166) to the union between the Principality of Moscow and the Republic of Novgorod in A.D. 1478. The later period of collapse in the early years of the sixteenth century which goes by the name of the 'Time of Troubles' in the Russian tradition would, in our terminology, be a 'recurrence' of an earlier 'Time of Troubles' which had been temporarily—but only temporarily—surmounted by the establishment of a *Pax Muscoviana*.

³ For this leader of the Far Eastern internal proletariat in the revolutionary movement of resurgence that bears the name 'Ta'ip'ing', see V. C (i) (c) 2, vol. v, p. 107, footnote 1. above.

ephemeral emperors successively seized and lost the Imperial Throne within the brief span of a quarter of a century.¹

Our survey of 'Indian Summers' has thus, it would appear, been leading us to the conclusion that the careers of the Solomons decisively refute, instead of decisively vindicating, the claim of the sword to be convertible into an instrument of salvation; for, whether an 'Indian Summer' lasts out the life of a dynasty or comes and goes within the briefer span of a single reign, we have seen that it is in any case essentially something transitory. The glory of Solomon is a glory that fades; and, if Solomon is a failure, then David—and David's forerunners—have wielded their swords in vain. The truth seems to be that a sword which has once drunk blood cannot be permanently restrained from drinking blood again, any more than a tiger who has once tasted human flesh can be prevented from becoming a man-eater from that time onwards. The man-eating tiger is, no doubt, a tiger doomed to death; if he escapes the bullet he will die of the mange. Yet, even if the tiger could foresee his doom, he would probably be unable to subdue the devouring appetite which his first taste of man-meat has awakened in his maw; and so it is with a society that has once sought salvation through the sword. Its leaders may repent of their butcher's work; they may show mercy on their enemies, like Caesar, and demobilize their armies, like Augustus; and, as they ruefully hide the sword away, they may resolve in complete good faith that they will never draw it again except for the assuredly beneficent, and therefore legitimate, purpose of preserving the peace against criminals still at large within the borders of their tardily established universal state or against barbarians still recalcitrant in the outer darkness. They may clinch this resolution with an oath and reinforce it with an exorcism; and for a season they may appear to have successfully achieved the pious *tour de force* of biting and bridling Murder and harnessing him to the chariot of Life; yet, though their fair-seeming *Pax Oecumenica* may stand steady on its grim foundation of buried sword-blades for thirty or a hundred or two hundred years, Time sooner or later will bring their work to naught.

Time is, indeed, working against these unhappy empire-builders from the outset; for sword-blades are foundations that never settle. Exposed or buried, these blood-stained weapons still retain their sinister charge of *karma*; and this means that they cannot really turn into inanimate foundation-stones, but must ever be stirring—

¹ These thirteen emperors, who reigned from first to last *circa* 1788/5–1760 B.C., appear to have all belonged to a single dynasty, though the Imperial Crown seems to have made its rapid transit from head to head by violence more often than not (see Meyer, E.: *Geschichte des Altertums*, vol. (i), part (2), 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 302).

like the dragon's-tooth seed that they are—to spring to the surface again in a fresh crop of slaying and dying gladiators. Under its serene mask of effortless supremacy the Oecumenical Peace of a universal state is fighting, all the time, a desperate losing battle against an unexorcised demon of Violence in its own bosom; and we can see this moral struggle being waged in the guise of a conflict of policies.

Can the Jovian ruler of a universal state succeed in curbing that insatiable lust for further conquests which was fatal to Cyrus?¹ And, if he cannot resist the temptation *debellare superbos*, can he at any rate bring himself to act on the Virgilian counsel *parcere subiectis*?² When we apply this pair of tests to Jovius's performance, we shall find that he seldom succeeds in living up for long to his own good resolutions.

If we choose to deal first with the fortunes of the conflict between the alternative policies of expansion and of non-aggression in the relations of a universal state with the peoples beyond its pale, we may begin by considering the Sinic case in point, for there could have been no more impressive declaration of a determination to sheathe the sword than Ts'in She Hwang-ti's immense work of consolidating the unco-ordinated fortifications of the former Contending States of the Sinic World, where these had marched with the Eurasian Steppe, into the single continuous rampart of his Great Wall.³ Yet Ts'in She Hwang-ti's good resolution to refrain from stirring up the Eurasian hornets' nest was broken, as we have seen, less than a hundred years after the Ts'in emperor's death, by the 'forward policy' of his Han successor Wuti.⁴ In the history of the Hellenic universal state the founder himself set a practical example of moderation to his successors by abandoning his attempt to carry the Roman frontier to the Elbe,⁵ before he bequeathed to them his famous counsel to be content with preserving the Empire within its existing limits, without attempting to extend it.⁶ Augustus's attitude is illustrated by Strabo's account of a current controversy over the question whether the Augustan rule might allow of a British exception.⁷ And, although this particular breach of the rule was eventually committed with an apparent impunity, Trajan afterwards demonstrated the soundness of Augustus's judgement when he ventured to break the rule on the grand scale by attempting to realize Crassus's and Julius's and

⁶ Dio Cassius: *History of Rome*, Book LVI, chap. 33.

⁷ This passage of Strabo has been quoted in II. D (vii), vol. ii, p. 282, footnote 4, above.

Antonius's dream of conquering the Parthian Empire. The price of a momentary advance from the hither bank of Euphrates to the foot of Zagros and the head of the Persian Gulf was an intolerable strain upon the Roman Empire's resources in money and men. Insurrections broke out not only in the newly conquered territories between the conqueror's feet but also among the Jewish Diasporà in the ancient dominions of the Empire in his rear;¹ the clear sky of a nascent Hellenic 'Indian Summer' was momentarily overcast; and it took all the prudence and ability of Trajan's successor Hadrian to liquidate the formidable legacy which Trajan's sword had bequeathed to him. Hadrian promptly evacuated all his predecessor's Transeuphratean conquests; yet he was able to restore only the territorial, and not the political, *status quo ante bellum*. Trajan's act of aggression made a deeper mark on Transeuphratean Syriac minds than Hadrian's reversal of it; and we may date from this epoch the beginning of a change of temper in the Transeuphratean tract of the Syriac World which was fostered by Roman relapses into a recourse to the sword² until the reaction in Iran declared itself at length in sensational fashion in the revolutionary replacement of an Arsacid King Log by a Sasanid King Stork,³ and the consequent resumption of that militant counter-attack against the Hellenic intruder which had succeeded in evicting Hellenism from its footholds in Iran and 'Irāq in the second century B.C., but had latterly been in suspense since the conclusion by Augustus, in 20 B.C., of a Romano-Parthian 'peace with honour'. Under the auspices of the second pādīshāh of the Sasanian line the Trajanic breach of the Augustan rule in A.D. 113-17 found its nemesis in A.D. 260 in a repetition of the disaster which had been inflicted upon Roman arms in 53 B.C. by the Parthians.⁴

In Egyptiac history we see the Theban sword that had been drawn in a *Befreiungskrieg* by Amosis (*imperabat* 1580-1558 B.C.) and wielded in a *revanche* by Thothmes I (*imperabat* 1545-1514 B.C.)

¹ For the insurrection of the Jewish Diasporà in Cyrene and Egypt and Cyprus in A.D. 115-17 see V. C (i) (c) 2, vol. v, p. 68, footnote 3; and V. C (i) (d) 9 (y), in the present volume, p. 123, above.

² Trajan's error of A.D. 113-17 was repeated by Marcus in A.D. 162-6, by Septimius Severus in A.D. 195-9, and by Caracalla in A.D. 216-18. These three Roman wars of aggression were accompanied by annexations which carried the Roman frontier eastward from the Middle Euphrates to the Khabūr and thereby recaptured for Hellenism a belt of Syriac territory which had been liberated from the Seleucidae by the Arsacidae at the turn of the second and the last century B.C. But this recovery of ground in Mesopotamia was offset in 'Irāq by the indiscriminate barbarity of Marcus's and Severus's soldiery, who sacked the citadel of Hellenism at Seleucia as mercilessly as the head-quarters of the Arsacid power at Ctesiphon. And it was a still worse blow for Hellenism when the twice perpetrated sack of Seleucia-Ctesiphon in the second century of the Christian Era was avenged by Sapor's twice perpetrated sack of Antioch in A.D. 253 and 258-9.

³ See V. C (i) (c) 3, vol. v, p. 216, above.

⁴ In A.D. 260, as in 53 B.C., a Roman army laid down its arms; but the captivity of Valerian was more humiliating than the death of Crassus.

being deliberately sheathed by the Empress Hatshepsut (*imperabat* 1501-1479 B.C.)—only to be wilfully drawn and wielded again by Thothmes III (*imperabat* 1479-1447 B.C.) as soon as Death had removed Hatshepsut's restraining hand.¹ The *karma* of the Militarism which governed the policy of 'the New Empire' for the next hundred years (*circa* 1479-1376 B.C.) could not be extinguished by Ikhnaton's passionate repudiation of a policy which he had inherited from four predecessors—any more than the nemesis of Nebuchadnezzar's militarism could be averted by Nabonidus's childish device of ignoring the unwelcome realities of his imperial heritage and seeking to forget the cares of state in the delights of archaeology. Nor, in the history of the Indic universal state, could Açoka's renunciation of War as an instrument of his imperial policy² save the noble emperor's successors from losing the Maurya power by the same lethal arts that Açoka's grandfather Chandragupta had employed in gaining it.

In the history of the Ottoman Power Mehmed the Conqueror (*imperabat* A.D. 1451-81) deliberately limited his ambitions to the enterprise of making his *Pax Ottomanica* conterminous with the historic domain of Orthodox Christendom (not including its offshoot in Russia);³ and he resisted all temptations to encroach upon the adjoining domains of Western Christendom and the Iranic World. But—partly, no doubt, because his hand was forced by the aggressiveness of Ismā'il Shāh Safawī—Mehmed's successor Selīm the Grim (*imperabat* A.D. 1512-20) broke Mehmed's self-denying ordinance in Asia,⁴ while Selīm's successor Suleymān (*imperabat* A.D. 1520-66) committed the further error—which was ultimately still more disastrous and which could not be excused on Selīm's plea of *force majeure*—of breaking the same self-denying ordinance in Europe as well. In consequence the Ottoman Power was rapidly worn down by the grinding friction of a perpetual warfare on two fronts against adversaries whom the 'Osmanli could

¹ In thus standing out as an exception to a rule that prevailed afterwards as well as before, Hatshepsut's reign in the series of the Eighteenth Egyptian Dynasty has a Syriac analogue in the reign of the Umayyad Caliph 'Umar II (*imperabat* A.D. 717-20). When 'Umar succeeded to the throne at Damascus he recalled the Arab army that was besieging Constantinople (see II. D (v), Annex, vol. ii, p. 400; and III. C (ii) (b), vol. iii, pp. 275-6, above); and he also tried, though this in vain, to withdraw his troops from the half-conquered territory of Transoxania (see II. D (v), vol. ii, p. 141; and II. D (vii), Annex VIII, vol. ii, pp. 446-52, above). It is noteworthy that 'Umar II was the only member of his dynasty who took his profession of Islam seriously (see V. C (i) (d) 6 (δ), Annex, vol. v, p. 675, above).

² The resolution which Açoka took and kept, after he had been convinced of the wickedness of War by his personal experience of the horrors of his own successful war of aggression against Kalinga, has been touched upon in V. C (i) (d) 6 (δ), Annex, p. 682, above.

³ For this feature of the policy of Mehmed Fātih see I. C (i) (b), Annex I, vol. i, pp. 369-71, above.

⁴ See I. C (i) (b), Annex I, vol. i, pp. 384-8, above.

repeatedly defeat in the field but could never put out of action. And this Selimian and Suleymanian perversity came to be so deeply ingrained in the statecraft of the Sublime Porte that even the collapse that followed Suleymān's death did not produce any lasting revulsion in favour of a Mehmedian moderation. The squandered strength of the Ottoman Empire had no sooner been recruited by the statesmanship of the Köprülü's than it was expended by Qāra Mustafā on a new war of aggression against the Franks which was intended to carry the Ottoman frontier up to the eastern bank of the Rhine. Though he never came within sight of this objective, Qāra Mustafā did emulate Suleymān the Magnificent's feat of laying siege to Vienna. But in A.D. 1682-3, as in A.D. 1529, the boss of the Danubian carapace of Western Christendom¹ proved to be too hard a nut for Ottoman arms to crack; and on this second occasion the 'Osmanlis did not fail before Vienna with impunity. The second Ottoman siege of Vienna evoked a Western counter-attack which continued, with no serious check, from A.D. 1683 to A.D. 1922, and which did not expend itself until the 'Osmanlis had not only been bereft of their empire but had even been compelled to renounce their ancestral Iranic culture as well, as the price of retaining possession of their homelands in Anatolia.²

In thus wantonly stirring up a hornets' nest in Western Christendom, Qāra Mustafā, like Suleymān before him, was committing the classic error of Xerxes when the successor of Darius³ launched his war of aggression against Continental European Greece and thereby provoked a Hellenic counter-attack which immediately tore away from the Achaemenian Empire the Greek fringe of its dominions in Asia, and which ultimately led to the destruction of the Empire itself when the work begun by the sea-power of Athens under the auspices of Themistocles was taken up and completed by the land-power of Macedon under the auspices of Alexander. In the history of the Hindu World the Mughal Rāj produced its Xerxes in the person of the Emperor Awrangzīb (*imperabat* A.D. 1659-1707), whose unsuccessful efforts to assert his authority over Mahārāshtra by force of arms provoked a Marāthā counter-attack which ultimately destroyed the authority of Awrangzīb's succes-

¹ For the Danubian Hapsburg Monarchy's function as a carapace see I. C (iii) (b), vol. i, p. 156, footnote 1; II. D (v), vol. ii, pp. 177-90; and V. C (i) (c) 3, vol. v, pp. 325-7, above.

² See II. D (v), vol. ii, pp. 186-8, and Part III. A, vol. iii, pp. 46-7, above.

³ Darius had, of course, extended the bounds of the Empire in his day—as, for that matter, had Trajan's predecessor Augustus and Suleymān's predecessor Mehmed the Conqueror. But the wars of Darius, like those of Augustus and Mehmed, differed from the wars of the Emperor's successors in the vital matter of the objective. Darius was seeking, not to expand his dominions *ad infinitum*, but on the contrary to bring their expansion to a definitive close by finding and establishing a 'scientific frontier' (see Meyer, E.: *Geschichte des Altertums*, vol. iii (Stuttgart 1901, Cotta), p. 96).

sors in the metropolitan provinces of their empire on the plains of Hindustan.¹

It will be seen that, on the first of our two tests of ability to sheathe the sword, the rulers of universal states do not make a very good showing; and, if we now pass from the test of non-aggression against peoples beyond the pale to our second test of toleration towards the populations that are already living under the vaunted *Pax Oecumenica*, we shall find that Jovius fares hardly better in this second ordeal—though the receptivity which we have seen² to be characteristic of empire-builders might seem likely, on the face of it, to make toleration come easy to them.

The Roman Imperial Government, for example, made up its mind to tolerate Judaism and abode by this resolution in the face of severe and repeated Jewish provocations; but its forbearance was not equal to the more difficult moral feat of extending this tolerance to a Jewish heresy that had set itself to convert the Hellenic World. In the very first collision between the Roman authorities and the Christian Church the Imperial Government took the extreme step of making the profession of Christianity a capital offence; and this declaration of war to the death was the only one of Nero's acts of savagery that was not rescinded by the tyrant's successors on the Imperial Throne.³ The motive of this proscription of Christianity as a *religio non licita* by the rulers of the

¹ It may be noted that the British Rāj in India—which was established on the ruins of the Mughal Rāj and took over its function of providing a *Pax Oecumenica* for the Hindu World—had passed through a phase of boundless ambition which was reminiscent of the temper of an Awrangzib and a Xerxes and a Qāra Mustafā and a Suleymān the Magnificent and a Thothmes III and a Trajan. The vastness and rapidity of the achievements of the British empire-builders of the generation of the Wellesleys so far turned their successors' heads that they seem for a moment to have dreamed of carrying their frontier north-westward from the banks of the Jumna to the banks of the Oxus (see V. C (i) (c) 3, vol. v, pp. 305-6, above). The extent of these British ambitions in Asia in the 'eighteen-thirties' may be gauged by the range and audacity of the reconnaissances that were made by Burnes (see loc. cit., p. 305, footnote 2) on the eve of the Anglo-Afghan War of A.D. 1838-42; but the annihilation of the British army that occupied Kābul and the execution of Stoddard and Conolly when they pushed on, in Burnes' footsteps, to Bukhara caused the British empire-builders to abandon once for all any idea of dealing with the Afghans and the Uzbeks as they had dealt with the Mughals and the Marāthās. The invasion and annexation of Sind in A.D. 1843 raised a controversy among the British themselves in which the policy of aggressive expansion in Asia was attacked on grounds of morality as well as on those of expediency; and, although the annexation of Sind in 1843 was followed in 1849 by the annexation of the Panjab, the British Rāj never sought to trespass beyond the North-West frontier which it inherited in that year from the *ci-devant* Sikh principalities. The subsequent alternating trials of a 'close border' and a 'forward' policy were a mere matter of military tactics; and this tactical controversy did not reflect any variation of political aim. The steadiness of the British-Indian Government's determination never to repeat the error of A.D. 1838 is revealed in its refusal to make any territorial profit out of its victories over Afghanistan in the wars of A.D. 1879 and A.D. 1919. (For the latter-day policy of the British Rāj on this frontier see V. C (i) (c) 3, vol. v, pp. 306-8, above.)

² In V. C (i) (d) 6 (α), vol. v, pp. 439-45, above.

³ This point is made by Tertullian in *Ad Nat.*, Book I, chap. 7 (Migne, J.-P.: *Patrologia Latina*, vol. i, col. 567): 'Permansit, erasis omnibus, hoc solum institutum Neronianum.'

Hellenic universal state is as significant as the sequel. The element in Christianity that was intolerable to the Imperial Government was the Christians' refusal to accept the Government's claim that it was entitled to compel its subjects to act against their consciences.¹ The Christians were disputing the sword's prerogative; and, in defence of its *laesa majestas*, the weapon which Augustus had contrived to sheathe came shooting out of its scabbard again, like a snake out of its hole, to join battle, this time, with a spiritual power which could never be defeated by the strokes of a temporal weapon. So far from checking the propagation of Christianity, the martyrdoms proved to be the most effective agencies of conversion;² and the eventual victory of the Christian martyr's spirit over the Roman ruler's blade bore out Tertullian's triumphantly defiant boast that Christian blood was seed.³

The Achaemenian Government, like the Roman, set itself in principle to rule with the consent of the governed and was likewise only partially successful in living up to this policy in practice.

¹ This question of principle, which underlay the practice of imposing the death-penalty in case of a refusal to perform, on demand, the outward formalities of the ritual of Caesar-worship, is brought out clearly by Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin 1923, Cotta), pp. 510-19. The same scholar points out in op. cit., vol. cit., pp. 552-65, that during the Hellenic 'Indian Summer' the Roman Imperial authorities deliberately forbore to carry the execution of their policy to its logical conclusion. Between Nero and Decius, Domitian was the only emperor who personally took the initiative in ordering a persecution (p. 553); and, while Trajan did not repeal the Neronian decree that had made the profession of Christianity a capital offence, he mitigated its practical working by ruling that the initiative in procuring convictions was not to be taken by the public authorities and that anonymous denunciations were to be ignored as an abuse which *et pessimi exempli nec nostri saeculi est* (*Correspondence between Trajan and Pliny the Younger*, No. 97 [98]). Thereafter Hadrian ruled (without formally revoking Trajan's ruling) that denunciations of Christians must take the form of an action at law; that the prosecutor must prove, not merely that the defendant was a Christian, but that he had committed a specific offence against the law; and that, if he failed to win his case, he himself should be liable to punishment (Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii, 2nd ed. (Stuttgart 1921, Metzler), p. 295). Under these rulings the profession of Christianity, while still officially proscribed, was largely, though never more than precariously, tolerated (Meyer, op. cit., vol. cit., pp. 562-4). This humanely inconsequent compromise did not outlast the *saeculum* for which it was devised. Even before the 'Indian Summer' faded out, the Government of the Emperor Marcus was swept into a campaign of persecution by the fury of a populace which had turned savage under the double scourge of war and plague (Seeck, op. cit., vol. cit., pp. 297-9); and, when the storm broke, it was not long before the Government of the Emperor Decius abandoned the Trajanic compromise and imposed a test on every subject of the Empire (see V. C (i) (c) 2, vol. v, p. 76, above). 'In accordance with the "law" which governs the religious development of the Imperial Age from first to last, the fanaticism that moved the populace to its deeds [of violence] gradually mounted from below upwards. Just as the new religion itself gradually forced its way up into the dominant social strata, so likewise the hatred of Christianity which was entertained by its opponents spread *pari passu*. The two currents that here met and broke in waves against one another were currents of an identical nature' (Seeck, op. cit., vol. cit., p. 301).

² 'You cannot fail to see that our having our heads cut off or being crucified or being thrown to the beasts or into bondage or to the flames or being subjected to all the other forms of torture does not make us abandon our profession of faith. On the contrary, the more of these martyrdoms that there are, the more we increase in numbers through the excess of conversions over martyrdoms.'—Justin: *Dialogus*, chap. 110 (Migne, J.-P.: *Patrologia Graeca*, vol. vi, col. 729).

³ 'Plures efficimur quoties metimur a vobis; semen est sanguis Christianorum.'—Tertullian: *Apologeticus*, chap. 50 (Migne, J.-P.: *Patrologia Latina*, vol. i, col. 535).

It did succeed in winning the allegiance of the Phoenicians and the Jews, but it failed in the long run to conciliate either the Babylonians or the Egyptians. The magnanimity with which the Tyrians were forgiven by Cambyses for their refusal to serve against their Carthaginian kinsfolk,¹ and the Jews forgiven by Darius for Zerubbabel's abortive essay in high treason,² sufficed to confirm a loyalty which these two Syriac peoples were inclined in any case to feel towards a Great King whose sword had saved them from Babylonian oppressors in the one case and in the other from Greek competitors. But the conciliation of the Babylonian priesthood by Cyrus and of the Egyptian priesthood by Darius was an ephemeral *tour de force*; no tact or cajolery could permanently reconcile the heirs of the Babylonian and Egyptian civilizations to an alien domination; and Egypt and Babylon never ceased to rise in revolt till Babylon was crushed by Xerxes and Egypt by Ochus.³

The 'Osmanlis had no better success in conciliating their *ra'iyyeh*—notwithstanding the wideness of the scope of the cultural, and even civil, autonomy that they conceded to them in the *millet* system.⁴ The liberality of the system *de jure* was marred by the high-handedness with which it was applied *de facto*; the Ottoman Government was never able completely to win the *ra'iyyeh*'s hearts;⁵ and the perilously practical fashion in which they displayed their disloyalty, as soon as a series of Ottoman reverses afforded an

¹ See Herodotus, Book III, chaps. 17 and 19.

² See V. C (i) (d) 9 (y), in the present volume, p. 121, above.

³ See V. C (i) (c) 2, vol. v, pp. 94 and 123, and V. C (i) (c) 4, vol. v, pp. 347-8, above, and V. C (ii) (a), Annex II, in the present volume, p. 442, below.

⁴ Mehmed the Conqueror himself (see IV. C (iii) (c) 2 (β), Annex II, vol. iv, p. 622, above) went so far to meet the susceptibilities of his non-Muslim subjects that one of his first acts after his capture of Constantinople was to invite the clergy of the Orthodox Church to elect a new Oecumenical Patriarch; and, when they presented George Scholarius as their candidate, the Ottoman master of the Orthodox Christian World took care to ratify the election in accordance with the procedure that had been customary under the East Roman Imperial régime (see Phrantzis, G.: *Chronicon*, Book III, chap. 11, ed. by Bekker, I. (Bonn 1838, Weber), pp. 304-7).

⁵ The friendly relations between Muslims and Dhimmis which prevailed in the earlier days of the Ottoman régime are described in Gibb, H. A. R., and Bowen, H.: *Islamic Society and the West*, vol. i (London 1939, Milford), chap. 14 (see the passage quoted in the present Study, IV. C (ii) (b) 1, vol. iv, p. 69, footnote 1, above). For the subsequent change from friendliness to antagonism see op. cit., vol. i, chap. 13. The growth of this antagonism can be measured and dated by the history of the relations between the two communities in the trade-guilds. Originally the Muslim and Dhimmī practitioners of the same trade belonged to the same guild, which would include all the masters of that craft without distinction of religion. From about the middle of the seventeenth century of the Christian Era onwards, however, the guilds began to split into fractions corresponding to the religious divisions between the craftsmen (Gibb and Bowen, op. cit., vol. i, chap. 6). The date of this untoward social change is significant. It coincides with the period of anarchy between the death of Süleymân the Magnificent and the advent of the statesmen of the House of Köprülü (see the present chapter, pp. 207-8 and 208-9, and V. C (ii) (b), p. 299, below). Compare the corresponding coincidence in date between the Decian persecution of the Christian Church and the period of anarchy through which the Roman Empire passed between the death of Marcus and the accession of Diocletian.

opening for treachery on the *ra'iyeh's* part, gave the successors of Selīm the Grim some reason to regret that this ruthless man of action had been deterred (if the tale were true),¹ by the joint exertions of his Grand Vezīr Pīrī Pasha and his Sheykh-al-Islām Jemālī, from carrying out a plan to exterminate the Orthodox Christian majority of his subjects—as he did in fact exterminate an Imāmī Shī'i minority.²

In exerting himself, with success, to defeat Sultan Selīm's atrocious project, Sheykh Jemālī was moved not merely by his own personal feelings of humanity but by the standing orders of the Islamic Canon Law which it was the Sheykh's professional duty to uphold. The *Sheri'ah* required the Commander of the Faithful, or his deputy, to give quarter to non-Muslims who were 'People of the Book'³ if these forbore to resist the sword of Islam by force of arms, and so long as they gave and kept an undertaking to obey

¹ See Hammer, J. von: *Histoire de l'Empire Ottoman* (Paris 1835-43, Bellizard, Barthès, Dufour et Lowell, 18 vols. + Atlas), vol. iv, pp. 364-5. (This story has been referred to already in V. C (i) (d) 6 (δ), Annex, vol. v, p. 706, footnote 1, above.)

² C'est surtout pour les chrétiens et les Grecs de Constantinople que Djemali fut un véritable ange sauveur, lorsqu'après le massacre des schiis, Sélim eut conçu l'idée non moins pieuse d'organiser une tuerie générale des chrétiens, ou du moins de leur retirer leurs églises. A cette occasion, il proposa à Djemali cette question captieuse: lequel est le plus méritoire, de subjuguier le monde entier, ou de convertir les peuples à l'islamisme? —Le moufti, qui ne devina pas les intentions de Sélim, répondit que la conversion des infidèles était incontestablement l'œuvre la plus méritoire et la plus agréable à Dieu. Aussitôt Sélim ordonna au grand-vizir de changer toutes les églises en mosquées, d'interdire le culte des chrétiens, et de mettre à mort tous ceux qui refuseraient d'embrasser l'islamisme. Le grand-vizir, effrayé de cet ordre sanguinaire, se consulta avec Djemali, qui, sans le savoir, avait, par son fetwa, sanctionné l'arrêt de mort des chrétiens; le résultat de leur conférence fut le conseil donné secrètement au patriarche grec de demander à comparaître devant le Sultan. Sélim refusa d'abord d'acquiescer à la prière du patriarche; mais il finit par se rendre aux représentations du grand-vizir et du moufti. Le patriarche, accompagné de tout son clergé, fut donc admis à paraître devant le diwan à Andrinople; il appuya ses réclamations sur l'engagement solennellement pris par Mohammed II, lors de la conquête de Constantinople, de ne point convertir les églises en mosquées et de laisser aux chrétiens le libre exercice de leur culte; il invoqua avec éloquence le Koran, qui défend la conversion par la force et ordonne la tolérance envers les nations non musulmanes, moyennant le paiement de la capitation. L'acte constatant la promesse signée par Mohammed II avait été détruit dans un incendie; mais trois vieux janissaires qui, soixante ans auparavant, avaient assisté au siège de Constantinople, attestèrent que le Sultan avait en effet engagé sa parole sur ces trois points aux députés qui lui avaient apporté les clefs de la ville dans un bassin d'or. Sélim respecta les dispositions du Koran et la parole de son aïeul pour ce qui regardait la liberté du culte; mais il ajoutait que la loi ne disait pas que d'aussi beaux édifices que les églises chrétiennes dussent être profanés plus longtemps par l'idolâtrie. En conséquence, il ordonna de changer toutes les églises de Constantinople en mosquées, de réparer celles qui étaient près de tomber en ruines et d'en élever d'autres en bois, afin de ne point porter atteinte au droit des nationaux et des étrangers professant le christianisme. Si Sélim, grâce à l'humanité du grand-vizir Piri-Pacha et du moufti Djemali, n'a pas souillé la fin de son règne par un massacre général des infidèles, comme il en avait souillé le commencement par le massacre des hérétiques, il leur enleva toujours leurs plus beaux temples.

³ For Selīm's massacre of the Shī'ah in Anatolia in A.D. 1514 see I. C (i) (b), Annex I, vol. i, pp. 362 and 384, above.

³ On a strict interpretation of this term the only peoples who could claim the status were the Jews and the Christians; but in Islamic practice the same privileges were accorded by analogy to the adherents of other 'higher religions'—in the first place to the Zoroastrians and eventually to the Hindus as well. See IV. C (iii) (b) 12, vol. iv, pp. 225-6; and V. C (i) (d) 6 (δ), Annex, vol. v, p. 674, footnote 2, above.

the Muslim authorities and to pay a super-tax. This was, in truth, the principle which had been followed by the Primitive Arab Muslim empire-builders, and their faithfulness to it is one of the considerations that account for the amazing rapidity with which they accomplished their work. As soon as the preliminary raids gave place to permanent conquests on the grand scale, the Caliph 'Umar intervened to protect the conquered populations against the rapine, and even against the rights, of the Arab Muslim soldiery;¹ it was 'Uthmān's unwillingness to abandon 'Umar's policy that cost the third of the Caliphs his life;² and in this matter the Umayyads³ showed themselves worthy successors of the 'Rightly Guided' Four. Mu'āwiyah set an example of tolerance⁴ which was followed not only by the later Umayyads⁵ but also by the earlier 'Abbasids.⁶ Yet the latter days of the 'Abbasid régime did not pass⁷ without being disgraced by outbreaks of mob violence against Christian subjects of the Caliphate who had by this time dwindled in numbers from a majority to a minority of the population as a result of the mass-conversions to Islam that heralded the break-up of the universal state and the approach of a social interregnum.⁸

In the history of the Mughal Rāj in India Awrangzib departed from a policy of toleration towards Hinduism which Akbar had bequeathed to his successors as the most important of their *arcana imperii*;⁹ and this departure was swiftly requited by the downfall of the empire which Akbar had built up.¹⁰

Our survey has revealed the suicidal importunity of a sword that has been sheathed after having once tasted blood. The polluted weapon will not rust in its scabbard, but must ever be itching to

¹ 'Umar's policy was emulated, in the history of the expansion of our own Western Society, in the efforts of the Spanish Crown to protect its 'Indian' subjects against the rapacity and brutality of the Spanish *conquistadores* (see Kirkpatrick, F. A., in *The Cambridge Modern History*, vol. x, pp. 260-9 and 277).

² For the nature of 'Umar's policy and the causes of 'Uthmān's assassination see Wellhausen, J.: *Das Arabische Reich und sein Sturz* (Berlin 1902, Reimer), pp. 21 and 27-31. For the liberality of the Arab Caliphate towards its non-Muslim subjects in general, as well as in particular cases, see op. cit., pp. 15-16, 18-20, 188-90, 206.

³ See V. C (i) (d) 6 (δ), Annex, vol. v, pp. 675-7 and 704-5, above.

⁴ Wellhausen, op. cit., p. 84.

⁵ See, for example, the eulogy of the Caliph Yazid I (*imperabat* A.D. 680-3) from the pen of a Christian chronicler which has been quoted in V. C (i) (c) 3, vol. v, p. 226, above.

⁶ See V. C (i) (d) 6 (δ), Annex, vol. v, pp. 677-8 and 706, above.

⁷ The turning-point seems to have come in the caliphate of Mutawakkil (*imperabat* A.D. 847-61).

⁸ For these outbreaks, which were reminiscent of those against the Christian 'Diaspora' in the Roman Empire in the reign of the Emperor Marcus (p. 202, footnote 1, above), see Tritton, A. S.: *The Caliphs and their Non-Muslim Subjects* (London 1930, Milford), especially chaps. 4 and 9.

⁹ Tacitus: *Annals*, Book II, chap. 36.

¹⁰ On the other hand it must be admitted that an earlier universal state which had stood on the same ground had anticipated Akbar's toleration without escaping Awrangzib's punishment. The Guptas had adhered to Hinduism without persecuting Buddhism (see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 706, above), yet their empire had been as ephemeral as the Mughal Rāj was.

leap out again—as though the disembodied spirit of the would-be saviour who first had recourse to this sinister instrument could now find no rest until his sin of seeking salvation along a path of crime had been atoned for by the agency of the very weapon which he once so perversely used. An instrument that is powerless to save may yet be potent to punish; the penitently sheathed sword will still thirst implacably to carry out this congenial duty; and it will have its way in the end when it has Time for its ally. In the fullness of Time the din of battle which has ebbed away towards the fringes of Civilization till it has passed almost out of ear-shot¹ will come welling back again in the van of barbarian war-bands that have gained the upper hand over the garrisons of the *limes* by learning from them, in the effective school of a perpetual border warfare, the winning tricks of the professional soldier's trade;² or, more terrifying still, the dreadful sound will come welling up again in the resurgence of an Internal Proletariat that has turned militant once more—to the consternation of a Dominant Minority which has been flattering itself that this *profanum vulgus* has long since been cowed or cajoled into a settled habit of submissiveness. The spectres of war and revolution that have latterly passed into legend³ now once again stalk abroad, as of old, in the light of day; and a *bourgeoisie* which has never before seen bloodshed now hastily throws up ring-walls round its open towns out of any materials that come to hand: mutilated statues and desecrated altars and scattered drums of fallen columns and inscribed blocks of marble reft from derelict public monuments.⁴ These pacific inscriptions are now anachronisms; for the 'Indian Summer' is over; the 'Time of Troubles' has returned; and this shocking calamity has descended upon a generation which has been brought up in the illusory conviction that the bad times of yore have gone for good!⁵

¹ In the heyday of the *Pax Romana* an observer who travelled from Rome to Cologne would have met with no troops on his road, between his last sight of the garrison of the capital and his first sight of the garrison of the frontier along the Rhine, save for a single *cohors urbana* which was stationed at Lyons; and this detachment was only 1,200 men strong (see Mommsen, Th.: *The History of Rome: The Provinces from Caesar to Diocletian* (London 1886, Bentley, 2 vols.), vol. i, p. 88, footnote 3).

² See V. C (i) (c) 3, *passim*, in vol. v, above, and Part VIII, *passim*, below.

³ See the passages of Aelius Aristides' *In Romam* quoted in V. C (i) (c) 4, vol. v, pp. 343-4, above.

⁴ Of all the improvised fortifications of this type that the writer of this Study has seen, the example that speaks most eloquently to the eye is the wall of the antique citadel that looks down to-day, with an air of open-mouthed amazement, upon the new-fangled capital city of the Turkish Republic at Angora. The historian's mind will also be conscious of a still more dramatic contrast between these fortifications round the citadel of Angora and the famous inscription on the wall of the Temple of Augustus; for this contrast embodies in visual form the whole tragedy of the relapse from an 'Indian Summer' into a recurrent 'Time of Troubles'.

⁵ Ibn Khaldūn (*Muqaddamāt*, McG. de Slane's translation (Paris 1863-8, Imprimerie Impériale, 3 vols.), vol. ii, pp. 46-8) points out that, while both the sword and the pen are indispensable instruments of all governments at all times, the sword is at a premium and the pen at a discount at the beginning of an empire's career, when it is being founded,

We have now followed the high tragedy of the saviours with the sword into an act in the drama which makes it plain, in retrospect, that our *dramatis personae* have been foredoomed to failure. But lost causes are the mothers of heroism; and we should be denying ourselves the sight of some of the finest examples of the type of hero that we are now passing in review if we coldly turned our backs upon the stage of history at this poignant moment. Upon the recurrence of the 'Time of Troubles', Zeus yields the stage to Hēraklēs once more; and, if we sit the play out, we shall bear witness, when the curtain falls, that we have never seen Hēraklēs show himself to such advantage as in this forlorn hope.

In Hellenic history this sympathetic part was played by a series of Illyrian soldiers—Claudius, Aurelian, Probus, Carus—who were successively invested with the purple because they had the courage to wear it in an age when it had become a veritable shirt of Nessus, and who duly justified their sensational rise to fortune by indefatigably striking off one after another of Anarchy's hydra-heads until they had cleared the field for the entry of their Jovian compatriot Diocletian. In the recurrence of the Egyptiac 'Time of Troubles' after the decease of the Twelfth Dynasty we may espy the handiwork of some forgotten Egyptiac Aurelian in a slight and transient but unmistakable rally of the Egyptiac Society *circa* 1760 B.C.;¹ and in the duplicate recurrence of the same tribulations in the days of 'the New Empire' after the death of Amenhotep III we can discern four indubitable counterparts of our four Illyrian heroes in the soldierly figures of the fighting pharaohs Seti I and Ramses II and Merneptah and Ramses III.² These Egyptiac saviours, like their Illyrian counterparts in Hellenic history, were *novi homines*, and so was the tradesman Minin who rose up to deliver the Russian branch of Orthodox Christendom from the troubles of A.D. 1604-13. Minin, however, had a companion-in-arms, Prince Pojarski, who had been recruited from the ranks of the Russian dominant minority; and the role of saviour in a recurrent 'Time of Troubles' has sometimes even been assumed by a vigorous scion of an imperial dynasty whose previous decadence has been the immediate cause of the catastrophe. Such were the careers of the Achaemenid Great King Artaxerxes Ochus (*imperabat* 358-338 B.C.) and of the 'Osmanli Pādishāh Murād IV (*imperabat* A.D. 1623-40); and the demonic vein that reveals itself

and again at the end, when it is breaking up, while, in between, there is a middle period of security, prosperity, and ease during which, conversely, the sword is at a discount and the pen at a premium.

¹ See Meyer, E.: *Geschichte des Altertums*, vol. i, part (2), 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 302.

² See I. C (i) (b), vol. i, pp. 92-3 and 100-2; IV. C (ii) (b) 2, vol. iv, p. 85; IV. C (iii) (c) 2 (β), vol. iv, p. 422; and V. C (i) (c) 3, vol. v, p. 269, above.

in the *êthos* of both of these grim militarists is perhaps an indication that their common effort to turn back the course of dynastic history was too extreme a *tour de force* for flesh and blood to undertake with impunity. We may close our catalogue of 'Illyrians' with the name of one saviour of this class who was not either a *porphyrogenitus* or a *novus homo*. In the middle of the nineteenth century of the Christian Era, when the T'ai'ping insurrection was on the point of sweeping a degenerate successor of Ch'ien Lung off the Imperial Throne at Peking, the Ts'ing Dynasty obtained a fifty years' reprieve thanks in large measure to the prowess of a general who came in consequence to be known among his own compatriots as 'Chinese Gordon', but who really—to confess the shocking truth—was a 'South Sea Barbarian' whose sword-arm had been hired by the Emperor in his dire extremity though the Son of Heaven knew very well that this mercenary saviour's barbarous blood had not in it even a tincture of the celestial ichor of the Children of Han.

We need not now linger much longer over a history that continues to repeat itself; but we may observe that, if the 'Illyrians' faithfully fulfil their task, their prowess may make it possible for *Hercules Redivivus* to withdraw in favour of *Jupiter Redux*. The labours of Aurelian opened the way for Diocletian to make his entry on to the stage as a second Divus Julius, and for Constantine, in his turn, to play Augustus to Diocletian's Caesar. And these second founders of the Hellenic universal state have their counterparts in the histories of other civilizations. In the Sumeric World, for example, Ur-Engur's Empire of Sumer and Akkad was refounded by an Amorite prince of Babylon, Hammurabi, after it had been wrecked by a successful revolt on the part of its Elamite subjects,¹ and had lain in ruins thereafter for not less than two and a half centuries.² In the main body of Orthodox Christendom the demonic exertions of the 'Osmanlı Pādishāh Murād IV were followed up by the constructive labours of the Albanian vezīrs of the House of Kōprülü (*fungebantur* A.D. 1656–76; 1687–8; 1689–91; 1697–1702; 1710),³ who gave the *Pax Ottomanica* a new lease of

¹ For this catastrophe and its sequel see V. C (ii) (b), pp. 297–8, below.

² There was an interval of 233 years between the capture of the Emperor Ibisin of Ur in 2180 B.C. and the accession of the Emperor Hammurabi of Babylon in 1947 B.C.; and it took Hammurabi many years of hard labour to accomplish his task of restoring unity and peace to the Sumeric World by welding together again, after so long an interval, the fragments into which the original Empire of Sumer and Akkad had been broken up.

³ The succession of Grand Vezīrs of the House of Kōprülü was as follows: Mehmed 1656–61; Mehmed's son Ahmed 1661–76; Mehmed's son-in-law Siāwush 1687–8; Mehmed's son Mustafā 1689–91; Mehmed's nephew Hüseyn 1697–1702; Mustafā's son Nu'mān 1710. The family ability for administration and diplomacy showed itself in varying measure in all but the last of these six members of the House. On the debit side we have, however, to place Qāra Mustafā, who was Grand Vezīr, with irretrievably

life that lasted until the outbreak of the great Russo-Turkish War of A.D. 1768-74. In the Russian offshoot of Orthodox Christendom the second founder of the universal state was the Tsar Peter the Great (*imperabat de jure inde ab* A.D. 1682, *sed de facto tantum inde ab* A.D. 1689), who roused the Russian body social out of a torpor in which it had lain since the convulsions of A.D. 1604-13 by giving it a potent injection of an alien culture.¹

The re-establishment of a universal state after its overthrow in a recurrent 'Time of Troubles' has in some cases been accomplished to such good effect that it has resulted in a return of at least a pale similitude of the long-since departed 'Indian Summer'. In the Russian offshoot of Orthodox Christendom, for example, the 'Indian Summer' which had visited Muscovy in the reign of Ivan IV (*imperabat* A.D. 1533-84), thanks to the foundation of a universal state by Ivan III (*imperabat* A.D. 1462-1505), returned at the accession of Catherine II (*accessit* A.D. 1762), and lasted, this time, till the death of Alexander I (*obiit* A.D. 1825), thanks to the re-establishment of the Russian universal state on a new basis by Peter the Great (*imperabat* A.D. 1682-1725). And in the Hellenic World Diocletian and Constantine did their work so well when they reconstructed, on new foundations, the dilapidated political edifice of Julius and Augustus, that they made it possible for the Emperor Justinian to radiate all the glory of a Solomon—in his codification of the Roman Law and his building of the dome of the Church of the Holy Wisdom and his recovery of the Empire's lost dominions in Africa and Italy²—though Justinian did not begin to reign (*imperabat* A.D. 527-65) until 149 years had passed since the defeat and death of Valens at the Battle of Adrianople,³ 243 since the accession of Diocletian, 292 since the death of Alexander

disastrous results, from 1676 to 1683. Qāra Mustafā was not a Köprülü, but he came from Merzifün, in the neighbourhood of the Köprülüs' home-town of Vezir Köprü in North-Eastern Anatolia, and on this account he was given his education by the generosity of Mehmed Köprülü—a bad day's work for the Ottoman Empire!

¹ It is interesting to observe that the Romanov Emperor who was the second founder of the Muscovite oecumenical empire in the Russian offshoot of Orthodox Christendom resorted (no doubt, quite independently) to an expedient which had already been adopted by the Köprülü vezirs who were the second founders of the Ottoman oecumenical empire in the main body of Orthodox Christendom. The identical cure for an identical disease which was applied with successful results in both cases was to invigorate an anaemic body social by a process of blood transfusion (in a metaphorical sense). The Köprülüs had drawn their supply of fresh life-blood from the Orthodox Christian *ra'iyeh* of the Pādishāh (see II. D (vi), vol. ii, pp. 222-8, above); Peter drew his from the free peoples of Western Christendom (see III. C (ii) (b), vol. iii, pp. 278-83, above).

² In the opinion of the writer of this Study this glory of Justinian's was purchased—like that of so many other princes of the same Solomonian type—at a cost which was socially disastrous, as witness the immediate and abysmal and never-retrieved collapse of the Hellenic body social, as well as the Roman body politic, after the vainglorious emperor's death. (On this point see IV. C (iii) (c) 2 (β), vol. iv, pp. 326-8, above, and the present chapter in the present volume, pp. 223-5, below.)

³ Justinian has a happier Indic counterpart in the Emperor Harsha (*imperabat* A.D. 606-47), who entered upon his auspicious reign some 130 years after the Huns had dealt with the Guptas as the Visigoths dealt with Valens.

Severus, and 347 since the death of Marcus in A.D. 180: a date that had marked the end of the original 'Indian Summer' which had lightened for a time the darkness of a disintegrating Hellenic Society in the Age of the Antonines before the recurrence of the Hellenic 'Time of Troubles' in the third century of the Christian Era.

At this eleventh hour in the long decline of the Hellenic Civilization, Justinian's Solomonian glory was a luxury out of season which had to be paid for at a fancy price; and, forty-five years after Justinian's death, a bill of a staggering magnitude was duly presented to the magnificent emperor's devoted successor Heraclius when he was summoned from Carthage to defend Constantinople against a Persian invader whose advance-guard had by then already pushed its way unhindered right across the Asiatic torso of Justinian's Mediterranean empire—from the banks of the Khabūr to the shores of the Bosphorus. Heraclius, with his ominous name, is a typical representative of the saviour with the sword in his final appearance on the stage, when the tragic actor once for all lays aside a Jovian mask that has now become utterly incongruous, and once more plays *Hēraklēs* in the only scene that it is any longer possible for even a *Hēraklēs* to play. This scene is the death of a 'Die-Hard'; a 'Die-Hard' is a soldier who offers up his life for a cause when he is convinced that all but Honour is already lost; and, as a classic example of the type, the Roman Emperor Heraclius is worthy to rank with the British Colonel Inglis whose call to his men first put the phrase into currency.¹

Heraclius spent twenty-four years out of a reign of thirty-one on the desperate enterprise of trying by force of arms to prevent the Syriac provinces of the Hellenic universal state from shaking off at last an incubus of Hellenic domination which had been weighing upon them ever since the overthrow of the Achaemenian Empire by the arms of Alexander the Great. The sword of Heraclius could not avail to stem a tide of Syriac resurgence which had been flowing for at least eight centuries in the Trans-euphratean, and for at least four centuries in the Ciseuphratean,

¹ In the verbal armoury of English party politics in the twentieth century of the Christian Era the term 'Die-Hard' has come to be used as a shaft of ridicule to be shot at a politician who makes a parade of his intention of 'dying in the last ditch' in defence of some political cause that is patently lost, and this particularly if his opponents have reason to expect that the *poseur* will prudently resign himself to the inevitable when it actually comes to the point. This latter-day connotation of play-acting does not, however, attach to the sobriquet in its origin. The authentic 'Die-Hards' are an infantry regiment of the British Army; and the Fifty-Seventh won their nickname as a title of honour at the Battle of Albuera in A.D. 1811. In an engagement in which the regiment was being mown down by the enemy's fire, their commander, Colonel Sir William Inglis, as he fell desperately wounded, cried 'Die hard, Fifty-Seventh! Die hard'; and the regiment gained the name of 'Die-Hards' for themselves by taking their fallen Colonel at his word.

territories of the Syriac World by the time when Heraclius was called in to Hellenism's rescue. The Syriac counter-attack was by then already victorious on the deeper planes of life—in religion, in language, in architecture, in art—and, even on the superficial planes of politics and war, the liberation, by Syriac arms, of the homeland of the Syriac culture had already been momentarily anticipated during the recurrence of the Hellenic 'Time of Troubles' in the third century of the Christian Era, when Zenobia of Palmyra had brought the whole of Syria under her rule and had even pushed her outposts across the Taurus and the Nile.¹ It is evident that Heraclius in the seventh century was courting disaster by venturing to repeat Aurelian's barely successful counterstroke.² Heraclius did succeed, at the end of eighteen years of strenuous and audacious campaigning, in pushing the Persian invader back from Chalcedon to Tabrīz and imposing on the Sasanian Empire a peace-settlement which restored the territorial *status quo ante bellum*. Yet the Persian champion of Syriac liberty had no sooner laid down his arms than an Arab champion stepped into his place in the arena and pitted his fresh vigour against a war-worn Roman Army; and this immediate return, from an unexpected quarter, of a tide which Heraclius had thought himself to have stemmed for good, was a challenge to which the weary emperor's spirit was not equal. In his fight to save Syria from the Arabs Heraclius abandoned after six years a struggle which he had kept up for eighteen years against the Persians, and withdrew from Antioch to Constantinople to die there broken-hearted.³

Heraclius is not the only famous 'Die-Hard' whose figure looms up for a moment in the last scene of the tragedy of the disintegration of the Hellenic Society. The historic fame of the African emperor has been outshone by the legendary glory of a British prince who is reputed to have spent his life, and met his death, in a vain effort to roll back a tide of barbarian invasion from the coasts of Ultima Thule; and the legend of Arthur possibly reflects—through the double refraction of Welsh epic and French romance⁴—the authentic history of an Artorius⁵ who did indeed surpass his fellow Roman Heraclius in stoutness of heart if he faced his fearful

¹ For the historical relation between Zenobia's 'successor-state' of the Roman Empire in Syria and Mu'awiyah's see I. C (i) (b), vol. i, p. 74, footnote 4, and II. D (i), vol. ii, p. 11, above.

² See III. C (ii) (b), vol. iii, p. 269, footnote 4; and IV. C (iii) (c) 2 (β), vol. iv, p. 330, above.

³ See II. D (vii), vol. ii, pp. 287–8, above.

⁴ For the attractiveness of the Welsh imagination of 'the Heroic Age' to a 'medieval' Western taste see II. D (vii), vol. ii, pp. 339–40, above.

⁵ For a faint indication of a possibility that the historical Artorius may have been a less attractive character than the legendary Arthur, see V. C (i) (c) 3, Annex III, vol. v, p. 609, footnote 2, above.

odds, and died his 'Die-Hard's' death, in defending, not the all but impregnable citadel of the Hellenic World,¹ but an outlying and exposed province which had been abandoned by the Central Government and had lost touch with the torso of the Empire before ever Artorius drew his sword.

If we turn our eyes from the Hellenic scene to the spectacle of other dissolving societies and crumbling empires, the mouths of other 'Die-Hards' will answer our roll-call with their 'Morituri te salutamus'. In the dotage of the 'Abbasid Caliphate of Baghdad'—in an age when the glory of Hārūn had long since been eclipsed by the humiliations that Hārūn's successors had suffered at the hands of barbarian praetorians and heretical Buwayhid mayors of the palace,² and when only two generations were still to run before the advent of the annihilating catastrophe of A.D. 1258—we see the Caliph Nāsir (*imperabat* A.D. 1180–1225), whose reign happened to fall in the trough between the Saljūq and the Mongol wave of a Eurasian Nomad Völkerwanderung, showing the hardihood to profit from this momentary relief by successfully re-establishing the rule of the Commander of the Faithful in regions, beyond the bounds of the metropolitan province of 'Irāq, where the authority of Nāsir's predecessors had been merely nominal for some three centuries past.³ In the death-agonies of the Ottoman Empire we catch a glimpse of an intrepid 'Die-Hard' in the figure of 'Osmān Pasha successfully delaying for nearly five months the descent of a Russian avalanche from the Balkans upon Constantinople by his stand at Plevna from the 20th July to the 10th December, 1877.

¹ The strength of Constantinople lay in a masterly collaboration between Art and Nature that saved the city from capture in the crisis of A.D. 626 (see II. D (v), Annex, vol. ii, p. 400, above). At a moment when Heraclius himself—at the head of an expeditionary force into which he had drafted the best of what remained of the Roman Army—was engaged in the far interior of Asia on a thrust at the Sasanian Empire's heart (see III. C (ii) (b), vol. iii, p. 269, footnote 4, and IV. C (iii) (c) 2 (β), vol. iv, p. 330, above), the Emperor's base of operations at Constantinople had to withstand a concerted attack from the Persians on the Asiatic and the Avars on the European side. The city was saved by the Roman Navy's command of the waters of the Straits, which made it impossible for the two hostile forces to join hands.

² For the domination of the Buwayhids at Baghdad see I. C (i) (b), Annex I, vol. i, p. 356, above.

³ See the article on Nāsir in the *Encyclopaedia of Islam*. This caliph had the temerity to implicate himself in the military struggles between the 'successor-states' of the Caliphate in Iran and the Oxus-Jaxartes Basin, and he succeeded in temporarily making himself master of Khuzistan by successively playing off the Khwārizmshāh against the Saljūq and the Mongol against the Khwārizmshāh. This hazardous play with an unstable Balance of Power was less statesmanlike than the simultaneous efforts that Nāsir made to rehabilitate the Caliphate by peaceful means. On the one hand he tried to heal the ancient religious schism in Islam by conciliating the Shi'ah of both the Imāmi and the Ismā'ili persuasion. On the other hand he tried to rally the princes of Dār-al-Islām round his own person by reorganizing the religious order of the *Futuwwa* into something like an order of knighthood with himself as its head. Nāsir's rally was perhaps in Ibn Khaldūn's mind when he wrote (*Muqaddamāt*, McG. de Slane's translation (Paris 1863–8, Imprimerie Impériale, 3 vols.), vol. ii, p. 121) that 'sometimes, when an empire is in the last stage of its existence, it suddenly gives such an imposing exhibition of strength as to create the impression that its decay has been arrested. But this is merely the last flare of a light that is on the point of going out.'

But 'Osmān and Nāsir and Arthur and Heraclius alike must yield the palm of valour to those Inca 'Die-Hards' who—after the deaths of Huascar and Atahualpa and the fall of Cuzco and Ollantay-Tampu and the overthrow, in the twinkling of an eye, of an Andean universal state which it had taken three centuries to build up¹—still refused to despair of a republic which had just been annihilated before their eyes by irresistible invaders from an unknown world that lay beyond the Andean horizon.² In the fastnesses of the Vilcapampa Mountains the Inca Manco dared—without gunpowder, and even without steel—to defy a Spanish victor who was already armed with European lethal inventions that have since been turned by their inventors to such terrible account. Manco died unconquered; and, when one of his sons, Sayri Tupac, capitulated, the other, Titu Cusi Yupanqui, still carried on the unequal struggle. These men of the Bronze Age held out against the men of the Explosive Age for thirty years before Vilcapampa fell at length and the last of the Incas, Tupac Amaru, was taken prisoner and put to death by a Spanish Viceroy of Peru in A.D. 1571.³

The Saviour with the Time-Machine.

The salvation of a disintegrating society is so unpromising a task, and the sword so clumsy an instrument for its execution, that it is not surprising to find other schools of saviours arising as the process of disintegration takes its course in spite of all the swordsmanship of Jovius and Hercules. These other schools all agree with one another, in opposition to the saviours with the sword, in professing to pursue a negative aim. The mundane Present which the swordsman is still struggling to salvage is for them a City of Destruction which it is neither possible nor desirable to save. Salvation *from*, and not *of*, Society is therefore their common watchword; but this is the highest common factor in their several purposes; for each of these four schools, as we have seen,⁴ follows out the aim of salvation from Society along a different path of escape, and they differ further in their choice of instruments and in their drawing of the bounds of the city whose dust they are proposing to shake from off their feet. Let us begin by reviewing those archaist and futurist saviours from Society who draw the line at the mundane Present without abandoning the whole plane of life on Earth, and whose instrument is a 'time-machine' which is to

¹ See I. C (i) (b), vol. i, p. 122, above.

² The shattering effect of this unheralded catastrophe upon the moral of the Incas' subjects (see V. C (i) (c) 2, vol. v, pp. 90-3, above) is the foil against which we should appraise the fortitude of the 'Die-Hard' remnant of the Incas themselves.

³ See Markham, Sir Clements: *The Incas of Peru* (London 1910, Smith Elder), pp. 256 and 274-96.

⁴ In the present chapter, pp. 177-8, above.

transport them, by some stroke of magic, clean out of a Present which has gone awry into a still unblemished Past or a not yet blemished Future.

The notion of a 'time-machine' has been conceived by Lewis Carroll in a passage of his *Sylvie and Bruno* and applied by Mr. H. G. Wells in a fascinating book which has *The Time-Machine* for its title. Mr. Wells makes use of Lewis Carroll's conceit in order to carry his readers, on the wings of his imagination, vast distances up and down the Time-stream—with pauses here and there to view an exotic landscape through the pilot-showman's seductive lens. This conducted tour in the 'time-machine' is a parable of the recent achievements of a modern Western *Homo Mechanicus* in extending the range of his knowledge of, and power over, the Material Universe. But a conceit out of which Mr. Wells has fashioned a hymn of whole-hearted praise to Mr. Straker¹ has been turned to account by its subtle inventor for the deeper purpose of moving our *Homo Mechanicus* not to self-praise but to self-criticism, and perhaps to self-abasement, by a touch of satire which pulls the handy man up short by reminding him of the limitations of what can be done by clockwork.

Lewis Carroll's thrust goes home because his point is a simple one. He allows his ingenious clockwork-maker to outwit Nature and cheat Destiny in one move of the game—only to find that he might just as well have spared himself the pains, since in the next move Destiny and Nature compass the self-same results that they would have produced anyway if the little man had never tried to monkey with them. In Lewis Carroll's fable the observer who holds the magic watch confidently sets back the hands when he sees the bicyclist come to grief, as he spins round the corner, over the cardboard box that has tumbled out of the draper's cart. At the magician-mechanic's sleight of hand Time duly recoils, and this time the philanthropist promptly snatches up the treacherous box before the bicyclist arrives on the scene. *Hi presto*—the trick has worked! For the bicyclist, spinning recklessly round the corner as before, is this time not caught out by colliding with an unexpected obstacle, but shoots on smoothly down the street. Yet, alas! the appearance of one moment is given the lie by the reality of the next; for, when the moment arrives at which, in the first version of the playlet, the bicyclist was lying cut and bleeding after taking his toss, lo and behold! the same moment reveals him in the same plight in the second version—just as though Philanthropy and Magic had not, after all, conspired together to whisk away the stumbling-block from in front of the luckless rider's giddy wheel.

¹ For Mr. Straker see Shaw, G. B.: *Man and Superman*, *passim*.

In this Lucianic parable Lewis Carroll was gently hinting to his complacent Western contemporaries that it was a vain imagination to fancy that mundane realities could be exorcized by mechanical arts. And this apologue of the generation of the velocipede may be capped by another drawn from the everyday experience of the generation of the automobile. A driver whose car is running badly may throw out the clutch, with a sigh of relief, when his road happens to bring him, in the course of its ups and downs, to the head of a gentle downward incline. 'So free-wheeling is the remedy for engine-trouble', our motorist lazily ruminates. 'How extraordinary that so simple a solution should never have been hit upon before.' But as he sits back and congratulates himself, the incline suddenly plunges into a steep descent, and on the instant he remembers that his brakes, as well as his engine, are out of order. No chance of avoiding a crash now except by going back into bottom gear! But by this time the car is racing so swiftly downhill that the result of putting in the clutch now is to strip the cogs off the gear-wheels and to check the car's impetus with a jerk that sends it skidding across the road through a dry-stone wall which masks a precipice.

The moral of our post-Carrollian parable is that the new-fangled 'time-machine' is as incapable as the old-fashioned sword is of permanently eliminating Violence when once Violence has entered in. The driver who free-wheels down the slope does succeed, for a moment or two, in silencing the noise and stilling the jolts and jars of a labouring engine; but the disaster that overtakes him the moment after proves his remedy to have been worse than the disease. The car that now lies overturned at the bottom of the ravine, with its gears stripped and its driver's corpse pinned under the steering-wheel, is in a worse case than the car which, only just now, was travelling right-side-up along the road—however disagreeably its engine might have been knocking and its ignition have been missing fire.

It was, no doubt, theoretically possible that the gentle incline which has lured the unfortunate driver to his horrid fate might have continued all the rest of the way to his journey's end; and if luck had so far favoured him he might have free-wheeled on in fine style till gravity brought him to a standstill at the door of the Roadside Hotel. To translate our imagery into terms of a piece of history that has several times engaged our attention before, we can imagine a devout Jew, who has taken to heart the lesson of Bar Kōkabā's failure, seeking salvation in the manipulation of the 'time-machine' without being taught by another disaster that he has not yet discovered a sure way of extricating himself from the

endless chain of Violence. Our Jewish Quietist—and his descendants for the next sixty generations—may succeed in living, without disaster, in an archaistic and a futuristic Utopia simultaneously. They may successfully render themselves insensible to the painfulness of the mundane Present by a minute observance of a God-given law and by a patient expectation of a Kingdom of God which is to be established on Earth in God's own good time by God's omnipotence alone, without the lifting of one human finger. Yet, even if an unconscious but unconscionable desire 'that we also may be like all the nations'¹ had not inveigled the sixty-first generation of our Jewish Quietists into a hazardous attempt to put itself into gear with the militant nationalism of a twentieth-century Western World,² one single example of a recourse to the 'time-machine'—and this an experiment which, up to date, has escaped a crash but has not yet evaded a question-mark—would hardly avail to invalidate a conclusion that is forced upon us by the rest of the historical evidence. This conclusion is that—as a rule which is not disproved by its exceptions—the would-be saviour with the 'time-machine' is apt, sooner or later, to become so embarrassingly entangled in the intricacies of his own clockwork that he is constrained in the end to throw the ingenious piece of mechanism aside and to pick up in despair his predecessor's rusty sword which Straker has so far contemptuously left to lie in the gutter where Bayard dropped it.

If we wish to test this rule by an empirical survey it may be convenient to review in the first place the saviour-archaists who have set the 'time-machine' to jump backwards, and in the second place the saviour-futurists who have jerked the lever of fantasy in the opposite direction to make the machine jump forwards. In the sequel to both of these manoeuvres we shall see a primitive demon of Violence who has been deftly shown out of the door come slyly creeping in again through the window.

In considering the archaistic variation on this theme we may begin with an illustration which we have examined in this Study already in another context.³ The notion of a 'Nordic Race' which is hypothetically superior to the rest of Mankind in virtue of its physical descent was first conceived and launched by de Gobineau as a neat verbal retort to the grim physical violence which, in the French Revolution, the Jacobins had used upon the Noblesse. De Gobineau effectively exploded the pedantic antiquarianism of those revolutionary leaders of a French proletariat who had sought to

¹ 1 Sam. viii. 20.

² For this interpretation of Zionism see II. D (vi), vol. ii, pp. 252-4, above.

³ In II. C (ii) (a) 1, vol. i, pp. 216-21, and in V. C (i) (d) 8 (a), in the present volume, pp. 56-8, above.

lend an air of respectability to their act of vengeance against a French dominant minority by representing themselves as descendants of the wronged and cultivated Gauls, while their adversaries were held up to odium, and condemned to extermination, as descendants of the barbarous and outrageous Franks. But this amiably academic French political *jeu d'esprit* began to breed a violence of its own when it passed out of de Gobineau's hands into those of a Nietzsche and a Houston Stewart Chamberlain whose caricatures of de Gobineau's theme helped to inspire the masters of the Second German Reich to act the part of 'the Blond Beast' in the real life of the international arena. And now, in the third generation, the platonically archaistic *Essai sur l'Inégalité des Races Humaines* has borne an ultra-Jacobin harvest in the Anti-Semitic enormities of a Third German Reich which has taken the French archaist's fantasy in deadly earnest and has based its policy, at home and abroad, upon a doctrine of 'Blood and Soil'.

This sinister metamorphosis of Archaism into Anti-Semitism in the latest chapter of the history of the Western Civilization has a Hellenic parallel. The eventual establishment of the Hellenic universal state in the form of a Roman Empire left a sting of resentment in the hearts of the citizens of Alexandria, who could not forget that, if the Battle of Actium had gone the other way, their own city might have become the metropolis of the Hellenic world-state.¹ A Greek *bourgeoisie* who, two hundred years back, had remained unmoved by the stirring call of a Spartan hero and had felt no temptation to follow Cleomenes into the streets in order to wrest their liberty by force of arms from the hands of a Macedonian autocrat² were now roused at last when the prize of civic pre-eminence was wrested away by an upstart Oscan city from an Alexandria whose citizens could point to the Tomb of Alexander himself and the Museum and Library of Ptolemy Soter³ as their own city's unchallengeable title-deeds to metropolitan rank.⁴ In

¹ For this unfulfilled historical possibility see V. C (i) (d) 7, p. 37, footnote 1, above.

² Plutarch: *Lives of Agis and Cleomenes*, chap. 58 (see further V. C (ii) (a), Annex II, pp. 381 and 391, below).

³ That Ptolemy I was the founder of the Museum and Library is probable but not quite certain in the present state of our knowledge.

⁴ There is some evidence to show that, as a result of her annexation to the Roman Empire after the Battle of Actium, Alexandria lost, not only her perhaps rather nebulous primacy among the cities of the Hellenic World, but also some of the solid substance of her municipal self-government (see Jones, A. H. M.: *The Cities of the Eastern Roman Provinces* (Oxford 1937, Clarendon Press), pp. 311-12). It must be added that, according to the same authority (pp. 304 and 471), the Romans were only carrying farther a process of *Gleichschaltung* which the Ptolemies had already begun. A civic council of Alexandria seems to have existed under the earlier Ptolemies, but to have been abolished by the later Ptolemies before the Roman conquest. No doubt the 'totalitarian' structure of the Ptolemaic state and the 'servile' character of native Egyptian social life under the Ptolemaic régime (see IV. C (ii) (b) 2, vol. iv, p. 85, footnote 5, above) made an unpropitious environment for Hellenic political institutions.

an age when the political liberation of Alexandria was no longer even a forlorn hope, but had become a sheer impossibility, successive generations of Alexandrian city-fathers now intrepidly, though inconsequently, offered up their lives on the altar of civic pride by assuming, in face of the Roman Imperial authorities, an attitude of defiance which left a reluctant Caesar no choice but to pronounce the death-sentence. The 'Acts of the Pagan Martyrs' in the reigns of Claudius and Trajan and Hadrian and Commodus were still being treasured by the Greek community in Egypt in the third century of the Christian Era, as is witnessed by the narratives, dating from that later age, that have been recovered in part by the ingenuity of our modern Western papyrologists.¹ But the piquant name which has been given to these anonymous works of Greek literature by our Western scholars is misleading in at any rate one point that is of capital importance. These martyrs to the civic pride of Alexandria may resemble the martyrs to the religious faith of the Christian Church in the courage, and even truculence, with which they refused to bow the knee to an Imperial Government which held them physically at its mercy. But the Christian martyr's glory of being the victim of a violence with which he had never polluted his own hands was not shared with Stephen and Polycarp by Lampon and Isidore and Antoninus and Appian. These Alexandrian recalcitrants against Roman authority had Jewish blood on their hands before their own blood was shed by a Roman sword which might fairly claim in this case to be vindicating a *laesa majestas*. The Greeks of Alexandria, who were impotent to assail the Roman Imperial Government itself with any missiles except innocuous words, were wont to satisfy their craving to vent their spite in some more effective way than this by massacring their Jewish neighbours.² From the Jewish community in Alexandria it was occasionally possible for the Greek community to take a toll of lives before the Roman garrison could intervene; and these Alexandrian Jews were odious to the Alexandrian Greeks because

¹ For the fragments of this genre of Egyptian Greek literature of the Imperial Age that have turned up on scraps of third-century papyrus see Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. iii (Stuttgart and Berlin 1923, Cotta), pp. 539-48; and Bell, H. I.: *Juden und Griechen im Römischen Alexandria* (Leipzig 1927, Hinrichs), pp. 14-44.

² These periodic massacres of Jews by Greeks in an Alexandria whose Greek citizens were smarting under a Roman yoke that had been weighing upon their city's neck since the Battle of Actium will remind a Western reader, in the present generation, of the persecution of the Jews in a post-war Germany by National-Socialist Gentiles who were smarting under the *Versailler Diktat* and who sought relief for their feelings by hitting the Jews, who happened to be at their mercy, as proxies for the Gentile victors in the General War of 1914-18. It was, of course, these non-German Gentiles, and not the German Jews, who had beaten Germany in the field and then dictated the terms of peace. But, so long as Germany was disarmed, the true authors of the *Versailler Diktat* were beyond her reach; and in these circumstances the Nazis seized upon the German Jews as vicarious targets for a German stroke of revenge.

the Romans deliberately favoured them as a make-weight against the flagrant disloyalty of the Greek citizens of the second city of the Empire. Fragmentary though our evidence is, it would hardly be rash to assume that some guilt, direct or indirect, for the shedding of Jewish blood could be brought home to every one of those Alexandrian Greek 'martyrs' who were condemned to death by the Roman Government in the course of the first two centuries of the Christian Era.¹

We have now found two cases—one in Western and the other in Hellenic history—in which an attempt to evade hard present facts by harking back to an irretrievably lost state of past national or civic glory has only resulted in a savage outbreak of Anti-Semitism. And the same spectacle—which would be comic if it were not tragic—of a saviour-archaist finding himself constrained to throw away his new-fangled 'time-machine' and snatch up his predecessor's old-fashioned sword instead is afforded by the histories of would-be constitutional reformers who have sought salvation in an attempt at a return to some ancestral constitution or 'patrios politeia'.²

In the second phase of the Hellenic 'Time of Troubles' we have seen³ this ironic fate overtaking a pair of Heracleidae at Sparta and a pair of Gracchi at Rome. In each of these two parallel political tragedies the originator of the reform movement—a Lacedaemonian Agis and a Roman Tiberius—had a horror of violence and lawlessness which was so genuine and so extreme that the would-be reformer actually allowed himself to be murdered by political opponents who did not scruple to resort to these 'methods of

¹ At an earlier stage in the establishment of the Roman domination over the non-Roman sections of a Hellenic dominant minority the Greek ruling class in the Seleucid Monarchy had produced a 'pagan martyr' who had the hardihood to strike at a representative of Rome herself, instead of seeking defenceless scapegoats among Rome's Oriental protégés. In the year 162 B.C., at Laodicea, Gnaeus Octavius, the chairman of a Roman commission of inspection, was assassinated by a Greek nationalist named Leptines (see V. C (i) (d) 9 (y), p. 122, footnote 5, above). The assassin aggravated the enormity of his offence by boasting of it in retrospect; and thereafter—with a view to saving his city and his sovereign from the consequences of his act—he voluntarily repaired to Rome, unfettered and unguarded; delivered himself into the hands of the Roman Government; and made a jaunty appearance at the bar of the Senate. From first to last he prophesied that the Romans would not touch a hair of his head; and the denouement proved him right. For the Senate characteristically preferred the diplomatic advantage of retaining a grievance of the first order against the Seleucid Government to the emotional satisfaction of avenging their murdered representative; and accordingly they took care not to accede to the Antiochene Government's proposal that the Senate should inflict on Leptines whatever punishment they might think good. Roman diplomacy kept the diplomatic incident open at the price of letting the criminal go scot free (see Polybius, Book XXXI, chap. 33, and Book XXXII, chap. 3; Meyer, *op. cit.*, vol. ii, pp. 237-9).

² This particular expression of Archaism has been examined already in V. C (i) (d) 8 (α), pp. 52-6, above.

³ In Part III. A, vol. iii, pp. 76-7; IV. C (iii) (b) 9, vol. iv, p. 205; IV. C (iii) (c) 3 (β), vol. iv, p. 508; V. C (i) (c) 2, vol. v, pp. 70-1 and 78; V. C (i) (d) 1, vol. v, pp. 388-9; V. C (i) (d) 8 (α), in the present volume, pp. 52-3; and V. C (i) (d) 8 (ε), p. 94, above.

barbarism', in the conviction that this was a lesser evil than it would be for him to give the lie, by getting in the first blow, to the very principles that he was upholding at his own peril. Yet even these two martyrs to a belief in Non-Violence had in one sense brought their deaths upon their own heads by having stooped, on their side, to a violence which was not redeemed by the fact that it was not physical. Before they lost their lives by the hands of some of their countrymen, both Agis and Tiberius had already broken some of the fundamental laws of their country's constitution; and this in itself was enough to stultify the endeavours of statesmen whose political programme was the thesis of the sacrosanctity of a constitutional heritage. The martyr hands that were innocent of having literally shed blood cannot be acquitted of the charge of having wielded the figurative sword of illegality; and the martyrs each inspired a successor who drew from the tragedy of his predecessor's fate the disastrous moral that his fatal error had been a lack of 'realism'.

In girding themselves for the task of making a second attempt to carry out their predecessors' enterprise a Cleomenes at Sparta and a Gaius at Rome did not forbear to draw and use the physical sword which had been abjured by an Agis and a Tiberius.¹ This second pair of 'tough-minded' reformers atoned for their recourse to violence by meeting, after a delusive momentary success, with the same failure and the same death as their 'tender-minded' predecessors. And their fate, in its turn, led a third pair of political adventurers to act on the theory that 'realism', if it was to do its work, must be carried to the point of a 'totalitarian' ruthlessness. By putting this theory into practice, Sulla—at the cost of proscribing half Rome and devastating all Samnium—did succeed, half a century after Tiberius Gracchus's death, in imposing something which passed for a 'patrios politeia' and in making this travesty of his country's ancestral constitution last long enough to allow the cold-blooded dictator himself to die comfortably in his bed. Sulla's Spartan counterpart Nabis did not in the end escape the assassin's knife; yet Nabis, too, lived long enough not only to complete the social revolution into which Agis' reform had been turned on Cleomenes' sword's point, but also to bring Messene and Argos, as well as Lacedaemon, under his tyrannically subversive rule, and to baffle a Roman commander who had just succeeded in beating the Macedonians.

If we turn again from Hellenic to Western history we may ob-

¹ Cleomenes appears to have resorted to violence without hesitation or compunction. Gaius Gracchus was torn in two ways and never whole-heartedly abandoned the gentle for the violent path (on this point see V. C (ii) (a), Annex II, pp. 378 and 392, below).

serve in the present context that our Civil War in England was precipitated by endeavours that had been made, in all good faith, to vindicate for the Parliament at Westminster a historic prerogative which, in its champions' belief, had been unlawfully set aside by a Royal Power that had recently been fortifying itself with a new administrative technique of Italian provenance.¹ And we may further observe that the soldier whose sword brought victory to the Parliament's cause played far greater havoc with the Constitution, in his autocratic role of Lord Protector of the Commonwealth, than King Charles had ever sought to play while he was sitting precariously on the throne of his ancestors. In the same Western World in our own day a Cromwellian violence has been used in Italy by a dictator who claims that by this means he has managed to give his countrymen back their 'patrios politeia' in the shape of his 'corporative state'.²

In the tragedy of Ottoman history we can see the two Hellenic series, Agis-Cleomenes-Nabis and Tiberius-Gaius-Sulla, reproduced in the series Selīm III-Mahmūd II-Mustafā Kemāl. Sultan Selīm (*imperabat* A.D. 1789-1807) was the first Ottoman statesman to take in hand the task of saving the heritage of his ancestors when the jeopardy into which it had fallen had been startlingly revealed by the disastrous outcome of the Russo-Turkish War of 1768-74.³ Like Agis and Tiberius Gracchus, Sultan Selīm set himself to restore a 'patrios politeia' which had been the palladium of the State; like them, he found himself driven to pursue reform along the paradoxical path of innovation; and like them, again, he died a violent death at the hands of political opponents whom he had the courage to defy but not the ruthlessness to crush. In the next act of the Ottoman play Mahmūd II (*imperabat* A.D. 1808-39) played Cleomenes' and Gaius's part with all the ruthlessness of Sulla and all the patience of Bismarck. For an opportunity to avenge his predecessor, Mahmūd waited, not ten years, like Gaius, but eighteen;⁴ during all that time he kept his own counsel, in contrast to Gaius's almost ostentatious display of his intention to seek revenge; and in consequence Mahmūd succeeded in extirpating the Janissaries and dying in his bed as comfortably as Sulla himself. Why was it, then, that this Ottoman play required a third act, and Sultan Mahmūd a successor? The reason was that Sultan Selīm's would-be archaizing reform had turned in Sultan Mahmūd's hands into a Westernizing revolution which even Mahmūd forbore to carry right through. Mahmūd required a successor

⁴ Ibid., pp. 49-50, above.

because, 'under the strenuous conditions of the Modern World', the 'Osmanlis could not hold their own if they halted half-way between their broken-down indigenous institutions and an imperfectly assimilated Westernism. A 'totalitarian' Westernizer was needed to finish Mahmūd's work if the 'Osmanlis were to be saved; and in our own day this third Ottoman saviour has appeared in the person of President Mustafā Kemāl Atatürk. The Ghāzi has been able to carry his people with him along a road of Westernization *à outrance*, on which their forefathers would never have followed the Sultans, thanks to the Greek invasion of Anatolia in A.D. 1919-22; for this home-thrust opened the eyes of the Ottoman Turks to the truth that they were fighting now for their very existence and no longer just for their empire.¹

This survey of would-be saviours with the 'time-machine' in the ranks of the Dominant Minority may close with two cases in which the revulsion from the 'time-machine' to the sword took place within a single lifetime.

The Roman Emperor Julian set himself to reinstate and reinvigorate by peaceful means the religion and culture of Hellenism when these had been pushed to the wall by a Christianity that had been enjoying an Imperial patronage since the conversion of Constantine. The moment when Julian was enabled to put this policy in hand—upon his receipt of the news of the death of the Emperor Constantius while Julian himself was on the march from Gaul to Constantinople—was separated by an interval of no more than fifteen months (December, A.D. 361–March, A.D. 363) from the moment when the new master of the Hellenic World marched on eastwards into the domain of the Sasanidae on a campaign in which he was to lose his life. These fifteen months were all the time that Julian had for putting his policy into effect; yet, short though this span was, it was long enough to see the Apostate's original policy change in two respects. Instead of being able to restore the pre-Constantinian régime and pre-Christian dispensation in their authentic shapes, Julian found himself constrained to wage his cultural and religious war on Christianity by organizing a pagan Antichurch on a Christian pattern² which was as alien as Christianity itself was from the genuine Hellenic *êthos*; and at the same time Julian failed to live up to his ideal of an enlightened tolerance. He was quickly disappointed of his romantically unrealistic expectation that, as soon as the Christian Church was deprived of its recent advantage of enjoying official support, a Hellenism that had really been moribund long before the conversion of Constantine would

¹ See II. D (v), vol. ii, pp. 187-8, above.

² See V. C (i) (c) 2, Annex II, vol. v, p. 584, above.

recapture its lost ground by the use of no other weapons than its own intrinsic merit and charm. In his treatment of his Christian subjects Julian had already crossed the line dividing a contemptuous toleration from a hostile discrimination before his activities in the field of domestic affairs were suspended by his departure for the Persian War; and, if it had been his fate to return victorious, it is difficult to believe that he would not have blackened his reputation sooner or later by crossing, in turn, the further line between discrimination and persecution.¹

Julian's failure in the fourth century of the Christian Era to put the clock back to a pre-Constantinian hour of Hellenic history was not more signal than Justinian's failure to accomplish the lesser *tour de force* of putting the clock back to Constantine's time in the sixth century. Justinian set himself to restore the Constantinian régime in all its aspects. Once again, as of old, the Empire was to be Latin-speaking, Orthodox, and integral; yet, in every sphere, the autocrat's endeavours to achieve his archaistic aim resulted in a sensational self-defeat.

Justinian's wars for the recovery of the provinces that had fallen into barbarian hands merely devastated the Imperial territories that were reconquered while it impoverished those that had hitherto remained intact; and the conquests bought at this price proved ephemeral. In extirpating the Ostrogoths the would-be *Restitutor Orbis Romani* was actually clearing the ground for an immediate occupation of Italy by the more barbarous Lombards, and in extirpating the Vandals he was redeeming a patrimony in Ifriqīyah for the Berbers and the Arabs.² Justinian was no more fortunate in his ecclesiastical policy. The ecclesiastical war which he waged against the Monophysitism of his subjects in the Oriental provinces was as unsuccessful as his military warfare against the barbarians, since it utterly failed of its intended effect of making the Catholic Church oecumenical once more in fact as well as in name. Justinian did not succeed in brow-beating Syria and Egypt back into Orthodoxy.³ What he did achieve was to alienate their affections so deeply and so lastingly that, in the next two generations, they welcomed the Persian armies of Chosroes and the Arab armies of 'Umar as deliverers from a Melchite yoke. As for the closing of the schools at Athens and the building of the Church of Saint Sophia at Constantinople, the first of these two of Justinian's

¹ Julian's failure to establish in the Roman Empire a Neoplatonic Church in lieu of the Christian Church has been touched upon in V. C (i) (c) 2, vol. v, p. 147; V. C (i) (d) 6 (δ), vol. v, pp. 565-7; V. C (i) (c) 2, Annex II, vol. v, p. 584; and V. C (i) (d) 6 (δ), Annex, vol. v, pp. 680-3, above.

² See III. C (i) (b), vol. iii, p. 162, above.

³ This failure of Justinian's Anti-Monophysite campaign has been touched upon already in V. C (i) (d) 6 (δ), Annex, vol. v, p. 679, above.

acts gave the *coup de grâce* to Hellenic learning and the second to Hellenic architecture; and, while it is true that the intellectual tradition of Plato and the architectural tradition of Ictinus were both of them already *in articulo mortis* by the time when Justinian thus sped them on their way to death,¹ these parting shots at Hellenism were nevertheless strange gestures from an enthusiast for a Roman Empire whose historic *raison d'être* had been to serve as a Hellenic universal state. It might seem equally strange that the Consulate, which had been the classic magistracy of the Roman Commonwealth, should have been abolished by an emperor who had undertaken the task of codifying the Roman Law;² yet this particularly conspicuous act of constitutional Vandalism was all of a piece with Justinian's legal enormity of abrogating the authority of the original texts on which his *Code* and *Digest* and *Institutes* were based, as soon as these compilations were published.

Hasty, ill arranged, and incomplete though they might be,³ Justinian's new law books were at least a mighty monument of the Latin language; yet, when the emperor who had just re-established the authority of the Constantinopolitan Imperial Government over the Latin-speaking lands of Africa and Italy had to supplement the law which he had codified, he found it advisable, as a matter of practical convenience, to publish his *novellae* in Greek! There could have been no more ironical illustration of the self-frustration of Justinian's policy; for the publication of his own new legislation in Greek was an admission of the fact that in his day the Latin speech of the City of Constantine was being supplanted by a Levantine vernacular;⁴ this linguistic revolution at Constantinople bore witness, in its turn, to the devastation and depopulation of the Imperial City's Latin-speaking European hinterland; and for this social catastrophe in the Latin-speaking provinces in the Balkan Peninsula Justinian himself bore a heavier responsibility than any

¹ For the senile decay of the Athenian intellect see IV. C (iii) (c) 2 (α), vol. iv, pp. 269-74; V. C (i) (d) 6 (δ), vol. v, pp. 563-7; and V. C (i) (d) 8 (γ), in the present volume, pp. 78-80, above; for the abandonment of the Hellenic style of architecture see IV. C (ii) (a), vol. iv, pp. 54-5, above.

² For the abolition of the Consulate by Justinian see V. C (i) (d) 9 (β), p. 111, above.

³ For the contrast in spirit, aim, and efficacy between Justinian's codification of the Roman Law and the contemporary codification of monastic law in Saint Benedict's Rule see III. C (ii) (b), vol. iii, pp. 265-6, above. Justinian fell between two stools. While on the one hand his compilations were an inferior substitute for the originals out of which they were excerpted, on the other hand they still reflected the social conditions of a more highly cultivated age faithfully enough to be inappropriate to the social conditions of the ruder age into which they were launched (on this latter point see Taylor, H. O.: *The Mediaeval Mind* (London 1911, Macmillan, 2 vols.), vol. ii, pp. 242 and 248).

⁴ The Greek in which Justinian's *novellae* were cast was an official variety of the Attic *κοινή* which had been minted in the chancelleries of the Hellenic 'successor-states' of the Achaemenian Empire and had remained current, under the Roman régime, in the Greek and Oriental provinces of the Hellenic universal state; but the colloquial Greek which was replacing a colloquial Latin in the streets and fora of Constantinople in Justinian's day was no doubt already in transition from the *κοινή* to Romain.

other man¹—an invidious distinction for a Roman Emperor whose own native province was Dardania, and who delighted in being able in consequence to boast that Latin was his mother-tongue.² Yet, while during Justinian's reign Greek thus gained on Latin in those Balkan territories of the Empire, including the capital itself, in which the Dardanian emperor was eager to keep Latin alive, Justinian was equally unsuccessful in his linguistic policy in the Oriental provinces. South-east of Taurus Justinian's intentions in regard to the Greek language were the opposite of what they were north-west of the Bosphorus; for in Syria and Egypt he was indirectly working to keep alive the established Greek ecclesiastical language of a Catholic Church whose cause he was championing against Monophysite dissenters. Yet, just because the Greek language was traditionally associated with the Orthodox Faith in this part of the Empire, the successful resistance of the Monophysites to Justinian's pressure on Orthodoxy's behalf was reflected in the linguistic field in the adoption of the Syriac and Coptic vernaculars as vehicles for a Monophysite liturgy and literature, in place of a Greek which was now doubly odious in Oriental Christian ears as an alien tongue which was the sign oral of the Melchites. This unfortunate identification, in the Oriental provinces, of the Greek language with a losing ecclesiastical cause was the direct result of Justinian's policy; and it sealed the doom of Greek in a region in which the *κωμή* had been the unchallenged vehicle of culture and administration for not much less than nine hundred years.

These interlocking failures of Justinian's policy in diverse fields amount, all told, to a total bankruptcy; and the story of this fiasco can be recapitulated in one sentence. Justinian produced results which were the opposite of his intentions because his pursuit of Archaism invariably led him into a use of force.

The saviour-archaists whom we have passed in review up to this point have all been representatives of the Dominant Minority; but there is a second company of saviours of the same class who arise in the External Proletariat when its liberty, or even its very existence, is threatened by the aggressiveness of some expanding civilization. When an external proletariat is fighting for its life against a civilization which, almost *ex hypothesi*, is its superior in material force, the members of the hard-pressed primitive society inevitably look back with regret to the easier and less anxious life which their forefathers used to lead before this external pressure began to disturb their peace. This regret for a happiness that is past may turn into a dream of harking back to it; and a people that

¹ See IV. C (iii) (c) 2 (β), vol. iv, pp. 327-8 and 397-8, above.

² See *ibid.*, p. 326, footnote 2, above.

is dreaming this dream will lend a ready ear to a prophet who promises to translate it into reality. A collision with external forces which has brought disaster and distress in its train is thus apt to excite a movement for jumping clear of the Present and landing safe—by a backward twist of the magic lever of the 'time-machine'—in some previous stage of existence in which the harassed society's life was once free from ills that have since been brought upon it by its undesired contact with a hostile and corroding alien presence.

This archaistic reaction to the painful experience of collision with an alien social force for which the victim is no match is not, of course, peculiar to societies of the primitive species. A primitive society that has been drawn into the External Proletariat of some expanding civilization is in no different case from a civilization that has collided with a more powerful society of its own species. In this identical situation the weaker party—be it a civilization or a primitive society—is apt to make an identical response; and the particular response that we here have in view is examined in greater detail, under the title of 'Zealotism',¹ in a later part of this Study that is concerned with the contact between civilizations in the Space-dimension.² In the present place we need not explore further the psychological phenomena in which 'Zealotism' displays itself, but may confine ourselves to a review of the saviours of the 'Zealot' type who arise in the External Proletariat.

There is no reason in theory why these barbarian saviour-archaists should have recourse to violence in working out their way of salvation;³ but an empirical survey will show that in practice the barbarian saviour with the 'time-machine' refrains from taking to the sword still more rarely than his counterpart who tries to take the same archaistic way of escape out of the miseries of a disintegrating civilization. Indeed, the only non-violent barbarian saviours with the 'time-machine' whom we shall find ourselves able to muster are those prophets who arose among the Red Indians when these primitive inhabitants of North America were being overwhelmed by an immense wave of inflowing European population which was aggressively sweeping westward from coast to coast of the continent.⁴ And even the followers of these Red Indian preachers of salvation through non-resistance were driven in the end, by sheer despair, to hasten the consummation of their doom by taking up arms.⁵ The rest of the barbarian saviours of this class

¹ This term has been coined out of the name 'Zealots', which was applied to a party in Jewry that made itself notorious in the conflict between Jewry and Rome in the first and second centuries of the Christian Era.

² Part IX, below.

³ On this point see V. C (i) (c) 3, vol. v, p. 331, footnote 1, above.

⁴ For these Red Indian prophets see V. C (i) (c) 3, vol. v, pp. 328-31, above.

⁵ *Ibid.*, pp. 331-2, above.

present themselves with the 'time-machine' in one hand and the sword in the other. Their posture is that of the Horatii holding the Transtiberine bridgehead against Lars Porsenna; but their fate is more cruel than that of the legendary Roman heroes, for the barbarian swordsmen's heroism seldom avails to purchase for their tribesmen the time to break the bridge before the invader can pass; and in facing enormous odds in a vain attempt to place their home beyond the reach of the aggressor's arm they more often meet the death of those two Horatii who fell than they escape with their lives like the two slain Roman heroes' brother Publius. The Redskin Sitting Bull wiping out Custer's troop of United States cavalry and surviving the feat to die in his bed in Canada is a far rarer figure in the annals of barbarian Archaism on the war-path than the Sūdānī standard-bearer at the Battle of Omdurman indomitably offering his breast to the machine-gun bullets as he still holds the Mahdi's standard defiantly aloft with his feet astride the corpses of his fallen comrades.¹

This barbarian martyr may stand as the type of a tragic company whose roll-call is too long for us to recite. *Honoris causa* we may single out the names of Caesar's Arvernian victim Vercingetorix and Justinian's Ostrogoth victim Totila and Charlemagne's Saxon victim Widukind.² We may recall the scene of the Negus Theodore blowing out his own brains as he charged, like a lion at bay, out of the ring-wall of a fortress which he had obstinately deemed impregnable until his Magdala was on the point of capture by a British expeditionary force. We may mourn 'Abd-al-Qādir's heroic failure to save Algeria, and 'Abd-al-Karīm's to save the Moroccan Rif, and Shāmyl's to save the Highlands of the Caucasus, from a modern Western imperialism that has armed itself with the lethal weapons of 'the Machine Age'; and we may pay equal respect to a Viriathus who failed to save his Lusitania from a Roman imperialism³ which was in effect as irresistible as our own, even though it was not equipped with our present technical facilities for the wholesale destruction of life and property. We may appreciate the intractability, while abhorring the savagery, of a Stenka Razin and a Pugachev⁴ who successively led the revolt of the Cossack marchmen of the Russian Orthodox Christendom against the relentless determination of a Muscovite imperialism to round up these semi-barbarians⁵ into the corral of a Russian universal state,

¹ For the Mahdi Muhammad Ahmad's leadership of a revolt of the Kordofānī Arabs against the penetration of the Nilotic Sudan by an Egypto-Ottoman imperialism equipped with Western weapons see *ibid.*, pp. 209, footnote 3, 294-6, 321, footnote 3, and 324, above.

² See *ibid.*, p. 319.

³ For the trapping of the barbarians in the Iberian Peninsula see *ibid.*, pp. 205-6, above.

⁴ See V. C (i) (c) 2, vol. v, p. 104, above.

⁵ The Cossacks, who were marchmen from the standpoint of the Russian Orthodox

and break them in to leading the servile life of an internal proletariat.¹ And we may lay a wreath on the graves of the obscure heroes who captained the Nairi highlanders in their stand against the Assyrians,² the Transcaspian Türkmens in their stand against the Russians,³ the Araucanians in their stand against the Spaniards,⁴ and the Maoris⁵ and the Pathans⁶ in their stand against the British.

After this review of would-be saviours with the 'time-machine' who have taken the direction of Archaism, we must complete our present survey by reviewing their futurist counterparts; but we may not find it easy here to draw any hard-and-fast line of demarcation. To begin with, we have seen⁷ that it is in the very nature of Archaism to defeat itself by breaking down into Futurism; and we have just been giving ourselves an empirical demonstration of the working of this historical 'law' in our survey of archaist-saviours in the ranks of the Dominant Minority. In one instance after another we have found that, in the act of resorting to the violence into which their Archaism leads them against their will, these enthusiasts for a vanished Past have veered round, involuntarily but unavoidably, out of an archaistic into a futuristic course. The same transmutation of Archaism into Futurism can be observed in the ranks of the External Proletariat; and here the change is not only promoted by a tendency that is innate in Archaism, and is not only precipitated by a resort to force, but is also foreshadowed, and perhaps even fore-ordained, in the history of the genesis of the body social in which the transmutation takes place.

In other contexts⁸ we have observed that, within the brief Timespan of some 6,000 years during which the species of societies that we have agreed to call 'civilizations' has been in existence up to date, the radiation of the civilizations that have already come and gone has travelled so far and so fast that it has long since made its mark upon every primitive society that it has not destroyed. And it is safe to assume that this brand of an alien culture will have burnt deep into the flesh of a *ci-devant* primitive society that has come to such close quarters with an expanding civilization as to

Christendom (see II. D (v), vol. ii, pp. 155-7, and V. C (i) (c) 3, vol. v, pp. 313-15, above), were in origin members of the external proletariat of the Golden Horde (see V. C (i) (c) 3, vol. v, p. 283, above).

¹ For the eventual success of the Russian Imperial Government in turning the Cossacks into 'running dogs' of a Muscovite imperialism see V. C (i) (c) 3, vol. v, pp. 313-15, above.

³ See V. C (i) (c) 3, vol. v, p. 323, footnote 3, above.

⁴ See V. C (i) (c) 3, vol. v, p. 322, above.

⁵ See *ibid.*

⁶ See *ibid.*, pp. 305-8, and 332-3, and the present chapter and volume, p. 201, footnote 1, above.

⁷ In V. C (i) (d) 8 (ε), pp. 94-7, above.

⁸ In Part II. A, vol. i, pp. 185-7, and in V. C (i) (c) 3, vol. v, pp. 196-7, above.

have been conscripted into its imperious neighbour's external proletariat. It is therefore also safe to predict that even the most fanatically archaistic-minded leader of an external proletariat will find himself unable to carry his Archaism to 'totalitarian' lengths. When he has done his utmost, his tribe will still retain some tincture of the very civilization from which its would-be saviour has been striving to keep its life clear; and this alien cultural tincture will infuse a vein of Futurism into the Archaism of the saviour-archaist himself.

This ineradicable element of Futurism in the life and leadership of an external proletariat that is reacting in the 'Zealot' way to the pressure of an aggressive civilization is most evident in the field of military technique. For the Red Indian saviour-archaists were perhaps unique among their kind in carrying their objection to the use of the White Man's tools to the point of forbidding their followers to use in self-defence the fire-arms with which their White assailants were engaged in annihilating them.¹ In other cases the leaders who have arisen to preach salvation-through-Archaism to the rank-and-file of hard-pressed societies of either species have usually allowed—and frequently enjoined—at least this one exception in the practical application of their saving principle; and, in granting to their followers this single licence of fighting an aggressive alien enemy with his own weapons, they have unintentionally opened in their curtain-wall a breach which can never be closed again but which will be worn ever wider by an inflow of alien influences that will start as a trickle to end in a flood. The impossibility of borrowing this or that element of an alien culture at choice, without eventually making an unconditional surrender to the intrusive alien force, is a fundamental law of the contact of cultures which is examined in this Study in other places.² In the present context we are only concerned with this 'law' in so far as it throws light upon the cause of the change of orientation from Archaism to Futurism which is so frequently to be observed in the reaction of an external proletariat towards the dominant minority against which it is up in arms. When once the barbarian has adopted the weapons of the enemy civilization there are two clear alternatives before him: either he will succumb to the enemy through failing to master the borrowed art, or else he will survive through learning in time to beat his master at his own game. If

¹ For this remarkable veto see V. C (i) (c) 3, vol. v, p. 331, above.

² See V. C (i) (d) 9 (β), pp. 106–7, above, and Parts IX and X, *passim*, below. For the particular operation of this law in the intercourse between an external proletariat and a dominant minority across the stationary frontier of a universal state see V. C (i) (d) 6 (α), vol. v, pp. 459–80, and V. C (i) (d) 7, in the present volume, p. 4, footnote 4, above; and Part VIII, *passim*, below.

we translate this pair of alternatives, as we must, from their literal application in the limited field of military technique into terms that cover the whole of life, we shall conclude that an external proletariat has a choice between being exterminated by the dominant minority with which it is at grips or else overcoming its adversary and stepping into his shoes. And this is, in effect, a choice between an Archaism which spells defeat and a Futurism which may be the key to victory. A barbarian saviour-archaist who is resolved at all costs to avoid the romantic doom of a Vercingetorix must embrace the futuristic ambition of a Visigothic war-lord whose 'dream was to see "Gothia" substituted for "Romania" and Atawulf seated on the throne of Caesar Augustus'.¹

In the ranks of the External Proletariat, Atawulf—in this mood of his unregenerate youth²—may stand as the type of the saviour-futurist. And this Visigothic raider of a Hellenic universal state is an exceptionally articulate representative of a host of barbarian war-lords who have been impelled by a usually quite unreflective appetite for loot and fame to lead their war-bands into the derelict domain of a disintegrating society where the unsophisticated barbarian interlopers may still find an eldorado when the delicately nurtured heirs of the kingdom have already perished miserably there of want and exposure. When Atawulf thus supplants Honorius, the first thing that is apt to strike an observer is the contrast between the triumphant avenger of Vercingetorix and the discomfited successor of Caesar. What can there be in common between the war-lord who is making his fortune by the sword and the emperor who has lost the courage to use the weapon even in defence of his heritage? Yet we have seen³ that the Goth's victorious swordsmanship has been learnt in a Roman school; and if we now look into the next chapter of the story we shall perceive that Caesar's barbarian conqueror is a barbarous caricature of Caesar himself, instead of being, as might appear at first sight, a 'noble savage' whose act of rapine is all but justified in equity by the immensity of the splendid robber's moral superiority over his degenerate victim.

In the history of the expansion of the Hellenic Civilization at any rate, the radiation of the expanding society's political institutions and ideas among the barbarians round about is almost as much in

¹ Orosius, P.: *Adversum Paganos*, Book VII, chap. 43, quoted already in V. C (i) (c) 3, vol. v, p. 227, above.

² The tendency, illustrated by Atawulf's second thoughts, for a victorious barbarian saviour-futurist to experience a revulsion from Violence towards Gentleness, and from Satanism towards Conservatism, has been examined *ibid.*, pp. 223-7, above. This tendency is also illustrated, as we have there seen, by the careers of a Theodoric, a Yazid, and even an Alaric.

³ In V. C (i) (d) 6 (α), vol. v, pp. 459-69, above.

evidence as the radiation of its military technique. In another context¹ we have seen how the republicanism which was one of the prominent political tendencies of Hellenism in its growth-stage spread from its cradle in Hellas into the barbarian hinterland of the Hellenic World until, by the time when Tacitus was writing his *Germania*, this new-fangled Hellenic institution, in its north-westward line of advance through Italy and Gaul, had supplanted its old-fashioned predecessor, the patriarchal hereditary monarchy, among all the peoples—including even the recent immigrants of Teutonic speech—on the left bank of the Rhine, while it had already begun to undermine the traditional form of kingship among the Transrhenane Frisians and Cherusci. By Tacitus's day, however, at the turn of the first and second centuries of the Christian Era, this typical institution of the growth-stage of the Hellenic Society, which was then still winning converts on the verge of Ultima Thule, had, of course, long since lost its hold upon the heart of the Hellenic World; for by this time more than five hundred years had passed since the growth of the Hellenic Civilization had been cut short by the breakdown of the year 431 B.C.; and a republicanism which was bound up with a phase of Hellenic history which had thus ended in disaster had soon been unceremoniously elbowed away from its native ground by a Macedonian counter-attack of patriarchal monarchy² and by the rise, under this and other constitutional masks, of would-be saviours with the sword. In an age in which the Hellenic institutional wave of republicanism was still making its way, unspent, in the North European barbarian no-man's-land beyond the Rhine, the following wave of dictatorship had already arrived at the frontiers of a Hellenic universal state which owed both its creation and its preservation to a monopoly of dictatorial power in the hands of Caesar Augustus. In the next chapter of Hellenic history this second wave, in its turn, travelled on into the Transrhenane no-man's-land in the wake of its precursor, and its progress was marked by a repetition, *in partibus barbarorum*, of the institutional revolution which had already taken place in a disintegrating Hellenic World.

During the interval between the generation of Tacitus, who was writing in the early days of the Hellenic 'Indian Summer', and the generation of Ammianus Marcellinus, who lived to record the Empire's irretrievable military disaster at Adrianople in A.D. 378, both the budding republicanism of the barbarian communities in the neighbourhood of the Roman *limes* and the sheltered

¹ In V. C (i) (c) 3, vol. v, p. 213, footnote 1, above.

² For this anachronistic recrudescence of patriarchal monarchy in the heart of the Hellenic World between 379 B.C. and 168 B.C. see III. C (ii) (b), Annex IV, vol. iii, pp. 485-7, above.

patriarchalism of the remoter barbarians beyond the range of the frontier war-zone¹ were blighted by the malignant growth of a new form of government² which a Hellenic political philosopher would have diagnosed as 'tyranny' and would have assigned, in his classification of constitutions, to the same category as the contemporary Caesarism of the Roman Empire.

'The binding force formerly possessed by kinship was now largely transferred to the relationship between "lord" and "man", between whom no bond of blood-relationship was necessary. . . . The form of government truly characteristic of "the Heroic Age" . . . is an irresponsible type of kingship resting not upon tribal or national law—which is of little account—but upon military prestige. . . . The princes of "the Heroic Age" appear to have freed themselves to a large extent from any public control on the part of the tribe or community. . . . The force formerly exercised by the kindred is now transferred to the *comitatus*, a body of chosen adherents pledged to personal loyalty to their chief. . . . The result of the change is that the man who possesses a *comitatus* becomes largely free from the control of his kindred, while the chief similarly becomes free from control within his community.'

³

Is this profound revolution in the institutional life of a primitive society that has been conscripted into an external proletariat a phenomenon that is peculiar to the history of the North European external proletariat of the Hellenic Society? Or is it a revolution that is apt to overtake any external proletariat as a consequence of its relations with a disintegrating civilization across the stationary frontier of a universal state? The second of these two alternative possibilities would appear to be the nearer to the truth; for the passages that have just been quoted from the work of a modern Western scholar all refer to both of two external proletariats of which the author is here making a comparative study. And, if the historical evidence reveals the war-lord, with his war-band, thus asserting himself, in an unmistakably identical fashion, among the Teutonic-speaking barbarians beyond the pale of the Roman Empire and among the Greek-speaking barbarians in the continental hinterland of the Minoan 'thalassocracy', we may venture to infer that an Atawulf who repeats the exploits of a Pelops and an Atreus⁴ is a typical example of a type of barbarian saviour-futurist that is apt to make its appearance in the external proletariat of any

¹ For the survival of the patriarchal monarchy in Tacitus's day among the Suebi, the Goths, and the Swedes see V. C (i) (c) 3, vol. v, p. 213, footnote 1, above.

² See V. C (i) (d) 7, p. 4, footnote 4, above.

³ Chadwick, H. M.: *The Heroic Age* (Cambridge 1912, University Press), pp. 365, 390-1, and 443.

⁴ Pelops, like Atawulf, acquired his kingdom by marrying a royal heiress; and Atreus, in his turn, succeeded to the heritage of the Perseidae thanks to a marriage connexion—though in this case the lady was the barbarian interloper's sister and the degenerate emperor's mother, in contrast to the affair of Galla Placidia, who was Honorius's sister and Atawulf's bride.

disintegrating civilization. We need not call the roll of Atawulf's peers; for, in bringing the External Proletariat on to our stage in an earlier chapter, we have already made so many of them march past us at the head of their warriors¹ that the figure of the barbarian saviour-futurist is by this time familiar to us. In this place it is perhaps more pertinent to observe that, however distinctive in themselves, and distinct from one another, our Atawulf-type and Vercingetorix-type may be, it is by no means easy to be sure in every case whether a barbarian saviour with the 'time-machine' belongs to the Gallic archaist's or to the Gothic futurist's company.

In the External Proletariat, at any rate, a distinction which is plain in principle is in practice difficult to draw because the replacement of a saviour-archaist by a saviour-futurist as the leader on the barbarians' side in the tug-o'-war along the frontiers of a universal state takes place by way, not of an abrupt mutation, but of a gradual evolution;² and in the course of this long-drawn-out chapter in the history of the struggle between the External Proletariat and the Dominant Minority there will be some barbarian leaders who will remain archaists with impunity and others who will become futurists without escaping disaster.

As examples of the type of the triumphant barbarian archaist we may cite the obscure leaders of the Scythians who foiled Darius's attempt to extend the Achaemenian Empire on to the Black Sea Steppe; the Cheruscan leader Arminius who foiled Augustus's attempt to extend the Roman Empire into the North European Forest;³ the Sa'ūdī leaders of the Wāhhābīs⁴ who threw off *circa* A.D. 1830 the Egypto-Ottoman yoke which Mehmed 'Alī had fastened upon their necks only about twelve years before at the cost of a nine years' war (*gerebatur* A.D. 1810-18);⁵ and the Gutaeans who not only held out when they were assaulted in their native mountain fastnesses by Naramsin (*dominabatur circa* 2572-2517 B.C.), but survived to take their revenge upon a disintegrating Sumeric Civilization—whose earlier convulsions had launched the

¹ See V. C (i) (c) 3, *passim*, in vol. v, pp. 194-337, above.

² See V. C (i) (c) 3, vol. v, pp. 208-10, above, and Part VIII, *passim*, below.

³ See V. C (i) (c) 3, vol. v, p. 205, and V. C (i) (c) 3, Annex I, vol. v, p. 593, above.

⁴ See V. C (i) (c) 3, vol. v, pp. 294-6 and 333-4, above.

⁵ Even at the cost of this amount of time and blood and treasure Mehmed 'Alī would probably have gained no more ground in Arabia than Darius gained in Scythia as the result of a single campaign, if the 'Osmanli empire-builder had not had, and taken, the opportunity to enhance the fighting power of his troops by borrowing from the Western World a discipline and a technique which were alien from the Ottoman spirit of that age, though the West itself had perhaps learned these arts in an Ottoman school (see Part III. A, vol. iii, p. 38, footnote 2, and IV. C (iii) (c) 2 (γ), vol. iv, p. 450, above). This adventitious aid enabled Mehmed 'Alī in Arabia to emulate Justinian's achievement in Italy. But his *tour de force* of asserting the dominion of a Cairene Government over the Najd was just as ephemeral as Justinian's analogous *tour de force* of asserting the dominion of a Constantinopolitan Government over the Basin of the Po (which Justinian's exertions merely converted from a Gothia into a Lombardy).

Akkadian militarist upon his career of aggression—when, less than a hundred years after Naramsin's death, the Gutaean war-bands descended upon the Sumeric Society's homeland on the plains of Shinar and kept their yoke upon their victims' necks for four successive generations (*circa* 2429–2306 B.C.).¹

As examples of unsuccessful barbarian futurists we may cite from the history of the Hellenic World the Suevian war-lord Ariovistus,² and the obscurer war-lords³ of the Cimbri and the Teutones,⁴ who dreamed the dream of Atawulf five hundred years too soon and paid the penalty for their precocity by encountering, not Honorius, but Marius and Caesar. These successive roles which were played by an Ariovistus and an Atawulf on the North European front of the Roman Empire have their analogues on its West African front in the careers of a Jugurtha who came within an ace of succeeding⁵ at the stage at which Ariovistus failed, and a Gildo who only just failed⁶ at the stage at which Atawulf was successful. In an intermediate age, and at the eastern extremity of the North European front, we see a Decebalus who had the makings of a Theodoric being blasted by the thunderbolt of a Juppiter Trajanus. From the history of the main body of the Orthodox Christian Society we may cite the Serb war-lord Stjepan Dušan (*dominabatur* A.D. 1331–55), who achieved the success of a Theodoric (though his achievement was as ephemeral as his Ostrogothic counterpart's) at a stage of the Orthodox Christian 'Time of Troubles' which corresponds to the times of Jugurtha and Ariovistus in the history of the Hellenic World.⁷ If we turn to the history of the 'Great Society' of the Westernized World of our own age we may cite, from the vast company of its *dramatis personae*, King Amānallāh of Afghanistan, who has come to grief through recklessly forcing the pace in attempting to put into effect a policy of salvation-through-Futurism⁸ which his moderate and circumspect Wahhābī contemporary King 'Abd-al-'Azīz of Sa'ūdī Arabia has been carrying out with signal success.⁹

¹ See I. C (i) (b), vol. i, p. 109; V. C (i) (c) 3, vol. v, pp. 203 and 262, and the present chapter and volume, p. 184, above, and V. C (ii) (b), pp. 296–7, below.

² See V. C (i) (c) 3, vol. v, pp. 219 and 223, above.

³ Ariovistus has been raised out of a like obscurity, not by any prowess of his own, but by the accident that his Roman conqueror Caesar was as great a master of the pen as he was of the sword, whereas Marius merely performed, without recording, his feat of exterminating the Cimbri and Teutones.

⁴ See V. C (i) (c) 3, vol. v, p. 218, above.

⁵ See IV. C (iii) (c) 3 (β), vol. iv, p. 507, and V. C (i) (c) 3, vol. v, p. 218, above.

⁶ For the wave of barbarian aggression which began to beat upon the West African front of the Roman Empire in the last quarter of the fourth century of the Christian Era, see V. C (i) (c) 3, vol. v, p. 221, above.

⁷ For the Serb domination over Macedonia in the latter part of the Orthodox Christian 'Time of Troubles' see V. C (i) (c) 3, vol. v, pp. 293–4, above.

⁸ See V. C (i) (c) 3, vol. v, pp. 332–3, and V. C (i) (d) 9 (β), in the present volume, p. 103, above.

⁹ See V. C (i) (c) 3, vol. v, pp. 333–4, above.

We can also cite at least one unsuccessful barbarian leader who is bafflingly amphibious. Is the Sicel leader Ducetius (*ducebat circa 466-440 B.C.*) to be classified as an archaist or as a futurist? At first glance we may see nothing but an archaist in the man who led the last of the native barbarians in their last stand against the Greek colonists of Sicily. Is not this a hero of the same class as the Red Indian Chief Sitting Bull or the Sūdānī standard-bearer at the Battle of Omdurman? But a closer examination of Ducetius brings to light one futuristic feature after another.

In the first place Ducetius's original enterprise, with its ambitious aim of uniting all the surviving Sicel communities into a single commonwealth, was manifestly inspired by the example of two miniature empires which had recently been exercised by Greek city-states over Sicel perioeci—the empires which had been won respectively for Agrigentum by her despot Theron (*dominabatur circa 488-472 B.C.*) and for Syracuse by the Deinomenidae (*dominabantur circa 485-466 B.C.*).¹ In the second place Ducetius not only emulated the ambitions of contemporary Greek empire-builders in Sicily but also imitated the methods of contemporary Hellenic statesmanship; for the device by which he sought to give his new Sicel commonwealth cohesion was to 'synoecize' it into a city-state *à la grecque* with its civic centre at Palice.² In the third place, after he had courted and incurred disaster by falling foul of Agrigentum and Syracuse simultaneously,³ Ducetius threw himself on the mercy of his victorious Syracusan adversaries and acquiesced in their decision to send the defeated Sicel patriot into an honourable exile at Corinth—the mother-city of Syracuse in the heart of Hellas. In the fourth and last place Ducetius, so far from becoming estranged from the alien civilization which had now proved itself more than a match for his barbarian arms, became instead so complete a convert to Hellenism that he eventually returned from Corinth to Sicily, not as a refugee who had broken out of prison and was shaking the dust of his captivity from off his feet, but as the Sicel leader of a new swarm of Greek

¹ For these Agrigentine and Syracusan 'empires' see V. C (i) (c) 3, vol. v, pp. 211-12, above; for the Deinomenidae see III. C (ii) (b), vol. iii, p. 357, footnote 1, above. Ducetius's attempt to set up a Sicel empire in Sicily which was to take the place of both these Greek empires was made immediately after the Deinomenids' fall from power.

² Herein Ducetius anticipated by a whole generation the Macedonian King Perdiccas II's creative achievement of inducing the Chalcidian Greek communities *ἐνὶ Θράκης* to 'synoecize' themselves at Olynthus *circa 432 B.C.* (see III. C (ii) (b), Annex IV, vol. iii, p. 480, above).

³ Compare the similar—and similarly disastrous—error of statesmanship which was committed by the Rifi barbarian saviour-archaist 'Abd-al-Karīm in A.D. 1925, when, not content with being at war with the Spaniards, he invaded the French Zone of Morocco and thereby drove the French into a military co-operation with the Spaniards which sealed the Rifi patriot's doom (see Toynbee, A. J.: *Survey of International Affairs*, 1925, vol. i (London 1927, Milford), Part II, sections (vi)-(viii)).

colonists. When death overtook him thereafter on the soil of his native island, it found him engaged once again, in this last phase of his career, on his original enterprise of attempting to unite all the surviving Sicel communities into a single commonwealth organized, *more Hellenico*, as a city-state. But Ducetius had not been blind to the lesson of his previous failure, and this time he started to build his Sicel state round a Greek nucleus. This was the significant difference between Ducetius's first experiment in 'synoecism' at Palice and his second experiment at Calacte. And if Fate had granted him the time to carry this second essay in empire-building to completion his Sicel hands would have reared a political structure with a Greek apex and a Sicel base which would have conformed exactly to the Hellenic pattern of the antecedent Siceliot Greek empires which had centred, not on Calacte, but on Syracuse and Agrigentum.

The case of Ducetius illustrates the difficulty of sorting out into an archaist and a futurist group, with a hard-and-fast line of demarcation between them, the would-be saviours with the 'time-machine' who have arisen in the External Proletariat. But when we turn to the Internal Proletariat we shall perhaps not reckon *a priori* on being confronted by any corresponding problem. One of the hall-marks of membership of the Internal Proletariat is an apparently congenital inability to make the archaistic response to the challenge of social catastrophe. It can therefore be taken for granted that every would-be saviour with the 'time-machine' who arises in the Internal Proletariat will be a saviour-futurist; and this certainty might be expected to simplify the rest of our present survey. There is, however, one complication, and that lies in the fact that the futurist leaders of the Internal Proletariat are not all of them drawn from the Internal Proletariat's own ranks.¹

At an earlier point in this Study we have noticed the proclivity of the Dominant Minority to succumb to a process of 'proletarianization' which takes the form of 'vulgarization' when the Internal and not the External Proletariat is the proletarian object of the Dominant Minority's mimesis.² And in the present chapter we have seen that this transfer of social allegiance to the Internal Proletariat from the Dominant Minority, which in a Commodus is the last extravagance of a wanton luxury, may be the first necessity of a baffled idealism in a Gaius Gracchus. It is, indeed, one of the tragic ironies of the Dominant Minority's fate that the idealists who arise in its ranks should tread the same path of social

¹ See V. C (i) (c) 2, vol. v, p. 71, above.

² For this phenomenon of 'vulgarization' see V. C (i) (d) 6 (α), vol. v, pp. 445-59, above.

migration as the wastrels. And it is even more tragically ironical that Gracchus should involuntarily work far greater havoc through a nobility to which Commodus could never rise than Commodus can work through a vulgarity into which Gracchus would never fall. Yet this is the melancholy truth. For, while Commodus rapidly reduces himself to impotence by a course of social truancy which is also one of spiritual demoralization, Gracchus's spirit is fortified by a decree of social outlawry which is passed upon him, not by any viciousness in himself, but by the impenitence of adversaries in his own household who cannot forgive him for calling in question the right of his own class to the enjoyment of its ill-gotten privileges. And so, in the sequel, Commodus is uneventfully swallowed up by a slough in which he has delighted to wallow, whereas Gracchus breathes a demonic energy and an explosive driving-force into the souls of the proletarians into whose company he has been thrust by the hostile hands of his own kin and kind.

This revolutionary alliance between an outcast saviour-archaist and an outcast Internal Proletariat is perhaps in some sense fore-ordained from the very beginning of the archaist's career, though it is no part of his original intentions or expectations. The essential feature and supreme attraction of the '*patrios politeia*' which the archaist originally sets out to re-establish is its freedom from social cankers that are penalties of social breakdown and symptoms of social disintegration. His aim is to restore the moral health of Society, and his prescription for dealing with the Proletariat is not to set it in the seat of the Dominant Minority but to abolish both classes at one stroke by closing the breach between them. But the social physician who undertakes to heal the body social by getting rid of the Proletariat in this way is committing himself to a policy of righting the wrongs of the proletarians; for the schism in Society can only be repaired by restoring to its proletarian members the 'stake' in Society of which they have been wrongfully deprived.¹ And this plank in the archaist-reformer's platform is an insuperable stumbling-block for his fellow members of the Dominant Minority, because the Proletariat's loss has been the Dominant Minority's gain. In their eyes the archaist's programme of reform is sheer treason against the reformer's own class, while in his eyes their opposition simply shows them up as hypocrites whose professions of public spirit disgracefully break down as soon as their pockets are touched. Misunderstanding breeds alienation; and, when the tension rises to breaking-point and the Dominant

¹ For the original meaning of the Latin word *proletarii*—i.e. persons whose only 'stake' in Society is the fruit of their own physical procreation—see I. B (iv), vol. i, p. 41, footnote 3, above.

Minority casts the contumacious reformer out, the thwarted and disillusioned idealist now almost joyfully parts company with his own kin and kind and throws himself—crying ‘I will be your leader’—into the arms of a Proletariat which by this time is waiting with arms outstretched to receive him. The Proletariat is content to take the archaist-outcast at the Dominant Minority’s valuation. In their eyes he is a champion of the proletarian cause who has sacrificed for their sake everything in the world except their gratitude and trust; and they give practical expression to these by adopting the outlaw as their leader. This dramatic situation is one which we have encountered in this Study before. ‘The stone which the builders rejected, the same is become the head of the corner.’¹ Paul turns away from the Jews who refuse him a hearing, and delivers his rejected message of salvation to the Gentiles’ open ears. And, while in Jewish eyes the Pharisee-Apostle of Christ is an odious renegade, in Paul’s eyes the Jewry of his generation is an Esau sacrilegiously repudiating his birthright.

When we pass in review the legion of saviour-futurists who have led the Internal Proletariat in their desperate revolts against an intolerable oppression, we see turncoats—or outcasts—from the ranks of the Dominant Minority fighting shoulder to shoulder with comrades who are proletarian-born, and in the confusion of the conflict the social antecedents of each dust-begrimed and blood-bespattered figure are not always easy to ascertain.

In the wave of insurgency that swept across the Hellenic World in the seventh decade of the second century B.C.,² a movement which was launched in Sicily by the Syrian slave Eunus and the Cilician slave Cleon was taken up in Asia Minor by a pretender to the throne of the Attalids who was denounced by his opponents as a bastard.³ With which of his contemporaries is Aristonicus to be classed? With Eunus or with Tiberius Gracchus? Eunus assumed the royal name Antiochus when he proclaimed himself king of a community of freedmen; and another insurrection of the slaves in Sicily was captained by a Salvius who called himself King Tryphon. This Salvius-Tryphon was adopting as his throne-name a *sobriquet* that had been borne as a nickname by an adventurer who in the preceding generation had momentarily usurped the diadem of the Seleucidae. And this Diodotus-Tryphon’s role at Antioch had been as equivocal as Aristonicus’s role at Pergamum. In the third and last act of the Sicilian tragedy, which was

¹ Matt. xxi, 42, quoting Ps. cxviii, 22. Compare Mark xii, 10; Luke xx, 17; Acts iv, 11; Eph. ii, 20; 1 Pet. ii, 7. The passage has been quoted in this Study already in IV. C (iii) (c) 1, vol. iv, p. 248, and in V. C (i) (d) 11, in the present volume, p. 164, above.

² See V. C (i) (c) 2, vol. v, pp. 68–71, above.

³ Strabo: *Geographica*, Book XIV, chap. 38 (p. 646); Justin: *Historiae Philippicae*, Book XXXVI, chap. 4, § 6.

played about half a century after the last of the local slave-revolts had been crushed,¹ the enterprise of establishing an Anti-Rome on Sicilian ground was taken up by an insurgent who, so far from being of servile blood, was a true-born son of Pompey the Great. Sextus Pompeius² was driven into the arms of a beaten but unreconciled proletariat when the Second Triumvirate included his name in their proscription-list. And thereafter, with Sicily for his head-quarters and with Oriental freedmen in command of his fleet, he avenged the defeats of Eunus and Salvius on the children of the Rupili and Luculli and emulated the atrocities of the Cilician pirates who had been swept off the seas by this Roman outlaw's father.

Before he gained possession of his maritime stronghold in Sicily, Sextus had found asylum in a Pyrenaean fastness in the country of the Lacetani; and from this Spanish base of operations he had repeated the exploits of Sertorius,³ a refugee-partisan of Marius who, in an earlier round of a hundred-years-long Roman civil war, had held out in Spain for a decade against the elsewhere victorious lieutenants and successors of Sulla. It was an extraordinary feat of arms for the master of a couple of backward provinces to keep at bay, for that length of time, the forces of a Roman Government which not only held Rome itself but also commanded the resources of all the rest of the Roman Empire. What was the secret of Sertorius's astonishing success? When we look into the history of this Roman outlaw, we find that after he had actually been driven out of Spain into Morocco by a Sullan expeditionary force he was able to recover his foothold in the Peninsula thanks to being invited by the recently conquered Lusitanians to come over and help them against the imperialism of the Roman outlaw's own compatriots.⁴ In other words, Sertorius (*in Hispania militabat circa 82-72 B.C.*) was able to set Rome at defiance because he had been invested with the mantle of Viriathus (*militabat circa 150-140 B.C.*). A barbarian people who had been forcibly transferred from the external to the internal proletariat of an aggressively expanding civilization in consequence of the failure of a native leader to stem the tide of Roman conquest, now called in one of their conquerors to deliver them from a yoke in which they had not yet learnt to acquiesce; and in this last act of the Spanish tragedy the Roman turncoat avenged the defeat of the Lusitanian patriot.

¹ The second of the slave-revolts in Sicily had lasted from about 104 to 100 B.C.; Sextus Pompeius's occupation of the island lasted from about 43 to 36 B.C.

² See V. C (i) (c) 2, vol. v, p. 71, above.

³ See *ibid.*

⁴ Like Hamilcar Barca a hundred and fifty years or so before him and the Arab Muslim conquerors some eight hundred years later, Sertorius made his descent on Spain from Africa at the head of a force which included a contingent of Berber troops.

In Italy in the same impious age we see the Roman senator Catiline (*insurgebat* 63–62 B.C.)¹ treading in the footprints of the runaway gladiator Spartacus (*insurgebat* 73–71 B.C.).² In the modern Western World we can espy, among the renegades from a dominant minority who put themselves at the head of the insurgent German peasants in A.D. 1524–5,³ a counterpart of Aristonicus in the ex-Duke of Württemberg Ulrich, and counterparts of Sertorius and Sextus Pompeius in the knights Florian Geyer and Götz von Berlichingen. And in the Westernized Russian World of our own day we ourselves have lived to see the dreams of Spartacus and Catiline translated into reality by the hand of a master-revolutionary who was not a workman and not a peasant and not (as Pugachev had been)⁴ a Cossack and not (as Minin had been)⁵ a butcher. The extraordinary genius who succeeded in establishing a 'Dictatorship of the Proletariat' on the ruins of the empire of Ivan the Terrible and Peter the Great was not himself of proletarian origin. Lenin⁶ was baptized as Vladimír Ulianov, and the father who gave him this respectable name was a gentlemanly official in the Imperial civil service.

This survey of revolutionary leaders of the Internal Proletariat who have been recruited from the ranks of the Dominant Minority will perhaps have sufficed to show that the political prophet without honour who withdraws as an outlaw to return as a saviour on a different social plane is a figure of far-reaching historical importance. We shall not learn much about the true character and worth of these social migrants by taking note of the provisional verdict that has been passed on them by their contemporaries, for it is a matter of common form for them to be execrated as turn-coats by their own kin and kind and to be lauded as martyrs by their new-found comrades. We must form our own opinion on the evidence before us; and this empirical method seems likely to lead us on the whole to a favourable judgement; for, if we repeat our roll-call, we shall find that the ne'er-do-wells of the type of Catiline and the desperadoes of the type of Sextus Pompeius and Sertorius are outnumbered by the disinterested and self-sacrificing idealists—among whom we must reckon not only an Agis and a Cleomenes and a Tiberius and a Gaius Gracchus, who will be accorded the title by a general consensus, but also, at least provisionally, an Aristonicus and a Lenin, whose claim—if we do give them the benefit of the doubt—will evoke a volley of indignant protests. The final judgement on satanist-saviours such as these

¹ See V. C (i) (c) 2, vol. v, p. 71, above.

⁴ See the present chapter, p. 227, above.

⁵ See *ibid.*, p. 207, above.

⁶ See V. C (i) (c) 2, vol. v, pp. 179–80 and 181–8, above.

must be left to Time and History; but in regard to the outlaw-saviours in general there are certain matters of fact which we may venture to state here and now. In the first place these outlaws are apt to include in their number some of the noblest souls that are ever born into the Dominant Minority of a disintegrating civilization. In the second place their nobility is the cause of their being cast out by their own kin and kind. In the third place this is the cause of their adoption as leaders by their new proletarian comrades. In the fourth place the 'clouds of glory' which these social migrants trail, as they make their painful transit across a monstrous social gulf, do not thereafter 'fade into the light of common day'. The outlook and ideals and standards and examples with which the saviour-outcasts' advent irradiates the Internal Proletariat's murky native 'ideology' are the only elements of the futurist *Weltanschauung* that survive the inevitable failure of the futurists' forlorn hope. After 'the City of the Sun' has shown itself to have been a 'City of Destruction', the alien light in which it was momentarily and bewilderingly apparelled can still be seen shining above the smoking ruins and the blood-soaked sod; and then at last this glory can be recognized for what it is. It is the celestial light that streams from the mansions of the City of God.¹

Now that we have followed the saviour-outlaw to his journey's end, and have recognized the source of the light which this torch-bearer carries with him, we need not go on to call the roll of the native proletarian leaders with whom he throws in his lot, since we have reviewed these once already in bringing the Internal Proletariat on to our stage.² Our survey of would-be saviours with the 'time-machine' may therefore close at this point with a summary of our findings; and these can be stated in a single sentence: the 'time-machine' has proved to be the fraud which it was accused of being by its quizzical inventor.³ This pretentious piece of clockwork is not, after all, an effective substitute for the sword. The sword's results cannot be attained without shedding blood and taking life; and such murderous work can only be done by dint of the sword's cutting edge. That is why the would-be saviour with the 'time-machine' invariably rejects his new-fangled instrument and gets to work again with his well-proved weapon as soon as things become serious—just as, in our British warfare in the eighteenth century, the Scottish clansmen used to throw their muskets away and draw their claymores

¹ The track which this light imprints, in its transit, on the sensitive medium of legend is examined, in one particularly momentous test case, in V. C (ii) (a), Annex II, pp. 376-539, below.

² In V. C (i) (c) 2, *passim*, in vol. v, pp. 58-194, above.

³ For Lewis Carroll's elegant exposure of the catch in the mechanism of the 'time-machine' see the present chapter, p. 214, above.

whenever they were coming to close quarters with the 'redcoats'.

Our present inquiry, as far as we have yet carried it, has shown us that, while there may be no salvation in the sword, there is none in clockwork either. But happily these are not the only means of salvation to which human souls have had recourse in response to the challenge of a disintegrating civilization. We must carry the inquiry farther.

The Philosopher masked by a King.

A means of salvation that does not invoke the aid of either 'time-machine' or sword was propounded in the first generation of the Hellenic 'Time of Troubles' by the earliest and greatest of Hellenic adepts in the art of Detachment.

'There is no hope of a cessation of evils¹ for the states [of Hellas]—and, in my opinion, none for Mankind—except through a personal union between political power and philosophy and a forcible disqualification of those common natures that now follow one of these two pursuits to the exclusion of the other. The union may be achieved in either of two ways. Either the philosophers must become kings in our states, or else the people who are now called kings and potentates must take—genuinely and thoroughly—to philosophy.'²

In suggesting this cure for social troubles which were not peculiar to the Hellenic World of Plato's day but which are apt (as the Hellenic sage divined) to beset the mundane life of Man in all times and places and circumstances, Plato is at pains to disarm, by forestalling, 'the plain man's' criticism of the philosopher's prescription. He introduces his proposal as a paradox which is likely to bring down upon the sage's head a deluge of ridicule and disrepute. If he doesn't look out he will be mobbed, and he will be lucky if he isn't massacred! Yet, if Plato's paradox is a hard saying for laymen—be these kings or commoners—it is an even harder saying for philosophers. Is not the very aim of Philosophy a Detachment from Life?³ And are not the pursuits of Detachment and of Salvation incompatible to the point of being mutually exclusive? How can one set oneself to salvage a City of Destruction from which one is rightly struggling to be free? How, then, is the sage to reconcile the spiritual exercise to which

¹ Plato's phrase *κακῶν παύλα ταῖς πόλεσι* sounds like a reminiscence of Thucydides' phrase *ἀρχὴ μεγάλων κακῶν τῇ Ἑλλάδι* which has been quoted in this Study in IV. C (ii) (b) 1, vol. iv, p. 62, above. The outbreak of the Atheno-Peloponnesian War, to which the Thucydidean phrase refers, was the social débâcle from which Plato was fain to rally the Hellenes of his own generation.

² Plato: *Respublica*: 473 D, repeated in 499 B and 501 E. The passage has been quoted already in this Study in Part III. A, vol. iii, p. 93, above.

³ See V. C (i) (d) 10, pp. 132-48, above.

he has dedicated his life with a residual scruple of conscience which he can neither justify without ceasing to be a philosopher nor overcome without ceasing to be a man?

In the sight of the philosopher the incarnation of self-sacrifice—Christ Crucified—is a personification of folly.¹ Yet few philosophers have had the courage to avow this conviction, and fewer still to act upon it, without at the same time giving Conscience something of her due. For the adept in the art of Detachment has to start as a man who is encumbered with the common human feelings and who is born, *ex hypothesi*, into a 'Time of Troubles'. The sorrows and sufferings of the age, which have impelled this human being to follow the philosophic way of life, are manifestly pressing no less cruelly upon his contemporaries. He cannot ignore in his neighbour a distress of which his own heart gives the measure, or pretend that a way of salvation which is commended by his own experience would not be equally valuable to his neighbour if only it were pointed out to him. Is our philosopher, then, to handicap himself by lending his neighbour a helping hand? In this moral dilemma it is vain for him to take refuge in the Indic doctrine that Pity and Love are vices,² or in the Plotinian doctrine that 'action is a weakened form of contemplation'.³ Nor can he be content to stand convicted of intellectual and moral inconsistencies of which the Stoic Fathers—a Zeno and a Cleanthes and a Chrysippus—are roundly accused by Plutarch. This eclectic *malleus Stoicorum* is able to quote texts in which the third of the three doctors condemns the life of academic leisure in one sentence and recommends it in another within the limits of a single treatise.⁴ And, in so far as these philosophers of the Stoic school did declare in favour of self-sacrifice in the cause of social service, Plutarch charges them with having failed to practise in their lives the conduct which they were preaching in their publications and their lectures.⁵ We need not attempt to ascertain whether Plutarch's damaging accusations against Zeno and Zeno's disciples are altogether well founded. But we may remind ourselves of Plato's reluctant decision that the adepts who had mastered the art of Detachment could not be permitted to enjoy for ever afterwards the sunlight into which they had so hardly fought their way. With a heavy heart he condemned his perfected philosophers to redescend into the Cave for the sake of helping their

⁵ *Ibid.*, chap. 2.

unfortunate fellow men who were still sitting 'in darkness and in the shadow of death, fast bound in misery and iron';¹ and it is impressive to see this grievous Platonic commandment being dutifully obeyed by Epicurus.

The Hellenic philosopher whose ideal was a state of unruffled Imperturbability (*ἀραπαξία*) was also, apparently, the one and only private individual before Jesus of Nazareth to acquire the Greek title of Saviour (*σωτήρ*). That honour was normally a monopoly of princes and a reward for services of a public nature.² Epicurus's unprecedented distinction was an unsought consequence of the cool-headed philosopher's good-humoured obedience to an irresistible call of the heart.³ And the fervour of the gratitude and admiration with which Epicurus's work of salvation is extolled in the poetry of Lucretius makes it clear that, in this case at least, the title was no empty formality but was the expression of a deep and lively feeling which must have been communicated to the Latin poet through a chain of tradition descending without a break from Epicurus's own contemporaries who had known him, and adored him, in the flesh. The Lucretian hymn of praise to a saviour who has braved the direst terrors and dared the farthest flights in order to liberate his fellow men from the prison-house of Superstition has been quoted in this Study already in a different context.⁴ In another passage the same poet compares his Master's writings to the flowery pastures of the honey-bees, and declares these 'golden sayings' to be worthy of immortal life because they dissipate the terrors of the mind and push back the walls of the World.⁵ In a third passage Lucretius hails his saviour-philosopher as a god in words which Virgil afterwards adapted to the apotheosis of a saviour-statesman.

Deus ille fuit, deus, inclyte Memmi,
qui princeps vitae rationem invenit eam quae
nunc appellatur sapientia, quique per artem
fluctibus e tantis vitam tantisque tenebris
in tam tranquillo et tam clara luce locavit.⁶

¹ Plato: *Respublica*, 520, and Ps. cvii, 10, quoted in III. C (ii) (b), vol. iii, pp. 251-2, above. A catalogue of Hellenic philosophers who 'did take their share of the burden of public life, instead of being good for nothing but intellectual work, and making that an excuse for living out their lives in peace and quiet', is given by Aelian: *Variae Historiae*, Book III, chap. 17.

² See Pauly-Wissowa: *Real-Encyclopädie der Klassischen Altertumswissenschaft*, 2nd ed., second series, Halbband v, col. 1214. Ibid., col. 1218, it is pointed out that *σωτήρ* is not yet used as a standing epithet of Christ in the Pauline Epistles.

³ For this see the evidence cited by Professor Gilbert Murray in V. C (i) (d) 11, p. 154, footnote 2, above.

⁴ Lucretius: *De Rerum Natura*: Book I, ll. 62-79, quoted in II. C (ii) (b) 1, vol. i, p. 299, above.

⁵ Lucretius: *De Rerum Natura*, Book III, ll. 1-17.

⁶ Ibid., Book V, ll. 8-12, imitated by Virgil in *Eclogue* I, ll. 6-10 (see V. C (i) (d) 6 (δ), Annex, vol. v, p. 648, footnote 4, above).

This paean may sound extravagant in Christian ears; and yet,

If we would speak true,
Much to the Man is due

Who from his private gardens, where
He lived reserved and austere
(As if his highest plot
To plant the bergamot),¹

could bring himself, for the sake of his fellow men, to play the uncongenial part of a saviour-king at the cost of sacrificing an Imperturbability which, for this sage who had sought and found it, was the pearl of great price.

The paradoxical history of Epicurus brings out the grievousness of the burden which the philosophers have to take upon their shoulders if, in setting themselves to carry out Plato's prescription, they follow the alternative of themselves becoming kings; and it is therefore not surprising to find that Plato's other alternative—of turning kings into philosophers—has proved highly attractive to every philosopher with a social conscience, beginning with Plato himself. After considering the possibility that 'sometime—either in the boundless Past or in the Present (in some non-Hellenic clime, far beyond our horizon) or else in the Future—first-rate philosophers somehow have been or are being or will be constrained to undertake the government of a state',² Plato goes on to examine the alternative possibility that 'there might be sons of kings or potentates who were born philosophers'. And he submits that when they had been born with this natural endowment it would not be absolutely inevitable that they should be carried off, and that—however difficult it might be for them to be saved alive—it would at the same time hardly be possible to maintain that no single one among them all would ever be saved in all time.³ In this passage Plato exerts his great powers of persuasiveness to demonstrate the theoretical possibility that a saviour of souls from the wreck of a disintegrating society might be thrown up by the fortuitous operation of Time and Nature and Chance.⁴ But a theory which satisfies the intellect of a thinker in his arm-chair may not avail in practice to relieve him of the necessity of shouldering a social burden which will fall remorselessly on the philosopher's own shoulders if he cannot find any one else to play the part of Atlas.

¹ With these lines of Marvell's on Cromwell compare Aristocreon's couplet on Chrysippus, quoted by Plutarch in *op. cit.*, chap. 2.

² Plato: *Respublica*, 499 C.

³ *Ibid.*, 502 A-B.

⁴ This theoretically possible but practically improbable Platonic means of salvation may be compared with the Epicurean means of creation through one 'infinitesimal swerve' (*exiguum clinamen*) of a single atom (see Lucretius: *De Rerum Natura*, Book II, l. 292).

The answer to the question whether it is practical politics for our philosopher to count upon the spontaneous generation of philosophically minded princes will depend, of course, upon the actual frequency of the occurrence of this natural phenomenon; and a survey of the histories of the disintegrations of civilizations up to date will show that the miracle is quite as rare as Plato admits it to be in his disarming apologia for this tentative solution of his problem. In another context¹ we have come across two princes—born into two different worlds at dates more than a thousand years apart—who each made it his mission to use his princely power for promoting the moral unity of Mankind without having been prompted, so far as we know, by any philosopher-mentor. 'Behold how good and how pleasant it is for brethren to dwell together in unity'² was at any rate never suggested to Alexander the Great by a tutor who held that all non-Hellenes, and especially those in Asia, were slaves by nature, and whose political ideal, even for a Hellenic commonwealth, was a dominant minority living parasitically upon the fruits of the labours of a servile proletariat.³ And, if it is certain that Alexander did not learn his lesson from Aristotle, it is at least not proven that he learnt it from any other source than his own experience of things human and divine.⁴ Nor is there any evidence to impugn Ikhnaton's title to originality—though we know so much less about Ikhnaton's upbringing and antecedents than we know about Alexander's that in this Egyptian case the *argumentum ex silentio* is far from being conclusive. The most that we can say is that, in the present state of our knowledge, both Ikhnaton and Alexander would appear to fall within Plato's category of kings' sons who were born philosophers, who lived to reign, and who attempted, on the throne, to translate into political practice a philosophy that was apparently all their own.⁵ At the same time we shall find that these two

¹ In V. C (i) (d) 7, pp. 6-12, above.

² Ps. cxxxiii. 1.

³ The extremeness of the contrast between Alexander's vision of Homonoia and Aristotle's conception of Hellenism as a cultural superiority carrying with it a title to political and economic privileges is brought out in Tarn, W. W.: *Alexander the Great and the Unity of Mankind* (London 1933, Milford), p. 4. For Aristotle's gospel of social salvation through caste see the present Study, Part III. A, vol. iii, pp. 93-7, above.

⁴ The evidence on this question is brilliantly examined by Tarn in op. cit.

⁵ We are bound to speak in these guarded terms in presenting Alexander's and Ikhnaton's claims to originality; for, while it is hardly conceivable that Alexander can have acquired direct from Ikhnaton himself the philosophical idea which was common to these two princes—considering that, in all probability, Alexander did not even know that such a person as Ikhnaton had ever existed—it is not inconceivable that the Macedonian and the Theban philosopher-king may have each derived the idea, quite independently of one another, from a common source. On the one hand we know that the conception of a brotherhood of all Mankind through the common beneficence of God, as this is expressed in Ikhnaton's Hymn to the Aton, was anticipated in Egyptian literature in an earlier hymn—written at least a generation before Ikhnaton's day—which was addressed not to the Aton but to the tutelary god of Thebes who had been raised by Ikhnaton's predecessor Thothmes III to the divine presidency of a Pan-Egyptian

names exhaust our list; and this result of an empirical test will lead us to the conclusion that, if the philosopher is really in earnest in his quest for a philosophically minded prince who will satisfy the demands of the philosopher's social conscience and will thereby absolve the philosopher himself from going into politics, then the philosopher cannot afford simply to sit back and let Nature, uncontrolled, take her utterly wayward course. He must personally take a hand to the extent at any rate of developing and improving upon Nature where she shows herself susceptible of philosophic cultivation. If the philosopher wishes to insure against the risk of being called upon to play Atlas himself, he must be willing at least to play Atlas' mentor.

This solution of the philosopher's moral problem has been propounded by the Stoic Father Chrysippus.

'The sage', he says, 'will readily put up with the institution of kingship, because he will turn it to account. And if he cannot be

Pantheon under the title of Amon-Re (for this anticipation of Ikhnaton's intuition see V. C (i) (d) 6 (8), Annex, vol. v, p. 695, footnote 2, above). On the other hand we know that a deep impression was made upon Alexander's mind by what passed between him and the priests of Amon when he visited the god's oracle-shrine in the Oasis of Siwah in 331 B.C. According to Plutarch (*Life of Alexander*, chap. 27), Alexander wrote to his mother Olympias that he had received certain private answers from the oracle which he would communicate to her, and her only, on his return. This message, if authentic, might of course be no more than a hint of the declaration, which the oracle is reported to have made to Alexander, that his true father was not Philip the son of Amyntas but was the god himself. And while this declaration was taken seriously by Alexander—who could hardly help being thrilled at hearing himself hailed as the son of a divinity whom the Hellenes identified with Zeus—it might have meant no more on the lips of the Egyptian priests themselves than an official recognition of Alexander as a legitimate heir to the throne of a Pharaoh who had continued to bear the title of an adopted son of Re long after he had ceased in fact to be regarded as being himself a living god (see IV. C (iii) (c) 2 (β), vol. iv, pp. 412-13, and V. C (i) (d) 6 (8), Annex, vol. v, p. 653, above). It is possible, however, that even if these were the words and the meaning of the oracle of Amon when it was consulted by Alexander there may still have been something more than that in the Egyptian divinity's communication to the Hellenic war-lord; and some such larger message may be the source of Alexander's saying that 'God is the common father of all men, but he makes the best ones peculiarly his own' (Plutarch: *Life of Alexander*, chap. 27, quoted in V. C (i) (d) 7, p. 9, above). Did the oracle go on to tell Alexander that, in so far as his divine parentage was not a mere official formality but was a living spiritual truth, this parentage was no single human being's peculiar prerogative, and that, in making the best of his children peculiarly his own, God was charging them with the mission of bringing their fellow men to perceive and live up to the truth that all men were brothers in virtue of God's common fatherhood? In other contexts (in I. C (ii), vol. i, pp. 140-4, and IV. C (iii) (c) 2 (β), vol. iv, p. 413, above) we have seen that the principal motif in the drama of Egyptian religious history was the gradual admittance of the common man to a share in certain religious hopes and consolations which had originally been the monopoly of a divine king and his privileged courtiers. This gradually achieved realization of the spiritual brotherhood of all men may have been furthered by the elevation of Amon, the originally parochial god of Thebes, to the status of a high god who was the common lord and benefactor of all Mankind up to the farthest limits of the sweep of Pharaoh's sceptre (for the elevation of Amon to this position by the Emperor Thothmes III see V. C (i) (d) 6 (8), vol. v, pp. 530-1, and V. C (i) (d) 6 (8), Annex, vol. v, pp. 653-4 and 695, above). Was the brotherhood of Mankind through the common fatherhood—or at any rate the common providence—of God one of the special tenets of the worship of Amon-Re from Thothmes III's time onwards? And was this mystery successively and independently learnt from the lips of Amon's priests by Ikhnaton in the fourteenth and by Alexander in the fourth century B.C.?

King himself he will be at the King's elbow both in peace and in war (συμβιώσεται βασιλεὶ καὶ στρατεύσεται μετὰ βασιλέως).¹

And more than a century before these words were written by Chrysippus the policy which they formulate had been put into action by Plato.

No less than three times in his life Plato voluntarily, though reluctantly, emerged from his Attic retreat and crossed the sea to Syracuse in the hope of converting a Sicilian despot to an Athenian philosopher's conception of a prince's duty. In his encounter, on his first visit, with the hard-bitten Dionysius I, Plato's expectations may not have been great; but his hopes rose higher when the founder of the second dynasty of Syracusan despots was succeeded by a son who had been saved by his father's criminal success in wading through slaughter to a throne from the horrid necessity of gaining his own throne by so unpropitious a method. Plato's failure to make a philosopher-king out of Dionysius II was the great practical disappointment of Plato's life. Yet the unexpected barrenness of his second and third visits to Syracuse was partially redressed by the unexpected fruitfulness of the first; for the shaft which, on that first campaign, the Attic archer had shot into the Sicilian air had smitten the heart of a statesman who became the brother-in-law of each of the Dionysii in turn besides being the uncle of the younger of them. 'When', Plato wrote long afterwards in retrospect, 'I conversed with Dio, who was then still quite a young man, and instructed him in my notions of the principles of ethics as a practical ideal for him to act upon, I suppose I had no idea that, all unwittingly, I was really in some sense paving the way for a future overthrow of despotism.'² In the fullness of time Dio put down from his seat a nephew and brother-in-law who had refused to play that part of philosopher-king for which Plato had perhaps rather arbitrarily cast him; and, when Dio, installed in Dionysius's place, brought down upon himself the tragic verdict of being *capax imperii nisi imperasset*,³ the enterprise which had proved too much for this self-consciously enlightened Syracusan prince was executed by the un-self-consciously public-spirited Corinthian freeman Timoleon.⁴

Plato's relation to Dio is the classic example of the influence of the philosopher behind the throne in a situation in which the monarch and his mentor are in immediate personal contact. In later acts of the Hellenic 'Time of Troubles' this situation is

¹ Chrysippus: *De Vitis*, Book I, quoted by Plutarch: *De Stoicorum Repugnantiis*, chap. 20.

² Plato's Letters, No. 7, 327 A.

³ Tacitus: *Histories*, Book I, chap. 49.

⁴ See IV. C (iii) (c) 2 (β), Annex I, vol. iv, pp. 589-91, above.

reproduced in the relation of the Borysthenite¹ Stoic philosopher Sphaerus to the Spartan King Cleomenes III,² and in the relation of the Cumaeian Stoic philosopher Blossius to the Roman statesman Tiberius Gracchus and to the Pergamene revolutionary Aristonicus.³ In the history of the Hindu World the acts of the Emperor Akbar—the founder of a Mughal Rāj which served as a Hindu universal state—reflect the results of the Emperor's personal converse with a number of diverse spiritual advisers: Muslim, Zoroastrian, Christian, and Jain.⁴ In the history of the Western World in its so-called 'modern' chapter we can likewise discern in the acts of a Frederick and a Catherine and a Joseph the results of the personal intercourse between these 'enlightened' Hohenzollern and Muscovite and Hapsburg monarchs and the contemporary French philosophers from Voltaire downwards.⁵

Such direct personal relations are no doubt the most effective; but it is not impossible for a philosopher-mentor to find ways and means of exerting his influence on less onerous terms. For example, when the founder of the Stoic school was besought by the restorer of the Macedonian monarchy to come over into Macedonia and help him,⁶ Zeno did not choose to leave his Attic cloister in order to hang about a Pellan court, but sent his disciples Persaeus and Philonides as his proxies.⁷ Nor is it only on princes

¹ Sphaerus was a Borysthenite according to Plutarch (*Lives of Agis and Cleomenes*, chap. 23), but a Bosporan [i.e. a native of the Cimmerian, not the Thracian, Bosporus?] according to Diogenes Laertius (*Lives of the Philosophers*, Book VII, chap. 177).

² Since, according to Plutarch, op. cit., loc. cit., Sphaerus's sojourn at Sparta, in the course of which the future king imbibed the philosopher's teaching, had already begun when Cleomenes was still a child, it may be conjectured that Sphaerus's influence was a factor in the political career not only of Cleomenes but also of the Agiad saviour-king's Eurypontid predecessor and ensample Agis IV (see Bidez, J.: *La Cité du Monde et la Cité du Soleil chez les Stoïciens* (Paris 1932, Les Belles Lettres), p. 38).

³ See V. C (i) (c) 2, vol. v, pp. 179–80, above.

⁴ For Akbar's mentors, and for this eclectically minded monarch's attempt to found a new 'fancy religion' of his own by combining some of the elements of their respective doctrines, see V. C (i) (d) 6 (δ), Annex, vol. v, pp. 699–704, above.

⁵ The eighteenth-century French philosophers were admittedly inspired by seventeenth-century English forerunners; the writings of these English philosophers had been an academic response to the political challenge of a conflict between Crown and Parliament; and the English revolutions of the seventeenth century had been precipitated by a previous impact of Italian institutions and techniques and ideas upon Transalpine Europe (for the political reaction that was evoked, in England, by the enhancement of the royal power through an infusion of Italian efficiency, see III. C (ii) (b), vol. iii, pp. 357–63, above).

⁶ For Antigonus's bent towards philosophy see V. C (i) (c) 2, vol. v, p. 132, above, and Tarn, W. W.: *Antigonus Gonatas* (Oxford 1913, Clarendon Press), chap. 8: 'Antigonus and his Circle.'

⁷ Though Persaeus was Zeno's favourite disciple (and incidentally his fellow countryman), he does not appear to have proved himself an altogether satisfactory substitute for the Master himself; and he had an unfortunate end after his Macedonian pupil-patron had eventually disposed of him by making him exchange a mentor's job for a viceroy's. Antigonus placed Persaeus in command of the Macedonian garrison of Corinth; and here, in 243 B.C., the philosopher-in-harness allowed himself to be taken by surprise by the soldier-statesman-in-embryo Aratus of Sicyon. Thus Zeno's experiment in playing mentor to a prince at second hand did not turn out very well; and the philosopher who did have an effect upon King Antigonus Gonatas' life and work was neither Zeno's disciple nor Zeno himself but Bion the Borysthenite—a free lance who atoned for his

who are his own contemporaries that a philosopher-mentor is able to produce an effect at second hand. For, when the Stoic emperor-philosopher Marcus Aurelius (*vivebat* A.D. 121-80) mentions, in the roll-call of his spiritual creditors,¹ the names of two Stoic philosophers—Sextus of Chaeronea and Quintus Junius Rusticus—who had personally instructed him in his youth, he is citing only the last of many links in a golden chain of Stoic mentors of Roman statesmen which can be traced back without a break, through a quarter of a millennium and more, from the age of Marcus and Rusticus to the age of Scipio Aemilianus (*vivebat circa* 185-129 B.C.) and Panaetius.

This Rhodian Stoic Father of the second century B.C., who had sat, with Blossius, at the feet of Antipater of Tarsus, was the mentor of Marcus in a deeper sense than either Rusticus or Sextus. For, though the two Stoic tutors of the future emperor may have been the most celebrated representatives of their school in their day, they would never have had an opportunity to do their work had it not been for their distant Rhodian predecessor who had planted the first shoots of Stoicism in Roman soil. And the chain of philosopher-mentors that runs back from Rusticus to Panaetius has its parallel in the chain of statesmen-pupils that can be traced from Marcus through Domitian's victims Herennius Senecio and Arulenus Rusticus and Vespasian's victim Helvidius Priscus and Nero's victims Seneca and Thrasea Paetus and Claudius's victim Caecina Paetus and Caecina's wife Arria, who showed her husband how to die, till we come to Cato Minor—the Roman Stoic proto-martyr²—and finally to Panaetius's own pupil Gaius Laelius Sapiens, a contemporary of Scipio Aemilianus and Tiberius Gracchus who managed to live into the early years of the Roman century of revolution (133-31 B.C.) without allowing himself to be robbed of his sweetness and serenity.

The chain of Stoic mentors that runs back to Panaetius from the Emperor Marcus's tutors Rusticus and Sextus has a Neoplatonic parallel. Maximus of Ephesus (*vivebat circa* A.D. 300-71), who was the personal instructor of the Emperor Julian (*vivebat* A.D. 331-63), was himself a disciple of Aedesius, who had been in his day the favourite disciple of Iamblichus; and the nonsense which

disreputability by taking the trouble to answer in person the philosophically inclined prince's call. According to a modern Western scholar (Tarn, *op. cit.*, p. 235),

'It is probable that Bion's relations with Antigonus were very much closer than written tradition gives us any idea of. Among the fragmentary notices that remain relative to the two men or to their sayings, the parallels in language are too frequent and curious to be accidental.'

In support of this view, Tarn (*op. cit.*, p. 236, footnote 47) quotes six examples.

¹ This roll-call occupies the first book of Marcus's *Meditations*.

² For Cato Minor and the influence of his example on later generations of Roman aristocrats see V. C (i) (d) 1, vol. v, p. 390, and V. C (i) (d) 3, vol. v, p. 405, above.

Iamblichus had imported into the philosophy of Porphyry and Plotinus had been principally inspired by a work from the pen of a Babylonian medicine-man (a namesake of the Emperor Julian's) who had practised his trade on Hellenic ground in the reign of Marcus Aurelius.¹ This Julian the medicine-man stands to Julian the Emperor as the philosopher Panaetius stands to the Emperor Marcus.

There are also cases of a philosopher exerting an influence upon a prince or statesman across a gulf of time without any chain of intermediaries. For example, Gaius Gracchus was manifestly influenced by the ideas of his elder brother Tiberius's mentor Blossius²—though it is certain that Blossius died seven years before the year of Gaius's first tribunate,³ and uncertain whether Gaius had been in personal touch with Blossius even in the years before the date of the philosopher's flight from Italy after the murder of Tiberius.⁴ Timoleon, again, can hardly have been unaffected by the ideas of his precursor Dio's mentor Plato⁵ when he accepted the mission of sailing to Syracuse in Dio's wake—though by the year in which Timoleon set sail Plato had been some three years dead,⁶ and there is no record of any personal intercourse between the Attic philosopher and the Corinthian statesman during Plato's lifetime. The Indic philosopher Siddhārtha Gautama exerted his influence upon the Mauryan Emperor Açoka after a Time-interval of more than two centuries, if the Buddha died in 487 B.C. and Açoka came to the throne in 273 B.C. But perhaps the most extraordinary example of this exertion of influence at long range is Confucius's effect upon the minds and lives of the two Manchu emperors K'ang Hsi and Ch'ien Lung.

The first of these two Confucian princes did not begin to reign until more than two thousand years had passed since his mentor's death; the Far Eastern Society into which K'ang Hsi was born was sundered from the Sinic Society, in whose bosom Confucius himself had lived and taught, by a social interregnum which deepened the gulf dug by Time; and K'ang Hsi himself was not

¹ For the abortive Neoplatonic Church which Iamblichus tried to found and Julian to establish see V. C (i) (d) 6 (8), vol. v, pp. 565–7, and V. C (i) (d) 6 (8), Annex, vol. v, pp. 680–3, above. For the Emperor Julian's debt to the Babylonian medicine-man of the same name see V. C (i) (d) 6 (8), Annex, vol. v, p. 680, footnote 3, above.

² For Blossius's relation to Tiberius Gracchus and to Aristonicus see V. C (i) (c) 2, vol. v, pp. 179–80, above.

³ Gaius Gracchus was Tribune of the Plebs for the first time in 123 B.C.; Blossius had committed suicide after the defeat of Aristonicus in 130 B.C.

⁴ Blossius appears to have fled from Italy to Pergamum in 132 B.C., and it was only in this year that Gaius Gracchus returned to Italy from Spain.

⁵ For Plato's general idea of the right relation between philosophy and politics see the passage quoted from *The Republic* on p. 242, above. For Dio's spiritual debt to Plato, as this was estimated by Plato himself, see Plato's Seventh Letter, *passim*.

⁶ Timoleon sailed in 344 B.C.; Plato had died in 347 B.C.

even a native-born son of the Far Eastern Civilization, but was a cultural convert from a horde of recently installed barbarian conquerors. The influence of Confucius upon K'ang Hsi was a brilliant posthumous consolation prize for the disappointment, in Confucius's own lifetime, of the hopes of a Sinic sage whose offers of service had been rejected by the Sinic princes of the day;¹ and this posthumous reversal of fortune was as ironic as it was extreme, for, in offering himself in the role of mentor, the Sinic sage had not just been making a half-hearted compromise with an importunate conscience in the manner of his Hellenic and Indic counterparts. In Confucius's eyes the role which Confucius never succeeded in playing effectively until long after his death was no grudgingly paid debt to the ineradicable human nature of the social animal under the sage's cloak: it was for him the only role in which a philosopher could properly follow his spiritual calling.²

Our survey of philosopher-mentors has revealed some notable instances of successful education. The state of the Indic World under the rule of Gautama's pupil Açoka and that of the Hellenic World under the rule of Panaetius's pupil Marcus bear out Plato's contention³ 'that social life is happiest and most harmonious where those who have to rule are the last people who would choose to be rulers'. And there are other enlightened monarchs who, though they may not have quite lived up to that standard, have at any rate testified to the truth. Antigonus Gonatas, for example, 'when he saw his son behaving all too violently and insolently towards his subjects, said to him "Don't you know, my boy, that our monarchy is only a glorified slavery?"' ⁴ 'Frederick William called himself "the field marshal and finance minister of the King of Prussia", Frederick the Great "the first servant of the State"'.⁵ Yet, in spite of a few successes such as these, our general conclusion will be that the device of serving Humanity through the soul of a king—as a ventriloquist talks to his audience through the mouth of his puppet—is not a satisfactory solution of the philosopher's personal problem of paying his moral debt to Society without abandoning his own precious Detachment.

We observe that a Dionysius II, who had been born and brought

¹ Confucius's career of contemporary failure and posthumous success has been cited as an example of Withdrawal-and-Return in III. C (ii) (b), vol. iii, pp. 328-30, above.

² In Confucius's view the ultimate purpose of self-cultivation, which was the Superior Person's first duty, was the purification of his neighbour and of the entire community. Confucius thought of himself, not as a happily detached sage, but as an unfortunately unemployed man of action (see Maspéro, H.: *La Chine Antique* (Paris 1927, Boccard), pp. 466-7 and 543).

³ In *Respublica* 520 D, quoted in this Study already in III. C (ii) (b), vol. iii, p. 252, above.

⁴ Aelian: *Variae Historiae*, Book II, chap. 20.

⁵ Bruford, W. H.: *Germany in the Eighteenth Century* (Cambridge 1935, University Press), p. 28.

up in the purple, turned out to be as unpromising a subject for Plato's educative efforts as a Dionysius I who had had to seize his power by force; and neither of the two Dionysii is so discouraging a case for the experimental philosopher as their kinsman Dio; for Dio had the double advantage of possessing an aptitude for philosophy without being either a reigning despot or a despot's heir apparent; yet his mere proximity to a throne had spoilt Dio to a degree which made it almost a foregone conclusion that he would come to grief in the high-minded enterprise on which he eventually embarked. Dio aspired to transfigure his native city-state of Syracuse into Plato's ideal commonwealth by appearing in the role, not of saviour-despot, but of saviour-liberator; but the sequel to his *coup* of ejecting his despot-nephew Dionysius was tragically ironic. The would-be liberator lived to commit a tyrant's crimes before dying a tyrant's death which left the coast clear for his evicted kinsman to come back again. And the sequels to the labours of other philosopher-kings and philosopher-statesmen have been equally disappointing. Though Timoleon was able to execute Dio's unfulfilled design, even Timoleon's success was no more than ephemeral. By the date of the Corinthian elder-statesman's death at Syracuse, Agathocles had already been born at Thermae to become a greater scourge to the Siceliots than either of the Dionysii. The sequel to the career of Sphaerus's pupil Cleomenes was the tyranny of Nabis and the subsequent collapse of the Lacedaemonian body politic. The sequel to the career of Blossius's pupil Tiberius Gracchus was a century of revolution and civil war which tore the Roman body politic to pieces and was only brought to an end at the price of acquiescence in a permanent dictatorship. The sequel to the philosophic eclecticism of Akbar was the religious bigotry of Awrangzib. The West European enlightenment which seeped through philosophical channels into Central and East European courts in the eighteenth century brought in its trail an infection of the West European political virus of Nationalism which first attacked the *bourgeoisie* and is now ravaging the masses. Bion's pupil Antigonus Gonatas was succeeded in due course by a Philip V, whose personal folly undid the political results of Gonatas' personal self-discipline. Panaetius's pupil Marcus deliberately broke with an admirable custom of adoption, which had been inaugurated by Nerva, in order to bequeath the Principate to his own physical offspring in the person of Commodus! The Babylonian medicine-man's pupil and namesake Julian taught Theodosius how to turn a Neoplatonist emperor's fanaticism to a Christian fanatic's account. The personal holiness of Gautama's pupil Açoka did not save the Mauryan

Empire from collapsing at a blow from the fist of the usurper Pushyamitra. And in the Far Eastern World the eighteenth-century splendour of the reign of Confucius's pupil Ch'ien Lung was followed, within little more than forty years from the death of this second Manchu philosopher-emperor, by an age of disasters and humiliations which was opened by the first salvo of British naval ordnance in 'the Opium War' and which was not yet in sight of its end in a year which was the ninety-eighth anniversary of that sinister date.

Nor is the picture different when we turn from these kings who have been made philosophers by force of example to those who have been born philosophers without requiring mentors. Ikhnaton's vision of peace through fraternity was marred, even before the Egyptian visionary's death, by the beginning of the break-up of 'the New Empire'; and in the sequel even the homelands of the Egyptian Society in the Nile Valley were only saved from barbarian clutches by the rude hands of soldier-emperors who unceremoniously thrust their way on to a throne which Ikhnaton and his like were too delicate to hold. As for Alexander's vision of the same ideal goal of human endeavours, it did, as we have seen,¹ continue to haunt the Hellenic World thereafter. But the immediate sequel to Alexander's career was not Augustus's partially successful translation of a Macedonian dream into a Roman reality. The immediate sequel was the warfare of diadochi and epigoni who contended with one another, for two live-long generations, over the spoils of the Achaemenian Empire in campaigns that ravaged the domains of no less than five civilizations.² The practical effect of Alexander's career was thus the very opposite of the philosophic war-lord's intentions. So far from living to establish the ideal *Pax Oecumenica* of which he dreamed, he merely lived to destroy an actual *Pax Achaemenia* which he only learnt to appreciate at its proper worth after he had dealt it its death-blow.³

Thus an empirical survey which registered a certain amount of

¹ In V. C (i) (d) 7, pp. 6-11, above.

² The Hellenic, Syriac, Egyptian, Babylonian, and Indic worlds were all involved in the sordid struggles of the Macedonian *conquistadores*.

³ For Alexander's tardy appreciation of Persian virtues see V. C (i) (c) 1, vol. v, pp. 51-2, and V. C (i) (c) 7, in the present volume, p. 9, above. This feat of insight bears witness both to the sublimity of Alexander's genius and to the profundity of his failure. In his personal attitude towards an imperial people with whom he had become acquainted only as their conqueror and supplanter, Alexander was able to rise above a Hellenic prejudice which had been part and parcel of the Hellenic tradition throughout the century and a half that had passed since the failure of Xerxes' attempt to conquer European Greece, and which, among the Hellenes of Alexander's own generation and entourage, had merely been confirmed and accentuated as a result of Alexander's military victories. Yet this extraordinary spiritual achievement of Alexander's, which puts all his military glory into the shade, was the Dead-Sea fruit of an act of wanton destruction which it proved impossible for Alexander to repair, just because he was almost the only Hellenic of this day who learnt to appreciate the worth of the thing that had been destroyed by Alexander's own military prowess.

success at the first assay now reveals an overwhelming preponderance of failure when the investigation is pursued, beyond the first chapter, to the end of the story. The philosopher-king—be he a philosopher born or the receptive pupil of a philosopher-mentor—turns out, after all, to be incapable of saving his fellow men from the shipwreck of a disintegrating society. To this extent the facts speak for themselves; but we have still to ask whether they also provide their own explanation. And, if we consult them again with this question in mind, we shall again find that they duly yield an answer.

This answer is indeed implicit in the passage of *The Republic* in which Plato introduces on to his stage the figure of the prince who is a born philosopher. After putting forward his postulate that, sometime and somewhere, at any rate one such born philosopher-prince will live to ascend his father's throne and will there make it his business to translate his own philosophical principles into political practice,¹ Plato eagerly jumps to the conclusion that 'a single one such ruler would suffice—if he could count on the consent of the governed (πόλιν ἔχων πειθομένην)—to carry out in full a programme that looks quite impracticable under existing conditions'. And the conductor of the argument then goes on to explain the grounds of his optimism. 'Supposing', he continues, 'that a ruler were to enact our ideal laws and introduce our ideal social conventions, it would assuredly not be beyond the bounds of possibility that his subjects should consent to act in accordance with their ruler's wishes.'²

These final propositions are manifestly essential to the success of Plato's scheme for making a philosopher's Utopia work out 'in real life'; but they are no less manifestly dependent upon an enlistment of the faculty of mimesis; and at earlier points in this Study³ we have observed that this resort to a kind of social drill—with the object of bringing and keeping an uncreative rank-and-file abreast of a creative leader—is a short cut which is apt to bring those who take it to destruction instead of expediting their journey towards their goal. The inclusion of any element of coercion—mental or physical—in the social strategy of the philosopher-king would therefore perhaps suffice in itself to account for his failure to bring to pass the salvation which he professes to offer; and, if we examine his strategy more closely from this standpoint, we shall find that his use of coercion is particularly gross. For, though Plato is at pains to give the philosopher-king's government the

¹ For this postulate of Plato's see the present chapter, p. 245, above.

² Plato: *Respublica*, 502 A-B.

³ In III. C (ii) (a), vol. iii, pp. 245-8, and IV. C (iii) (a), vol. iv, pp. 119-33, above.

benefit of the consent of the governed, it is evident that there would be no purpose in the philosopher's surprising personal union with a potentate who is to be an absolute monarch unless the despot's power of physical coercion is to be held in readiness for use in case of necessity; and the case in point is as likely to arise as it is obvious to foresee.

'The nature of the peoples is inconstant, and it is easy to persuade them of a thing, but difficult to hold them to that persuasion. Accordingly it is expedient to be so equipped that, when their belief gives out, one will have it in one's power to make them believe by force.'¹

In these wholesomely brutal words Machiavelli brings out a sinister feature in the strategy of the philosopher-king which Plato almost disingenuously slurs over. If ever the philosopher-king finds himself at a point at which he is no longer able to gain his end by the exercise of charm or bluff, he will throw away his copy-book of moral maxims and proceed to enforce his will by laying about him with a sword which he took care not to lay aside when he exchanged his royal robe for a philosopher's mantle. Even a Marcus reluctantly resorted to this *ultima ratio regum*, and that not only against Parthian and Marcomannian fighting-men beyond the frontier, but also against unarmed and unresisting Christians in the interior.² Such a denouement is a scandal which brings the philosopher-king's whole profession into disrepute; for the mantle is an even more deceitful cloak than the robe for concealing a lethal weapon. Once again we are presented with the shocking spectacle of Orpheus changing into a drill-sergeant;³ and in this case the simile is a literal description of the fact; for the king who drops the philosopher's mask is a drill-sergeant whose instruments are not the psychological devices of 'personal magnetism' and 'the confidence trick', but the physical weapons of the cat-o'-nine-tails and the firing-squad.

If a flagrant resort to coercion thus turns out to be the false step that explains the failure of the philosopher-king when he is a philosopher born, the same explanation holds good *a fortiori* when the philosopher-king is merely the royal pupil of an academic mentor. In proof of this it will be sufficient to take note of Plato's analysis of his own motives for accepting the invitation to revisit Sicily which he received, on Dio's initiative, from the Younger Dionysius after the accession of that prince to his father's throne at Syracuse.

'After [the death of the Elder Dionysius] Dio came to think that perhaps he might not for ever remain solitary in holding the views which

¹ Machiavelli, Niccolò: *Il Principe*, chap. 6, quoted already in V. C (i) (d) 1, vol. v, p. 389, footnote 3, above.

² See p. 202, footnote 1, above.

³ For this simile see IV. C (iii) (a), vol. iv, p. 123, above.

he himself had acquired as a result of the proper instruction [imparted to him by Plato during the Athenian philosopher's earlier visit to Syracuse]. He noticed, from observation, that the same views were taking root in other minds too—not in many, but any way in some; he thought that, with Heaven's help, [the Younger] Dionysius might perhaps come to be numbered among these converts; and, if anything like that did happen, this in turn, as Dio saw it, would raise his own life, and the life of the whole Syracusan community, to a hardly imaginable degree of felicity. Further, Dio thought it essential that at all costs I should come to Syracuse post-haste to collaborate with him in all this. He had not forgotten our previous intercourse with one another and how effectively this had stimulated in him a passion to live the life that was finest and best. If he could now achieve the same result in Dionysius, which was what he had set himself to do, then he had great hopes of being able to make the life of happiness and truth into a general and permanent institution of the country, without the bloodshed and the loss of life and the other evils that have come to pass in the event.

'Having come to these conclusions—which were right—Dio persuaded Dionysius to send me an invitation, and at the same time he sent a personal message of his own, begging me to come post-haste at all costs, before others would have time to gain Dionysius's ear and divert him into some other way of life than the best way. At the risk of prolixity I shall recapitulate the considerations with which Dio supported his plea. "What opportunities", he asked, "are we to wait for that could be more favourable than those which have now been presented by a heaven-sent piece of good fortune?" And he went on to dwell, in detail, upon the extent of the Dionysian dominions in Italy and Sicily, and upon his (Dio's) own power in the state; upon Dionysius's youth and the intensity of his passion for an education in philosophy; upon the ripeness of his (Dio's) own nephews and other intimate friends for conversion to the doctrine and the way of life which I consistently preached; and upon the strength of the influence which they would have on Dionysius, in helping to convert him along with them. "And so (he concluded) now, if ever, is the moment for a realization of all our hopes of a personal union between philosophy and political power¹ in a state of large calibre."

"These—with many others in the same strain—were the arguments with which Dio sought to prevail upon me. As regards my own opinion. it was divided between an anxiety on the score of how things might go with the young people—considering how volatile are the passions of youth and how often they react by "going into reverse"—and a confidence in the character of Dio, which was, I knew, stable by nature and was now also fortified by the comparative maturity of his age. So I long debated and hesitated whether I should go, as I was asked, or what I should do, till in the end I inclined to the opinion that, if ever a philosopher was to set himself to realize his ideas about legislation and government,

¹ See the passage from *The Republic*, 473 C-D, that has been quoted in Part III. A, vol. iii, p. 93, and again in the present chapter and volume, p. 242, above.—A.J.T.

this was just the occasion for making that experiment, since I now had only to convince one person thoroughly and at this one stroke I should have achieved a whole world of good.

"These were the considerations that led me to take the bolder course and set out from home, not at all in the spirit with which some people have credited me, but under a most powerful moral compulsion not to lose my own self-respect, as I was in danger of losing it if I were to be convicted, in my own judgement, of being simply nothing but a mere voice—a fellow who would never take action, not even a hand's turn, if he could help it. I was also afraid of waking up to find that I had proved false, among other things, to my friendship with my former host, Dio, and this at a time when he was really in no little danger. Suppose that some misfortune were to overtake him and he were to be banished by Dionysius and his other enemies and then arrive at my door as a fugitive and interrogate me like this: "Plato, I come to you as an exile, not asking for, or wanting, foot and horse for fighting my enemies, but wanting and asking for those persuasive arguments with which you, of all men, as I know, have the ability to arouse in young men an enthusiasm for goodness and righteousness and, in the same act, to bring them into friendship and good-fellowship with one another, whenever occasion arises. It is because I have been left in want of this assistance on your part that I have now had to leave Syracuse and appear here and now on your door-step. But it is not this plight of mine that is the worst reproach to you; for what about your obligations to Philosophy? Are you not always singing her praises and complaining that she is without honour among the rest of Mankind? Yet hasn't she, like me, now been betrayed as far as it has lain with you? If we had happened to be living at Megara, no doubt you would have come to my aid in the cause in which I was invoking your help, on pain, if you had hung back, of feeling yourself the vilest creature on Earth. And now, [when I have called you to Syracuse,] do you really think that you could plead the length of the journey and the immensity of the voyage and the fatigue as a valid defence against an imputation of cowardice? You know very well that you would not have a leg to stand on!"

"If I had had to meet this attack, what plausible answer would there have been for me to make? Just none at all. And so I came for the most unimpeachable of reasons that mortal man could ever have. And on this account I left my own occupations, which were by no means despicable, and put myself under a tyranny which might well be thought unbecoming both to my teaching and to myself. In coming in spite of all this, I acquitted myself of my duty to Zeus Xenios and cleared myself of all reproach on the part of Philosophy—who would have been put to shame in my person if, through defect of hardihood and courage, I had got myself into real disgrace."¹

If this analytical reminiscence is a true account of the workings of Plato's mind at the time when Dionysius's invitation was awaiting

¹ Plato, Letter No. 7, 327 B-329 B.

Plato's answer, it tells us that Plato's mission was doomed *a priori* to failure; for neither of the two principal considerations that he here attributes to himself can bear examination. We here see the philosopher not only yielding to the temptation to exploit the use of the despot's material power as a short cut to the translation of a Utopia into 'real life', but even being influenced by a self-regarding feeling which looks less like a genuine prick of conscience than like a twinge of the scholar's painful sense of inferiority to the man of action; and, whether we adopt the more or the less charitable of these two alternative interpretations, we are bound to discern in either of them a latent lack of confidence in the policy of Detachment on which, *ex hypothesi*, the philosopher has staked his personal hope of salvation.

In fact, the philosopher-king is doomed to fail because he is attempting to unite two contradictory natures in a single person. The philosopher stultifies himself by trespassing on the king's field of ruthless action, while conversely the king stultifies himself by trespassing on the philosopher's field of loveless and pitiless contemplation.¹ Like the saviour with the 'time-machine', the philosopher-king is driven, sooner or later, into proclaiming his own failure by drawing a weapon which convicts him of being a saviour with the sword in disguise. If the sword spells self-defeat and the 'time-machine' self-deception, the philosopher's mantle and the prince's mask are emblems of hypocrisy; and, since 'hypocrite' and 'saviour' are incompatible roles, our search for a genuine saviour must be carried further.

The God Incarnate in a Man.

We have now examined three different epiphanies of the creative genius who is born into a disintegrating society and who bends his powers and energies to the task of coping with the challenge of social disintegration by finding and making some effective response. We have reviewed in turn the would-be saviour of Society who puts his trust in the sword, and the would-be saviours from Society whose respective instruments are the 'time-machine' and the philosopher-king. And in each case we have found that the vaunted way of salvation leads nowhere but to the brow of a precipice. There is no salvation in the sword. It proves impossible after all, as might have been expected *a priori*, to make a deadly weapon do the very opposite of the work for which it has been designedly forged. However cunning the hand that wields it, and

¹ For this attitude of mind, which in Greek is called *θεωπία*, see III. C (ii) (b), vol. iii, p. 253, and V. C (i) (d) 10, in the present volume, pp. 144-8, above.

however well-meaning the will that governs the hand, the sword can neither be compelled to bring salvation nor prevented from dealing the destruction which it is its nature to bring to pass. The would-be saviour with the sword is self-condemned to self-defeat; and in exposing him for the failure that he is we have also exposed his two competitors; for we have found that both the would-be saviour with the 'time-machine' and the sage who operates as the mentor of a philosopher-king are apt, at the critical moment, to drop their pretentious instruments and take to the old-fashioned killing-tool. We have thus reduced our three ostensibly diverse types of would-be saviour to the single figure of a man with a sword. Whether the weapon happens at the moment to be drawn or sheathed or cloaked, it is the only means of salvation which the man has to offer in the last resort.

What conclusion are we to draw from this series of disillusionments? Do they signify that any and every attempt to find and bring salvation is doomed to end in destruction if the would-be saviour is merely a human being? Let us remind ourselves of the context of the classic statement of the truth which we have been verifying empirically in this chapter. 'All they that take the sword shall perish with the sword' are the words of a saviour who gives this as his reason for commanding one of his followers to sheathe again a sword which this henchman has just drawn and used. In thus taking to the sword at the critical moment, the henchman has done his best according to his present lights.¹ He has taken his own life in his hands for the sake of playing the man on his Master's behalf. But the Master swiftly and sternly rejects an offer of self-sacrifice that is made in this militant form. So far from following up this first blow with a general counter-offensive in the fashion of Judas Maccabaeus² or Ismā'il Shāh Safawī³ or Guru Govind Singh,⁴ Jesus of Nazareth first heals the wound that Peter's sword has already inflicted,⁵ and then delivers his own person up to suffer the last extremes of insult and torment.

Nor is Jesus moved to choose this agonizing alternative by any fear that, if he did take to the sword, he might be courting a military defeat. 'Thinkest thou', he says to Peter, 'that I cannot now pray to my Father, and he shall presently give me more than twelve legions of angels?'⁶ And to Pilate he says: 'If my kingdom were

⁵ Luke xxii. 51.

⁶ Matt. xxvi. 53.

of this world, then would my servants fight, that I should not be delivered to the Jews; but now is my kingdom not from hence.¹ Jesus's motive for refusing to take to the sword is thus not any practical calculation that, in the particular circumstances, his own force is no match for his adversaries'. He believes that, if he did take to the sword, he could be certain of winning all the victory that swordsmanship can procure. Yet, believing this, he still refuses to use the weapon. Rather than conquer with the sword he will die on the Cross.

In choosing this alternative in the hour of crisis, Jesus is breaking right away from the conventional line of action which has been taken by the other would-be saviours whose conduct we have studied. What inspires the Nazarene saviour to take this tremendous new departure? We may answer this question by asking, in turn, what distinguishes him from the saviours who have refuted their own pretensions by turning into swordsmen. The answer is that these were men who knew themselves to be no more than human, whereas Jesus was a man who believed himself to be the Son of God.² Are we to conclude that 'salvation belongeth unto the Lord',³ and that, without being in some sense divine, a would-be saviour of Mankind will always be impotent to execute his mission in act and deed?⁴ Now that we have weighed and found wanting those *soi-disant* saviours who have avowedly been mere men, let us turn, as our last recourse, to the saviours who have presented themselves as gods.

To pass in review a procession of saviour-gods, with an eye to appraising their claims to be what they profess to be and to do what they profess to do, is perhaps an unprecedentedly presumptuous application of our habitual method of empirical study. And, if we are to venture upon the attempt, it may be easiest to begin with those claimants whose performance of the saviour-god's part has been the most perfunctory. Let us start with the *deus ex machina* and try to ascend from this possibly infra-human level towards the ineffable height of the *deus cruci fixus*. If dying on the Cross is the utmost extreme to which it is possible for a man to go in testifying to the truth of his claim to divinity, appearing upon the stage is perhaps the least trouble that an acknowledged god can decently take in support of a claim to be also a saviour.

On the Attic stage in the century which saw the breakdown of

¹ John xviii. 36.

² For the association between the revelation of Jesus's divinity and the announcement of his Passion see V. C (i) (d) 11, p. 165, with footnote 3, above. ³ Ps. iii. 8.

⁴ In V. C (i) (d) 9 (γ), pp. 124-32, above, we have already observed how this conclusion forces itself upon would-be saviours of the futurist school as the insistent lesson of their own repeated and cumulatively disastrous failures to achieve their aim by their own method.

the Hellenic Civilization the *deus ex machina* was a veritable god-send to embarrassed playwrights who, in an already enlightened age, were still constrained by a tenacious convention to take their plots from the traditional corpus of Hellenic Mythology. If the action of the play had in consequence become caught, before its natural close, in some, humanly speaking, insoluble tangle of moral enormities or practical improbabilities, the author could extricate himself from the toils in which he had been involved on account of one of the conventions of his art by resorting to another of them. He could appeal to his stage-manager for help, and that obliging and resourceful technician would promptly wheel or hoist on to the stage a god out of the blue to effect a denouement. This is the role of Artemis in Euripides' *Hippolytus* and of Athena in the same poet's *Ion* and *Iphigeneia in Tauris*; and this trick of an Attic dramatist's trade has given scandal to scholars. The solutions of human problems that are propounded by these Olympian interventionists neither convince the human mind nor appeal to the human heart. Was Euripides simply making use of a traditional convention of his art without troubling to question or criticize it? That can hardly be believed of a 'high-brow' who was patently a born sceptic, and whose natural scepticism had been vehemently stimulated by a catastrophic social experience in which it had been his fortune to participate. Or was he perhaps just professionally incompetent? Was he driven to resort to this clumsy trick by finding that he had tied himself into knots from which he could see no other way of escape? No, it is impossible to attribute such silliness to an intelligence which in all else is so dazzlingly clever. The puzzle seems to admit of only one solution. If our fifth-century Attic dramatist was not a 'low-brow' and not a fool, must he not have been a knave?

It has, in fact, been seriously suggested by one modern Western scholar that Euripides never brings on a *deus ex machina* without having his tongue in his cheek. According to Verrall, the sly Athenian rationalist has made this quaint traditional convention serve his own purposes by using it as a screen for sallies of irony and blasphemy upon which he could hardly have ventured with impunity if he had come out into the open. This screen is ideal in texture, since it is impervious to the hostile shafts of the poet's 'low-brow' adversaries while it is transparent to the knowing eyes of his sophisticated brother sceptics. In fact, the Euripidean use of the *deus ex machina* is an artistic *tour de force* which is a consummate artist's *chef d'œuvre*.

'It is not too much to say that on the Euripidean stage whatever is said by a divinity is to be regarded, in general, as *ipso facto* discredited.

It is in all cases objectionable from the author's point of view, and almost always a lie. "By representing the deities he persuaded men that they did not exist."¹ . . . This character of mere theatrical and conventional pretence, contradictory to the sense of the part and transparent to the instructed reader, which Lucian² rightly attributes to the machine-gods of Euripides, is nowhere better illustrated than by the Athena of the [*Iphigeneia in Tauris*].³

In this play the goddess ostensibly intervenes in order to stop a barbarian tyrant from catching and killing some distinguished Hellenic fugitives. In Verrall's opinion this 'happy ending' is not meant to be taken seriously. The spectator of the performance—or reader of the text—is intended to understand that the play is after all a tragedy. The fugitives are not really going to escape their persecutor's clutches; it is made perfectly clear, all along, that they have not a dog's chance; and, what is more, they do not morally deserve any miraculous reprieve; for it cannot be denied that they have brought this fate upon themselves by trying to practise a fraud upon their barbarian captor. Well, but is not Thoas a savage in fighting whom all is fair? Yes, but are not his captives Hellenes who should scruple to retort even to savagery with deceit?⁴ And how did these representatives of Civilization come to place themselves in the false position for which they are going to pay so tragic a penalty? Were they not 'let in' by the very divinities who are now 'letting them down'? What possessed Orestes to think of stealing the holy image of the Tauric Artemis? Was it not Apollo who sped him on this knavish errand with the promise that, if he brought the stolen statue to Athens, he might hope to win as his reward a breathing-space from the cruel malady which had descended upon him as the penalty for the commission of a greater crime in obedience to a previous behest of the same divinity?⁵

The same scholar applies the same *apparatus criticus* to the interpretation of Euripides' *Ion*. Just as, according to Verrall, Iphigeneia and Orestes and Pylades and the chorus of Attic women are not miraculously reprieved by Athena but are tragically put to death—in the sight and hearing of any audience that

¹ Aristophanes: *Thesmophoriazuse*, ll. 450-1, apropos of Euripides.

² Lucian: *Zeus Tragedus*, § 41.

³ Verrall, A. W.: *Euripides the Rationalist* (Cambridge 1895, University Press), pp. 138 and 201.

⁴ A modern Western reader who finds Euripides' *Iphigeneia in Tauris* too alien in its atmosphere for him to appreciate its point can see this 'ancient' drama replayed in 'modern' dress if he will attend a performance of William Archer's *The Green Goddess*. The colloquy between the Rajah and the *parlementaire ex machina* from the rescue squadron of the R.A.F. raises an issue—'What is Civilization?'—which is precisely the issue that arises (undeclared) between Thoas and Athena.

⁵ Euripides: *Iphigeneia in Tauris*, ll. 85-92 and 1438-41 b.

has ears to hear and eyes to see—so, according to the same interpreter, the illegitimacy of Ion's birth and the unchastity of Creusa's life before her marriage are tragically exposed through the thread-bareness of the veil which Athena makes a pretence of throwing over this pair of scandals.¹

If there is any substance in Verrall's interpretation of Euripides' plays, it would seem to be the practice of the Euripidean gods first malevolently to inveigle the human *dramatis personae* into putting themselves in the wrong, and then heartlessly to abandon their dupes to a doom which ought in justice to overtake the divine mischief-makers and not their human victims. But who, 'in the last analysis', are these odious divinities? Have they really any independent existence in themselves? Are they not, rather, the mythical 'externalizations' of psychological forces that 'in real life' are immanent in the souls of the human actors? And is not Euripides' esoteric theme the moral frailty of his own enlightened countrymen and contemporaries?

On this showing, the *deus ex machina* is nothing but a caricature of the human saviour with the 'time-machine', whose trick we have seen through already.² In bringing this mountebank on to his stage in the mask of a god and not of a mortal the playwright is hinting to his audience that he intends this character to be taken satirically in the spirit of Lewis Carroll, and not seriously in the spirit of Mr. Wells.³ The *deus ex machina* thus turns out to be a joke—and that a bitter one. And the Olympians would hardly be able to rehabilitate themselves even if they could convince us that Verrall's theory is moonshine and that the Euripidean Artemis and Athena are genuinely doing all that they are professing to do. Morally it makes little difference whether a miraculously 'happy ending' is a genuine miracle or a fake; for it cannot in either case save a tragedy from being anything but what it is. What are we to think of divine shepherds who neglect their duty towards their human flocks until the wretched sheep have fallen into the deepest moral errors and suffered the utmost spiritual agonies of which their nature is capable? Are we to acquit them of blame just because, at the thirteenth hour, they are kind enough to avert—by an exercise of magical power which costs them no exertion—

¹ See A. W. Verrall's reconstruction of the epilogue to the *Ion*—as the author (according to the scholar) intends us to read it between the lines of the play—on pp. xx–xliii of his edition and translation of *The Ion of Euripides* (Cambridge 1890, University Press).

² In the present chapter, pp. 213–42, above.

³ This moral depreciation of traditional divinities in the Hellenic World has its analogue in the Indic World in the intellectual depreciation of the members of a kindred pantheon (see V. C (i) (d) 7, pp. 19–20, above). In either case a human enlightenment has taken the shine out of the gods to a degree at which their once radiant colours have faded to a positively infra-human drabness.

some of the material consequences of moral disasters which, owing to their neglect, are now beyond repair? Divinities who behave like this cannot defend themselves by pleading that they are practising what has been preached to them by human philosophers;¹ for Epicurus, as we have seen,² had not the heart, when it came to the point, to lower his own conduct to the level of his doctrine; and, if a human sage knew better than to take a heartless philosophy seriously, even when he had invented it himself, his divine disciples, too, ought to know better *a fortiori*. Nor is the practice of tempering a habitual neglect with an occasional intervention morally salvaged by expanding the field of the *deus ex machina*'s perfunctory performance from the stage of the theatre at Athens to the sum-total of the Universe, as Plato expands it in a myth which we have already quoted in another context.³ The *deus ex machina* is indefensible in any field and on any hypothesis. And yet we need not be discouraged by this outcome of our first essay towards a survey of saviour-gods; for a train of ideas that starts with a conceit may end in a revelation. If 'Cloudecockooland' can open human eyes to the Kingdom of Heaven,⁴ it is not impossible that the *deus ex machina* may put us, if we persevere, on the track of another epiphany of God which 'unto the Greeks' was likewise 'foolishness'⁵—the figure of Christ on the Cross.

If putting in an appearance as a *deus ex machina* is the cheapest of all the ways in which a god can present himself to Man as his saviour, the next cheapest kind of epiphany is an avatar. At first sight, perhaps, it might seem to imply a considerably greater expenditure of divine time and trouble when a god condescends to exchange his proper form for a tenement of human flesh and to linger in this shape on Earth for the length of a human lifetime, instead of just for the duration of the last act of a play. On closer scrutiny, however, the apparent generosity dwindles. In point of time those three score years and ten must count for much the same as three minutes in the consciousness of an immortal who has Eternity to play with; and in point of trouble the divinity who is living through an avatar is apt, we shall find, to avail himself of his latent supernatural powers as soon as things look nasty. In Euripides' *Bacchae* Dionysus does not dream of allowing a deluded Pentheus to have his way with this divinity in human disguise. When it comes to the crisis the camouflaged god, with one wave of his magic wand, causes Pentheus' own womenkind to tear

⁵ 1 Cor. i. 23.

the wretched man to pieces in the blind frenzy of their orgiastic religious exaltation.

The god recovered from the bout;
The man it was that died.

In thus meanly drawing upon his reserves of superhuman potency Dionysus is breaking the rules of his own game, like the human saviour with the 'time-machine' and the human philosopher-king when they drop their pretences and take to their swords. But the god is behaving more detestably than his human counterparts; for the crisis that moves him to make use of his hidden weapon is one that he himself has deliberately provoked. This god incarnate has kept his human assailant in ignorance of his superhuman bugbear's true nature in order to lure the silly fellow into a cruel trap. The show of patience and humility with which the mysterious stranger replies to the headstrong prince's ill-usage of him in the first act of the play is neither sincere nor disinterested. It is not Dionysus's intention to put Pentheus out of countenance, and so win him to repentance, by eventually revealing his own identity. His plan is to catch him out, and his temper is malicious.

Nor does Dionysus, in his sojourn among men, always make even so much as a pretence of being other than an Olympian. The best part of Dionysus's earthly career is devoted to a campaign of world-conquest in which the divine aggressor takes advantage of his supernatural powers in order to anticipate (or emulate), at his ease, the human exploits of Sesostris and Alexander. And woe betide the human potentate who ventures to offer resistance to the conqueror-god's triumphal progress. For the crime of successfully repelling this Olympian invader, Lycurgus King of the Edônes pays the same dreadful penalty that is exacted from Pentheus King of Thebes for his refusal to acknowledge Dionysus's divinity. But the principal theatre of Dionysus's military prowess lies neither in Boeotia nor in Thrace. Dionysus, like Alexander, glories chiefly in being the conqueror of India; and on this Indian soil the Hellenic deity's brutal epiphany has its analogues in the avatars of Shiva and Vishnu.¹ As for Shiva, he is nothing but Destructiveness personified. And even Shiva's divine antithesis is capable of sinking to Dionysus's level when Vishnu goes on the war-path in the guise of a Krishna or a Rama.

If the avatar thus turns out to be morally almost as repulsive as the epiphany *ex machina*, the demigod, who presents himself next, is a decidedly more sympathetic figure. We have only to

¹ For certain likenesses and differences between these two Hindu worships and Christianity see V. C (i) (c) 2, vol. v, p. 138, and V. C (i) (d) 7, in the present volume, pp. 47-9, above.

cast our eye over the goodly company of these heroes: a Sumeric Gilgamesh; a Hellenic Hêrklês and Asklêpios and Castor and Pollux and Perseus and Achilles and Orpheus; and a Sinic contingent that includes, among others, the 'culture-heroes' Yu and Yi and Yao and Shwen.¹ These half-divine beings in human flesh live out their lives on Earth without benefit of that privilege of arbitrarily contracting out of the game which the full-blown gods, in their avatars, retain and abuse. The labours of Hêrklês are at least as serviceable to Mankind as Dionysus's escapades; yet the sufferings which such labours must entail for the labourer in the natural human course of events are suffered by Hêrklês as genuinely as though he were no more than an ordinary mortal. The divinity of the demigods is housed in common clay; and they have to contend with all the challenges which present themselves to 'Man that is born of a woman'.² The demigod, too, 'is of few days, and full of trouble'; and he is not even exempted from having to do battle with Man's 'last enemy'.³ The demigod—and this is his glory—is subject, like Man, to Death.

Still less remote from our common humanity are the authentic human beings who have been credited by their fellows with the half-divine parentage that is the demigods' birthright. The divine paternity which in Euripides' play is ascribed by Athena to Ion has also been attributed to princes and sages that are no legendary figures but are well-known historical characters who have unquestionably lived in the flesh, and whose acts and thoughts are on record in documents that must rank as unimpeachable evidence. In the Hellenic tradition not only Ion and Asklêpios, but also Pythagoras and Plato and Augustus, have been reckoned among the sons of Apollo; and not only Hêrklês and the Dioscuri and Perseus, but also Alexander, among the sons of Zeus, while Apollonius of Tyana has been reckoned alternatively as a son of Zeus or as either a son of Zeus or a son of Proteus.⁴ The common form of the tale is that the human hero's human mother is visited by a superhuman mate who usurps the place of her lawful human husband.⁵ Apollo ousts Mnesarchus and Ariston and Octavius;

¹ See Maspéro, H.: *La Chine Antique* (Paris 1927, Boccard), pp. 26–32.

² Job xiv. 1.

³ 1 Cor. xv. 26.

⁴ 'When Apollonius's mother was pregnant with him she was visited by an apparition (φάσμα) of an Egyptian divinity (δαίμων)—it was the Proteus who keeps on changing shape in Homer. The woman was not afraid, and asked him what kind of a child she was going to bear. "Me" was the apparition's reply; "Who are you?" she asked; "I am Proteus, the Egyptian god," said he. . . . The local belief [in Apollonius's home country, the Tyranitis] is that Apollonius was a son of Zeus; but Apollonius himself calls himself the son of [his mother's human husband] Apollonius.'—Philostratus: *Apollonius of Tyana*, Book I, chaps. 4 and 6. For the common features in the stories of Apollonius and of Jesus see Seeck, O.: *Geschichte des Untergangs der Antiken Welt*, vol. iii, 2nd ed. (Stuttgart 1921, Metzler), pp. 183–4.

⁵ When the tale is told of historical characters whose official parents are both of them

Zeus-Amon ousts Philip. Sometimes the divine visitor presents himself in the form of a man, sometimes in the form of an animal, and sometimes in the form of a thunderbolt or a ray of light. Zeus-Amon is fabled to have visited Alexander's mother Olympias in the form either of a thunderbolt or of a snake,¹ and in the course of ages this fable has travelled far and wide. In Italy it was transferred in the third century B.C. from Alexander to Scipio Africanus Major² and in the last century B.C. to Augustus;³ in Central Asia by the fifteenth century of the Christian Era it had come to be transferred to a legendary common ancestor of Chingis Khan and Timur Lenk.⁴ In an etherial version the same story is also told of a man of the people who has outshone every one of these kings and statesmen and philosophers.

"These tales have their counterpart in the Christian legends of the birth of Jesus; and the version followed by Matthew exhibits the direct influence of the Hellenic *motif*.⁵ This influence has not, of course, been

perfectly well known, it is, of course, easier to deny the paternity of the human father than the maternity of the human mother. It would probably be difficult to cite a genuinely historical personage who has been credited, like Orpheus and Achilles, with a mother who was a goddess.

¹ Both fables are recounted, side by side, in Plutarch's *Life of Alexander*, chaps. 2-3.

² See Livy, Book XXVI, chap. 19. The Roman historian, who retells the tale with a sneer, does not inform us whether Scipio's, as well as Alexander's, snake-father was identified with Zeus, or whether his identity was left in doubt.

³ In Asclepiadis Mendetis *Theologuménōn* libris lego.—Suetonius: *Life of Augustus*, chap. 94.

⁴ See Herzfeld, E.: 'Alongoa' in *Der Islam*, vol. vi (Strassburg 1916, Trübner), pp. 317-27. This legendary Mongol hero Budhuntchar is fabled to have had no human father, but to have been conceived in the womb of his mother Alongoa through the incidence of a ray of light. The legend is recited in the inscription on the tomb of Alongoa's reputed descendant Timur Lenk at Samarqand, and in this context it is brought into connexion with the story of the Annunciation to Mary, as this is told in the Qur'an xix. 20 and xix. 17 (Herzfeld, op. cit., p. 318). The same legend, with the same comparison between Alongoa's miraculous experience and Mary's according to the Qur'an, figures (ibid., pp. 318-19) in the *Zafarnāmah* of Timur's biographer Sharaf-ad-Din 'Alī Yazdī (for whom see II. D (v), vol. ii, p. 149, above). It is not, however, through the Qur'an that the tale has attached itself to Timur's and Chingis' legendary common ancestress Alongoa. The tale, as it is told in this context, has come direct from the Alexander Romance (Herzfeld, ibid., p. 326), as is attested by the heroine's name; for 'Alongoa' is a transparent travesty of Olympias (in the inscription on Timur's tomb the name is written, in the Perso-Arabic Alphabet, *الأميرة*); and, if we may assume that the ambiguous letter *ā* has been pointed *ā* [qāf] in mistake for *fā* [fā] at some weak link in a long chain of literary transmission, we arrive at an earlier form 'Alanfoa' which is very near indeed to the original Greek).

⁵ 'The view that the Messiah has to be born of a virgin is notoriously quite unknown to the Jews; it is a purely Christian (pagan) myth' (Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), p. 60, footnote 2), which attaches, not to the Jewish Messiah, but to the Zoroastrian Saoshyant (Meyer, op. cit., vol. ii (1921), p. 68; von Gall, A.: *Βασιλεία τοῦ Θεοῦ* (Heidelberg 1926, Winter), pp. 418-19). In the Jewish view the Messiah is a man with nothing superhuman, and *a fortiori* nothing divine, about him (on this point see V. C (i) (d) 11, p. 163, footnote 1, above). To a Jewish mind the Christian attribution of a divine paternity to Jesus seems like a lapse from the slowly and painfully attained monotheism of the Chosen People of the One True God into one of the grossest and most unedifying superstitions of a Hellenic paganism. This Jewish reproach against Christianity is forcefully expressed in a passage placed in the mouth of the Jewish disputant in the *Dialogus cum Tryphone Judaeo*, chap. 67 (Migne, J.-P.: *Patrologia Graeca*, vol. vi, col. 629) of the Christian philosopher, saint, and martyr Justin (*vivebat aevi Christiani saeculo secundo*):

"Trypho replied: "The Scripture [Isa. vii. 14] does not read *Behold a virgin shall*

transmitted through any literary channel; what has happened is that the popular ideas that have been diffused far and wide through all peoples and all religions have been laid under contribution for the benefit of the Christian myth. Be that as it may, the correspondence between Matthew and the legend of the birth of Plato is as exact as it could possibly be. Before Mary's marriage with Joseph has been consummated, she becomes with child ἐκ πνεύματος ἁγίου = φάσμα Ἀπολλωνιακὸν συνεγένετο τῇ Περικτιόνη (Olympiodorus). Joseph proposes to put her away when the Angel of the Lord (the mal'ak Yahweh, the representative of the Godhead, as so often in the Old Testament) appears to him in a dream and reveals to him what has come to pass and what is his son's future. In obedience to this revelation Joseph "did as the Angel of the Lord had bidden him and took unto him his wife and knew her not till she had brought forth her first-born son"—the exact instructions that are given to Plato's father.¹

conceive, and bear a son, but *Behold a young woman shall conceive, and bear a son*—and so on to the end of the passage that you have just quoted. And the whole prophecy refers to Hezekiah—in whose life events in consonance with this prophecy can be shown to have taken place. There is, however, in the mythology of the so-called Hellenes, a story of how Perseus was gotten upon Danae, when she was a virgin, by the streaming upon her, in the form of gold, of the [demon] whom the Hellenes called Zeus. You [Christians] ought to be ashamed of reproducing this Hellenic tale, and ought to admit that this Jesus is a human being of human parentage. And, if you want to prove from the Scriptures that he is the Christ, your thesis ought to be that he was accounted worthy to be singled out for being the Christ because he led a perfect life in conformity with the Law. But beware of telling tall stories (ῥεπατολογεῖν) if you do not want to be convicted of being as silly as the Hellenes are."

Justin, however, is not ashamed of finding himself in the Hellenes' company. In his *First Apologia on behalf of the Christians*, which is addressed to the Emperor Antoninus Pius, he submits, in chap. 22 (Migne, J.-P.: *Patrologia Graeca*, vol. vi, col. 361), that 'if we [Christians] say that [Jesus] was born of a virgin, this too has a Hellenic parallel in what you say of Perseus'.—A.J.T.

¹ Meyer, E.: *Ursprung und Anfänge des Christentums*, vol. i (Stuttgart and Berlin 1921, Cotta), pp. 56-7. This modern Western scholar has not, of course, been the first to point out the parallelism between these two stories. As he himself mentions in the same context (op. cit., p. 55, footnote 4), the Christian father Origen (in his *Contra Celsum*, Book I, chap. 37) 'cites the story of the birth of Plato as a parallel to the birth of Jesus, with the object of making it clear to the Hellenes that what is related in the Gospels is by no means incompatible with Hellenic ideas'. ('In an argument with Hellenes it is quite in place to bring in Hellenic tales in order to show that we [Christians] are not unique in telling this extraordinary tale [of the virgin birth and divine paternity of Jesus]. There are Hellenic authors who have deliberately recorded, as a thing within the bounds of possibility—and this with reference, not to Ancient History or to "the Heroic Age", but to what happened only yesterday or the day before—that Plato was born of Amphionē when Ariston had been debarred from having sexual relations with her until she should have given birth to the child begotten by Apollo.'—Migne, J.-P.: *Patrologia Graeca*, vol. xi, col. 732.) How is this parallel to be explained? Are we to suppose that the story of the birth of Jesus was adapted from that of the birth of Plato or Pythagoras or Alexander or Scipio Africanus or Augustus? It is true that the stories attributing a divine paternity to these pagan Hellenic heroes must all have been in circulation by the time when the sources of the Gospels began to take shape. Yet, although the hypothesis of a direct mimesis is thus tenable in point of chronology, it is improbable in itself. It seems more likely that the parallel between the birth-stories of Jesus on the one hand and of our five pagan Hellenic heroes on the other is due, not to an adaptation of the later story from one or other of the earlier stories, but to an independent derivation of each of the six stories from a common source. The essence of each of the six stories is that it ascribes to an historical character the semi-divine parentage that is the birthright of a demigod. And, if we compare the birth-story of Jesus with that of Hēraklēs, we shall find a still greater number of points of correspondence than Meyer has pointed out in his comparison of the birth-story of Jesus with that of Plato. The parallel between the birth-stories of Jesus and Hēraklēs is set out in Pfister, Fr.: 'Hēraklēs und Christus' in *Archiv für Religionswissenschaft*, XXXIV, Heft 1/2 (Berlin and Leipzig 1937, Teubner).

This divine paternity of a saviour born of a woman is a form of epiphany which brings the saviour-god into a perfect intimacy with human kind. But how is the nature of fatherhood to be conceived of if God is the subject of it? Can God's fatherhood really be supposed to take the form of an act of physical procreation? It would be hard to say whether the suggestion is the more shocking when the divinity is pictured as masquerading in the body of a human seducer or when this sordid realism is evaded by the childishly grotesque device of turning a god into a beast and a myth¹ into a fairy-tale. In whatever physical shape the god may be portrayed, a literal paternity cannot be attributed to him without making blasphemous nonsense of his fatherhood in the judgement of any human soul that is morally sensitive and intellectually critical. If the hero's divine father was really behaving like a human rake, there is no reason why the hero should have turned out better than any other child that has been born out of lawful wedlock. On the other hand, if it be accepted that the hero has displayed an unmistakably superhuman prowess, and if it be granted that a spiritual endowment which cannot be of human origin can only be accounted for as the gift of a divine parent, then the nature of the divine paternity with which the hero must be credited will have to be conceived of in the non-corporeal terms in which it is in fact presented in our Christian version of the Hellenic myth.² If God has begotten a Son, the divine act must be an eternal truth and not an occurrence in Time. And if God can create the Universe by uttering a word,³ then assuredly he can

pp. 46-7. Amphytrion, the husband of Hēraklēs' mother Alcmena, refrains, like both Joseph and Ariston, from having sexual intercourse with his newly wedded wife until she has conceived and born a child whose paternity is not human but divine. But between the birth-stories of Jesus and Hēraklēs there is a further point of resemblance that is not to be found in the birth-story of Plato. Before the birth of the divine child the child's mother and her husband change their residence—Alcmena and Amphytrion from Mycenae (Alcmena's native city) to Thebes; Mary and Joseph from Nazareth to Bethlehem—so that the child has a birth-place (a Judæan Bethlehem or a Boeotian Thebes) which is not his parents' home (in a Galilaean Nazareth or an Argive Mycenae). We may conjecture that the birth-story of Hēraklēs is the archetype of the birth-stories of all our six historical Hellenic heroes (see further V. C (ii) (a), Annex II, p. 469, below).

¹ For the view that the story or drama of the encounter between the Virgin and the Father of her Child is a mythological image of the mystery of Creation, see II. C (ii) (b) 1, vol. i, p. 272, above.

² In expounding the parallelism between the Christian and the Hellenic Mythology, Saint Justin Martyr (*First Apology*, chap. 21, in Migne: *Patrologia Graeca*, vol. vi, col. 360) implicitly absolves the Hellenic motif of divine paternity from the imputation of grossness which is usually read into it. 'When we say that the Logos, which is the first offspring of God, has been begotten without sexual intercourse—the Logos who is Jesus Christ our Master—and that this [Jesus Christ] has been crucified and has died and has risen again and has ascended into Heaven, we are saying nothing novel, for we are saying nothing that is not to be found in the stories of the sons that are attributed, in your Hellenic Mythology, to Zeus.'

³ The Jewish conception of a creative 'Word' ('Memra') of God may be either an independent discovery of the Jewish religious genius or else a Jewish adaptation of the Hellenic conception of the 'Logos' (see Meyer, E.: *Ursprung und Anfänge des Christen-*

send his Son into the World by making an Annunciation.¹ This is the common foundation of all varieties of Christian belief concerning the manner in which the saviour-god has made his historical epiphany. But this primary common ground leaves some critical secondary questions outstanding. To whom, and at what moment, and in what circumstances, will the creative Annunciation be made?

If it be agreed that God's way of revealing himself as a father is to speak with the voice of the Spirit to a human soul, it may still be debated whether the Father is to be expected to announce His divine intention to the human mother of His Son at the moment when her child is physically conceived. May it not be more god-like to confer the grace of this divine paternity upon a soul which has already reached the threshold of its human maturity and has already proved its worthiness of sonship by offering itself to God without blemish or reserve? 'God is the common father of all men, but he makes the best ones peculiarly his own.'² This adoptive kind of fatherhood is not unknown even among men. Even in the gross economy of a purely mundane society the physical act of procreation is not the only means by which a man can acquire a son. As an alternative to the begetting of a child whose character is *ex hypothesi* an unknown quantity, the would-be father may adopt a grown man who has already shown himself capable of taking over the heritage which his adoptive parent has to hand on. And, if this heritage be one that carries heavy responsibilities and imposes exacting tasks involving many people's welfare, then a conscientious man of affairs—be he householder or prince—may well find greater comfort in a son of his choice than in a son of his loins. In such a spirit the second Scipio Africanus³ adopted Scipio Aemilianus; Divus Julius adopted Octavian; and Nerva initiated a succession of imperial adoptions which ran through Trajan and Hadrian and Pius to Marcus. In the Age of the Antonines it had come to be almost a constitutional convention of the Roman Empire that the Principate should be transmitted by adopting a successor and not by begetting one. Did Marcus do well when he broke Nerva's 'Golden Chain' for the benefit of his own child

tums, vol. ii (Stuttgart and Berlin 1921, Cotta), pp. 103-4, and the present Study, V. C (i) (d) 6 (δ), vol. v, p. 539, with footnote 4, above).

¹ Had this idea already struck the mind of a Hellenic poet-prophet in a generation that was born before the breakdown of the Hellenic Civilization?

λαβούσα δ' ἔρμα Δίον ἀψευδεὶ λόγῳ
γεῖνατο παῖδ' ἀμεμφή,
δι' αἰῶνος μακροῦ πάρολβον.

Aeschylus: *Supplikes*, ll. 580-2.

² This 'logion', attributed to Alexander the Great, has been quoted already in V. C (i) (d) 7, p. 9, above.

³ This physical son of Scipio Africanus Major was himself prevented by ill-health from carrying on his father's work.

Commodus? And, if adoption works better than procreation when the father is a human prince and the heritage a mundane empire, may it not be better, *a fortiori*, when the father is God himself and when the business on hand is Man's salvation?

The belief that a Son of Man may in this way become a Son of God has declared itself, in the first instance, in the deification of oecumenical monarchs.¹ In some oecumenical empires the adoption of the prince by the god has been conceived of as taking place at the moment of the prince's accession, and in others as being deferred until after his death. Posthumous apotheosis appears to have been the rule among the Hittites and in Japan; adoption-upon-accession in the Egyptiac and Sumeric and Sinic and Andean worlds; while in the Hellenic World the two practices came into currency side by side²—with the strange consequence that a Hellenic ruler in the Age of Disintegration might find himself already an object of worship in his own lifetime in certain parts of his dominions or among certain classes of his subjects, while elsewhere he must be content with the knowledge that he would receive—or at any rate become a candidate for receiving—the same honours as soon as he had ceased to be present in the flesh.³ This belief in divine paternity by adoption has had the same social history as the cruder belief in divine paternity by procreation. While it likewise makes its first appearance as an expression of the awe in which an oecumenical ruler is held by his subjects, it also likewise breaks these original bounds and comes to be extended to commoners instead of remaining a monopoly of kings. In the history of the disintegration of the Hellenic Society the earliest example of the deification of a man of the people is to be found in a comedy. In the closing verses of Aristophanes' *Birds* the chorus hail Peithetaerus as 'God of Gods' (δαίμόνων ὑπέρτατε) when, in reward for the feats of having founded 'Cloudcuckooland' and blockaded Olympus into an abject surrender, the Athenian cockney makes a triumphal epiphany with the sceptre of Zeus in his hand and with

¹ For Caesar-worship and its limitations see IV. C (iii) (c) 2 (β), vol. iv, pp. 348–9, and V. C (i) (d) 6 (δ), Annex, pp. 648–57, above.

² This seems also to have happened in certain overseas domains of the Hindu World—Java, Camboja, Champa—where we have evidence for a deification of monarchs of which there are only slight traces in the main body of the Hindu Society in Continental India (Eliot, Sir Ch.: *Hinduism and Buddhism* (London 1921, Arnold, 3 vols.), vol. iii, pp. 115–20, already cited in V. C (i) (d) 6 (δ), Annex, p. 653, footnote 4, above.

³ This was the situation of the Roman Emperors in the Age of the Principate. In Rome itself, and in those parts of the Ager Romanus that were peopled by communities of Roman citizens, a princeps was in no circumstances accorded divine honours till after his death, and even then his apotheosis was not a matter of course, but was a special recognition of merit which could only be conferred by act of the Senate. On the other hand the Emperors were worshipped as gods in their lifetime at many places in the Greek and Oriental provinces and protectorates of the Empire, while in Egypt a Roman Emperor automatically became an adopted son of Re upon his accession, in virtue of his recognized status of being a legitimate Pharaoh.

'the Queen' on his arm as his heavenly bride.¹ But a scene which, in the first generation of the Hellenic 'Time of Troubles', had thus been played in the theatre of Dionysus at Athens as the crowning extravaganza of a fantastic farce was replayed four and a half centuries later on the banks of the Jordan in an amazingly different setting and spirit. In the story of the Gospels the designation of a Nazarene carpenter as the Son of God is presented as the opening revelation of a mystery which was to culminate in the Crucifixion and which was nothing less than God's scheme for Man's salvation.

In all four Gospels² it is told of Jesus that he was designated as the Son of God after his baptism in Jordan by John, as he was coming up out of the water.³ And in the earliest, as well as in the latest, of the four the whole story begins with this act of adoption, and not with any account of the saviour-god's conception or birth or infancy or upbringing.⁴ There is, of course, an apparent

¹ For this extraordinary finale of the *Birds* see further V. C (i) (d), 11, Annex I, below.

² Matt. iii. 16-17; Mark i. 10-11; Luke iii. 21-2; John i. 32-4.

³ In all the three Synoptic Gospels this designation of Jesus as the Son of God is represented as having been both visual and aural. The Spirit of God is seen descending upon Jesus in the likeness of a dove, and simultaneously the voice of God is heard from Heaven proclaiming Jesus to be God's beloved Son in whom God is well pleased. In the Gospel according to Saint Mark the story is told in words which seem to imply that the vision was seen and the voice heard by Jesus alone in a flash of spiritual enlightenment. The words used in Matthew would seem to imply that the vision was seen by Jesus alone, but that the voice was addressed to—and therefore, presumably, heard by—the spectators. Inversely, the words used in Luke would seem to imply that Jesus alone heard the voice, but that the spectators saw the vision. In the Gospel according to Saint John no mention is made of the voice, while, in regard to the vision, it is explicitly stated that this was seen by John, and is implicitly suggested that it was not seen by any one else—not even by Jesus himself.

⁴ It is noteworthy that this story of the Designation of Jesus, at his baptism, as the Son of God is not omitted in either of the two Gospels which preface this story with an account of Jesus's birth and which represent him as having acquired his divine paternity at the moment of his physical conception and therefore, by implication, not at the moment of his baptism, when, according to Luke iii. 23, he was about thirty years old. The internal evidence can hardly fail to produce on the mind of the literary critic an impression that the form of the story in which this begins with the baptism and Designation of Jesus in his prime is the original form, and that the Lucan and Matthaean prologues represent a later accretion. The discrepancy between an 'adoptionist' gospel and its 'conceptionist' preface is particularly conspicuous in Luke. In the first place Luke iii. 22 reads, in one set of manuscripts (D, a, b, c, ff, &c., with the support of Clement of Alexandria): 'Thou art my beloved Son; *this day have I begotten thee*', in place of the standard reading: 'Thou art my beloved Son; *in thee I am well pleased*'; and it is not impossible that this discarded reading may be the authentic original text (Streeter, B. H.: *The Four Gospels* (London 1924, Macmillan), p. 143; cf. pp. 188 and 276). In the second place the vagueness of the estimate of Jesus's age at the moment of the Designation seems to imply (in contradiction to what is told in chapters i and ii) that little or nothing was known about his life before this event, which is represented as having occurred at his first public appearance. In the third place the genealogy of Jesus's human ancestry (which, curiously enough, is introduced into the story in both Luke and Matthew, while it is not to be found in Mark, where there is nothing with which it would be incompatible) is placed in Luke immediately after the account of the Designation, which would be the natural place for it if this were the beginning of the story, whereas in Matthew it is placed, less awkwardly, at the opening of the preface, before the account of the Annunciation. In the fourth place the genealogy—and this not only in Luke but also in Matthew—is traced through Joseph, with the implication that Jesus was in the physical sense Joseph's son, and not through Mary, though Mary is the sole physical parent of Jesus according to the story told in both these Gospels in their

discrepancy between this account, in all the Gospels, of the adoption of Jesus as the Son of God in the prime of his manhood and the account of his conception by the Holy Ghost which precedes the account of the adoption in the Gospels according to Saint Matthew and Saint Luke. And this raises difficult problems of literary criticism and theological exegesis which have exercised scholars and have divided Christians.¹ Is 'adoption' or 'conception' the proper description of a humanly ineffable utterance of the Creative Word that gave God a man for his son and Mankind a god for their saviour? At what moment in Jesus's human life on Earth did a divine wave of salvation break upon the shoals of Time in the course of its everlasting passage over the boundless ocean of Eternity?² Instead of attempting to answer a question that is humanly unanswerable, it may perhaps be more useful to suggest that the two words 'adoption' and 'conception', which bear their literal meaning in the crude Hellenic embryo of the myth, have in our Christian version acquired a new connotation which is neither legal in the one case nor physical in the other, but is in both cases metaphorical. The essence of the Christian mystery lies in a belief that God has made himself, by means that have been spiritual and not corporeal, the father of a son who has lived and died on Earth as a man in the flesh. This belief in an incarnation of Divinity postulates in its turn the further belief that the human vehicle of the Godhead has been a physical reality with a physiological origin; and, on every Christian interpretation of the story, Jesus the Son of God is deemed to have been born, in the literal physical sense of the word, by a human mother. The issue on which the 'adoptionists' and 'conceptionists' part company is not either the question whether God made himself the father of a man by a

prologues (in the Lucan genealogy (Luke iii. 38), in contrast to the Lucan prologue, it is not Jesus, but Jesus's first human forefather Adam, who is the Son of God). With this we may compare the double paternity that is ascribed to both Alexander and Hēraklēs. Plutarch, *Life of Alexander*, chap. 2, records that Alexander was believed to be a Heracleid on his father's (i.e. Philip's) side, and an Aeacid on his mother's, besides recounting the story of his father's being, not Philip at all, but Zeus-Ammon (the story of Alexander's divine paternity, as recounted by Plutarch, comes closer to the Matthaean than to the Lucan prologue to the story of the Gospels: Herzfeld, *op. cit.*, pp. 326-7). Similarly Hēraklēs is represented as being both the son of Amphitryon and the son of Zeus (Pfister, *op. cit.*, p. 47).

¹ For the traces of an 'adoptionist' Christian Church which appears to have been overwhelmed, without having been completely obliterated, by a following wave of the 'conceptionist' Christianity which now prevails, see IV. C (iii) (c) 2 (β), Annex III, vol. iv, pp. 624-34, above. The 'adoptionist' type of Christianity has manifestly a closer affinity than the 'conceptionist' type has with the Mahayanian cult of the Bodhisattva Amitābha (Amida). 'In the oldest documents he is a man who becomes a Buddha in the traditional manner. The fundamental idea is not that God is Love but rather that Love is God: lovingkindness raised Amida to a place which may be called divine' (Eliot, *Sir Ch.: Japanese Buddhism* (London 1935, Arnold), p. 394).

² 'History is the result of a deep interaction between Eternity and Time; it is the incessant eruption of Eternity into Time.'—Berdyayev, N.: *The Meaning of History* (London 1936, Bles), p. 67.

non-corporeal act or again the question whether the man of flesh and blood had a physical origin. The two schools agree in answering both these questions in the affirmative. They are divided on the question whether the physical procreation of Jesus was normal or miraculous; and it may be neither uncharitable nor unreasonable to suggest that this point of discord—sharp though it be—is minute by comparison with the expanse of the encompassing field of harmony.

In any case a theophany can never avail in itself to fulfil the promise of salvation. Whether *machina* or avatar or conception or adoption be the means that God elects for making his divine intervention in a human tragedy, an epiphany must lead on to a Passion if God Manifest is to become Man's Saviour by proving himself 'a very present help in trouble'.¹ Suffering is the key to salvation, as well as to understanding;² and a saviour's suffering must fathom the uttermost depths of agony. Even a Hellenic philosopher whose idea of salvation was Detachment has demanded an extremity of suffering from the sage who is to testify to his fellow men that Justice is an end in itself which is to be ensued at any cost for the sake of its own absolute and infinite value. The testimony, as Plato perceives, will only carry conviction if the just man bears it out by submitting to be scourged and racked and shackled, to have his eyes seared with red-hot irons, and finally to be impaled after having gone through every lesser torture.³ In imagining this extremity of suffering for an utterly unselfish object, Plato assuredly had in mind the historic martyrdom of his own master Socrates.⁴ And this human martyr who gave his witness at Athens in the year 399 B.C. was following the example of super-human prototypes whose labours and tribulations—undergone for the sake of Mankind—were the themes of the holiest legends in the Hellenic cultural heritage. Even the hero Achilles had deliberately cut short his brief allotted span of life on Earth for the sake of avenging the death of a comrade. Hêrâklês had toiled, and Prometheus endured,⁵ and Orpheus died, for all men. And even the death of this dying demigod was not the acme of divine suffering in the panorama of the Hellenic *Weltanschauung*. For, though no living being can pay a greater price than life itself, the life of a demigod is not so precious as the life of a god of unalloyed divinity;

⁴ Some analogies between the theophany and Passion of Socrates and the theophany and Passion of Jesus are examined in V. C (ii) (a), Annex II, pp. 486–95, below.

⁵ For the Passion of Prometheus see III. B, vol. iii, pp. 112–27, above.

and behind the figure of the dying demigod Orpheus there looms the greater figure of a very god who dies for different worlds under diverse names—for a Minoan World as Zagreus,¹ for a Sumeric World as Tammuz,² for a Hittite World as Attis,³ for a Scandinavian World as Balder,⁴ for a Syriac World as Adonis ('Our Lord'),⁵ for an Egyptiac World as Osiris,⁶ for a Shī'i World as Husayn, for a Christian World as Christ.

Who is this god of many epiphanies but only one Passion? Though he makes his appearance on our mundane stage under a dozen diverse masks, his identity is invariably revealed in the last act of the tragedy by his suffering unto death. And if we take up the anthropologist's divining-rod we can trace this never varying drama back to its historical origins. 'He shall grow up before him as a tender plant, and as a root out of a dry ground.'⁷ The Dying God's oldest appearance is in the role of the *ἐναιυρός δαίμων*, the spirit of the vegetation that is born for Man in the spring to die for Man in the autumn.⁸ And both the epiphany and the Passion of this nature-god bring material benefits to Mankind that are plainly indispensable for the physical salvation of the race. If the grass were not clothed in glorious raiment to-day in order to be cast into the oven to-morrow,⁹ the fire on the householder's hearth would go out for lack of fuel; and, if the wheat did not ripen for the sickle, the husbandman would harvest no grain-store for the impending winter and no seed-corn for the following spring. Man profits by the nature-god's death, and would perish if his benefactor did not

² See I. C. (i) (b), vol. i, p. 115, footnote 1, and V. C. (i) (c) 2, vol. v, pp. 148-9, above.

³ See V. C. (i) (c) 2, vol. v, p. 149, above.

⁴ See *ibid.*, p. 150, above.

⁵ See *ibid.*, p. 149, above. In the Syriac Mythology the theme has a variation (see V. C. (i) (d) 11, p. 162, above) which is reproduced in the Christian Theology. Side by side with the figure of a god who dies for the World in his own person there is the figure of a god who so loves the World that he gives his only begotten son to save it (John iii. 16). The original Syriac myth, in its Phoenician version, is preserved in a passage from Philo of Byblus's Greek translation of the work of the Phoenician author Sanchuniathon which is quoted by Eusebius of Caesarea in his *Praeparatio Evangelica*, Book I, chap. 10 (Migne, J.-P.: *Patrologia Graeca*, vol. xxi, col. 85): 'Cronos, whom the Phoenicians call Israel [in cap. cit., col. 81, above, his name is given as Il]—a king of Phoenicia who, after his departure from this life, was consecrated into Cronos' Star—had an only begotten son (*υἱὸν μονογενῆ*) by a local nymph called Anðbret (they called him Ield, which is still the word for "only begotten" in Phoenician). When Phoenicia was overtaken by immense dangers arising from war, Cronos arrayed his son in royal insignia, set up an altar, and sacrificed his son upon it.' In the Israelitish version of the same Syriac myth the fatal consummation of the sacrifice of Isaac is averted at the last moment; the son and the father are ordinary human beings and not demigods; and the sacrifice of the son is undertaken by the father on the initiative, not of the father himself, but of the father's god (Gen. xxii). In the saga of Jephthah (Judges xi) the only child is transposed from a son into a virgin daughter who is a Syriac counterpart of the Hellenic Iphigeneia.

⁹ Matt. vi. 30.

die for him perpetually. 'He was wounded for our transgressions, he was bruised for our iniquities, the chastisement of our peace was upon him and with his stripes we are healed.'¹ That is one aspect of the salvation which the Dying God's epiphany and Passion bring to Man. But an outward achievement—however imposing and however dearly paid for—cannot reveal the mystery at the heart of a tragedy. If we are to read the secret, we must look beyond the human beneficiary's material profit and the divine protagonist's material loss. The god's death and the man's gain are not the whole story. We cannot know the meaning of the play without also knowing the protagonist's circumstances and feelings and motives. Does the Dying God die by compulsion or by choice? With generosity or with bitterness? Out of love or in despair? Till we have learnt the answers to these questions about the saviour-god's spirit, we can hardly judge the value of the salvation that Man will derive from his death. We cannot tell whether this salvation will be merely a profit for a man through a god's equivalent loss, or whether it will be a spiritual communion in which Man will repay, by acquiring ('like a light caught from a leaping flame'),² a divine love and pity that have been shown to Man by God in an act of pure self-sacrifice.

In what spirit, then, does the Dying God go to his death? If we address ourselves once more to our array of tragic masks and adjure the hidden actor to reply to our challenging question, we shall see the goats being separated from the sheep, and the tragedy³ being transfigured into a mystery, under this searching test. Even in Calliope's melodious lamentation for the death of Orpheus there is a jarring note of bitterness which strikes, and shocks, a Christian ear when it rings out of one of the most beautiful poems in Greek.

τί φθιμένοις στοναχέυμεν ἔφ' υἱάσιν, ἀνίκ' ἀλαλκεῖν
τῶν παίδων Ἀΐδην οὐδὲ θεοῖς δύναμις;⁴

'Why do we mortals make lament over the deaths of our sons, seeing that the Gods themselves have not power to keep Death from laying his hand upon their children?' What a moral to read into the Dying God's story! So the goddess who was Orpheus' mother would never have let Orpheus die if she could have helped it; and *ergo*, if even the Gods are thus impotent to satisfy their dearest wishes, then the only reasonable attitude for feebler beings to adopt when the same pangs of bereavement come upon them is

¹ Isa. liii. 5.

³ The word 'tragedy' means literally what the performance was originally: a 'goat-chant'.

⁴ Elegy on the death of Orpheus by Antipater of Sidon (*floruit circa* 90 B.C.).

a posture of dull resignation—barely relieved by the faintest thrill of malicious pleasure at the greater discomfiture of the mightier Olympians. Like a cloud that veils the Sun, the Hellenic poet's thought takes the light out of Orpheus' death. But Antipater's poem is answered in another masterpiece which responds to it like antistrophe to strophe, though it was written at least two hundred years later, and that in a Judaic Greek which would have grated on the aesthetic sensibilities of the exquisite Sidonian Hellenist.

'For God so loved the World that he gave his only begotten Son, that whosoever believeth in him should not perish but have everlasting life. For God sent not his Son into the World to condemn the World, but that the World through him might be saved.'¹

When the Gospel thus answers the elegy, it delivers an oracle. *Οἷος πέπνυται, τοὶ δὲ σκιαὶ ἀΐσσουσιν.*² 'The one remains, the many change and pass.'³ And this is in truth the final result of our survey of saviours. When we first set out on this quest we found ourselves moving in the midst of a mighty marching host; but, as we have pressed forward on our way, the marchers, company by company, have been falling out of the race. The first to fail were the swordsmen, the next the archaists, the next the futurists, the next the philosophers, until at length there were no more human competitors left in the running. In the last stage of all, our motley host of would-be saviours, human and divine, has dwindled to a single company of none but gods; and now the strain has been testing the staying-power of these last remaining runners, notwithstanding their superhuman strength. At the final ordeal of death, few, even of these would-be saviour-gods, have dared to put their title to the test by plunging into the icy river. And now, as we stand and gaze with our eyes fixed upon the farther shore, a single figure rises from the flood and straightway fills the whole horizon. There is the Saviour; 'and the pleasure of the Lord shall prosper in his hand; he shall see of the travail of his soul and shall be satisfied.'⁴

(b) THE INTERACTION BETWEEN INDIVIDUALS IN DIS-INTEGRATING CIVILIZATIONS

The Rhythm of Disintegration.

In the last chapter we have studied the effect of the disintegration of a society upon the individuals who are born into it in this unhappy phase of its history. We have seen that in a disintegrating body social the 'member' who has in him the spark of creative

¹ John iii. 16-17.

³ Shelley: *Adonais*, l. 460.

⁴ Isa. liii. vv. 10-11.

genius finds his field of social action in the role of a saviour. We have passed in review the diverse types of would-be saviours who arise in response to the challenge that social disintegration presents. And we have found that the only claimant to the title who makes his claim good is the saviour *from* Society who does not allow himself to be deflected from his aim. The would-be saviour *from* Society who lapses into the role of a would-be saviour *of* Society is condemning himself to the failure that is in store for his comrade who has cast himself for this role deliberately. It is only in so far as he succeeds in finding, and showing, the way into an Other World, out of range of the City of Destruction, that the would-be saviour is able to accomplish his mission. And this conclusion, to which we have just been led as the result of an empirical survey, will confine the present chapter, *a priori*, within a narrower compass than its predecessor. For in this chapter we are not concerned with the destinies of the pilgrims who are moved by the awful prospect of impending catastrophe to break out of the doomed city and shake off the dust of their feet.¹ If the leader whom they are following in their exodus is a saviour indeed, he will lead them into the Kingdom of God and there build them a New Jerusalem. 'And he led them forth by the right way, that they might go to a city of habitation'²—but that is another story.³ In the present chapter our business is with these pilgrims' unhappy fellow citizens who remain sitting in darkness and in the shadow of death,⁴ whether through lack of the imagination to foresee their city's doom or through lack of the courage to forestall it by making their escape. Our business now is with the interaction between individuals *in* disintegrating civilizations; and this means that we shall not be so much concerned with the relations of the uncreative rank-and-file with creative personalities or minorities, since, *ex hypothesi*, the creators are being moved, *ex officio creativitatis*, to leave the doomed city at the head of the departing bands of pilgrims.

Excessere omnes, adytis arisque relictis
di quibus imperium hoc steterat.⁵

We shall therefore mainly be studying the relations between an uncreative rank-and-file and a minority that in most of its activities is not creative either, but is merely dominant.⁶

¹ Matt. x. 14.

² Ps. cvii. 7.

³ The question whether the New Jerusalem can be brought down to Earth in the shape of a universal church is discussed in Part VII, below.

⁴ Ps. cvii. 10.

⁵ Virgil: *Aeneid*, Book II, ll. 351-2, quoted already in this Study in I. C (i) (a), vol. i, p. 57, footnote 1; in II. D (vi), vol. ii, p. 216; and in IV. C (iii) (c) 2 (β), vol. iv, p. 349, above.

⁶ See V. C (i) (b), vol. v, pp. 23-35, above. The Dominant Minority deserves its name, since it relies on force, and not on charm, for the maintenance of its hold. At the

This means in turn that we shall not find our key this time in that movement of Withdrawal-and-Return which is the key to the interaction between individuals in civilizations that are still in the growth-stage.¹ All the same, we shall not find the rhythm of social disintegration altogether unfamiliar, for we shall recognize in it several other movements which we have learnt to know in studying the processes of genesis and growth. Indeed, we have observed already at an earlier point in this Part that the disintegration of a civilization, like its growth, is a process that is both continuous and cumulative;² that the process has a rhythm which is repetitive;³ that each beat of the music follows from the last and leads on to the next;⁴ and that the basis of this periodic rhythm is the principle of Challenge-and-Response.⁵ In the same context, however, we have also noted⁶ a point of difference between the rhythm of disintegration and the rhythm of growth which is clearly of capital importance.

In the growth-rhythm each successive beat is introduced by the presentation of a new challenge which arises out of a successful response to a previous challenge, and which is met, in its turn, by a successful response to itself out of which, again, another new challenge arises. This is the nature of the growth-rhythm *ex hypothesi*, since on the one hand the movement could not be continuous if a successful response were the end of the whole story, while on the other hand the movement could not be one of growth if any of the responses to any of the challenges were to prove, not successes, but failures. A failure to respond to a challenge successfully is the essence of the catastrophe of social breakdown which cuts short a process of growth and gives rise, in its place, to a process of disintegration. A disintegrating society is failing *ex hypothesi* to respond to a challenge that is presented to it; and so long as a challenge remains unanswered it will continue to hold the field. This means that a disintegrating society is confronted all the time by a single challenge—the particular challenge over which it has broken down—instead of being called upon, like a growing society, to deal with a series of challenges which are severally different from one another. And this means, in turn, that the periodicity which is one of the features that the process of disintegration has in common with the process of growth cannot be accounted for by the same explanation. While the growth-beats

same time—as we have observed in cap. cit., pp. 33–4—the Dominant Minority cannot be entirely lacking in creative power, since the schools of philosophy and the universal states are the Dominant Minority's handiwork, and both these works bear witness to the creativity of the hands that have made them.

² See Part V. B, vol. v, pp. 12–13, above.

⁴ Ibid., p. 12, above. ⁵ Ibid., pp. 11–12, above.

³ Ibid., p. 12, above.

⁶ Ibid., pp. 12–13, above.

arise out of a series of successes in responding to a series of different challenges, the disintegration-beats arise out of a series of failures to respond to a single challenge; and, if the disintegration-process, like the growth-process, is continuous, this must be because each successive failure sows, in failing, the seeds of a fresh attempt. This must be the nature of the disintegration-rhythm because, if any one of the failures to respond to the unanswered but inexorable challenge were to prove so conclusive as absolutely to close the door upon all possibility of making any further endeavours, that would mean that, in this particular beat, the process had come to a stop and the disintegration-movement had thus ended—as of course, it must end sooner or later—in the *rigor mortis*.

Thus, while the disintegration-movement resembles the growth-movement in having Challenge-and-Response for its basis, it does not turn this basis to the same account in building its periodicity-structure. In the growth-movement each beat of the rhythm consists in a new performance of the drama of Challenge-and-Response which is at the same time a new rendering; in the disintegration-movement the beats are merely repetitive performances of one rendering of the play that never varies so long as this run of the play lasts; and, if we were to try to formulate the two series of beats as though they were mathematical progressions, we should find that we had to describe them in different terms. Our formula for the growth-progression would be 'a challenge evoking a successful response generating a fresh challenge evoking another successful response and so on, pending a breakdown'; our formula for the disintegration-progression would be 'a challenge evoking an unsuccessful response generating another attempt resulting in another failure and so on, pending dissolution'. Rout-rally-relapse is the form of the disintegration-process that any failure to respond to a challenge sets in train. And this is the pattern of the dance that the individual 'members' of a disintegrating society lead one another.

This interaction between individuals in a disintegrating society may be described in a military simile.

The failure of a response results in a retreat in which ground is lost and discipline is relaxed; but the débâcle is neither complete nor final, because the very danger and disgrace of it call out latent powers of leadership and latent habits of obedience. On some line, at some moment, some officer will temporarily succeed in checking the fugitives' flight and re-forming their ranks; the shaken army will then once more face the enemy and allow itself to be led into another attack upon the objective that it has failed to capture in the previous engagement; and for a time it will almost look as though

the fortunes of the battle might be retrieved. But these reviving hopes soon prove delusive; for the recovery of *moral* upon which the leaders are counting in their hope for better success at a second attempt is no more than a fair-weather courage. The rally has only been achieved after the discomfited army has succeeded in breaking contact with a victorious enemy by shamefully taking to its heels, and it only lasts so long as the troops are not led back into action. Their recovery is more than offset by the shock of finding themselves once again under fire; and the result is another débâcle which is more serious than its predecessor.

In the sphere of human activity from which our simile is taken we have seen a tragic illustration of this process in our own world and generation. On the East European front in the General War of 1914-18 the Russians suffered in 1915 a military disaster which resulted in the first place in a great military retreat and in the second place in a great political revolution. In 1917 the Tsardom was overthrown and was replaced by a Liberal parliamentary government. This change of political régime was followed by a moral rally; and thereupon pressure was brought to bear upon the new Government of Russia—partly by its nationalist supporters at home and partly by its West European allies—to turn this moral rally to military account by launching a new offensive. Against their better judgement the new Russian Government reluctantly consented to do what was being so insistently demanded of them, and the consequences were ruinous beyond their worst forebodings. After an indecisive initial success the new offensive broke down; and the disaster of 1917 quite eclipsed that of 1915. In 1917 the Russian army did not simply retreat: this time it melted away. And the political revolution in which the military disaster was reflected once again was this time far more violent and more destructive than it had been on the former occasion. The Liberal régime which had momentarily taken the place of the old autocracy was now swept away by Bolshevism; and one of the first acts of the Bolshevik Government of Russia was to make peace at Brest-Litovsk on the enemy's terms.

This illustration brings out the grim truth that the process of social disintegration is a galloping consumption. The rider's desperate efforts to rein in the runaway horse do not avail to bring the frantic animal to a halt. They merely stampede him into plunging on again, with a demonic impetus, along his breakneck course.

If Rout-and-Rally is thus the rhythm in which the individual 'members' of a disintegrating civilization are prone to interact with one another, does this rhythm assert itself on the large scale as

well as on the small? Can we discern it in the broad lines of the historical process of social disintegration with which we have now made ourselves familiar?

If, with this question in mind, we now cast our eye over the conspicuous features of the disintegration-process, we shall find an unmistakable example of a rally in the foundation of a universal state, and an equally unmistakable example of a rout in the foregoing 'Time of Troubles'; and we shall also find that the process does not exhaust itself in this single beat of the rhythm; for the establishment of the universal state is not the end of the story. For a time it may look as though this were something better than a rally from a rout. Is not the universal state a genuinely, even if belatedly, successful response to the challenge that has remained unanswered since the original breakdown? This challenge usually seems to take the form of a warfare between parochial sovereign states which threatens to become deadly unless the institution of parochial sovereignty can be transcended. Is not this condition for salvation fulfilled in the establishment of a unitary state of oecumenical range? And does not this justify the creators and preservers of a universal state in expecting that their handiwork will endure for ever? The answer seems to be that the establishment of a universal state is a response which falls short of success because it has been achieved both too late and at too great a cost. The stable door has been bolted only after the steed has fled. The cease-fire has been sounded only after the soldier has been dealt a mortal wound. The sword has been sheathed only after it has drunk so deep of blood that its thirst for bloodshed can never now be slaked until it has stolen out of its scabbard again and buried its blade up to the hilt in the body of the blood-guilty swordsman.¹ And, whatever the explanation, there is at any rate no doubt about the fact; for the march of events proves incontrovertibly that the universal state has an Achilles' heel, and that its belief in its own immortality is nothing but an illusion.² Sooner or later the universal state passes away; and its passing brings the disintegrating society to its dissolution. In the terms of our formula the rally that is represented by the foundation of a universal state is followed by a relapse when the society *in extremis* is either attacked and devoured by some aggressive contemporary or else dissolves in an interregnum out of which an affiliated civilization eventually emerges.³

¹ The truth of the saying that 'they that take the sword shall perish with the sword' is impressively demonstrated by the transitoriness of a universal state's *Pax Oecumenica* (see V. C (ii) (a), pp. 191-206, above).

² For this belief, and its ironical nemesis, see Part VI, below.

³ For these two alternative endings to the life of a disintegrating civilization see IV. C (ii) (b) 1 and 2, vol. iv, pp. 56-114, above.

Thus in the disintegration-phase of the history of any civilization we can trace a movement of the disintegration-rhythm through at least one beat and a half. A rout which begins at the breakdown of the civilization is eventually followed by a rally which begins at the foundation of its universal state and which is eventually followed in its turn by the breakdown of this universal state's *Pax Oecumenica*. This latter breakdown marks the beginning of another rout which, instead of being followed by another rally, runs on unchecked until it results in annihilation.

On this grand scale the pattern is conspicuous; but, if we look into the movement of disintegration more closely, we shall perceive that the beats which catch our attention first are not the whole of the tune: they are major beats that are interspersed with at least as many minor ones.

While it is true, for example, that the foundation of a universal state marks the beginning of a rally, and its breakdown the beginning of a rout, it is not true that the rally maintains itself continuously, without flagging, from the first until the second of these two moments. In our survey of saviours with the sword we have passed in review the company of the 'Illyrians',¹ whose mission is to re-establish the *Pax Oecumenica* of a universal state after the society has suffered a relapse into anarchy; and this is as much as to say that, 'in the last analysis', the reign of the *Pax Oecumenica* proves not to be a single continuous régime, but to resolve itself, under the analyst's lens, into a couple of minor reigns with a minor interregnum in between them. On this showing, the periodicity-formula for a universal state is not a single beat of Rally-and-Relapse but a double one; and, if we employ a more powerful microscope, we may be able to carry our analysis farther.

For example, if we focus upon the Roman Empire, which was the Hellenic universal state, we shall easily discern the minor interregnum—beginning after the death of Marcus in A.D. 180 and ending at the accession of Diocletian in A.D. 284²—which splits the total span of the *Pax Romana* into two discontinuous bouts: the first bout ending in the year of the death of Marcus and beginning in the year of the Battle of Actium (*commissum* 31 B.C.), while the second bout begins in the year of the accession of Diocletian and ends in the year of the Battle of Adrianople (*commissum* A.D. 378). But, if we now take the first of these two bouts of the *Pax Romana* (*durabat* 31 B.C.—A.D. 180) and analyse this in its turn, we shall find that even this bout did not run quite continuously from beginning

¹ See V. C (ii) (a), pp. 207–8, above.

² This temporary collapse of the Roman Empire *post Marcum* has already been noticed in IV. C (i), vol. iv, p. 8; V. C (i) (c) 3, vol. v, p. 219; V. C (i) (d) 6 (δ), Annex, vol. v, p. 649; and V. C (ii) (a), in the present volume, p. 207, above.

to end of its own relatively short span. Even within this sub-period we can put our finger, at the year A.D. 69, 'the Year of the Four Emperors', on a sub-interregnum which is undoubtedly a genuine example of its kind, however mild a case we may pronounce it to be—judging by the length of its duration and the degree of its anarchy—in comparison even with the minor interregnum of A.D. 180–284 and *a fortiori* with the major interregnum which began in A.D. 378 and which was never retrieved.

If we now turn from the Roman Empire to the Tokugawa Shogunate, which was the universal state of the Far Eastern Society in Japan, we may be able to carry our analysis to yet a further degree of refinement. The *Pax Tokugawica* (*durabat* A.D. 1600–1868) did not last out its natural term, because it was overtaken and overwhelmed by the impact on Japan of the alien civilization of the West; yet, even within this exceptionally short Time-span, a modern Western scholar has detected three sub-relapses and two sub-rallies between the foundation of the Tokugawa Shogunate in the year of the Battle of Sekigehara (*commisum* A.D. 1600) and its abrupt end in the year of the Meiji Revolution (*actum* 1868).¹

Again, in the major interregnum that follows the decisive breakdown of a *Pax Oecumenica*, it is possible in some cases to discern a sub-rally punctuating a débâcle which at first glance appears to run on and out, without any check at all, into a never-retrieved annihilation. In the major interregnum that followed the decisive breakdown of the *Pax Romana* in A.D. 378, we can espy a sub-rally of this kind in the reign of Justinian (*imperabat* A.D. 527–65).² In Indic history Justinian has a counterpart in Harsha (*imperabat* A.D. 606–47),³ who temporarily arrested the ebb of a tide which, by the time when Harsha came to the throne, had been running out, unchecked, for no less than four generations since the decisive breakdown of the *Pax Guptica* in the eighth decade of the fifth century of the Christian Era. And, if Harsha is an Indic Justinian, the 'Abbasid Caliph Nāsir'⁴—who for a moment successfully reasserted the temporal authority of his office more than three hundred years after its eclipse in the ninth century of the Christian Era—may be called a Syriac Heraclius. In Sinic history the major interregnum that followed the decisive breakdown of the

¹ See Murdoch, J.: *A History of Japan*, vol. iii (London 1926, Kegan Paul), p. 427. According to Murdoch, the initial rally, which began with Ieyasu's great victory in A.D. 1600, did not continue for more than seventy years without flagging, and from first to last the Bakufu régime experienced the following vicissitudes: 1600–70: rally; 1670–1709: relapse; 1709–51: rally; 1751–86: relapse; 1786–93: rally; 1793–1868: relapse.

² For Justinian as an example of a 'Second Solomon', see V. C (ii) (a), pp. 209–10, above. For the disastrous effects of Justinian's Archaism see *cap. cit.*, pp. 223–5, above.

³ See V. C (ii) (a), p. 209, footnote 3, above.

⁴ See *ibid.*, p. 212, above.

Pax Hanica in the last quarter of the second century of the Christian Era was momentarily interrupted—in this case after an interval of about a hundred years—when the political unity of the territories which had formerly been embraced in the Sinic universal state was temporarily restored under the dynasty of the United Tsin (*imperabant* A.D. 280–317).¹ This Sinic sub-rally in the course of a major interregnum was impressive so long as it lasted; but in the sequel it proved as costly a luxury as Justinian's blaze of magnificence. In the Sinic, as in the Hellenic, case the dissolving society was harrowed by more cruel tribulations after the abortive rally than it had ever undergone before it. For example, the 'successor-states' of the Sinic universal state in the first bout of the interregnum, which had followed immediately upon the break-up of the empire of the Posterior Han at the turn of the second and third centuries of the Christian Era, had been the indigenous Sinic principalities that still live on in the realm of romance under the name of 'the Three Kingdoms'. On the other hand the 'successor-states' by which the empire of the United Tsin was supplanted in its turn were carved out of the flesh of the Sinic body social by barbarian invaders.²

If we turn, in the third place, from the major interregnum which follows the decisive breakdown of a *Pax Oecumenica* to the 'Time of Troubles' that precedes its establishment, we shall find that this phase, too, in the disintegration of a civilization is not really uniform in colour or seamless in texture. The rout that is precipitated by the breakdown of a civilization does not run quite unchecked until the moment of the rally that is marked by the foundation of a universal state. Just as the *Pax Oecumenica* of a universal state is punctuated by a minor interregnum which splits its reign into two discontinuous bouts, so the anarchy of a 'Time of Troubles' is punctuated by a minor recovery which breaks the seizure up into two distinct paroxysms.

If, in the light of these considerations, we now try to strike a mean between an over-simple and an over-subtle analysis, we may be inclined to concentrate our attention upon a run of the disintegration-rhythm in which it takes three and a half beats of the movement of Rout-and-Rally to cover the journey from the breakdown of a civilization to its dissolution. Let us test our periodicity-pattern, as it presents itself on this scale, by our usual empirical method. Do the histories of the disintegrations of the civilizations whose histories are known to us fall naturally into this shape? Our survey will necessarily be confined to cases in

¹ See I. C (i) (b), vol. i, p. 88; IV. C (ii) (b) 1, vol. iv, p. 65, footnote 3; and V. C (i) (c) 3, vol. v, p. 272, above.

² See V. C (i) (c) 3, vol. v, p. 273, above.

which our evidence is sufficient and in which, at the same time, the normal course of events has not been distorted out of all recognition by the disturbing impact of external forces. These conditions are fulfilled in the histories of the Hellenic and Sinic and Sumeric civilizations, and again in the history of the main body of the Orthodox Christian Society. The history of the Hindu Civilization has likewise followed a normal course which in our day is all but complete. And we shall also find it worth while to look at the histories of the Syriac Civilization, the Far Eastern Society both in Japan and in China, the Babylonian Civilization, the Orthodox Christian Society in Russia, and the Minoan Civilization—in spite of the irregularities which deform the first five of these six histories in their later chapters.

The Rhythm in Hellenic History.

The Hellenic example may be convenient to take first, because the challenge that worsted the Hellenic Civilization is one which has been the common bane of most of the civilizations whose breakdowns and disintegrations are on record, and at the same time one which is nowhere more easy to identify than it is in the Hellenic case in point. The challenge under which the Hellenic Civilization broke down was manifestly the problem of creating some kind of political world order that would transcend the institution of Parochial Sovereignty. And this problem, which defeated the generation that stumbled into the Atheno-Peloponnesian War of 431–404 B.C., never disappeared from the Hellenic Society's agenda so long as such a thing as Hellenism survived in any recognizable form.¹

The moment of the breakdown of the Hellenic Society is not difficult to date; it can be equated with the outbreak of the Atheno-Peloponnesian War in 431 B.C.; and we can be equally confident in dating the establishment of the *Pax Romana*, which served as the Hellenic *Pax Oecumenica*, from Octavian's victory at Actium in 31 B.C. Can we also discern a movement of Rally-and-Relapse in the course of the 'Time of Troubles' that extends between these two dates? If we scan the history of the Hellenic World during the four centuries ending in 31 B.C., the vestiges of an abortive pre-Augustan rally are unmistakable.

One symptom is the social gospel of Homonoia or Concord² which was preached by Timoleon (*ducebat* 344–337 B.C.) in Sicily and by Alexander (*imperabat* 336–323 B.C.) in a vaster field east of

¹ See IV. C (iii) (b) 10, vol. iv, pp. 206–14; IV. C (iii) (c) 2 (β), vol. iv, pp. 303–15; and V. B, vol. v, p. 12, above.

² See V. C (i) (d) 7, pp. 6–8, above.

the Adriatic.¹ Another symptom of a rally is the subsequent prescription by two philosophers, Zeno and Epicurus, of a way of life for citizens of a commonwealth which was not any parochial city-state but was nothing less than the *Cosmopolis*.² A third symptom is a crop of constitutional experiments—the Seleucid Empire, the Aetolian and Achaean Confederacies, the Roman Commonwealth—which were all of them attempts to transcend the traditional sovereignty of the individual city-state by building up political communities on a supra-city-state scale out of city-states which had been persuaded or coerced into playing the part of constituent cells of a larger body politic.³ A fourth symptom is the endeavour to put new life into a dead-alive ‘*patrios politeia*’ which was made by certain high-minded sons of the Hellenic dominant minority—the two Heracleidae at Sparta and the two Gracchi at Rome⁴—who idealistically overrated the blessings which their country had derived in times past from its traditional constitution when this had been ‘a going concern’, and who were naïvely blind to the dangers of attempting to reinstate an obsolete institution which had now become an anachronism as well as a dead letter.⁵ A fifth symptom is a certain considerateness towards civilian life and property which appears to have been shown by the belligerents in the wars of Alexander’s successors.⁶ A sixth symptom is the social re-enfranchisement, *post Alexandrum*, of the women and slaves.⁷ It will be observed that these symptoms of a rally in the course of the Hellenic ‘Time of Troubles’ extend over four or five generations, reckoning from Timoleon’s to Cleomenes’,⁸ so that it is not easy to pin this rally down between definite dates; but, if we try to determine the period in which all this promise seemed nearest to being translated into performance, we may be inclined to single out the breathing-space of half a century between the death of Pyrrhus in 272 B.C.—an event that marked the end of

¹ For the respective missions of Timoleon and Alexander as a philosopher-statesman and a philosopher-king see V. C (ii) (a), pp. 248, 251, and 253, and pp. 246 and 254, above.

² For the Hellenic conception of the *Cosmopolis* see V. C (i) (d) 7, Annex, pp. 332–8, below.

³ For this crop of constitutional experiments in the third century B.C. see IV. C (iii) (c) 2 (β), vol. iv, pp. 309–13, above.

⁴ The two Gracchi are ‘philosophically contemporary with’ the two Heracleidae, though in chronological time they lived and worked a hundred years later. For the concept of ‘philosophical contemporaneity’ see I. C (iii) (c), vol. i, pp. 172–4, above. For the chronological Time-lag of the history of Rome, in the Pre-Imperial Age, behind the histories of the states at the heart of the Hellenic World see IV. C (iii) (b) 9, vol. iv, p. 205, above, and also Part XI, below.

⁵ For the Archaism of the Heracleidae and the Gracchi, and its disastrous outcome, see V. C (ii) (a), pp. 219–20, above.

⁶ On this convention see the passage quoted in IV. C (iii) (b) 3, vol. iv, p. 147, footnote 1, above from Polybius, who gives to Alexander himself the credit of having been the first Hellenic captain to set this example of humanitarianism.

⁷ See IV. C (iii) (b) 14, vol. iv, pp. 239–40, above.

⁸ And leaving the generation of the Gracchi out of the reckoning, for the reason given in footnote 4, above.

the strife over the division of the heritage of Alexander the Great—and the outbreak of the Hannibalic War in 218 B.C. This relatively prosperous spell of Hellenic history in the third century B.C. is not incomparable with the earlier spell of rather greater prosperity and almost equal length which in the fifth century had intervened between the repulse of Xerxes and the outbreak of the Atheno-Peloponnesian War; and the two general wars which respectively cut the two breathing-spaces short were disasters of an approximately equal magnitude. It will be seen that, if the third century B.C. witnessed a rally which almost looked like a return of the Periclean Age, this rally was followed by a relapse which was at least as serious a débâcle as the breakdown in which the Periclean Age had found its tragic end.¹

Can we diagnose the weak point in the rally that accounts for its ultimate defeat? The weakness arose out of a sudden great increase in the material scale of Hellenic life that had been a by-product of the first paroxysm of the Hellenic 'Time of Troubles'. Hellenic arms which had been exercised and sharpened in a hundred years of internecine warfare were turned against non-Hellenic targets towards the end of the fourth century B.C.; and, in practised Macedonian and Roman hands, these formidable weapons then conquered, and in conquering annexed to the Hellenic World, the domains of four alien civilizations² as well as vast tracts of Barbarism.³ This sudden change of material scale seriously—and, as it turned out, fatally—aggravated the difficulty of solving the unsolved problem on the solution of which the fate of the Hellenic Civilization hung. The problem, as we have seen, was that of creating some kind of political world order that would transcend the traditional sovereignty of the individual city-state; and, while the change of material scale did promise to serve this end in one negative way by making the maintenance of City-State Sovereignty impossible, the same change also had a positive consequence which militated—and this with far greater effect—against the endeavour to bring a world order into being.

Experiments in overcoming a traditional parochialism which were unprecedentedly successful in themselves were now turned

¹ On a first view of Hellenic history we were content to trace the disintegration of the Hellenic Society back to the Hannibalic War and to let our investigations rest at that point for the time being (see I. B (iv), vol. i, pp. 40-2, above). It was not till we had come to grips with the problem of the breakdowns of civilizations that we took this inquiry up again and this time traced the story farther back, through an earlier chapter, from the Hannibalic War of 218-201 B.C. to the Atheno-Peloponnesian War of 431-404 B.C. (See IV. C (ii) (b) 1, vol. iv, pp. 61-3, and V. C (i) (c) 3, vol. v, p. 213, above.)

² The Syriac, Egyptian, Babylonian, and Indic.

³ For this sudden territorial expansion of the Hellenic World at this time see III. C (i) (a), vol. iii, pp. 140 and 150-1; III. C (i) (d), vol. iii, p. 197; IV. C (iii) (c) 2 (α), vol. iv, p. 265; IV. C (iii) (c) 2 (β), vol. iv, pp. 305-6; and V. C (i) (c) 3, vol. v, p. 214, above.

to account, not for the large and vital purpose of creating an all-embracing Hellenic world order, but for the petty and perverse purpose of forging new-fangled Great Powers of a supra-city-state calibre which would be capable of continuing, on the new scale of Hellenic affairs, the internecine warfare that had been waged on the old scale by a Sparta and an Athens and a Thebes with such disastrous effects upon the life of the society in which all these parochial communities had their being. Thus the political shape which the Hellenic Society assumed in the new chapter of Hellenic history that had been opened by Alexander's passage of the Hellespont¹ was something that was at the opposite pole from a political world order. When the epigoni of the diadochi of Alexander had fought one another to a standstill and the dust of battle had had time to settle down, the political landscape that became visible in the fourth decade of the third century B.C. revealed a cluster of pygmy states at the heart of the Hellenic World compassed about by a ring of giant Powers whose ambitions were set, and energies bent, upon the perilous game of contending with one another in the central arena for the prize of a hegemony over its puny and defenceless denizens.² Both the geographical expansion of the Hellenic World that had been achieved by Macedonian and Roman military prowess and the constitutional progress in transcending city-state sovereignty that had been accomplished by Aetolian and Achaean and Seleucid and Roman statesmanship had been seized upon, and successfully misapplied, for the purpose of recruiting the strength of the new competitors for a military ascendancy. And these giants' only notion of how to employ their huge physical powers was to refight the battles of Athens and Sparta with a titanic violence that had never come within those old-fashioned belligerents' capacity.

The inevitable consequence was a repetition in the third century of the catastrophe which the Hellenic Society had brought upon itself once already in the fifth century. In that earlier age the city-states which had indulged in 'temperate contests' with one another during the half-century following the repulse of Xerxes had eventually fallen into the internecine conflict of 431-404 B.C. And now, in the third century, the new Great Powers of supra-city-state calibre which had taken Athens' and Sparta's place proved likewise unable to contend with one another for longer than half a century without stumbling, in their turn, into a disaster. The respite that had begun after the death of Pyrrhus ended in the

¹ For this 'new era' of Hellenic history see V. C (i) (d) 9 (β), Annex, p. 340, below.

² For this constellation of Hellenic political forces in this age see III. C (ii) (b), vol. iii, pp. 310-13 and 339-41, and IV. C (iii) (c) 2 (α), vol. iv, pp. 265 and 268-9, above.

Hannibalic War of 218-201 B.C. And this time the havoc was proportionate to the unprecedented material 'drive' of the conflicting forces. The overthrow of Athens in 404 B.C. had been followed by nothing worse—bad enough though this might be—than a series of indecisive epilogues to the Great War which had ended at Aegospotami. Sparta, Thebes, and Macedonia in turn had won and lost an originally Athenian hegemony. On the other hand the overthrow of Carthage in 201 B.C. was followed by the destruction or subjugation of three other Great Powers in a series of decisive conflicts from which Rome emerged as the sole surviving combatant. Zama was followed by Cynoscephalae and Magnesia and Pydna; and the cumulative effect of half a century of catastrophic warfare (218-168 B.C.) upon the stamina of the Hellenic Society of the day was so devastating that the victor's triumph was immediately followed by a series of social convulsions which racked the victor himself quite as cruelly as his victims and which left the whole Hellenic body social mortally enfeebled by the time when this second paroxysm of the Hellenic 'Time of Troubles' was brought to an end at last through the tardy conversion of a Roman Anarchy into a Roman Peace.¹

In the history of the disintegration of the Hellenic Society we have now verified the occurrence of one perceptible rally and one flagrant relapse between the original breakdown of the Hellenic Civilization in 431 B.C. and the establishment of a Hellenic *Pax Oecumenica* in 31 B.C.; and, since we have already taken note² of the subsequent relapse and rally that intervened between the first establishment of the *Pax Romana* in 31 B.C. and its final breakdown in A.D. 378, we can now report that the disintegration of one historic society, at any rate, does in fact present itself in the pattern of a run of three and a half beats of a recurrent movement of Rout-and-Rally. Let us see whether this finding is confirmed in other cases.

The Rhythm in Sinic History.

If we turn to the Sinic case next we shall identify the moment of the breakdown of the Sinic Civilization with the date of the disastrous collision between the two Powers Tsin and Ch'u in 634 B.C.,³ and the moment of the establishment of a Sinic *Pax*

¹ Saint Augustine, in *De Civitate Dei*, Book III, chaps. 18-28, surveys the evils of this second paroxysm of the Hellenic 'Time of Troubles', from the outbreak of the Hannibalic War to the establishment of the *Pax Augusta*; and in chaps. 29-30 he submits that at any rate the climax of this paroxysm—i.e. the Roman *stasis* and civil wars of 133-31 B.C.—had been more dreadful than any of the experiences of his own generation, not excluding Alaric's sack of Rome in A.D. 410.

² In IV. C (i), vol. iv, p. 8; V. C (i) (c) 3, vol. v, p. 219; V. C (i) (d) 6 (δ), Annex, vol. v, p. 649; V. C (ii) (a), in the present volume, p. 207; and the present chapter, p. 284, above.

³ See IV. C (ii) (b) 1, vol. iv, p. 66, above.

Oecumena with the overthrow, in 221 B.C., of Ts'i by Ts'in—a 'knock-out blow' which left Ts'in alone alive as the solitary survivor in an arena now littered with the corpses of all the other Great Powers of the Sinic World.¹ If these are the two terminal dates of the Sinic 'Time of Troubles', are there any traces of a movement of Rally-and-Relapse within the intervening period? In the Sinic, as in the Hellenic, case the answer to this question is in the affirmative.

There is a perceptible rally in the course of the Sinic 'Time of Troubles' round about the generation of Confucius (*vivebat circa* 551-479 B.C.); and this rally may be taken to have been inaugurated by the disarmament conference of 546 B.C.,² in which a serious attempt was made to grapple with the fundamental problem of Sinic international politics.

In the Sinic World the dangerous political constellation into which the Hellenic World fell *post Alexandrum*³—that is to say, not until half-way through the Hellenic 'Time of Troubles'—had already taken shape in the last phase of the growth of the Sinic Society, before its breakdown. Even as early as that, the geographical expansion of the Sinic culture had produced the political effect of encircling the older states in the cradle of the Sinic Civilization with a ring of younger states which outclassed their elders in material calibre as decidedly as these surpassed the *parvenues* in every other respect.⁴ The catastrophe of 634 B.C. can perhaps be traced back to the failure of a previous attempt to deal with this awkward situation by international co-operation. In 681-680 B.C. the pygmy states in the heart of the Sinic World had organized themselves into a Central Confederacy under the presidency of the eastern Great Power, Ts'i, with the object of opposing a collective resistance to the pressure of the preponderant and aggressive southern Great Power, Ch'u. But, although this Central Confederacy was equipped with a permanent constitution which provided for recurrent assemblies of the heads of states with the Prince of Ts'i as their convener,⁵ its existence did not avail to prevent 'power politics' from becoming the dominant factor in Sinic international relations; and the conference of 546 B.C. represented a fresh attempt⁶ to rescue the Sinic World from a chronic

¹ For the significance of this event see I. C (i) (b), vol. i, p. 89, above.

² See cap. cit., vol. cit., pag. cit.

³ See the present chapter, pp. 289-91, above.

⁴ See III. C (ii) (b), vol. iii, p. 303, footnote 2, and p. 313, footnote 3, above, as well as Maspéro, H.: *La Chine Antique* (Paris 1927, Boccard), pp. 286 and 336-7.

⁵ For the foundation, organization, and history of this Sinic Central Confederacy see *ibid.*, pp. 299-301. The Assembly was convened annually for the first four years of the Central Confederacy's existence, but thereafter only at longer intervals which were of no fixed length.

⁶ Between the foundation of the Central Confederacy in 681-680 B.C. and the calling

warfare which, in and after the Tsin-Ch'u War of 634-628 B.C., had ceased to be temperate and had become internecine. This time the two Great Powers which for eighty-eight years past had been struggling inconclusively for the prize of hegemony were implored by Sung—which was one of the most ancient and most respectable of the pygmy states at the centre—to lay aside their mutually incompatible ambitions and to assume a joint presidency of the Central Confederacy on a footing of equality with one another; and this statesmanlike diplomacy did secure a breathing-space for an already grievously self-lacerated Sinic body social.

What the Sung Government accomplished in 546 B.C. gave an opportunity in the next generation for a sage who had been born in the neighbouring central state of Lu about five years before the date of the conference. Confucius was able to devote his life to the self-imposed mission of saving the Sinic Society from suicide by converting its princes to a philosophically archaistic way of living and ruling.¹ But Confucius's personal experience gives the measure of the rally which the conference of 546 B.C. had inaugurated, for Confucius is perhaps the supreme example of a prophet who has been not without honour save in his own time. A sage who was to be honoured superlatively by Posterity after the Sinic World had been tragically overtaken by the catastrophe from which the posthumous hero had hoped to save it, found himself unable to gain the ear of any contemporary ruler. And, if Posterity has been right in recognizing in Confucius's prescription the sovereign cure for Sinic troubles, then it is not to be wondered at that the generation who refused to take this healing medicine when the cup was brought to their lips should have fallen into a relapse which was to prove to be still graver than the seizure that had almost been the death of their fathers.

The first warnings of fresh trouble had already declared themselves quite early in Confucius's own lifetime. For example, the Covenant of 546 B.C. had been broken by Ch'u in 538 after one renewal in 541.² But a disturbing factor to which the relapse of the Sinic Society *post Confucium* can be traced back more directly is the decline and fall of the principality of Tsin. This northern

of the conference of 546 B.C. the Central Confederacy had one conspicuous success when, in the successive assemblies of 655 and 652 B.C., it succeeded in regulating the succession to the throne of the Imperial Dynasty of the Chou. At the second of these two meetings the Governments there represented appear to have subscribed to a Covenant of five articles, in which they pledged themselves to act upon certain rather vaguely formulated principles of political and social behaviour. (See Hirth, F.: *The Ancient History of China* (New York 1908, Columbia University Press), pp. 209-10.)

¹ Confucius's career has been taken as an illustration of the *motif* of Withdrawal-and-Return in III. C (ii) (b), vol. iii, pp. 328-30, above, and as an illustration of the sage's endeavour to save souls by proxy in V. C (ii) (a), in the present volume, p. 252, above.

² See Maspéro, *op. cit.*, p. 348.

Great Power, which had been the first Sinic state to militarize itself,¹ was also the first to go to pieces.² Since about 573 B.C. there had been signs that the central government of Tsin was losing its hold over its feudatories; from 497 B.C. onwards this weakening of the central authority in the state began to be reflected in a process of internal disintegration; in the course of the fifth century the principality virtually dissolved into a mere congeries of fiefs; and this anarchy was only overcome at the cost of the life of the principality itself. About the year 424 B.C. Tsin broke up into three 'successor-states'—Chao, Han, and Wei—which secured diplomatic recognition in 403. This was the signal for a fresh outbreak of internecine warfare in the Sinic World; and that warfare was now waged in a larger arena and with a greater intensity than the pre-Confucian bout.

The increase in the extent of the arena was directly due to the break-up of Tsin; for the three 'successor-states' of the defunct principality were none of them of a calibre to play the part of a Great Power effectively; and their individual weakness was enhanced by the interlacement of their territories and by the mutual hostility of their governments; so that the effect of the change was to add three new members to the cluster of pygmy states at the heart of the Sinic World. On the other hand the ring of giants on the periphery was not broken, but was merely expanded, by the transference of the territories of the *ci-devant* northern Great Power from the outer circle to the inner; for all this time the Sinic World as a whole had continued steadily to expand; and by the time when Tsin collapsed a younger Power, Yen, which had latterly come into existence to the north of Tsin, was ready to step into the defunct northern Power's place. As for the increase in intensity that accompanied this increase in the scale of the warfare between the Sinic Great Powers, it is commemorated in the trivial yet significant fact that the name *Chan Kuo*—'the [period of] contending states'—which is properly applicable to the whole of the period between the outbreak of war between Tsin and Ch'u in 634 B.C. and the conquest of Ts'i by Ts'in in 221 B.C., has actually been confined, in the usage of Sinic historiography, to the second of the two paroxysms³ into which the Sinic 'Time of Troubles' is divided by the respite which began at the conference of 546 B.C.

¹ See Maspéro, *op. cit.*, p. 322.

² See *ibid.*, pp. 345, 353, 362-3, and 367-8, for the principal stages in a decay which was a gradual process.

³ The beginning of the *Chan Kuo* period seems to have been sometimes reckoned from 403 B.C. (the date of the diplomatic recognition of the three 'successor-states' of Tsin) and sometimes from 479 B.C. (the supposed date of the death of Confucius); but the usage of the term does not seem ever to have been stretched to include either Confucius's lifetime or, *a fortiori*, the bout of internecine warfare before Confucius's birth.

The second paroxysm engraved so much more harrowing an impression upon Sinic minds that it came to be thought of as the 'Time of Troubles' *par excellence*.

'Avec la chute du Tsin, ce n'est pas seulement un des grands états qui avait disparu, c'était aussi tout un idéal d'organisation politique sous la forme d'une sorte de confédération respectant dans une certaine mesure les droits des princes locaux: à partir du ^ve siècle, le vieux système des hégémonies était bien mort, et ce n'est pas pour le ressusciter à leur profit que les grands états luttèrent, ce fut pour s'agrandir directement aux dépens de leurs voisins plus faibles, jusqu'à ce que le triomphe définitif d'un seul réalisât pour la première fois l'unité absolue du monde chinois entier.'¹

Thus in Sinic, as in Hellenic, history we can verify the occurrence of one perceptible rally and one flagrant relapse between the original breakdown of the society and the establishment of its *Pax Oecumenica*; and, if we go on to inquire whether the Sinic, like the Hellenic, *Pax Oecumenica* was punctuated by a relapse and a rally, we shall find this question easy to answer in the affirmative. The break in the continuity of the *Pax Hanica* is marked by a literal interregnum (*durabat* A.D. 9-25) which intervened between the fall of the dynasty of the Prior Han and the establishment of a new dynasty which had no genuine connexion with the House of Liu Pang, though it assumed the name of 'the Posterior Han' in a barefaced endeavour to gloze over its lack of any legitimate title to the Imperial Throne. The historical fact of the interregnum disposes of this fiction of continuity, and the bout of anarchy was longer *de facto* than *de jure*; for the Prior Han had let the reins of government fall from their hands about half a century before they lost the throne itself to the usurper Wang Mang.² It will be seen that the subsequent decisive breakdown of the *Pax Hanica* towards the close of the second century of the Christian Era, when the Posterior Han collapsed in their turn, was the fourth débâcle, reckoning from the initial disaster of 634-628 B.C., in the history of the disintegration of the Sinic Society; and, since this fourth débâcle was not successfully retrieved by the abortive rally in the time of the United Tsin,³ the number of standard beats of the movement of Rout-and-Rally that can be counted in the course of the disintegration-process from first to last turns out in Sinic, as in Hellenic, history to be three and a half.

¹ Maspéro, *op. cit.*, pp. 390-1.

² This collapse of the Prior Han is perhaps to be explained, at least in part, as an effect of the strain of the great wars of conquest on the Eurasian Steppe which had been launched by the Emperor Wuti (see V. C (i) (c) 3, vol. v, p. 271, above).

³ See pp. 285-6, above.

The Rhythm in Sumeric History.

If we pass from Sinic history to Sumeric we shall register the same reading here again; for in the course of the Sumeric 'Time of Troubles' a beat of Rally-and-Rout is distinctly, even if only faintly, perceptible, while the life-span of the Sumeric universal state is punctuated by a counter-beat of Rout-and-Rally which is unusually emphatic.

If we date the beginning of the 'Time of Troubles'¹ from the career of the Sumerian militarist Lugalzaggisi of Erech (Uruk) and Umma (*dominabatur circa 2677-2653 B.C.*)² and equate its end with the foundation of a Sumeric universal state by Ur-Engur of Ur (*imperabat circa 2298-2281 B.C.*)³ we may detect, in the life-time of the Akkadian militarist Naramsin (*dominabatur circa 2572-2517 B.C.*), at least one symptom of a rally in a sudden notable advance in the field of visual art which had been achieved between the generation of Naramsin and that of his predecessor Sargon (*dominabatur circa 2652-2597 B.C.*)⁴ At the same time this very increase, in this age, of the Sumeric Society's powers of visual representation has served to testify that this successful cultivation of the arts of peace was not accompanied by any renunciation of Militarism. The scene portrayed on Naramsin's celebrated stele cries out for a nemesis that duly overtook the hero's successors.⁵ Within a quarter of a century of Naramsin's death the Akkadian power had been shaken by disputes over the succession to the throne;⁶ within sixty-two years the sceptre had passed back from Akkad to Erech; and within eighty-eight years the Gutaeans who had been brought to bay and slaughtered by Naramsin in their native mountain fastnesses had taken their revenge by descending upon the plains of Shinar and imposing their own rule on both Akkad and Sumer.⁷ This interlude of barbarian domination—which marked the acme of the second paroxysm of the Sumeric 'Time of Troubles'—lasted for 124 years (*circa 2429-*

¹ The dates given in the following paragraphs for events in Sumeric history are all taken, except where other references are given, from Meyer, E.: *Die Aeltere Chronologie Babyloniens, Assyriens und Aegyptens* (Stuttgart and Berlin 1925, Cotta).

² See I. C (i) (b), vol. i, p. 109, above.

³ See I. C (i) (b), vol. i, p. 106; V. C (i) (d) 6 (γ), vol. v, p. 497; V. C (i) (d) 6 (δ), Annex, vol. v, pp. 650-1; and V. C (ii) (a), in the present volume, p. 190, above.

⁴ For this advance—for which one of the most striking pieces of evidence is afforded by the stele on which Naramsin has commemorated his aggression against the highlanders of Gutium—see Meyer, E.: *Geschichte des Alterthums*, vol. i, part (2), 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 533.

⁵ For Naramsin's militarism and its nemesis see also I. C (i) (b), vol. i, p. 109; V. C (i) (c) 3, vol. v, pp. 203 and 262; and V. C (ii) (a), in the present volume, p. 184, above.

⁶ The triennium, *circa 2491-2489 B.C.*, which saw no less than four successors of Naramsin come and go may be compared with the Roman 'Year of the Four Emperors'.

⁷ See V. C (i) (c) 3, vol. v, p. 262, above.

2306 B.C.) before Utuchegal of Erech (*militabat circa* 2305–2299 B.C.) made his abortive, and Ur-Engur of Ur (*imperabat circa* 2298–2281 B.C.) his successful, attempt to establish a *Pax Sumerica*.¹

The Time-span of this *Pax Sumerica* extends between Ur-Engur's accession *circa* 2298 B.C. and Hammurabi's death *circa* 1905 B.C.; but when we look into the course of Sumeric history between these two dates we find that in this case the 'Peace' is a thin shell encasing a wide welter of anarchy.² The peace which Ur-Engur succeeded in establishing did not remain unbroken for more than 118 years. It was suddenly and violently interrupted when in 2180 B.C. Ur-Engur's fourth successor, the Emperor Ibisin, was defeated and taken prisoner by a host of Elamite rebels. Thereupon 'the Empire of the Four Quarters' broke into fragments. The triumphantly insurgent province of Elam not only recovered its own independence; it also imposed its rule upon a portion of the metropolitan territory of the Sumeric universal state in Shinar, which was now organized into a client-state of Elam with its capital at Larsa and with an Elamite prince installed there as the vassal of an Elamite suzerain who was the King of Elam itself. In other parts of Shinar the tradition of the Empire of Ur was carried on by a 'Realm of the Two Lands'³ with its capital at Isin; but this relic of the Sumeric universal state was not strong enough to hold together the provinces on which the Elamites had not laid hands. This or that city-state (*imprimis* Erech) was perpetually asserting its independence here and there; and 130 years after Ibisin's catastrophe a new 'successor-state' with a greater future was carved out of the former domain of the Empire of Ur by Amorite marchmen who made themselves masters of Babylon in 2049 B.C. From first to last the tide of anarchy that had broken loose in 2180 B.C. went on flowing for more than 200 years. The first sign of a recoil from disruption towards consolidation was the conquest and annexation of the Empire of Isin by the Elamite client-state of Larsa *circa* 1954–1948 B.C. The work of re-union was completed in 1918 B.C. when Rimsin of Larsa, the Elamite conqueror of Isin, was overthrown in his turn by Hammurabi, the Amorite prince of Babylon. In virtue of this feat

¹ See I. C (i) (b), vol. i, p. 106; V. C (i) (d) 6 (γ), vol. v, p. 497; V. C (i) (d) 6 (δ), Annex, vol. v, pp. 650–1; and V. C (ii) (a), in the present volume, p. 190, above.

² The following facts and dates in the history of this recrudescence of the Sumeric 'Time of Troubles' are taken from Meyer, E.: *Geschichte des Altertums*, vol. i, part (2), 3rd ed. (Stuttgart and Berlin 1913, Cotta), pp. 559–69, as corrected by the same scholar in his *Die Aeltere Chronologie Babyloniens, Assyriens und Aegyptens* (Stuttgart and Berlin 1925, Cotta), pp. 26–31.

³ i.e. Sumer and Akkad. After the catastrophe of 2180 B.C. the demi-emperors at Isin reverted to this original style and title of the Emperor Ur-Engur and abandoned the more ambitious style and title of 'the Empire of the Four Quarters' which had been introduced by Ur-Engur's successor Dungi (see V. C (i) (d) 6 (δ), Annex, vol. v, p. 651, above).

Hammurabi justly regarded himself as the successor of Ur-Engur and Dungi;¹ and there was a moment when he was effectively master of the whole of Dungi's 'Empire of the Four Quarters', Elam included. But Hammurabi's restoration of the *Pax Sumerica* was as ephemeral as it was far-reaching. For the author of it was hardly in his grave before the Sumeric Society was swept off its feet again in a fourth and final débâcle from which it never rallied.²

The Rhythm in the History of the Main Body of Orthodox Christendom.

The now familiar pattern reappears, just complete, in the disintegration of the main body of Orthodox Christendom, and again—this time all but complete—in the disintegration of the Hindu Society.

We have identified the breakdown of the Orthodox Christian Society with the outbreak of the great Romano-Bulgarian War of A.D. 977-1019;³ and the eventual establishment of a peace which was oecumenical for the main body of Orthodox Christendom—though it did not extend to the offshoot of this civilization on Russian soil—may be dated from the Ottoman conquest of Macedonia in A.D. 1371-2.⁴ In between these two termini of an Orthodox Christian 'Time of Troubles' we can discern a rally led by the East Roman Emperor Alexius Comnenus (*imperabat* A.D. 1081-1118),⁵ a consequent respite which lasted through the reigns of the next two sovereigns of the Comnenian Dynasty, and a relapse into which the society fell in the ninth decade of the twelfth century.⁶ The subsequent tribulations of Orthodox Christendom, which were only ended by the establishment of a *Pax Ottomanica*,⁷ were still more grievous than the earlier troubles

¹ See Meyer, E.: *Geschichte des Altertums*, vol. i, part (2), 3rd ed. (Stuttgart and Berlin 1913, Cotta), p. 633.

² See I. C (i) (b), vol. i, pp. 106 and 110, and IV. C (ii) (b) 1, vol. iv, pp. 63-4, above.

³ See IV. C (ii) (b) 1, vol. iv, p. 72, and IV. C (iii) (c) 2 (β), vol. iv, pp. 390-1, above.

⁴ See Part III. A, vol. iii, p. 27, and V. C (ii) (a), in the present volume, p. 191, footnote 1, above.

⁵ See IV. C (iii) (c) 2 (β), Annex II, vol. iv, pp. 619-20, and V. C (ii) (a), in the present volume, p. 184, above.

⁶ This relapse at this date was the penalty that Orthodox Christendom had to pay for the fault of a dynasty which had forgotten its founder's mission of bringing salvation to a disintegrating society. The successors of Alexius I Comnenus succumbed to a fatal spirit of military adventure which had first taken possession of the East Roman Government in the tenth century of the Christian Era (see IV. C (iii) (c) 2 (β), vol. iv, pp. 399-404, above).

⁷ This second paroxysm of the Orthodox Christian 'Time of Troubles' was faintly relieved in the middle decades of the thirteenth century by the success of the Nicene Greek 'successor-state' of the East Roman Empire in putting together again some of the fragments into which the Empire had broken up between A.D. 1186 and A.D. 1204. In other contexts (Part III. A, vol. iii, p. 27, and V. C (ii) (a), in the present volume, p. 184, above) these Nicene Greek achievements have been taken as symptoms of a turn in the tide of disruption, and as portents of the later and greater achievements of the

which had been momentarily overcome by the prowess of Alexius Comnenus.

The *Pax Ottomanica* which was inaugurated by the Ottoman conquest of Macedonia in A.D. 1371-2 eventually collapsed under the shock of defeat in the great Russo-Turkish War of 1768-74; but, while this collapse marked the decisive breakdown of a régime that had been first established four hundred years earlier, the Ottoman annals of the intervening centuries present plain evidence of an anticipatory relapse that was retrieved by a temporary rally. The relapse is to be discerned in the rapid decay of the Pādishāh's Slave-Household after the death of Suleymān the Magnificent in A.D. 1566.¹ The rally is heralded in the subsequent experiment of compensating for the demoralization of the *qullar* by taking the Pādishāh's Orthodox Christian *ra'iyeh* into partnership with the free Muslim citizens of the Ottoman commonwealth—who had now seized the reins of power—without any longer insisting that the *ra'iyeh* should become renegades as the price of their admission to a share in the government of the state.²

This almost revolutionary innovation, which was introduced in the seventeenth century by the statesmanship of the vezirs of the House of Köprülü,³ won for the Ottoman Empire in the eighteenth century a breathing-space which is still wistfully remembered by the 'Osmanlis of a later day as 'the Tulip Period'. During this brief spell (*circa* A.D. 1718-36) the ruling class of an empire that was already standing on the defensive against the Franks and the Russians was still able for a moment to rest from the toils of war and to forget the cares of state in the recreation of cultivating a flower.⁴ The breathing-space, however, was as short as it was pleasant; for, even before it began, the statesmanlike salvage-work of the Köprülüs had been fatally sabotaged by the reckless

¹ 'Osmanlis. Yet, if the Nicene Greek attempt at political reconstruction is to be regarded as a sub-rally, it must also be written off as an abortive one; for the Principality of Nicaea did not enlarge its dominions, but merely shifted its centre of gravity, when it conquered Adrianople in A.D. 1235 and Macedonia in A.D. 1246 and Constantinople itself in A.D. 1261. As fast as these Greek princes of Nicaea acquired territories in Europe from Greek or Latin rivals, they lost territories in Asia to the Turks. For the subsequent flashes of religious and artistic light in Orthodox Christendom in the fourteenth century see IV. C (iii) (c) 2 (β), vol. iv, pp. 359-61, above.

² For this decay see Part III. A, vol. iii, pp. 44-7, above.

³ For this experiment see II. D (vi), vol. ii, pp. 223-5, and Part III. A, vol. iii, pp. 47-8, above.

⁴ See V. C (ii) (a), pp. 208-9, above. These Albanian statesmen performed the same service for the Ottoman Empire in the seventeenth century of the Christian Era as the Illyrian soldiers had performed for the Roman Empire in the third century.

⁵ For this interlude of dilettantism in the grim history of the Ottoman governing class see von Hammer, J.: *Histoire de l'Empire Ottoman*, French translation (18 vols. + atlas), vol. xiv (Paris 1839, Bellizard, Barthès, Dufour et Lowell), pp. 61-70. 'La passion des fleurs devint le goût dominant du peuple, à tel point qu'elle surpassa bientôt celle qu'un grand nombre d'individus avaient à cette époque en France et dans les Pays-Bas, pour la culture des tulipes' (p. 65). See also Jorga, N.: *Geschichte des Osmanischen Reichs* (5 vols.), vol. iv (Gotha 1911, Perthes), Book II, chap. 4, pp. 361-99.

militarism of Mehmed Köprülü's unluckily chosen protégé Qāra Mustafā.¹ This megalomaniac had wasted the precious strength which the Köprülüs had been nursing back into the Ottoman body politic on a new attempt to conquer Western Christendom—a military task which had proved to be beyond the Ottoman Empire's power when this had been still at its height in Süleymān the Magnificent's lifetime. Qāra Mustafā's folly had precipitated the great war of 1682–99, in which the ascendancy had passed once for all from the Ottoman to the Frankish side.² And, although the Köprülüs' work did avail to stave off disaster for three-quarters of a century—from A.D. 1699 to A.D. 1774—the nemesis of Qāra Mustafā's wanton stroke was merely postponed and was not averted. The military disaster of A.D. 1768–74 proved irretrievable because, by that time, the *ra'īyeh* whose support the Köprülüs had enlisted were ceasing to be content with a partnership in the government of a declining Ottoman Empire and were being captivated by the ambition of carving up the decrepit Ottoman body politic into young national states of their own in the fashion of the rising peoples of the West.³ The sequel to the decisive breakdown of the *Pax Ottomanica*—which was Orthodox Christendom's *Pax Oecumenica*—in the last quarter of the eighteenth century was not a rally: it was a merger of the main body of Orthodox Christendom in a 'Great Society' of a Western complexion.⁴ And thus we see that in Orthodox Christian history, too, the process of disintegration has run through three and a half beats of the movement of Rout-and-Rally from first to last.

The Rhythm in Hindu History.

In the history of the disintegration of the Hindu Society the final half-beat is not yet quite due, since the second instalment of the *Pax Oecumenica*—which in the Hindu World has been provided by the British Rāj—is not yet quite over.⁵ On the other

¹ See V. C (ii) (a), p. 208, footnote 3, above.

² See Part III. A, vol. iii, pp. 46–7, above.

³ For the Westernization of the 'Osmanlis' Orthodox Christian *ra'īyeh*, and for the political consequences of their cultural conversion, see II. D (v), vol. ii, pp. 181–6; II. D (vi), vol. ii, pp. 226–8; and IV. C (ii) (b) 2, vol. iv, pp. 76–8, above.

⁴ See *ibid.*

⁵ Since the usual span of a *Pax Oecumenica*—including both its two instalments and the bout of anarchy in between them—seems to be round about four hundred years, and since the original establishment of the present *Pax Oecumenica* in the Hindu World may be equated (if there is any virtue in a conventional date) with the conquest of Gujerat by Akbar in A.D. 1572—as being the event which, perhaps more than any other, marked the elevation of the Mughal Rāj from a parochial to an oecumenical status—the break-up of the British Rāj was to be expected, on this showing, within thirty or forty years of the time of writing in A.D. 1938. At that moment, however, it seemed rather more probable that the history of India would take a different turn; for the establishment and collapse and re-establishment of a 'sub-continental' *Pax Oecumenica* was not the only experience of first-rate historical importance which India had undergone by then since Akbar's day. In the meantime the contact between India and the Western World,

hand the three earlier beats of Rout-and-Rally have all left some trace on the record of Hindu history. The third beat of the three has been particularly emphatic; for in this beat the 'rout' is represented by the collapse of the Mughal Rāj in the eighteenth century of the Christian Era and the 'rally' by the establishment of the British Rāj in the nineteenth century;¹ and these two instalments of peace—which are separated from one another in Time by no less than a hundred years of virulent anarchy—have been the work of two gangs of empire-builders who are as alien from one another as they both are from their Hindu *ra'iyeh*.² The rally-stroke of the second beat of the rhythm is equally clear. It is represented by the establishment of the Mughal Rāj in the reign of Akbar (*imperabat* A.D. 1556-1602). The foregoing rout-stroke is not so conspicuous. But, if we peer into the history of the Hindu 'Time of Troubles', which ends in the reign of Akbar and begins in the latter part of the twelfth century of the Christian Era with an outbreak of internecine warfare among the Hindu Powers of the age,³ we shall notice—in between the tribulations of India under the heel of the Ghaznawīs and Ghūrīs and Slave-Kings in the eleventh and twelfth centuries of the Christian Era and the similar tribulations that were inflicted upon her in the fifteenth and sixteenth centuries by the Lōdī Afghans and by Akbar's own ancestor Bābur—some signs of a temporary relief in an intervening period which begins with the accession of 'Alā-ad-Dīn in A.D. 1296 and ends with the death of Fīrūz in A.D. 1388.⁴ If the second beat of Rout-and-Rally in Hindu history, which ends in the establishment of the *Pax Mogulica*, may be taken as beginning with the collapse of Fīrūz's régime after its author's death, we may see in the preceding establishment of 'Alā-ad-Dīn's régime the end of a first beat of Rout-and-Rally which begins with the original breakdown of the Hindu Civilization in the twelfth century of the Christian Era.

The Rhythm in Syriac History.

These cases in which a run of three and a half beats of the disintegration-rhythm can be traced throughout—or almost through-

which Akbar himself had done much to promote, had increased to a degree of intimacy at which India had ceased to be a world in herself and had become, instead, one of the members of a new 'Great Society' of a Western complexion. In A.D. 1947 a British Rāj which had served as a second instalment of a Hindu *Pax Oecumenica* transformed itself into a pair of independent states—an Indian Union and a Pakistan—which became members of a world-wide political society without ceasing at this stage to be members of the British Commonwealth of Nations.

² *Anglicè* 'ryot'.

³ See IV. C (ii) (b) 2, vol. iv, pp. 99-100, above.

⁴ The slave-households that were maintained by these two Turkish empire-builders in Hindustan have been brought into comparison with the Ottoman Pādishāh's Slave-Household in Part III. A, vol. iii, p. 31, footnote 1, above.

out—its entire course may be supplemented by a glance at several other cases in which the same pattern can be made out, beyond mistake, in a run that is incomplete.

In Syriac history, for example, the disintegration-process was interrupted immediately after the third rally by a militant irruption of Hellenism into the Syriac World in the train of Alexander the Great; but down to that point, which in this case was as far as the process went, it followed the regular course which we have learnt to recognize in other instances. The third rally of the Syriac Society had been achieved, on the eve of Alexander's epiphany, by the Achaemenian Emperor Artaxerxes Ochus (*imperabat* 358–338 B.C.),¹ who had crushed a coalition of rebellious satraps and had followed up that victory by the reconquest of Egypt.² The rout which Ochus was stemming had set in about the turn of the fifth and fourth centuries B.C. (the first portent had been the secession of Egypt from the Achaemenian Empire in 404 B.C.; and the impunity with which the Egyptians had repudiated their allegiance to the Great King had nerved other rebels, less remote from Susa, to follow this Egyptian example). But the *dégringolade* of the Achaemenian power in the reigns of Darius II and Artaxerxes II was not, of course, the first chapter of Achaemenian history. It marked the collapse of an effective *Pax Achaemenia* which had first been established by the successive labours of Cyrus and Darius the Great³ and which had not been more than locally disturbed by Xerxes' fiasco in the hinterland of the North-West Frontier.⁴ And that first establishment of the *Pax Achaemenia* in the sixth century B.C. had been the second rally of the Syriac Society in the course of its disintegration. The Achaemenian Empire was the universal state which had put an end to the Syriac 'Time of Troubles'; and in another context⁵ we have identified the original breakdown of the Syriac Society, which had brought the Syriac 'Time of Troubles' on, with an outbreak of internecine warfare among the parochial states of the Syriac World which had occurred towards the end of the tenth century B.C. after the death of Solomon. Between Solomon's generation and Cyrus's, can we observe any symptoms of a first rally and a second rout? One

¹ This grim Achaemenid 'saviour' has been inspected, in company with the Ottoman Pādīshāh Murād IV, in V. C (ii) (a), p. 207, above.

² See V. C (i) (c) 2, vol. v, p. 94, and V. C (i) (c) 3, vol. v, p. 245, footnote 4, above, and V. C (ii) (a), Annex II, in the present volume, p. 442, below.

³ For the respective contributions of these two empire-builders see V. C (ii) (a), pp. 187–8 and 190, above.

⁴ The Achaemenian Rāj in South-Western Asia was no more seriously shaken by the disastrous failure of the Persian invasion of European Greece in 480–479 B.C. than the British Rāj in India was by the even more disastrous failure of the British invasion of Afghanistan in A.D. 1838–42.

⁵ In IV. C (ii) (b) 1, vol. iv, pp. 67–8, above.

plain token of a rally in the course of the intervening age is a coalition of Syriac forces which defeated an Assyrian aggressor at the Battle of Qarqar in 853 B.C.¹ Conversely, we may diagnose a rout in the subsequent relapse of the Syriac states into a fratricidal strife that made it easy for Tiglath-Pileser III and Sargon to conquer piecemeal in the eighth century B.C. a cosmos of Syriac city-states which had not found it difficult in the ninth century to keep Shalmaneser III at bay by making common cause against a common alien enemy.

The Rhythm in the History of the Far Eastern Civilization in Japan.

In the disintegration of the Far Eastern Society in Japan the duration of the *Pax Tokugawica* has been cut short, as we have seen, by the collision of Japan with the West; and the observable fluctuations in the fortunes of the Tokugawa Shogunate, so long as it lasted, are of a shorter wave-length than the normal run of the disintegration-rhythm which we are investigating at the moment.² On the other hand the first two beats of this standard run of rhythm can be detected in the preceding chapter of Japanese history³ which ends with the establishment of a *Pax Oecumenica* by Hideyoshi (*dominabatur* A.D. 1582-98)⁴ and which begins in the latter part of the twelfth century of the Christian Era with the overthrow of the régime of 'the Cloistered Emperors' in the military revolutions of A.D. 1156 and 1160 and 1183-5.⁵

A first rally, in reaction to this original breakdown, can be discerned in an attempt to re-establish a civilian government which was made immediately after the downfall, in A.D. 1333, of the military regency which had been ruling Japan from Kamakura since A.D. 1184.⁶ This rally, however, was abortive.⁷ Within five years the restored civilian régime had been superseded by a new military regency⁸ which was not the less true to type because it made the conciliatory gesture of establishing its official headquarters at Kyoto—the ancient Imperial Capital—instead of simply entrenching itself in the north-eastern stronghold from which

¹ For the Battle of Qarqar see *ibid.*, p. 67, and IV. C (iii) (c) 3 (α), vol. v, pp. 468, footnote 1, 473, footnote 3, and 475, above.

² For Murdoch's analysis of the rhythm of the Tokugawa Shogunate see the present chapter, p. 285, footnote 1, above.

³ For Nichiren's designation of this period as the Age of Mappō ('the Destruction of the Law') see V. C (i) (c) 2, vol. v, p. 96, footnote 6, above.

⁴ For Hideyoshi's role in Japanese history see V. C (ii) (a), pp. 188-9, above.

⁵ For this revolutionary change of régime in Japan see IV. C (ii) (b) 2, vol. iv, p. 94, above. For the antecedent and underlying differentiation between the *ethos* of Yamato and the *ethos* of the Kwanto see II. D (v), vol. ii, pp. 158-9, above.

⁶ See Sansom, G. B.: *Japan, A Short Cultural History* (London 1932, Cresset Press), p. 319; Murdoch, J.: *A History of Japan*, vol. i (London 1910, Kegan Paul), p. 539. The civilian Imperial Government at Kyoto had made one previous attempt, as early as A.D. 1221, to overthrow the Kamakura Bakufu (*ibid.*, p. 442).

⁷ *Ibid.*, p. 554.

⁸ *Ibid.*, p. 569.

Japan had been ruled for 150 years by Minamoto Yoritomo and his successors. This swift reversion to Militarism was the first symptom of a fresh rout. In the days of the Shoguns of the Ashikaga Dynasty who succeeded one another at Kyoto from A.D. 1338 until the last of the line was hustled off the stage by Hideyoshi in A.D. 1597, Japan suffered worse tribulations than she had known in the days of the previous line of Shoguns who had succeeded one another at Kamakura from 1184 to 1333.¹

The immediate sequel to the establishment of the Ashikaga Shogunate was the unprecedented scandal of a schism of the Imperial House itself into two rival courts. This enormity, which was a sin against religious ritual as well as a breach of political etiquette, had to be atoned for by fifty-five years of civil war (*gerebatur* A.D. 1337-92);² and, even when the Ashikaga Shogunate—acting in the name of the court which was its puppet—eventually succeeded in suppressing the rival court which had refused to acknowledge its title, the tale of calamities did not cease.³ In the fifteenth century of the Christian Era a feudal anarchy which the Shoguns were impotent to reduce to order goaded an intolerably oppressed peasantry into a chronic state of revolt and stimulated the monasteries to militarize themselves—in flat defiance of all precepts of both the Greater and the Lesser Vehicle—as the only alternative to becoming the lay militarists' victims.⁴ In the War

¹ Sansom, *op. cit.*, p. 342.

² Murdoch, *op. cit.*, vol. cit., pp. 584-6.

³ Between the end of the War of the Rival Courts in A.D. 1392 and the beginning of the War of Onin in A.D. 1467 there was a minor rally (Sansom, *op. cit.*, pp. 345, 358, and 371).

⁴ This militarization of the monasteries during the Japanese 'Time of Troubles' cannot be entirely explained as an unavoidable measure of self-defence which was forced upon the monks by the turbulence of the worldlings among whom their lot had been cast. The metamorphosis, in Japan, of monks into fighting-men which was completed in this age had a long history behind it, and, while it was partly an effect of the breakdown of the Far Eastern Civilization in Japan, it was also one of the antecedents and causes of this catastrophe. The first recorded case of monks taking up arms in Japan occurred in the seventh decade of the tenth century of the Christian Era (see Eliot, Sir Charles: *Japanese Buddhism* (London 1935, Arnold), p. 246, and the present Study, IV. C (ii) (b) 2, vol. iv, p. 94, footnote 2, above); and in this case the militant monastery was not defending itself against a lay aggressor, but was resorting to war as a method of asserting its claims against a rival religious house. Thus, when the militarization of the monasteries in Japan is traced back to its origins, it becomes apparent that this was one of several symptoms of a relapse into barbarism which was the cause of the breakdown of the Far Eastern Civilization in Japan, and not a consequence of it. In other contexts we have observed that this relapse was the nemesis of a cultural *tour de force* by which the hot-house plant of Far Eastern culture had been transplanted from its kindly native soil and climate on the Asiatic Continent into the uncongenial environment of the Japanese Archipelago (for this feature of Japanese history see II. D (v), vol. ii, pp. 158-9, and IV. C (ii) (b) 2, vol. iv, p. 94, above). Conversely, one of the labours that had to be performed by Nobunaga and Hideyoshi in order to accomplish their mission of imposing a *Pax Oecumenica* by force was to break the military power of the monasteries, which in their day was at its apogee.

'During all the latter half of the sixteenth century [of the Christian Era] Buddhism was an important force in Japan, but, strange to say, more conspicuous as a military and political force than in its proper sphere. The principal monasteries appear on the scene from time to time in exactly the same way as the great military houses with armies and forts of their own, with territorial ambitions and designs to crush or annex their rivals.

of Onin (*gerebatur* A.D. 1467-77) the Imperial City of Kyoto was devastated by street-fighting between contending provincial forces who made the capital their arena. In the sixteenth century the Shoguns were overtaken by the ignominious fate which their predecessors had inflicted on the Emperors. The Shogun's *de jure* powers were now exercised *de facto* by a Kwanryo; and this travesty of government by the deputy of a deputy was perhaps the one thing worse than no government at all.¹ This was the state of misery to which Japan had been reduced by the second paroxysm of her 'Time of Troubles' before her convulsed and writhing frame was forced into a strait-waistcoat by the successive exertions of Nobunaga and Hideyoshi and Ieyasu (*militabant* A.D. 1549-1615).²

The Rhythm in the History of the Main Body of the Far Eastern Civilization.

In the history of the main body of the Far Eastern Society the process of disintegration took an abnormal turn at an earlier stage than in Japan; for, whereas in Japan the *Pax Oecumenica* which had been imposed by Hideyoshi and had been organized by Ieyasu lasted for more than two and a half centuries before the impact of the West precipitated the Meiji Revolution of A.D. 1868, the *Pax Oecumenica* which was imposed on China by alien Mongol arms between A.D. 1209³ and A.D. 1280 did not remain unchallenged for more than seventy years before it was shaken off by a Chinese insurrection which began about A.D. 1351 and which persisted until the Mongol intruders had been driven right out of Intramural China into their native wilderness beyond the Great Wall.⁴ This Chinese counterstroke was followed in its turn by a back-wash of barbarian invasion in which the Manchus re-established the

But the same period witnessed the end of this system and the definite defeat of the Church Militant. There was evidently a danger that the country might be ruled by priests, like Tibet. The leaders of Japan forestalled this danger but were careful to avoid anything like a war against Religion as such' (Eliot, op. cit., p. 301).

¹ The century between the opening of the War of Onin in A.D. 1467 and Nobunaga's assumption of dictatorial powers *de facto* in A.D. 1568 seems to have been the worst phase of the whole of the Japanese 'Time of Troubles' (Sansom, op. cit., pp. 394-5 and 419-20). It was during these hundred years that the four popular Japanese 'higher religions' (see V. C (i) (c) 2, vol. v, pp. 96-103, above) were at the height of their influence (Sansom, op. cit., pp. 366-7).

² For the respective roles of these three saviours with the sword see V. C (ii) (a), pp. 186, 188, and 191, above. Nobunaga and Hideyoshi both died in harness, and Nobunaga literally under arms (though the hand that took his life was his own). Ieyasu died in the year following his last campaign against the castle of Ōsaka. Hideyoshi and Ieyasu took up arms simultaneously with one another in A.D. 1558.

³ This seems to have been the date of Chingis Khan's first assault upon the principality of Tangut, which was a north-western barbarian 'successor-state' of the Empire of T'ang and Sung. His attack on the far more important north-eastern barbarian 'successor-state'—the principality of the Kin—was not launched until A.D. 1211.

⁴ For the *Pax Mongolica* in the main body of the Far Eastern Society, and for the successful Chinese reaction against it, see II. D (v), vol. ii, pp. 121-2; IV. C (ii) (b) 2, vol. iv, pp. 86-7; and V. C (i) (c) 4, vol. v, pp. 348-51, above.

empire which the Mongols had won and lost; and this interlude has been followed by the impact of a Western Civilization which has collided with China as well as with Japan in the course of its ubiquitous modern expansion. In a period of Chinese history which has been dominated by this capricious play of external forces it is not to be expected that the pulse of the disintegrating society should register the normal beat. On the other hand, in the 'Time of Troubles' of the disintegrating Far Eastern Society in China, as in Japan, we can detect two beats of Rout-and-Rally which are of the standard wave-length.

In the main body of the Far Eastern Society we have identified the end of the 'Time of Troubles' with the completion of the Mongol conquest of China in A.D. 1280,¹ and the beginning of it with the decay of the T'ang Dynasty in the last quarter of the ninth century of the Christian Era;² and in the interval between these two termini there are clear traces of both a rally and a relapse.

On the political plane this first rally in the history of the disintegration of the main body of the Far Eastern Society declares itself in the establishment of the Sung Dynasty in A.D. 960. In the field of technique it declares itself particularly in a remarkable advance in the art of printing.³ In the field of visual art it declares itself in the rise of a school of painting which is the fine flower of Far Eastern achievement in this line.⁴ In the field of abstract thought it declares itself in the work of the five Neo-Confucian philosophers (*vivebant* A.D. 1017-1200),⁵ who reinterpreted Confucius in the light of the Mahāyāna as, in the contemporary Western World, the Schoolmen read the philosophy of Aristotle into the doctrines of Catholic Christianity. In the field of social theory and practice the same rally is represented by the Neo-Confucians' bugbear Wang An Shih.⁶

¹ See IV. C (ii) (b) 2, vol. iv, pp. 86-7, above.

² See *ibid.*, pp. 86 and 87-8, above.

³ See Carter, T. F.: *The Invention of Printing in China and its Spread Westward*, revised edition (New York 1931, Columbia University Press), chap. 10. 'In invention, what the T'ang period conceived, the Sung era put to practical use. The magnetic needle, used in the main in earlier times either as a toy or for the location of graves, was applied to navigation. Gunpowder, already known and used for fireworks, was during the Sung Dynasty applied to War. Porcelain was so developed as to become an article of export to Syria and Egypt. A similar development took place in printing' (p. 55). According to the same authority, *op. cit.*, p. 32, block printing for the production of books had been invented as early as the reign of T'ang Ming Hwang (*imperabat* A.D. 712-56).

⁶ See Fitzgerald, C. P.: *China, A Short Cultural History* (London 1935, Cresset Press), chap. 19; Hackmann, H.: *Chinesische Philosophie* (Munich 1927, Reinhardt), pp. 313-15; and Williamson, H. R.: *Wang An Shih* (London 1935-7, Probsthain, 2 vols.). The true purpose of Wang An Shih's administrative and social reforms seems to have been to increase the prosperity of the state by alleviating the burdens of the peasantry, on whose shoulders the political superstructure rested. His most important

The subsequent relapse declares itself in the tragic career of the connoisseur-emperor Huitsung (*imperabat* A.D. 1101-25).¹ Huitsung's life-work was the making of a collection of works of art, and he lived to publish a catalogue of this, in twenty volumes, in A.D. 1120. But the unfortunate collector lived on to see his collection dispersed when, five years later, the city of Kaifêng, in which it was housed, was attacked and captured by the Kin barbarians from Manchuria—not because these uncultivated invaders coveted the possession of Huitsung's artistic treasures, but because Kaifêng happened also to be the political capital of the Sung Empire. This was a challenge which Huitsung was utterly unprepared to meet; and in the last chapter of his life he had to atone for his neglect of his political duties during a reign of twenty-five years by lingering on for another ten years as a refugee, or prisoner, in the tents of the Kin barbarians' evicted predecessors the Khitan—an asylum in which the unhappy exile could neither exert himself as an emperor nor enjoy himself as a connoisseur.² While Huitsung was thus languishing in limbo, the barbarians whom he had so lamentably failed to keep at bay were conquering the northern provinces of the Sung Empire; and this Kin war of conquest, which went on from A.D. 1124 to A.D. 1142 and did not stop until the invaders had reached the line of the River Hwai and the watershed between the Yellow River and the Yangtse, signalized the second rout in the disintegration of the main body of the Far Eastern Society—as the first rout had been signalized by the earlier loss of sixteen frontier districts to the Kin's predecessors the Khitan between the years A.D. 927 and A.D. 937.³ This second rout was not followed by a rally until the Mongols—supplanting the Kin as the Kin had supplanted the Khitan—completed the barbarian conquest of China by pushing on from the northern watershed of the Yangtse to the southern sea-board of China, which they reached in A.D. 1280. It

measures were aimed at protecting the peasants against the twin scourge of the tax-collector and the money-lender. His success is attested by the increase in the population of the Sung Empire—on the evidence of the census returns—during the period in which Wang An Shih's new laws were in force. And the mass-revolts which his critics prophesied never broke out. The new laws were in force throughout the reign of Wang An Shih's Imperial patron the Emperor Shêntsung (*imperabat* A.D. 1068-85). Upon this emperor's death Wang An Shih's reactionary opponents regained the upper hand, and the new laws were in abeyance during the minority of Shêntsung's successor Chêtsung (*imperabat* A.D. 1086-1100). One of the young emperor's first acts, however, upon coming of age and taking the reins of government into his own hands in A.D. 1093 was to call to office Wang An Shih's disciple Ts'ai Ching (Wang An Shih himself had retired in A.D. 1076, before Shêntsung's death). And Wang An Shih's laws were in force again from the date of this appointment, which was made in A.D. 1094, down to the invasion of Northern China by the Kin, *imperante* Huitsung, in A.D. 1124.

¹ See Münsterberg, op. cit., p. 249.

² Huitsung's Babylonian counterpart, the archaeologist-emperor Nabonidus (see V. C (i) (d) 8 (δ), p. 94, above), was *felicior opportunitate mortis*. He was already in his grave when the Neo-Babylonian Empire was overwhelmed by Cyrus.

³ See II. D (v), vol. ii, p. 121; IV. C (ii) (b) 2, vol. iv, p. 86; and V. C (i) (c) 3, vol. v, p. 308, above.

will be seen that in the main body, as in the Japanese offshoot, of the Far Eastern Society the 'Time of Troubles' falls into two paroxysms which are separated from one another by a perceptible breathing-space.

The Rhythm in Babylonian History.

If we turn from the main body of the Far Eastern World to the Babylonian Society, we shall find that the Neo-Babylonian Empire, which served as a Babylonian universal state, was cut short as prematurely as the Far Eastern universal state that was provided by the Mongols. Indeed, the respective lives of the two régimes were of an almost equal brevity, if we reckon the reign of the *Pax Mongolica* in China as running from A.D. 1280 to A.D. 1351,¹ and that of the *Pax Chaldaica* in Babylonia as beginning with the annihilation of the last Assyrian fighting force at Harran in 610 B.C.² and ending with the capture of Babylon by Cyrus in 539 or 538 B.C. At the same time we shall find that, if we cast our eyes back from the prematurely ended universal state to the antecedent 'Time of Troubles', at least a fragment of our disintegration-pattern can be recognized at this stage in Babylonian history, as in Far Eastern. The second paroxysm of the Babylonian 'Time of Troubles', which clearly ends in the holocaust of 610 B.C., no less clearly begins with the act of aggression against Babylonia which was committed by King Tiglath-Pileser III of Assyria in 745 B.C.; for this act sowed the seeds of a hundred years' war between the two principal Powers of the Babylonian World, and that war had the decisive battle of Harran for its grand finale.³

The Rhythm in the History of Orthodox Christendom in Russia.

These cases in which a glimpse of our disintegration-pattern can be caught in the earlier, though not in the later, stages of the disintegration-process are balanced by inverse cases in which the pattern is visible in the later stages though not in the earlier. The history of the offshoot of the Orthodox Christian Society in Russia, for example, offers a contrast in this respect to the otherwise analogous history of the offshoot of the Far Eastern Society in Japan.

The Russian 'Time of Troubles' (in the sense in which the term is used in this Study, and not in the original Russian usage of the

words)¹ may be taken as having been brought to a close by the union of Novgorod with Muscovy in A.D. 1478²—an act of political consolidation which marks the establishment of a *Pax Oecumenica*—and as having been opened by the decay of the principality of Kiev in the last quarter of the eleventh century,³ when the political centre of gravity of the Russian World shifted from the Upper Dniepr to the Upper Volga.⁴ Concomitantly with this politico-geographical change, the exotic plant of Orthodox Christian culture, which at Kiev had been kept artificially in the exquisite condition to which it had been brought by a Byzantine gardener's art, ran wild and at the same time reverted to a barbaric coarseness as the price of becoming acclimatized to a natural life in the open air in this forbidding Russian clime in which it had only managed to keep alive hitherto on condition of being confined in a hothouse. In other contexts⁵ we have noticed an analogy between this chapter of Russian history and a corresponding chapter of Japanese history—and this on both the political and the cultural plane. The north-eastward shift of the Russian political centre of gravity from Kiev^{*} in the Dniepr Basin to Vladímir in the Volga Basin has its analogue in the north-eastward shift of the Japanese political centre of gravity from Kyoto in Yamato to Kamakura in the Kwanto. In Japan, as in Russia, this geographical movement was accompanied by a relapse into anarchy and barbarism. And in the next chapter of the story—again in both cases alike—the backwoodsmen themselves stepped in to rally the disintegrating society from a rout which was their own barbaric handiwork. The *Pax Muscoviana* which was established in A.D. 1478 has its counterpart in the *Pax Tokugawica* which was established at the turn of the sixteenth and seventeenth centuries of the Christian Era by the cumulative labours of Nobunaga, Hideyoshi, and Ieyasu. These points of likeness between Russian and Japanese history from the original breakdown until the establishment of the universal state are so striking that we should expect *a priori* also to find a Russian parallel to the abortive attempt which was made in the course of the 'Time of Troubles' in Japan to bring back the political centre of gravity from the north-east to the south-west, and at the same time to revert from a military to a civilian régime. Yet, if we look in Russian history for the equivalent of the Japanese flash-in-the-pan

¹ For this difference between the conventional usage in this Study and the traditional Russian usage see the references in V. C (ii) (a), p. 195, footnote 2, above, and in the present chapter, p. 311, footnote 4, below.

⁵ *Ibid.*, p. 158, and in IV. C (ii) (b) 2, vol. iv, pp. 91-6, above.

in the fourth decade of the fourteenth century of the Christian Era,¹ we shall find ourselves drawing blank.²

On the other hand, when we come to the next chapter of the story, in which the 'Time of Troubles' has given place to a *Pax Oecumenica*, we shall find, when we look for traces of our disintegration-pattern in the respective histories of the two societies at this stage, that there is again a discrepancy but that this time it is the other way round. In this chapter, too, the analogies between the two histories are striking.³ In both Russia and Japan a hibernating society has been overtaken by a collision with the alien civilization of the West before it has completed the normal hibernation period; and in both cases the statesmanship of the society whose repose has been thus abruptly and perilously disturbed has shown itself capable of coping with the emergency.⁴ In Japan, as in

¹ See the present chapter, p. 303, above.

² The abortive endeavour in the fourth decade of the fourteenth century of the Christian Era in Japan to bring back the Kingdom, the Power, and the Glory from Kamakura in the Kwanto to Kyoto in Yamato was made about 150 years after the beginning of the Japanese 'Time of Troubles', if we are right in dating the breakdown of the Far Eastern Civilization in Japan in about the last quarter of the twelfth century of the Christian Era. And, if we are also right in dating the breakdown of the Orthodox Christian Civilization in Russia about a hundred years earlier than that, then in the Russian field we ought to focus our attention upon the fourth decade of the thirteenth century of the Christian Era and inquire whether, at or about that time, there was an abortive attempt to bring back the Kingdom, the Power, and the Glory from Vladimir in the Volga Basin to Kiev on the Dniepr. This inquiry yields a negative answer. So far from recapturing her ancient status of political primacy in that decade, Kiev suffered in A.D. 1240 the supreme disaster of being stormed and sacked by the Mongol host of Bātū Khan; and from this blow she has never fully recovered. At the same time we shall observe that, while the Russian sceptre did not return to Kiev either then or at any later date, it did pass back from the north-eastern principality of Vladimir, which had likewise been prostrated by Bātū's hammer-stroke, to a south-western principality in whose domain Kiev came to be included—though this not as the capital but only as an outlying dependency. The fortunate Russian principality which thus rose to a position of relative power and prosperity in an age that was one of deep adversity for the Russian World as a whole was Red Russia or Galicia (see V. C (i) (c) 3, vol. v, p. 312, footnote 1, above). During the ninety years that elapsed between Bātū's onslaught upon the Russian World in A.D. 1238–40 and the gravitation of the hegemony over what was left of Russia to the principality of Moscow in A.D. 1328, Galicia was the leading Russian state. One of the reasons for Galicia's primacy among the Russian states in these earlier decades of the period of Tatar domination was the accident of a geographical position which counted for most in the years when the Tatar yoke was at its heaviest. Galicia was ensconced among the foothills of the Carpathians in the hinterland of the western extremity of the Don-to-Carpathians Steppe (see Part III. A, Annex II, vol. iii, p. 401, above), and its capital, Halicz, on the banks of the Upper Dniestr, was more difficult for Tatar raiders and tribute-collectors to reach than either Kiev on the Dniepr (in a district which now came to be known as the Ukraina or 'borderland' *par excellence*) or even Vladimir in the Upper Basin of the Volga. Thus Galicia's fortune was made by a Mongol conquest of Russia which had overthrown Vladimir and crushed Kiev; and, in the light of this episode of Russian history, we may speculate on what might have happened in Japan if Qubilai's invasion of Japan in A.D. 1281, instead of being the disastrous failure that it was, had been as brilliantly successful as Bātū's invasion of Russia in A.D. 1238 (for the contrast between the respective outcomes of these two Mongol enterprises see IV. C (ii) (b) 2, vol. iv, pp. 92–4, above). In that hypothetical event, would the hegemony in Japan have passed from Kamakura—not to Kyoto, which would then in all probability have suffered the fate of Kiev, but to one of the remoter islands of the Japanese Archipelago?

³ See IV. C (ii) (b) 2, vol. iv, pp. 82–3 and 88–91, above.

⁴ In the light of the catastrophic sequel to Peter the Great's brilliant attempt to solve 'the Western Question' in Russia, we may hesitate to award him the victor's palm; and,

Russia, a non-Western universal state has been skilfully transformed into a national state member of a 'Great Society' of a Western complexion. But here, once more, the points of likeness only throw into sharper relief the discrepancy in the disintegration-pattern. Whereas the disintegration of the Japanese Society during the prematurely interrupted currency of the *Pax Tokugawica* ran in a rhythm with a wave-length that was shorter than the standard,¹ the normal run of the disintegration-rhythm is conspicuously visible in the course of the *Pax Muscoviana*—in spite of the fact that the Russian universal state was overtaken and interrupted at a still earlier stage than the Japanese by the impact of an alien social force.² Between its foundation in A.D. 1478 and its decay in the latter part of the nineteenth century³ the Russian universal state experienced one notable relapse and one notable rally. The relapse was the bout of anarchy in the early years of the seventeenth century which is known as the 'Time of Troubles' in the Russian historical tradition.⁴ The rally was the subsequent recovery, which was not less astounding than the fall which it retrieved. And the single beat of Rout-and-Rally which is struck out by this sequence of a downward followed by an upward movement in so steep a curve punctuates the history of the *Pax Muscoviana* into two separate chapters which are sharply divided by an interregnum that has made up for the shortness of its length by the virulence of its anarchy. In Russian, as in Sinic, history this punctuation of a *Pax Oecumenica* by a short and sharp interregnum is emphasized by a change of dynasty. The transference of the Sinic Imperial
